The early 1930s witnessed the downfall of the fêted Harlem Renaissance, as the upsurge of African American creativity and scholarship that dominated the 1920s came tumbling down under the economic crisis of the Great Depression. However, this did not mean that African Americans’ voice became muffled since the same decade was to foster another surge of black creativity burgeoning in the South Side Chicago district. In 1950 Arna Bontemps averred that “Chicago was definitely the center of the second phase of Negro literary awakening”¹ and later in 1986 Robert Bone coined the term ‘The Chicago Renaissance’ to refer to this African American literary movement.² The new renaissance started in the mid-1930s and lasted till the early 1950s, bridging the hiatus between the Harlem Renaissance of the 1920s and the Black Arts Movement of the 1960s. The decline of the Chicago Renaissance started in the mid-1940s and was complete by the early 1950s³, yet the legacy of the upsurge was resonantly heard in the following African American generations. It was a legacy of transcendence and integration, as much as it was one of revolution and protest. It defied any polemic that threatened African American artistic freedom and sought enhancement of their position in the modern world paving the way for the Black Arts Movement in the 1960s to tread further steps in the path of black tropism of creativity.

With Chicago at the crux of artistic creation, Richard Wright was its most renowned figure as the instigating dignitary for most of the African American voices at that time in setting their subject matter, themes, and forms of expression. The

¹ Arna Bontemps, “Famous WPA Authors,” *Negro Digest* June 1950: 46
² In my account of the Chicago Renaissance I am indebted to Robert Bone’s article “Richard Wright and the Chicago Renaissance.”
³ The downfall is chronicled with Arna Bontemps’ moving to Fisk in 1943, Robert Park’s death in 1944, Horace Cayton’s moving out of Chicago in 1945 and Richard Wright’s going to Paris in 1946.
rejuvenation arose from the great black migration to Chicago starting after World War I and through the 1930s, the new sociological writings and theories and the indubitable impact of communism that was then at the peak in the African American ideological background. Wright stood as the impetus behind the new movement and his collection of short stories *Uncle Tom's Children* (1938) and novel *Native Son* (1940) opened the door to the flood of the African American literary writings that appeared between 1935 and the early 1950s including Margaret Walker’s *For My People* (1942), Arna Bontemps’s *Black Thunder* (1936), Frank Yerby’s *The Foxes of Harrow* (1946), Gwendolyn Brooks’s *A Street in Bronzeville* (1945), William Attaway’s *Blood on the Forge* (1941), Willard Motley’s *Knock On Any Door* (1947), Frank Marshall Davis’s *A Black Man’s Verse* (1935), Lorraine Hansberry’s *A Raisin in the Sun* (1950) and Theodore Ward’s *Big White Fog* (1938).

The Chicago Renaissance, however, was not confined to literature. The intellectual upsurge included journalism, arts, music, and social sciences. The city of Chicago was the pivot of African American press activity during the 1930s and 1940s offering a wide array of publications\(^4\) of journals and magazines that ignited the political awareness of African Americans\(^5\), especially in Bronzeville, as most of the published articles focused on their domestic conditions and the hardships they were drawn against. They also introduced the Chicagoans to the thriving cultural life that was in bloom at the time in the artistic works of Richmond Barthe, William Carter, Charles Davis, George Neale, Gordon Parks, and William McBride. Cultural institutions soon emerged to embrace this flow of African American creativity bringing the ground-breaking figures together for discussion and criticism of their works. Such institutions included libraries, churches, theatres, clubs, and community centres.\(^6\)

The black migration to Chicago was seen as an escape from the Jim Crow segregated South with its racism and lynching; an exodus to a promised land.

---

\(^4\) Such publications included *Chicago Defender, Chicago Bee, Chicago Whip, Pittsburgh Courier, Left Front, Abbott’s Monthly, Negro Story, Negro Digest, Ebony, Challenge, New Challenge* and *Jet*.

\(^5\) The 1930s marked the historical shift of African Americans from the Republican to the Democratic Party. The Chicago Renaissance witnessed new modes of political activism by African Americans who went on mass campaigns like the Double-V Campaign to win victory against fascism and racism and the “Don’t Buy Where You Can’t Work Campaign.”

\(^6\) The famous institutions of Chicago at that time were the Regal Theatre, The South Side Writers’ Group, the Illinois Writers’ Project, John Reed Club, Lincoln Centre, Parkway Community House, Ebenezer Baptist Church, Club DeLisa, Savoy Ballroom, Wabash YMCA, the George Cleveland Hall branch of the Chicago Public Library, the Chicago Unit of Federal Theatre Project and others.
Between 1916 and 1920 Chicago had 50,000 African American migrants from the South and the population of the Black Belt increased to more than 125,000 by 1930. Bronzeville became as Bone argues “one of the world’s largest concentrations of black people.” However, as pointed out by Wright African Americans soon realized that “here in the North cold forces hit you and push you. It is a world of things.” The shattered dream of the African American migration to the North was a prominent theme in the works of most of the Chicago Renaissance writers and was epitomized in the image of the iron city that crushed the hopes of black families and devoured their aspirations for a better life. The Great Depression heralded abject poverty and unemployment for the black masses in Chicago as well as a form of new segregation creating what Richard Wright named ‘the world of the kitchenettes.’ This world hovered in the works of Richard Wright and other black writers of the Chicago Renaissance.

The great migration brought about the new experience of urbanisation to the transplanted Southern farmers. African Americans resisted submission to white racism by moving to the North, but urbanisation embroiled them in more tensions. Robert Park’s sociological theory was the most popular one at that time. His urbanisation theory tackled the darker side of urban life in the city, such as ghettos, alcoholism, prostitution, gangsters, hoboes, crime rates, and juvenile delinquency. Urbanisation for Southern African Americans entailed labour disputes, class distinctions, housing discriminations and the mood was not unreservedly sanguine; African American migrants as Wright noted soon realized that “The city has beaten (them), evaded (them).” But Park’s theory was progressive in perspective; depicting human history as an ongoing movement from simple to complex in all respects and thus urbanisation appeared as a cathartic experience, giving vigour to individual potential and the assurance that any hardships in adjusting to the city life were transient, and that even racism was to finally end in assimilation.

Park’s theory was based on four main social processes of competition, conflict, accommodation and assimilation through which society progressed. Blacks’ place in the American society suffered from the social distance which was “the tendency to
approach, but not too near”¹⁰ and that it was racial prejudice that kept this distance between whites and blacks. However, his theory argued in favour of final assimilation which was the case with the early African slaves who were able to cope with the new culture of their masters and transferred this culture to the other slaves working on the plantations and thus “assimilation followed rapidly and as a matter of course.”¹¹ Park’s theory led to the emergence of other sociological theories concerned with African Americans. Like Park’s theory, Black Metropolis propagated the same kind of assimilation despite the severe problems blacks were facing, its writers averred that “as time passes individual immigrants and their ethnic groups as a whole rise in status. Many of them are ‘assimilated’ and become socially accepted.”¹² Published in 1945, the book was a groundbreaking sociological study of the life of the immigrant Southern African Americans in the urban ghettos of Chicago’s South Side. It dealt with the sociological notions of urbanisation, industrialisation, religion, social stratification, and race relations based on data of research conducted by WPA fieldworkers in the late 1930s.

The Chicago School of Urban Sociology paradigms offered new visions for the emerging generation by placing the individual vis-à-vis the environment and showing the great impact society had on the personalities, motivations and actions of its people. The struggle between the individual and society for self-realisation would construct the social reality of the whole group and it was through such struggle that the personality of the individual was shaped. Society was an umbrella term that embraced family, traditions, mores, religion, schools, culture, community, and all other forms of authority. The sociological writings of Horace Cayton, Robert Park, Ernest Burgess, Franklin Frazier and Louis Wirth ¹³ played a crucial role in explaining this African American urban experience and as Bone explains “As Wright and his generation were coming to maturity, sociology was in the air.”¹⁴ Arna Bontemps and

¹¹ Ibid. 762
¹³ These books marked the sign of a budding white acceptance of African Americans and they included Gunnar Myrdal’s American Dilemma: The Negro Problem and Modern Democracy (1944), Black Metropolis (1945), a sociological study, by St Clair Drake and Horace Cayton; From Slavery to Freedom (1947), by the historian John Hope Franklin, and the anthology The Social Fabric of the Metropolis: Contributions of the Chicago School of Urban Sociology edited by James F. Short.
Jack Conroy’s *They Seek a City* (1945) and *Any Place But Here* (1945) adopted similar sociological frameworks in depicting black migration to the North.

The Chicago School of Sociology also expounded the schism resulting from the individual’s striving for self-expression on the one hand, and the ineptitude imposed by society on the other hand. Nonetheless, the sociological echo in literature crossed the boundaries of this individual-society dichotomy. As Carla Cappetti explains it propounded “the conceptualization of two important points of view: the informant and the participant-observer.”

The individual notion perceived the individual as a consequential entity capable of self-expression; whereas, the participant-observer notion understood society as an intricate reality to be grasped only from within. The new sociological notions had a clear impact on biographers, anthropologists and the autobiographies of the Chicago Renaissance writers, turning these works from mere declarations into sociological case studies put within literary frameworks. In *American Hunger* 1977 Wright asserted that sociology enabled him to “discern many strange types of Negro characters, to identify many modes of Negro behavior; and what moved me most was the frequency of mental illness, the tragic toll that the urban environment exacted of the black peasant.” Whereas the informant point of view allowed him to delve into the social reality of growing up as an African American in America from within, the participant-observer point of view offered the literary dramatisation of this social reality and depicted the significance behind it.

Wright responded fully to sociology, in his introduction to *Black Metropolis* he averred that he “found that sincere art and honest science were not far apart, that each could enrich the other” and the sociological impact was quite conspicuous in his *Twelve Million Black Voices* (1941) which fused the text with photographs taken by Edwin Rosskam. The book that fell into four sections narrated the story of African Americans in America from the time of slavery and through abolitionism and the mass migration to the North. In his book, Wright deliberately excluded the ‘talented tenth’ of African Americans who came from mulatto backgrounds and managed to dig

---

16 The most notable autobiographies of the Chicago Renaissance were Wright’s *Black Boy* (1944) and *American Hunger* (1977), Katherine Dunham’s *A Touch of Innocence* (1959), Horace Cayton’s *Long Old Road* (1970), and Gwendolyn Brooks’s *Report from Part I* (1972).
their ways through the American society by way of luck or kinship. He focused on the masses of blacks in their passage to attaining the social consciousness of their real status. He chose the first-person narrative as an attempt to endow a voice to these voiceless masses that had been denied the chance of self-expression. Jack Moore thinks that choosing this pronoun was quite functional for:

his ‘We’ is many people, it speaks with one voice (one capable of varying its sounds) and thereby reinforces the idea of black trauma, as though all the ‘crowded’ sufferings and shocks were endured by a single entity in a single though extended lifetime.19

However, choosing that pronoun puts the question of Wright’s detachment as a writer in a critical situation as he fully becomes a participant. His diction is filled with visual images and sounds and his prose retains an obvious poetic feature that points to wide gaps between his intellectual position and that of the people he is telling the story of and makes it more difficult to accept the part of a total participant. Wright also frames the historical account within a sociological framework that always puts his people in confrontation with their environment, whether in Southern plantations or Northern ghettos, and the final product is a book that fails to comply with any specified form. It is neither a sociological case study nor a definite literary work.

However, the sociological paradigms remain traceable in Wright’s work and if Twelve Million Black Voices imposed the problem of form, his novel Native Son was a major work that incorporated these sociological doctrines and reflected Wright’s firm grip over form. Published in 1940, the novel was an instantaneous success selling more than 25,000 copies in less than one month and selected in the Book-of-the-Month Club the same year. Irving Howe perceived the book as a landmark not only in African American, but the whole body of American literature, averring that “The day Native Son appeared, American culture was changed forever.”20 In 1941, Ralph Ellison argued that the novel “possesse(d) an artistry, penetration of thought, and sheer emotional power that place(d) it into the front rank of American fiction.”21 It defied the unflinching stereotypes of African Americans and triggered both white and black criticism. The majority of black critics condemned such atrocious portrayal of

---

African Americans that only justified white prejudices. However, the impact of the novel was irrefutable for all critics who saw it as a vitriolic albeit honest endeavour to deftly establish a realistic exposé stemming out of a plethora of deterministic social and economic injustices together with racial suppression.

Wright imparts the target of self-expression upon Bigger Thomas, the doomed protagonist of Native Son. He shares an intimate relationship with his protagonist as both are transplanted Southern immigrants who flee to the North and live in its slums, they are both rebellious and feel the same sense of alienation from their families, religion, folk culture and the impelling submission racism enforces on them; and thus the narrative voice does not attain absolute detachment from the protagonist throughout the novel’s discourse; and as Charles Glicksberg notes “Richard Wright is Bigger Thomas – one part of him anyway. Bigger Thomas is what Richard Wright, had circumstances worked out differently, might have become.” Wright manages to escape such a tragic end, but Bigger does not.

Bigger is the outcome of unmitigated oppression and callous racism. He is the only character in the novel that Wright portrays in depth; other characters are not fully-developed, they are types drawn to represent their social class and race. Wright bases Bigger’s character on a number of mutinous African Americans who defied the Jim Crow order in the South through the violation of its taboos; their self-defence mechanism in surviving white racism was always rebelling through violence. They announced their frustration through discursive acts of crime and murder, yet they had a high price to pay as they “were shot, hanged, maimed, lynched, and generally hounded till they were either dead or their spirits broken.” Bigger’s character is not confined to Wright’s childhood memories in the South, he has other traits of African American prototypes that Wright encountered in urban Chicago who shared common fear, agitation, frustration and alienation in the urban North. James Baldwin notes that “no American Negro exists who does not have his private Bigger Thomas living in the skull.” Like the other Biggers, Bigger Thomas is denied all chances to develop a normal personality for wherever his dreams turn to, poverty and racism strike back to keep him ‘in his place.’ His response to an oppression that thrives on his own erasure

24 James Baldwin, Notes of a Native Son (London: Michael Joseph Ltd., 1964) 45
is savage violence but he only crosses the dark realms of the ghettos to go to the electric chair.

Bigger lacks the intellectual potential of his creator and he displays a clear inability to designate due significance to most of the events especially in Book I. His relationship to language is one of perplexity which deepens his lack of communication with others whose speech remains befuddling as: “the long strange words they used made no sense to him; it was another language.” Wright sets a deterministic setting for Bigger and places him in circumstances that can hardly produce an articulate person, thus the linguistic potential of the white paradigm remains hostile and incapable of helping him reflect his reality. Bigger’s mumbling speech becomes inevitable and “Always there is something that is just beyond the tip of his tongue that he could not explain at all.” Bigger’s environment imposes repression rather than self-expression and his feeling of powerlessness impedes his intellectual insight which augments what Craig Werner calls “repressed silence.” Bigger strives to attain self-expression but his existence remains marginalised by the dominant discourse and usually there is a linkage between his desire for expression and his emerging acts of violence. His speech is faltering in Book I, it is the hermeneutical omniscient narrative report that mirrors and contextualises his mental turmoil to the reader.

Sociology perceives man in relation to the surrounding environment and living in urban Chicago adds to Bigger’s frustration and nurtures more violence in him; the city remains intimidating albeit enticing. Wright argues that living in a city like Chicago has more detrimental effects on African Americans than the segregation of the South since it exposes them to unattainable luxuries and profligacy for its “physical aspect – noisy, crowded, filled with a sense of power and fulfilment – did so much more to dazzle the mind of a taunting sense of possible achievement that the segregation it did impose brought forth from Bigger a reaction more obstreperous than in the South.” Bigger goes to the movie with Jack to watch a film named The Gay Woman; the poster of which shows “images of white men and white women lolling on

beaches, swimming, and dancing in night clubs.”

Even the newsreel features white millionaires and their lives showing Bigger the scintillating aspect of a white world beyond his reach, which adds to his dissatisfaction with everything and urges him to rebel against a world that kindles and repudiates dreams simultaneously. The urban landscape that is drawn catapults Bigger into insecurity; and as Houston Baker argues: “bereft of determinative control of boundaries, the occupant of authorized boundaries would not be secure in his or her own eulogized world but maximally secured by another, a prisoner of interlocking, institutional arrangements of power.”

Living in Chicago intensifies Bigger’s severe sense of dislocation and isolation. His character is a complex paradox of fear and pride that thrust him into a racist and unfair world. He yearns to challenge all forces that strive to ‘keep him in his place’ demanding his own place in the world and violence seems to be the one means he knows to realize that.

Bigger treads a difficult path to achieve his voice. Wright comes closest to his protagonist during the murder scene of Mary Dalton. Discovering his indefensible crime, Bigger acts in utter frenzy and out of terror disposing of Mary’s corpse by decapitating and burning it in the furnace:

He paused, hysterical. He wanted to run from the basement and go as far as possible from the sight of this bloody throat. He could not. He must not. He had to burn this girl. With eyes glazed, with nerves tingling with excitement, he looked about the basement. He saw a hatchet. Yes! That would do it.

The narrative voice interprets most of Bigger’s actions as instinctive reactions to his death-defying situation. The pace of narration gains much speed with the compelling sense of determinism that lurks in the background and leaves no other choices for Bigger. However, the narrative paradigm starts to change with Mary’s murder which as Laura Tanner describes: “opens up the possibility of rewriting (Bigger’s) own existence within a new language game and a new paradigm of reality.” Bigger unintentionally and naturalistically performs the exact role the white society expects of him by assuming the identity of a murderer, however, a strange sense of pride

---, Native Son (London: Picador, 1995) 68

Richard Wright, Native Son (London: Picador, 1995) 132

overwhelms him. He recalls his murder and though it has been an accident, he craves to think about it differently to maintain this new self-esteem.

For the first time in his life, Bigger is allowed to make choices and he can either flee from the electric chair or keep walking down the new path murder has opened up for him. Wright argues that “at the moment when a people begin to realize a meaning in their suffering, the civilization that engenders that suffering is doomed.”33 Bigger’s petrified flight brings about more bloodshed. Though killing Mary evokes pride and a new sense of control in Bigger, it remains a fortuitous act of manslaughter. Bessie’s murder, however, is premeditated; a blood-thirsty beast is on the loose in Bigger’s mind bringing about a flood of rash violence. The ideological hegemony of freedom deludes Bigger into being an equal to his white oppressors and so he deliberately chooses to direct his oppression towards a black character as the whites do. Bessie’s murder entails more brutality as Bigger drags her under duress to a warehouse where he rapes her and relentlessly crushes her head with a brick till he thinks she is dead and discards her body down an air-shaft. Her cold-blooded murder marks a significant stage in Bigger’s journey to establish his true identity. Bigger takes much pride in his act and he realizes that he is experiencing irretrievable shifts; “there remained in him a queer sense of power. He had done this. He had brought all this about. In all his life these two murders were the most meaningful things that have ever happened to him.”34 He strives to know what he wants and what he is. His flight discloses masked truths and he realizes that his violence and hate stem from his suffocating environment that allows nothing but violent action directed to everyone and enforcing indifference regarding their reaction to him.

Murder opens up new horizons of freedom and choice for Bigger creating a “new world,”35 but the deterministic webs remain tightly weaved and his flight is doomed. ‘Fate’ is the title of Book III in which Bigger embraces his inevitable end on the electric chair. However, this book marks more changes in his agency and he is finally able to establish his true self. Wright moves from his naturalist perspective to an existentialist one as Bigger is left in solitude to brood over his entire life and seek some significance behind his actions. With Ma, Vera, Buddy, GH, Gus, Jack,

34 Richard Wright, Native Son (London: Picador, 1995) 279
35 Ibid. 281
Reverend Hammond, Jan, Max, State Attorney Buckley, and the Daltons in Bigger’s cell, he is in direct confrontation with all the forces that pushed him into this cell.

Jan and Max stand for the communist dogma that attempts to use racial oppression and political subjugation in its propaganda machinery to attack capitalism. For them Bigger is an instance of coercion that serves their cause, not a human being and this is where they fail. Max’s character serves as an aiding voice to articulate Bigger’s predicament. Bigger needs Max to interpret the complexity of his situation as he “knew that the moment he tried to put his feelings into words, his tongue would not move … he wondered wistfully if there was not a set of words which he had in common with others, words which would evoke in others a sense of the same fire that smoldered in him.”\textsuperscript{36} It is through the help of Max and Jan that Bigger is able to find his voice and establish his identity. Jan crosses the line and manages to establish a faint connection with Bigger who realizes that “this white man had come up to him, flung aside the curtain and walked into the room of his life.”\textsuperscript{37} Jan is the one character who tries to reach out to Bigger, not to accuse, but to understand him. And through his conversations with Max, Bigger sees his existence in new lights. Before committing his brutal murders, he is dispossessed of any will and his life runs through “indifference and violence; periods of abstract brooding and periods of intense desire; moments of silence and moments of anger.”\textsuperscript{38} When he is entrapped, his vision is still controlled by his bitterness for being an inferior black pariah. Max’s conversations with Bigger drag him to a snapping point of perception as the pace of narrative slows down. Bigger experiences clashing feelings of hope and despair but he endeavours to see himself in relation to others and realizes the impossibility of attaining a sense of wholeness.

Bigger’s attitude towards Max is ambivalent; he experiences a fervent urge to talk to him, though he fully understands that Max is “upon another planet, far off in space.”\textsuperscript{39} Bigger’s introspection allows him to see that his environment has been a compelling force that made him hurt others and that his invisibility as an African American has been the reason behind his endeavours to blot out everything. Although Max tries to explain it all to Bigger from a proletariat perspective and to assure him that this is way the wretched of the earth feel, Bigger attains a sort of deeper insight

\textsuperscript{36} Ibid. 225 \\
\textsuperscript{37} Ibid. 326 \\
\textsuperscript{38} Ibid. 67 \\
\textsuperscript{39} Ibid. 454
into his condition and reaches a higher level of consciousness. To consent to Max’s interpretation of his crimes “would be once more to accept a passive view of himself, to sink back into oblivion again.”40 Bigger transcends his hatred and refuses to blame his actions on religion or society. The death sentence offers a revelation for this great paradox and Bigger realizes that death has never been his true intention, “But what I killed for, I am! It must’ve been pretty deep in me to make me kill! I must have felt it awful hard to murder …” 41 He successfully achieves his agency by creating freedom out of determinism and attaining meaning of both his life and death through shouldering full responsibility of his deeds.

Bigger achieves the sense of full integration that he has been seeking all his life and through it he can make judgements and choices. Though he commits both murders under different circumstances, they remain quite overlapping in his mind since he is not after the motivation of his actions as much as the actions themselves. He forges his identity through this action of killing and by accepting its brutal nature he is born into humanity only to die:

‘What I killed for must’ve been good!’ Bigger’s voice was full of frenzied anguish. ‘It must’ve been good! When a man kills, it’s for something … I didn’t know I was really alive in this world until I felt things hard enough to kill for ‘em … It’s the truth, Mr. Max. I can say it now, ‘cause I’m going to die. I know what I’m saying real good and I know how it sounds. But I’m all right. I feel all right when I look at it that way … 42

Bigger breaks the invincible discourse of both whites and communists and attains a voice that he can never relinquish, a voice that denotes an urge to exist and to make the grade of this existence with every action entailed in it, even if it is murder. His overt voice enables him to eliminate his invisibility and step out of ‘his place.’

Bigger’s agency stems from discursive acts of violence and bloodshed, which positions him in African American stereotype as conceived in white mythologies. His story appears on the surface as that of a typical black man who commits a crime and gets his due punishment. White racism in America strives to maintain such an image of African Americans so as to endorse its prejudices and retain its sense of superiority. But Wright avers that Bigger’s story aims at demolishing such

41 Richard Wright, Native Son (London: Picador, 1995) 461
42 Ibid. 461
conventional replicas. *Native Son*, despite its flaws, successfully creates a shock for its readers and through the character of Bigger. John Reilly believes that “Wright throws the weight of stereotype back upon its source to create a greater shock than the murders – the recognition that those very acts of violence are consequences of the social and linguistic events that created Bigger.”\(^{43}\) Despite being on the threshold of death, Bigger strives to fulfil a fading plea for human communication. Max’s shock makes it rather unfeasible so Bigger asks him to “Tell Mister … Tell Jan hello …,”\(^{44}\) he attempts to communicate with a white character since he conceives his identity as a human being and he does not see himself purely as an African American any more.

Ralph Ellison acknowledges the impact of *Native Son* and the shock Bigger’s characterisation is meant to induce in white and black audiences, however, he argues that “Wright could imagine Bigger, but Bigger could not possibly imagine Richard Wright.”\(^{45}\) Ellison’s criticism resonates clearly with Bigger’s ultimate pronouncement and his sudden ability to verbalise his situation from a deeply philosophical perspective. Wright’s style in writing the novel is loaded with linguistic sophistication, imagistic descriptions, and a unique use of metaphors that denote Bigger’s reality and maintain Wright’s control over rhetoric. Bigger’s final declaration to Max stands as a huge and unattainable symbolic abstraction for him which creates a textual fracture in Wright’s narrative. Bigger displays an obviously unwieldy relationship with language throughout the novel, thus his linguistic development at this point is rather abrupt and unconvincing. His pronouncement also carries political premises that Bigger is unlikely to even comprehend. *Native Son* can fall into the category of proletarian works that share common features of what Barbara Foley describes as “the insertion of long explanatory speeches, the allegorical equation of classes with individuals, or the centrality of political conversion in protagonists.”\(^{46}\) However, the political dimension in Bigger’s portrayal is highly symbolic since Bigger lacks the intellectual potential to enable him to grasp political ideologies, which further makes his heuristic declaration unpersuasive.

\(^{44}\) Richard Wright, *Native Son* (London: Picador, 1995) 462

It is also the attempt not to be part of the African American community that leaves Bigger in no-man’s land which echoes a lack of reconciliation Wright has always suffered from. Bigger is oddly caught in a greyish zone or “shadowy region”47 between a white and a black world, yearning for the former and repudiating the latter while hating both. This perpetual shrugging from the black community is a formidable flaw that James Baldwin takes against *Native Son* as it denies African Americans their own black culture. Depicting Bigger in absolute isolation in the novel indicates that “a necessary dimension has been cut away; this dimension being the relationship that Negroes bear to one another, that depth of involvement and unspoken recognition of shared experience which creates a way of life.”48 This feature in Bigger’s characterisation also confines him in another framework through which he remains a social and prophetic symbol, not a fully-developed human being, and even when he manages to wrench his identity, it is achieved on a metaphysical level.

Wright tightly weaves a ruthless web of deterministic iron chains that push his characters to the brink and make him ripe for rebellion but they are always drawn as social outcasts. His voice is resonant and true but it carries incongruities as it seeks to create a sociological framework in telling the stories of African Americans who are totally isolated from albeit the victims of their environments. In *Twelve Million Black Voices* the distance disappears because the narrating voice adopts the ‘we’ pronoun to become one of the people. Reilly argues that “Wright negated the apparently objective facts and gave to the people the power to interpret and shape their experiences. Thus, they assumed the capacity to become subjects rather than merely objects of history.”49 However, the tone of the book remains largely subjective as Wright fails to be detached and becomes a complete participant. The same sociological paradigm puts Wright in a similar position with his inarticulate protagonist who strives to attain an individual voice. Attaining agency for Bigger is Wright’s means of realising complete detachment and becoming an observer but the final declaration weakens this endeavour where Wright’s voice is still heard in the background. Gwendolyn Brooks’s *A Street in Bronzeville* (1945) is significant because it fills in some of the gaps that are left by Wright. Like him, she is writing about urban Chicago during the same time while responding to the same sociological wave that swept that literary

49 John M. Reilly, “Reconstruction of Genre as Entry into Conscious History,” *Black American Literary Forum* Spring 1979: 3
Renaissance. Wright never gives a fully-developed depiction of African American women in his works whereas Brooks allows more room for women. Unlike him, she chooses a different aspect of the sociological doctrines to embrace and whereas Wright fuses naturalism and communism to delineate quite a gloomy side of the kitchenette world, Brooks’s world is much brighter and the participant-observer dichotomy is always at play in her poems.

The African American voice of the Chicago Renaissance endeavoured to break the silence while disclosing righteous anger at an antagonistically racist situation. African American writers embark upon the task of finding their own voices and then giving a voice to their characters wherewith to articulate their diverse inner and outer experiences. Being her first published collection of poems, *A Street in Bronzeville* epitomises both attempts by Gwendolyn Brooks. There are many echoes that linger in the background of her poems which fall into three main sections; where the first section draws delineations of Bronzeville and its dwellers, the second section narrows the focus on black characters portraying their emulations and defeats, and the last one is a sonnet sequence tackling the treatment of African American soldiers in US Armed Forces during World War II. Through these poems, Brooks struggles with her inherited poetic pedigrees of expression in an attempt to break with her ancestors and attain her true voice. She also tries to give a voice to her vignettes and poetic personae to express their paradoxical experience of being entrapped in poverty and racial prejudice while aspiring to realise their crestfallen dreams despite their environment. Brooks’s acumen as a poet is clear in the prosody and rhetoric of technical artistry, her narrative strategies, and syntactic techniques. She uses ordinary and lucid speech in most of the poems and her forms are traditional ones that range between the ballad, the blues, terza rima, quatrains, free verse, and the sonnet. However, she manages to create her stylistic idiosyncrasies as in adapting and merging different forms together and in her unique use of rhythms. As D. Melhem notes Brooks deftly “dramatizes everyday existence while her prosodic variations support its diversity.”

Published in 1945, *A Street in Bronzeville* marks the intersection of scores of disparate streams of thought springing from the 1920s and through the 1930s and

---

1940s to which Brooks has been quite responsive. She is a true heir to the Harlem Renaissance embodied in the poetry of Langston Hughes, whose lesson is seeking power in blackness and adopting a sanguine perspective in poetic vision. In her autobiography, she obsequiously remembers his impact on her at that preliminary stage: “Langston Hughes! The words and deeds of Langston Hughes were rooted in kindness, and in pride. His point of departure was always a clear pride in his race.”

The leftist ideologies of the 1930s are clearly mirrored in her realistic depiction of the rivalry of her characters against an inequitable and crushing environment. Her vignettes of mothers, men, women, children, preachers, and soldiers are all rooted in the social confinement of penury and racism. Brooks equally responds to the sociological theories about African Americans that influenced many voices emerging from the Chicago Renaissance, among whom Brooks’s stature is highly prominent. In their sociological exposition of black life in the urban North, St. Clair and Horace Cayton coin in *Black Metropolis* the term ‘The Axes of Life’ to refer to the means by which dwellers of Bronzeville seek perseverance through: “(1) Staying Alive; (2) Having a Good Time; (3) Praising God; (4) Getting Ahead; and (5) Advancing the Race.”

Most of Brooks’s poems, which are grouped thematically in the volume, rotate round these major axes.

Bronzeville is both the urban and psychological landscape that shapes and influences its residents and plays a major part in their actions, choices and ambitions. Brooks’s residents of Bronzeville are not displaced people that roam astray in existentialist quests or social pariahs in their own community as the characters of Wright, they are real characters enmeshed in their environment with all its promises and constrictions. Other than their pursuit of social justice, there is nothing stupendously great about the unnamed dwellers of Brooks’s unnamed street in Bronzeville as she recalls depicting them while living on 63rd Street: “I wrote about what I saw and heard in the street … There was my material.” However, Brooks does not conform to the dogma of seeing them collectively through the 1930s leftist lens of masses. Though her work fully acknowledges the impact of the gigantic and iron city on its residents, her realism gives no way to the deterministic approach of the neorationalists and the African American protest literature that are both unmistakably

---

echoed in Wright’s *Native Son*. Though most of them remain anonymous, her characters maintain their human individuality in brazing out oppression. Her Bronzeville is a world of dingy kitchenettes, funeral homes, beauty parlours, Black churches, pubs, movie theatres, prostitutes, mothers lamenting their aborted children, silent old couples, and defeated soldiers with their whimsical triumphs and defeats.

In “kitchenette building” a sturdy sense of place is established and the choice of the communal first-person dramatic voice avers the bearing of this place on its dwellers. The kitchenette is the racist synecdoche that indicates suburban segregation as old mansions have been turned into a form of shared accommodation houses for Southern African American immigrants in Chicago’s South Side. Wright describes it as “our prison, our death sentence without a trial, the new form of mob violence that assaults not only the lone individual, but all of us, in its ceaseless attacks.” The poem opens with a modernist declaration: “We Are things of dry hours and the involuntary plan,” which resonantly echoes T.S. Eliot’s “The Hollow Men” and creates a sombre air of subjugation to the depredations of those imposed plans. Living in the kitchenette leaves its residents “Grayed in and gray” suffering under the many shackles of paying the rent, making ends meet and gratifying a partner, which incarcerate their souls and rein in their dreams. The reality of the urban ghetto is drawn as highly adversative to dreams. Ruminating Langston Hughes’s deferred dreams, Brooks takes on a realistic perspective in depicting her characters and delving into their ghetto life. The poem then deftly draws a harsh paradox between the awry kitchenette conditions of stinky pong and the possibility of holding hope.

In the following stanzas, however, Brooks does not give in to the modernist views of fragmentation and meaninglessness. Though this kind of dehumanising environment should leave its residents utterly downhearted, the speaker imposes the question of dreaming amid these conditions. The tone changes into one of unobtrusive humour with the domestic imagery of “onion fumes”, “fried potatoes” and

57 Eliot’s poem “The Hollow Men” depicts ethereal men who inhabit a morbid realm of spiritual vagrancy and their quest for salvation can only be attained by turning back to God. They are dead men walking, hollow in their existence and speech, and utterly detached from reality, which impels them to the world of dreaming. Brooks’ kitchenette dwellers may have the same vantage point, however, they are not as detached as Eliot’s characters, and they have clearer perception of the torpor that divides dreaming from reality.
“yesterday’s garbage” standing in the way of realising any dreams, and the symbolic use of the colours “white” and “violet” to denote the nature of those dreams. White takes on a rather ironic dimension in African American texts, for though it is the archetypal colour of purity and peacefulness, it also rings a sad bell of racial oppression. Violet, however, as Melhem explains stands for “a solitary flower, honeyed, self-pollinating.” Both colours delineate a frail albeit graceful image of these African American dreams. The dominating metrical pattern of the poem is iambic pentameter, but irregular rhyme intrudes to mirror the chaotic state of the kitchenette milieu and the paradox of being able to retain the power of dreaming despite obvious oppression. The stanzas of the poem are all written in terza rima with the exception of the second stanza which is a quatrains to give more space to contemplate the battle between the residents’ reality and dreaming. The strong trochee of “Flutter” starting the fourth line endows much power upon those dreams while wondering whether they can “sing an aria down these rooms.” Introducing the aria renders upon the question a rhetorical quality as the speaker fantasises the possibility of its fulfilment.

The third stanza displays Brooks’s compassionate relationship with her characters through her understated irony and placid humour in portraying how they cling to and nurture their dreams. Musicality emerges from the alliteration: “Even if we were willing to let in / Had time to warm it, keep it clean” adding beauty to those dreams, yet all efforts are likely to prove futile with the garbage’s “ripening in the hall” of the building. The dream of the aria is stillborn even if the dwellers are willing to embrace it. The last tercet does not fulfil the elegant dream either. However, it does not end the poem in despondency. The question of the previous two stanzas is answered in succinct declarations:

We wonder. But not well! Not for a minute,
Since Number Five is out of the bathroom now,
We think of the lukewarm water, hope to get in it.

The speaker does not choose seclusion or defeat, the poem conforms to Black Metropolis’s axe of ‘staying alive’, as the speaker attains this through the power of

dreaming. B. Bolden argues that “the bubbles of a fragile imagination are burst by the narrator’s reality check, and the momentary exploration into the foreign world hopes and dreams is thrust aside,” but the image by the end does not have to be so gloomy. As Number Five leaves the bathroom, the speaker soon wakes up from the chimera of the aria, it is true that the reality of the kitchenette is glaring, but the speaker still retains a simple and modest hope of getting into ‘lukewarm water’, as unpretentious as the dream is, it exists in the kitchenettes with the strong caesura preceding ‘hope’. The language of the last stanza is highly prosaic and simple, it is the voice of the speaker that utters it, and as close as Brooks gets to her characters, she manages to attain detachment from them letting them speak for themselves.

There is no solid evidence of Brooks’s involvement with the Communist Party, yet the impact of the leftist polemics is someway noticed in most of the writings stemming from the African American literary oeuvres appearing in the 1930s and 1940s. In her autobiography, Brooks recalls that “1941 through 1949 was a party era. Partying now was most important. My husband and I knew writers, knew painters, knew pianists and dancers and actresses, knew photographers galore.” Among the names that she mentions are: Paul Robeson, Langston Hughes, Margaret Burroughs, Frank Marshal Davis, and Margaret Walker among others, and it would be hard to suggest that communism did not occupy any part in their conversations at those parties. The framework of Brooks’s vignettes of the black women of Bronzeville espouses indubitable proletarian ideologies that structure them within the themes of social caste, and the economic afflictions imposed upon the working classes. Bronzeville is not simply their urban ghetto for the term goes beyond the boundaries of place to denote these women’s environment as a bigger concept embracing gender, class, and race. Unlike the women characters of Wright that are not fully-developed and who resort to different means of escapism rendering them as further trouble on the shoulders of the black man and adding to his sense of inferiority, Brooks’s women go all-out to survive the ravages of poverty and both black and white prejudices.

The series of “Hattie Scott” poems are about a black domestic worker and her means of surviving economic hardships in domestic work, love, coming up to white standards of beauty, and other man-woman relations in her world. Brooks’s

64 Gwendolyn Brooks, Report from Part One (Detroit: Broadside P, 1972) 68
perspective focuses on the drudgery of her menial chores while coming to grips with her marginalised existence and through her use of Southern vernacular idiom, oral rhythms, and the point of view, she creates what Bill Mullen calls “a flower of the rural proletarian ground of the migration.”65 The series falls into five interior monologues in a first-person narration consciousness that ironically starts with “the end of the day” in which the image of the sun is central and Hattie identifies with it:

It’s usually from the insides of the door
That I takes my peek at the sun
Pullin’ off his clothes and calling it a day.66

The poem is uttered at the time of sunset, yet this does not mark the end of Hattie’s harsh work. The sun fails to herald the beginning of a bright day, but rather more work for Hattie for she is denied enjoying its warmth. The closing quatrain establishes this identification as an inevitable fact in Hattie’s life that she must accept willy-nilly.

“the date”, taking the form of an octave, depicts another aspect in Hattie’s life and displays a different tone in her voice. Unlike the resigning tone of the previous poem, “the date” portrays Hattie’s fervent zeal to get her work done and go to meet her lover. However, her ‘Madam’ wants to keep her to do more work. The tone is enraged:

Hey, you
Whatcha mean talkin’ about cleanin’ silver?
It’s eight o’clock now, you fool.67

Hattie’s suppressed anger is cloaked in poise as she refuses to do overtime work and decides to go to her ‘date’ instead of earning extra money. In the four-syncopated quatrains that constitute “at the hairdresser” the hair motif is employed to stand for the impossible white standards of beauty, to which African Americans are not able to walk up to. Hattie wishes to fulfil the miracle of elongating and sweeping her short and frizzy hair at the hands of Minnie. She has much faith in the power of cosmetic products of “Madam C.J. Walker” and “Poro Grower,”68 but as they prove futile with her hair, Hattie’s tone is not derelict by the end of the poem and she enthusiastically declares that:

---

66 Gwendolyn Brooks, Blacks (Chicago: Third World Press, 1994) 51
67 Ibid. 52
68 Ibid. 53
Long hair’s out of style anyhow, ain’t it?
Now it’s tie it up high with curls.
So gimme an unsweep, Minnie.
I’ll show them girls.⁶⁹

Though Hattie ends the poem with accepting her own black beauty, the following poem adopts a different voice. “when I die” is Hattie’s rumination of her death. She realistically acknowledges her marginalised existence that is not going to be lamented after her death except for “one lone little short man / Dressed all shabbily”⁷⁰ who will put cheap flowers on her grave. However, his mourning is likely to be ephemeral since he is going to find another girl to replace her in no time. The poem closes in a sad line “There’s nothin’ more to say”⁷¹ reflecting Hattie’s cynicism at her status as a worker in the white world and as a black woman.

The last poem in the series marks some disorder in the narrative scheme because instead of ending with Hattie’s death musings in the previous poem, Hattie’s voice emerges with a rebellious tone as she watches one of the frequent fights that her friend Moe Belle Jackson is having with her husband. Hattie rejects her friend’s submissiveness to physical abuse and the whipping to which she would respond with a knife. The married couple that appear to be what Melhem calls “a sadomasochistic couple”⁷² soon make peace and get back to their normal life as Moe sheds a tear and her husband wonders at breakfast: “More grits, dear?”⁷³ Though the poem does not involve Hattie directly, it firmly establishes her sense of dignity. Brooks’s depiction of Hattie is not totally controlled by leftist ideologies. Hattie starts as a stereotypical image of all African American domestic workers who suffer from tedious errands in white and cruel house holds and strive to look beautiful. However, Hattie retains her own individuality and though her voice is rebellious at times, her anger is self-conscious, and she neither resorts to violence nor feels too aggrieved, she keeps her dignity and accepts her life and her self as they are.

“Queen of the Blues” depicts another working woman in Bronzeville night life. The poem marks a distinctive achievement in technique as Brooks fuses the blues with the ballad in telling the story of Mame the blues singer. The choice of the form is

⁶⁹ Ibid. 53
⁷⁰ Ibid. 54
⁷¹ Ibid. 54
⁷³ Gwendolyn Brooks, Blacks (Chicago: Third World Press, 1994) 55
in total harmony with the poem’s sad content since the blues is defined by Ralph Ellison as
an impulse to keep the painful details and episodes of a brutal experience alive in one’s aching consciousness, to finger its jagged grain, and to transcend it, not by the consolation of philosophy but by squeezing from it a near-tragic, near-comic lyricism. As a form, the blues is an autobiographical chronicle of personal catastrophe expressed lyrically.  

The multi-voiced “Queen of the Blues” is set in the vaudeville night life of Bronzeville with the voices of Mame, the narrator and the chorus. As Werner explains Brooks presents seven-, eight-, and nine-line stanzas to “manipulate emphasis by visually isolating words for the reader” thus the basic repetitive AAB pattern of the blues of the twelve-bar, three-line structure in which the second line is replica of the first and the third rhyming line offers commentary or elaboration is not perfectly fulfilled in the poem. The influence of Langston Hughes is clear in her blues technique in which she divides the lines instead of conforming to the conventional basic pattern and giving voice to the main character of the blues to tell her part. The poem is mainly about Mame’s loneliness as a major theme established and polarised in emotive tones from the first stanza uttered by the narrator’s voice:

Mame was singing  
At the Midnight Club.  
And the place was red  
With blues.  
She could shake her body  
Across the floor.  
For what did she have to lose?  

The symbolic use of colours is a prominent metaphorical device that Brooks takes after modernist poets with setting red in contrast to blue(s). Red is the colour of incongruities; it is the puzzling colour of ardour, living on the edge and to the full,

---

75 Craig Werner, *Playing the Changes: From Afro-Americanism to the Jazz Impulse* (Urbana: U of Illinois P., 1994) 150
76 Most of Langston Hughes’s poetry is blues-inspired. Hughes believed that the blues was the spiritual force standing behind the ability of African Americans to keep going despite oppression and that it had the power to mirror everything about the African American experience. He was quite innovative in manipulating the rhythms, musical structures, techniques, and lyrics of the blues in his poems in which prominent blues performers like Bessie Smith and Ma Rainey were his poetic muses.
beating hearts and body insistence. It is also a colour associated with wounds, blood, violence, and danger. The ‘blues’ is a euphemistic reference to melancholy which establishes the night club as a hostile place that denies Mame any bliss pushing her to more solitude and indifference.

The narrator voice recounts the plaintive episodes of Mame’s family life with the death of her mother whom she loved and buried with “roses and tears” and the absence of any “Legal pa”, “Big brother”, “Small brother”, “Baby girl” or “Sonny boy”78 to restrain her from leading such a brazen life, she is left in utter solitude. Mame’s voice makes its way in the fifth stanza with brusque language and conspicuously short lines:

“Show me a man
What will love me
Till I die.
Now show me a man
What will love me
Till I die.
Can’t find no such a man
No matter how hard
You try.
Go ‘long, baby
Ain’t a true man left
In Chi.79

The stanza conforms to the basic musical pattern of the blues since Mame is actually singing her own blues. The quaint humour that appears in earlier poems is absent from the poem’s general tone. Struggling in her harsh urban experience, Mame desperately seeks a man to love her but this dream is soon crushed by the rhetorical question she imposes by the end of the stanza which does not even end with a question mark. The poem brims with irony as the ‘Queen’ adopts another voice that dredges up working as a domestic servant in white kitchens and giving all her wages to a “daddy” that left her for a “brown-skin chicken” whom she intends to turn “Black and blue.”80

Once more the symbolic use of colour is at play, brown denotes that the

---

78 Ibid. 56-57
79 Ibid. 57
80 Ibid. 58
other girl escapes the black tinge that scars Mame’s skin and thus black becomes the
colour of both Mame’s skin and irate vendetta. Mame’s vignette is established as a
double victim of white capitalism and intra-black racism.

Mame’s blues is a sad ode to oblivion and loss. The M.C. is the only one who
sings the praises of Mame by introducing her as “Queen of the blues! / Folks, this is
strictly / The queen of the blues!”81 However, this acclamation leaves her in a state of
morbidd mourning over this majestic obloquy as men would not even pay her the most
minuscule courtesy of tipping their hats. The ‘hollering’ of the M.C. is quite ironic
since holler is originally “an animated religious song associated with revival
meetings.”82 The irony transforms Mame’s alleged royalty into mere ignominy as she
rolls her hips while performing her blues, for after all “What did she have / To
lose?”83 Repeating the rhetorical question together with introducing the voice of the
M.C. breaks the blues call-response pattern as Brooks achieves a “call-and-response’s
rhetorical inverse”84 since the question remains unanswered. The three voices of the
poem merge in the last two stanzas to pass a verdict on such men as “low down /
Dirty and mean.”85 Mame’s unfulfilled quest is for human dignity and respect. Unlike
Ma Rainey in Sterling Brown’s “Mother of the Blues,” Mame is left to confront the
physical obscenities of the Midnight Club where men “pinch my arms / And they slap
my thighs.”86 Ma Rainey’s reward lies in the other extreme for she appears as a
legendary idol around whom the rural Southern audience “Flocks in to hear / Ma do
her stuff.” Brown’s poem, mainly written in Southern vernacular and dwelling upon
folklore as the authentic form of African American self-expression, elevates the blues
singer into a symbol of black beauty, pain, survival, and the entire folk heritage. The
poem is typical of the Harlem Renaissance voice that urges its audience to take pride
in their race, resist oppression while seeking to explore the aesthetic potential of the
black vernacular. This proud voice, however, dissolves into a realistic and
deromanticised tone in Brooks’s perspective in depicting Mame’s solitude among her
audience and her fatal apathy in singing and living her blues; she is neither a Ma

86 Ibid. 58-59
Rainey nor a Bessie Smith. The poem probably realises the axe of ‘staying alive’, and though the Midnight Club falls into the category of ‘having good time,’ Mame is totally excluded from that fun.

Hattie and Mame are granted their own voices to articulate their urban and human experiences in interior monologues or blues. Brooks’s poems about Bronzeville men however sing a different note. Her poems construct an African American urban masculinity of men who have no bright professions or settled family lives with caring wives and happy children, and who defy oppression in a rather unconventional way. Unlike her female poems where women have their own voices, her male vignettes are given aiding narrative voices in telling their stories for usually in her narrative strategies “whether she is talking of women or men – sometimes undoubtedly to generate compassion, but, at other times, it well may be, with her tongue in her cheek – constantly speaks as a woman.” Brooks’s perspective in limning their experience pays much attention to the smallest details, how these men view themselves and view black women, and their display of a maniacal obsession with their physical appearance.

The elegiac ballad “of De Witt Williams on his way to Lincoln Cemetery” sums up the status of most of her male characters with the opening quatrain:

He was born in Alabama,
He was bred in Illinois.
He was nothing but a
Plain black boy.

The ballad celebrates the simple life of an ordinary African American whose Southern roots remain part of his identity though he immigrates to the North, gets enmeshed in the big city, tries to enjoy the small pleasures of dancing, drinking, and women that life offers him, and then dies. Technically, Brooks merges the metrical patterns of the

---

87 Both women are depicted in a rather proletarian light as African American workers in the white world but their depiction is not as melodramatic as Richard Wright’s Bessie Mears in Native Son. Bessie is also a black domestic worker in white houses, but she is denied any volitional voice or action by Wright. Her character is drawn as an escapist who flees to sex and alcohol to survive her plight of oppression. Pleading Bigger to spare her life, her character takes on some pathetic dimension which is intensified by her immediate brutal rape and murder by Bigger. Wright further carries her melodramatic delineation after her death in the court scene where her corpse is brought as an evidence of Bigger’s thirst for blood, not to punish him for that crime, but to convince the jury of his guilt of killing white Mary.

88 Bylden Jackson and Louis D. Rubin, Black poetry in America : Two Essays in Historical Interpretation (North Carolina: Louisiana State UP, 1974) 82

89 Gwendolyn Brooks, Blacks (Chicago: Third World Press, 1994) 39
ballad with the repeated couplet that she takes from African American spirituals of “Swing low swing low sweet sweet chariot. / Nothing but a plain black boy.”90 Through this repetition, Brooks portrays De Witt as what Werner describes as “an Everymen black boy”91 whose life and death mark no extraordinary events and remain marginalised till their funeral processions.

In *A Street in Bronzeville* Brooks holds a colourful palette that presents a vivacious depiction of Bronzeville through a pictorial language. Brooks is the disciple of a double-voiced literary legacy which, as Houston Baker argues, renders the experience of reading her early poems as reading “white style and black content – two warring ideals in one dark body.”92 Her early voice has a parodic quality and occupies a special in-between position which makes its tone satirical albeit sympathizing, and detached albeit compassionate. It has undeniable modernist traces of irony, symbolic use of colours, subject matter, and narrative stance. Yet Brooks’s irony is singular in its emotional punch and its lucid diction. She takes the bright optimistic Harlemite tone from Langston Hughes but frames it in realism and keeps a tone of humour that reflects the hopefulness of the 1940s American New Deal and its promise of democracy and opportunity for African Americans. Most of her characters are hemmed in a chaotic world, however, they maintain control over their fates, and in most cases they end up making their own choices. Violence is not their refuge and even when they attempt to protest or rebel, their voice is placid as the girl who spends her lifetime in the front yard and innocently muses “And I’d like to be a bad woman, too” just to go to the back yard and see real life. They are not bitter or outraged, and they never lose their potential of dreaming.

Chicago in the 1930s and 1940s phased in an urge to escape all African American stereotypes and to forge an unprecedented black aesthetic tradition. It sought political participation and black cultural enhancement. The Chicago Renaissance flourished on many cultural levels but the new sociological theories had one of the most resonant echoes in the new literary upsurge. Wright and Brooks both turned to sociology in depicting the urban experience of African Americans in the Chicagoan kitchenettes in the 1940s. The participant-observer notion that came from

---

90 Ibid. 39
the Chicago Urban School of Urban Sociology had an undeniable impact upon both writers who always delineated their characters a propos their environment and tried to achieve a balance between playing both parts. Wright’s fusion of naturalism and protest hindered the achievement of a perfect balance in *Native Son* and his other fusion of sociology and history further stood in the way in *Twelve Million Black Voices*. Brooks, however, was more able to maintain this balance in her work where she was able to retain distance and present a brighter side of the ghetto. But read together, their works complement each other and give a true reflection of African American life in urban Chicago.
Health Inequalities and the Urban Foodscape: Evidence from Alameda County

Most research on neighborhood effects and health has identified local institutions and resources as a pathway through which neighborhoods may influence health. The bulk of this work has investigated issues like access to health care facilities, the number and quality of medical practitioners, and the nature of medical technology and facilities. Others have considered how characteristics of the neighborhoods may also make it difficult to get to the doctor in the first place, such as poor and inadequate transportation or high crime rates that make people fearful of travel. The resources in a neighborhood may also influence levels of overall health (as opposed to their ability to get treated when sick).

It is widely understood that diet plays a significant role in the causation and prevention of adverse health outcomes. While diet choices are most likely impacted by a constellation of factors, only a limited number of studies have identified and investigated the built environment as a factor that may critically hinder people’s ability to attain a health diet.

Using a geographical analysis, this study investigates the impacts of neighborhood effects on health as a result of local nutritional environments or ‘foodscapes’- food landscapes.
specifically, the study examines the spatial distribution of major chain grocery outlets and fast food retail outlets in relation to neighborhood income and racial characteristics, and neighborhood morbidity profiles.

The present study generates much needed empirical data on geographic and economic disparities in retail food access in order to better understand the nutritional-related mechanisms which cause disparate health outcomes. An enhanced understanding of the context in which dietary choices are made has the potential to create more effective programs to decrease nutrition-associated morbidity.

Though spatial analysis has just begun, preliminary findings seem to indicate a very imbalanced geographical distribution of major ‘chain’ grocery outlets and fast food retail outlets- with a disproportionate number of fast food retail establishments in areas with lower median incomes, and a deficiency of major ‘chain’ retail establishments in the same areas.

The fast food/grocery store data will then linked to geographic data on nutrition-related morbidity/mortality rates including diabetes and heart disease in Alameda County, California in the San Francisco Bay Area. Only a handful of studies have focused on the geographic distribution of retail food outlets and morbidity/mortality. This study makes a further contribution in the emerging and interdisciplinary research field combining GIS analysis with more traditional public health/epidemiological methodologies, and offers a powerful visual representation of inequality.

---

1 Chain supermarket accessibility has been used as a proxy for better access to a good selection of high quality, low cost foods. This is based on the assumption that selection, quality, and prices of foods are better at larger grocery stores.
Title: “Both Sides of the Revitalization Coin”: Revanchist and Emancipatory Gentrification in One Chicago Community

“Both Sides of the Revitalization Coin”:
Revanchist and Emancipatory Gentrification in One Chicago Community

This paper is a case study of the “urban renaissance” of a traditionally divested, impoverished, predominately Black community on the west side of Chicago. Central to the paper is a discussion of the two main academic perspectives on gentrification, the ‘revanchist’ and the ‘emancipatory’ perspectives. These perspectives address the political question of whether the policies involved with urban transformation are primarily representative of a ‘revanchist’ or a revengeful approach to the urban poor and other marginalized groups; or whether the policies of urban transformation are predominantly “emancipatory” and representative of a middle-class reaction to the repressive institutions of the suburban life.

This paper considers how the two contrasting academic discourses on gentrification—generally thought of one the one hand, as the American perspective (revanchist); and on the other, as the Canadian perspective (emancipatory) - reflect what is happening within one gentrifying community in Chicago. The paper is an effort to examine these perspectives empirically, as they occur on the ground, and to further inform the theoretical debate on the nature of gentrification within the context of an intensive community case-study based on over three years of participant observation, along with Census, Real Estate, and Mortgage Lending data.

Following a discussion of the emancipatory and revanchist perspectives, the paper presents the case-study community and the specific stories of its urban renaissance.
I argue that the gentrification that has taken place in the case-study community is simultaneously BOTH emancipatory and revanchist, and is important for the further conceptualization and refinement of the very varied process that is gentrification.

Dimensions of Consciousness in W.E.B. Du Bois’ The Souls of Black Folk

Abstract:

Double consciousness has been engaged, deconstructed, manipulated, diluted by scholars of African American issues. Adolph Reed offers that utilizations of double consciousness as a characterization of the “black American condition” can be grouped into three main categories: “integrationist-therapeutic motiv[e] from the 1920s to the mid-1960s, a nationalist-therapeutic one from the mid-1960s to the early 1980s, and an academic race-celebratory one since.” Used therapeutically to understand and promote integration and nationalism and used to add an intellectual element to the celebration of race, double consciousness has come to be a term germane to understanding the position of the African American in American society. Reed further offers that other writers, including Francis L. Broderick and Jack B. Moore, view Du Bois’s idea of double consciousness as “an expression of biographically and psychologically idiosyncratic aspects of Du Bois’s life and upbringing, even as they link the image to larger structures of meaning.” Therefore, critics not only explore double consciousness as it applies to the African American collective, but scholars also look at the manifestation of double-consciousness in Du Bois’s own life.

While this research will highlight manifestations of double-consciousness expressed in Du Bois’s text and life, its true contribution to the research is its exploration of the dimensions of consciousness; these dimensions— double consciousness, “falsified Afrikan consciousness,” and self-consciousness— are revealed in Du Bois’s life and works, particularly in Du Bois’s sociological essay, Souls. Furthermore, Du Bois’s Euro-American scholarship and concomitant Pan-Africanism seems to be one of the more striking manifestations of double consciousness as he attempts to reconcile his education with his heritage. In sum, the dimensions of consciousness— double consciousness, “falsified Afrikan consciousness,” and self-consciousness— are revealed in both Du Bois’s life and works, and these dimensions emphasize the process of emergence from ignorance to knowledge and self-awareness necessary for the progress of the African American collective.
Title: Status of Law and anticorruption in post-reform China

Area: Sociology
Format: Paper session

Abstract

Corruption, an “age-old” (Lo, 1993:1) phenomenon, has been persistent in human history for thousands of years. From the Alpis to the Yangtze River, from biblical time to post-modern era, it features our societies all the time. Osborne (1997) once documents that throughout human history, from ancient Greece, William Shakesphere in the West, to Confucianism and Hinduism in the East, one can find repeated expressions of distaste by scholars and ordinary people for corruption and dishonesty.

Since the formation of Chinese Confucian civilization, corruption has been puzzling this nation. As Maguire (1997:73) summarizes, “corruption has been a recurring theme in Chinese history. Regimes that became too corrupt were felt to have lost the mandate of heaven and in due course they would be overthrown……By the late sixteenth century, the Ming dynasty had become corrupt and they were unable to resist the Manchu invasion from the north……There was sporadic resistance to the new Manchu rulers……” Guomingdang (or KMT) faced the same problem when it was in power, and lost its sovereignty later. The founder of PRC, Mao Zedong places a lot of emphasis on corruption control, and launched mass-based campaigns against corruption1. The moves were effective; the government at that time is regarded to be clean.2 In Deng Xiaoping’s era, he stresses more on economic development, less on ideological struggle. So a new policy of “Open and Reform” was implemented in 1978, targeting a market economy system. The policy was successful regarding to the economic development. People in China enjoyed a better life. However, the new policy not only brought a booming economy to China, but also negative side-effects, such as corruption and crimes. Moreover, with the deepening of economic reform, more corruption emerges in new forms. Or as Gong articulate (1997:278), “recent years have witnessed a spread of corruption into new economic areas as the scope of reform widened in China.” Transparency International established in Germany composed Corruption Perception Index (CPI) based on the various polls. China is ranked 73rd among more than 100 hundreds, which is not pleasing at all. Just because it is so rampant, “in the post-Mao era, political corruption has become one of the central concerns, even an obsession, for the citizens of the People’s Republic of China” (Hsu, 2001:27).

---

1 In 1951 the Three-Anti Campaign against three evils (corruption, waste and bureaucratism) was launched. The Five-Anti- Campaign against five evils (bribery, tax evasion, theft of state property, cheating on government contracts and stealing state economic information) was launched in 1952, targeting businessmen and industrialists. In 196, the Four-Clean (cleaning up account book, granaries, properties and work place), another campaign to combat corruption in the villages, was launched. All these censures of corruption worked effectively, but also was utilized by people to weed out political dissidents. See Lo. T. Wing; Corruption and politic in Hong Kong and China. Philadelphia: Open University Press. 1993.

2 http://www.yangjianli.com/articles/01_minzhu_en.htm
Although corruption is a universal phenomenon, there is no well accepted definition for it. The existing definitions reflect particular aspects of corruption. For example, moral perspective views corruption as individual’s moral problem which is immeasurable or imponderable and a disease of body destructive to political order (Friedrich 1972). Legal perspective views corruption as extra-legal institution or clear-cut illegal behaviors (Bryce 1921). Public-office-centered approach sees corruption as behaviors deviating from the formal duties of an office role rather than law for private interests or influences (Nye 1967). Public-interest-centered approach views corruption as behaviors against public needs and interests shared by a community at large (Friedrich 1966). Public-opinion-centered approach views corruption as what the public in any given state perceives it to be (Heywood, 1997). Market-centered approach conceives of corruption as civil servants abusing his authority in order to obtain an extra income from the public on the base of treating his office as business (Klaveren 1989). P-A-C approach predicts corruption occurring when agents betray principle’s interest in pursuit of her/his own by taking money from clients (Banfield 1975). Rent-seeking approach view corruption money as rent and the bribery process as rent-seeking (Buchanan, 1980).

The above approaches we reviewed above share one point that corrupt individuals do something wrong according to ruling class’ standards, no matter whether their behavior is against norm, law, ethic, public interest, public opinion, or principle’s objectives. In other words, their analyses are inner institutional. A commonly missed point in their analyses is that the ruling group’s standards or posits are always right with no challenge. Such a class bias is their common assumption. It might be overstated to refer it to “false consciousness”. But it is inappropriate not questioning ruling group’s ideology and entrenched interests at all. “Given the impossibility of using the social categories of crime and deviance as scientific categories or observational terms with definable, constant and consistent behavioral referents, it makes most sense to treat them as elements of highly contextualized moral and political discourses, i.e. negative ideological categories with specific, historical applications.” (Sumner, 1990:26) Based on that, rather than analyze corruption following ruling group’s logic, Lo (1993) examines corruption in a societal (social, political and economic) structure and historical background with the ruled group’s interests and political economy such as power, class, ideology, conflict, institution and culture taken into account. His finding shows that since all kinds of deviance including corruption are not “scientific categories or observational terms with definable, constant and consistent behavioral referents” (Sumner, 1990:25), and it is unconvincing not to challenge the class bias behind the previous approaches, it is more appropriate to treat corruption as “a form of social censure” which is a negative category of moral ideology created and enforced by the ruling group in societies (Lo, 1993:3). Censure, as “an expression of strong official disapproval or harsh criticism, or an official rebuke, as by a legislature of one of its members”3, helps to avoid most

3 http://www.thefreedictionary.com/censure
serious deficiency which is class biases in that an assumption of censure is that the problem or contradiction to be censured is internal rather than external. In other words, censure means handling enemies within. In this logic, social censure perspective goes beyond it by rejecting ruling group’s normative assumption or behavioral prerequisite about corruption and therefore exposes the essence or nature of corruption which is overlooked in the former definitions.

If corruption were a special form of social censure, it would serve the ruling group or dominant group in nature ultimately. Dominant group’s definitive goal is to maintain hegemony. All other goals or considerations are subject to it, including anticorruption. Therefore dominant group will take many other issues into account in the process of anticorruption, such as establishing legitimacy, winning public support and personnel arrangement. Moreover, dominant group is not always a coherent group. There are fragmentations and sub-groups within. Also, dominant group exists at various levels such as central government, provincial government, municipal government, and county government. On the one hand, they want to maintain the whole groups’ hegemony; on the other hand, they have their own entrenched interests to consider. With such ultimate goal of hegemony and various aims or considerations in mind, anticorruption is hard to be consistent across the nation. It could be “instruments with which party leaders pursue ideological and political struggles” (Lo, 1993:155). Then anti-corruption could be very selectively targeting, also could be utilized to reach other goals. Following this logic, it seems that it is hard to have a genuine anti-corruption move and anti-corruption cannot be completely successful.

However, there are tons of clean governments around the world including Ice Island, Finland, Australia, Singapore, and Hong Kong. Why they are clean given the “bad” nature of corruption? Is our theoretical imagination wrong or because of something else? Our preliminary research suggests that status of law might play an important role in their anticorruption. More exactly, it is the rule of law which played a key role in effective anticorruption. The rule of law means a complete and well publicized legislation, independent judicial system and fair law enforcement. As a matter of fact, Mainland China has only reached the rule by law rather than rule of law which is mainly about supremacy of law and order. Without rule of law, anticorruption in China is constrained by too many political considerations and personal interference, and therefore faces difficulties.

To test the above theoretical imagination, the author did both quantitative and qualitative research in Mainland China. The quantitative part is purposed as preliminary study testing the theory initially. More than 1100 questionnaires were collected from three universities which located in the north, middle and south China. Cluster sampling was used as sampling method. The statistical results run by SPSS catered for theoretical imagination, and encouraged the following qualitative part. Eight in-depth interviews were done with imprisoned corrupt officials at jails. Ten in-depth interviews were done with normal officials for comparative data. The raw
qualitative data hold up the argument further.

The initial data result confirms the theoretical imagination that corruption in essence is a form of social censure which serves dominant group in society. Without external conditioning power, it will easily be dominant group’s political tool. However, the rule of law conditions dominant group’s such ability effectively, and finally anticorruption turns out to be a genuine move.

Necessary equipment for this presentation include: a room suitable for a lecture/recital, a computer, a projector for a PowerPoint presentation, speakers; a CD player and a VCR player with a speaker to project onto a screen.
Women’s Music of the Holocaust and/or Nazi Invasion

This project and presentation is designed to present stories, experiences, and music from women musicians who either fled their homelands due to the Nazi Invasions or were sent to the Concentration Camps. The format of our presentation is a lecture/recital of poetry reading, piano solos, vocal solos, a PowerPoint presentation, a video-clip, and recordings of a college vocal ensemble. Musicians presented are Ilse Weber, Vitezlava Kápralová, Alma Mahler-Werfel, Fania Fénelon, and Alma Rosé.

Introduction to the Project

Fourteen years ago I created and have since been teaching a course called Women in Music at Keene State College in Keene, New Hampshire; which has served as an elective for the Women’s Studies minor, the BA Music major, and as a general education course in the Arts and Humanities curricular offerings. In addition to learning about the women of the Western culture I have wanted my students to experience a “live” woman artist who was either a composer or a classical performer of women’s music; so each year have organized and brought women artists to the campus as artists-in-residence. The artist this year was Ms. Virginia Eskin, a world-renowned pianist who has devoted much of her career to performing music written by women. With support from Northeastern University (where she teaches) and WFMT Radio Network in Chicago she has been presenting a thirteen-week, one-hour-series of women composers called First Ladies of Music; of which one week included Holocaust and Suffering. In collaboration with Ms. Eskin, she and I presented a similar concert at Keene State on March 5, 2007. Following are the mini biographies of the women and the music we performed.
The Presentation

**Ilse Herlinger Weber (1903-1944)** was a non-Jew who wanted to keep her family together; so she and her younger son, Tommy, followed her husband, Willi Weber, out of Czechoslovakia and to Terezín, which was a concentration camp called Theresienstadt. Ilse and Tommy died in the camp but her husband survived for an additional thirty years; as well as her oldest son, Hanus, who was sent to Sweden in 1939. At 23 Ilse wrote her first children’s book *Tales for Jewish Children*, a talent which she later used at Theresienstadt to write songs and music for the many children who were there. She was assigned the role of head children’s nurse and she sang these songs to them as encouragement during their horrific experiences.

*Kinder Lieder*

**Emigrantenlied** (Song of Emigration)

Swallow your tears, hide your pain,
Don’t hear the insults and abuse,
Though your will becomes hard as brass,
O survive the misery.

Then all will be good, endure,
Be patient in waiting.
Trust in the future,
Don’t lose your courage:
The world will be like a garden!

Then the discord ends, the hatred and horror,
And all pain ends.
Then your enemy calls you a “respected brother,”
And reaches in shame for your hand.

For you shines the sun,
For you the trees grow,
You have once more a homeland and brothers.
This bitterness is forgotten like a bad dream,
Life blesses you again.

**Und Der Regen Rinnt** (And the Rain Falls)

And the rain falls,
I think about you in the darkness, my child!
The mountains are high and the sea is deep,
My heart is dark and very heavy.
And the rain falls,
Why are you so far away my child?

And the rain falls,
God himself has torn us apart, my child!
You should not have to see pain and misery,
-Should not have to walk on rocky streets.
And the rain falls,
Have you already forgotten me, child?

**Dobry Den** (Good Day)

Give us a good day, God,
Bless all people,
So that we may love each other,
And forget all evil.
Kleines Wiegenlied  (A Small Lullaby)
The night creeps through the ghetto
So dark and quiet,
Sleep, child, and forget everything around you.
Nestle your little head in my arms,
Near mother you’ll sleep cuddly and warm.

Sleep, overnight much can happen,
Overnight all suffering can disappear.
My child, you should see, first,
When you awaken.
That freedom has come suddenly overnight.

Ich Wandre Durch Theresienstadt  (I Wander Through the City of Therese)
I wander through the city of Therese
My heart as heavy as lead,
Until suddenly my path ends,
Abruptly at the fortress.

There I stand on the bridge
And look out into the valley:
I wish so much to go further,
I wish so much to go home.

“Home” you wonderfully beautiful word,
You make my heart heavy,
They took my house away from me,
Now I don’t have it anymore.

I turn away disturbed and faint
I was so heavy standing there;
Theresienstadt, Theresienstadt,
When will this pain end?
When will we be free?

Vitezslává Kaprálová (1915-1940) was a Czech composer and conductor who studied at the
Brno Conservatory. She won an award for writing Military Sinfonietta and conducted it at the
premier in 1937. Kaprálová went to France during the German occupation of Czechoslovakia and
there she married a writer, Jiri Mucha, in 1940; however just two months later she died of
music historian Hartog Howard wrote that he believed that she would have been a great composer
in Europe had she lived. Karla Hartl started a web-site for Kaprálová that can be found under The Kapralova Society which was established in 1998 in Toronto, Canada. Ms. Eskin is the first to
premiere this music in the United States.

The Little Song

Navzdy

Wild geese are flying south
Someone leaves and comes back
Someone leaves forever.
Perhaps somewhere else the sky is more beautiful
But you wouldn’t be able to count more stars there than here
When the night is clear.
Five Compositions for Piano

1. Maestoso
2. Cantabile
3. Andante con moto
4. Tempo di Menuetto
5. Marcia funebre

Oseh Shalom melody by Nurit Hirsh; arr. Elaine Broad Ginsberg

*KSC Chamber Singers, Elaine Ginsberg, director

---

Alma Schindler Mahler-Werfel (1879-1964) fled from Austria to France in 1938; then fled France to go to Spain; then Portugal, and finally to New York City in 1945. She grew up in a home in which many leading cultural figures visited; married three times including famed-composer Gustav Mahler, bore a son who died at 10 months and a daughter who died at 19 from polio. She was musically trained; had the strong support of her father, however was denied the right to compose by Mahler; yet he used her as his copyist. In spite of her tremendous composition abilities, she never seemed to regain the confidence that she had before her marriage.

Die Stille Stadt (The Silent City) Mahler-Werfel (1879-1964)

A town lies in the valley,
A pale day fades.
It will not be long
Before neither moon or stars
But only night shall rule the Heavens.
From all the mountaintops
Mists descend upon the town;
No roof nor yard nor house
Nor sound can pierce the smoke,
Not even a tower or a bridge.
But as the traveler felt fear
A tiny light shone below
And through smoke and mist
And a soft song of praise began
From the mouth of a child.

Bei Dir ist es Traut (I Am At Ease With You)

I am at ease with you
Faint clocks strike as from olden days.
Come, tell your love to me,
But not too loud!
Somewhere a gate moves
Outside in the drifting blossoms
Evening listens in at the window panes,
Let us stay quiet,
So no one knows us!
Der Erkkenennde (Awareness)

People love us, and unhappy
They rise from the table, to cry for us.
Still we sit, bent over the draped cloth
Are cold and can deny them.
That which loves us, we push away
And us colds, no grief can soften.
What we love, will save itself a place,
It gets hard and is no longer to be reached.
And the word, that is dispensed, is: Alone,
When helplessly burn towards each other.
One thing I know; never and nothing will be mine.
My possession also, is to recognize that.

Diane Cushing, soprano and Virginia Eskin, piano

Alma Rosé (1906-1944): Alma is named after her godmother, Alma Mahler, who was the wife of Gustav. Her mother was Mahler’s sister and her father, Arnold Rosé, was the concertmaster of the Vienna Philharmonic Orchestra. Alma was schooled in Viennese music and played at the Wiener Walzermädeln (a waltzing salon). She was married for five years; then divorced and moved to London with her father and a new love, Heini Salzer. When Austria joined Hitler’s Germany, Heini left suddenly and went to Holland; Alma followed, only to find out that he was marrying someone else. It was in Holland where she was arrested and eventually sent to Auschwitz, where she was granted the role of the conductor of the Mädchenorchester von Auschwitz (Girls’ Orchestra of Auschwitz); which was a pet project of the SS-Oberaufseherin Maria Mandel. It has been written that Alma’s work with the musicians saved all of them from the gas chambers. Their music was to be played as the workers went back and forth to their labor; as well as to entertain members of the SS. Some surviving reports suggested that that the orchestra was to play as the long lines were being led to the gas chamber. There has been a mystery surrounding her death, whether she died from food poisoning or was she poisoned?

Alma’s Poem  (Chopin Etude in E major)

In me echoes a song, a beautiful song
And brings back memories.
My heart was still.
Now those sweet sounds emerge again,
Of dreams no longer mine.
My heart! You were dormant.
But now all my desire
Springs up again.
Deep longing, sleepless anguish,
Everything now comes to life.
Yet I only want
Peace for my heart.
Rest is all I want,
Never again to think,
Of the beautiful song.
Fania Goldstein Fénelon (1918-1983) wrote her Holocaust experiences in the book *The Musicians of Auschwitz* which was adapted for a film in 1980 called *Playing for Time*, with Vanessa Redgrave playing her role. She brought to the concentration camp her experience as a singer, pianist, and theorist which saved her life because she was part of Alma Rosé’s Women’s Orchestra. Fania wrote the instrumentation for the orchestra that included ten violins, a flute, reed pipes, two accordions, three guitars, five mandolins, drums, cymbals, and sometimes a cello. She wrote that the SS “had given the order to destroy us and burn the camp, April 15, 1945; we were to be shot at 3 P.M.; the British arrived at 11 A.M. (Fénelon, English translation, 1977, Michael Joseph Ltd. And Atheneum Inc, page 255).”

**Performer’s Bios**

**Virginia Eskin**, faculty member at Northeastern University in Boston, received an honorary Doctorate of Humane Letters from Keene State in 1994; she was recognized for her work as a concert pianist and music educator, and her active role in summer music festivals in the Monadnock Region. Born in New York, she studied at Trinity College, London University, and earned the degree of Fellow of Music with honors. Her performance career has taken her throughout the United States, Europe, and Israel, where she has made concerto appearances with the Utah, San Francisco, Rochester, Louisville, and New Hampshire Symphony Orchestras; and with the Israel Sinfonietta, the Boston Classical Orchestra, and the Boston Pops. She has appeared as a guest soloist with the New York City Ballet and the London Mozart Players, and in solo recitals and chamber performances in Amsterdam, Palm Beach, Athens, Pittsburgh, London, and San Diego. She appears frequently on college campuses as a speaker and performer, and has appeared as a guest on National Public Radio's “All Things Considered.” Presently she is presenting a 13-week, one-hour series *First Ladies of Music* with WFMT Radio Network.

**Gladys Johnsen**, Ph.D. is Professor of Music at Keene State College, where she teaches General Music Methods, Women in Music, Music Masterworks, Fundamental Music Skills, and Introduction to Women’s Studies. She is the alto soloist at the United Church of Christ in Keene and studied voice with Peter Hart of Sturbridge, MA. Dr. Johnsen was founder and conductor of the *Youth Chorus at Keene State College* for ten years. While under her direction, the chorus performed in New York City at the Eastern Division of the Music Educator’s Association (MENC), and with national performers: *The Boston Camerata*, Judy Collins, Rita Coolidge and Tom Chapin. She completed her music education degrees with a B.S. from Minot State University (ND), a M.Ed., and a Ph.D. from the University of North Dakota. She has published articles in state and national journals including *The Orff Echo*, *Pan Pipes* and *The Music Educator's Journal* and has served as adjudicator and guest conductor for choral festivals throughout Pennsylvania, Vermont, and New Hampshire. Dr. Johnsen has completed all levels of the *Orff-Schulwerk* pedagogy at the Universities of Rhode Island and Colorado and all levels of the Kodály certification program at Westminster Choir College. She has served as the collegiate advisor for the KSC chapter of MENC. She holds two national honors from Sigma Alpha Iota, a professional fraternity for Women. She has traveled and sung in South Africa and Greece with the *NH Friendship Chorus* and *Monadnock Singers*; at the Vatican with the *Rome Pilgrimage Tour: 2001* of Pennsylvania; and throughout Europe and the Scandinavian Countries with *The Keene Singers*. 
Diane T. Cushing received her musical education at Anna Maria College, where she received the Bachelor of Music Education degree. She went on to earn a Master's Degree in Choral Conducting at Syracuse University, and eventually earned a second master's in Vocal Performance at Boston Conservatory. While at Boston she was engaged as a teaching assistant. Ms. Cushing has been heard as soloist with The Master Works Chorale of Boston, Boston Baroque, The Hamilton Baroque Ensemble, The Cape Cod Chorale, The Bach Society, The Neponset Choral Society, The Thayer Symphony Orchestra, The Assabet Valley Mastersingers, and The Monadnock Chorus and Orchestra. Ms. Cushing has also been heard in Boston's premiere of Villa-Lobos' Bachianas Brazileiras No.5 with bassoons, and in Worcester's critically acclaimed performance of setting of the poetry of Stanley Kunitz by composer David McKay. Ms. Cushing has performed music of American Composers at Queen's College, New York, and at Newberry College, South Carolina in their Recital Series. She has also performed music of Finnish composers at Fitchburg State College. Her vocal studies have been with Dr. David Rives, Dr. Robert White, Ruth Golden, Bruce Kolb, Oren Brown, and vocal coaches Michael Strauss and William Merrill. Ms. Cushing has performed with the Keene State College and Assumption College and conducts the Keene State College Choir. She is also the founder and director of The Greater Gardner Youth Choir and The Mount Wachusett Community choir, and was recently appointed director of the Nashua Choral Society. She has adjudicated several choruses throughout New England.

Dr. Elaine Broad Ginsberg is currently teaching music theory and composition at Keene State College in New Hampshire as well as conducting the Hampshire College Chorus in Massachusetts. She was previously the Jewish Community Music Director in the Springfield, MA area. Prior to that she taught composition, music theory and history, and conducted the Chamber Singers at Interlochen Arts Academy in Michigan. Dr. Ginsberg holds B.A. and B.M. degrees from Oberlin College (in Music and Judaic Studies), an M.M. in Composition from Ball State University, and a D.M.A. in Composition from the University of Cincinnati. She spent her senior year in college living on Kibbutz Tzora as well as studying at Hebrew Union College in Jerusalem. Dr. Ginsberg has received commissions from the International Clarinet Society as well as from numerous synagogue and secular choirs throughout the United States. She has received composition awards from the Guild of Temple Musicians, Zamir Chorale of Boston, the Cincinnati Symphony Orchestra, the Midwest Composers' Forum, and Mu Phi Epsilon (international music fraternity). Dr. Ginsberg's compositions have been performed at the St. Moritz International Choral Festival in Switzerland, at Merkin Hall and the 92nd Street Y in New York City, at the American Conference of Cantors Convention, at ACDA conventions, at the International Trombonists' Workshop, and on WQXR in New York. Performers of Dr. Ginsberg's works have included the Gregg Smith Singers, the Springfield Symphony Chorus, the choir of Temple Emanu-El (NYC) and the South Bend and Muncie (IN) Symphony Orchestras. Several of her choral works are published by Transcontinental Music.
NAFTA and the Tarahumara: Challenges of Free Trade in Developing Nations

NAFTA and the Tarahumara: Challenges to Free Trade in Developing Nations

Research Abstract

The North American Free Trade Agreement’s (NAFTA) effects on indigenous culture within Mexico provide important lessons about the consequences of free trade and globalization. The proliferation of regional trade agreements (RTA) involving both developing and developed nations demands an appreciation of the particular challenges confronting less developed states. Indications of such emerging trends as RTA consolidation, anti-globalization pressures and intensifying agricultural related discord within WTO-sponsored negotiations heighten the importance of appreciating the non-monetary implications of heterogeneous RTAs. Analyzing the consequences of free trade economics on the indigenous Sierra Tarahumara of Chihuahua, Mexico provides insights into issues concerning maintenance of land resources, self-development, the environment and discrimination. This soft-spoken peoples’ struggle to maintain its unique culture exemplifies the challenges confronting developing nations in a world of rapidly evolving RTAs.
The Success of Jiri Trnka: Political Censorship and the Growth of Czechoslovak animation in the Early Years of the Communist Regime

Lucie Joschko and Michael Morgan

Berwick School of Information Technology
Faculty of Information Technology
Monash University
100 Clyde Rd., Berwick 3806 Victoria, Australia
Lucie.Joschko@infotech.monash.edu.au
Michael.Morgan@infotech.monash.edu.au

Abstract

The Czech animation industry has formed a unique and internationally recognized part of Czech culture since its inception in the late 1940’s. However over this period the animation industry has faced many changes and challenges to it’s survival as a powerful cultural force, which have escalated since the fall of Communism in 1989. Some of these challenges include collectivization, political censorship, and post-1989 the introduction of an open market, external competition, reduced government funding and rapid changes to production technology. This paper examines the initial growth of the Czech animation industry and the impact of political censorship on the production of animation in the first years of the Communist regime in Czechoslovakia, namely the period of Stalinization between 1948 and 1955. Czech animated films gained a worldwide reputation during this period, thanks to the works of animators such as Jiri Trnka, as the government funded the animation industry to serve as a propaganda tool in the ongoing cultural battle between East and West. The main question arising from this study is whether the political censorship of the Communist regime restricted the freedom of artistic expression in Czech animation and therefore affected its national and international success. As the first in a series, this paper examines the triumphant path of Jiri Trnka and proposes that, while central government funding and nationalization fostered the growth of the industry, the censorship restrictions imposed upon artists did not seriously inhibit the development of a unique Czech cultural practice and may in fact have contributed to their distinctiveness in creatively conveying those messages that would be otherwise banned.
Introduction

The Communist Party of Czechoslovakia came to power in February 1948 and lasted until 1989. The intention of the Communist Party was to build a totalitarian political system where the power would be concentrated in a small circle of the highest Party officials. The Communist leadership looked upon Soviet Union as their model of political structure and economic growth. To secure their position of power, censorship practices were quickly implemented in all mass media, including film, literature and art. Following the example of Stalin’s dictatorship, the early years of Communist regime in Czechoslovakia can be characterised by an intense oppression.

It was during this period of time that arts and culture, subjected to the authoritarian control of Communist government, began to flourish. Within the first years of Communist regime, production of Czech animation became very prolific. The rapid rise of animation in the post-war era was largely due to the nationalisation of the film industry, including animation studios, and the introduction of centralised state funding. The question currently open to debate is how animators, required to comply with the demanding nature of Communist censorship, managed to turn this specialised form of filmmaking into an element of national identity and indeed an essential element of the Czech cultural heritage.

One of the most prominent artists in the late 1940s and early 1950s was animator and puppet master Jiri Trnka (1912-1969). Like other artists relying on centralized government funding Trnka’s films were subjected to the Communist censorship and due to demands for the portrayal of Socialist Realism themes were funded as propaganda material. However, despite the censorship practises, Trnka’s animated productions, his career in the animation industry and his subversion to the political system seemed to have defied attempts to repress his individual artistic expression. His numerous international achievements led the Communist regime to recognize the potential of animated films to promote the nation’s culture as a symbol of the moral victory of Socialism over Capitalism in the ongoing cultural battle of East against West (Toepler, 2000).

The Velvet revolution in 1989 (the peaceful downfall of the Communist regime) introduced artists to a newfound freedom of expression but the advent of market economy and subsequent privatisation of the film industry, including animation studios, meant the sudden withdrawal of centralized government funding. Ironically, just as restrictions to freedom of expression were removed, the sharp cut in financing resulted in
less production of Czech animation (Taylor et al., 2000). Once considered the main rival to Disney, the golden era of Czech animation seemed to have vanished with declining numbers of productions evident in the past decade (Fiser, 2000). In the first post-communist years, the average number of animations dropped from 140 in 1990 to approximately 50 in 1996 (Osmond, 2003). Dramatic reductions in government funding represent only one of the challenges Czech animation was forced to face. Additional factors contributing to the current transformation of Czech animation industry include changes in censorship, studio ownership and animation technology. As the rich tradition and distinct achievements of Czech animation appear to be under threat by these changes, research into the development and long-term viability of Czech animation industry is becoming more critical.

While the overall research aims to analyse each of the critical factors, this paper focuses on the impact that political censorship and central government funding had on the development of Czech animation tradition in the first seven years of Communist regime in Czechoslovakia, namely the period known as Stalinisation from 1948 to 1955. Research into this time period is particularly important as it reveals the inception of Czech animation industry and witnesses its exponential growth under totalitarian conditions. As the first in its series, this paper examines the ways the oppressive nature of Communist censorship affected the distinctiveness of Czech animation, using the example of a Czech animator Jiri Trnka.

**Censorship and Propaganda in Czechoslovakia**

Prior to the analysis of the impact of Communist censorship on the development of Czech animation, it is essential to examine the concept of censorship and the role of propaganda in spreading Communist ideology.

Political censorship enforced by totalitarian regimes and the control of media by the state constitutes a form of surveillance that allows manipulation of public views and control over mass education. It is typically understood as a method of totalitarian government ‘to achieve comprehensive subordination of knowledge to state policy’ (McLean and McMillan, 2003). The introduction of state censorship is often aimed at quelling the possibility for political dissent. Jensen (1988, p. 6) confirms that the ‘powerful require knowledge to preserve, defend and extend their advantage’. Butler (1998) also points strongly to the link of power and censorship, both the power exercised by censors as well as the power gained through the act of implementing constraints.
While Freshwater (2004, p. 241) argues that repressive interventions of the state aimed at artists are typically experienced as ‘destruction, distortion, or limited dissemination of their work’, the international success and rich tradition of Czechoslovak animation established under the censorship of the Communist government appears somewhat inconsistent with such a statement. No formal censorship was present in Czechoslovakia after the end of WWII (May 1945) and the first censorship practices in the post-WWII era emerged only in response to the requirement to define rules for content publishing. This was mainly due to a number of non-communist newspapers accused by the Communist information minister Vaclav Kopecky (1945-1953) for writing about ‘fascist and reactionary material’ (Culik, 2001). The Social Democrats (1945-1948) supported the introduction of censorship in the hope of limiting the power of the Communist party. Finally, in December 1947, only two months before Communists ascended to power, the Inspection Department was established to enforce censorship by monitoring print publications for breaches of the law. It must be noted however, that despite these authoritarian practices of the Communist government, censorship in Czechoslovakia was not legalized until 1966. The government power seemed to have resided behind the Communist doctrine of propaganda, which was closely associated with the objectives of censorship and as such allowed control of the flow of information.

The term propaganda typically comprises of negative connotation and can be seen as distorting and adjusting accessible information. In arts, the word propaganda appears somewhat contradictory. While the concept of art suggests freedom of thinking and the search for truth, propaganda refers to the ‘systematic propagation of beliefs values or practices’ in the light of manipulative persuasion (Clark, 1997, p. 7). The conflict in a relationship between art and politics typically questions whether the quality of aesthetics is subservient to the political message (Clark, 1997). However, the study of censorship practices imposed on Czech animation during the period of Communist government suggests that restrictions were mostly placed upon the choice of themes rather than individual visual or artistic style.

While the concept of censorship was originally refused by the Communists Party in 1947, full control of all the media and the arts (including production processes) was exercised directly after their victory in elections in February 1948. Information minister Kopecky became the leading figure in directing the new cultural ideology of the state and in spreading communist propaganda by developing a monopoly over all media capable of information dissemination. Some of the topics banned from mass media were criticism of
the government, questioning the state’s internal and foreign policies or discussing military and religious issues (Culik, 1998).

The political propaganda forced successful films to promote love, admiration and gratitude towards Russia and hatred against Germans as the symbols of fascism and capitalism. Aware of the popularity of motion pictures as a source of entertainment, Kopecky proclaimed:

‘As the cultural and educational medium serving the broadest masses our film industry is first and foremost destined to fulfill the great educational mission assigned to it by our people’s democratic Republic. This requires that our creative film workers provide our people with worthy motion pictures which would convince by their truthfulness and would be an incentive for our construction effort and a source of enthusiasm for joyful socialist work’ (Lidove Noviny cited in Taborsky, 1961, p. 579).

This optimistic portrayal of joyful life in a socialist society exemplifies Socialist Realism, originally introduced by Stalin in 1934 as the ‘official aesthetic of the Soviet Union’ (Clark, 1983, p. 73). Socialist Realism as an expression of Communism and the state directive for socialist culture was adopted by Czechoslovakia in 1949 at the Communist’s Ninth Party Congress. This approach to creative production became an artistic and literary doctrine of political censorship in most communist countries all over the world (Clark, 1983). Within the context of Communist government, Socialist Realism can be defined as ‘the scientific method in aesthetics’, where political value was considered the key determinant when assessing artist’s work (Bradac, 1950, p. 100). The primary role of this artistic directive was to contribute to the cultural rebirth of Czechoslovakia and to serve as a socialist tool for education of the masses. Thus, the Communist government implemented their ideology into aesthetics, pressing artists to create their work accordingly. As a result, it was possible to evaluate a piece of art in advance based on adherence to political criteria, such as whether an artist was agreeable to the Party and whether the artwork promoted Communist ideologies. This way, Socialist Realism dictated what was deemed beautiful and desirable. Milan Kundera (1929 – present), a Czech artist whose two years membership in the Party was terminated due to his individualistic tendencies and his work later banned, points out the evident paradoxes of the official doctrine dominating art.
‘In the name of realism, we were forbidden to depict reality; in the name of the cult of youth, we were prevented from being young; in the name of socialist joy, joyousness was repressed’ (Leihm, 1973, p. 16-17).

Leihm refers to the ‘dialogue of the deaf’ when those in power could not comprehend the need of an artist to express the truth as it was seen. Instead, ‘the truth had already been spoken, everyone knew it by heart and the duty of the artist was to repeat it’ (Leihm, 1973, p. 31).

**Censorship, Propaganda and the Czech Animation Industry**

The Ministry of Culture was responsible for overseeing and executing the objectives of film production, holding virtually an absolute power of censorship in their authority to prevent the dissemination of any material. All steps of a production process from script writing to final film screening were placed under their control. Each stage from pre-production to distribution, including the choice of themes and storyboards, required an official approval. This process was only practical because the state held a monopoly over all media including film production. In 1955 alone, the censors viewed 1321 feature films of all genres, including puppet and cartoon animations, and commented on 646 scripts (Barta, 2003). While the Soviet Union seemed to have directed their focus on censoring predominantly newsreels, Czechoslovak censors agreed to continue reviewing both domestic and imported film production, which included the production of animated film.

Interestingly, in the post WWII years, Communist leadership regarded the role of animation as a ‘bourgeois pastime for spoiled rich kids’ disassociated from Socialist Realism and its working class (Kilmer, 1999). It was only Trnka’s early success (1947-Czech Year, 1948 - A Midsummer Night’s Dream) that led the Communist leadership to reconsider the function of animation. The international recognition of Trnka’s work started off the notion that artwork could promote the liberated state of Czechoslovakia (Dutka cited in Ulver, 2003). Subsequently, the production of animation became a form of propaganda, allowing the regime to use its success as a showcase of thriving life in a Communist country.

Paul Fierlinger (1936-present), a freelance animator born to Czechoslovakian parents recalls the years of forced Communist propaganda, stating that everyone involved creatively in producing animation at that time ‘knew that they were helping the country lie’ (Kilmer, 1999). Dutka (2006) notes that beside being influenced by individual talent
and originality, the artist’s work is also considerably influenced by political pressures, especially those subject to totalitarian regimes. The question arises as to how much the subjugation of themes to the political censorship of the Communist regime restricted artistic freedom of expression. To gain a deeper understanding of the impact of censorship upon the production of Czech animation, the authors evaluate the achievements of Jiri Trnka.

The success of Jiri Trnka, individualistic artist subverting the censorship system

Despite the censorship practices and the demands of the Communist regime to comply with the artistic doctrine of Socialist Realism across all Czechoslovakian cinema, there were artists who seemed to have found their own path of success. One of these was Jiri Trnka. Born in 1912 in Bohemia, Trnka is commonly respected as one of the first Czech animators and the master of stop-motion animation. He grew up in a culture where wooden toys were hand crafted at home, developing his love for puppets early on in his childhood. However, Trnka’s career in animation did not start until 1945 when at the age of 33, this illustrator of children’s books was approached by a group of young artists to help them found an animation studio Bratri v Triku (The Trick Brothers). While Trnka in one of his interviews recalls that he may have been expected to mainly draw, he admits to taking further charge of scriptwriting and directing (Broz, 1965). His first success was a nine minute animation Zviratka a Petrovsti (The Animals and the People of Petrov, 1946) made rather remarkably within only six months. Zviratka a Petrovsti won an award at the first postwar film festival in Cannes in 1946. This victory was the more noteworthy as that year relatively unknown Czech animated films competed against production of renowned names such as Norman McLaren, Paul Grimault and until that time the invincible Walt Disney.

Within the following four years, Trnka managed to create three animated feature films and two short animated films, an effort unmatched by any other animation studio in the world including Walt Disney (Dutka, 2000). To pursue his favourite stream of puppet animation, Trnka initiated the establishment of a separate division that would direct its focus from cell animation to puppets only. Within the small atelier of this studio, Studio Loutkoveho Filmu (Studio of the Puppet Film), Trnka first produced Spalicek (The Czech Year, 1947), a highly regarded and internationally acclaimed animation depicting Czech customs, holidays and rituals, in which Trnka expressed the attitudes of the country people towards life, work, faith and death (Opela, 2006). This short puppet film, accompanied by music composed by Trnka’s friend Vaclav Trojan represented a national
vision of peace and happiness. When asked twenty years later which of his films Trnka held closest to his heart, he answered the Czech Year. In 1948, Trnka made his first feature puppet film *Cisaruv Slavík* (The Emperor and the Nightingale, 1948) and his work became known for its unique poetry and expressions of love. Although Trnka’s projects were largely funded by the Communist government for their international achievements, the regime continued to impose restrictions on the selection of Trnka’s projects. For example, *The Legend of St. Prokop* (1947) was banned as church propaganda. When trying to adapt Don Quijote in 1951, the government deemed this project as ‘too cosmopolitan’ (Dutka, 2000). Trnka also proposed a project about famous Czech puppeteer Matej Kopecký (1775-1847), in which he was planning to combine live actors and puppets. The regime deemed this film as ideologically questionable and Trnka’s idea was again banned. Even his story about a little train was not approved as ‘trains are mechanical toys, supposedly inappropriate for that time’ (Dutka, 2006, p. 119).

In addition, Trnka was pressed by the Communist officials to produce a film depicting Czech historic legends. Without openly expressing his opinion in front of the regime, Trnka suspected this choice of strongly national theme was intended to cure the state’s complex about the nature of Czech national identity five years after the end of WWII (Dutka, 2006). Trnka’s dissatisfaction with this forced topic initially tempted him to return to illustrating children’s books but he ultimately decided to embrace the Old Czech Legends (1952) as a challenge of his creativity. His approach turned out unique and the six national legends Trnka covered in his work were no longer specific to only Czech audiences (Dutka, 2006). Upon its completion in 1952, the reception of Trnka’s Old Czech Legends was diverse. While judges at the film festival in Venice did not award Trnka any prize for this film, the audience demanded it and the Old Czech Legends left with a silver medal from the organizers of the event. Despite the high quality of character animation, this theme was not widely accepted in its homeland as to the Czech audience it mainly served as a reminder of what they had to learn at school (Dutka, 2000).

Political pressures continued to escalate, causing conflicts among animators with incompatible political beliefs. The fact that Trnka never joined the Communist Party and insisted he remain a freelance artist was met with disapproval from some of his more ideologically oriented colleagues. His mentality resided not within a team but in a distinctive artistic individuality. Although this approach is not favoured, Trnka’s rejection of collective teamwork represented his determination to strive to remain true to art while other more politically aware colleagues focused their attention on satisfying the socialistic ideology and the demands of Communist leadership. In the attempt to resolve
the continuous difference in opinions, a voting system was implemented at formal meetings at the Trick Brothers Studio presided over by a panel of Party officials. Trnka’s dominant personality was evident when no number of opposing votes would still change his direction or approach (Ulver, 2003). He was recurrently disparaged for his lack of political involvement and for not assisting in building socialism. The government even warned Trnka that his picturesque, intricate stories were losing the connection with the working class (Dutka, 2000). This naturally leads to conjecture that Trnka’s distinctive style of animation was never meant to address large masses or to promote the Communist doctrine of Socialist Realism. Trnka’s animated stories seemed to aim at reaching their audience with far more poignant messages and ageless values of morality. While approved artists struggled to make significant contributions to the Czechoslovak culture, Trnka’s audacious qualities separated him from the rest. Kanes (1990) confirms that artists approved by the totalitarian regime typically carried little artistic value in contrast to those more vigorously censored.

Towards the end of his career, Trnka chose to intricately employ a political theme. His very last puppet film *Ruka* (The Hand, 1965) was a pitiless political allegory, in which Trnka ingenuously criticizes state-controlled art. In this bold piece of animation, Trnka depicts an artist who is happily creating pots for his much loved flower. Suddenly, a giant hand intervenes and orders the artist to create a sculpture of the hand instead. The artist tries to resist but the omnipotent hand forces him to stop producing clay pots and imprisons him until the hand sculpture is complete. Although Trnka officially released this film as a criticism of Stalin, whose denunciation by Khrushchev in 1956 was finally being accepted by the Czechoslovak government, Czech audiences immediately recognized the mirrored image of their life in a totalitarian society (Dutka, 2000). Despite its great international success, the Hand was ultimately banned and its suppression lasted until the fall of the Communist government.

Despite his occasional setbacks caused by the regime, Trnka’s puppet films became a part of national culture. His individualism, determination and contribution to the rise of Czech
animation tradition earned him the titles of Father and Founder of puppet animation (Kroupa, 2004). Trnka’s distinctive visual style creatively influenced a number of his co-workers such as Bretislav Pojar (1923-present) who followed his footsteps with similar success. This was the origin to the internationally renowned Czech school of animation.

In one of his international interviews, Trnka explained the balance he found as an artist in a totalitarian society. He admitted that he would have never invested financially into his puppet animations but truly appreciated the opportunity to do what he loved while the political regime was willing to fund it (Dutka, 2003).

Conclusion

The initial period of Communist leadership in Czechoslovakia known as Stalinisation (1948-1955) introduced the practice of authoritarian censorship along with directives for socialist culture including political propaganda. The monopoly over all media and virtually an absolute power to prevent dissemination of any material certainly created a considerable pressure on artists to adhere to political criteria and implement Communist ideology into their work.

An analysis of Trnka’s work exemplifies that political oppression may pose boundaries on themes and messages expressed through animation but in the case of this Czech animator ultimately did not affect the artist’s creativity and individual style. Although frequently criticized for his lack of political participation, the talent of Jiri Trnka was in the end commemorated by the Czechoslovakian film authorities by renaming the Studio of the Puppet film as the Studio of Jiri Trnka in 1970.

It remains somewhat contradictory that Czech animation in 1950s received a privileged position thanks to the works of strong-minded, opposing artists such as Jiri Trnka rather than the more ideologically oriented animators whose primary attention was to first and foremost satisfy the directives of Communist propaganda. This also indicates that Socialist Realism, the official doctrine of art and culture under Communist regime, was not the cause of international success of Czechoslovak animated films. Instead, the worldwide acclaim seems to have been achieved through passion, creativity, daring individualistic style and experimentation with new techniques.
It has also become apparent that while each animation project was scrutinized by the government censors, from the pre-production stage to its distribution, censorship practices did not seem to confine artistic expression and their distinctive visual styles. On the contrary, artists seemed to be the more motivated to implement metaphors and allegories, thus creating remarkable subtexts. Trnka’s ingenious puppet films, namely the Hand (1965) indicate that censorship restrictions imposed upon artists may in fact have been what contributed to the uniqueness of their art.

The current climate may offer artists freedom of expression, yet their original work cannot be produced without sufficient funding sources, including in some cases subsidization from the state. Today, Czech animators are pressured to accept projects from foreign customers, mainly in forms of TV commercials. It may be argued that their creativity is currently suppressed even more than during the oppressive censorship era of Communist government due to lack of funding for Czech themed animation projects. As a result of the introduction of a free market economy, subsequent privatization of animation studios and the sudden withdrawal of government funds, the tradition of Czech animation is struggling for its survival.

Further research may address important issues impacting the viability of the Czech animation industry including the possible establishment of a new scheme for state funding of select elements of the animation industry in order to maintain a critical mass of animation expertise in the industry, analyse new opportunities for production and distribution of animation via new digital technologies such as Internet and mobile telephony, and examine the impact of external competition for the sustainability of Czech animation in its own market.

Abstract
This paper draws on research contained in the authors recently completed Ph.D. thesis which explores the possibility of identities that exist ‘in-between’ Aboriginal and Anglo Australia in the context of Australian Football. Considered to be the ‘national game’ Australian Football is commonly associated with Australian nationalist discourse and is thought to signify many key qualities of an Australian national character that is characterised by whiteness, masculinity, sporting and military prowess. This paper seeks to disrupt nationalist understanding of identity by showing that throughout its historical development the game allowed for the possibility of hybrid figures to operate and succeed. In doing so the paper disputes the notion that identities in contemporary Australian society are defined by the racially pure and culturally absolute divide between Aboriginal and Anglo-Australia, instead arguing that all identities in (post)colonial Australia are to some extend culturally (and often racially) hybrid. In examining these questions the paper develops a theoretical analysis of identity drawn from Indigenous Studies to develop a postcolonial understanding of Australian Football, its historical development and its current standing as a key signpost of Australian national identity.

Social Transformation of Malayalis: An Ethnographic Study

Kathiresan. L*

Tribes in India constituting about 8 per cent of the total population had been subjected to oppression and exploitation for several years even after independence. They had been facing various social and economic problems such as poverty, hunger, unemployment, exploitation, illiteracy, inequality, discrimination, remoteness, exclusion, deprivation, alienation of land and forest, indebtedness, bonded labour, lack of food, shelter, clothing, malnutrition, poor sanitation, unsafe drinking water, etc. Against this backdrop, tribal development is given national importance and protection and promotion of the welfare of the scheduled tribe is one of the constitutional provisions. Numerous schemes had been introduced by the central and state governments namely, Community Development Programmes, Multipurpose Tribal Development Schemes, Integrated Tribal Development Projects, 20 Point Programmes with special reference to tribals, integrated rural development programme, Tribal Sub Plans and Hill Area Development Programmes. Moreover, number of non governmental organizations also had been actively involved in uplifting the tribes in our country. But their status and problems have not changed remarkably. Tracing the reasons and accepting the critiques of development thinkers the tribal development strategies had been changes accordingly aiming to achieve maximum community participation. However, the outreach by programmes and the utilization and accessibility of these programmes remains limited. Certain pockets of tribal settlements and few tribal groups even in the project area had been neglected. Their oppression and exploitation never come to an end. The development initiatives must consider the uniqueness of the people, their knowledge and their culture. Tourism was promoted as an industry by the state in the places where people had attraction due to its climate, physical features, availability of forest resources, etc. Some of these tourist spots had been the home for many tribal settlements. Tourism is considered as a developmental initiative for the regional development, social and economic transformation of the local people.

In this backdrop, the paper aims to make an in-depth qualitative analysis of social, cultural, economic and political changes among the Malayalis of Yelagiri Hills. Ethnographic research

* Research Scholar, Centre of Social Medicine and Community Health, School of Social Sciences, Jawaharlal Nehru University, New Delhi – 110 067 India.
techniques are used to collect data from two villages in Yelagiri Hills namely, Athnavoor and Punganoor.

**Yelagiri Hills – An Outline**

Yelagiri hills are located in Eastern Ghats, 213 kilometres south west of Chennai, 91 kilometres from Vellore the district headquarter and 18 kilometres from Jollarpettai, of which 14 kilometres are mountain road having 14 hairpin bends, with few mountain viewpoints. The weather in winter in Yelagiri is 11° Celsius and in summer 34° Celsius, which is considered to be the coolest place in the district. The average rainfall is 900 mm. Yelagiri in its forest has number of flora and fauna some of which are considered as the rare species. Yelagiri Hills occupies area of 29.2 sq kilometres. Yelagiri is a Panchayat comprising fourteen villages namely, Muthanoor, Kottaiyur, Poonganoor, Athanavoor, Kottoor, Pallakanivoor, Mettukanivoor, Nilavoor, Rayaneri, Paaduvanoor, Putthur, Thaayaloor, Mangalam and Manchankolli Pudhur. This Panchayat is administratively functioning under Jollarpettai Block and Tirupattur Taluk. Malayalis are the only predominant scheduled tribe inhabits in this hilly region.

Yelagiri was declared as the tourists spot in 1984 by the government of Tamil Nadu. Since then, various development initiatives had been undertaken and several places of interest were set up, which includes lake, children park, a nursery, murugan temple, yelagiri tamilannai temple, swami malai, telescopic centre, jalagampaarai water falls, hotels and restaurants, guesthouses, residential schools and other educational institutions, weekly market, forest fruits and other minor produces, summer festival, and paran house are other centre of attraction in the hills.

There are twenty hotels, lodges and health resorts cater the boarding and lodging to the tourists. In addition to these private hotels, Yatri Nivash by the tourism development corporation is under construction to cater the needs. Three camp sites offer facilities for various training and retreat programmes with boarding and lodging. Six provision shops, seven tea shops, one hardware shop, three ice cream parlours, few nurseries, numerous fruit-stalls on the road side, one boat house canteen and numerous petty-shops and five banks involved in trade and commerce in Yelagiri. The profile of government educational institutions includes one higher secondary school, three primary schools, five crèches, seven midday meals centres, and a residential primary school for boys and girls up to Class V and a Scheduled Caste (SC) welfare hostels for
boys up to Class XII. There are twelve private schools and seven hostels also cater the educational needs. There are about thirty government offices functioning in Yelagiri Hills.

Malayali Tribes – A Profile

Malayalis is the Tamil speaking community scheduled as dispersed tribal group in Tamil Nadu, mainly dwelling in isolation in the forest and hilly terrains of Dharmapuri, Vellore, Pudukkottai, Villupuram, Thiruvannamalai and Tiruchirappalli districts. Malayali\(^1\) is a Tamil word to denote hill dwellers, hill people, and inhabitants of the hills or the rulers of the hills. Very little is known about the history of them. They call themselves as *Malaikaran, Mala Gounder, Vellala Gounders, Mala Jati and Malayal*. It is believed that they are basically cultivators migrated from Kanchipuram\(^2\) to the hills of south-west Tamil Nadu a few generations ago and predominately distributed in Jawadhi hills, Yelagiri hills, Shevaroy hills, Sitteri hills, Kalrayan hills, Kolli hills and Pachamalai.

According to Thurston Malayalis have divisions among them namely, big Malayalis or Kanchi Mandalam Malayalis, little Malayalis and middle Malayalis. The big Malayalis live in the Shevaroy hills, little Malayalis in Kolli Malai and middle Malayali in Pachaimalai regions\(^3\). The Malayalis of the Yelagiri hills are called without prefix. The customs followed by these Malayalis at different hills do show variations that are unique to each other.

According to Census of India 1991, their population was 33,450 in Vellore district which is 67.1 percent of total tribal population of the district and 13.4 percent of total Malayali population of the state accounting for about six percent of the total scheduled tribe population in the state. Salem district has the largest Malayali population than Vellore and Dharmapuri districts.

It is the forest economy in which Malayalis inhabit depending on the utilization of various forest resources. Practice of barter was existed until recent times. They were self sufficient with their

\(^1\) Singh K. S., 1994, The Scheduled Tribes, Delhi: Oxford University Press

\(^2\) Elderly Malayalis described that Periyantha was responsible for such migration. He fell in love with a Bhramin girl so he was exiled with his family and migrated into the southwest forests and hills. Similarly another legendary story reveals that due to the fear of Tipu Sultan’s invasion in late 17th century, a group of farmers under the leadership of Shevarayan from the bank of river Cauvery in the Krishnagiri was fled to the hills and settled down in the Shevaroy hills. Thus the hill is known as Shevarayan hill. Later, the group moved to the neighbouring hills viz. Jawadhi, Pachamalai, Chitteri, Kalvaran etc.

local resources except oil, cloth and salt. In exchange of the minor forest produces they used to buy these commodities from the weekly market in Kodiyr. However the infrastructural development had facilitated to have the weekly market in Yelagiri hills since 1980s.

Their main economic activity is agriculture, cattle rearing and poultry. A great majority of them own at least a small piece of agricultural land. They supplement their income by collecting minor forest produces and by working as labourers with forest department. Women equally take part in economic activity. Monsoon failures increased unemployment that forced them to change their tradition occupation. A large majority of Malayalis including both men and women are commuting daily to the nearest towns for mason work. Educated youth and government employed Malayalis mostly migrate to their working places. However, they keep their identities and linkages with Yelagiri and tribal tradition.

Malayalis were shifting cultivators then become settled cultivators. They cultivate *samai*, *ragi*, *thinai*, *kambu* and *maize* and a few vegetables for their local needs. But due to the changes that brought out by the process of modernization and the contacts with outside population they had started cultivating paddy and certain other cash crops such as rose, pepper, coffee, plantain, sugarcane, mustard, *kadukaai*, *daniaya*, *yellu*, and tapioca.

**Social Transformation**

Due to various intervening and inbuilt potentials certain aspects of malayali tribes are transiting, changing and transforming. Following are the brief note on such changes.

The origin of Malayalis is expressed through multiple versions. These ancestral myths were preserved through their traditional drama and dance which were their only entertainment in the past. But now people show less interest in it. A vast majority of young Malayalis do not know even a single version. The advent of satellite televisions made the shift from traditional drama to modern cinema which is one of the responsible factors of social change.

An historical analysis of tribal area development and tourism promotion in Yelagiri show that the former is the causative factor for the social change. Several government institutions such as bank, electricity board, community hall, bee keeping training centre, silk boards, veterinary hospital, primary health care centre, Large scale Multipurpose societies, milk producers’
cooperative societies and schools were established between 1964 -1982 which is immediately after the completion of the Ghat road. Therefore, there is a great need to qualify the association between these two.

Malayali family has changed from joint family to nuclear as it is experienced by the general population. Although this can not be attributed to tourism, the interactions with non-tribals to an extent have influenced the change. Employment related migration is one of the reasons for the split in the traditional family structure.

Malayalis follow patrilocal rule of residence. Cross cousin marriage is the most common marriage pattern among Malayalis. Monogamy is most common among Malayalis although polygyny is permitted. Junior sororate and junior levirate remarriages are also allowed. Present spouses are acquired through negotiations, elopement and courtship. The role of village council is very important in marriage. The system of collective marriages is common to reduce the expenditure. Parayam (bride prices) was paid at the time of marriage to bride’s family by the groom but now it exists as merely a custom. Dowry has become common. Divorce is allowed. Importance to the marriage rituals has reduced. Although the traditional society has an internal structure to protect and preserve the cultural identity without much influence of non tribals/tourists, the process of Westernisation and Sanskritization has transformed some aspects such as marriage rituals, education as described above.

They are inspired by the non-tribals/tourists and numerous educational institutions in Yelagiri. The contribution of faith based organization is appreciable in encouraging tribal children’s education. However, further investigation is needed to justify it.

Women enjoy equality although the patrilocal rule of residence is followed. They actively participate in economic activities and are involved in decision making that concerns the family. Their suggestions are considered while making community decision by the village council. Their literacy rate is lower than their male counterparts. The self help groups have helped in uplifting their status to some extent.

The traditional political system has a top down structure. Ezhupathu nadu (assembly of all tribal chieftains and their ministers at the state level) on the top functions to resolve disputes between
Malayali settled hills. However, this body has no relevance as the judicial system intervened. *Nadu* (constituency comprising 10 to 15 tribal villages) at the intermediate level is to solve inter-village disputes. It is officiated by *naatar* and his minister. Village council is led by *voor gounder* with an assistant. All the families in the village represent the Village council. The political party affiliations influence the traditional administration. As a result, rival leaders have emerged in Yelagiri.

Malayalis predominantly depend upon agriculture. Most of them are cultivators and agricultural labourers. Frequent monsoon failures and non availability of agricultural employment forced them to find alternative employment in construction works. Forest department provides seasonal wage employment. *Kambalam* (traditional village employment at the harvest season) provides occasional employment. A segment of educated are placed in government position. The institutions in Yelagiri also provide sporadic employment opportunities. Self help groups are managing themselves through learning different trades and skills. Tourism has not created much demand and hence employment opportunities were meagre for the local people. Most of them are involved in unskilled jobs whereas the establishment of hotels, resorts are owned and run by people from outside.

Faith based organisations, non governmental organizations, and private schools and catering institutions are the major agents of large scale land alienation and these institutions exploit more natural resources while most of their services are for the outsiders except a few for the local people. The introduction of tourism and tourism promotional activities actually hiked the land value in Yelagiri. As a result, tribals were lured into selling to sell their land if and when need arises and at the time of economic crisis. The problem of land alienation has severely affected a number of families because of their poor financial management and other social and economic conditions although instances of economic transformation also are noted as the result of land transfer from tribal to non tribals.

**Conclusion**
Despite all these structural changes, there is a struggle to maintain the Malayali identity and keep the community unassimilated. There are efforts to retain some of the cultural practices as traditional and characteristic of the community identity. The consciousness of identity at the juncture of fast-going acculturation and assimilation has started leading to attempts at restoration of traditions by some clans. Eventually these attempts tend to differentiate the clans from the rest of the community, as more traditional. But at the same time they are adopting ‘modern’ practices like arranging a public hall to perform marriage function and calling Brahmin priest to perform certain rituals. However, it is observed that an elite group is emerging within the community with a new code of conduct, dietary habits, and educational values and so on. They consciously retain certain institutional practices as a means identity.

Abstract: Multiethnic Identity Formation

This continuous study seeks to explore factors contributing to multiethnic students’ positive self-image during their identity formation process. We are investigating how multiethnic individuals come to determine their identity and how they relate in situations involving mono-racial institutions and structures. Participant population includes 18-25 year olds with the majority of subjects identifying as African-American/European-American and Asian-American/European-American. Moreover, there exists an equal representation of gender across cultural groups. Preliminary findings reveal that most participants identify with the ethnicity of the parent who raised them, if they were raised in a single parent family. Additionally, a significant majority of the Asian-American/European-American participants state feeling unwelcome or unaccepted by one or both of their ethnic communities. Furthermore, the participants whose parents spoke with them about their multiethnic identity growing up report feeling less anxiety, fear, and insecurity about their ethnic identities.

Predictability of Residential Mobility: Evidence from the Health and Retirement Study

Abstract

Paula M. Kazi

Expectations, or probability distributions, of future events play a prominent role in economic models of decision-making under uncertainty. Hurd and McGarry (1995) note that an individual's own subjective evaluation of probability distributions determines behavior, even if it is systematically incorrect. This paper is an addition to the growing literature that assesses the potential usefulness of subjective probability or expectation information in micro data. The key research question we have in this paper is: What do the subjective probabilities of moving tell us? Drawing on the longitudinal data from The Health and Retirement Study, we document the relationship between moving expectations and subsequent moving realizations among the older population in the United States. The effectiveness of moving expectations, like any other expectations elicited from household surveys, in behavioral models relies on how well individuals have idea about probabilities of future events and how accurate their forecasts are. In view of that we appraise the accuracy of moving expectations by looking at how well the reported subjective mobility probabilities line up with actual moving propensities. Additionally, we explore whether the probabilities vary qualitatively with observable characteristics as they do in actual outcomes, and whether the probabilities contain important idiosyncratic information not available in more traditional variables.

There has been an overwhelming upsurge of interest in the policy debate with respect to the well being of the elderly population in the recent decades. The decision and act of moving, preceded by the planning related to that, essentially leads to the choice of living arrangement – as an independent household, with adult children or other unrelated persons, or in an institution. Elderly poverty measures are expected to be sensitive to living arrangements, and if the policy goal is to enhance elderly well being, then understanding people's expectations and preferences regarding moving may be as important as understanding their moving outcomes. More critically, we would want to know if older people are making mistakes in planning for their future living arrangements. While stated expectations reflect current states of mind with respect to residential mobility, it is almost axiomatic that they will correlate imperfectly with moving outcomes. What we expect is that conditional on observable characteristics, the subjective probabilities will be good predictors of actual moving that will enable us to observe and control for individual heterogeneity. Another important issue, from a practical point of view, is whether knowledge of moving expectations can improve econometric models of individual moving behavior. The most plausible reason for thinking that expectations would improve the model is that the

---

1 Engelhardt and Gruber (2004) note that changes in living arrangements are likely to be associated with changes in the level of care and assistance received by the elderly. Living arrangements additionally affect the elderly's eligibility and transfer level for certain types of government assistance, such as food stamps and supplemental Social Security (since these are determined by the income of the household, not by the income of the elderly), and potentially induce demand for social support services.
covariates of moving behavior comprise not just observables but also unobservables, such as preferences for upsizing or downsizing housing, (dis)taste for undertaking the physical and psychological strain associated with moving, etc., for which expectations data might be a suitable proxy.

In this paper we find that moving is subjectively a low probability event, even for the movers. And for a sizable fraction of movers – about 40% – moving apparently represents an entirely unforeseen shock/event. Still, like other studies on expectations, we also find the subjective probabilities of moving to be very important in predicting future moving, even once demographic information known to be associated with the propensity to move is added to the analysis. However, although this relationship is positive and monotone, individuals appear to be overly projecting their mobility probabilities during the sample period examined here. While several papers assess the predictive power of the expectation information on the corresponding actual outcome, there have not been many studies that investigate the deviations between realizations and expectations of future events, particularly in relation to how these deviations vary across different demographic and socio-economic groups. A related, but separate, issue involves understanding differences in response patterns (e.g., point forecasts, focal responses, non-responses) by various demographic groups. We examine these issues in depth in relation to subjective moving probabilities. Among other things, cognition and health are found important in making more accurate forecasts, while education definitely lowers the probability of item non-response as well as focal responses. We find that people are more likely to make larger errors in their forecasts if they belong to groups that are more likely to make a residential move. We hypothesize, and argue that the data appears to agree with, that the individuals provide noisy reports of their true probabilities of moving, which likely attenuates the relationship between moving expectations and realizations. We also argue that part of the noise in moving probabilities can be attributed to systematic errors. The forecast errors of residential mobility appear to be systematically correlated with people’s demographic characteristics. In other words, the available information is not efficiently processed in forming moving expectations. We show that information on expectations can improve the accuracy of models of actual moving behavior, most likely as we already pointed out, because they provide a suitable proxy for unobserved tastes. Finally, we put the findings of the paper in context of the existing literature on subjective probabilities.
1. RUSSIA’S ECONOMY: PAST AS PROLOGUE AND FUTURE

Prologue to this 90-minute briefing for analyst course including non-economists and non-Russian specialists
1. The Russian economy is compared to other Eurasian economies to distinguish uniquely Russian factors from general economic factors.
2. Briefing includes and defines key economic concepts and uses quantitative economic data.
3. History is relevant, but which history, not necessarily the most recent.
   Past is prologue, but not destiny.

Analytical process
1. Identify key drivers – in this case, forces that determine Russian economic growth and development, and the strategic and political significance of the resulting economic power and influence.
2. Create alternative scenarios and assign probabilities to these scenarios.
3. Identify future signposts to check which scenario is playing out.
4. Monitor signposts and keep policy maker informed as outlook changes or evolves.

Analysts’ Curse
The future is always uncertain until one scenario plays out.
Then that scenario must have been inevitable.
Not assigning that scenario 100% probability soon enough is, therefore, an analytical failure.

Was the collapse of the Soviet economy inevitable?
The Soviet economy grew through extensive growth; that is, it employed more and more labor and added more and more capital (machinery and structures, not money) through investment. USSR also had abundant natural resources to exploit.
This worked well until the 1970s, when labor force growth could no longer keep up with rapidly growing capital stock. We used input-output tables (define) to identify bottlenecks and shortages in the Soviet economy. We used production function analyses
(define) to measure the declining ability of the Soviet economy to substitute capital for labor. Soviet central planning could not make the many millions of economic decisions necessary for each enterprise to substitute capital for labor effectively. Only a well functioning market economy with exquisitely sensitive, correct, and constantly changing price signals can do this. Continual economic reforms of the central planning system continually failed. Gertrude Schroder’s “treadmill of reform.” We knew the economy could not grow much under central planning and would only become more inefficient and wasteful of resources. The Reagan administration also made the Soviet leadership sensitive to Soviet technological backwardness.

You know what happened. The system disintegrated in 1990-91. Was it inevitable? Alternative scenario: Soviets freeze the annual plan; that is, the output targets don’t change. The plan will be fulfilled next year since they were able to fulfill the same plan this year. But investment has added new production capacity and new workers have joined the labor force. Let that new capacity sell into a developing market system, which will allocate about 4% of GDP in its first year, about 8% in its 2nd year, and so on. Over the years, the economy will become more market and less planned, without a collapse in output. Note that the Chinese Communist Party has presided over a much more sophisticated version of this approach with output growing rapidly from the first year—and with Western analysts predicting doom every year for one reason or another.

My assertion: the collapse of the Soviet economy was not inevitable, but was due to bad policy choices.

What happened after the collapse?
Page 2 of handout show the decline of Gross Domestic Product, \( K + L = C + I + G + \text{Exports} - \text{Imports} \), from 1989 to the year during transition when GDP finally bottomed. US GDP dropped by about a third in the Great Depression of the 1930s. Note that all the transition economies suffered declines in GDP, and Russia, at minus 46.5% was not the worst. So, the declines in GDP were not uniquely Russian or even uniquely post-Soviet. Poland declined the least, 13.7%, and resumed GDP growth in 1992.

Were these disastrous declines in GDP inevitable? I say no. They were due to bad advice from Western economic advisors, whom the Poles called “Marriott brigades.” They flew into the capital, checked into the Marriott, gave the same advice regardless of the country’s unique political and sociological situation and ignoring the dependence of economic behavior on the political and social environment in general. They then checked out of the Marriott and flew off to the next country or back home.

What was so bad about the advice?
Arrogant economists assumed that economic functioning is not dependent on psychology, sociology and politics. In the early to mid-1990s, area specialists sponsored a series of conferences lead by Nobel Economics Laureate Douglas North and Charles Tilly, a leading sociologist, at the National Academy of Sciences. The speakers were mostly well-trained graduate students, whose research required them to live in these countries, often staying with families outside the capitals. They were superb sources of what analysts call “ground truth.” They produced volumes of excellent papers based on Ph.D. dissertations that were vetted by senior professors on the committees. This and other work was ignored in favor of the Washington Consensus, which asserted that letting free
markets develop spontaneously and rapid privatization of state-owned capital stock would spontaneously generate a well functioning economy. 

In Russia, privatization was accomplished by several means: a voucher scheme that gave vouchers tradable for shares in newly privatized companies to most citizens. These vouchers were bought from the individual citizens at ludicrously low prices and consolidated to get controlling interest in the enterprises and take them over. Another scheme was loans for shares. Banks would loan money to enterprises with shares held by the banks as collateral. When the enterprises could not repay the loans because their customers were bankrupt, the bankers used the shares to take control of the companies. Another practice was called “tunneling.” Managers would create and own a dummy company and sell inventory and assets under their control to the dummy company at ridiculously low prices; thus, basically stealing the company. These and similar practices created the oligarchs: thieves who gain control of assets through legal or illegal means. In general, they did not create value; they only transferred it to themselves.

Why was corruption not expected by the economists pushing the Washington Consensus? Pages 3-4 of the handout give you a taste of the analysis. Basically, economic behavior and decision-making are sensitive to conflicts of interest, time horizons, and uncertainty about the future. For example, in all the discussion about pension reform in the US, has any mention been made of how pensions reduce corruption? How many crime shows have you seen where the good cop refuses to skew an investigation in response to bribery or threats because he might lose his pension, or the bad cop is struggling because he lost his pension due to one lapse in integrity? In Russia, all the pensions disappeared. The future was uncertain, so stealing as much as possible as fast as possible was the best way to a secure future. He who does not steal robs his family. The Marriott brigades had no understanding of this. Their theory implicitly assumed that Milton Friedman’s permanent income hypothesis (explain) was still operating benignly. Friedman’s permanent income hypothesis, for which he won the Nobel Prize, did not deal with what happens when the permanent incomes suddenly disappear.

Monopsony and oligopsony: All basic economic textbooks recognize the problems of monopoly and oligopoly. Monopoly means only one seller, who can then raise his price above the competitive price by reducing supply. Oligopoly is the same, except that a small group of sellers collude to raise the price of their product by jointly reducing supply. But few, if any, basic economics textbooks, mention monopsony, a single buyer who limits his purchases to lower the price he has to pay. Think of a Soviet town created to supply labor to one big factory or mine that is the town’s only major employer. It is a local monopsonist, the only buyer of labor. Furthermore, this monopsonist also runs the medical clinic, local grocery, and supplies local housing. So, it is also a monopoly supplier for all these consumer necessities. This situation also occurs on US military bases in locations where they need to be self-contained and self-supporting. Everything is OK as long as it is a government-run operation fulfilling its mission. Now let it be taken over by ruthless profiteers legally or illegally. What happens? The monopsonist reduces wages or even stops paying them. The workers have no place to go since this is also happening in all the single-employer towns they could move to. Besides if they leave, they lose their apartment, health care, and rights to unpaid wages they still hope to
collect. Sometimes the workers are “paid” with some of the factory’s output, which they will all try to sell at the same, so the price of the output falls to near zero. Furthermore, the company may start charging, or charging more, for medical and other services. This is monopoly power: the company is the only local provider. Western economic advisors could not foresee this result of marketization and privatization. It isn’t in their textbooks. It is, however, in the US country music heritage. One of Tennessee Earnie Ford’s hit songs was “Sixteen Tons.”

You load sixteen tons,
And what do you get?
Another day older and deeper in debt.
(Monopsony employer keeps wages low.)
Saint Peter don’t call me
Because I can’t go.
I owe my soul to the company store.
(Monopoly seller keeps prices high.)
Good economic analysis may be found in unexpected places.

Marketization and privatization did not result in well functioning competitive markets. They resulted in rampant theft and exercise of monopoly, monopsony, oligopoly, and oligopsony power that cut wages, increased unemployment, and raised prices all at the same time. Uncertainty about the future meant that everyone hoarded money and anything they could store in hopes of being able to sell or barter it later.

Western economic advisors also missed something called the Marshall-Lerner condition because in the textbooks, it is applied only to international trade. Technically, the Marshall-Lerner condition means that the elasticities of supply and demand sum to less than one, that is, both curves are almost vertical. The result is that small shifts in either curve result in big changes in price but only small changes in the quantity bought and sold. Markets for food, fuel, and medicine necessary for survival are likely to suffer from the Marshall-Lerner condition. The nearly vertical demand curve means that buyers will pay almost anything to get the amount they need to survive, but once that need is satisfied, they don’t buy much more even if the price falls a lot. Nor can they reduce their purchases much even if the price increases a lot. For the suppliers, increases in quantity supplied reduce total revenue because the number of units sold does not increase enough to make up for the price decline. This is why historically most governments interfere with markets for these necessities, ignoring complaints by economists who fail to consider the dire effects of the Marshall-Lerner condition. The economists implicitly assume reasonably elastic supply and demand curves.

The Washington consensus misunderstood more than the internal microeconomics of the economies in transition in the 1990s. It set up the world for a series of international financial crises by requiring fixed foreign exchange rates, that is, fixed currency prices, to foster international stability and to remove currency risk from international trade. The results were the forced withdrawal of the UK pound from the European Exchange Rate Mechanism in 1992, the Mexican peso crisis in 1994 after NAFTA, and the Asian financial crises of 1997 beginning with the Thai baht in July 1997. Russia’s turn came in
August 1998, when the central bank could no longer maintain the ruble’s fixed exchange rate and the Russian government could not pay its debts. (Any rubles it paid out would immediately be turned in to the Russian central bank in exchange for its foreign currency reserves, which were fast disappearing.) The Russian government defaulted on its bonds, which banks held as reserves, bankrupting the banking system. The main cause was that government revenue depended on taxes on oil sales and the price of Russian oil had fallen to $10 a barrel with no prospect of prices rising. Peek ahead to page 17 of your handout at the upper right graph. See the ruble fall off the cliff in 1998.

The Russian leadership that succeeded Yeltsin learned two important lessons from the 1990s. Don’t listen to Western economic advisors and don’t supply so much of any commodity, but especially oil and gas, to world markets that the prices fall too much. These lessons are key drivers of Russia’s economic strategy since 1998 and will continue to be in the future.

How has the Russian economy developed since the 1998 financial crisis? Look at pages 5 – 12 of the handout. Russia’s economic development is very uneven. In some ways, it is an advanced economy. In other ways, it fits in with less developed economies.

Page 5: Even now, the Russian business environment is worse than India’s but better than Pakistan’s. Economic freedom is worse than in Nigeria but not as bad as in Columbia.

Page 6: Since Russia defaulted on its debt in 1998, you’re safer holding Mexican bonds, but Russian bonds are safer than South African bonds. Oddly, the capitalization (the sum of all shares times their prices at the end of June 2006) of the Russian stock market is high, second after South Korea’s and ahead of India’s.

Page 7: Bond buyers will buy Russian bonds instead of US bonds if the Russian bonds pay 1 percentage point more in interest. 100 basis points = 1 percentage point. This puts Russian bonds behind Mexico’s but ahead of Egypt’s. It takes fewer days to start a business in Russia than in Malaysia, but more days than in Chile. However, the cost of starting a business in Russia as a share of per capita income is only 3%, but probably not counting bribes. The cost of starting a business in Hong Kong is also only 3%, but the uncounted bribes may be less.

Page 8: Russian export competitiveness is worse than Turkey’s but better than Brazil’s.

Page 9: The first chart has the lowest bribe payers at the top. Russians in foreign countries bribe less than the Chinese but more than the Turks. Keep in mind that ranking also depends on which countries the Russian business people are working in. Russia’s national budget is less open to scrutiny than Tanzania’s, but more open than Guatemala’s.

Page 10: According to the UN Human Development Index, which blends material welfare, longevity, and education, Russia is between Malaysia and Brazil. Remittances by Russian migrants back home to Russia were only 0.5% of GDP, about the same as Iran. Russia is booming with GDP growth in the 6% range, but it suffers from high inflation in the 7% to 8% range. Driven by high oil and gas prices, Russia’s current account surplus is in the 7% range but may fall closer to 4% in 2008.

Page 11: The value of mergers and acquisitions in Russia, slightly over $100 billion in 2006, placed Russia below Italy but above Australia. Foreign direct investment inflows into Russia, at almost $30 billion in 2006, placed Russia below Italy and above Mexico;
however they did increase by 94.6% over 2005. Apartment purchase prices in Moscow are a bit less than in Amsterdam, but a bit more than in Rome.

Page 12: Russia’s foreign trade as a share of GDP, near 50%, is between France’s and India’s, increased by oil, gas, and metals exports.

I haven’t added them here, but Russian statistics on health and longevity are horrible.

As I’ve attended both business and academic conferences and seminars on Russia, Russia seems to be two very different countries. Political and social science specialists portray a Russia that is backward, crime ridden, and hopelessly corrupt. Sometimes even phrases like “impending collapse” and “looming crisis” are used. For careful analysts, these phrases are dangerous. They are emotion-laden and imprecise. Economic and financial analysts, when met with these phrases, can ask the speaker to define “crisis” and “collapse” quantitatively. Quite often, the definition in numbers is much less alarming than the words. The stock market “collapse” is a 10% drop in stock market prices, what others call a “normal correction.” The currency crisis is a 10% depreciation, which makes the country’s exports more competitive and helps solve its current account deficit.

Please do beware of incendiary words in your reading and seek cool and unemotional precision in your own writing and briefing.

Dung Zhou-ping, at the beginning of China’s economic transition, said, “It doesn’t matter if the cat is black or white, as long as it catches mice.” To me, as an economist, much of the criticism of Russia’s severe political and social problems, are in Dung’s phrase, cries of “The cat is black! The cat is black! Therefore it cannot function and must collapse.”

Please turn to page 13 of the handout to see if the Russian “economic cat catches mice.” Page 13 reports both history and forecasts for annual real growth in Gross Domestic Product (GDP) and for Consumer Price Index (CPI) inflation for the countries of the former Soviet and Union and for Eastern Europe. West European countries are included for comparison. The countries are listed in each table in descending order for the year 2007. First, note the near absence of negative signs in the GDP table. Turkey suffered a decline in GDP of 7.5% in 2001, and Germany, a decline of 0.2% in 2003. Contrast this with the GDP declines in the 1990s on page 2. Note that the forecasts out to 2016 are also very positive. Note also that the slow growers at the bottom of the table are West European countries. Russia has healthy GDP growth in the 5% to 6% range, but ranks 9th in GDP growth for 2007.

In the consumer price inflation table, Russia ranks 6th in 2007 and will continue to have high, but declining, inflation out to 2016. I am in a small minority of economists, maybe a minority of one, who thinks that high inflation should be acceptable under certain conditions. A price index is just a weighted average or mean of price changes for the goods and services included in the index. For those of you who have studied mathematical statistics textbooks, what is the topic covered right after you learn how to calculate the average or mean? The next topic is how to calculate variance and standard deviation. This is to measure the degree to which the components within the average differ relative to each other. For a price index, the change in variance or standard deviation tells you how much the prices are changing relative to each other. This is
important because the changing of relative prices within an economy signals the producers to change the composition of production and the mix of inputs used to produce each good or service. Changing relative prices also signal consumers to change the composition of their consumption. Tight monetary policies that reduce overall price inflation also suppress the important relative price signals that tell the economy to produce and consume a changing mix of goods and services. Countries, like Russia, that need to change the mix of what they produce, consume, export, and import need relative price signals to be free to change so that producers and consumers can respond by changing the mix of real goods and services they produce and consume. Therefore, if the variance or standard deviation of the price index is increasing, inflation should be tolerated. Unfortunately, monetary economists don’t recognize this, and only the change in the average or mean price level is calculated. No one calculates the variance or standard deviation to see if relative prices are changing. Nevertheless, after suffering from the bad economic advice of the 1990s, Russia and other countries in the table are willing to ignore bad advice about reducing inflation at all costs, even if they don’t fully articulate why.

Please turn to page 14 in the handout. The forecasts for 17 major economic forecasters are reported, so you can see the range of forecasts. The data on page 13 are the mean or average from this table. Note that real average monthly wages will rise 10.5% in 2007 and 9.2% in 2008. “Real” means after subtracting the effects of consumer price inflation. This growth is consistent with household consumption increases of 110.6% in 2007 and 9.4% in 2008. This helps to explain Putin’s approval ratings in the 70% range. Page 16 shows very positive trade and current account balances. The lower left table shows the composition of the current account. The Russian Central Bank’s foreign currency reserves exceed a quarter of a trillion dollars and will continue to grow. Page 17 presents the good news in graphs. Page 18 shows the performance of my two favorite Russia stock funds.

The Russian economic cat may be black, but it definitely catches mice.

What then could be the dangers to the health of the Russian economy going forward? There are two. One is “Dutch disease” due to high oil and gas prices. The other is the same problem with which I opened this lecture, the growing imbalance between capital and labor.

Dutch disease first. Before the Netherlands discovered large gas deposits back in the 1960s, it was an exporter of high quality manufactured goods. The gas exports earned foreign currency. The large inflow of foreign currencies caused the Dutch guilder to appreciate. The strong guilder was great for Dutch consumers. They could buy imported goods more cheaply. So they bought imported goods rather than more expensive domestically produced goods, hurting Dutch domestic producers. The effect on Dutch exporters was even more dramatic. Dutch exporters of manufactured goods lost market share to other exporting countries and to the domestic producers in their customer countries. The currency inflows from natural gas caused the guilder to appreciate, which
priced Dutch manufactures out of their markets, resulting in the decline of manufacturing and loss of jobs. Prosperity caused poverty!

Is Dutch disease a threat in Russia? The aggregate statistics say no. The Russian economy is growing flat out as fast as it can. Rising wages and household consumption are not consistent with Dutch disease. Gross fixed investment is also growing in the 10% to 11% range, but much of that is in the oil and gas sector. GDP growth will continue in the 5% to 6% range, but 1/3 of GDP is produced in the Moscow region plus Tyumen oblast, Western Siberia, where most of the oil and gas is currently extracted. The Russian economy should be analyzed by regions. The prospects for Dutch disease in some of Russia’s regions have been ignored, possibly because the Netherlands is too small and homogeneous to have regions. Nevertheless, for Russia as a whole, Dutch disease is not a threat.

The second threat to the Russian economy is the growing imbalance between capital and labor, the same imbalance that led to the Soviet Union’s growth slowdown beginning in the 1970s, the treadmill of reform that the Soviet Union fell off of, and the breakup of the empire in 1990-1991. The same quantitative economic analytical tools, input-output tables and production functions, are being used to diagnose the long-term health of the Russian economy. But now, the cutting edge work is being done in Japan by Professor Masaaki Kuboniwa at Hitotsubashi University and Professor Shunichiro Tabata at the Slavic Research Center at Hokkaido University (See http://src-h.slav.hokudai.ac.jp/). This time, the problem is more serious. The Russian labor force is not growing more slowly, it is declining. (This declining labor force is part of the explanation why Dutch disease is not a threat. It also helps explain the 10% growth in real wages and household income.) Nevertheless, the growing imbalance between capital and labor will slow the growth of the Russian economy except for oil and gas, which are not labor intensive and for which expert foreign labor can be imported. Russia can address, but not fully ameliorate, the growing labor/capital imbalance through immigration, mostly from Central Asia and China, and import of labor-saving technology from Japan, which faces the same problem. The prognosis for Russia being able to solve the growing capital/labor imbalance problem is not good. Large-scale immigration raises a host of social and political problems. The growing capital/labor imbalance also invalidates the long-term optimistic growth forecasts for Russia, such as the 2003 Goldman-Sachs BRIC (Brazil, Russia, India, and China) forecast.

The alternative is not bleak for Russian quality of life. Think of Japan but with oil and gas wealth. Russia could concentrate its wealth on increasing per capita income and improving income distribution so that all Russians can live longer and healthier lives. Not bad, but would this be enough for Russia?

Probably not. Russia and its changing leadership are moving up, and sometimes backtracking down, a very unfamiliar learning curve. The key points on that learning curve are as follows.
1) Being a nuclear and military superpower did not prevent the Soviet collapse in 1990-91; indeed, the drain on resources to maintain that status contributed to it.
2) Embracing the ideology and following the advice of the Western “Marriott brigades” in the 1990s was a total failure. It resulted in economic collapse (GDP fell 46.5%) and the financial crisis of 1998.

3) Efforts to hold on to the buffer states of the “near abroad” have not enhanced security. However, Russia has a pathological fear of losing more territory. It holds onto Chechnya, yet resists union with Belarus. Pipeline routes may explain some of this apparent inconsistency.

4) Russia finally found the “energy lever” when it reduced the pressure in the gas pipeline through Ukraine to the EU on 1 January 2006.

5) Russia’s strategic power, influence, and security depends on its natural resources, especially but not limited to, oil and gas, and on maintaining high prices for these resources. (Russia’s 1998 crisis occurred when oil prices dropped to near $10/barrel. No one recognizes the importance of the Marshall-Lerner condition, but Russia has learned to restrict supplies to keep prices up.)

6. Thus, the Russian Government must have control over oil, gas, and other strategic resources. Western arms-length regulation is not enough, and nationalization results in inefficiency. Russia is trying another tack: the involvement of Government officials in the management of key resource companies. (There is precedent in Tsarist Russian business history.) This approach is simultaneously denounced by Western ideologues and endorsed by Western investors.

7. Russian Government officials’ involvement in key Russian businesses will help them to coordinate and to play key roles in the developing global cartels for energy, metals, and maybe other key commodities.

To Be Continued …
Software Evolution and the Rise of Game Culture
- Focusing on the “Ripple Game” in South Korea -

Mun-Cho Kim and Jong-Kil Kim

Today ICTs have a great impact on our everyday life, presumably far greater than that of conventional mechanical or printing technologies. One of the unanticipated phenomena is the rise of game culture led by “fantasy principle,” a new social ethic following Freudian reality principle that are thought to be the dominant motivational basis through the entire modern period.
At the core of such transformation, there lies software (S/W) technology. Although disputes have been remained unsettled on the classification schema or developmental stage of S/W technology, it can be generally portrayed that S/W technology have been developed as follows; Infrastructure (Machine Language) S/W → Information (Data) S/W → Interface (HCI) S/W. Based on the STS perspective that postulates the reciprocal interaction between technological subsystem and social system, this study attempts to analyze the emergence of game culture with special reference to “Ripple (Reply) Game” in South Korea.

The current development of S/W technology can be characterized by its contribution to (1) exponential growth of knowledge, (2) upgrading quality of knowledge, (3) active reconsilience/hybridization of knowledge. Given the circumstance, cyberspace is going to be a complexity system of self-organization. Thus, cyberspace becomes a place of uncertainty of high degree of freedom. Such tendency may be facilitated by the subsequent evolution of S/W technology that tends to enhance the level of knowledge application.

In accordance with diffusion of internet and the other means of digital communication, cyberspace becomes a major agent of socialization, competing with traditional agents of socialization such as family, school, workplace or mass media. One of conspicuous characteristics of the cyberspace is found in the fact that it represents a fictitious world called ‘virtual reality.’ To those who are sick of the tedious or repetitive daily routine, cyberspace should be appealing with its potential to provide something cool.

It is widely known that cyberspace is an effective mean of interpersonal association. Cyberspace is also recognized as an alternative life-world far exceeding the expectation of its usage as a tool. However, combined with the incoming fantasy principle, cyberspace will be endowed with the new role neither a tool nor a simple complement for the real world. Cyberspace is turning to an active playground, designed to evoke our inert desire for amusement.

If we specify the stages of online socialization in terms of type of knowledge along with the evolution of S/W technology, the dominant pattern of ‘cyber-socialization’ is described to move from the acquisition of formal knowledge, through the adoption of practical knowledge, to the mastery of contextual knowledge. Through this dynamic process of socialization in an utterly flexible setting of cyberspace, netizens are apt to be more permissive to “risky ways of life.” Owing to high psychological pressure for social accomplishment in the ultra-achievement society of extreme competitiveness, the risky ways of life become a rule of everyday life and socially favored and institutionalized. Extreme sports and venture business are the exemplars that reflect this emerging socio-cultural trend.

In addition, the current development of S/W technology predisposed to reinforce the function of universal interaction is likely to support the risk-taking lifestyle of excitement, adventurism, contention, satiation and the like. In accordance with the establishment of technological
infrastructure of ‘risk-taking society,’ game culture is likely to prevail. Recent online game boom might be an indication of the co-evolution of S/W technology and ‘fun-oriented’ society.

Ripple Game is one of the most popular online activities in South Korea. Those who are deprived of the opportunity to express their opinions via other means of communication are most enthusiastic to the Ripple Game. Usually Ripplers who are addicted to the Ripple Game are wandering around the cyberspace and eager to spend several hours a day making comments on any type of online text, written, visual, audial whatsoever. If prohibited, Ripplers are getting depressed since they can only establish their identity through the Ripple Game.

Ripples can be either good(Welpple) or bad(Badpple). Therefore, cyberspace can be interpreted as “a grand contested terrain of language game” where the need for amusement and the need for risk-taking are interwoven with each other during the process to cope with ever-increasing ‘serious play.’

Based on a four-sample case study concerning a selection of the public disputes such as constitutional amendment, new housing policy, aircraft accident and homosexuality, quantitative analysis of Ripples will be conduct in order to figure out the shape and dynamics of Ripples. Then, qualitative analysis of the Ripple text will be followed in order to examine and interpret the content of Ripples within the game perspective. Finally, depending on additional data acquired by heuristic grounded approach, the nature of Ripple Game as a serious play will be further explored in light of the dual socio-cultural trends of ‘hyper-realism’(fantasy principle) and ‘neo-frontierism’(risk-taking attitude).

Abstract

Building an Advanced Financial System through Microcredit

Su Hee Kim

Under the Supervision of Professor Sung Hoon Park
at Graduate School of International Studies
Korea University

Microcredit or in its wider definition microfinance, is a new way of delivering loans to the poor, who have been usually excluded from formal financial services because of high cost and risk, in the developing and least developed countries. With access to a range of financial tools, poor households can invest according to their own priorities, reduce the vulnerability to loss of income and achieve
economic sustainability. In this paper, a general understanding, including historical background and microcredit institutions’ main characteristics, and the effectiveness of microcredit are discussed. Following to positive effects, current debates and limitations of microcredit such as group lending methodology, heavily-subsidized institutions and restricted loans are also mentioned. After a thorough review of several countries’ experiences, the paper examines three strategic issues for making microcredit more effective to enable inclusive financial services, namely (a) Integration of microcredit into the formal financial market, (b) From microcredit to microfinance for inclusive financial services, (c) Regulatory framework: the role of governments. Microcredit is not the best tool for everyone or every situation. However microcredit integrated with a mainstream financial system and non-financial services will bring the maximum number of poor clients into a multipurpose banking environment.

This paper highlights the institutional interpretation of scaled market reforms in Russian economy starting 1980 up to nowadays. The methodology of this research is based upon the institutional matrices theory, developed by the author. The main theses of the institutional matrices theory are given in Proceedings of Hawaii International Conference on Social Sciences, June 12 - 15, 2003 (Proceedings, 2003).

According to this theory, an *institutional matrix* (a derivative from the Latin “queen; foundation; primary model”) is defined as a system of basic institutions, which combine economy, politics and ideology, and regulate the functioning of a state as a whole. Two ideal types of institutional matrices that differ qualitatively and aggregate a whole variety of states of a society as a social system can be singled out: an X-matrix and an Y-matrix. They differ in a set of basic institutions forming them.

An X-matrix is characterized by the following basic institutions:

- in the economic sphere: *redistribution economy institutions* (term introduced by Karl Polanyi’s, 1977). Redistribution economies are characterized by a situation when the Center regulates the movement of goods and services, as well as the rights for their production and use;
- in the political sphere: *institutions of unitary (unitary-centralized) political order*;
- in the ideological sphere: *institutions of communitarian ideology*, the essence of which is expressed by the idea of dominance of collective, public values over individual ones, a priority of We over I.

X-matrix institutions are predominant in Russia, most Asian, Latin America, and some other countries.

The following basic institutions belong to the Y-matrix:

- in the economic sphere: *institutions of market economy*;
- in the political sphere: *institutions of federative (federative-subsidiary) political order*;
- in the ideological sphere: *institutions of the ideology of subsidiarity* which proclaims the dominance of individual values over values of larger communities, the latter bearing a subsidiary, subordinating character to the personality, i.e. a priority of I over We.
Y-matrix institutions are prevailing in the public order of most countries of Europe and the USA.

The type of material-technological environment is crucial for the formation of a particular type of institutional matrix. We distinguish a *communal* environment and a *non-communal* one. Communality denotes such a feature of the material-technological environment, which assumes that it is used as a unified, further indivisible system, parts of which cannot be taken out without a threat of its disintegration. A communal environment can function only in the form of public goods which cannot be divided into consumption units and sold (consumed) by parts. Accordingly, joint, coordinated efforts on behalf of a considerable part of the population, and a unified centralized government are needed. Therefore, the institutions’ content of a state which is developing within a communal environment is, eventually, determined by the tasks of coordination of joint efforts towards its effective use. Thus, an X-matrix is formed under communal conditions, whereas *non-communality* signifies a technological dissociation, a possibility of atomization of the core elements of material infrastructure, as well as a related possibility of their independent functioning and private use.

Non-communal environment is divisible into separate, disconnected elements; it is able of dispersion and can exist as an aggregate of dissociated, independent technological objects. In this case, an individual or a family can involve parts of non-communal environment in their economy, maintain their effectiveness, and use the obtained results on their own, without cooperating with other members of the society. If this is the case, the main function of the thus-forming social institutions is to assure an interaction between the atomized economic and social agents. An Y-matrix is shaped in a non-communal environment.

From the point of view of this theory the essence of Russian economic reforms is the search for the optimal combination of market and redistribution institutions and modern forms of their embodiment.

Complexes of redistribution institutions (X-type) and market institutions (Y-type), which are the main subject in this research, are presented in details in the table.

**Table. X- and Y-institutions and their functions in economy**

Property rights system ensures the basis for stable relations between economic agents. The structure of property rights entails the order of resources, got from the nature, for the production and the subsequent delivery of the goods to the people for their existence and development.

The specificity of **supreme conditional property** is that the rules of access for the use of some objects as a means of production are conditional. These rules are changeable in the course of time and dependable on the external circumstances. The supreme hierarchical level of governance determines the rights of access in accordance with the public role and importance of the resources for each historical moment. Due to the existence of the supreme conditional property institution the ownership configuration is permanently changing but the role of the supreme center as the principal regulator of property rights is constantly preserved. If the objects belonged to any economic agent do not assure the essential contribution to the total productivity or if they are not used for the public benefit, they can be seized and returned to common ownership or transferred to the other productive economic agent.

**Private property** means that the society sanctioned the whole constant property rights (including the possession, disposal and use of the objects) to the economic agents.

Transfer of goods within the framework of appropriate property rights is regulated by redistribution or exchange.

**Exchange** means the horizontal interactions between independent economic agents for the profit gaining.

**Redistribution** describes the process of material goods and service (and proper rights) transfer not between the independent agents as in exchange process but transfer between the agents and the Center as a mediator. Historically the redistribution as an institution emerges in the nations where the majority of economic agents depend on the common significant resource. Such resource can be called public goods. In this case it is necessary to coordinate the transactions not only between two interactive agents but also between other economic agents which can explicitly or implicitly be involved in the transactions. The motivation to minimize the transaction costs leads to the creation of one special Center responsible for the necessary coordination. All necessary information is accumulated in this Center. The rules and the order for the use of common goods are defined there. The appropriate resources are concentrated in this Center to support its coordinative functions.

Thus the redistribution model includes three participants of transaction, namely, a pair of economic agents and the Center as a mediator. Redistribution means the permanent process with three basic phases – **accumulation** (collection storage of resources and goods) – **concordance** (concentrated in the center) - **distribution** (resources, goods and proper rights).

Since the exchange (the market) and the redistribution are the fundamental peculiarities of the economic systems based on them, the economies with predominating X-institutions can be rightfully named redistribution economy.
(following Karl Polanyi), whereas the economies with prevailing Y-institutions can be named exchange or market economy.

The institutions of cooperation or institutions of competition regulate interactions between economic agents. Cooperation fixes itself as an institution when the joining up of people for the involvement of the resources into the economy is more productive than the use of restricted resources by separate agents. In communal material and technological environment the cooperation between economic agents with the Center as a mediator is the predominate mode for achievement of economic objectives.

Accordingly the competition stimulates the possession of the limited resources when it is possible to get benefit from the ownership of the part of material resources, material and technological environment and other means of production. There are many different models of competition on the market, for instance monopolistic competition (Chamderlin, 1956) or imperfect competition (Robinson, 1948).

The institutions of service labor (Bessonova, Kirdina, O'Sullivan, 1996, p.8-9) and wage labor regulate the labor relations in economies. Employed labor institution means the realization of redistribution laws in the labor sphere as K. Polanyi noted (Polanyi, 1977, p.36).

The essence of contract labor institution is, according to Karl Marx, that labour-power becomes a commodity – it is sold and bought on the market (Marx). The institutions with the functions of feedback signals also perform in the economic systems.

Without the pressure of competition the efficiency of the redistribution economy can be achieved at the cost reduction in each its segment and in the economy as a whole. H. Leibenstain called this phenomena X-efficiency (Leibenstain, 1966, 1978).

Y-efficiency means the profit markup or growing of the producer surplus and consumer surplus (Principles of Economics) and marks signals that the economy is successful.

All X- and Y-institutions coexist in actual national economies in different combinations and are embodied in many institutional forms.

By the middle 1980s on the eve of perestroika (in terminology of the Soviet Union) or transition economy (in terms of world social sciences) Russia had the unbalanced institutional economic structure. It appeared in predominating and active development of X-institutions of redistribution economy only. Y-institutions which are necessary for successful growth of economic system, were undeveloped and performed as latent, shadow or illegal forms only. At last such misbalance resulted in the non-efficiency of the social system and the deep decrease of its economic and social parameters. The necessity of systemic reconstruction and rearrangement of the institutional structure was recognized in the Russian society.

From the middle of 1980s new political leadership began to develop the market Y-institutions on the legislative basis:
the privatization (in different forms) of the majority of the state scale enterprisers and all the state middle and small enterprisers was put into practice to create the private property;

the decentralization in the economic governance system was realized to develop the exchange transactions instead of redistribution. The state planning system (“Gosplan”) and rigid connections between economic agents was liquidated. The price management was stopped;

new laws about the creation and liquidation of new enterprisers and small business in all branches of economy (from finance and banks to trade and service) were passed to develop the competition;

the contract labor institution substitutes for the service labor because the state system of manpower training and distribution was liquidated. The relationships between employees and employers became the subject of the contract. Both the state salary management and the price management were canceled.

the profit markup (Y-efficiency) becomes the main criteria for new enterprisers and their owners acting in open and competitive market environment.

The attempt to replace the redistribution institutions by the market ones failed. It was evident because there was neither growth of the total efficiency in economy nor expected efficiency increase of the new companies. In 1998 after the default the state economic policy was turned to the search for the optimal and balanced combination of related market and redistribution institutions.

Since the late 1990s – early 2000s (when new political leaders and actual president Vladimir Putin took the office) more attention was paid to the modernization of redistribution X-institutions rather than to the implementation of market Y-institution as it was before:

the supreme conditional property institution shows itself in the creation of the large-scale joint-stock companies and holding structures under the management (or with control share in capital) of Russian government or regional governments. Such companies are mainly presented in infrastructural or high-tech branches including gas, petroleum and energy production and transportation, railway transport, space and aircraft construction, housing management in the cities, motor-car industry, information and communication etc;

the redistribution is presented in new National Projects under the federal governance and supported by the federal budget. These projects covered the main spheres of human being namely the education, the public health, the housing and the agriculture. The centralized scheme of National Projects Management on the new level puts the redistribution scheme (accumulation-concordance-distribution) into life;

the cooperation development is performed in the following: 1) state bodies involve different business structures into the decision-making process of the development of the country, investment participation including; 2) state patronage in the establishment of different forms of cooperation with
business structures; 3) correction of large business structures reformation, directed from the concentration on their own enhancement of efficiency and capitalization to the deep involvement in the process of the country’s economic development. (e.g. electric power reform correction) etc.

- The development of employed labor is expressed in the following: 1) the organization of the industry specialists education system on the basis of private-and-state partnership the state retaining its leading position; 2) the new labor policy which is primarily oriented towards the wealth of people working in the so-called budgetary financed area of economy; 3) the growth of non-monetary factors of labor reward (which is peculiar for the system of service labor)

- X-efficiency (cost reduction) is expressed in the price and tariffs regulation both on federal and regional levels. The main objective of the corresponding commissions (in electric power, railway transport, housing service) is not the revenue of the companies but the decrease of general resources and manpower use as well as national product expenditure and total cost of its production.

As a result, the new balance of redistribution and market institutions is being created in Russia at present. The development of redistribution X-institutions in the institutional structure of Russia along with the further support of market Y-institutions forms a more balanced (in favor of the former) institutional structure. The process of its formation goes along with the recent growth of economic and social development indexes in Russia. In 2006 Russia occupied the 10-th (compare to the 18-th in 2005) place on the GDP index in the world.

This paper finds that the hierarchical organization of the Archdiocese of Portland affected its decisions in regards to two linked events: sex abuse of minors by priests of the Archdiocese and the resultant bankruptcy. The theory of hierarchical organizations is discussed in the survey of the literature, along with pertinent literature on sex abuse by the clergy of the Archdiocese of Portland, and the opinions of legal experts on bankruptcy. The historical data in both cases is discussed and analyzed. Conclusions are drawn based on the advice of various experts on how to ameliorate the effects of a hierarchical organization.
The Archdiocese of Portland became the first Catholic Archdiocese in the world to declare bankruptcy.¹ On 6 July 2004, Archbishop John Vlazny announced, “The Archdiocese of Portland in Oregon is filing for Chapter 11 reorganization in bankruptcy court.”² The Portland Archdiocese spent more than $6.5 million in attorney’s fees during the first year of bankruptcy and it could take three more years to reach a settlement.³ Meanwhile, the state has unprecedented control over a religious organization.⁴ This paper is organized into a survey of the pertinent literature, consideration of how the Archdiocese handled cases of clerical misconduct, and an analysis of the resultant bankruptcy proceedings. My thesis is that the hierarchical organization of the Archdiocese of Portland affected its response to the sexual abuse of children by priests and the consequent Chapter 11 bankruptcy proceedings.

I. Survey of the Literature

This survey focuses on three areas of literature: the theory of hierarchy, sex abuse of minors by priests in the Portland Archdiocese, and bankruptcy law.

Hierarchy – S. N. Salthe, a scientist at Brooklyn College, provided a theoretical analysis of hierarchy as a scientific and social concept in “Summary of the Principles of Hierarchy,” (2001). He noted that hierarchies “provide boundary conditions on the behaviors of lower levels.”⁵ John Gonsiorek added that the leaders of a hierarchy make decisions based on “the needs of the layer above.”⁶ In Getting Things Done (2005), Gerard Fairtlough stressed that the only learning within a hierarchy “is the learning of the individual at the top.”⁷ Richard Donkin noted that hierarchies create “authoritarianism and even despotism, creating fear in some cases and dependence in others,” in his article, “A Hierarchy Is Not the Only Way to Run a Business” (2005).⁸ In Top Down (2005), Harold Leavitt of the Stanford School of Business argued that hierarchies promoted greed, immorality, inefficiency, and distrust.⁹ A Times article entitled, “The
Necessary Evil of Hierarchies,” blamed hierarchies for conflict, distorted communication and “most of the other human ailments that plague large organizations.” These works collectively provide a means of analyzing the actions of the hierarchy of the Archdiocese of Portland.

National Level – A survey of literature on the sex abuse of minors by priests at the national level is important because church hierarchies operate in similar ways throughout the United States. The first category of literature appeared in the 1980’s. Newspapers exposed clerical pedophiles such as Thomas Laughlin in Portland (1983), Gilbert Gauthe in Louisiana (1983), and Mel Balthazar in Idaho (1985). Jason Berry expanded his investigation of Gauthe into an analysis of the problem nationally in Lead Us Not Into Temptation (1992). The crisis reached its peak in 2002 with revelations in the Boston Globe about molestation of minors by priests in the Archdiocese of Boston.

Laurie Goodstein of The New York Times (2003) asserted that a sub-category of literature existed within the Catholic community. Conservative Catholics, like Berry, blamed the crisis on a clerical culture “that tolerated pedophiles and sexually active gay priests.” Liberal Catholics like Andrew Greeley in Priests: A Calling in Crisis (2004) and Karen Lebacqz in “Gay Catholic Priests and Clerical Sexual Conduct” (2005), presented evidence that neither homosexuality nor celibacy caused the problem of sexual abuse by priests. They indicted the
hierarchy of the Church, a structure that Greeley compared to a “dysfunctional firm in which transparency across levels is almost nonexistent.”

**State level** – Newspapers form the major sources of information on the sexual abuse of children by priests and the subsequent bankruptcy of the Archdiocese of Portland. Ashbel Green of *The Oregonian* emphasized the plight of the victims and the inaction of the hierarchy. Ed Langlois of the Archdiocesan newspaper, *The Catholic Sentinel*, defended the actions of the Church. Vlazny declared, “Things are not as negative as they may appear, if your only source of information is the secular media.” The divergent outlooks of these two sources engendered negative emotions that hindered compromise during the bankruptcy hearings.

**Bankruptcy** – Attorney Wendy Davis compared understanding the arguments in a bankruptcy case to figuring out “a very complicated exam question.” Laurie Hamilton of the Cardozo School of Law wrote an article for *FindLaw* entitled “Did the Portland Archdiocese Declare Bankruptcy To Avoid or Delay Clergy Abuse Suits?” (2004). In a paper entitled “The Archdiocese of Portland, Oregon Files For Chapter 11 Bankruptcy: No One Wins When Clergy Sex Abuse Claims Are Litigated” (2006), an unnamed J.D. candidate at Rutgers School of Law pointed out the cooperative nature of bankruptcy court. David Skeel of the University of Pennsylvania Law School, author of *Debtors Dominion, A History of Bankruptcy Law in America* (2001), noted that debtors waive “their right to insist on many of the protections that might otherwise be available to them.” Most legal observers agreed that Vlazny’s decision propelled the Archdiocese into “Uncharted Waters.”

**II. Clergy Misconduct in the Archdiocese of Portland**

In a letter to the parishes of Western Oregon in 2004, Vlazny stated that in the Portland Archdiocese, during the years 1950 through 2003, 181 individuals accused 37 priests of sexual
misconduct. In their article, “Claims in Court Far Outnumber Church Listing,” Green and Woodward reported that the bankruptcy records filed by the Archdiocese of Portland revealed the existence of 368 allegations against 1333 priests. Claimants made 59 accusations against Grammond and the Archdiocese of Portland paid $29,904,500 in settlements. There were 38 accusations against Laughlin and $11,106,715 paid in settlements.

Bud Bunce, spokesperson for the Archdiocese of Portland, accounted for the discrepancies by noting that Vlazny did not include individuals belonging to religious orders in his figures and that new accusations arose as a result of bankruptcy. Bill Crane, leader of the Oregon Survivors Network of Those Abused by Priests (SNAP) commented, “The hierarchy of the Catholic Church always takes the path most advantageous to itself.”

Vlazny noted that a 1991 Oregon law allowed adults to sue for sexual abuse that had occurred decades ago, and held an employer liable for the actions of its employees, even if there is no evidence the employer knew about such misconduct. Vlazny commented that in many cases the accused priest had died. Attorney Jeff Anderson, an attorney who specializes in child abuse cases, observed that while the archdiocese cannot call a deceased priest to defend himself, neither can claimants secure an admission of wrongdoing.

Data

The roots of the Chapter 11 Bankruptcy of the Portland Archdiocese lay in the problem of sexual abuse of children by priests. Three individuals, Laughlin, Grammond, and Joseph Baccellieri are worthy of examination because of the way the hierarchy reacted to their transgressions. Laughlin focused the attention of the Archdiocese on the problem of sexual abuse of children. Grammond’s case led to Vlazny’s apology, and his decision to order Baccellieri to retire alerted the priests of the Archdiocese to the consequences of sexual misconduct.
Laughlin - Archbishop Dwyer transferred Laughlin to St. Mary’s Parish in Corvallis, after a student at Central Catholic High School charged Laughlin with sexual abuse in 1965. Subsequently, Dwyer appointed Laughlin pastor of All Saints Parish in Portland. Father George Gage, assistant pastor at All Saints, wrote Dwyer’s successor, Archbishop Cornelius Power, that Laughlin took boys to his bedroom in the rectory.

A Catholic Sentinel article entitled “Portland Priest to Begin Serving Sentence Tuesday” (1983) by Tom Staley detailed Laughlin’s misconduct. The District Attorney of Portland brought charges against Laughlin as the result of a parental complaint. The police investigation found that a nun, a priest, and several parents had reported concerns about Laughlin to Power years earlier. Church authorities did not inform child welfare officials as required by state law. Laughlin pleaded guilty to two counts of criminal sex abuse, but avoided jail by opting for psychological treatment. On his way to a treatment center in New Mexico, Laughlin stopped in Las Vegas with his eighteen-year-old male lover. When the judge discovered the details of this trip, he sentenced Laughlin to six months in jail and six months rehabilitation in New Mexico.

Laughlin relocated to Albuquerque, New Mexico after finishing his rehabilitation. Attorney Michael Morey investigated Laughlin’s activities there and currently represents an Albuquerque man who accused Laughlin of abusing him over a period of five years. Laughlin moved from Albuquerque to San Diego and was defrocked in the mid-1980s. He now lives in Omaha, Nebraska.

Thirty individuals accused Laughlin of molesting them from 1965 to 1996. The church settled several cases, one in 1986 for $500,000. As a result of the terms of another settlement, Laughlin met with several of his victims. He told them that three different Archbishops knew he had a problem with children, but described it as a spiritual problem. Laughlin blamed the
Archbishops for not keeping him away from children. Archdiocesan lawyer, Tom Dulcich, summed up the effect of the case, “It sort of changed the way things were looked at.”

**Grammond** - The second case that brought the Archdiocese to the verge of bankruptcy involved a priest that Archbishop Levada remembered as “a guy who was nervous, was a hypochondriac, was unhappy where he was.” Grammond admitted that he molested over fifty children from 1951 to 1985. One of his victims testified that Grammond “abused him and, when the boy balked, beat him with a belt and raped him.” Grammond blamed his victims. “They’d dive in my lap to get sexual excitement.” After hearing the priest’s admissions and watching the videotaped testimony of Grammond’s victims, Vlazny settled some of the cases in 2000 for an undisclosed sum and a public apology in which he admitted that “some of the priests of this diocese have sexually molested children.”

Attorney David Slader brought in a $130 million suit against the Portland Archdiocese on behalf of several of Grammond’s victims in 2004. He was to note in his opening statement that archdiocesan officials disregarded five documented notifications of sexual abuse. Slader never delivered this statement. Vlazny filed for bankruptcy moments before the opening of the trial.

**Baccellieri** – A high school classmate of mine, Baccellieri molested eight boys during the 1970’s when he taught at Central Catholic High School. Levada settled the cases out of court, sent Baccellieri to a treatment program, and allowed him to return to the ministry in 1994. Vlazny approved Levada’s decision when he became Archbishop in 1997. Slader argued that Baccellieri had unsupervised access to children and that officials of the Archdiocese of Portland didn’t notify parishioners of his problem. Vlazny denied these charges, but ordered Baccellieri to retire after the US Council of Bishops announced a zero tolerance policy in 2002. Regardless of their feeling for this popular priest, the clergy of the Archdiocese realized that if accusations
of child abuse proved true, it would cost them their careers. The stories of these three priests, out of forty-five accused priests in the Archdiocese of Portland, bear analysis.

**Analysis**

The root word for hierarchy means “high priest.” Fairtlough and Leavitt argued the Church based its hierarchy on the nine choirs of angels “divided into various orders or grades, in which the inferior are subject to and yield obedience to the higher orders.” The early Church assumed a decentralized structure, but adopted the hierarchical organization of the Roman Empire during the rule of Constantine (311-357 AD). Thomas Barth, a professor of public affairs at University of North Carolina, observed that texts in organization theory cite the Church as a “classic bureaucracy, characterized by a hierarchical command, extensive rules and regulations, specialized rules and responsibilities.”

Salthe defined hierarchy in terms of the boundary conditions between levels. The Church identifies boundaries by symbolic dress and maintains them through doctrine. Popes wear white and gold robes and carry a bent crosier. Cardinals don scarlet garments and wield a straight staff. Bishops wear a distinctive pectoral cross. Michael Papesh noted that a priest’s ordination places an indelible mark on his soul that “by implication makes the priest and the bishop ‘other than’ the laity, placing them above lay people.”

Greeley, Fairtlough, and Leavitt argued that the rigid boundaries of the Church hierarchy inhibited communication. Members of the laity are not likely to bring forward accusations of misconduct in a culture that views the parish cure as a surrogate for Christ. As Vlazny observed, “People kept things like that quiet in those days.”

Fairtlough emphasized that hierarchies inhibit learning. Dwyer and Power ignored warnings about Laughlin and Grammond from priests, nuns, and lay people. When he took over
as Archbishop in 1997, Vlazny approved Levada’s decision to allow Baccellieri to remain in a parish without notifying parishioners. Later, Vlazny admitted, “With deep regret, I further acknowledge that some people in the church community did not believe bona fide reports of abuse and failed to recognize the deep and lasting harm that child abuse causes.”

In line with Gonsiorek’s observations, the hierarchy of Portland considered their needs first in making decisions. They declared sexual abuse by clergy a moral problem and asked pedophiles to make a good confession and avoid that sin in the future. When it was obvious that this solution didn’t work, they sent offenders for psychological treatment. They believed the claims of treatment centers that they could cure pedophiles so that the Archbishops of Portland could return priests to parishes where they were needed.

The inefficiencies of hierarchies and what Thomas Plante, author of *Sin Against the Innocents*, described as the defensiveness typical of such organization surfaced in the Grammond and Baccellieri cases. Levada related in a deposition that his predecessor, Archbishop Power never warned him about Grammond. In 1991, after learning that a child accused Grammond of abuse, Levada told Grammond “not to engage in public ministry.” Levada testified about Baccellieri, “I believe there was some allegation that occurred while I was there.”
The Archbishops of Portland maintained the boundaries between the levels of the hierarchy and as a result, ignored legitimate complaints, failed to learn about pedophilia, and reassigned accused priests to parishes. The exception was Vlazny’s settlement mandated apology to the victims of sex abuse.63 His humble and forthright expression of regret earned the respect of the community.64 However, it didn’t compensate the 181 children abused by priests in his Archdiocese. Experienced trial lawyers prepared cases on behalf of these victims.

III. The Archbishop of Portland Asks for Chapter 11 Bankruptcy Protection

Social anthropologist F. G. Bailey’s theory helped strip the emotion from the topic of the bankruptcy of the Portland Archdiocese. In *Stratagems and Spoils* (2001), he suggested we think of such contests as competitive games. Bailey noted that in games both sides are evenly matched, adhere to a set of rules, and agree on the prize. The referee penalizes those that violate the rules. He insisted that one ought to judge the tactics employed by both sides, not by what was right or wrong, but by what was effective. Bailey provided a tool for analyzing such contests by parsing major confrontations into turning points he labeled “episodes.”65

The intense competition of bankruptcy court fits Bailey’s analogy. Both sides compete on the playing field of the courtroom for scarce resources – money. In order to win, both sides must agree to a settlement. The law gives debtors (defendants) and creditors (plaintiffs) equal standing. The bankruptcy judge enforces the rules. The standard of judgment for the actions of the lawyers is based on whether their actions move the case toward settlement. Actions based on abstract moral principles impede resolution.

Before examining the episodes or points of conflict in the Chapter 11 proceeding between the Roman Catholic Archbishop of Portland in Oregon and the Committee of Creditors, some background is necessary. David Skeel of the University of Pennsylvania noted in his definitive
history of bankruptcy *Debt’s Dominion* the importance of the bankruptcy of asbestos manufacturer John Manville. It established the principle that a company need not be insolvent to declare bankruptcy and expanded the definition of “claims” to include “mass tort” cases. Most importantly it set the precedent of setting up a trust fund to compensate past and future victims of the debtor’s products to resolve the liability problems.

Vlazny’s legal advisors confirmed that the Portland Archdiocese met the legal requirements for Chapter 11 bankruptcy. After consulting the Vatican, the Archbishop filed for Chapter 11 protection as a result of two pending cases of sex abuse by clergy, one for $25 million and the other for $130 million. Vlazny argued he did so “to assure fair compensation for all claimants.” He asserted, “The pot of gold is pretty much empty now.” Slader retorted, “Vlazny has not begun to touch his pot. He is lying.” Judge Elizabeth L. Perris believed that the $26 million paid by the Archdiocese of Portland and the $27 million paid by their insurers demonstrated good faith and accepted the case.

**The Delaying Game** – Both sides claimed it was to the advantage of the other side to settle the case quickly. However, time is generally on the debtor’s side, even though attorney fees may be higher. Debtors enjoy full use of their resources until forced to part with them. The Archdiocese of Portland contested every legal issue.

Steve Woodward of the *Oregonian* noted that a tragic consequence of the delay was the suicides of several plaintiffs. Peter Ryan committed suicide after receiving a $1 million settlement from the Church over abuse by Grammond. Larry Craven and Steven Colvin had sex abuse suits pending. They took their own lives after the Church cut funding for their counseling. A spokesperson from the Archdiocese commented, “The Archdiocese has provided counseling in the past for many people, but the bankruptcy has presented obstacles to our past practice.”
Fees – Attorneys for the claimants argued that the tactics employed by the debtor prolonged the time that the Archdiocese of Portland had to pay legal bills averaging $440,000 a month. Under bankruptcy law the debtor, the Church, pays for both sides. Tom Dulcich, a Church lawyer, noted that his firm discounted their fees to $235 an hour. Ed Kennedy, representing the claimants, replied that $350 an hour was not unreasonable considering the fact that lawyers in the bankruptcy of Northwest Airlines charge $800 an hour.

Bargaining – Lawyers representing the debtors and claimants started work in the summer of 2004 to develop a mutually acceptable reorganization plan. In November 2005, Vlazny presented a plan that called for a $40 million settlement for victims of abusive priests. He asked Perris to set a cap on the amount of money the Archdiocese would have to pay to over 100 claimants. Perris ruled that a Supreme Court decision prevented her from setting such a cap.

The claimants found Vlazny’s reorganization plan unacceptable. They estimated it would take $255 million to satisfy all claims and contended that if Vlazny counted the assets of the parishes, he could raise hundreds of millions of dollars without selling church property. Vlazny responded with an offer of $42 million for current claims and $8 million for future claims. Both sides labeled the offers of their opponents “bargaining ploys.”

Class Action Suit – Church lawyers persuaded Perris to accept a class action suit granting standing to the Committee of Parishes and Parishioners as representatives of 400,000 Catholics. The Committee and the Chancery office gathered evidence to prove their case that parish property was a restricted asset held in trust. Rev. Joseph Jacobberger warned that in the event of an unfavorable ruling “the church could go out of existence in terms of owning buildings.” Skeel responded, “Bankruptcy makes seizure of a church or school less-likely
rather than more-likely." After a debtor files for bankruptcy, a stay prohibits foreclosure of property, and remains in effect until both sides agree on a reorganization plan.

**Parish Property** - The major disputed assets in *Vlazny v. Tort Claims Committee* (2005) consisted of the property of parishes and a $36 million perpetual endowment fund. In December 2005, Perris ruled that the Archdiocese of Portland created a corporate structure that didn’t allow parishes to hold title to real estate, even though they could have done so. Vlazny promised that he would follow canon law and never confiscate the property of the 124 parishes of the Archdiocese. He received permission to appeal the ruling to the Federal District Court.

The court commissioned Hamilton, Rabinovitz, and Alschuler, a firm with experience estimating awards in the Dalkon shield case to write a report determine the amount of awards in present and future unsettled sex abuse cases. The report to the court (10 March 2006, revised 22 May 2006) entitled “Estimating the Number and Value of Future Sex Abuse Claims Filed Against the Archdiocese of Portland in Oregon,” documented that in the 237 resolved cases the average amount awarded was $266,000, with a low of $22,500 and a high of $724,038.

An article by an anonymous J.D. candidate from the Rutgers Law School on a website established by Joseph Hickson, editor of the *Journal of Law and Religion*, pointed the difficulty of predicting the size of settlements juries might award in the future, noting, “Only one thing is certain, the sky is the limit.” Perris decided that the best way to determine the obligation of the Archdiocese was to let the backlog of cases, frozen by bankruptcy proceedings, go to court. In April 2006, she allowed attorneys representing 88 claimants to schedule cases in federal and state court. The courts scheduled a suit against Grammond for October 2006 and Laughlin for January 2007. Perris also ruled that the $36 million endowment fund was a restricted asset held in trust for the schools and parishes of the Portland Archdiocese.
Mediation – These upcoming trials and the prospect of a district court decision on the Church’s appeal of Perris’ ruling on parish assets prompted the parties in contention to accept mediation from Judges Hogan and Velure on 12 September 2006. These judges must secure approval of all of the parties involved. Skeel expressed their most serious obstacle. “It’s tough to work out a settlement in circumstances where the sides really do not like each other.”

The Diocese of Spokane reached a $45 million agreement with 75 claimants in February 2006. However, the Association of Parishes found this unacceptable because it required, “the involuntary liquidation of parish churches and schools.” A decision by the US District Court of Spokane in June gave weight to their argument by overturning a bankruptcy court decision that the property of the parishes belonged to the diocese of Spokane. Although this decision does not apply directly to the Portland Archdiocese, it may encourage claimants to settle because the “pot” of money may not be as large as they argued.

The prospect of the suits going to trial will prompt the debtors to accept a mediated settlement. Lawyers for the claimants will present devastating cases, with videotapes of priests admitting their guilt and victims recounting their pain. Attorneys have letters of complaint that prove the hierarchy knew about the problem of priests sexually abusing minors. Woodward of the Oregonian opined the jury’s final verdict would be, “Pay in full.”

Settlement – On Dec. 18, 1996 mediation efforts by Judges Hogan and Velure resulted in a settlement. The Roman Catholic Archdiocese, a committee of victims, and a panel of future victims submitted a reorganization plan to the bankruptcy court. The Archdiocese agreed to pay $75 million to settle 170 claims of clergy abuse, and take out a $20 million line of credit to pay future claims. Insurance companies would pay $52 million. The rest of the money would come from various Archdiocesan assets, but not its parishes and schools. Vlazny also agreed to set up...
parishes and schools as separate and distinct legal entities under Oregon law and hold a healing service to thank all parties and their lawyers. Judge Hogan noted that the gag order was still in effect, cautioned that it would take until May 2007 to settle the remaining issues in bankruptcy court, and stated that the Archdiocese had learned an expensive lesson.97

Analysis

The greed and distrust promoted by hierarchies described by Leavitt were evidenced in the haggling over fees, negotiating ploys, and reluctance to negotiate. Skeel noted that the parties were past rational outcomes, emphasizing, “There’s a lot of animosity there.”98

The fear and distrust attributed to hierarchies by Donkin surfaced in bickering over the size of the Archbishop’s pot of gold and accusations that Vlazny’s decision to seek Chapter 11 protection was “a horrible ploy to avoid responsibility.”99 Bill Crane, leader of the Oregon Chapter of Survivors of Those Abused by Priests charged that the Archdiocese of Portland was “morally bankrupt” and that the attitude of the Church made victims, “feel like we’re the enemy. We’re the ones who are taking away the soup kitchens.”100

Donkin described the authoritarian nature of hierarchies.101 Vlazny and Skylstad decided to seek Chapter 11 protection on their own.102 Both represented the Church at hearings, participated in discussions, and approved of their lawyer’s strategy. Vlazny insisted that he would never violate canon law even if ordered to do so by a bankruptcy judge.103

Events in Spokane and Portland foreshadowed a redistribution of power. Gonsiorek noted “many institutions experience episodic shifts between local and central control.”104 Skylstad negotiated a settlement without consulting the parishes and suffered the consequences. Vlazny encouraged the formation of the Committee of Parishes and Parishioners.105 Even so the Committee asserted its independence stating, “The positions of the Archdiocese have not always
been consistent with the interests of the parishes and parishioners.” Vlazny held true to his promise that he would never seize parish assets to pay creditors and that he would restructure the Archdiocese in the final settlement.

Debtors and claimants reached agreement because delaying tactics were not working. The negatives of continuing litigation were too great, a fact that I am sure the negotiators were quick to point out. Lawyers for the creditors wanted their day in court. However, they saw the amount of money controlled by Archbishop Vlazny as shrinking. First, Judge Perris, put endowment funds off limits, then a Spokane District Court ruled that the Archdiocese did not control parish assets. They knew the smaller the ‘pot,” the less money for their clients.

The debtors spent $16 million on legal fees. They wanted bankruptcy proceedings ended and the scandal put behind them. They feared that the abuse cases scheduled for hearing could result in horrendously bad publicity and significant financial liability. They faced a no win situation in district court. If they won the case on parish property, they would have fewer assets to pay creditors, but lose control of parish assets. If they lost the case they would have more money to pay creditors.

IV. Conclusions

Bankruptcy – Bailey believed that anthropologists and political scientists ought to strive to do more than just describe the actions of participants in a contest; they ought to use analysis to describe what the players in the game do not know. In the Chapter 11 bankruptcy of the Archdiocese of Portland, neither side foresaw that parishes would gain power as a result of the struggle. Neither side understood how much emotions would turn the contest into a fight. The first thing the mediators did was forbid both sides issuing press releases. Accusations of lying hurt Vlazny personally and he distrusted the secular press. On the other hand the claimants and
their representatives suspected the motives of the Church and rankled at insinuations that their greed prevented the Church from caring for the poor.

Vlazny and other church officials desperately wanted an end to the scandal. This sentiment persists despite the findings of Hamilton, Rabinovitz, and Alschuler. Researchers from this firm demonstrated that the distribution of years from abuse to claims falls in a bell shaped curve with the median at twenty-one years and the end-point at forty-five years. Vlazny must develop strategies that deal with the fact that sexual abuse claims against the Archdiocese of Portland will continue for the foreseeable future.

The Committee of Claimants overestimated the wealth of the Archdiocese. Schools and Churches have an assessed value, but it is difficult to realize that value since these properties are usually located in areas zoned residential. Claimants did not understand the organization of the Church. They thought the Church owned parishes the way Sears owned local outlets. The problem of the ownership of parish assets proved much more complicated and is not settled yet.

Fred Naftziger, a professor of business law at Indiana University, predicted that higher courts would support Perris’s decision on parish property. Naftziger might change his mind in light of the district court opinion in Spokane. The Committee of Parishes and Parishioners believe that their existence “demonstrates independence from the Archdiocese.”

Bailey argued that analysis of the actions of the participants allowed social scientists to forecast the outcome of the contest. If the disputants ignore the advice of seasoned negotiators and fail to settle, the contest will turn into a fight. Both sides will attack each other in court and in the press. In so doing, they will loose focus on the prize, fair compensation for the victims of sexual abuse by priests. Bailey succinctly described the consequences of a fight, “Men destroy themselves not always because they have to in order to defend a principle, but sometimes merely
because they have not learned how to communicate through confrontations and how to keep their confrontations socially inexpensive.\textsuperscript{113}

**Hierarchy** - The vast majority of organizations feature some degree of hierarchy for good reasons. Hierarchies, according to Fairtlough, enjoy formidable advantages. They prevent chaos, enforce discipline, and provide leadership, motivation, and identity.\textsuperscript{114} The hierarchical organization of the Church has helped her survive threats for over a thousand years. The Church is not likely to discard her tough and durable organization.

A clerical hierarchy characterized by lack of leadership, aristocracy, and a siege mentality played a significant role in shaping the decisions of the Archbishops of Portland concerning the scandal of sexual abuse of children by priests and the subsequent bankruptcy of the Archdiocese.\textsuperscript{115} If they wish to prevent the reoccurrence of such scandals, the Archbishop of Portland and his fellow bishops in the United States must implement what Fairtlough described as, “smaller, short-term changes” that “downgrade hierarchy.”\textsuperscript{116}

Barth suggests dioceses consider the flattened hierarchy employed by religious orders.\textsuperscript{117} One-third (about 15,000) of the priests in the United States belong to orders like the Jesuits and Franciscans.\textsuperscript{118} They take the same vows of chastity and obedience that diocesan priests take, with the addition of a vow of poverty. They elect their leaders and live in communities. This structure fosters a more democratic and accountable culture than that found in dioceses. Barth’s untested hypothesis is that the less rigid hierarchy of religious orders could account for the lower rate of sexual abuse of children than in dioceses (2.5% v. 4.3%).\textsuperscript{119}

The role played by the United States Council of Catholic Bishops checked the power of individual bishops and archbishops by providing horizontal or peer accountability. They
admonished their members to “to act with less secrecy, more transparency, and more openness to the greater gifts that all members of the Church bring her.”

The Archdioceses of Cleveland and Philadelphia demonstrated two ways to foster communication within the Church. Papesh, a victim of abuse by a priest in the seminary, organized group discussions among priests to promote a healthier clerical culture in the Archdiocese of Cleveland. Cardinal Justin Rigali called the Presbyterium of Philadelphia together to listen to victims of sex abuse by clergy.

Other recommendations are specific to the Archdiocese of Portland. The Committee of Parishes and Parishioners agreed to work with the Archdiocesan coordinator of outreach to victims of clerical sex abuse to develop programs of reconciliation in parishes, non-monetary programs of assistance, and research into the best ideal for healing developed by other dioceses. In addition, Vlazny must ensure every parish participates in the ember days of healing and reconciliation that he has decreed and visit every parish victimized by pedophiles employed by the Archdiocese of Portland.

The bankruptcy decisions made in courtrooms and mediation rooms will have momentous consequences as far as money and power. Church leaders now recognize the consequences of the clergy abuse scandal and the decision to seek Chapter 11 bankruptcy. Father Liam Carey, Pastor of Sacred Heart Parish, noted in the parish bulletin of 17 December 2006, that the settlement was, “a wonderful Christmas present,” and observed that “This humiliating experience has brought to life the dark deeds of betrayal by priests thought to be trustworthy. It has taught us how deeply their abusive behavior seared the souls of their victims.” Such insight opens the way to forgiveness, healing, and a return to the church’s historic mission of evangelization, education, and care for the poor.

The Effects which Relate to the Experiences of Pregnancy and Childbirth caused by Participating in the Relaxation Classes: an Attempt of Development of a Psychological Support Program for Pregnant and Parturient Women

Key Words: Pregnant and Parturient Women, Relaxation, Psychological Support Program

ABSTRACT

This research was done in order to develop a psychological support program for pregnant and parturient women. It consists of two studies; in study1 the author did hearing investigations regarding the experiences of pregnancy and childbirth in parturient women with questionnaires and semi-structured interview during childbed hospitalization of mother (3-5days after delivery) and after leaving hospital one month, analyzed types and origins of their negative feelings of pregnant and parturient women.

The negative feelings remembered in the back during childbed hospitalization and after leaving hospital one month were classified for 3 quarters; the pregnancy period, the childbirth period, and the puerperal period. The contents were able to classify anxiety / worry and limitation / enduring. Furthermore, towards other people tangles about husbands and parents were expressed, too.

When compare the elements of negative feelings in childbed hospitalization and after leaving hospital one month, anxieties about a body of mother of the puerperal period, feelings of fatigue, irritation and anxiety to be concerned with child care, that were not expressed during childbed hospitalization, recalled parturient women after leaving hospital one month changed more detailed. And tangles about husbands and parents were also similar.

As for the state anxiety of mother of puerperal period measured with STAI, there was the tendency which state anxiety score of the primipara were higher than the multipara after leaving hospital one month through in childbed hospitalization. However, regarding the multipara, there was a tendency that states of anxiety score become high while being hospitalized compared to one month after leaving hospital.

It was thought that a childbirth preparations classroom for pregnancy with their husbands or family will be able most to decrease negative feelings in the pregnancy period expressed by this investigation. Concerning the contents, to hold down excessive insecurity by making the both of the mother and the father study about the correct extra knowledge of pregnancy and childbirth, and to reduce muscle stress which with process of
pregnancy happens well to the mother by making pregnancy and their husbands or family study relaxation method.

In study2, on the basis of study1, as a part of childbirth preparations for the pregnancy period education, relaxation classes were carried out for pregnant women and her family for the purpose of reduction or disappearance negative feelings about a process of pregnancy and childbirth for pregnant women.

As a result, about both of relaxation in the relaxation classes and home, mothers were able to get subjective effects of relaxation enough.

The elements of negative feelings in a process of pregnancy and childbirth expressed by mothers who participated in the relaxation classes during childbed hospitalization and after leaving hospital one month were approximately similar to mothers who did not participate in the relaxation classes, however about lack of hope and images of concrete birth-style, the negative feelings about tangles about their husband were not expressed again.

Having examined state anxiety of mother in the pregnancy period and the puerperal period, as for the mothers who participated in the relaxation classes in the pregnancy, in latter period assumed that anxiety became generally strong, surges of anxiety weren’t recognized. Therefore, mothers who became acquiring technique of relaxation did not experience surges of anxiety in last part of pregnancy either, and it is thought that they could spend the pregnancy period in a stable mind state. In addition, the mothers who participated in relaxation classes were able to maintain a state anxiety score lower than the mothers who did not participate in relaxation classes in childbed hospitalization through one month after leaving hospital.

From results above, the relaxation classes for pregnant women and their family to make them learn technique of relaxation for the pregnancy period in a maternity center, it was suggested that it’s not only mothers enabled that the pregnancy period were spent in a stable mind state but also being a possibility to have the effect that rising restrained of anxiety of a puerperal period at the same time.
The Impact of Cyberspace Disaster-Response Communities on Internet Giving: How Online Media Facilitated Relief Efforts Following Hurricane Katrina and the Indian Ocean Tsunami

The Impact of Cyberspace Disaster-Response Communities on Internet Giving: How Online Media Facilitated Relief Efforts Following Hurricane Katrina and the Indian Ocean Tsunami

Kris Kodrich and Melinda Laituri

Abstract: Millions of dollars poured into relief organizations to help victims of Hurricane Katrina in 2005 and the Indian Ocean tsunami in 2004, much of it in the form of online donations. The Internet has increasingly played a key role in disaster awareness and relief efforts. News coverage, fueled by gripping stories of human struggle and tragedy, helps in the formation of disaster-response communities in cyberspace. The news coverage appears not only in traditional print and broadcast forms, but also on Web sites as well. Links from news Web sites to charity Web sites enable concerned citizens to donate quickly and securely to disaster relief efforts. Through an examination of the Internet’s role in disaster awareness and relief, this paper shows that a combination of forces has greatly altered the nature of charitable giving following disasters.

Introduction

As Hurricane Katrina churned across the Gulf of Mexico, intensifying as it headed toward New Orleans, weather forecasters and local authorities urged residents there and along much of the Gulf Coast to flee to safety. The storm pummeled Louisiana, Mississippi and nearby coastal regions the morning of August 29, 2005, destroying thousands of homes and businesses, and creating havoc for weeks to come. More than 1,200 people died as a result of Katrina.¹, ²

About eight months earlier, on December 26, 2004, a gigantic 9.0 magnitude earthquake struck off the island of Sumatra in the Indian Ocean, sending massive waves of death to the shores of South Asia. The tsunami devastated a dozen countries, killing more than 275,000 and leaving millions homeless. It was the most lethal tsunami in recorded history.³, ⁴

Both tragedies moved thousand of people to donate money to disaster relief. Americans donated about $923 million to charities in the two weeks after the hurricane. After the tsunami, Americans donated $406 million within two weeks.⁵ Overall, relief
organizations had collected about $1.8 billion for the victims of the hurricane within seven weeks. About $1.3 billion was collected in 10 months for the victims of the tsunami.⁶

Many of the donations were made quickly and securely through the Internet. One-third to one-half of the individual contributions given to relief agencies in the days following Hurricane Katrina were given by way of the Internet.⁷, ⁸ After the tsunami, relief organizations raised about $350 million online within a month.⁹

In just a few years, the Internet has become a preferred method to donate money to charities. “It’s an idea whose time has come. People are more comfortable giving over the Web,” said Rick Perera, spokesman for Atlanta-based CARE USA.¹⁰ In 2004, an estimated $2.62 billion was donated to charities online, according to the non-profit ePhilanthropy Foundation. That was up 260-fold from the estimated $10 million that was donated through the Internet in 1999.¹¹ Online donations continue to swell every year. Many U.S. charities, for instance, raised twice as much money over the Internet in 2004, as they did in 2003. Fund-raising experts report that the increase in online contributions is growing at a much larger rate than other types of fund-raising.¹²

This paper will explore how the hurricane, tsunami and other disasters have contributed to the formation of disaster-response communities in cyberspace. Through the news media, citizens are informed of not only the latest developments and details of tragedies, but are also directed to online media coverage that provides detailed coverage and Web links to additional resources. Through links to charity Web sites, concerned citizens are enabled to donate quickly and securely to disaster relief efforts. Through an
examination of the Internet’s role in disaster awareness and relief, this paper will show that a combination of forces has greatly altered the nature of charitable giving.

Disaster-response communities now routinely form in cyberspace following disasters. Members of the community share a common interest – getting money and aid to disaster victims in a secure and efficient manner. Both the hurricane and the tsunami brought together a combination of forces. First, the public was able to use the Internet and the online news media as resources to learn the latest news about the disasters, including detailed personal accounts. Second, the online news media featured prominent links to Web sites for charities that were equipped to deliver money and aid quickly to the stricken areas. Third, the public felt confident enough in the security of Web sites to donate online using their credit cards. And fourth, the public remains connected to the events through continuing coverage allowing people to track recovery and reconstruction efforts. These forces combined to become a powerful motivator of individuals to donate to disaster relief, and help explain the tremendous growth in online giving.

Disaster-Response Communities in Cyberspace

The World Wide Web has brought people with similar interests together since it began to be rapidly adopted by citizens in the mid-1990s. The Internet helps humans express and fulfill their needs in a social manner. A variety of researchers have documented virtual communities, which occur when people interact in cyberspace for enough time and with enough feeling to form Webs of personal interaction. Although an online disaster-response community includes elements of other cyberspace communities, they also include added emphasis on the ability of members to
empathize with the victims of a disaster and express support though reading their stories and, in some instances, sending money. Thus, an online disaster-response community has both an ongoing interest in disaster awareness and humanitarian aid programs and a transitory interest in immediate disaster response. The response is facilitated by the media, the general public and interested parties, such as aid groups, family and governments. Both the hurricane and the tsunami have had a significant effect upon online disaster-response communities.

**Online Media and Disaster Coverage**

The news media play an important role in online disaster communities. People in times of disaster want to know important details such as the number of casualties, public safety, rescue and relief operations, and governmental responses. The media play a key role in communicating this type of information to the local, national, and international community. The Internet, in contrast to traditional methods of communication, is virtually indestructible. Unlike telephone lines, it also has an almost unlimited capacity to transmit information and can easily manage the large amount of traffic that occurs after a disaster. An international audience has ready and instant access to disaster information as a result of the Internet.

One study examined the role of the online news media after the 2001 earthquake in Gujarat, India. It found that online media facilitate communication among families, friends and others, both inside and outside the country, in a disaster, and that the technological capabilities of the Internet make it an ideal tool for reporting accurate information, very quickly, and distributing it to the largest audience possible.
Numerous examples exist of this intersection of online news and Internet technology. Most newspapers and television news programs have created online versions. Popular news Web sites include usatoday.com, nytimes.com, and cnn.com. One advantage to this medium is that news can be continually updated, which is not possible when producing a paper edition. Even 24-hour television news programs, such as CNN Live, have commercials that interrupt news coverage. Mercury Center, a San Jose, California, newspaper Web site, was a pioneer in online media development. This allowed it to be the first newspaper to report on the 1994 Los Angeles earthquake. It was able to provide constant updates and to post stories online that did not make the 5 am deadline for the print edition. The BBC News Online has also been at the forefront of interactive electronic news development. It received eyewitness reports via e-mail within 10 minutes of the 1999 earthquake in Turkey. This enabled the site to give an estimate of the severity and conditions resulting from the earthquake before other media organizations could gather the information.

Because it allows for ample interactivity, the Internet is redefining the role of the media and influencing disaster relief efforts. After the 1999 earthquake in Turkey, e-mails started pouring into the BBC News Online from readers asking for information about loved ones. The BBC News Online was able to organize requests and pass them along to people near the disaster area who were willing to contact survivors. The media have an emerging humanitarian role and responsibility to communicate information to victims. Many media organizations are beginning to report information concerning the availability of medical relief and the location of food distribution points, a task that has been traditionally left to relief organizations. Instead of merely reporting the news, the
Internet allows the media to intervene in disaster management, changing the way that it affects people.

**Hurricane Katrina, the Tsunami and the Traditional News Media**

News coverage of Hurricane Katrina was intense. Many of the TV networks top anchors descended upon New Orleans and the region. NBC had Brian Williams from NBC Nightly News and Katie Couric from the Today Show, CBS had John Roberts from the Evening News and Early Show anchor Harry Smith, and ABC sent Bob Woodruff and Elizabeth Vargas for World News Tonight along with Good Morning America’s Diane Sawyer and Robin Roberts. Viewers of the evening newscasts for the three big networks were a combined 29 million after the hurricane struck, up from 21 million the week before. On cable, Fox News had 4.8 million viewers in prime time, up 142 percent, CNN had 3.9 million viewers, up 466 percent, and MSNBC had 1.6 million, up 470 percent.\(^45\) Several television networks and newspapers later opened bureaus in New Orleans and the region.\(^46\) Due to the hurricane, the *New Orleans Times-Picayune* had to stop publishing its printed paper but the staff continued to produce an online editing that drew accolades from many media observers.\(^47\)

A Pew Research Center study of 1,000 Americans immediately a few days after the hurricane found that 65 percent of respondents said the news coverage of the hurricane was either good or excellent.\(^48\) Some of the media coverage from both national and regional television and newspapers was later criticized for providing exaggerated tales of lawlessness in New Orleans. The media reported accounts of murders, rapes and child molestations from misinformed public officials that later turned out not to be true.\(^49\)
In the days following the December 26, 2004, tsunami, the news media focused extensive attention on the event and its aftermath. As the death toll climbed and global relief agencies and foreign governments began to respond, the news media began extensive around-the-clock coverage. Newspapers featured the disaster on their front pages and TV stations devoted extensive time to it. CNN, for instance, began airing coverage of the disaster the same day and by that night had decided to go to nearly total coverage of the tsunami. "One of the reasons we are the only ones covering it 24/7 is because we are the only ones who can cover it 24/7," said Jonathan Klein, president of CNN/U.S. "We are the only ones with an international operation that is always up and running and can turn on a dime." CNN preempted regular programming, called in substitute hosts, recalled people from vacation and deployed an additional 50 people to the region to boost the reporting efforts of CNN International. Among those dispatched to the region were correspondents Matthew Chance in Phuket, Mike Chinoy in Indonesia, Hugh Riminton in Sri Lanka, Mallika Kapur in the Andaman Islands and Dr. Sanjay Gupta in Sri Lanka. Fox News Channel, which had aired the first reports of the tsunami a few hours earlier than CNN, interspersed tsunami coverage with its regular schedule, which included reruns of earlier talk programming. Fox said its initial tsunami reporting attracted substantially more viewers than CNN, between 300,000 and 400,000 more viewers in that first day. CNN’s prime-time viewership was up about 89 percent by the third night.

Some of the best-known anchors also traveled to South Asia to report from the disaster. Brian Williams of NBC, Dan Rather of CBS and Anderson Cooper of CNN all broadcast from the scene. Williams broadcast 'NBC Nightly News' live for four nights
from Asia, including Banda Aceh, Indonesia, where casualties were the highest. "This is what we get paid to do. And sadly, greatness in our business, in journalism, so often comes following great misfortune for others." Rather, who broadcast from several affected countries, said he grieved at the loss of tens of thousands of lives but was glad to be able to report from the scene. "It's very difficult, perhaps impossible, from the outside to understand the conflicting undertows that go through you as a journalist. Flying out, I'm saying to myself, 'They're talking about death tolls that are practically impossible to imagine.' At the same time, you're saying to yourself, 'What a story.'"52

Graham Wood, head of policy at Ockenden International, a humanitarian and development aid organization, said the news media focused so much attention on the tsunami for a variety of reasons, including that it is a great media event complete with lots of dramatic pictures, stories of lost relatives and victims with connections to developed nations with major media. He also said the tsunami reinforced people’s feelings of others as victims and also occurred at Christmastime, when many are more concerned with the plight of others.53 Lisa Jeffrey, director of the McLuhan Global Research Network, said the tsunami made people realize the interdependence of the world. Given the timing of the disaster during the holidays, people had more time to pay attention to the news. “The audience was receptive and the receptive climate for media is very important.”54

Hurricane Katrina, the Tsunami and the Online News Media

In addition to extensive coverage in traditional newspaper, magazine and broadcast outlets, the online Web sites of those news organizations featured extensive
news coverage of both the hurricane and the tsunami. Web sites like nytimes.com, usatoday.com, MSNBC.com and CNN.com were filled with extensive coverage, with links to maps and other resources. The number of viewers who watched video on the Internet also set records following the hurricane. An estimated 4.6 million users watched nearly 50 million videos on MSNBC.com, 3.3 million users watched 36.6 million videos on CNN.com, and other national and local news sties broke video-streaming records as well. One video that showed the disaster at the Superdome was viewed by 1.8 million viewers.55 The New Orleans Times-Picayune had only its online edition after Katrina. “Even after it became possible to resume printing and, in a limited way, distributing a traditional paper, the staff has continued to produce a vigorously updated online edition that skillfully exploits the unlimited space available on the Web and the enhanced ability to interact with readers and their needs.”56 The Times-Picayune Web site (www.nola.com) provided not just news but also interactive services, such as features for readers seeking missing persons, relief services, jobs and lost pets. Likewise, New Orleans TV stations used out-of-town studios to broadcast news to the Web (www.wwltv.com and www.wdsu.com). They also used Web logs, online forums and other interactive tools to gather and share news.57

National news organization, too, provided outlets for survivors of Hurricane Katrina to tell their stories and show their photos. MSNBC.com, for instance, created a Citizen Journalist section filled with photos and first-person accounts. For example, Donald A. Sauviac, Jr., a criminal defense attorney, wrote on September 1 about his experience in his flooded house in the Lakeview area of New Orleans “This is a very strong house. I laid on a mattress on the second floor during this hurricane with a rosary
in one hand and the other hand uplifted, praying the Hail Mary over and over, probably 10,000 plus time. I am Catholic but not ultra religious – until now. I promised never to not evacuate in the future when told to do so if I just made it through this one. I kept hearing the 140 mph wind hitting the house, a nearly 100-year-old wood-framed shotgun. I kept waiting for something to give. It never did.  

CNN.com also asked readers to submit their stories, as well as e-mail photos, audio or video. It provided a way to post messages to try to locate loved ones.

Other Web sites, such as www.craigslist.com, a free classified ad site, provided information for victims who had lost their homes, including advertisements for families around the country who were willing to house victims temporarily. One of the quickest sources of news about the disasters came from blogs, a form of personal diary in cyberspace. Eyewitnesses who publish their own stories online are often called “citizen journalists.” Those sites became an information sources both for the public and for the news media.

Many bloggers at the scene of the tsunami posted images of the disaster on their sites. One blog, at www.thiswayplease.com/extra.html, featured a photo of a boat smashed against a beachside palm in Jaffna, Sri Lanka. Fred Robart, who posted the photo, wrote alongside it: "Every house and fishing boat has been smashed, the entire length of the east coast. People who know and respect the sea well now talk of it in shock, dismay and fear." Nanda Kishore, a contributor to sumankumar.com, posted a photo of a body on a sidewalk with a buffalo walking by along with commentary from Chennai, India. "Some drenched till their hips, some till their chest, some all over and some of them were so drenched that they had already stopped breathing. Men and
women, old and young, all were running for lives. It was a horrible site to see. The relief
workers could not attend to all the dead and all the alive. The dead were dropped and the
half alive were carried to safety.  

In recent years, blogs have become a more common source of news for many. Bloggers, for instance, broke the CBS "Memogate" story involving President Bush's National Guard service. A study by the Pew Internet & American Life Project estimated that 8 million Americans have blogs, while 32 million said in November 2004 that they had read a blog, up 58 percent from 10 months earlier. The hurricane and the tsunami demonstrated once more the growing importance of blogs as a source of news. One blog, www.punditguy.com, saw its viewership increase by 500 times after its creator posted video clips of the tsunami’s destruction.  

Another site, WaveofDestruction.org, which posted amateur videos of the tidal wave, had 682,366 unique visitors in five days.

Hurricane Katrina, the Tsunami and Online Giving

Both the hurricane and the tsunami generated several immediate responses from online disaster communities. The Internet demonstrated its effectiveness as a unifying force in providing news and information, interactive donor efforts, and links to charitable sites. The growing power of Citizen Journalists, Web logs (blogs) and other informal news sources also was evident. Other effects were not as constructive: concerns over fraud and Internet contributions were raised and other less dramatic disasters were largely forgotten or overlooked.

Many of the online news sites featured links to sites where money could be donated, such as the American Red Cross and the Salvation Army for the hurricane and
UNICEF and Save the Children for the tsunami. In fact, many Internet-specific companies put links to charities on their Web sites. For instance, after the tsunami, PayPal linked to UNICEF, Amazon.com linked to the American Red Cross, and eBay linked to UNICEF and several other relief organizations. After the hurricane, many news sites and other Internet sites also linked to the Network for Good (www.networkforgood.org), which serves as a clearinghouse for donations. The site allowed people to donate to dozens of organizations through the site – Network for Good processes the donation and distributes it to the selected charity. The nonprofit organization deducts 3 percent of the total donations for credit card donations and $10 per transaction for online check donations in order to pay the costs of processing the donations.63

The response to both Hurricane Katrina and the tsunami in terms of donations was phenomenal. Overall, relief organizations had collected about $1.8 billion for the victims of the hurricane within seven weeks. U.S. charities had raised more than $500 million in cash and pledges in a little more than a week after Hurricane Katrina struck – compared to $239 million raised in the 10 days after September 11 and $163 million raised in nine days after the tsunami. The American Red Cross raised five times the amount for the hurricane than it did for the tsunami in the first week.64

About $1.3 billion was collected in 10 months for the victims of the tsunami.65 An Associated Press poll in early January 2005 found that three in 10 Americans say they donated to the victims of the tsunami.66 A USA Today poll two weeks after the disaster found that about 45 percent of Americans had donated to victims of the tsunami.67 A month after disaster struck, private donations from the United States including corporate
contributions were approaching $400 million. That’s in addition to the $350 million in aid from federal government. The International Red Cross said it raised $1.2 billion in just 30 days, enough to fund the recovery effort for 10 years. The International Red Cross received in one month more than half the total donations it collected in its previous 86 years of operations. Baltimore-based Lutheran World Relief said it pulled in more money in one week than it does usually in a year.

The relief efforts for both disasters also were milestone for the Internet. One-third to one-half of the individual contributions given to relief agencies in the days following Hurricane Katrina were given by way of the Internet. The Network for Good reported that it was processing 1,800 hurricane relief donations every hour, or one every second, during the peak hours in the first couple of days after the hurricane. Catholic Charities reported getting 20,000 online donations in a two-day period following Hurricane Katrina, when the group usually gets just 6,000 online donations in a year. Most of the $5 million it had raised in the first week came from online donations. Other charity officials encouraged credit-card donations via telephones or the Internet, as a way to help provide immediate food, clothing and shelter. Trent Stamp, executive director of a charity rating service, Charity Navigator, said: “As unsexy as it may seem, giving to this type of relief effort should feel relatively corporate. While it may not be the most daring philanthropy of all time, there’s a pretty good chance that the money is going to get to the victims.”

About $350 million in online donations was collected by disaster relief organizations for tsunami relief through the end of January 2005. The American Red Cross received $71 million in online donations of its $168 million raised in two weeks.
According to The NonProfit Times, online donations comprised half to two-thirds of total donations during the first week after the disaster. Organizations were able to access the cash within 72 hours to start funding relief efforts because it was sent through credit cards, electronic checks and PayPal. “The compassionate public response to the tsunami crisis was overwhelming, and the fact that we were able to handle such an outpouring so smoothly online is a small miracle in itself,” said Tim Ledwith, director of interactive donor communication at the U.S. Fund for UNICEF.

The United Methodist Committee on Relief received nearly 10,000 online donations totaling more than $1.8 million as of Feb. 10, 2005. “Things have gone well in this, our first major experience with online giving,” said Glenda Survance, director of information services at the United Methodist Board of Global Ministries. Most Americans who donated did so through the Internet, according to Vinay Bhagat, Chief Operating Officer for Convio, an Austin, Texas-based software maker that specializes in e-commerce. “There has been a shift in the acceptance of the Internet to make donations, rather than relying on traditional methods, such as telethons. The relief effort has gained a lot of momentum on the Web, and there are campaigns everywhere you click. The marketing has become ubiquitous.”

Most online donations come through credit cards. About 55 percent of the donations coming into the American Red Cross for tsunami relief has been through credit cards. Online donations to the American Red Cross averaged $104 on Yahoo.com and $81 on Amazon.com. UNICEF also saw record-breaking online contributions. Within 10 days, it had received $20 million in donations on its U.S. Web site. About $1 million came from the 800 telephone number. CARE USA received almost $19 million in
pledged donations from organizations and individuals in the two weeks after the tsunami, and $6.8 million of it was in online payments. Nonprofit group Action Against Hunger saw a 100 percent increase in online contributions in the week following the tsunami. Samaritan’s Purse said the number of its online donations first doubled, then tripled, setting records every day after the Dec. 26 tsunami.

Many commercial Web sites posted prominent links to charities or offered ways for customers to contribute. Google had a “Ways to help with Tsunami Relief” feature on its home page and also links to “Tsunami Help Blog,” which provides information on missing persons, news updates, donations and volunteer efforts. Amazon.com teamed with American Red Cross to create a donation site for tsunami relief. In less than two weeks, Amazon.com received $14 million out of the $150 million raised by American Red Cross. Amazon had its online donation system up within two days of the tsunami and received more than 187,000 contributions, providing $15 million for American Red Cross. The goal was to offer customers an easy and secure way to help the relief efforts. Auction site eBay collected more than $790,000 for UNICEF after the tsunami through the PayPal online payment service that allowed sellers to contribute a portion of their auction proceeds to charities. After Hurricane Katrina, a non profit called Modest Needs (www.modestneeds.org) received $44,000 in donations online to provide grants for victims in a financial bind. Online applications for aid totaled about $78,000.

Vinay Bhagat of Convio says groups are using sophisticated Web-marketing and e-mail campaigns to raise awareness, leading to an exponential growth in online donations. "The ease and immediacy of making gifts online is unprecedented. You can be moved by something that you’ve seen on TV and immediately go to your desktop and
make a contribution," said Ted Hart, president of ePhilanthropy.org, a Washington-based foundation that promotes Internet giving and educates nonprofit groups. In fact, some charities received more money after the tsunami than they could use. Medicins Sans Frontieres, or Doctors without Borders, offered to return money it received to help victims of the tsunami because it has more than enough cast to cover its operations in the area. MSF received about $78 million in donations in the few weeks afterward. Most of the donors contacted said they will let their money be reassigned to relief work with other emergencies. “Everybody’s surprised at the amount of money given generally,” said MSF Geneva spokesman Aymeric Peguillan.

So much money was given online for hurricane and tsunami relief that it raised concerns over fraud. The FBI’s Internet Crime Complaint Center saw a dramatic increase in online scams after Hurricane Katrina that purportedly aided hurricane victims. The problems included Web sites claiming to collect donations for Hurricane Katrina and phony e-mails to solicit money. This technique, known as phishing, includes pretending to be a legitimate organization to get consumers to post personal information such as a credit card or bank account number. Malicious activity has grown with the rise in Internet contributions. The FBI and security vendors like Symantec and McAfee have reported a number of Internet viruses and scams masquerading as legitimate e-mail related to relief efforts. Cyber-crime analysts in India said con artists are mass mailing pleas worldwide from fictional tsunami survivors begging for assistance. Dozens of the thieves sent out messages for donations via mobile phones, posted fraudulent e-mails seeking donations and phishing (pretending to be someone else to attract donors). “Some of them [thieves] even pretended to be donors themselves. It’s a huge problem,” said Na
Vijayashankar, a cyber law consultant in India. The U.S. Federal Bureau of Investigation even issued a warning for a wave of “fake generosity cases” for tsunami relief on the Internet.

Another concern has been that the focus on the hurricane and tsunami has decreased the attention and the amount of aid for places such as Africa. Disaster officials in Africa say the attention to the Asian tsunami caused a significant drop in funding. The World Food Programme of the United Nations said particularly affected are those southern African countries that have faced drought for a number of years. Mike Sackett of the WFP said, “Southern Africa is a forgotten crisis. We are not getting contributions for southern Africa since the tsunami struck. We appeal to the donor nations around the world to give additional resources so the needs of hungry southern Africans are met. If they do not get the full food that they need, thousands of them will die over the next year.”

And finally, the issue of donor fatigue has arisen. Other disasters in 2005, including flooding in Central America and an earthquake that ripped through Pakistan and India, resulted in much less relief money than either the tsunami and Hurricane Katrina. Patrick Rooney, director of research at the Center on Philanthropy at Indiana University, said the tsunami and hurricane brought in tremendous amounts of money. “There may be an issue of donor fatigue, it’s too early to tell, but it looks like giving for the Pakistan earthquake is more typical of the historical response by U.S. donors to international emergencies.” Relief agencies reported that donations for the Pakistan earthquake, which killed more than 45,000 people along the India-Pakistan border and left more than 2.5 million people homeless, and flooding in Central America, where at
least 2,000 people died from mudslides, were coming in at a much slower rate than the hurricane and tsunami relief efforts did at the start.\textsuperscript{106, 107} “I’ve never seen a year quite like this one,” said Carolyn Miles, the head of operations for the relief agency Save the Children.\textsuperscript{108}

**Discussion: The impact of online disaster-response communities on disaster relief**

Hurricane Katrina and the Indian Ocean tsunami have brought online disaster-response communities into sharper focus. Disasters bring tremendous attention from the news media. And the online news media in particular have the ability to link news consumers directly via the Internet to charitable organizations. Consumers are able to use their credit cards to send money immediately to help in the relief efforts.

While the knowledge of the enormity of both the hurricane and the tsunami may have developed slowly, the news media quickly made up for it by devoting extensive time and resources to the events. Newspapers throughout the United States sent reporters and photographers to the devastated Gulf Coast region. For the tsunami, even local and regional newspapers like the *Denver Post* and *Rocky Mountain News* sent their own reporters to places like Indonesia, Thailand and India. Network television in the United States sent newscast anchormen and anchorwomen to broadcast live from both scenes. The impact of such extensive coverage inevitably creates awareness of the situation that can lead to empathy and compassion for the victims. Another factor in helping increase awareness was certainly the role of online media. The Internet provided immediate information and Web logs proved to be valuable sources of information. Many blogs featured information with video of the disaster and rescue and relief efforts.
As a result, synergistic relationships have been further strengthened between the new media and the traditional media, as they interact to fuel news stories and information dissemination. The Internet, online media, and blogs work in concert, remixing and amplifying information. Many television networks and newspapers host blogs on their Web sites. “The blog phenomenon is amazing. The Internet has had a truly significant, all-around impact on the relief effort,” said Vinay Bhagat, Chief Operating Office for Convio, an Austin, Texas-based software maker that specializes in e-commerce. These media have created feedback loops that continue to stimulate coverage long after the event. The distinction between traditional news sources and other types of media is further blurred by all sorts of Web sites that offer news stories. Charitable sites offer their own stories about disasters.

Online technology has improved dramatically in recent years. Many relief organizations were better prepared to deal with large numbers of donations following a disaster. Much of that change resulted from the impact of 9/11. Many charity Web sites were overwhelmed by the public response in the aftermath of the Sept. 11, 2001, attacks. Some Sept. 11 pledges went unfulfilled but because the technological capacity of charities to accept online donations had increased dramatically, tsunami donations typically were made with credit cards or Internet payment systems. The Web sites experienced far fewer technical problems, according to Ted Hart, president of ePhilanthropy.org, a Washington-based foundation that promotes Internet giving and educates nonprofit groups. As a result of the improvements, the charities were well equipped to handle donations for the victims of Hurricane Katrina as well.
The online disaster-response community also has evolved and become more sophisticated. In addition to receiving information about disasters and delivering needed funding for disaster victims, the community provides an ongoing presence that will monitor relief efforts, reconstruction and aid allocation. Aid agencies may experience a level of scrutiny they have not previously experienced. A big pool of first-time donors has created the possibility for additional donations down the line. The vast majority of online donors for tsunami have signed up for e-mail newsletters that allow charities to update them and ask for more help, according to John Hartman, vice president of client services for Kintera, a San Diego company that builds and maintains Web sites for non-profit groups. “An organization’s database of e-mail addresses can double or triple. It now means there’s a communication channel between the nonprofit and the donor that didn’t exist before,” Hartman said. Whether that means the nature of charitable giving is fundamentally changed is unknown. Eugene Tempel, executive director of the Center on Philanthropy at Indiana University said charities generally have not thought of the Internet as effective as traditional methods in seeking donations. “The problem with Internet fund raising is that you have to drive people to a Web site. Where it works best is in these big relief efforts where there is a lot of media coverage,” Tempel said.

Need for Further Research

As demonstrated by Hurricane Katrina and the Indian Ocean tsunami, the Internet can be an effective unifying force in creating an online disaster-response community. Such communities have matured due to technological innovation and synergistic effects between formal and informal media. The authors consider this paper to be a starting
point, with long-term research goals directed toward understanding these synergistic relationships.

The authors intend to explore the growth of “citizen journalism,” which enables the news consumer to also contribute to the news product, allowing individuals to post material about disasters on the Web often in a more timely manner than journalists are able to do. Blogs, or Web logs, are another form of media that allow anyone with a computer and Internet access to post information and opinion, along with photos, easily and quickly. The researchers want to better understand this phenomenon in light of disasters.

One immediate area the authors intend to study is the correlation between the extent of news coverage of a particular disaster and the amount of money that is donated both online and through traditional means. Donors would be surveyed in an attempt to determine what role media coverage, and specifically that coverage on the Internet, played in influencing their donation decision. Along with that, the authors intend to more closely examine donor fatigue. When the media focus so much attention on such gripping stories as a hurricane that devastates a beloved American city and a tsunami that destroys so much humanity in an instant, do they do a disservice to the victims of other disasters or continuing problems such as famine and poverty? Relief organizations worry that citizens can feel overwhelmed by disaster to the point where they feel they can no longer make a difference with their donations. What role do media play in that?

Further study also is needed on the complex role the online news media play in the formation of community in cyberspace. Because a disaster is a one-time event, any cyberspace community that emerges is certain to be transitory. Are there ways the news
media can try to capture that community’s attention permanently through more relevant and continuing information offerings?

Tracking the results of disaster recovery efforts online would provide important insights into how online technology fosters the development of disaster-response communities as well as recommendations for the mass media, governmental organizations and non-governmental organizations to improve responses to disasters via online technology. These goals include a study of both those who produce the media messages and the intended audiences. This would help determine how useful to the readers is the information about a disaster, the emergency response and aid efforts.

And, finally, further work is needed to address the social, economic and political circumstances that create conditions of vulnerability. By focusing on the sensational and the immediate, do the media help disguise the long-term consequences of inequality? In other words, can the media tackle important and dramatic stories such as hurricanes and tsunamis in a way that fosters more understanding of the societal forces that leave so many people vulnerable to the wrath of nature?

TRANSLATING A COMMUNITY: AN EXPERIENCE FROM SOUTH ASIA

Abstract: Post-Colonial theories have brought in the agency of the colonized in a rather forceful way to retrieve the lost self-hood. But even as they do that these theories do not look into the possibility of several communities within the colonies perceiving the colonizers as agents of modernity. This way, colonizers which include British officials as well as missionaries as the translators of several communities into modern communities. This paper looks into a context where one such community, Billavas in South India opted rather to the Western modernity by taking to Christianity, denying the offer from the elites at home to take to Brahmo Samaj, a way of modern Hinduism in the late nineteenth century.

South Canara\(^1\) provides certain specificities for translation studies. Here, we have multiplicity of languages, not brought about by the urbanity and cosmopolitanism of the late modernity, but by the trade & commerce, travel and a constant touch with the outside world. There is Tulu, one of the old languages, considered to be indigenous. There is Kannada, which has been the administrative as well as literary language of the region for the last one and a half millennium with very few exceptions.\(^2\) Then there is Konkani spoken by Gouda Saraswat Brahmins as well as Catholic Christians, who fled from Goa, escaping from either proselytisation or inquisition from the hands of the Portuguese authorities. We also have the Beary language, spoken by a specific Muslim community. This is apart from certain kinds of Marathi and Malayalam spoken by smaller communities. This pre-colonial melting pot of linguistic communities witnessed speeding up of always already existing forms of negotiation between groups during the days of colonialism. This paper looks into an incident, which was part of such a negotiation between groups or communities. Textual work, translation, mediation and representation were part of this negotiation. In this sense, this paper does not do a stock taking of all translation work that has taken place in this geo-literary space called South Canara.

In the nineteenth and early twentieth century the missionaries and the British published vast representations of Indian peoples, literatures, customs and traditions in English translation. Some of

---

1 The present districts of Udupi, Dakshina Kannada and Kasargod (of Kerala), in the South-West of India, were considered to be the South Canara district. After linguistic state formation in India in 1956, Udupi and Dakshina Kannada only remained in South Canara, in the state of Karnataka. From 1997, Udupi and Dakshina Kannada have become separate districts. However, nostalgia rules the people in their cultural psyche and many a time we hear the expression ‘Avibhajita Dakshina Kannada’, i.e., undivided South Canara.

2 Among the inscriptions of Tulunadu, only a couple of inscriptions have been found which are in Tulu and rest all are in Kannada (Ramesh 1980). When it comes to literary expressions, some epic poetry have been found in the last two or three decades. They are Sri Bhagavato, Devi Mahatme, Kaveri and the recent one found being Karna Parva. All these were deciphered and brought to light by Venkataraja Puninchittaya, a scholar in Tulu. From the third and the fourth decades of the twentieth century, we have the modern literature in Tulu language starting with a novel Sati Kamale, by S.U. Paniyadi.
them dealt with Indian folk traditions at great length. With the help of texts as well as practices, there were efforts to represent modernity to several native communities in India. The contributors to these publications were sometimes Indian elites themselves. Therefore the efforts by the missionaries and the British were mediated by the Indian elites too. In this paper we shall look into the choices of modernity and options that were available to a native community in the south coastal Karnataka – Billavas. The principal actors were the missionaries of the Basel Mission, British officials, people of the Billava and Brahmin communities, and the Brahmo Samaj. My study seeks to critique postcolonial critique of Orientalism, which might ignore or sideline some groups or communities that accepted the Western modernity. In other words, the Saidian ambition of retrieving the colonized as the subject of its own history, runs the risk of perceiving the colonizer and the colonized as terms in binary opposition and might monolithise these terms without looking into the multiplicity and complexity of a variety of identities that these terms might be inclusive of, and the power play therein.

I

According to the imagination of the people, in the Canara district, the Tulu country is especially fitted for demons, which they say, are partly created by God, like the Panjurli, and partly sprung from men, like the Beiderlu. There are several kinds of them, mostly thought to be flying about in the air. Some are, however, considered to be residing in certain places, houses, gardens etc. While some are family Bhutas, others are village Bhutas, and others, again, are only to be found in connection with certain temples (Manner 1894: 5)

The ceremony at which we were present…was celebrated by the head-man of the Billavar (i.e., toddy-drawers) caste, once in about twenty years. The expense, five hundred to a thousand rupees, falls on him, but he is partly compensated by gifts from the people who attend. Europeans have so often failed to get a sight of these rites, that, even after permission had been given us and we had accordingly attended, it seemed questionable whether we had really seen the ceremony or had been imposed upon, and it was only after questioning a Bhuta priest, now a Christian, that we found out that what we saw was really the ceremony, and, therefore, we can confidently put forward this account of it (Burnel, A.C., and Hesse, J., 1894: 7).

The above excerpts are examples of ventures to describe the outlandish native customs and practices by the missionaries and British officials.³ The British and the missionaries in the colonies mostly

³ In this case, Rev. August Manner and Johannes Hesse (latter, the father of the illustrious German novelist Herman Hesse) were the missionaries working for the Basel Mission in Mangalore and A.C.Burnel was the British official. In South Canara, the British and the Basel Mission had quite cordial relations except during the World Wars in the twentieth century.
worked within the framework that has been identified as Orientalism.\(^4\) The critique of Orientalism took to task a description of the Orient as a “place of romance, exotic beings, haunting memories and landscapes” and its enterprise to sift through the Orient into “Western consciousness” (Said 2000: 20-53). The above texts perfectly yield to the postcolonial critique of Orientalism. The critique of Orientalism would argue that the confidence and the power of the first hand-experience as seen in the latter passage with the motif of an illusive spectacle on the one hand and on the other, a claim to authenticity, built up a repository of knowledge that made possible an Occidental hegemony over the Orient (Said 2000: 24). But before we go further, it is pertinent that we acquaint ourselves with the missionary group called the Basel Mission, which was involved in the linguistic and cultural study of the people, their land, customs and traditions, apart from the proselytizing activities in the south coastal Karnataka.

The Basel Mission is a less talked about missionary group from Basel (now in Switzerland). It emerged in the early nineteenth century as a small, but dedicated missionary group. The missionary organizations were highly ambitious as they entered a vast and almost virgin land. Gauri Viswanathan says “the belief that Hinduism could surely fall from its foundation and the gospel rise on its ruins – that through science and modern learning ‘we must all come to one religion’ (‘an intellectual revolution culminating in a universal Christianity’) – was quite clearly an ideology that directed missionary labour in India” (Viswanathan 1990: 62). With a conviction to spread Christianity, this pietist missionary group set foot in India in 1835, in Mangalore, now in Karnataka. The Basel Mission had trained their missionaries to work in acute conditions. There was an Institute in Basel to train candidates who would become missionaries and would work in different parts of the world. The study of language was prioritized in this Institute. The chosen candidates in this Institute were trained both in Oriental and Occidental languages and literatures. In 1881/82, six hours of Greek and Latin was taught to the candidates. Missionaries who came to the East also received training in Arabic, Sanskrit and English. One of the worst exercises given to them was to pull a ‘dung-cart through the city of Klein Basel…amidst the laughter of the Basel population’ (Bieder 1985: 36-37). Theses rehearsals to work unabatedly helped these trainees in such a condition as their bazaar speeches during the native

\(^4\) Roughly put, that body of knowledge and ways of perceiving or imagining the Orient or the East that led to the hegemony of the West on the East. The hegemony, in turn, reinforced those perceptions and imaginations of the West.
festivals, when even things such as cow-dung was thrown at them and they continued their speech being indifferent to the attitudes of the crowd.

Within the first twenty years of work in South Canara, the Basel Mission was able to achieve converts from almost all castes viz, the Brahmin, Bunt, Billava, Moger etc. However, after a couple of decades’ work among the Billavas, there was a prominent change in the profile of new converts. There was a sudden outburst of response from the Billavas towards Christianity. In the 1860s and 1870s, thousands of Billavas from Mangalore and Udupi region were taken into the fold of Christianity.

II

Billavas belonged to a caste that was hierarchically quite low in caste status, though they were not considered untouchables. Their population in South Canara was 1,51,491 (about twenty percent of the population of South Canara which remains the same even today) in the year 1851 (David 1986). During olden days they had been an important part of armies of the kings of the region. As the wars ceased taking place, their prime occupation became toddy tapping and distillation. Some members of the community played the role of the Bhuta priest or priests of spirits during the worship ceremonies. They also worked as agricultural, but landless laborers. Billavas were the ardent worshippers of countless Bhutas or spirits. They did not worship any other gods and also did not have a proper temple until 1912, when the visit of Narayana Guru from Kerala prompted the community to build their own temple. High alcoholism, lack of a proper occupation and constant vulnerability to deadly diseases had resulted in the socio-economic and also political backwardness of Billavas.

It was chiefly for upward mobility that the Billavas started converting to Christianity. Their hope for an exalted material life made many of them accept the fold of Christianity. Coupled with that

---

5 The word Bhuta has been translated in different ways by the Indologists. But predominantly the words ‘devil’ and ‘demon’ occur in their translations. Bhutas (corresponding Hindi word being ‘Bhoot’) are sometimes the spirit of the deceased or some other times they are partly divine. Apart from gratifying the wishes of the devotees, they have a high propensity to commit mischief on their devotees. Therefore these spirits were highly feared ones.

6 This moment seems to be an important point in the history of Billava community in South Canara. Billavas in Mangalore built Kudroli Gokarnanatheswara Temple, where they would have a non-Brahmin priest (However, the Basel Missionary Society considered it only as a step towards Christianity. The Report of the Basel Evangelical Missionary Society for 1912-1913 says “The efforts of these people to get rid of the Brahman, to appoint priests of their own, and to break away as much as possible from their old ways of life can easily be understood. But as the newly constructed temple is no real source of strength, this revival of Hinduism, and even the apparent opposition to Christianity can only be interpreted as a step on the road toward Christianity [RBMS 1912-1913: 27]). Many Billava leaders from through out South Canara went to meet Narayana Guru in Mangalore and with his blessings they started Bhajana Mandalis (Bhajan troupes) through out South Canara, which were and are the constellation points of community activities.
was the fear of *Bhutas*. They had a feeling that Christians had a power to drive away the *Bhutas*. Stating the reason for conversion, the Report of the Basel Evangelical Missionary Society (further referred as RBMS) for 1869 says that the Billavas had realized “that their religion and their social circumstances were rotten and that the manner of life in which they saw the native Christians walking, was far better than their own. Joined to this was the dread of their demons, a feeling of misery under the annoyances coming from their demons and Gurus, whilst they were convinced that the Christians were stronger than the devil and were able to shelter them also from his persecution” (RBMS 1869: 31).

The study of the *Bhutas*, their worship and the incantations during such worship had been conducted by the missionaries in the first half of the nineteenth century itself as part of the study of the culture and language of the Tulu people and especially Billavas. They had published such studies in various Indological journals such as *Indian Antiquary* and also as independent books and booklets. The presence of these missionaries during the worship ceremonies sans any feeling of devotion and yet being immune from any curse of the *Bhuta* appealed the Billavas. The missionaries even got pleas from the newly converted people to stay in their houses so that the presence of the missionaries warded off any approaching *Bhuta*. By representing the *Bhuta* worship as ‘Devil’ worship both in day-to-day practice as well as in textual translations, the Basel Mission was the agent of modernity in the above-mentioned region in Karnataka. These efforts were accompanied by the Enlightenment idea of ‘Development’ and the pietistic idea of ‘Hard Work’. Part of this was the establishment of some industries where the new converts could work and earn their livelihood.

The conversion to Christianity led to excommunication from the community. The Billavas and others, who got converted, were alienated by their friends, patrons and familial relations. This also resulted in the loss of livelihood not only because they lost their previous social network but also because the Basel Mission banned certain kinds of occupations like toddy tapping. In such cases the Mission had to provide an alternate occupation to a displaced and isolated community. The kind of pressure that worked on the converts resulted in the missionaries trying their hands at various industrial enterprises and teaching the converts “the basic characteristics of modern man in general”

---

7 One of the Tulu pamphlets distributed by the Mission was titled “Kaligangasarada Tayari Kraistareg Yogyadavu Adunda?” (Is preparation of toddy and arrack fit for Christians?)
The Basel Mission Report for the year 1854 asserted:

Let us break the force of social excommunication which follows conversion, by teaching the industrial, mechanical and agricultural arts of Europe to the humblest converts, both in Christian colonies and industrial schools formed for their accommodation and tuition the great desirableness of which is becoming apparent (the Report quoted in David 1986: 166).

This solved not just the problem of providing the converts with livelihood, but also built an alternate community, which made up for the effects of excommunication. The Basel Mission established fly-shuttle looms on the West coast, producing high-quality clothes mostly for the Europeans in the region. In 1860, they ventured into tile industry to provide sound economic protection to the converted. In 1910, the number of people working in the weaving and tile factories was 3,500. There were other jobs created such as printing, bookbinding and watch making. All these jobs were occupied by the converted Christians. Fischer sees this as phenomenally different from other mission organizations in India and says “Basel Mission Christians underwent the most radical social change ever inflicted on Indian converts by a missionary society” (Ibid.).

III

However, there was a Billava leader who ‘was dissatisfied with the social customs of his people and the lack of a temple of their own for worship of God’ (Anonymous n.d.: 8). He was well-to-do and could be counted on par with other elites of the region. His name was Arasappa. Arasappa had come into contact with a prominent Saraswat Brahmin of the place called Ullal Raghunathayya. He was the son of the District Munsif and a famous Sanskrit scholar, Ullal Mangeshayya. Raghunathayya had been inspired by the ideas of Keshab Chandra Sen, a leader of the Brahmo Somaj from Calcutta. Incidentally Raghunathayya’s interest in Brahmo Somaj had bloomed by a constant visit to the library adjacent to the Basel Mission School in Mangalore. Later, he started to subscribe the weekly paper published by the Somaj from Calcutta, titled Indian Mirror. This had given a further boost to his interest in the Somaj activities. Arasappa was influenced by Raghunathayya’s new inspiration and he too got interested in the Somaj (Ibid.).

---

8 The missionaries had tried to rehabilitate the converts in agriculture too. But the missionaries felt that the tenants tended to be lazy. Therefore, focus turned more on industries as time went (Shiri 1986: 196).
Arasappa was possibly the most powerful and influential leader among the Billava brethren in and around Mangalore who numbered about 5,000. He held a meeting of the community members in 1869 and sent a telegram to the Brahmanand Keshab Chandra Sen, Secretary of the Brahmo Samaj of India, for the services of the missionaries to come and teach Brahmoism to the people of Mangalore. Three missionaries of the Brahmo Somaj, Bhai P.C.Muzoomdar, Bhai Gour Govind Roy, and Bhai Amrit Lal Bose came to Mangalore by the end of April 1870. They were accompanied by Vasudev Nowrangy of the Bombay Prarthana Samaj (Ibid.).

However, Brahmo Somaj missionaries were a failure in impressing “the minds of Arasappa’s people”. Their “ways and habits of life” were “something like Christian priests quite unlike their Hindu priests” (Ibid.). Or perhaps they looked rather more alien than the Basel Mission priests working in that region. The latter, they knew, were sympathetic to their cause. They took their children to school; gave medicines whenever they were ill; drove away the fear of Bhutas and so on. But these new comers were totally strangers for them as well as their aspirations. Therefore, the vast Billava contingent turned down the offer of their leader Arasappa. “However, Arasappa tried his best to induce them to come forward” (Ibid.). But only five persons including himself got ready for the initiation into the Brahmo faith. Some twelve days later fourteen more joined them. A Samaj was established for them in Arasappa’s house in May 1870, which went by the name of Brahmo Samaj (Ibid: 1-3).

In fact, the possible conversion into Brahma Samaj was highlighted in the then media. The Report of the Mission says, “The news of the Billawars of Mangalore had run the round of Indian newspapers…” (RBMS for 1869: 23). On the other hand, there was a considerable possibility of the large Billava contingent turning onto Christianity as propagated by the Basel Mission. Since it was a large group of people who were getting ready for this conversion into Brahma Samaj, the Mission was worried about the prospect of getting anymore converts from that community. The Mission had put up its efforts to win over the minds of some “leaders”, when it came to know about the Billava intention to embrace Brahmo Samaj. In fact, the Mission was even granted the permission by the leaders. The Report says, “These leaders are people with whom we had been acquainted for many years, and we now tried again to influence them in favor of Christianity. One of their leaders⁹ came to our house, and

---

⁹ We do not come across was any other leader of the Billavas, who was of Arasappa’s stature. Therefore, this must have been Arasappa himself.
as soon as they granted us permission, we returned the visit in their houses. But it became more and more apparent that there were scarcely any spiritual motives, the chief reason of their wish for change being the desire to rise in social position, and they begged to make conditions, that in the event of their becoming Christians, they would not be one with the congregation, but remain an independent body, to be allowed to visit heathen plays etc.” (Ibid.). The Mission was always for a single congregation without any fragments of caste or creed entering into it. The change in social position would only be a contingent factor along with conversion but not a primary factor. To this ideal, the Mission stuck to the end of its tenure and had a uniform congregation. However, the slow trickle of Billavas into the Basel Mission fold continued till the Mission existed in India and on the other hand, the Brahmo Samaj mainly consisting of a handful of Billavas, died down with the death of Arasappa in 1876.10

IV

Now, it is also important to see why the Billavas felt so alien to the Brahmo ideals that within the time of a single speech 4,995 (or approximately so!) of them had decided not to accept Brahmoism as a way of life. Firstly, we saw that the “ways and habits of life” of the Brahmos were alien. Secondly, and most importantly, the elites who were involved in persuading and influencing Arasappa were the Saraswat Brahmins of Mangalore such as Ullal Raghunathayya and Bharadwaj Shiva Rao etc. And it was the Brahmins who were quite opposed to the upward mobility of the Billavas in South Canara as evident in the nineteenth century itself. In 1836 itself, the Brahmins were against the employment of Billavas in government offices as trainees, on the ground that such Billavas would attain the headship of the offices and Brahmins would be compelled to follow the orders of a man they could hardly look at without getting polluted. They even went to the extent of complaining to the judge. However, the judge had replied that under the administration of the East India Company, no man could be deprived of office, or employment on account of religion, custom, and caste (David 1986: 167). It could be easily observed that the ones who had undergone schooling in the Basel Mission school in Mangalore were immediately absorbed in to one of the government offices in

---

10 The Saraswat Brahmins had started their own group of congregation called Upasana Sabha, because they did not like to be identified with the Brahmo Samaj, which was mainly consisting of Billavas. This group started to be called Brahmo Samaj only in 1903, much after the death of Arasappa in 1876.
Mangalore and it was the Brahmins of Mangalore who had appealed for the starting of the schools by the Mission in Mangalore (Rossel 1986).\footnote{Goud Saraswat Brahmins, Valerian Rodrigues says, ‘were in a way the most troubled community looking for a religious identity throughout the late 19th and early 20th centuries, unhinged from its traditional anchor by the colonial interventions including that of the Portuguese and looking for a larger alternative’ (Rodrigues 2006). However, it did not resort to conversion (except for an occasion in 1844 when three boys of this community were converted followed by a big commotion in Mangalore city, see Gundert 1997: 131) but it oriented itself sometimes to Brahmo Samaj, some other times to Theosophical society or yet some other times to a regional variety of Brahmo Samaj – Upasana Sabha (the latter being distinct part of Brahmo Samaj, since the actual Brahmo Samaj was represented by the Billavas, Saraswat Brahmins did not want to identify themselves with that version of Brahmo Samaj)}

At this point, it is interesting to note certain remarks of the Oriental scholars with regard to Bhuta worship and related cultural practices. It seems that the Brahmin intervention in Bhuta worship started only in the mid-nineteenth century or roughly from the time since the Billavas’ entry into modern spaces was legitimised by the British rule in South Canara. To quote R.C. Temple, a British official and a scholar placed in Mangalore in the nineteenth century, “One of the points…which will prominently strike the reader conversant with Hinduism as a whole, is the stronghold that modern Brahminism has now obtained over the minds of the Tuluva Bhuta-worshippers, and the acuteness with which their practices have been bent towards Hinduism pure and simple” (Temple 1894: 4, emphasis mine). It looks probable that a community that could not be ‘subdued’ or isolated had to be appropriated and as a way of appropriation, the upper castes got assimilated in practices such as Bhuta worship\footnote{It should also be noted that the practice of Bhuta worship also involves the resolution of certain social disputes or disputes related to land etc. This takes place during the Bhuta worship ceremony called ‘Kola’, which is an annual ceremony.} and started orienting it towards Brahminical practices. Thus, the various Bhutas that were worshipped were identified as the attending forces of Shiva and the names of the ceremonies were also sanskritised, though sometime back, the practices were ignored by Brahmins. The observation of A.C. Burnel and Johannes Hesse is as below:

This primitive religion is now no longer neglected by the self-styled “higher castes”, which formerly merely tolerated, but now almost respect the barbarous rites; while some philanthropic Brahmins labour to persuade the people that their gods are Bhutas, or attendants on Siva. These influences are apparent in the classification of the rites, which are deva-kriya or asura kriya, according as offerings are, or are not, made to the Bhuta. As the aboriginal “Peyi” has been changed into “Bhuta”, so these rites have now a Sanskrit name, nema (i.e., niyama), and they are sana (i.e., sthana) or illechchhida, according as they are performed at a temple or in a house… (Burnel and Hesse 1894: 7, emphasis mine).

One cannot come across the word ‘Peyi’ at present as the word ‘Bhuta’ has already become a commonly accepted word to refer to those spirits or deities. Going through the Indological writings,
thus, one can get references to the upper caste mediation in the modernity as it was represented to lower caste communities. When modernity could not be denied to lower caste communities, the upper castes tried to mediate or appropriate modernity through the cultural sphere to maintain their hegemony. However, the evident opposition of the upper castes against the upward mobility of the Billavas did not allow the latter community to see the agency of modernity (of the kind they wanted) among Brahmins or upper castes, who had arrived in the form of Brahmo Samaj.

CONCLUSION

Going back to where we started, it should be seen that modernity as it was represented by the Western agencies such as the missionaries or the British officials was a conscious choice among certain sections of the native population. By saying that through mechanisms of hegemony the Western colonial forces spread the tentacles of power, and by monolithising the colonial subjects as a uniform collectivity without any agency, is to deny the deliberate opting for colonial modernity by certain native communities, as it was represented by the West. However, a major chunk of Billavas remained within the fold of their caste accepting the Narayana Guru inspired Hinduism in the early twentieth century.13

ABSTRACT
As post-secondary institutions increase the availability of on-line programs, students must now consider the method of instruction among university choice criteria. This paper reviews a selection of literature on university choice, with specific reference to ‘high-tech’ versus ‘high-touch’ instruction. Using conjoint analysis, the study determines the importance students place on method of delivery, relative to several traditional criteria. The results identify two unique student segments (technology-sensitive and cost-sensitive) reflecting concerns regarding methods of education delivery. While the technology-sensitive segment expresses strong preference for face-to-face instruction the cost-sensitive segment is open to high-tech delivery, if the price is right.
HIGH-TECH VERSUS HIGH-TOUCH EDUCATION:
PERCEPTIONS OF RISK IN DISTANCE LEARNING

Jack D. Kulchitsky, Ph.D., University of Calgary, Canada

INTRODUCTION
For most students, the selection of a post-secondary institution involves the evaluation of university programs using traditional criteria such as program focus, campus location, and cost. The typical method of education delivery can be described as ‘high-touch’. Students attend a physical campus for lectures and tutorials, and consult with instructors and peers in face-to-face settings. More recently, however, students have been given the option to consider ‘high-tech’ delivery alternatives. Web-based technologies create virtual campuses where lectures are delivered on-line and chat room tutorials are available for students to interact with classmates and instructors. Larson (2002) compares traditional and virtual education and defines high-tech alternatives as course-related communications unconstrained by fixed classroom locations. Positioned as a cost effective and convenient alternative to the traditional classroom, high-tech instruction creates education opportunities for unique student segments including travel- and cost-constrained international students.

The objective of this research is to determine the relative importance of education attributes considered by students when choosing a post-secondary college. Specifically, this study focuses on the preferences of students in their final year of study prior to applying to an undergraduate institution. The study examines the preference for high-tech versus high-touch instruction and the influence of education delivery method on the university selection process.

HIGH-TECH VS. HIGH-TOUCH EDUCATION
Originally limited to mail correspondence, distance education delivery systems have evolved to include television, video, teleconferencing, CD-ROM, and the Internet. Driven by the financial objectives of educational institutions, program administrators view on-line education as a means to expand the reach of a class that in many cases is already being taught on campus. The potential market may include individuals living in remote areas, students with inflexible work schedules, and foreign students and expatriates working in international locations.

Advocates of distance education have reported overwhelming success from technology-mediated instruction. Quoting the Director of the Michigan State Virtual University, Eccles (1999) notes, “When on-campus students were given the choice of the same course offered online or in the classroom, they choose the virtual section.” Studies conducted by Comeaux (1995), and Thompson (1999) unanimously report that students in distance education courses perform as well or better than those in traditional face-to-face programs. Klesius, Homen, and Thompson (1997) acknowledge the limitations of distance education, but conclude that convenience alone can overcome most deficiencies.
Although many studies have compared on-line versus classroom learning with regard to course preparation, instruction, course evaluation, and technology, few studies have examined the possible concerns of the on-line novice; the student with only face-to-face classroom experience. There is evidence to suggest many faculty, senior administrators, and students perceive on-line courses to be inferior to classroom instruction. Expressed concerns include: (1) a cold learning environment lacking interaction with faculty and students; (2) increased time commitments compared to regular classrooms instruction; and (3) subject to the whims of ‘temperamental’ technology (Drago, Peltier, & Sorensen, 2002). Fuller, Vician and Brown (2006) believe many prospective on-line students may suffer from email anxiety (“the fear or apprehension associated with real or anticipated communication via email”), computer anxiety (“the tendency of individuals to be uneasy, apprehensive, or fearful about current or future use of computers”), and communication anxiety (“an individual’s level of fear or anxiety associated with real or anticipated communication with another person or persons”). Since most communication within the context of on-line interaction takes place via electronically written messages or shared files, prospective students who have poor writing skills may believe they would be at a disadvantage in a high-tech learning environment (Smith & Rupp, 2004).

COLLEGE CHOICE CRITERIA
There are numerous sources listing post-secondary choice criteria, including magazine rankings of colleges and universities, higher education promotional material, and the academic literature. McDonough et al. (1998) studied various magazine rankings of American universities. These rankings include the “best colleges” (in terms of reputation) by U.S. News and World Report, the “best buys” by Money magazine, the “best party schools” by Playboy magazine and the “top jock schools” by Sports Illustrated. Potter (2003) reports the emergence of yet another college ranking—the “most chic campuses” by Women’s Wear Daily. Similarly, MacLean’s ranks Canadian universities on a number of criteria across six broad categories: student body, classes, faculty, library, reputation and finances. The student body measures include average incoming grade point average, percentage of out-of-province students and percentage of international students.

In the academic literature, Chapman (1981) presented a conceptual model consisting of internal (student characteristics) and external influencers (significant persons, fixed college characteristics, and college efforts to communicate with students) of college choice. Chapman’s fixed characteristics, so called because they are hard to alter in the short-term, include location, cost, campus environment, and availability of desired programs. Petr and Wendel (1998) studied university choice criteria used by students who leave their home state to attend a university in another state. Their research categorized choice criteria into four clusters: academic program, campus climate, cost of attendance, and influential persons. Some of the academic program indicators included institutional reputation, reputation of professors, starting salaries of graduates, average SAT scores of entering students, and average class size. Campus climate was described as athletic tradition, friendliness, aesthetic beauty of the campus, and extra-curricular activities. Total cost of attendance was defined as tuition fees plus living expenses minus any financial aid available to the student.
RESEARCH OBJECTIVE AND METHODOLOGY

A conjoint methodology was used to estimate the importance of method of instruction as a decision criterion relative to more traditional university attributes such as tuition fees and location. The conjoint model also estimated student preference for internet instruction, face-to-face instruction, and a hybrid model consisting of on-line instruction together with a partial on-campus requirement. A main-effects, fractional factorial design presented the respondents with descriptions of 16 competing university profiles. Each profile contained different levels for teaching philosophy, employment prospects, tuition fees, campus location, and method of instruction. The range for each attribute was determined using previous studies, current exploratory research, and select university websites.

The researchers drew a cluster sample by randomly selecting five classes at a South-East Asian polytechnic college. The sample included only students who were actively engaged in the search for a university and who needed to consider travel and/or distance education options as part of the decision criterion. The survey booklet simulated the Good Universities Guides (Hobsons PLC), a publication familiar to most students searching for an undergraduate university. Instructions and definitions were provided in the opening pages and demographic data were collected at the end of the survey.

One-hundred and forty-seven students in the five classes completed the conjoint survey, producing a 92% response rate. Incomplete responses eliminated 11 surveys. Low consistency scores (minimum individual Pearson’s $r = 0.80$) eliminated an additional 16 subjects from the analysis. Of the 120 remaining respondents, 30 were male and 90 were female. The average age of the group was 20 years. A large majority of their parents worked in either trade/technical-based jobs (48.3%) or professional/office-based jobs (38.3%). One-third of the respondents reported having at least one parent with a university education.

Aggregate Model Results

As shown in the Aggregate Results column in Table 1, the students performing the conjoint task appeared most sensitive to method of education delivery (relative weight = 26.79%). Course fees displayed the second highest importance rating (24.20%), followed by employment prospects (19.89%). University location (14.59%) and education philosophy (14.52%) contributed the least influence.

The results also demonstrate a strong preference for traditional, face-to-face instruction (mean utility = 0.46). If this method is unavailable, the students appear less inclined to attend a university offering even partial Internet-based instruction (mean utility = -0.01) and may possibly forego attending university if on-line education is the only means offered to obtain a degree (mean utility = -0.44).

As expected, lower tuition fees and greater ease finding a job contribute to utility. In this study, the respondents strongly preferred the lowest tuition fees (mean utility = 0.00), demonstrating increasing disutility when tuition fees were increased to $8,000 per year (mean utility = -0.19), and $15,000 per year (mean utility = -0.80). The respondents demonstrated minimum utility for
a 50% likelihood of receiving a job after 4 months (mean utility = 0.00), moderate utility for a
65% likelihood (mean utility = 0.35), and a strong preference for an 80% probability (mean
utility = 0.68). The respondents demonstrated no significant difference in their preferences for
campus location or education philosophy.

Segmented Model Results
The aggregate model found respondents willing to accept the increased costs of on-campus
programs due to concerns about on-line programs and the quality of education. However, high
variance suggested the presence of a group of students with higher utility for on-line instruction.
A hierarchical cluster routine identified two homogeneous student segments. The first segment
(n=67) was comprised of 16 males and 51 females. The second segment (n=53) was comprised
of 14 males and 39 females. Average age, parent’s occupation and parent’s education did not
differ between the two groups.

As shown in the last two columns of Table 1, the two clusters differ most on the relative
importance placed on method of delivery and course fees. The technology-sensitive (TS)
segment placed highest importance on method of delivery (relative weight = 36.55%), followed
by employment prospects (19.35%) and course fees (17.64%). Similar to the aggregate model,
education philosophy (14.05%) and university location (12.41%) demonstrated the least
influence. In contrast, the cost-sensitive (CS) segment rated course fees most important (relative
weight = 32.50%) and method of delivery least important (14.46%). This group ranked
employment prospects second (20.58%), followed by university location (17.35%) and education
philosophy (15.11%).

The utility for method of delivery shows that the TS segment values on-campus instruction
(mean utility = 0.84) and is opposed to any form of on-line education (hybrid mean utility = -0.09; on-line mean utility = -0.75). In contrast, the CS segment is indifferent to the method of
delivery. Although the CS segment favors the hybrid model over both the on-campus and the
Internet models, the difference is not significant.

As shown in Table 1, both segments demonstrate disutility from increases in tuition, but the CS
segment is more price-sensitive. In contrast to the TS group, the CS segment perceives only
moderate utility from smaller tuition fees ($5,000, mean utility = 0.00; $8,000, mean utility = -0.16), but may forego a university education at higher costs ($15,000, mean utility = -1.16). The
TS group perceives more moderate disutility with an increase in tuition from $5,000 (mean
utility = 0.00) to $8,000 (mean utility = -0.22) to $15,000 (mean utility = -0.53).

If finding a job is necessary to cover the costs of education, it is not surprising that the two
groups also differ significantly on utility for employment prospects. The results reveal that the
TS group is about equally content with either a 65 percent or an 80 percent chance of fielding a
job offer within four months of graduation. However, the CS segment is not satisfied with only a
65 percent chance of getting a job offer within four months of graduation, and has a much
stronger preference for an 80 percent chance of an offer (mean utility = 0.60).
**IMPLICATIONS**

The purpose of this study was to examine the importance of mode of education delivery relative to more traditional university attributes, and to determine the preferences of prospective students for high-tech versus high-touch education. The research confirmed that undergraduate students continue to use a subset of attributes when selecting a college or university. These core decision criteria include course fees, philosophy of the university, employment prospects, and location of the university. The results also show that while more students are considering mode of delivery as a search attribute, many continue to express concerns regarding limitations of the technology and quality of education.

At the aggregate level, the results from this study support previous research suggesting on-line education may not be attractive to undergraduate students (e.g., Clow 1999). However, further analysis reveals the existence of two significantly different student populations. The technology sensitive population appears to be most concerned with “how” they will receive instruction. This group displays a strong preference for high-touch education. Consistent with comments recorded in exploratory interviews with this population, lack of trust in the technology and quality of education are of major concern to these students. In contrast, the cost-sensitive population is most concerned with “how much” their education will cost. This segment appears willing to accept the risks associated with high-tech instruction, provided it is the most cost effective alternative.

An important finding of this study is the identification of an undergraduate student segment with a propensity toward on-line education. Latanich, Nonis and Hudson (2001) compared profiles of distance and non-distance learners. They found distance learners to be older, more likely to be female, and more likely to be employed full-time. In this study, however, the cost-sensitive segment was comprised of students matching the profile of most first-year undergraduate college students. They were younger, had little work experience and limited family commitments. In addition, the females in the sample were evenly divided in their preference for on-line versus on-campus education. Post-secondary institutions could use the results of this research to design academic programs, establish course fees, and develop promotional campaigns targeting unique student segments with preferences for either high-tech or high-touch instruction.

Hey! Where Are You "Homo Sapiens" Going?: A Clinical Case of the Urbanized Man

Yoshiya Kurato

Fukushima-Gakuin University
6-16 Kendani
Nishinomiya 662-0099
Japan

k.yoshiya@mac.com
Yoshiya Kurato, Ed.D. (Fukuoka-gakuin University)

Man is said to have evolved from the ape through the repetitive evolution over 2 million years. The evolution was occurred perhaps because the change of climate on the earth, accordingly followed excessive traveling for better climate, the style of living by inventing tools, or other reasons. Through the evolution the man has constantly acquired wisdom, hence, the man has been called as *Homo sapiens*, a creature of wisdom.

However, has the man been using the wisdom since then? One clinical case of the urbanized man may give us an idea or an indication how we can think of the inquiry.

A male client aged 24 whom I met for a counseling purpose was arrested in charge of molesting a woman in the park. It happened while we met once a week for about one year. This act of molesting a woman shows that he hasn’t developed a sense of wisdom, not knowing what was right and what was not. In addition, he wasn’t wise enough to control his sexual desire. He was once diagnosed as a borderline personality disorder. In case of him, according to psychoanalytic view, he might have suffered from maternal deprivation and didn’t seem to get enough parental discipline to the point he could behave all right in the outer world. In other word, he didn’t seem to developed so-called *attachment* (Bowlby, 1969) to his mother, one most significant other. The *attachment* is considered to be a means-whereby with which the man develops the confidence in himself and accordingly in others, hence, it is a base to relate with others.

As I continuously saw him once a week and the psychotherapeutic process seemed to progress, he has gradually become better in expressing his thoughts and feelings in responding therapist’s accepting attitude. It was before he was arrested and I felt the psychotherapy was going well. Then, he suddenly began canceling the psychotherapy. I found later on it was because his parents who were absent for business for nearly a year came back home and began staying together with him and started interfering and insulting. He was soon right back where he started. He became confused and violent. Finally he run away from home and went out of control.

After nearly 3 months passed, he suddenly appeared to psychotherapy with me again and said he lost every thing he had not only money but self-confident. He regretted the return of his parents to his home. He couldn’t help but tolerate with their intrusion into his life. Because of it, he stopped attending the university he was able to return before his parents joined living together. I as a psychotherapist tried to listen and relate what he
How to fulfill our drive.

How to fulfill our drive.

wanted to say. My psychotherapy seemed successful in that he spoke a lot and disclosed what was happening during his absence for psychotherapy while I was attending to him. He was a bit in a state of high tension but was under control with himself. He seemed all right.

It was on the day after he came to see me that he got involved in the criminal. Therefore, in a sense, it can be said that the acceptance on the part of psychotherapist was not good enough to the degree the client fulfilled his needs of being loved, hence it was psychotherapist’s responsibility. I agree with it to some extent, but I somehow feel discontent and I argue if it might be due to the fact that his sense of wisdom as a homo sapiens, or value system, had not been developed. He was rather ambiguous, not knowing what was right and what was and he accordingly could not draw a line between right and wrong. He said later on he didn’t know it was a bad thing to do. He said how strongly he needed to be cared and loved at the time he attacked the lady in the park.

This episode suggested that he was experiencing the maternal deprivation and didn’t obtain parental discipline to the point he could behave all right in the world. I thought the above was more contributing factor and I knew it was psychotherapist’s role to give him such a need and discipline. However, I found an inclination in the client the more accepted he was, the easier he tended to do acting out. To deal with the acting out, it is not an easy job since it varies from an easier one to a pathologically difficult one and his was that of pathological. In another look I could say that it was due to a matter of liking the sense of human wisdom, or human values, and in general I have difficulty in relating with those who haven’t acquired the sense of wisdom as
a *homo sapiens*. It doesn’t necessarily mean I can not deal with those who have pathology, rather I feel I am good at it in most of the time.

In case of him he was born in a foreign country and brought to Japan when he was 3 years old. He was confused what language he could speak. He was taken to another country when he was 7 years old and faced with language problem and cultural confusion during 2 years of his stay. He was raised with the parents who didn’t know how to raise children. The parents often moved from place to place where father was busy and had almost no chance to relate with him. Moreover the parents didn’t get along well with each other and his mother was suffered from father’s violence. He seldom talked to his father and feared for his father. He had an eldest sister who became anorexia and who was hard on him. During junior-high school years he was bullied often times and became school refusal. He suffered from pathological episodes, some of which were hesitate to describe in this paper for the sake of privacy, and was diagnosed as a borderline personality disorder. As he became better in his health he was brought to my private clinic.

After he was released from police we talked about what was happening in him and found the above. Then, my psychotherapy with him has slightly changed in a way that he became able to acquire a sense of wisdom by understanding what would be right and wrong, along with skills that would enable him as to how he could relate with others or with the world. It was, for one, with my self-disclosure: “If I were to relate to a lady, I would become acquainted with her by saying ‘hallow’ and talk with each other. I would make relationship with her first. It is my way. How about you? What would you like to do?” In my psychotherapy I was neither preaching nor lecturing, but relating with him based on my self-disclosure and a role rehearsal. What I value and depend on in my psychotherapy is a sense of wisdom as a *homo sapiens*.

Not only him, but also relatively many in Japan are like him, lucking the ability to relate with others. For instance, a 14-year old boy, a son of the physician, killed a younger sister and the mother by setting a fire to the house. The reason known to us was that he was pressed by the stress in studying for a college entrance examination. A 34-year old mother killed a 7 years old child and threw the body in the river because the child didn’t behave as she expected. A 6th-grade girl threw another 6th-grade girl from a 12 story-high building because she was insulted by an e-mail sent by another girl.

There were more cases like the above in modern Japan during a past two years. People today, young and old, do not seem to behave with wisdom. Therefore I am anxious as to where we, creatures of wisdom, are going. Traditionally, we behave what we are supposed to behave. This is so to
speak culture including parental discipline. By culture I mean a certain social conditioning in which we acquire necessary wisdom so that we know how to behave, what is okay and what is not, and what is necessary to live together with others. However, the case cited here along with others tends to show symbolically as if we were going back to the pre-stage of *Homo sapiens*. In conclusion, I would like to say, “Hey! We got to use our wisdom for survival.”

Nishinomiya 662-0099
Japan
monica@hcc1.bai.ne.jp
INTRODUCING A GROUP APPROACH TO GRADUATE STUDENTS: ITS IMPACT AND IMPLICATIONS

Yukiko KURATO (Otemon-Gakuin University)

Purpose
I introduced a group approach to the special class of graduate students who were candidates for the license in clinical psychology. Together with a project team sponsored by the Naruto University of Education, I was expected to contribute to present a training model of the licensed clinical psychologist. Therefore, this study aimed at finding a feasibility of offering a training model along with its necessary process. The group approach was that of combination of the psychotherapy group and the exercises taken from the humanistic education. The therapy group was conducted by me whose orientation in therapy was that of existential phenomenological and the exercises were consisted of values clarification, self-awareness exercises, imagery, and others.

Method
The class was consisted of 40 classroom sessions during a spring vacation. Eighteen graduate students participated the class. To see how well the class went the post meeting reaction was collected and the questionnaire was administered before and after the group approach. The post meeting reaction was scored and categorized into 3 categories; self-awareness, interpersonal relationship, and recognition. The questionnaire was analyzed by a principal factor analysis.

Results
Results of the factor analysis yielded 3 factors in both times; the understanding and relating with others, realization of the weak point, and the present state and tasks to be attained. A t-test indicated a significant statistical difference between before and after the experience in the understanding and relating with others (t=.613, p<.05). The post meeting reactions revealed that almost all students appreciated the group experience, for instance, “I am aware that I have a lot of shoulds,” “I have become clear what to do to get the license,” in the self-awareness category, “I have difficulty in verbalizing so that I would like to get use to it,” “It was nice that I could express what I felt to others,” “It was wonderful I experienced that I was warmly accepted,” “I felt it was okay to express my feelings” in the interpersonal relationship category. “I learned a lot if I opened my heart,” “I realized it was true that ‘parricide’ in the dream existed and whereby people could reconstruct the image of the mother in better way,” “I became to know that self-disclosure was effective to reach to others,” in the recognition category.

Discussions
All in all, the group approach seemed helpful to the students. This can imply that the group approach can offer a training model for the candidate for the clinical psychologist. I more detail, results from the factor analysis showed that the group approach was helpful in 3 factors, namely, the understanding and relating with others, realization of the weak point, and the present state and tasks to be attained. This meant these 3 factors were the contents of the group approach that were helpful to the candidate. And the t-test
between before and after the group approach indicated that the group approach was most effective especially in the field of *understanding and relating with others*.

It was the style of group approach that was effective, meaning that, more than anything, sharing with others in the form of group therapy or exercise was effective. In other words, experience rather than a series of lectures helped the candidate to open their hearts whereby the learning process was facilitated. The contents of the group approach, starting from *the ice breaking* to the final goal in *the self-awareness*, were also helpful to promote learning. That the students were staying in the same student’s dormitory and knew each other was another contributing factor. They knew each other and were already reliable, feeling safe enough to disclose themselves in the group.

Also the students who had positive motivation and participation seemed to contribute the cohesiveness of the group, hence, most contributing factor in this study. The way of relating that the facilitator exposed to the students might have helped to this end, resulting that almost all participants enjoyed and learned from the group approach.

However, the study was limited to the small number of students and the number of classroom sessions, although it was suggested statistically and experientially that the group approach would be feasible to hypothesize a training model for the candidate for the license in the clinical psychology.

The Rise of Dispatched Workers in Japan since 1990s:
Increased Labor Mobility and the Socio-Economic Implications

Abstract
Reflecting the recent IT penetration and the economic stagnation in Japan, a new type of labor force, the dispatched workers (temp staffs), has increased. With the reduced costs of skilled labor and labor mobility, more and more firms have been accepting dispatched workers. This research paper discusses the rise of temp staffs in Japan. The first part analyzes the system and the demographic trend of dispatched workers. The second part reviews the history of liberalizing the labor laws concerning dispatched workers. Finally, the last part discusses the economic impact and socio-economic implications Japan may face in the future with the new labor forces. This paper may present an objection against a globally believed myth that Japan’s labor cost is too expensive to operate its manufacturing operations in own country. Given the fact that labor-cost of Japanese people has tremendously decreased due to the rise of temp staffs, does Japan still need to outsource its manufacturing operations offshore?

Dispatched Workers
Dispatched workers, called haken-shain in Japanese, are a new type of work force in Japan. They in many ways are similar to the “temp” workers in the U.S.. Although the population of dispatched workers was roughly 100 million or less, which accounts for merely 1.5% of the total labor force in fact, the rapid increase of the new labor force is a significant trend in Japan, particularly within the past few years.¹

Indirect Employment System
As figure 1 exhibits, dispatched workers are first hired by the dispatching worker service agencies, and then the workers are sent to the client firms. The dispatched worker actually works under the supervision of the client firms. In other words, a firm that hires a worker and a firm that commends tasks to the worker are different. The dispatched employee is paid by the dispatching agency. The agencies interview employees before the client firms. Most of the agencies provide the employees with various job trainings such as a basic or higher level of PC operations, skills for office working, web designing and programming.

There are two types of arrangements: agencies hire the workers as their full-time regular employee, and then send them to client firms as needed; or workers just register with agencies and obtain various temporary jobs as work becomes available, which is more similar to the temporary staff or “temps” in the U.S.² In both cases, the agencies are required to submit the business reports and balance sheets that state the number of workers, fees and payments to the government.³

¹It is quite difficult to measure the actual population of dispatched workers for several reasons, partly because some workers have just registered with the agencies but do not actually work, partly because some workers register with several agencies so that the data might count one worker as two or more. The Ministry of Labor, Health and Welfare announced 236 million, by simply counting the number of registrations in the dispatching agencies in 2005. The Ministry of International Affairs and Communication, by contrast, reported 85 million by counting the number of those who have worked at least for an hour in the last week of a month in 2004, which excluded the workers who worked only in the beginning of the month. Thus, the actual population can be roughly estimated as around 100 million or less.
Demographics

Figure 2 shows the changing trend in employment positions in 2003-4. Despite the continuous decrease in permanent employees and the moderated increase of part-time employees, the ratio of dispatched workers rapidly increased after 2004.5

Dispatched workers, NEETs and Freeters: Japan’s Young Age Groups

Figure 3 shows the demographic trend of dispatched workers. In the second and third quarter of 2004, the number of the dispatched employees drastically increased. Particularly, the increase in the number of people in the young group of (15 to 34-year-old) is remarkable.5

However, it should be noted that the young people, who can be categorized as NEETs, are different demographic characteristics from those who can work as dispatched workers. NEETs are jobless young people who are not in education, employment or training. Japan’s NEETs have a strong correlation with educational background.ii Among the jobless youths, college graduates tend to be seeking for jobs and become “unemployed,” while those with lower educations including high school graduates are more likely to give up their job search entirely and become NEETs.6 Furthermore, given the fact that most of dispatching agencies requires a qualification of college degree other than specified skills, the groups categorized as young dispatched workers and as NEETs are mostly different.

The distinction with Freeters and the unemployed youths is obscure. Freeters are young people who work as part-time and change jobs frequently. The populations of both Freeters and jobless youths have been increasing as well.iii Despite the full-time employment status and the higher average wage than Freeters, dispatched workers are sometime considered as upgraded version of Freeters because of the frequency of changing jobs. Also, dispatched workers easily become jobless after the contracted period of work ends.

Gender Differences

Historically, gender differences in Japan’s labor market have been significant. Even in 2001, the employment ratio of all the population significantly differed (71.5% males vs. 46.3% females). Females tend to work as non-regular employment such as part-time workers more so than males. To illustrate, in 2001 the ratio of non-regular employees is only 10.3% for males, whereas it was 39.8% for females. The only exception is found in the unemployment rate, where with both genders the rate was increased from 2.3% in 1990 to 4.7% in 2001.7

---

ii The increasing population of NEET in Japan reached 0.8 million in 2002, which became a social problem.

iii The population of Freeters in Japan reached 2.0 million in 2002. The population of unemployed youth also reached 2.1 million in 2002, jumping up from 1.3 million in 1992, when the bubble economy collapsed.
Furthermore, the population of dispatched workers also represents large gender differences. In 2004, 57,000 females worked as dispatched workers, whereas only 23,000 males were dispatched workers. The ratios for each labor population are respectively 2.1% and 0.6%. As for kinds of occupations, female dispatched workers prefer to work as clerk generals, office assistants, and accountants, while males prefer to work as sales persons, system engineers, and programmers. Recently, however, gender differences in dispatched workers’ population have been diminishing. The primary reason is the increased number of males who fall into dispatched workers from permanent employees, while the change in females was virtually little.

Liberalization of Dispatching Worker Services

The original Labor Standards Law, introduced in 1947, did not permit the private business to dispatch workers from one company to another. It was feared that such dispatching arrangement could lead to the exploitation of workers. Dispatching worker services were permitted only for the public sectors or non-profit private sectors. In addition, some private sector were allowed to dispatch workers in the limited business categories such as doctors, translators, hair dressers, and artists.

The Dispatched Workers Law in 1986
In 1986, the Dispatched Workers Law was enacted, reflecting the domestic firms’ large demand for the labor mobility and skilled workers. The law defined the business of dispatching workers as “to dispatch the employees hired by the dispatching agency to the client firm to work under the supervision of the firms.” The law permitted for an agency to supply dispatched workers, only if the employment relationship of the agency and the staffs is defined.

At that time, the range of the permitted industries was limited to only 13 industries that required a high mobility of workers and a certain level of technical skills mostly related to information technology. The jobs included office administrators, market analysts, editors of business and financial documents, and receptionists. The revisions of the law in 1996 and 1999 allowed the dispatching worker services in a wider range of industries. Rather, the revised laws allowed all the industries, except for the listed industries such as some professional jobs, transportation, and constructions.

In 2004, the law was finally revised to permit an industry of production-line manufacturing. In March 2006, the law was revised again. Some jobs in the medical industry were added to the list of the permitted industries for dispatching workers. Yet, a certain industries such as the construction, security, and harbor industries were still prohibited from accepting dispatched workers.

Protection of the worker’s rights: Yodobashi case in 2002
The primary purpose of its latest revision was shifted towards protecting the dispatched worker’s rights from expanding the permitted industries. It extended the periods for which a dispatched worker can work in a firm, and also enforced the responsibility of dispatching agencies on maintaining the employee’s safety and health and offering labor insurances.

In addition, the revised law prohibited firms from re-dispatching the dispatched worker, who was already sent from an agency, to another firm to work. The issue of re-dispatching workers was raised by Yodobashi case in 2002. The case revealed the weak position of dispatched workers, who were easily abused by the firms and agencies. Observing Japan’s diversified and individualized labor systems, Kazuo Sugeno emphasizes “the establishment of rules for employment contracts which are needed in response to the mobilization of the labor market.” Even today, the liberalization of the Dispatched Worker’s Law is continuing.

iv Yodobashi case in 2002: a dispatched worker, 25-year-old male, sued Yodobashi Camera (electric products retailer) and E-persons (dispatching agency) for the repeated physical violence by a supervisor of Yodobashi to him. The worker hired by E-persons was first sent to DDI pocket (cell-phone manufacture). However, DDI sent him to Yodobashi which retailed the DDI’s cell phones in the retailing shops.
Economic Demands for the Dispatched Workers

Japan’s unique employment systems, lifetime employment and seniority-based payment, contributed to the Japanese firm’s long-term investment in developing human resources efficiently. Due to the rigid systems, compared with other developed countries, Japan’s aggregate employment for the entire economy has been considerably stable. The changes of aggregate employment to the changes of output were also small.

Indeed, even before the advent of dispatched workers in 1980’s, external work force companies existed and contributed to Japan’s rapid economic growth, such as part-timers or staffs hired from outside the company. As Japan’s position in the global economy improved, the demand for outside labor forces also changed. When Japan obtained global competitive advantages more than comparative advantages, multinational enterprises started to seek for more internationally viable employment systems to attract competent professionals and enhance productivity.

The economic stagnation: reduced labor costs

In 1990’s-2000s, a new type of external labor forces rose up. There were two main factors that caused the rapid demand for the dispatched workers. First, Japan’s economic slowdown increased the number of unemployed people, who eventually became dispatched workers. At that time, getting hired as dispatched workers was much easier than getting hired as permanent workers, particularly for those who needed jobs immediately and wanted various choices of job type, time, and place to work. Second, many firms reduced the number of new employees to hire, which generated a severe climate for the young labor market, including college graduates. As a result, these conditions generated more supply of dispatched workers to Japan’s young labor market.

From the viewpoint of firms, utilizing dispatched workers is advantageous in many ways. First, firms can find skilled workers as they need immediately. Second, since dispatched workers are not their permanent employees, they do not have to pay for the benefits and insurances, and they can fire the employees easily. These responsibilities are attributed to the dispatching agents (real employers in contract). Third, the cost of hiring dispatched workers appears in financial statement as non-fixed cost, not fixed cost. The fees to agencies are already imposed tax, which results in reducing the consumption tax. Kenn analyzes, “long recession in the 1990s added difficulty and immediacy, especially in reducing labor cost in an effort to retain/recover competitive advantage in the market place.”

Labor flexibility of skilled workers

Another factor for the rise of dispatched workers was the penetration of information technology into business environments. According a survey of the Ministry of International Affairs and Communication about “non-permanent staffs and dispatched workers” the biggest reason of choosing non-permanent staffs was “to keep the low labor cost.” By contrast, compared with the ratio of all types of the non-permanent employment, firms tend to hire temporary staffs in order to “to secure the skilled labors.” That is, the skilled labor’s flexibility matters more than the reduced costs. Indeed, if the firms want to reduce the human resource costs, they could hire temporary staffs as part-time by themselves without paying expensive fees to the dispatching agencies.

The fact that the number of dispatched agencies keeps increasing implies that their business is profitable because of the increasing demand for providing the skilled labors immediately. Traditionally companies in Japan developed their own long-term and intra-organizational training systems, and hired young college graduates obtained well-designed training programs to become candidates for the administrative or specialized positions. The dispatching agencies, by training the employees for business and IT skills in advance, tend to displace Japan’s traditional intra-organizational trainings. Therefore, both the reduced labor costs pressured by the economic slowdown, and the skilled labor’s mobility contributed to the rapid increase of the dispatched workers.
Socio-Economic Consequences: Polarized Labor Market

Reflecting the rapid increase of dispatched workers, Japan’s labor’s market moved towards polarization and divided into permanent employees and dispatched workers. In a recent survey of MHLW, 40% of the dispatched workers answered that the difficulty in finding permanent employment positions made them work as dispatched workers. Figure 4 shows that the possibility for permanent employee to fall into non-permanent has been drastically increased since 2002, while the promotion from non-permanent employment to permanent employment has not changed or slightly declined since 2001. That is, it is difficult for dispatched or non-permanent workers to be hired as permanent employee, once they have become non-permanent employees. When the data analyzed separately by gender, the barrier for male is getting bigger while that for female is not changing.

Income Gaps

A negative outcome of the polarized labor market is the increasing gap of their incomes. The average income of a dispatched employee is 206,000 yen per month, or 2,917,000 yen per year, which is roughly 60% of the average of a permanent employee of 334,910 yen per month (see figure 5). The income gaps in males are bigger than females. In particular, the gap tends to increase, as the employees get older. While an average income of male temporary employees is 86% of the average of male permanent employee at the 20s age group, the ratio becomes 56% at the late 40s age group.

The National Community Union, an organization united to solve the dispatched worker’s issues, held a conference in March 2006. They announced that two requirements must be met:

1) Maintaining a lowest payment above 1,780 yen/hour, which results in 3 million yen/year.
2) Avoiding an unstable condition in which the fairly short-term (1 to 3 month) contracts are repeated.

Asami Nakano, a lawyer and chair of the NCU, commented, “Our goal is to save the dispatched workers, suffering from continuously low incomes, from loosing their social status and positions.”

Bonus system as incentive for savings and consumptions

In addition, even if the gap of monthly wage is relatively small, the bonus wage system, another unique custom to Japan, can also increase the income gap. With the bonus wage, permanent employees tend to obtain extra 25-35% of the total wage bill annually. The bonus system enables employers to profit from the interest saved on the amount of bonus retained. Also, since the amount of bonus depends on the net profit of the firm’s operation, bonus wages functions as a reward for the employee and enhances the relationships between employers and employees.

The bonus wage is usually paid in cash in summer and at Christmas. This bi-annual cash flow has been big incentives for consumption in Japan. It also contributed to the high saving rate of Japan during 1950s-90s. Due to its indirect and short-term employment, dispatched workers cannot get the bonus wages. Furthermore, the unstable employment status makes it difficult for the workers to request a loan from banks or credit companies. In conclusion, through the rise of dispatched workers, the polarized labor market
increases the income gaps, and the lack of bonus system negatively affects the consumption behavior of Japan’s economy.

**Estimated Structural Changes in Dispatched Worker’s Market**

Recently, Japan’s economy and labor market showed signs of recovery. The unemployment rate has been continuously decreasing within the past three months, reaching 4.1% in February 2006. In particular, the demand for permanent employment positions showed a remarkable recovery from the past seven years. Alexander analyzes, “since there are twice as many as full-timers as part-timers, the reversal of their growth paths has even more positive implications than suggested in the crude growth numbers.”

Then, given the recent recovery of Japan’s labor market, the question is whether or not the labor of dispatched workers will change.

**Recovering young labor’s demand: the 2007 problem**

In 2006 many firms increased the number of new employees both from college and high school graduates. Furthermore, some firms reduced the restriction on their candidate’s career history; calling *second-Shinsotsu*, same job opportunities as new college graduates was opened to those who already worked as full-time or part-time for two to three years after they graduated from colleges.

Behind these positive trends, there is a firm’s concern about “the 2007 problem,” other than the economic recovery. In 2007, when the generation of baby boomer’s children turns to be 60-year old, the senior employees are expected to leave the firms, many of whom are in management positions. The potential consequence will be a lack of transferring knowledge and techniques from the older to the younger workers within firms and industries. This problem is severer in the research and development department of high-technology related industries, which are the Japan’s competitive fields.

**Labor’s structural changes**

The ageing demographics and the big layoffs of the middle-aged employees both contributed to the increase of the middle-senior aged labors in Japan’s workplace. Since the 1980s, many firms concerned themselves about the impact of demographic changes on horizontal and vertical hierarchies. Because increasing the number of dispatched workers in the workforces does not solve any the issues above, the firms turned their recruiting strategy to hire more young employees. Therefore, as for the young labor market in Japan, it is difficult to conclude that the number of the dispatched workers will continue to increase in the future.

By contrast, particularly in the manufacturing sectors, many firms plan to increase the number of non-permanent workers including dispatched workers. Many empirical surveys of MHLW support the trend. In 1999, 50% of the sample firms reported to “plan to increase the share of non-standard employees in their workforce over the coming three years.” The proportions were highest in manufacturing, trade, and services. More recent survey in 2002 states, “the liberalization of dispatching workers for the manufacturing industry will highly increase the number of dispatching agencies and dispatched workers.” Therefore, perhaps the workplace of dispatched workers will shift towards the manufacturing fields.

**Conclusion**

Dispatched workers have been rapidly introduced to Japan’s labor market, reflecting the economic slowdown and the penetration IT. The biggest advantage for firms to hire dispatched workers is the enforced flexibility to provide skilled labors. However, due to the liberalization of Japan’s Dispatched Worker’s Law, the ageing society issue and the economic recovery, the workplace for dispatched workers tend to change gradually. If the demand for dispatched workers continues to increase, particularly in the manufacturing sectors, Japan will again face some socio-economic problems. Even if Japan’s economy recovers, the stagnated consumptions and low incomes and savings of the dispatched workers will prevent the Japan’s economy from fully recovering.

Parent Training with Behavioral Couples Therapy for Alcoholism: Secondary Effects on Children

Among the major public health concerns of the 20th century, alcoholism is certainly among the most devastating and costly. Among the many consequences of these disorders are the harmful effects of parental alcohol abuse on the family environment. These deleterious effects can, in turn, adversely affect the psychosocial development of children in these households. Estimates suggest that more than 17 million children currently live with an alcohol-abusing parent (Windle, 1997); it is widely accepted that these children are at risk for developing a host of emotional and behavioral problems.

Interventions are needed to address the clinical needs of these children. To date, treatment approaches have targeted the children themselves or have used family-based interventions to treat both the parents and their children. Unfortunately, research suggests that parents who enter outpatient treatment with a drinking problem are very reluctant to involve their children in these services, with more than 60% refusing to allow their children to participate (Fals-Stewart, Fincham, & Kelley, 2004). In circumstances in which substance-abusing parents will not allow their children to receive treatment directly, interventions for adult patients that improve parenting skills and the family environment may hold the most promise for the psychosocial adjustment of their children. Evidence suggests that couple-focused substance abuse treatment for mothers and fathers who abuse alcohol can have secondary benefits for children even when parenting skills are not directly addressed (Kelley & Fals-Stewart, 2002). Through a NIAAA-funded pilot trial, we examined whether adding parent skills training to behavior couples therapy (PSBCT) would be more effective at improving children’s psychosocial adjustment relative to Behavioral Couples Therapy (BCT) alone and to individual-based treatment (IBT) (with no couples- or family-focused therapy).

Methods. Substance-abusing men (N = 30) entering outpatient treatment for alcohol misuse and their nonsubstance-abusing intimate female partners were recruited. Eligible couples had to have custodial care of at least one pre-adolescent child between the ages of 8 and 12 years, inclusive. The substance-abusing patients and their partners were randomly assigned to one of three equally intensive treatments: (a) PSBCT, (b) BCT (without parent-skills training), and (c) IBT (without couples-based or parent skills intervention components). Couples and the children in their families who were within the above-noted age range were assessed at baseline, posttreatment, and at 6- and 12-month follow up. This presentation compares preliminary effects of PSBCT relative to IBT on children’s externalizing and internalizing behaviors, as reported by both mothers and fathers, through 12-month follow up. Data were analyzed using multilevel regression models, which account for the inherent nesting (e.g., partners nested within couples, repeated measures nested with time); MLwiN was used to model the data.

Results. Regardless of condition, children’s functioning improved, as indicated by the Child Behavior Checklist (CBCL; Achenbach, 1991) total, externalizing, and internalizing T-scores from baseline through treatment completion. However, as hypothesized, differences emerged by treatment condition. Children of alcohol-abusing fathers who participated in PSBCT experienced greater improvements than those of fathers who received individual behavior therapy without
parent skills training from baseline to treatment completion. Differences remained significant through 12-month follow-up, although there was some erosion of effects during the posttreatment follow-up period. Although mothers and fathers who participated in PSBCT reported higher levels of children’s functioning on the CBCL than parents who received BCT only, these differences were not significant (which is likely due to low power resulting from small sample size).

Conclusions: Custodial children (8-12 years) of fathers who abused alcohol and received couples therapy with a parenting skills training component showed significantly greater increases in psychosocial adjustment than those whose parents received individual behavior therapy alone, supporting study hypotheses. These differences were found not only during treatment, but continued through 12 months posttreatment. Although not significant, a similar pattern was found between children of fathers who participated in PSBCT compared with BCT alone. Results of this pilot study are promising, but very much support the need for a larger trial to explore these and other effects with a sufficiently powered investigation. Future research on the families will explore cross-respondent relationships between parenting (e.g., fathers, mothers, and children) and children’s adjustment, and other dimensions of parents’ adjustment as related to children’s functioning.
Title: Multiculturalism and Disability Education

Abstract

This article will discuss the importance of placing disability education within the construct of multiculturalism. Within an international context, some of the important issues surrounding multiculturalism and disability education, and how these issues relate to teacher education, will be explored.

KEYWORDS: multiculturalism; disability; teacher education
Introduction

This discussion will examine the importance of placing disability education within the framework of multiculturalism. It will begin with a brief review of the history of the construct of multiculturalism followed by the importance of teacher reflection, exploration of personal bias, and personal understanding of this construct. The significance of placing disability within cultural context will be reviewed as well as issues of policy, overrepresentation and the influence on educational equity. Finally, within an international context, some of the important issues surrounding multiculturalism and disability education, and how these issues relate to teacher education, will be considered.

Background

In discussing multiculturalism, it makes sense to begin with a brief explanation for the inspiration and a definition of the term. Multiculturalism evolved from the concept of cultural pluralism and has its roots in the civil rights movements of various microcultures (O'Connor, 1993). Culture and cultural diversity are the core of multiculturalism (Nieto, 1992). It is a reform movement with international educational and social implications. Multiculturalism makes cultural and linguistic differences, gender, and physical and mental disabilities a legitimate part of the social discourse (Talbani, 2003). It is crucial that any dialogue about multiculturalism include a discussion of disability education. Children with disabilities who are from racially, ethnically, linguistically diverse backgrounds are often treated by educators from majority populations as if the disability is the single defining characteristic (Miles, 2002). Viewing disability
through the multicultural lens is not a new concept. More than 30 years ago Bogdan and Biklen (1977) and Biklen and Knoll (1987) discussed the notion of *handicapism* within the larger social construct of prejudice and drew comparisons with other types of discrimination such as racism and genderism; their analysis laid the groundwork for placing disability within the context of multiculturalism and it is important to continue this discourse.

**Clarification and Reflection**

There remains much confusion over the terms multiculturalism, cultural diversity, cultural pluralism, and interculturalism and many educators use the terms interchangeably. Every educator has a unique set of life experiences which color her/his perceptions, expectations, and interactions, and thus, her/his definition of multiculturalism and use of the term. In addition, country of origin also determines how one defines the term. In Latvia, for example, multiculturalism is a movement whose goal is to incorporate many ethnic groups of the same race into mainstream Latvian culture; in the United States, multiculturalism is often erroneously believed to be simply an issue of race. Defining the term and reflecting upon its meaning and personal implications allows the educator time to think deeply about her/his personal biases and the way those biases may influence her/his teaching and interactions with children.

**Cultural Context and Disability**

Educators must understand that family culture has the most profound influence on the child; as educators they must educate themselves about the cultural backgrounds of their students. In addition, it is imperative for educators
to understand the ways in which different cultural groups view disability. The cultural context within which the disability is perceived should inform good practice. Many educators equate *different* with *deficit* and perceive persons from other cultures and persons with disabilities as somehow less valuable, knowledgeable, or important than persons from the majority population. Educators must learn and respectfully acknowledge that all families have their own views and perceive problems, solutions, and support in different ways; in deed, families may view situations from an entirely different perspectives than the educator or the majority population. Educators must find ways to listen, understand, support, and respond in culturally sensitive ways, to families from diverse backgrounds, including those with children with exceptionalities; they must learn to view families’ differences as strengths and build on those strengths. Educators who engage their families as cultural informants will be more successful in establishing respectful partnerships with those families and better able to address the needs of their students.

**Policy, Educational Equity, and Overrepresentation**

Each country throughout the world has attempted and continues to attempt, with varying degrees of success, to institute policies that guarantee educational equity and meet the needs of many microcultures. There is pressing need for appropriate policy and educational equity. However, policies are often shaped by political agendas and prejudice rather than sound research and effective pedagogy (Miles, 2002). For example, over the past twenty years, Spain has seen a tremendous increase in immigrant populations; this increasing
diversity has resulted in many educational inequities including students from diverse backgrounds performing at lower academic levels than their peers (Arnaiz & Soto, 2003). In Australia, approximately 25% of all students come from non-English speaking backgrounds (Janiszewska, 2003) but as Janiszewska affirms, until very recently the Australian government’s policy on diversity was one of assimilation. Assimilation, she states “is a process by which individuals from minority ethnic groups adopt both the language and cultural values of another (usually dominant) cultural group (p.50).” We have seen this in the United States where a “melting pot” mentality prevailed until fairly recently.

In the discussion of disability education, it is evident, on a world-wide basis, that many ethnic groups are overrepresented in special education, especially among children assessed as having mild learning disabilities, mental retardation, and emotional/behavioral disorders, but under-represented in gifted programs. Thus, disability education is a political issue. In many countries children from minority groups travel to special schools. For the child, this may mean moving out of their home area to be taught with children who do not share their cultural and linguistic background by teachers who may have no knowledge and limited sensitivity to the needs of these students.

While there is a tendency to point fingers at third world countries when discussing educational inequities, we see that in many developed countries like the United States, there are social policies in place to promote inclusion and educational equity however, evidence indicates that in many cases there is a dramatic difference between policy and practice; marginalized populations are
still victimized. As an example, in one major U.S. urban city, an assistant principal forced a group of students of Haitian descent to sit and eat on the cafeteria floor using their hands, calling them animals and stating “that’s how you people eat in your own country” (Saulney, 2005). The students were American citizens. In other parts of the world, children of minority populations, those who are typically developing as well as those with disabilities are denied schooling completely. In the Turks and Caicos Islands, a vacation haven for the wealthy, Haitian immigrants provide the work force but their children are not allowed to go to school (Bolderson, 2002). In Great Britain, entire schools consist of one ethnic and/or racial group of students (Miles, 2002) many classified as having disabilities; separation does not facilitate educational equity.

Conclusion

As the worldwide discussion of multiculturalism continues, “scholars will have to pay much greater attention to situating special education research within the discourse on race, class, culture, and language and acknowledge that the context within which all disability exists is always an individual’s socioculture” (Pugach, 2001, p.447). Pugach further states the study of disability without a discussion of race, class, culture and language will result in misconceptions. According to Waite (1999) including students with disabilities is a central feature of school reform and teacher education but it is often overlooked in multicultural education and diversity coursework. Teacher preparation programs must spend more time – theoretical and practical – devoted to instructing future teachers on working with diverse populations and providing teacher-trainers opportunities for
hands-on work with families from diverse backgrounds and children with
disabilities. For teachers currently in the classroom, reflective exercises and
quality professional development opportunities can help sensitize them to issues
of diversity and disability, inform practice, and help them develop the skills and
understanding necessary to place disability within the framework of
multiculturalism. As educators, policy makers, administrators, and researchers,
we must remember that multiculturalism means educating for social justice and,
therefore, we must help future teachers learn to teach for social change (Waite,
1999).

Abstract

In this study, we seek to provide an emic understanding of the general assumptions about personhood among the Chinese Malaysians as communicated through discourse about and performance of complaint-making. We particularly focus on discourse about *thou soo* and *aih auan*—two speech acts that community members consider meaningful in expressing dissatisfaction. Expressions of dissatisfaction with others and with life situations in general provide an excellent window into assumptions about personhood as they deal with unmet expectations that in other circumstances are taken for granted. Furthermore, the communication focused on dissatisfaction involves the evaluation of the inadequacies of people involved in the situation, since the complainer assumes some shared value or ideal that has not been met when expressing dissatisfaction. This situation allows the observation of the interlocutors’ assumptions of the nature of individuals, as they discuss how people, including themselves, should or should not behave. Although the findings of this study do not provide a comprehensive list of the community’s assumptions of personhood, we believe we have provided important insights into a community that has not received much attention in research. In short, the Chinese Malaysians’ discourse and performance of complaint-making reveal four assumptions of personhood: (a) people are inescapably connected, (b) people are vulnerable, (c) people have one true self, and (d) people have partial agency. In the discussion, we reflect on how these revealed assumptions about personhood fit with past research on East Asians in general and highlight the importance of understanding the underlying meanings associated with certain communicative behaviors and the danger of large scale generalizations.
Assumptions About Personhood in Chinese Malaysians’ Discourse of Dissatisfaction

The discourse about and performance of speech acts are useful in understanding people’s sense of self. Previous studies have shown that speech acts contribute to and reveal individuals’ conceptions of the self in their talk (e.g., see Carbaugh, 1989, 1993). As Goffman (1967) proposed, individuals form their self-conception via talk. Individuals depend on others to complete the picture of themselves and to understand themselves. At the same time, via talk, individuals also reveal to others how they view themselves in a social interaction (Goffman, 1971). Therefore, discursive practices reveal important information pertaining to people’s assumptions about personhood, or the nature of individuals.

People’s assumptions about personhood that are revealed via speech acts are intertwined with culture. Fundamentally, the performance of speech acts involves the use of symbolic resources—the arbitrary and conventional commodities and ideas that people rely on to communicate and to make sense of their lives (Hall, 2005). Since humans assign meanings to symbolic resources, their use of symbolic resources (i.e., communicative acts) reveals their assumptions about personhood. These assumptions are culturally laden. In fact, studies that strive for native understanding of speech acts and other culturally laden elements should be understood from and interpreted according to the emic (i.e., within culture) perspective—through the lens of a specific community (e.g., Carbaugh, 1990; Witteborn, 2003) and the native terms of that community (e.g., see Gales, 2003; Wierzbicka, 2003a; Witteborn, 2003).

Therefore, to obtain a genuine understanding of people’s assumptions about the self that is revealed via speech acts and as grounded in cultural context, we use an emic approach in this study. The purpose of this study is to identify and describe general assumptions about
personhood via the discourse about and performance of complaint-making from one Chinese Malaysian community—a community whose culture is not widely studied in the communication field (see the next main section for further discussion).

In the following section, we provide background information on the Chinese Malaysian community of study. Next, we explain the selection of expressing dissatisfaction or complaint-making as an appropriate speech act to identify and describe the Chinese Malaysians’ assumptions about personhood. We also discuss complaint-making based on the Chinese Malaysians’ understanding by using words in their native languages.

The Chinese Malaysian Speech Community

The Chinese Malaysian speech community that we studied consisted of ethnic Chinese people who were born and raised in Malaysia. Malaysia consists of three main ethnic groups: Bumiputra (65.1%), Chinese (26%), and Indians (7.7%) (Department of Statistics Malaysia, n.d.). Bumiputra, literally translated as sons of the soil, composed of the Malay ethnic group and other indigenous people represent the dominant group in the country (Lam & Yeoh, 2004). The dominant group, the Malay population that is Muslim, rules the politics of the country. During the British colonial period (1789-1957), the British imported ethnic Chinese people from China and ethnic Indians from India to work as laborers. Although the current postcolonial Malaysia is multiracial, cultural or racial issues and underlying ethnic differences and values are taboo topics (Giacchino-Baker, 2000). Cultural diversity is perceived as threats to the country.

The common identity among Chinese Malaysians is rooted in their ethnicity mainly because of great-grandparents or grandparents who migrated from China. However, Chinese Malaysians consider themselves as having different cultural identities based on the languages they speak (Freedman, 2001; Lam & Yeoh, 2004). They divide themselves further into at least
five different cultural groups based on the mutually unintelligible languages that they speak: Hokkien, Cantonese, Teochew, Hainan, and Hakka (Tan, 1999; Waller & Fam, 2000). Although the languages originated from different provinces in China, they have been adapted to local culture since the 1700s (Platt, 1976). The languages incorporate local lexicons and folk concepts from the Malay language and certain words from the English language (Platt, 1976). The languages are limited to oral form and writable in Chinese characters using equivalent words in combination with Malay and English lexicons.

Chinese Malaysians also identify themselves differently based on their different schooling systems (e.g., there are Chinese Malaysians who attend the Malay school) and religions, as well as their attitude toward (e.g., disbelief in or acceptance of) Westernization. Westernization is commonly associated with adoption of Christian values and is perceived as modern or hip (e.g., see Wierzbicka, 2003b). Furthermore, certain Chinese Malaysians who are particularly receptive to Western influences also speak Malaysian English in combination with their own languages based on their descent.

Public and mundane discourse among the ethnic Chinese people as diaspora in Malaysia commonly focuses on their fluid identifications with Malaysians (i.e., the citizens of the country) and/or the minority ethnic Chinese people (Nonini, 1997). However, the country and the cultural group’s discourses do not single out specific assumptions about the nature of individuals, whether referring to the Malaysian population in general or the Chinese Malaysians. Furthermore, the U.S. and Western common conceptualization of the self as an independent entity or in relation to others is not used in the country and the Chinese Malaysians’ discourse. Since cultural values are influential in people’s assumptions about personhood (Smith, 1991), we
discuss possible cultural values that may influence the Chinese Malaysians’ perceptions of the 
self and possible assumptions of personhoods in the next subsection.

*Cultural Values and Personhood*

Based on the colloquial way of discussing cultural values, Malaysians and Chinese 
Malaysians rarely use of scholarly terms such as those discussed in U.S. and other Western 
literature (e.g., collectivism-individualism, high- and low-context communication, etc.). Instead, 
the Malaysian government accentuates its call for *bangsa* Malaysia—a Malaysian race that 
highlights Malaysian identity (Giaccino-Baker, 2000; Waller & Fam, 2000). Common terms 
used in the limited discussions about monocultural values or so-called Malaysian values include 
references to *social responsibility, civic mindedness, mutual tolerance, acceptance,* and 
*celebration of different cultures* (Waller & Fam, 2000). This aspiration of achieving *bangsa* 
Malaysia and the promotion of the associated government-prescribed values do not necessarily 
single out or reveal any distinct set of Chinese Malaysian cultural values and assumptions about 
personhood.

Since the Chinese Malaysian cultural values are not openly discussed in Malaysian public 
discourse, some possible cultural values that may shape their assumptions about personhood may 
be identified from the teachings of Confucius (Lee-Wong, 2000; Wierzbicka, 2003b). As 
examined in different studies, Confucianism is a prominent foundation for learning about the 
core of Chinese cultural values (e.g., Liu, 2003; Yick & Gupta, 2002). Although people in the 
speech community that we studied did not grow up in China, as one of the many Chinese speech 
communities in the world, it is expected to share certain traditional Confucian values with people 
in China (Lee-Wong, 2000).³ Common Confucianistic virtues include filial piety, transcendence 
of individuality and sociality, love and respect, and benevolence.
Confucianistic virtues are proposed as influential in the ethnic Chinese people’s notions related to and conceptualization of the self (e.g., Gao, 1996; Ng, 1999; Tu, 1985). Based on the key philosophical elements of Confucianism, scholars posit and portray the ethnic Chinese people as collectivists who define themselves in relation to others (e.g., see Gao, 1996; Ho & Chiu, 1994; Markus & Kitayama, 1991; Yum, 1988). Since the preservation of harmony and human relatedness are central in Confucianism, the ethnic Chinese people are said to view themselves according to relational status and social role that are interdependent with others (Gao; 1996; Tu, 1985). The self is then characterized by how well people fit into groups and live up to others’ expectations of them in order to pursue interpersonal accommodation (Gao, 1996; Ng, 1999). Hence, the Chinese self is described as selfless, in the sense that people deemphasize self-centeredness and voluntarily devote to social obligations, such as to conform, cooperate, and suppress one’s internal desires and emotions (Hu & Grove, 1991).

From a philosophical standpoint, Confucianistic values and the understanding related to the self can be mentioned and discussed as those manifested in well-researched Chinese communities, such as the mainland Chinese and Taiwanese. However, due to the historical background of the Chinese Malaysians, there are two possible influences that may distort the assumptions about the self as influenced by Confucianistic values. First, the ethnic Chinese people in the community of study have been exposed to British influences and Western values. Second, the community was not exposed to the anti-intellectual Cultural Revolution of 1966 in China, in which traditional Chinese cultural beliefs and values were under severe attack (Fang, 1998; Lee-Wong, 2000). Consequently, the community might have been influenced by a fusion of cultural sources that affect the Chinese Malaysians’ assumptions about personhood. These sources may include Confucian teaching, Western values that have been adapted to local needs,
Malay (i.e., Islamic) values that are reflective of the dominant group in the country, and to some extent, the government-sponsored bangsa Malaysia values.

**Complaint-Making**

Since people’s sense of self is constituted and reconstituted via social interaction, we treat the discourse and performance of complaint-making as a speech act that is useful to infer people’s assumptions about personhood. As Davies and Harré (1999) stated, the social meaning of the self is realized through interlocutors’ participation in discursive practices. Thus, through discourse, in this case complaint-making, people realized their positioning—which is defined as the ways people perceive themselves as “being a person of a certain sort” (Davies & Harré, 1999, p. 52).

Basically, individuals participate in social interaction in terms of a special capacity, or status called a “special self” (Goffman, 1967, p. 52). Since individuals participate in social interactions using the “special self,” they do not participate in social interactions in terms of a total self (Goffman, 1967). This means that each individual has a continuity of a multiplicity of the self (Davies & Harré, 1999). Furthermore, the multiple selves could also be different from or contradictory to each other (Davies & Harré, 1999).

Indeed, utterance of dissatisfaction reveals a complainer’s perception of the situation and evaluation of the inadequacies and the parties involved (Olshtain & Weinbach, 1993; Tracy, Van Dusen, & Robinson, 1987). As Hochschild (1983) explained, complaints indicate a gap between cultural moral ideals and the complainer’s negative experience that the complainer justifies by complaining. The evaluations of the inadequacies and expectations of people involved in the situation allow the observation of the interlocutors’ assumptions of the nature of individuals, as they discuss how people, including themselves, should or should not behave (Lee, 2005). In fact,
this observation of the notions of personhood as related to the evaluation of how people should and should not behave was borne out in the Chinese Malaysians’ discourse and performance of complaint-making as everyday talk.

In the following subsections, we briefly describe the main types of complaint-making—known as *thou soo* and *aih auan*—that Chinese Malaysians treated as meaningful speech acts. We intend to use these folk concepts to aid in the discussion of assumptions of personhood. We use native folk concepts in order to better resonate with the community members’ own understanding of these issues and to avoid misleading assumptions that may occur if other complaint-oriented speech act labels were used (e.g., fault-finding, criticizing, bitching, whining, troubles telling, and griping).

*Thou Soo*

*Thou soo* is a cultural specific form of solution-focused of complaint-making in which people who perceive themselves as *victims-of-offense* express their dissatisfaction and want the *offenders* to change the unsatisfactory situations and/or to solve the problems that caused the dissatisfaction. The *victims-of-offense*’s performance of *thou soo* may focus on the *offender*’s wrongdoings through omission or commission. Focusing on issues of omission when performing *thou soo*, the *victim-of-offense* complains about actions that the *offender* is perceived to have failed to take, or should have taken, to avoid eliciting the victim’s dissatisfaction. The issues of omission in this study mostly emerged from Chinese Malaysians’ discourse of services or task-oriented matters that public organizations or agencies failed to provide to the victims and/or society (i.e., public issues). Organizational or governmental acts of omission include the lack of the teaching of defensive driving skills in driving schools, the lack of enforcement of no-smoking rules, and the absence of public safety in residential areas. The *victims-of-offense* also
complain about issues of commission in which offenders committed mistakes by engaging in behaviors that the victims considered inappropriate and wanted stopped. We found that issues of commission emerged mostly from Chinese Malaysians’ discourse about private issues—matters that pertained to individuals’ personal lives.

The victims-of-offense talked about their dissatisfaction either directly to the offender who committed mistakes (i.e., direct sequence) or to an advocate who could facilitate the complaint-making process between the protagonists (i.e., mediated sequence). In the direct sequence, the face-to-face nature of thou soo between the victim and the offender was seen as extremely face-threatening, so the performance was often delivered in a tense, emotional tone. In the mediated sequence, the performance of thou soo was often characterized by a hopeful tone mixed with fear and frustration. The victim hoped that the advocate’s mediation would bring about the desired changes. At the same time, the victim was afraid of speaking directly to the offender and frustrated at having to endure the dissatisfaction and to deal with what was perceived as the offender’s mistakes. The victim-of-offense used an advocate because the victim perceived that threats would be involved if he or she talked directly to the offender. The community members cited possible negative consequences associated with the speech act, such as physical violence, psychological abuse, job losses, and other repercussions. Consequently, the community members evaluated the performance of thou soo as risky.

Aih Auan

In contrast to the performance of thou soo, the performance of aih auan is not solution-focused. Rather, those who engage in aih auan see themselves more as victims-of-fate and assume that their unsatisfactory situations are irreversible and/or partially predetermined by fate-related elements and, therefore, beyond their control. Consequently, aih auan is used to lament a
problem but not solve it. The *victims-of-fate* performed *aih auan* to supportive companions—people who are willing to listen and be sympathetic about their plight. Since the victims do not seek to solve their problems, the victims perform *aih auan* to achieve catharsis and to seek and gain empathy. On certain occasions, in the hope of preventing the supportive companions from repeating the same or making similar mistakes, the performance of *aih auan* is meant as a caution and aimed at educating the listeners.

Issues about which the Chinese Malaysians in this study performed *aih auan* included one’s poor health condition, inability to be rich regardless of job competence, no compensation for dedication and physical labor provided to help the business of one’s spouse, and regrets about one’s wedding which was not conducted appropriately some 30 years ago. Due to the irreversibility and uncontrollability of the unsatisfactory conditions, performance of *aih auan* by the *victims-of-fate* was repeated and continuous. That is, the victims mentioned their dissatisfaction repeatedly during an episode of *aih auan*. Alternatively, they continued to air their grievances over time and space (i.e., at different times and during different episodes of *aih auan*), to the same and/or to different companions.

The tone of the performance of *aih auan* was emotional and characterized by despair and resignation. The Chinese Malaysians also described the performance of *aih auan* as essential and natural. Primarily, they viewed the purging of negative emotions related to dissatisfaction as part of their basic human needs. The Chinese Malaysians also viewed the victim’s expressions of emotions that accompanied the performance of *aih auan*, such as raising the voice, expressing anger, crying, and yelling, as natural and acceptable.

As reviewed above, both types of complaint-making among Chinese Malaysians—*thou soo* and *aih auan*—essentially entailed the community members’ discussion of the perceptions
and evaluations of the unsatisfactory situations, other people involved, and the complainers themselves. Therefore, *thou soo* and *aih auan* revealed the community members’ positioning of the self, and the different and multiple selves people hold (e.g., the self in the past as compared to the self at present, or the different roles that people play when they engage in the performance of *thou soo* or *aih auan*). Their discourse also entails the discussion of how people should or should not behave, and who people are. Evidently, the Chinese Malaysians’ discourse and performance of complaint-making reveals rich and complex notions they attached to the self. Therefore, we ask:

*RQ*: What are Chinese Malaysians’ general assumptions about personhood that are revealed via the speech act of complaint-making?

**Method**

The authors collaborated to devise a research plan for collecting and interpreting the data for this study. The first author grew up in the community and speaks the community languages with native fluency. Although she now resides in the United States, her native knowledge of the community was invaluable in terms of making connections with community members that may otherwise have been suspicious and resistant to strangers. Her background also helped in understanding the conscious cultural knowledge. The second author is an outsider to the community. Though he does not have the native knowledge of the first author, he has a background in studying cultural communities that provides a point of reference to notice what would often be unconscious to those within the community. Working together, the authors have been able to provide an in-depth exploration of folk concepts related to complaint-making and the relevant cultural ideals within the Chinese Malaysian community.

*Data Collection*
We used two types of data: (a) transcribed semi-structured interviews, and (b) field notes and transcribed versions of spontaneous conversations that contain complaint-making. The first author interviewed 11 community members in the Chinese Malaysians’ native languages (i.e., a combination of Hokkien, Teochew, Mandarin, Bahasa Melayu, and Malaysian English). She recruited the participants using the snowball sampling technique and obtained informed consent from all participants before conducting the interviews at the participants’ place of selection.

Although the informal visits typically lasted much longer, the formal interviews ranged from one to two hours and centered around four main issues: the interviewee’s experiences expressing dissatisfaction, his or her observation of others expressing dissatisfaction, situations when the interviewee has been the target of complaints, and labels and other identifying characteristics associated with the expression of dissatisfaction. All but one of the interviewees were non-college students with various life experiences. Additionally, pseudonyms were given to each participant.

Since interviews did not allow the observation of actual interactions in progress, the first author also collected naturally occurring interactions, in which people performed and responded to complaint-making. As a participant observer, she took field notes and audio-recorded the conversations whenever possible. She obtained the interlocutors’ permission to record their interactions. She generally audio-recorded all conversations at the beginning of the interaction and continued until she left, since complaint-making episodes were embedded within occurring conversations.

Data Analysis

We employed four steps in the data analysis process. First, the first author transcribed the oral data. She transcribed the interviews and spontaneous recordings involving expressions of
dissatisfaction. Second, in keeping with the speech code perspective, we made a close reading of the letters and transcriptions and identified categories of instances that conformed to the elements of Hymes’s (1972) SPEAKING framework (i.e., setting or scene, the participants and participant identities, the ends, the act sequence and act topic, the key or tone, the instrumentalities, the norms of interaction and of interpretations, and the genre). In doing so, we also identified key native terms associated with these categories. Third, we looked for patterns among the categories. For example, we noted if certain participants were related to certain types of complaint-making, but not to others. Fourth, we sought connections among our initial findings by employing the constant comparison technique (Lindlof & Taylor, 2002). That is, we compared each unit of one source of data to other units of the same source. Then, we cross-compared the different sources of data to identify distinct themes that existed across the data. Finally, to answer the research question, we used the related information that we organized by category to identify and then analyze the relevant themes.

Findings

The community discourse of complaint-making revealed four assumptions about personhood: (a) people are inescapably connected, (b) people are vulnerable, (c) people have one true self, and (d) people have partial agency. The community’s various assumptions about personhood are intertwined with each other. In order to provide a meaningful understanding of the community assumptions of human nature, we also discuss the interconnections between and among the different assumptions. However, all four assumptions about personhood mentioned above may not be explicitly present in each community member’s narrative.

People are Inescapably Connected

In their discourse, the community members revealed that a person’s behavior affected
Assumptions About others with whom he or she interacted; that is, people were inherently linked to one another. However, it was not a matter of choice to be thus connected even when people did not like it and/or were unwilling to continue the links. For example, the victims-of-offense spoke thou soo because they believed that changes in the offenders’ behaviors would necessarily change their state of dissatisfaction. Thus, a change in one person’s life was seen to change many people’s lives. Furthermore, the victims’ belief that people were connected led to their wanting to talk about their dissatisfaction and to find a solution. As Kwan observed:

People meet each other as a consequence of predestination. Whether or not they have a good or a bad relationship, they should work it out. If they have dissatisfaction toward each other, then they need to talk in order to solve the problem.

Additionally, the community discourse about dissatisfaction revealed their belief that when a person was not responsible, the person’s act imposed burdens on and adversely affected other people. Therefore, the community members emphasized people should act responsibly, since the consequences of their actions were not confined to themselves. Bee Hoon’s narration about her husband’s thou soo regarding their son’s laziness illustrates this point. Her narration implied that everyone was connected to others and that who they were always depended in part upon others. She stated:

Such frequent thou soo from him [referring to her husband] also caused me to be dissatisfied with him. . . as a father, he has not been really taking care of and spending time with our son since he was little. . . . Then, I also feel dissatisfied. . . I have to help him with [family business] management. And, that caused me not to have time to do the things that I would like to do for my family. Like, I don’t even have time to cook a quick and simple meal for my family. So, the situation has caused me to be like, I am angry at
myself. And, I am also angry at him. What I mean by this is, because of his job, I am also affected.

Clearly, Bee Hoon believed that her husband’s job caused both of them to sacrifice family time. As a result, they neglected their son. Specifically, without her husband discharging his responsibility adequately, she equally could not realize her responsibility fully to contribute to her family’s success. Another interviewee, May Ping, indicated that the exchange of information was possible only via people’s connections with each other, even though the connections were not a matter of choice. She noted:

As for working in a corporation, people have to put on a mask to go to work to ensure their survival. . . . Like right now, I am working with a group of colleagues who have no qualifications and have bad attitudes. . . . If I don’t want to mingle with them, I will be left alone. [So that] in the future, if I have anything that I need or want to know, they won’t talk to me. . . . [So] I won’t have a single piece of information.

The community members’ discussion of *aih auan* also revealed their belief that people’s personhoods were inherently connected. This point was illustrated by Siew Ean’s spontaneous performance of *aih auan* during which she revealed her dissatisfaction about preparing a Chinese New Year steamboat meal for 30 family members and relatives. Siew Ean was aggrieved that none of these 30 people offered to help her. As Siew Ean noted, “When they all came here for the event, they caused me to suffer.” Her complaints about the burdens imposed on her by her relatives revealed her assumption that people’s selves were inexorably connected.

Furthermore, the *victims-of-fate*’s beliefs about their fated situations also revealed their assumption of the connectedness personhood. For example, Ah See reflected:

In the past, I helped him out working on the plantation. He did not give me money for
working there. For a long time, deep inside my heart, I thought that, maybe in a past life, I owed him. If not, why do I have to work my tail off and almost paid with my life working for him?

In Ah See’s eyes, her husband’s lack of compensation for her hardwork was probably the result of a past debt she owed him during their past lives. Traditionally, the community believed that debts that a person owed others in a past life must be paid during the person’s current life. Consequently, debtor was fated to meet the specific people he or she was indebted to in the current life in order to pay off the debt—for example, by giving to them without receiving anything in return.

*People are Vulnerable*

Given that people’s selves were inexorably connected, it followed that the ways that they behaved affected the people around them. Therefore, when people’s undesirable behaviors yielded negative effects and dissatisfaction on the community members, the community members tried to avoid those negative effects that could harm them. Indeed, the community’s discourse on protecting the self revealed their belief that individuals were naturally fragile; that people were naturally susceptible to harm.

The assumption of a vulnerable personhood emerged from the community members’ discussion about their utilization and avoidance of complaint-making. Their use of an *advocate* and their careful selection of *supportive companions* revealed their assumptions that the nature of individuals was fragile and susceptible to harm. For example, Aih Lih stated that she performed *thou soo* to her husband regarding her mother-in-law’s criticisms and accusations of her. Her explanation of her action revealed her vulnerable self. She discussed:

I needed to let go some of the burdens of feeling dissatisfied. . . . I must perform *thou soo*
so that my husband knows that his mother is incorrect. . . [so that] my husband will not think that I am at fault. Of course, when people mention the incident in the future, I want the situation to turn out in favor of me [so that] my husband will support me . . . I need to \textit{thou soo}. I need to protect myself. All humans behave just like me . . . All humans want to protect themselves before anyone else.

In her narration, Aih Lih highlighted two aspects of the protective self that revealed the vulnerable nature of individuals. First, her mother-in-law’s accusations made her feel uncomfortable and hurt. She performed \textit{thou soo} to protect herself from present hurt—to lessen and/or stop the feelings of and associated with dissatisfaction. Second, Aih Lih performed \textit{thou soo} to protect her image in the present and future. She did not want her husband to think that she was in the wrong and, by clarifying her position, Aih Lih was protecting herself against potential undesirable effects.

When Ah Chong spoke about Chinese Malaysians’ reluctance to engage in the \textit{thou soo} about public issues, he attributed the reluctance to people’s avoidance of potential threats, such as becoming the subject of governmental investigation and/or being harmed physically. His comment further revealed the community members’ assumption about the vulnerable personhood. Ah Chong said, “I think that the Chinese people in Malaysia are very afraid, very afraid of performing \textit{thou soo}. . . They think that by avoiding \textit{thou soo}, they are looking out for themselves.”

Furthermore, Yew described how female colleagues carefully framed their complaint messages to avoid conflict and serious possible consequences. Such avoidance of harm revealed the colleagues’ need to protect the self and recognition of the vulnerable self. The consequences included, as Yew mentioned, “[Maybe] afraid of losing a job, of getting a warning letter, or
being sidelined by the boss. . . . Or, one might fear being denied a promotion by the boss, or afraid that her boss will harm her in retaliation.” In order to protect themselves, the community members often avoided not only performing *thou soo*, but also avoided engaging in the process of the speech act itself. For example, May Ping’s justification of her refusal to play the role of *advocate* revealed this vulnerable self:

I don’t even know if the person who complained to me is a good or a bad person, or if that person is the culprit or the wronged party. I am saying this because at the workplace, everyone competes. Everyone fights against the others. So you don’t know if that person will come back and attack you.

Although the community members cited the use of an *advocate* as a means of guarding against potential harmful effects of complaint-making, they were also wary of relying completely on an *advocate*. For example, Choo Choo confessed her mixed feelings about depending on an *advocate* to convey her messages of dissatisfaction, “. . . I feel that people can’t be trusted one hundred percent . . . people can’t be trusted. You can’t trust them. I feel that with anyone and everyone in this world, you have to be careful.” Choo Choo’s view was that, people can be hurt as a result of completely depending on others; that complete trust may lead to betrayal, hurt feelings, and other harmful outcomes. This belief led her to try to minimize the level of trust she placed on others, thus revealing her assumption that personhood was indeed vulnerable.

Last, in the performance of *aih auan*, the community members also stressed the need for the *supportive companions* to avoid gossiping about the victim’s dissatisfaction. The *victims-of-fate*’s desires for confidentiality was one way of protecting themselves against potential risks, thus suggesting the fragile nature of personhood. For example, Chew Lien said, “The people I talked to gossiped and my family members heard about my complaints. Family members who
heard about my complaints did not like what I said. . . . The whole situation was just unpleasant.

And, I was placed in an awkward position.”

*People Have One True Self*

The community discourse about the performances of *thou soo* and *aih auan* also revealed that while people may employ many disguises in their interactions with each other, they have only one true self. Such disguises are used for various strategic reasons, for example, to hide one’s true feelings and/or inner thoughts and to spare someone else’s feelings. Kee Kee’s explanation illustrated this specific assumption of personhood:

If I reveal my true evaluations and tell the person that he or she is wrong, what will happen if that person thinks that I am a bad person for not taking his or her side? . . . To be honest, I do not always say things that are consistent with my thoughts and feelings. I will take that person’s side, even though I have to fake it. . . . Doing so will help the person feel better. Another way to look at this is that the person will not be more dissatisfied and then come back to complain to me [to] talk about more unsatisfactory stuff. My concern is that I do not want to be bothered again. Basically, that person’s matter has nothing to do with me.

In fact, Kee Kee’s actions of pretending to be supportive of the *victim-of-fate* while hiding her true evaluations in turn suggested that her perception of herself depended on how other people perceived her. This action makes her personhood connected to that of other people (i.e., their negative comments affected her), as well as vulnerable to their manipulations (e.g., due to fear of rejection). Consequently, she strategically utilized disguises to hide her one true self—to utter messages that were different from her true evaluations—to befriend someone. She further explained, “. . . making enemies with others will not work toward my advantage.”
Assumptions About

Echoing Kee Kee’s views about people’s one true self, May Ping used the metaphor *mask* to describe how she spoke and behaved differently in different situations and/or with other people during the performance of *thou soo* and *aih auan*. The use of the metaphor *mask* indicated that May Ping believed that she had a true self that she was masking strategically in order to avoid creating enemies. She said, “Of course, if I were to tell that person my true evaluation, that he or she was wrong, then I would put myself at risk. This means that I would only be exposing myself to trouble. I would only be creating one more enemy for myself.” As her comment revealed, May Ping recognized that her well-being was connected to that of the other people at work—hence she wanted friends and not enemies—and she acknowledged that she was vulnerable as she risked losing the friends.

May Ping’s further narrative also betrayed her assumption that people have one true self that they can disguise using multiple identities. Although her elaborate disguises were meant to curry her favor and to gain her certain advantages, they also served to support the notion that personhood was interdependent or connected. Indeed, her need to curry favor with her colleagues also left her vulnerable—hence her revelation that she needed to disguise her true self in order to look out for herself. She described:

> Sometimes people do not know who are the good people and who are the bad people. For example, I do not know the gang [at the workplace] to which I belong. And, I also do not know which is yours. So I can pretend to join your gang and be your friend. However, I can also betray you and be your enemy. . . . I can always create a story, even talk falsehoods, in order to present myself as a friend to almost everyone in different gangs. Doing so is not about being selfish. It is about me thinking about my interests and benefits to me. I am looking out for myself.
Bee Hoon’s description of some of the means that lower-rank staff employ to climb up the corporate ladder further illustrates the belief that people have one true self. According to Bee Hoon, the particular selves that some employees present when communicating with their bosses are disguises, but not their true selves. She gave an example of an employee she knew, June, who was jealous of her manager because she wanted to be a manager herself. But, June disguised her true intentions and hid her desire to climb up the ladder. June reported her manager’s small mistakes to the director in order to get her manager fired. The director then promoted June as the manager. Bee Hoon then commented:

Deep down, June is sly. She is smart. It was just like she was trying to cover that up. . . . She was effective in hiding her real motives. Actually, she wanted to climb the corporate ladder to become a manager. But she framed her messages to the director like it was for the company’s benefit.

People Have Partial Agency

In addition to the previous three assumptions about personhood, the community members’ discourse also revealed that people have partial agency. In their discussion about complaint-making, the community members pointed out that there were things over which they had little or no control. They revealed their assumption that people did not have complete autonomy over all aspects of their lives. The first main aspect of the community’s discourse that revealed the assumption that people have partial agency was the indication that people did not have full control over their emotions or other people’s behaviors; however, they could control their own outward behaviors depending on how they spoke and displayed their emotions. For example, Bee Hoon’s reference to situations in which victims-of-offense approached her illustrated this point. She said:
... when a person performs *thou soo* to me, it is not surprising that the person raises his or her voice. ... When the person raises his or her voice, I will also be affected in such a way that I can’t even stay calm and think clearly. What I can do is to help the person to calm down so that he or she can think rationally and speak clearly. So that I can also engage in sound reasoning when listening to the issue ... actually, I understand the feelings associated with dissatisfaction. People have emotions, so I won’t get angry at that person.

Indeed, Bee Hoon’s narrative that suggested that she perceived influence over helping to minimize the *victims-of-offense’s* raising of their voices, she, however, did not have complete autonomy to control the ways the victims react (i.e., outward behavior). This was also a clear pointer to the assumption that personhood was connected. Furthermore, when the victims expressed their emotions as a result of hurt (e.g., dissatisfied, angry, and/or sad), the victims were essentially revealing their one true self that was vulnerable. They were hurt, so they sought *advocates’* intercession in order to seek protection.

Yew’s comment echoed Bee Hoon’s assumption that people had control over their own outward behavior, albeit not their emotions. Yew added the criticism he faced when he did not control his emotional display at the workplace, and thus implied that since people had control over their outward behavior, they were accountable for the way they behaved. Yew narrated:

Um, after he [referring to his boss] criticized me, I started to observe my own behavior. ... And I agreed with him that I displayed too much emotion. ... To be honest, there are a lot of other emotions that I hide. It is true that people affect others with whom they interact by displaying negative emotions. But, for me, not hiding all my emotions is just natural.
Related to the assumption of partial agency as explained above, the community members’ discourse of dissatisfaction also revealed the assumption that people did not have control over fate-related situations; however, they could control their outward attitude about the fated situations. According to Ah Khoon:

Part of being human is to live under fate’s control. . . . Clearly, when people do not have certain good things that are fated to happen to them, then it is their misfortune. They will have to live their lives as predetermined. . . . Just accept it and go on with living life.

In fact, Ah Khoon’s viewpoint also revealed his assumption regarding the vulnerability of personhood. In effect, the partial agency gave the victims power to accept the inevitable, thus giving them a semblance of protection against endless dissatisfaction. Ah See basically agreed with Ah Khoon’s standpoint that people did not have control over fated situations, but that people could change their attitude toward such situations. Referring to her husband’s lack of compensation for her hard work (see earlier reference in section of People are Connected), she discussed the advice she received:

Yin [referring to her sister] said to me, “You do not need to scold him [referring to her husband]. As you can see, even after you have scolded him, he still does not give you any money.” What Yin meant was that “When you scold him, you are the only one who is provoked emotionally. . . . Since he does not change his attitude, scolding him will only hurt you and [affect] your health.”

Later, Ah See remarked:

Yin said that even though I couldn’t change his [referring to her husband] way of treating me [since it had been pre-determined by past life], I could change the way I thought about the situation . . . so that I would not continue to feel angry about it.
Clearly, Yin’s suggestion that Ah See change her attitude toward the situation supported the notion that Ah See had partial agency in the matter and could opt not to continue getting angry at her husband. The narrative also revealed the notion of the vulnerable self: if Ah See did not control her own outward behavior (i.e., scolding her husband), she was likely to affect her health.

Discussion

We sought to provide an emic understanding of Chinese Malaysians’ general assumptions of personhood via their discourse and performance of complaint-making. Our discussion of the findings was based on the community’s discussion about thou soo and aih auan—the speech act that the community members considered meaningful in expressing dissatisfaction. Although the findings of this study do not provide a comprehensive list of the community’s assumptions of personhood, we believe we have provided important insights into a community that has not received much attention in communication research. In short, the Chinese Malaysians’ discourse and performance of complaint-making revealed four assumptions of personhood that were intertwined: (a) people are inescapably connected, (b) people are vulnerable, (c) people have one true self, and (d) people have partial agency.

Theoretical Contributions

The assumption of connected personhood was shown in the community members’ narratives that a person’s actions always had an effect on others. Consequently, the community members indicated that people need to be responsible, since they were accountable for their behaviors. More importantly, the community members indicated that people should not impose unnecessary burdens on others. Based on a facile comparison, it can be argued that the Chinese Malaysians, similar to other ethnic Chinese people whom researchers often categorized as East
Asians (e.g., as separate groups or as a combination of ethnic Chinese people from mainland China, Taiwan, and Hong Kong), view themselves as interdependent or interconnected with others. Such an interdependent view was cited in literature in terms of reliance on others for multiple communicative purposes, such as cooperation (e.g., see Utz, 2004). However, the finding of this study revealed that the Chinese Malaysians viewed interdependence not as some type of reliance on others, but a motivation for people to be responsible and to act proactively to maintain their social position.

The community members’ complaint-making discourse also revealed their belief in a vulnerable personhood. Consequently, they emphasized that people must protect themselves against harm by others. One way of protecting the self was by avoiding performing *thou soo* that exposes oneself to negative consequences, such as threats to personal safety and risks of losing one’s job. Such avoidance was largely influenced by external social factors and in relation to people’s perceptions of their agency. This finding suggests further that the examination of communicative behaviors cannot be isolated from the understanding of larger social structure, echoing a similar suggestion by Shuter (1990). More importantly, the Chinese Malaysians’ avoidance of performing *thou soo* about public issues with the intention to protect themselves should not be interpreted as the result of mere passivity in changing these situations.

Moreover, since people are connected to other people in diverse ways, interactions between them inevitably lead to dissatisfaction. Therefore, people must guard against the adverse effects of others’ behaviors. The community members’ perception that they need to protect themselves before others attack them is one of the main highlights of this study. To the best of our knowledge, these findings about the Chinese Malaysians’ need to protect their vulnerable selves from possible harm from others’ actions has not received as much attention as deserved in
literature dealing with communicative behaviors and social psychology of the Chinese or the broader category of East Asian people (e.g., see Ho & Chiu, 1994; Hofstede, 2001; Kagitcibasi, 1997; Markus & Kitayama, 1991).

To a certain extent, the Chinese Malaysians’ indication of protecting their vulnerable selves indicates their assertiveness in guarding themselves against current and/or future threats. Such assertion by performing *thou soo* or *aih auan* suggests that the Chinese Malaysians indeed seek to stand up for themselves, even if that means to confront others about the unpleasant situation and display negative emotions in complaint-making. This finding broadens the understanding of the mentality of the crude category of East Asians. It also contradicts the common view of the Chinese people as harmony-loving cultural groups who tend to avoid conflict in general (e.g., Ting-Toomey, 1988).

Although past literature commonly characterized the Chinese people place others before themselves in favor of group considerations (e.g., see Bond, 1986; Gao, 1996; Hu & Grove, 1991), the finding of the current study, however, intimates that the Chinese Malaysians prioritize the self in communication, even it means at the expense of others. In essence, the preservation of the self is an important goal of communication among the Chinese Malaysians. Furthermore, the Chinese Malaysians did not emphasize relationships with others at the expense of the self. Therefore, this finding also seems to contradict the popular claims in cross-cultural studies that the Chinese people in general are collectivistic and are interdependent in self-construal and, hence, seek to smooth out relationships with others because they place others before the self.7

The Chinese Malaysians’ communicative strategy of putting on different disguises to mask their one true self further portrays the complexity of the presentation of multiple selves. People presented multiple identities that were different from their true selves for various strategic
reasons. The presentation of a true self and a disguised self suggests the Chinese Malaysians’ adaptability in negotiating the simultaneous tensions of multiple and contradictory selves. This revelation highlights the absence of discussion in previous literature that narrowly categorizes cultural groups using a certain dimension of the self, such as independent or interdependent self-construal (e.g., Markus & Kitayama, 1991). It can be considered as a caution to the simplistic view of targeting an aspect of the self in capturing various communicative behaviors and across contexts.

The finding of the Chinese Malaysians’ use of disguises for self-interests, especially to protect themselves from negative reactions and negative evaluations by others, should be interpreted with caution and from the community standpoint. On the surface, such use of disguises by Chinese Malaysians to secure favorable impressions from others might be interpreted as concealing the inner self in order to maintain harmonious relationships with others, which is consistent with such claims in popular research (e.g., Hofstede, 2001; Markus & Kitayama, 1991). However, a deeper look and interpretation of the underlying reasons for such disguise shows that the behavior is a strategy for protecting one’s self-interests, but not for building solidarity and preserving harmony as proposed in many studies (e.g., Bond & Sabourin, 2000; Ho & Chiu, 1994; Ting-Toomey, 1988). Therefore, it can be argued that the strategic use of disguises to protect one’s vulnerable self for self-interests is, in fact, self-oriented and self-centered.

Last, the community members also believe that people have partial agency. That is, people are not fully in control of their emotions, other people’s behaviors, or fated situations. However, they are capable of rationalizing and controlling their outward behaviors (e.g., their manner of speech and whether or not to display emotions). The Chinese Malaysians’ acceptance
of emotions as natural and desirable, and their concurrent emphasis on rationality, also enhances the reservoir of knowledge on the topic in communication studies. It is common in literature to characterize ethnic Chinese, and other East Asians in general who share many cultural characteristics with the Chinese Malaysians, as suppressive of their inner emotions (Markus & Kitayama, 1991). In contrast, the present study found that Chinese Malaysians assume they have partial agency in controlling their emotions. Even though they acknowledge that negative emotional displays affect others, the Chinese Malaysians wholly accept people who react emotionally while performing complaint-making, including those who raise their voices, display anger, cry, or even shout.

In conclusion, the findings of this study imply the importance of the in-depth examination of communicative behaviors; particularly, the understanding of the driving force behind certain behaviors. The findings of this study also challenge some of the Western common views used to portray the Chinese people, especially by using some generalized labels (e.g., collectivism and interdependent self-construal) that are commonly theorized and imposed from the outsider perspective. In fact, understanding the particular contexts and forms of communication involved will help give us a more nuanced and useful understanding of the communities in question. By giving voice to the community to label their own realities, we believe this study has contributed to our ongoing and partial understanding of the Chinese Malaysians’ general assumptions of personhood, the community, its people, and its culture.

Assumptions About

Assumptions About Footnotes

1 In past studies, the languages spoken among Chinese Malaysians were labeled as dialects (e.g., see Lee-Wong, 2000; Platt, 1976; Waller & Fam, 2000). However, debate has recently arisen as to whether the Chinese dialects should be labeled as languages, since they are mutually unintelligible (Comrie, 1989). In this study, we will talk about different languages instead of dialects because language plays an important role in the Chinese Malaysians’ distinction of their different identities.

2 To the best of our knowledge, no research studies have been conducted to identify behavioral differences and similarities among different groups of Chinese Malaysians. Wierzbicka’s (2003b) research was based on Chinese Singaporeans. Due to the close similarities between Chinese Malaysians and Chinese Singaporeans (Lee-Wong, 2000), it can be argued that Chinese Malaysians possess similar perception of Westernization.

3 In fact, during the first author’s data collection trip in the community of study, she also visited several historical places of worships of the Chinese Malaysians that are still used by the people. Some of the places were used as schools in the 1800s. Confucian values were carved on the buildings and are currently well-documented and preserved as part of the history of the people.

4 The term thou soo is spelled phonetically as tō sōō, which is how it is pronounced by the community members. Aih auan is pronounced as ī ō won.

5 Detailed discussions of the speech act are contained in the first author’s doctoral dissertation.

6 It is important to note that the traditional Western research approach of conducting each interview with a single interviewee was not always feasible in the Chinese Malaysian
community, given the cultural norms and expectations. In four of the interview sessions, one to three other family members showed up, often just to watch and listen. The community members whom the first author was interviewing often shared living space with other family members, with a typical family consisting of at least five members. The first author did not object to this phenomenon as she did not want to impose alien standards from her researcher’s standpoint and thereby creating a laboratory condition out of the community members’ lives.

Some studies have claimed that the Chinese people are integrated into groups (Hofstede, 1991, 2001) and view themselves as interconnected with others (e.g., see Markus & Kitayama, 1991); hence they emphasize allegiance to the group before the self. We do not make the comparison here on the basis of physical geography (i.e., Chinese Malaysians live in Southeast Asia); rather, our comparison is based on the shared history and cultural heritage of the groups.
Abstract

The main purpose of this project is to collect and put in order the experiences of the medical foreign aid from respected aged person in tropical countries years ago, and thereafter the Taiwan medical mission in Africa, and the foreign aid from non-governmental organizations. Using these historical records to uncover the past and preserve it for the future.

This oral history project collects memories and personal commentaries of historical significance through recorded interviews and related documentary materials. Finally the project interviews seventeen representative individuals. By interviewing, recording, transcribing, summarizing and analyzing, the project explores the history of disease control foreign aid in Taiwan.

The major findings are as follows:
The disease control foreign aid workers in Taiwan include Respected aged person, Taiwan medical mission leaders, Taiwan medical mission physicians, Taiwan Youth Overseas Servicemen, Hospital medical service missionary workers, Foreign aid Non-governmental organizations, and Overseas volunteers.

Keywords: oral history, disease control, foreign aid
ABSTRACT

The purpose of this project was to explore the present situation and related factors of refreshing oral solution drug use in the laborers. The laborers of construction and transportation in Taiwan were the population, and the samples were selected by using PPS and quota stratified random sampling. In total, 550 workers of construction and 550 workers of transportation were interviewed and investigated in this study. The research instruments were an epidemiological survey questionnaire and the data collected from the questionnaire were analyzed with statistical methods.

The major findings were as follows:
1. 86.5% of the construction laborers and 85.6% of the transportation laborers were used to take refreshing oral solution at workplace in working time.
2. Most laborers buy the refreshing oral solutions not in drugstore.
3. The main messages of refreshing oral solution came from TV advertisement.
4. The laborers had very low cognition about the refreshing oral solution drug use.
5. Educational background, living area and working character were significant factors related to cognition and self-efficacy of oral solution drug use.

Finally, based on the findings of the epidemiological survey, several recommendations for health administration and future study were proposed.

Keywords: refreshing, oral solution, drug use, epidemiology

A Reassessment of South African Liberals under Apartheid

LEE, Hyang Sook

This study, through an analysis of selected literary works, proposes a reassessment of the South African whites who have been impeached by both blacks and whites. By recalling the theoretical debate of the 1980s between liberals and such new communitarians, this study argues that liberalism, as defined by John Rawls, is different from the political ideology subscribed to by figures such as J. M. Coetzee, Nadine Gordimer, and others. The ultimate goal of liberalism is to grant individuals maximum freedom and, to quote Rawls’s words, “to advance as far as possible [their] welfare, [their] system of desires” while still preventing harm to others. Yet, communitarians unanimously proclaim that individualistic liberalism alone does not suffice to guarantee the communal good and solidarity. When Gordimer finds fault with her white compatriots, she raises the same issues, such as self-interest versus social responsibility and autonomy versus communal solidarity. The same issue is found discussed in the literary works of J. M. Coetzee. The conclusion of this study is that the vision preached by, and often practiced by, the so-called liberal whites in South Africa has ethical elements that go beyond the limitations of individual liberalism and thus may be called communitarian.

In South Africa, English-speaking whites have been criticized by both Afrikaners and blacks. The Afrikaners had a reason not to like the English-speaking whites who, despite their verbal protests against apartheid, all the while benefited from the notorious system. Es’kia Mphahlele, the South African Marxist, tells us about the blacks’ perspective on this issue when he claims that black people don’t read her. (qtd. in Wagner 235) In The African Image, this Marxist critic criticizes South African liberals in more straightforward terms. According to him, the white liberals in South Africa “spend two-thirds of their energy trying to avert a revolution and one-third to verbal protest against repressive legislation.” (87) Lewis Nkosi is also found on the list of the black critics who castigate the white liberals in South Africa for their assumed cowardice and hypocrisy. Nkosi attributes the liberals’ anti-apartheid slogans to
the “fear of exclusion, the fear of loitering without intent in the vicinity of revolution.” (“Resistance and the Crisis of Representation,” 46) Just a bit more careful condemnation from this camp is also heard when Njabulo Ndebele states: “At the risk of setting up simplistic binary oppositions, one should state that, on balance, the guilt of English-speaking South Africans is as extensive as that of the Afrikaners.”

(27) This study proposes a reassessment of these whites, whose ambivalent positionality in the South African politics, when duly considered, actually makes a wholesale impeachment of them look rather harsh.

In an attempt to assess the situation of the English-speaking whites under apartheid, let me revisit certain scenes in the literary works of a couple of writers produced by South Africa. Let me start with Veronica Slater, the white girl, in Lewis Nkosi’s *Mating Birds*, with whom Sibiya, a Zulu boy, falls in love at a beach of Durban. To Sibiya who roams the beach out of frustration at the political, educational and economic situation in South Africa, Ms. Slater seems to offer an exit from the social cul-de-sac, a rosy relationship that breaks through the barrier between whites and blacks. She certainly leads him on in the imaginary love game that is carried on behind the state’s surveillance. They communicate only with visual gestures across the state’s warning sign: Bathing Area—For Whites Only! According to a review essay of this novel:

Caught between the language of the bodies and the written language of the law, between the
power of his sexual attractiveness and the taboo which destroys the power of his body, Sibiya finds himself in a double bind, to which he responds with blind anger. His rage is not merely triggered off by the suggestion of racial inequality inherent in the warning, but also because it interrupts the illusory moment of his power over the “white” woman, his “victory” arising from the peculiar inversion of the power structures. (1st Par.)

However, when he finally and actually engages himself in the relationship partly for the desire of her body and partly out of his pent-up anger at racial discrimination, Ms. Slater panics and backs off from the relationship. Not just that. By calling him a rapist and representing herself as a helpless victim, she is able to save her own skin. This scene is important for several reasons; yet in the context of this paper it is significant for its allegorical or symbolic representation of the English-speaking whites’ failure to meet the expectations of their black compatriots.

English-speaking whites in J. M. Coetzee’s Disgrace serve as a comparison with Ms. Slater in Nkosi’s novel. One is David Lurie, a fifty-two-year-old professor in Communications at Cape Technical University, who has to resign from the school due to his sexual harassment of one of his students, Melanie Issacs. During the development of the alleged harassment case, Lurie maintains an insolent attitude towards the judging gaze of the academia, finding inner strength in considering himself to be a victim of those who, he believes, do not understand his inner world. Even when he goes to the country and stays
with his daughter, he does not show much change in his attitude towards his environment. Yet, after agonizing experiences at the hands of three black gangsters, he learns the virtues of compassion and love. Although he does not go so far as accepting or respecting the blacks around him as his equals, Lurie certainly learns to feel pity for the weak and the helpless at the end of the novel. Lucy, Lurie’s only daughter, makes another contrast to the conventional image of the English-speaking whites. After the three African blacks’ break-in and rape, Lucy finds herself pregnant and decides to give birth to the child. In addition to this, refusing to lend an ear to Lurie’s persistent urgings, Lucy decides to stay where she is and even considers marrying Petrus, her black helper, for the protection of her life. This attitude of Lucy’s makes a strong message that the South African whites need to accept the changes following the demise of the Apartheid in order to live on in South Africa.

Mrs. Elizabeth Curren, the heroine of Coetzee’s *Age of Iron*, makes even a stronger posture when she abandons all the comforts of her bourgeois existence in a protest against the police’s brutal killing of a black boy involved in a movement against the Apartheid. She leaves her home and sleeps on the street, careless of her own life, and then is rescued by Mr. Vercueil, the beggar she gradually comes to share her home with. Her anger at having been deceived for so long by the Afrikaner government concerning the racial realities of South Africa leads her to consider burning herself in front of the parliament. Her action of sacrificing herself in the cause of the oppressed blacks surely makes a big stride towards racial equality. Something that is easier said than done. What this paper tries to argue is that the ethics of conduct,
suggested in the actions of Lurie and Lucy and directly preached by Curren, goes well beyond the individualistic liberalism which is, after all, to grant individuals maximum freedom while still preventing harm to others. In calling upon others to sacrifice what they can for the oppressed, as seen in the case of Curren, the ethics advocated by Coetzee can be called communitarian, not liberal. Underlying this moral obligation or what Hegel called “sittlichkeit” is the belief that morality and self-realization reach their completion in a community. When Gordimer finds fault with her white compatriots, she raises the same issues, such as self-interest versus social responsibility and autonomy versus communal solidarity, in other words, liberalism versus communitarianism. The conclusion of this study is that the vision preached by, and often practiced by, the so-called liberal whites in South Africa has ethical elements that go beyond the limitations of individual liberalism and thus may be called communitarian.

SUMMARY:
The courts of the Hong Kong Special Administrative Region have played an important political role in the early years after the reunification of Hong Kong and China, through reviewing the constitutionality of local legislation with the Basic Law. Scholars discuss the work of judiciary in two different ways, namely the less common positive analysis by social scientist and normative analysis conducted from within the professional by lawyers, law professors and judges. This paper is to be the former one. This paper seeks to study the political role of Hong Kong courts in the early years after the handover, from the perspective of constitutional review. My aim in this paper is to present my main thesis: The court was an important political actor supported with legal reasoning.

Part I of this paper introduces the methodology. Our discussion is based on the judgments. Two definition models, namely the “Legal Classification Model” and “Social Functional System Model” have been used as the indexes to make the analysis. And the statistics of this paper are based on the social-scientific approach with longitudinal and in-depth documentation research methodologies. Part II studies the two political approaches played by the Hong Kong courts: (1) The courts perorated and created new norms under the new public order, and (2) The courts searched for new
legal, political and social consensus. As well as the backgrounds experienced by the Hong Kong society in the early years after the handover: (1) New but un-concrete public orders appeared, and (2) Social polarization. Part III discusses all cases possessed by Hong Kong courts since July 1997 to November 2005. Among them, 77 cases with 96 related judgments have possessed a review on constitutionality matters, which the writer has categorized the case studies into (1) The subject of constitutional review, (2) The nature of constitutional review cases, and (3) Review results.
PART 1: TEXT.

The courts of the Hong Kong Special Administrative Region ("HKSAR") have played an important political role in the early years after the reunification of Hong Kong and China, through reviewing the constitutionality of local legislation with the Basic Law. These issues have major consequences for the social, economic and political future of Hong Kong, and more specifically, the roles of courts in sustaining those relationships. Scholars discuss the work of judiciary in two different ways, namely the less common positive analysis by social scientist and normative analysis conducted from within the professional by lawyers, law professors and judges.¹ This paper is to be the former one.

This paper seeks to study the political role of Hong Kong courts in the early years after the handover (1997-2005), from the perspective of constitutional review. My aim in this paper is to present that: The court was an important political actor supported with legal reasoning. This paper will study the two political approaches played by the Hong Kong courts: (1) The courts perorated and created new norms under the new public order, and (2) The courts searched for new legal, political and social consensus. As well as the backgrounds experienced by the Hong Kong society in the early years after the handover: (1) New but un-concrete public orders appeared, and (2) Social polarization.

During the early years of the HKSAR, the other two political bodies, the Executive and Legislation, were only able to keep low public supports which were not strong enough to lead a social norm peroration. Judiciary is filled the gap to play the role, because it enjoyed the highest public reliance to make a judgment and therefore on average they are more consequential. Concerning the related executive and legislature information, please refer to other public polls studies.

“Politics” or “political role” will be discussed in this paper is a neutral expression of an entity which exercising power that makes impact to the public. It is not equal to “partisan” or somewhat “party animals”!²

Part I of this paper introduces the methodology. Our discussion is based on the judgments. Two definition models, namely the “Legal Classification Model” and “Social Functional System Model” have been used as the indexes to make the analysis. The statistics of this paper are based on the social-scientific approach with longitudinal and in-depth documentation research methodologies. Part II studies the two political approaches played by the Hong Kong courts: (1) The courts perorated and created new

² Ibid.
norms under the new public order, and (2) The courts searched for new legal, political and social consensus. As well as the backgrounds experienced by the Hong Kong society in the early years after the handover: (1) New but un-concrete public orders appeared, and (2) Social polarization. Part III discusses all cases possessed by Hong Kong courts since July 1997 to November 2005. Among them, 77 cases with 96 related judgments (Include applications for appeal) have possessed a review on constitutionality matters, which the writer has categorized the case studies into (1) The subject of constitutional review, (2) The nature of constitutional review cases, and (3) Review results.

For the abstract of judgments being studied, please refer to Part 2. The corresponding cases are shown in the “Reference case number” in each table.

1. New but Un-concrete Public Orders Appeared Under the New Political Framework

1.1 Most constitutional review cases being possessed were on issues concerning the establishment of the HKSAR

The impression that the Hong Kong courts played an important political role is due to the constitutional review cases that possessed are mainly on Constitutional and Public law. We use the three divisions of legal system to make our study, namely, (1) Constitutional or Public Law, (2) Criminal Law, and (3) Private Law. These divisions are not rigid, but they are commonly accepted to define the law or statutory.

The number of decisions made by Hong Kong courts on Constitutional or Public Law constitutional review was nearly 60%, compared to only 20% on the Criminal Law and Private Law respectively.

Basic Law is a constitutional document. It is about politics and society, and more specifically, about issues concerning the establishment of the HKSAR. Like any other constitution, the Hong Kong Basic Law is a complex document consisting of
many clauses, each of varying degrees of generality and ambiguity\(^3\), and is especially general in character. In fact, the provisions of the Basic Law had to be general because it is a result of compromise and balance among different histories, legal orders and institutional arrangements. Therefore during the process of real practice, argument must therefore be aroused.\(^4\)

Constitutional review cases are therefore aptly regarded as “public” and “political”. When the courts decide constitutional review cases, it is not possible to consider everything merely on the basis of professional legal norms. Non-legal reasoning, such as policy and political rule or standard becomes another basis of decision. Constitutional text, history and other references of the Basic Law do not speak everything clearly.

### 1.2 Judgment is a creation of new and deep social norms

Constitutional case reviews also draw more attention because on average they are more consequential, since the **judgments are indeed making decisions on in-depth conceptual matters**.

The number of decisions made by Hong Kong courts was mainly on acts of the legislature, more than 60%. Compared to only about 38% on the acts of the government. About one-fourth of the acts of the government cases are about the immigration and right of abode issues. The result shows that the acts of the executive bodies are to a great extent agreed among the society.

The difference between reviewing acts of the government and acts of the legislature is that: Acts of the government reviews more on administrative and technical, operational level stuffs, and acts of the legislature reviews on the law itself, considers more fundamental legal philosophies, ideologies and conceptions.

Therefore, it is aptly to say that constitutional review cases that possessed by Hong Kong courts tend to deal with fundamental issues. They include constitutional context and political issues as mentioned above, as well as different kind of social issues.

The Basic Law established certain new public orders and amended some old orders after the re-unification. However, these public orders require real practice to make them concrete and workable. The early years of the HKSAR were exactly in the situation of try and error for these orders. It was unavoidable to have different conceptions to the practice and understanding from different sides and ideologies during this process. This explains the arguments experienced by the Hong Kong society immediately after the re-unification.

At a more mature stage of arguments, an authority is demanded by the society or whatever way established by systems to make peroration and conclusion to a specific issue or norm. A new consensus on certain code of practice is to a greater extent fixed. Here, there is potentially a little misleading on what I called consensus. I do not mean that once the judgment is made and the whole society will all agree with that. The level of consensus depends on first: the level of reliance of the entity making decision or
judgment. The higher level of reliance and authority the entity enjoyed, the higher consensus can be achieved. Second, the adequateness of argument and discussion by the society. However, no matter how much does the consensus level can be achieved, a decision or a judgment can at least provide a way of doing thing under the current system.

The judgments made by Hong Kong courts are indeed a creation of new social norms response to litigation.

2. Social Polarization in the Early Years of the HKSAR

2.1 Polarization on social order issues within the society

Besides, the constitutional review cases that possessed by Hong Kong courts have become more consequential because of the society’s increased polarization over just the sort of issue most likely to get the courts’ attention. The most controversial was on social order issues.

We use the five divisions of social functional system to make our study, namely, (1) Public Administrative Order, (2) Social Order, (3) Economic and Financial Order, (4) Constitutional and Political Order, and (5) Judicial Order.

The number of cases possessed by Hong Kong courts on social order was nearly 55%, compared to only 14% on the public administrative order, 12.7% on the judicial order, and 8.9% on economic and financial order / constitutional and political order respectively.

### Table 6: Case Nature by Sociological Classification (Details).

1. **Public Administrative Order**:
   - Number of Cases: 11; Number of review: 12

   1.1 **Internal Administration (Civil Servant Management)**:
   - Number of Cases: 8; Number of review: 9.
   - Details of Cases:
     - Reduce or adjust the pay of public officers: 4 cases, 5 reviews, 1(63), 69, 89, 90
     - Police internal disciplinary control: 2 cases, 2 reviews, 83, 84
     - “Public Officers Pay Adjustment Ordinance”: 2 cases, 2 reviews, 37, 38

   1.2 **Public Administration**:
   - Number of Cases: 3; Number of review: 3.
   - Details of Cases:
     - The discretion to suspend pending appeal of the Telecommunications Authority Appeal board: 1 case, 1 review, 4
     - An offence in Public office: 1 case, 1 review, 25
     - Decisions made by the Commissioner of Transport: 1 case, 1 review, 65

2. **Social Order**:
   - Number of Cases: 44; Number of review: 59.
   - Details of Cases:
     - Commissioner’s discretion in relation to public order: 2 cases, 2 reviews, 22, 64
     - Post-release supervision of prisoners: 1 case, 1 review, 75
     - The definition of the mental element of murder: 1 case, 1 review, 79
     - Requirements made by the Gambling Control Board: 1 case, 1 review, 81
     - The Director of Immigration’s decision on right of abode issues: 7 cases, 9 reviews, 8, 12, 13(46), 14, 86, 50(87), 91
     - “Noise Abatement Notice”: 1 case, 1 review, 3
     - “Legal Practitioners Ordinance”: 2 cases, 3 reviews, 5(39), 30

The number of social order cases also shows the polarization in this aspect. Among the 96 judgments being studied, 59 belong to this category. Especially on the immigration and right of abode issues, have 33 cases. Debate on these issues existed in both the acts of government (The Director of Immigration’s decisions) and acts of legislature (“Immigration Ordinance” and “Immigration (Amendment) Ordinance”).8

---

8 The jurisprudence on the right of abode issues is amended after the interpretation of the Basic Law by the National People’s Congress Standing Committee.
2.2 Controversy on social order cases within the courts

Social order issues are more controversial even within the courts. Among the social order constitutional review cases, 54% of the judgments were decided “constitutional” and 46% were decided “unconstitutional”. Besides, decisions on constitutional and political order were controversial too. However, the total amount of case in this category was small and therefore it was not significant. There were totally 7 decisions on this type of cases, five decided “constitutional” and two “unconstitutional”.

Compared to public administrative order / economic and financial order / judicial order cases, the decisions were much less controversial. Over 80% of decisions decided “constitutional” in public administrative order and economic and financial order cases. In the judicial order cases, about 75% were decided “constitutional”.

Among the cases, decisions on social order cases by different courts were split. In the Court of the Final Appeal, about 40% of the judgments decided “constitutional” and 60% decided “unconstitutional” respectively. In the Court of Appeal of the High Court, it was 53% decided “constitutional” and 47% decided “unconstitutional” respectively. For the High Court, it was 70% decided “constitutional” and 30% decided “unconstitutional” respectively.

### 2.3 Other aspects and different courts did not show a controversy

Compared to other aspects, the decisions were much less controversial. On the average, about 75% of the cases were decided constitutional, and about 25% were
unconstitutional. Different courts also did not show a significant difference on the ratio of constitutionality decisions.

Conclusion: Hong Kong Court is An Important Political Actor Supported With Legal Reasoning

The courts of the Hong Kong Special Administrative Region (“HKSAR”) have played an important political role in the early years after the reunification of Hong Kong and China, through reviewing the constitutionality of local legislation with the Basic Law. This paper studies the political role of Hong Kong courts in the early years after the handover, from the perspective of constitutional review. This paper presents my main idea: **The court was an important political actor supported with legal reasoning**, with two political approaches, namely (1) The courts perorated and created new norms under the new public order, and (2) The courts searched for new legal, political and social consensus.

Because in the early years of the reunification, the Hong Kong society experienced (1) New but un-concrete public orders appeared, and (2) Serious social polarization.

Our constitutional review case studies and statistics examine several political conception of the courts: (1) Most constitutional review cases being possessed were on
issues concerning the establishment of the HKSAR, (2) Judgments made by Hong Kong courts functioned as a creation of new and deep social norms, (3) Polarization on social order issues within the society, (4) Controversy on social order cases even within the courts, (5) Other aspects and different courts did not show a critical controversy, and (6) High appeal rate on social order cases. The first two founding are talking about Hong Kong court’s role in creating new norms in response to the new public orders. The latter four founding are talking about court’s role in searching for consensus in response to social polarization.
PART 2: BASIC LAW CONSTITUTIONAL REVIEW BY HONG KONG COURTS (July 1997-Nov 2005).

1. COURT OF FINAL APPEAL

1.1 Final Appeal (Civil)

1. SECRETARY FOR JUSTICE v. MICHAEL REID SCOTT  Reported in :[2005] 3 HKLRD 88

The operative provisions in the two Ordinances namely ss 4 to 6 of Cap. 574, s.10 of Cap. 574 of the Public Officers Pay Adjustment Ordinance, and ss 4 to 11 of Cap. 580, s.15 of Cap.580 of the Public Officers Pay Adjustments (2004/2005) Ordinance, which purported to reduce the pay of public officers, are not inconsistent with arts. 100 and 103 of the Basic Law.

Court: Court of the Final Appeal

2. NG YAT CHI v. MAX SHARE LTD AND ANOTHER  Reported in :[2005] 1 HKLRD 473; (2005) 8 HKCFAR 1

The restrictions on the right of appeal in the context of Grepe v Loam orders and extended orders are consistent with the protections provided under the Basic Law and the Bill of Rights.

Court: Court of the Final Appeal

3. NOISE CONTROL AUTHORITY AND ANOTHER v. STEP IN LTD

Reported in :[2005] 1 HKLRD 702

The terms of the NAN (a noise abatement notice) are consistent with the principle of legal certainty which incorporated in art. 39 of the Basic Law and in art. 11(1) of the Bill of Rights.

Court: Court of the Final Appeal

4. PCCW-HKT TELEPHONE LTD v. THE TELECOMMUNICATIONS AUTHORITY  Reported in :[2005] 3 HKLRD 235

If s32N(2) bars discretionary suspension pending appeal, then it is unconstitutional
(The court reaches its conclusion that the Appeal Board has no discretion to suspend pending appeal before dealing with the constitutionality.)

**Court:** Court of Appeal of the High Court

---

**LEE MIU LING and Another v. THE ATTORNEY GENERAL**

Here the persons of a particular description are the voters in functional constituencies and the additional voting entitlement conferred upon each of them is a vote in his or her functional constituency is not unconstitutional in that it comes squarely within article VII para. 3 of the Letters Patent.

**Court:** Court of Appeal of the High Court

---

**Master Chong Fung Yuen and others v. The Director of Immigration, CACV No. 61 of 2000**

The respondent claimed that he is a permanent resident within art. 24(2)(1) of the Basic Law with the right of abode. The appellant, the Director of Immigration ("the Director") rejected his claim. The Director’s rejection violated the Basic Law.

**Court:** Court of Appeal of the High Court

---

**Mok Tai Kei v. Constitutional Affairs Bureau of the HKSAR government, Electoral Affairs Commission and Registration and Electoral Office ; Reported in: [2005] 1 HKLRD 860**

The “ipso facto” system is not unconstitutional with the electoral rights granted by Article 26 of the Basic Law and the same right granted by Article 25 of the ICCPR (Article 21 of the Hong Kong Bill of Rights Ordinance).
Kowloon Poultry Laan Merchants Association vs Department of Justice for and on behalf of Director of Agriculture Fisheries Conservation Department of HKSAR, HCAL 2630/2000

The decision not to pay additional compensation for the implementation of the segregation arrangement is inconsistent with, or contravenes, Art. 105 of the Basic Law.
The court did not agree with that.

Court: Court of Appeal of the High Court

Wong Chung Ki v. The Chief Executive; Chan Shu Ying v. The Secretary for Constitutional Affairs, CACV No. 1 of 2000; HCAL No. 151 of 1999

Hong Kong’s two municipal councils were abolished at the beginning of this year. Their functions were transferred to other bodies. Those bodies were not elected bodies. That was believed by the Applicants to be contrary to various provisions in the International Covenant on Civil and Political Rights (“the ICCPR”), the Basic Law and the Bill of Rights. Accordingly, an application for leave to apply for judicial review of the decisions which resulted in local government in Hong Kong being in the hands of non-elected bodies was lodged.

That application was dismissed,

Court: Court of Appeal of the High Court

Xie Xiaoyi and others v. The Director of Immigration, CACV No. 301 of 1999

Whether Article 24(3) of the Basic Law confers a right of abode in Hong Kong on persons born outside Hong Kong but who have been adopted by a Hong Kong permanent resident.

This appeal is allowed by the Court.

Court: Court of Appeal of the High Court

The election arrangement of the right of non-indigenous villagers to take part in the election of a village representative in the New Territories is challenged
violation of Article 40 of the Basic Law.
The appeals are dismissed.
Court: Court of Appeal of the High Court

52
Chan Kam Nga v Director of Immigration, Civil Appeal No. 40 of 1998
The words “if the parent had the right of abode at the time of the birth of the person” in paragraph 2(c) Schedule 1 of the Immigration Ordinance, Cap. 115 (which schedule was introduced by the Immigration (Amendment) (No. 2) Ordinance 1997) contravene Article 24 of the Basic Law and are not unconstitutional.
Court: Court of Appeal of the High Court

53
Cheung Lai Wah and others v Director of Immigration, Civil Appeal No. 203 of 1997
In these appeals and cross appeal, four issues have been raised. Three of them relate to the constitutionality and validity of certain provisions of the Immigration (Amendment) (No.2) Ordinance 1997 and the Immigration (Amendment) (No.3) Ordinance 1997. The fourth issue relates to the legality of the Provisional Legislative Council which enacted these Ordinances. The Court gives a decision on the constitutionality and validity of the relevant provisions of the two Ordinances.
Court: Court of Appeal of the High Court

2.4 Criminal Appeal

54
1. HKSAR v. HUNG CHAN WA; Reported in: [2005] 3 HKLRD 291
2. HKSAR v. ASANO ATSUSHI; Reported in: [2005] 3 HKLRD 291
The issue is: the reverse onus imposed by section 47(1) of the Dangerous Drugs Ordinance, if read as constituting a persuasive burden, is incompatible with articles 39 and 87 of the Basic Law, and article 11(1) of the Hong Kong Bill of Rights Ordinance. 
(This court held that to construe the presumptions enacted by sections 47(1) and (2) of the Dangerous Drugs Ordinance as presumptions that each create an evidential onus only, and that the provisions are not to be regarded as imposing persuasive burdens of proof.)
55

**HKSAR v. LAM KWONG WAI AND ANOTHER**

Section 20(1) of the Firearms and Ammunition Ordinance, *as and when read with* section 20(3)(c) of that Ordinance is inconsistent with the presumption of innocence prescribed by article 11(1) of the Hong Kong Bill of Rights Ordinance, article 14.2 of the ICCPR, and article 39 of the Basic Law.

Court: Court of Appeal of the High Court

56

1. **CHAN CHAK FAN AND ANOTHER v. R**
2. **LAI YIU PUI v. R.**

The presumption contained in the section 37K(1) of the Immigration Ordinance, Cap.115 is justifiable. And the argument that the subsection is unconstitutional fails.

Court: Court of Appeal of the High Court

57

**HKSAR v. PUN GANGA CHANDRA AND OTHERS**

The "grievous harm" rule, in its application to a person charged with murder who is alleged to be a primary offender, is neither inconsistent nor incompatible with the rights protected by the Basic Law and the Bill of Rights.

Court: Court of Appeal of the High Court

2.5 **Reservation of Question of Law**

58

**HKSAR v. MA WAI KWAN DAVID AND OTHERS**  Reported in :[1997] HKLRD 761

“The Reunification Ordinance” and the common law with its court system mentioned in the Ordinance are not inconsistent with the Basic Law.

Court: Court of Appeal of the High Court

Court: High Court

MICHAEL REID SCOTT v. SECRETARY FOR JUSTICE, HCAL 188/2002
S.15 of the Public Officers Pay Adjustment (2004/2005) Ordinance, Cap.580 (the 2003 Ordinance), is inconsistent with art.103 of the Basic Law and therefore is unconstitutional.
Court: High Court

LAU KWOK FAI BERNARD v. COMMISSIONER OF POLICE AND ANOTHER, HCAL 177/2002
The issues are: whether 1. A declaration that the Commissioner’s decision requiring the applicant to give prior written notice of his intention to leave Hong Kong and to seek exemption from the Commissioner should he wish to leave Hong Kong for any period that would affect the daily reporting condition associated with his interdiction, s in breach of Article 31 of the Basic Law (“BL”) and Article 8 of the Hong Kong Bill of Rights Ordinance (“BORO”), cap. 383 and is unconstitutional, unlawful and of no effect; 2. A declaration that the Commissioner’s decision as a whole is in breach of Article 35 of the BL and is unconstitutional, unlawful and of no effect.3. A declaration that the Commissioner’s decision as a whole is in breach of Article 11 of the BORO and is unconstitutional, unlawful and of no effect.
(This court held that the applicant’s application for judicial review is dismissed)
Court: High Court

Yook Tong Electric Company Limited vs Commissioner for Transport, HCAL 94/2002
The applicant seeks judicial review of three decisions made by the Commissioner of Transport. In criticising the decisions of the Commissioner for being Wednesbury unreasonable, he also urged that the fundamental rights of the applicant, those protected by the Basic Law, have been infringed.
The court does not accept that there has been any infringement of the applicant’s
fundamental rights.

Court: High Court

66

RE CHU WAI HA

Section 138 of the Bankruptcy Ordinance which is prima facie inconsistent with the fundamental principles set out in Paragraphs 7 to 12 above is actually constitutional.

Court: High Court

67

HKSAR v. LEUNG KWOK HUNG AND OTHERS ; Reported in: [2004] 3 HKLRD 729

The notification scheme contained in sections 13 to 15 of the POO (the Public Order Ordinance, Cap.245) is constitutional.

Court: High Court

68

1. RE THE LINK TRADING CO LTD AND OTHERS
2. RE ANSON GARMENT LTD AND OTHERS

The appellant mentioned that certain provisions of the Mutual Legal Assistance in Criminal Matters Ordinance Cap. 525 may be unconstitutional under the Basic Law and/or the Hong Kong Bill of Rights Ordinance (Cap. 383)

(This court held that it has never been suggested that these observations should form an independent ground in support of the judicial review applications. Moreover, the applicants have not sought leave to include in the Re-Amended Form 86A any argument regarding the constitutionality of the provisions in Cap. 525 so the applications are refused.)

Court: High Court

69

1. GOVERNMENT PARK AND PLAYGROUND KEEPERS UNION AND OTHERS v. SECRETARY FOR JUSTICE
2. LAU KWOK FAI BERNARD v. SECRETARY FOR JUSTICE

The Public Officers Pay Adjustment Ordinance has neither breached the individual articles of the Basic Law which have been placed before this court for consideration nor has it offended the principle of the separation of powers contained in that Law.
## PENNY’S BAY INVESTMENT CO. LTD. v. CHIEF EXECUTIVE-IN-COUNCIL AND OTHERS

The issue is: whether s. 12(1) of the Foreshore and Sea-bed (Reclamations) Ordinance is consistent with art. 105 of the Basic Law.

(This court held that it cannot at this time be argued with any prospect of success that that exclusive jurisdiction should, even as to matters of constitutional determination, be imported into this Court)

## 1 YAU KWONG MAN v. SECRETARY FOR SECURITY, HCAL 1595/2001

1 In respect of s. 67C of the Criminal Procedure Ordinance, Cap. 221 a declaration is granted that s. 67C(2), (4) and (6) is inconsistent with Art. 80 of the Basic Law and is thereby invalid.

2 In respect of s. 67C of the Criminal Procedure Ordinance, Cap. 221 the declaration sought that s. 67C(2), (4) and (6) is inconsistent with Art. 14(1) of the International Covenant on Civil and Political Rights as applied to Hong Kong through Art. 39 of the Basic Law, and is inconsistent Art. 8 of the Basic Law, is refused.

3 In respect of s. 12(12) of the Long-term Prison Sentences Review Ordinance, Cap. 524, the declaration sought that it is inconsistent with Art. 9(4) of the International Covenant on Civil and Political Rights as applied to Hong Kong through Art. 39 of the Basic Law, and is inconsistent Art. 8 of the Basic Law, is refused.

## Kowloon Poultry Laan Merchants Association vs Department of Justice for and on behalf of Director of Agriculture Fisheries Conservation Department of HKSAR, HCAL 2630/2000

The decision not to pay additional compensation for the implementation of the segregation arrangement is inconsistent with, or contravenes, Art. 105 of the Basic Law.
The court did not agree with that.

Court: High Court

73

Ng Siu Tung and others v. The Director of Immigration; Li Shuk Fan v. The Director of Immigration; Sin Hoi Chu and 42 others v. The Director of Immigration, HCAL No. 81 of 1999; HCAL No. 2 of 2000; HCAL No. 70 of 2000

The compatibility of the requirement of the certificate of entitlement to be attached to a one-way exit permit for establishing the right of abode in Hong Kong was challenged.
The Court of Appeal agreed, it is not unconstitutional.

Court: High Court

74

PREM SINGH v. THE DIRECTOR OF IMMIGRATION

The issue is: whether that a person must be settled in accordance with paragraph 3(1)(c) of the Schedule 1 is unconstitutional because Article 24(2)(4) of the Basic Law describes a state of affairs that, upon being established as matters of fact, entitled the claimant to recognition of permanent resident status.

(This court held that it is not necessary for this court to come to any concluded view on this matter because this is not a matter that would be determinative of Mr Singh's right in this case when he clearly had not fulfilled the seven-year ordinarily residence requirement in the first place.)

Court: High Court

75

LUI TAT HANG LOUIS v. THE POST-RELEASE SUPERVISION BOARD AND ANOTHER

The powers conferred on the Board by the Post-Release Supervision of Prisoners Ordinance, Cap.475 to impose supervision orders, and to recall a prisoner to prison under the circumstances prescribed by that Ordinance, do not constitute a heavier penalty within the meaning of art.15 of the ICCPR (or of art.12(1) of the Bill of Rights Ordinance), and the provisions of the Ordinance are accordingly not in breach of art.39 of the Basic Law.

Court: High Court

76
HKSAR v. YIK PO MAN

In the present case, this court held that it cannot see that any case has been made out on behalf of the accused which shows that the mandatory sentence, if imposed, would be an arbitrary or unlawful detention in terms of Art. 5(1) of the HKBOR or of Article 28 of the Basic Law.

Court: High Court

Chang Kai Nam, Gary (In the Matter of an Application by Cheng Kai Nam, Gary for leave to apply for Judicial Review (Order 53, rule 3)) , HCAL3568/2001

An application for leave due to the language used in the Court violates art9 of the Basic Law, to apply for judicial review. The Court refused.

Court: High Court

MASTER CHONG FUNG YUEN v. DIRECTOR OF IMMIGRATION

The words in paragraph 2(a) of Schedule 1 to the Immigration (Amendment) Ordinance enacted on 1 July 1997: "if his father and mother was settled or had the right of abode in Hong Kong at the time of the birth of the person or at any later time" were in this judgment incompatible with, and contravene art.24(2)(1) of the Basic Law; and so, too, are the same words as they are repeated in the amended paragraph 2(a) of Schedule 1 to the Immigration Ordinance, introduced by resolution made by the Legislative Council on 16 July 1999. They have therefore no effect to limit the right of abode of those Chinese citizens born within Hong Kong and, therefore, of this applicant.

Court: High Court

HKSAR v. MOK TSAN PING AND OTHERS

The definition of the mental element of murder as an intention either to kill or cause really serious injury is not incompatible with either the Bill of Rights (which came into force on 8th June 1991) or the Basic Law (which came into force on 1st June 1997).

Court: High Court

TSE KWAN SANG v. PAT HEUNG RURAL COMMITTEE ; Reported in: [1999] 3 HKLRD 267
The arrangements made by the Pat Heung Rural Committee for the Village Representative Election of Shek Wu Tong Village held on 2nd March 1999 ("the Election") are inconsistent with the provision of Article 25(a) of the International Covenant on Civil and Political Rights as applied to Hong Kong and received by Article 39 of Basic Law.

Court: High Court

81

LAS VEGAS HILTON CORPORATION v. LO YUK LEUNG

The evidence clearly establishes that the statute, namely the law of Nevada that allows casinos immediate access to the courts, but requires gamblers to first have recourse to the Nevada State Gambling Control Board is not unconstitutional.

Court: High Court

82

MO YUK PING v. SECRETARY FOR JUSTICE

The issue is whether s.33 of the Telecommunications Ordinance, Cap.106 is inconsistent with art.30 of the Basic Law.

(This court held that these are not matters, in my view, which should persuade this court to exercise its jurisdiction, therefore, leave is refused.)

Court: High Court

*Only Chinese version Judgment available. English abstract as follow:

Law Hao Yi v. The Commissioner of Police

1. Executive order concerning personal financial situation is not inconsistent with Article 1 of the Hong Kong Bill of Rights Ordinance.
2. The accuse to the Investigation Panel on Staff Discipline on violation of Article 10 of the Hong Kong Human Rights Ordinance is not established. The judicial review request is not supported.

Chan Shu Ying v. The Chief Executive of the Hong Kong Special Administrative Region, HCAL 151/1999

The challenge is founded on the assertion that the legislative steps taken to bring the new framework into being – more particularly, the provisions contained in the Provision of Municipal Services (Reorganization) Ordinance, Chapter 552, (‘the Reorganization Ordinance’) – are inconsistent with Article 25(a) of the International Covenant on Civil and Political Rights (‘the ICCPR’), which is enshrined in our law through Article 39 of the Basic Law, holds that every citizen shall have the right and opportunity to take part in the conduct of public affairs, directly or through freely chosen representatives. It is said by the Applicant that in removing the old constitutional framework and replacing it with the new – at least in respect of executive power to control municipal affairs – the Reorganization Ordinance has indefinitely denied Hong Kong permanent residents the right to participate in public affairs at a regional or local level.

The application for judicial review was dismissed.
CHAN MEI YEE v. DIRECTOR OF IMMIGRATION, HCAL 77/99
The Respondent applies to strike out the Notice of Motion on the ground that it
discloses no reasonable claim in public law.
Application dismissed.

Xie Xiaoyi v. The Director of Immigration; Tam Nga Yin and others v. The
Director of Immigration , HCAL No. 13 of 1998; HCAL No. 14 of 1998
Whether Article 24(3) of the Basic Law confers a right of abode in Hong Kong
on persons born outside Hong Kong but who have been adopted by a Hong
Kong permanent resident.
The Court dismissed it.

Lau Kong Yung and others v. Director of Immigration, HCAL 20/99
The applicants claim to be persons of Chinese nationality born on the Mainland
China (the Mainland) of permanent residents of Hong Kong. They therefore
claim themselves to be permanent residents of the HKSAR under Article 24(3)
of the Basic Law. They apply for writs of Habeas Corpus Ad Subjiciendum and
to judicially review the decision of the Director of Immigration (the Director) to
remove them from Hong Kong.
Both the applications for writs of Habeas Corpus Ad Subjiciendum and for
judicial review are dismissed.

The Association of Expatriate Civil Servants of Hong Kong v. The
Secretary for the Civil Service , HCAL 9/1998
Several decisions by the Secretary for the Civil Service concerning civil servant
management are challenged in contravention of Article 100 of the Basic Law
The decisions are not unconstitutional.
### The Association of Expatriate Civil Servants of Hong Kong v The Chief Executive of the Hong Kong Special Administrative Region, A.L. No. 90 of 1997

This is an application by the Association of Expatriate Civil Servants of Hong Kong ("the A.E.C.S.") for judicial review of (a) the decision of the Chief Executive to promulgate two instruments and (b) various provisions in those instruments. The two instruments are the Public Service (Administration) Order 1997 (E.O. No. 1 of 1997) ("the Executive Order") and the Public Service (Disciplinary) Regulation ("the Regulation"). The grounds on which the legality of the two instruments are challenged are that (a) they provide for the appointment and removal of holders of public office contrary to the provisions of the Basic Law, and (b) they are retrospective in operation. Application for judicial review concerning the contravention of the Basic Law is dismissed. It is not unconstitutional.

**Court:** High Court

### Lui Sheung Kwan & Ngan Sau Ying v Director of Immigration, HCAL 109 of 1997

The applicants are not satisfied with Removal Order issued by the Immigration Department and apply for leave to seek a judicial review. The Order is constitutional.

**Court:** High Court

### Chan Kam Nga v Director of Immigration, A.L. No. 104 of 1997

A new legislation which was enacted to implement limited the right of abode in Hong Kong to the children of persons who had acquired the right of abode in Hong Kong by the time the children were born. The issue which the case raises is whether that legislative provision contravenes the Basic Law. The Court concludes that the words “if the parent had the right of abode in Hong Kong at the time of the birth of the person” in the new para. 2(c) of Sch. 1 to the Immigration Ordinance contravenes Art.24(3) of the Basic Law. It is unconstitutional.

**Court:** High Court
Cheung Lai Wah and others v Director of Immigration, A.L. Nos. 68, 70, 71 & 73 of 1997

The requirement placed by the Director of Immigration to those who claimed the right of abode in Hong Kong is challenged.
The Court decides that the requirement and amendments to the Immigration Ordinance are constitutional.

Court: High Court

4. DISTRICT COURT

HKSAR v. MO YUK PING AND OTHERS

The issue is: whether or not to sec. 33 of the Telecommunications Ordinance is inconsistent with the Basic Law.
(This court deemed that the constitutionality of sec. 33 is not a matter in which there is any necessity for it to make a determination for the purposes of disposing of these applications.)

Court: District Court

5. MISCELLANEOUS

HKSAR Government v. Leung Kwok Hung & others

Article 13, 13A and 14 of the Public Order Ordinance is constitutional to Article 27 of the Basic Law and Article 17 of Part II of the Hong Kong Bill of Rights Ordinance.

The Commissioner of Rating and Valuation (“the Commissioner”) demanded
for the first time government rent in respect of them. In these appeals the appellant challenged the assessments of the Commissioner.
The Court decided that Section 4 and 5 contravene Article 121 of the Basic Law.

Court: The Land Tribunal
Proceedings submission

1. Title of the submission: The Interaction between Quantifier and Negation in L2 Chinese interlanguage by Adult English-speaking L2 Chinese Learners

2. Name of the author: Yan Li

3. Affiliation of the author: University of Southern California

4. Address of the author: 1216 W 37TH DR; Los Angeles, CA 90007

5. E-mail address of the author: yanautomatic@gmail.com

6. Abstract

   This paper reports the preliminary results of a study of adult English-speaking L2 Chinese learners’ interpretation of sentences that contain negation and numerally quantified NPs as shown in (1)a.

   (1) a. zhe-ge nanhair meiyou kan liang-ben shu. (Chinese)

       this-CL   boy       NEG read  two-CL book

       ‘This boy didn’t read two books.’

   b. This boy didn’t read two books. (English)

   It has been discussed in the literature (Musolino 1998; Musolino, Crain & Thorntorn 2000; Lidz and Musolino 2002, Su 2003) that sentences in (1) are ambiguous both in Chinese and English: they can either mean that it is not the case that this boy read two books (i.e. the negation takes the wide scope, not>two) or there exist two books such that this boy did not read (i.e. the quantified NP takes the wide scope, two> not).

   Studies in L1 acquisition with Chinese-speaking children show that young children do not interpret sentences like (1)a in the same way as adults do: according to Su (2003), while Chinese-speaking adults prefer the negation wide scope reading (72% acceptance) to the QNP wide scope reading (38% acceptance), Chinese-speaking children prefer the
QNP wide scope reading (63% acceptance) to the negation wide scope reading (35% acceptance). Su (2003) attributed children’s preference to their misinterpretation of the structures.

Based on the analyses of the L1 data, three predictions can be made on L2 acquisition. If it is as Su (2003) argued that the Chinese-speaking children’s preference for the QNP wide scope reading for sentences like (1)a is caused by children’s misinterpretation of the structures, it would be predicted that such preference would not be observable among adult English-speaking L2 Chinese learners, since there is no reason to believe that adult English-speaking L2 Chinese learners would misinterpret the structures in the same way as Chinese-speaking children do considering the fact that in English *not* does not form a constituent with the verb following it. If the Chinese-speaking children’s preference for the QNP wide scope reading reflects a developmental stage that Chinese-speaking children go through when they acquire the interaction between quantification and negation (Musolino 1998), it would be predicted that English-speaking L2 Chinese learners would experience a similar developmental stage as Chinese-speaking children. Learners at different proficiency levels would show different preference: they would prefer the QNP wide scope reading as Chinese-speaking children do at the beginning level and prefer the negation wide scope reading later as Chinese adults do. If L1 transfer plays a role in the process, it would be predicted that adult English-speaking L2 Chinese learners do not perform like Chinese children or Chinese adult speakers---they would pattern English adult speakers in equally accepting both readings in the initial state. The current study used a Truth Value Judgment Test (Crain and Thornton 1998) to test these predictions. The preliminary results we got seem to
confirm the first and the third predictions. English-speaking L2 Chinese learners did not show preference to the QNP wide scope reading and their performance do not pattern L1 children or L1 Chinese adults---they accept the QNP wide scope reading on the average of 50% of the time. The subjects in the beginning level prefer the QNP wide scope reading with a little higher percentage (n=12; 54.16%) than the subjects in the intermediate level (n=12; 45.83%). This result suggests that Chinese children’s preference for QNP wide scope reading does not reflect a developmental stage. It is caused by pragmatic reasons rather than their immature grammar (c.f. Musolino 1998; Lidz and Musolino 2002). L1 transfer effect is also observed.

   Abstract
   The study purpose was amid to develop and evaluate evaluation of the health educational model in primary medical clinics. This project designed was depended on patient’s health educational demand and need that a study results of the effect of health education in primary medical clinics in 2004. According above study results and concern the difference between urban areas and rural areas therefore we apply quota sampling technique to select 14 samples from 7 areas in Taiwan. We develop health educational checklist to create a new primary medical clinics health education model and evaluate the efficiency from primary medical clinics and patients. The results as follow: (1) the health educational checklist can prevent some slip-up of health educational process and content. (2) the primary medical clinics makes some change for new health educational model such as clinics environment, equipment, educational member, educational process and content, and increase time for the health education. (3) the health education time was increased average 3.15 minute, all of the primary medical clinics will keep the educational model going because they think that the doctor-patient relationship will improve (66.7%). (4) the patients are male 618 (43.6%) and
female 798(56.4%) a total 1416 and 93.3% of clinic patient had receive disease-related health education while they medical treatment process. (5) the patient aware of the educational model was difference from the clinic before and other medical clinics. From the patient’s view, the educational model was acceptable (96%) and meet their need (95.2%), it useable (92.9%) and helpful (94.6%) in their daily live but take that educational model will spend more time (45.3%). (6) they will return to clinic if necessary (97.5%) and to suggest relatives and friends when they need medical check up(93.8%). (7) from the urban and rural areas view, the patient of urban areas could aware that health educational model take more time for medical treatment process then the patient of rural areas, the patient from rural areas senses of the health educational model was difference from clinic before and the health education content was used able. According above study finding suggest: (1) the health educational Prescriptions sheet will be design and apply disease related health education content in to primary medical clinics treatment process. (2) according urban and rural areas difference to recruit voluntarily primary medical clinics to participate and follow up the effective to promote the health educational model.

**Key words:** primary medical clinic, health educational model, development, evaluation.
Effects of Smoking Prevention Education Program on the Knowledge, Attitude, and Refusal Skills in the Elementary School children of Taiwan

Shu-hua Lin¹, Jenn-Chang Liou¹, Ching-Sung Ho²
1. Institute of Healthcare Administration, Asia University, Taiwan
2. Department of Healthcare Administration, Asia University, Taiwan
Email: sharon.a927@msa.hinet.net

Introduction: Smoking is recognized as one of the major risk factors that affects human health. In recent years, the smoking age in Taiwan has touched a real low than ever. It was figured that the prevalence of smoking in our teenagers is increasing rapidly. Also, it is believed that the health of our younger generation is an important asset for the future of our country. This reinforced the importance of implementing the educational programs on smoking prevention to enhance knowledge, attitude and refusal skill for our school children, as education is considered to be a miraculous weapon to promote healthy behavior.

Objective: The purpose of this study was to evaluate the effect of the smoking prevention education program on knowledge, attitude, and refusal skills of 5th grade students in Taiwan.

Methods: The evaluation was based on a non-equivalent pre-post test design. For this study four sections of 5th grade students from an elementary school were recruited as the study sample. Among the four sections, two classes (N=68) were randomly assigned to the experimental group and the other two (N=67) were used as the control group. The experimental group received the 6- hour education sessions (2 hours each
week for 3 consecutive weeks), but the control group did not have any such sessions. The data was collected by a field-tested questionnaire and analyzed by using the SPSS package.

**Results:** The main findings of this study are as follows

Table 1 shows the basic information of 135 sample students. Out of them, 76 (56.3%) were boys and 59 (43.7%) were girls. Majority of the parents of the students had a high school education (fathers, 23.9%; mothers, 29.3%). The result showed that 8 (5.9%) students had ever smoked and 19 (14.1%) had the intention of trying it. Also, 76 (56.3%) reported that their fathers smoked and 37 (27.4%) said that their grandfathers also smoked. On top of it, 7 (5.2%) students reported that they even had their fathers buy them the cigarettes.

Independent t-tests were performed to reveal the differences in gain scores (posttest – pretest) of the knowledge, attitude, and refusal skill measurements between the two groups. The results showed that the gain score for the knowledge test of the intervention group was significantly higher than that of the control group \( t = 2.29, p < .01 \). The gain score for the attitude measurement of the intervention group was significantly higher than that of the control group \( t = 2.13, p < .05 \). No significant difference was found in the gain scores for refusal skill measurement of the two groups \( t = 1.75, p > .05 \). (Table 2)

p< .05;  p< .01

Nearly all the students (N=64) in the intervention group expressed that they liked the smoking prevention program and 61 of them said that they would be looking forward to having a similar kind of smoking prevention program in the future also.

**Conclusion**

This study shows that the 6 hour program intervention uniquely enriched the knowledge of the students about the benefits of non-smoking, thereby greatly influencing their attitude towards smoking. However, the program did not show any significant improvement in their refusal skills. A longer intervention period and more effective teaching strategies may be needed for the refusal skill formation of the students. The parents’ cooperation in the non-indulgence in smoking and promoting a more responsible behavior may also be recommended.

ABSTRACT

The Inland Empire: The New Heart of Black Life in Southern California?

Historically, early Los Angeles afforded many Black migrants opportunities that they did not enjoy in the places where they migrated from. In particular, as many historians have noted, Los Angeles offered Blacks the opportunity to own homes. However, as Los Angeles developed into one of the world’s largest cities, the opportunities for Blacks in L.A. seemingly declined. Deteriorating conditions and declining opportunities for Blacks in Los Angeles have caused many Blacks to migrate out of L.A. in search of “greener pastures”. One of the most popular destinations for Black Los Angeles migrants, as some social scientists have noted, is Southern California’s Inland Empire.

Located approximately 50 miles east of Los Angeles, the Inland Empire is one of the fastest growing metropolises in America and its anchor cities are San Bernardino and Riverside. Like early Los Angeles, the Inland Empire is affording many Black Los Angeles migrants the ability to own newer, bigger, more affordable homes and enjoy a “perceived” better quality of life. In order to ensure that these opportunities persist, some Black Los Angeles migrants have made a decision to move into communities in the Inland Empire that they believe are less likely to “tip-over” racially; that is these Black Los Angeles migrants have decided to settle in communities where they believe “white flight” is less likely to occur. Yet, this migration trend
has resulted in the dilution of the Black population in Southern California. The population dilution has had real social, economic, and political consequences for the sustainability of the Black community in Southern California. My paper presentation will examine these consequences.
At the Threshold: Developing a Subconscious Response to Nanotechnology

Strugatsky brothers’ science-fiction novel *Roadside Picnic*\(^1\) revolves around the presence of the subconscious at the core of the human being. Andrei Tarkovsky, a famous Russian film director adapted the novel into his film *Stalker*, in which a stalker guides a Writer and Professor into the ZONE—a dangerous and unpredictable territory deserted after some fantastical event took place there—in search of the Room where wishes come true. On the way they learn of a man named Porcupine who came to the room to ask for his brother’s health but upon return suddenly became very rich and hung himself. At the threshold to the Room, the Writer and Professor realize the reason for Porcupine’s suicide. The Room grants only the most sacred desires: the unknown desires of man’s subconscious. Porcupine may have asked for his brother’s health but in his heart he wanted wealth and could not live with this knowledge. Before the entrance to the Room the Writer says, “It doesn’t matter what you are saying. Here that will come true which reflects your very essence of which you yourself are ignorant!”\(^2\) The

---

Writer refuses to enter fearing what we can call his subconscious—that which he does not know about himself but which he recognizes has the power to affect his future.

The development of the nanotechnology program is reminiscent of the journey the Writer and Professor make in *Stalker*. Scientists behind nanotechnology are on their way to making their most sacred wishes come true. The dreams of nanotechnology include the desire to improve the quality of human life by eliminating disease and death, preventing further environmental destruction and facilitating faster communication. When these dreams are written down by scientists they often seem more like science fiction than objective scientific projections. Rather than discard them as mere unrealistic desires, we should listen to the dreams expressed in these writings with more attention. Porcupine’s story shows us that when such desires are realized, they can have unexpected consequences because of unknown to us subconscious undercurrents. Although the capabilities of today’s techniques are not yet at the point of achieving all of the applications envisioned for nanotechnology, with the current speed of technological development it is only a matter of time before nanotechnology stands at the threshold of realizing these dreams. These dreams, like mirrors, reflect their owners’ subconscious desires and can, unknowingly to the scientists, affect the outcome of nanotechnology developments. What thoughts will the scientists behind nanotechnology encounter at the threshold and will they stop or cross over?

The Writer and Professor recognize in Porcupine’s story a reflection of their own journey and stop at the threshold of the Room. They need a reflection in order to see their own situation, which was invisible to them previously. The simplest example of the need for reflection is the inability of man to see his physical body in its entirety. In order to see our physical selves we require a mirror. Similarly, we construct figurative mirrors (for example, in the form of film,
literature and art) to understand phenomena invisible to us. In *Stalker*, Porcupine’s most cherished desire—the to-him-unknown desire for wealth—is reflected in the form of a granted wish. As a result of the reflection he is able to see his subconscious. Film, literature and art commonly exhibit mirror-like qualities by reflecting the life they depict. Jorge Luis Borges, for example, uses mirrors in his stories to intercept the difference between perception and reality. Hergé’s famous *The Adventures of Tintin*, inspired the sciences of Tintinology (“study of Tintin”) and Tintinlatrie (“love of Tintin”), reflections through which the new generation is now trying to understand the original Tintin and its own modern society. Another interesting example is Velázquez’s famous oeuvre, *Las Meninas*, which is composed of many figurative mirrors. Pablo Picasso, painting three hundred years after Velázquez, completed forty-four variations on the grand master’s work. Each of Picasso’s forty-four renditions of *Las Meninas* in his distinctly cubist style are reflections of a reflection. Picasso’s multiple versions show that art has the ability to trigger an infinity of reflections, the subject of each one of which is ultimately ourselves. Reflections imply the existence of the subconscious by revealing something previously unknown but integral to us. The subconscious is made visible by reflection.

The main power of the mechanism of reflection is that it distances us from the object we are trying to apprehend. Philosopher Michel Foucault, analyzing Velázquez’s painting in his book, *The Order of Things*, describes the function of the mirror to reveal the invisible. He writes that the mirror draws from the “exterior” what is invisible in the painting and making it visible, “[cutting] the whole field of representation, ignoring all it might apprehend within that field, and [restoring] visibility to that which resides outside all view.”

---

canvas. In order for the mirror to reveal anything or be of any use to us there must be a
distinction between what is on the “exterior” and on the “interior” or between what is visible and
invisible. The presence of the subconscious, whose influence is unknown to us but important in
shaping our view of the world, indicates that there is a difference between life and our
understanding of it. Sometimes the difference is expressed in a distance from the subject, as the
Russian poet and novelist Boris Pasternak says, “The big is seen at a distance.” To accurately
see our object in its entirety we might need to take a step back, as, for example, when we are
standing too close to a pointillist painting. At other times this difference takes the form of time,
like in the example of history in which we can see the entire event only retrospectively.
However that difference is measured, it exists because of the impossibility to see ourselves
directly.

Stalker leads the Writer and Professor on a long and indirect journey through the ZONE
to the Room. The time that they spend walking gives the Writer and the Professor enough
distance to reflect on Porcupine’s story and come to the decision to stop at the threshold to the
Room. Unlike the characters in Stalker, nanotechnology’s journey to the threshold of its dreams
coming true is taking a very short amount of time. With the overall speed of life increasing,
evident in the demand for faster and faster Internet services and information delivery, there may
be not enough time for the scientists and society to reflect on the impact of the new technologies
and stop in time before crossing an irreversible threshold. Nanotechnology is fast even by
today’s standards: the creation of a single molecule transistor was announced on August 30,
2006, just 15 years after the invention of the scanning tunneling microscope,4 and updates on
nanotechnology developments are published every day in news sources and blogs such as the

Emerging Technology Trends blog. In 1958, Hannah Arendt hypothesized in her book *The Human Condition* that it would take scientists, “no more than a hundred years” to produce a man “possessed by a rebellion against human existence as it has been given.” Today, less than 50 years from the date of Arendt’s writing, an organization of such individuals, who call themselves “transhumanists,” already exists. Raymond Kurzweil, an inventor and author very respected among the transhumanists, acknowledges the exponential growth of technological change. In his 2001 essay, “The Law of Accelerating Returns,” Kurzweil writes that, “the history of technology shows that technological change is exponential, contrary to the common-sense ‘intuitive linear’ view. So we won’t experience 100 years of progress in the 21st century—it will be more like 20,000 years of progress (at today’s rate).” The unprecedented speed with which nanotechnology is moving forward makes me wonder whether human intellect has enough time to see the true effect of the technology and adequately respond to it.

If there is not enough time to react with our reason, what can serve as an emergency break and help us stop in time? Usually, a subconscious sense can guide us when reason fails. Intuition, a nagging premonition or a seemingly unwarranted fear from nowhere can cause us to reconsider our mind’s reasoning and we (or it) change our course of action. The subconscious is often the central theme of both art and science. Fyodor Dostoevsky explores the influence of the subconscious in his novels, *Notes from the Underground*, *Idiot* and *Brothers Karamazov*, and the subconscious forms the basis of Sigmund Freud’s psychoanalysis. Freud’s study of the role of dreams in his work, *The Interpretation of Dreams*, relies on the idea that something repressed in

---

man, unknown to his reason can significantly affect his life. These and many other prominent works support the existence of the subconscious and demonstrate its importance in influencing human existence. By recognizing the existence of the subconscious, we acknowledge that there may be something which we do not know; therefore the subconscious can function as a limit of our reason’s capabilities.

In this sense, the subconscious not only provides an intuitive feeling that can change our plans, but it also sets limits. In *Stalker* this limit is the threshold of the Room which the Writer, Professor and Stalker do not cross (although in one humorous instant the Professor accidentally trips and almost falls into the Room, but the Writer holds him back by the tails of his coat). The notion of the subconscious acknowledges the presence of mystery, a kind of cognitive limit. In contrast, scientists and dreamers of nanotechnology do not believe that there can be any limit to the mind’s knowledge. Without a belief in any limits to knowledge, man develops an insatiable appetite for more knowledge, driving today’s incredible speed of technological development. Scientists cannot be satisfied with anything less than with what professor and philosopher Jean-Pierre Dupuy calls “perfect knowledge,” at which point, by its very design, the power of their creation will lead to the escape of all knowledge and technology from their own hands. Through Porcupine’s story, the Writer and the Professor learn that breaching the threshold limit could lead them to their death. The warning message from *Stalker* is clear: the subconscious can keep us from taking an irreversible step.

If the subconscious helps guide us in critical situations, what can be done to develop it? As we have seen, film, literature and art point at the existence of the subconscious and have been trying to understand it for hundreds of years. They do so in the context of time-old culture and

---

traditions, which leads to the argument that the subconscious is strengthened by culture, 
tradition, morals and faith. Also, these areas of human activity are relatively free of influence 
from human reason and logic—the two instruments historically used to expel the mysterious 
subconscious. It is necessary to actively pursue these disciplines in step with technological 
development. We need to develop the subconscious through these areas so that if we find 
ourselves with insufficient time to act with our reason our subconscious may guide us. The 
nanotechnology program has taken some preliminary steps in this direction.

The convergence of the Nano, Bio, Info and Cognitive sciences (NBIC convergence) is 
an attempt to create an interdisciplinary community around nanotechnology. Jean-Pierre Dupuy 
writes that the role of cognitive science, the least scientific of the four disciplines mentioned, as 
the “thinker” of the NBIC convergence is an important one. Nevertheless, it is subordinated to 
the goal of scientific progress, once again diverting attention from the philosophical to the 
scientific debate. Nanotechnology is also closely watched by groups with “ethics” in their name 
or mission statement, for example organizations such as the Institute for Ethics and Emerging 
Technologies (IEET) and the World Transhumanist Association (WTA) whose mission 
statement advocates “the ethical use of technology to expand human capacities.” Their effort 
to draw attention to ethics and ask ethical questions is commendable; however it is often 
questions of risk and safety that are passed off as ethics to which caution and regulation are 
proposed as solutions. One illustration of how a cost-benefit analysis is substituted for ethics is 
an interview with Nick Bostrom, the co-founder of the WTA and director of the Future of 
Humanity Institute at Oxford University. During the interview Bostrom discusses a procedure he

---

calls, “technological marriage counseling,” 12 a new technology aimed at restoring romance to fading marriages by manipulating the levels of a few hormones which facilitate the formation of bonds between people. When asked about the ethical implications of this kind of cognitive enhancement, Bostrom resorted to a cost-benefit analysis: at first the procedure would be costly and therefore “unethical” since not everyone could afford it, but it would be ethically approved as it became cheaper. The real ethical question—that the manipulation of hormones would undermine love by guaranteeing it, and in effect would invalidate marriage—was not brought up. Such examples demonstrate that nanotechnology has not been very successful in strengthening the subconscious with the same intensity as it pursues the development of technology.

But it is not solely the responsibility of nanotechnology to develop society’s culture and morals. While it may be impossible to slow down the pace of the development of nanotechnology, a society with a fit collective subconscious nurtured by a strong culture, live traditions, healthy morals and faith will guide our decisions in critical times. If we are worried that rapid technological development is not allowing for the adequate distance to see the technology for what it really is and not leaving enough time to prepare a response, we must build up the cultural and moral fabric of society and rely on its intuition to pull the emergency break if necessary. For inspiration, I turn to Federico Fellini who indirectly touches upon the subconscious while examining the invisible mysteries of life such as love and beauty in his films. The subconscious emerges subtly as one watches the end scene of Fellini’s 8½. As all of the film’s characters and clowns hold hands and run around the circus ring to Nino Rota’s music, to my own surprise I find myself surrender to unity, kindness and hope in a world fraught with difficult relationships and the unsettling pursuit of endless fantasies.

Research Abstract

From Mammy to Yemoja, Jezebel to Osun

The Spiritual & Social Reconstruction of Black Motherhood within the

African Diaspora

by

Alysia Logan
Objectives

My primary objective is to explore the connection between the West Coast of Africa to the West Coast of the United States and expose the link between the iconic figures of Mammy and Jezebel/Sapphire to the West African Deities Yemoja and Osun. My secondary and equally important objective is to empower mothers (single mothers, in particular) throughout the African Diaspora through the positive reconstruction of these She-roie images. Due to the Trans-Atlantic Slave Trade and the misrepresentation of West African culture throughout the African Diaspora, these icons have been methodically and tenaciously deconstructed over time, therefore affecting our respect for and treatment of Black women's sexuality and their roles as women and mothers in this society.

I am suggesting that Yemoja and Mammy are one in the same and so are Osun and Jezebel/Sapphire. By utilizing empowering myths such as those of Queen Califia and Nanny of the Maroons in comparison with movies like Claudine and Coffy, fairy tales and other literature and music, I will show how the various representations of these icons (and women like them) have affected Black American women's roles and identities. As I traveled to Europe, Puerto Rico, Ghana and Jamaica back to my home town in Compton, California I noticed women across the Diaspora have similar struggles and identities which are both self-perpetuated and placed upon them by their respective societies.

In the United States, as well as throughout the African Diaspora, a positive image of a Black single mother is hard to come by; Mammy and Jezebel
are all too prevalent. But, where are Yemoja and Osun? I want to help other women I see struggling to raise their children, deal with the system and still be a whole woman. Through the Center for the Study of Women, I will conduct research to help further the Black single mother's struggle for social justice and equanimity.

Methodology

I will perform a comparative analysis of the social status of Black women throughout the African Diaspora to Black women in the United States, comparing and contrasting how these women are viewed and how they view themselves through field work, interviews with local spiritual and cultural leaders and members of the community; gathering various statistical data about single mothers across the Diaspora and quality of life, religious ideology and systems of belief; asking questions like do they feel empowered to influence positive change in their lives and in lives of their children; what do they think of Mammy and Jezebel; how do they relate; and who/where are Yemoja and Osun?

Expected Outcome

The end product (as already discussed with several book editors) will result in a book on the subject matter which will be published first in the academic realm, then mainstream.

Abstract
The Sama-Bajau peoples are one of the maritime communities found in Malaysia, Philippines and Indonesia. Sama-Bajau has recently been suggested as a general term for the language spoken by the various Sama populations. The group as a whole is probably coordinated with Malay and the Philippine, and language as a member of the Hesperonesian branch of Austronesian. The Sama-Bajau peoples are noted for their close association with the sea and are even given the appellation of sea-gypsies. Nowadays, however, a large number of Bajaus have become house-dwellers through a small member still prefer to be boat-dwellers and lead a nomadic type of life. Most of them who have settle on land are strand-dwellers, perhaps because of their fishing activities which undoubtedly, require an easy access to the sea. Today, in Sabah, the Bajau people are enjoying an earned period of prosperity and importance, whereas in the past, here and elsewhere, they were treated usually as ‘odd man out’, ‘water gypsies’ and other condescending classifications. In general, the objective of this paper is to explore the language aspects of the Bajaus among three countries namely Malaysia, Philippines and Indonesia, in terms of the basic vocabularies used in both the Bajau language and the Proto Austronesian language.

Introduction
The Southeast Asia sea nomads are divided geographically, culturally and linguistically into three major groups, each the product of an apparently independent history of adaptation. The first of these groupings comprises the Moken and Moklen of the Mergui archipelago of Burma, with extensions southward into the islands of southwestern Thailand (Hogan 1972). The second is represented by a congeries of variously named groups, collectively referred to as orang laut (sea people), who inhabit the islands and estuaries of the Riau-Lingga archipelagos, the Bantam archipelago, and the coasts and offshore
islands of eastern Sumatra, Singapore and southern Johor (Andaya 1975; Sopher 1965). A northern subgroup of orang laut, the Urak Lawoi, occupies the offshore islands from Phuket to the Adang island group. Finally, the third, and largest grouping consists of the Sama-Bajau, most of them maritime or stand-oriented communities, but also includes small numbers of boat nomads, who together form what is probably the most widely-dispersed ethnolinguistic group indigenous to the islands of Southeast Asia, living over an area of some one-and-a-quarter million square miles, from south-central Philippines, eastern Borneo and Sulawesi, south and eastward to the island of eastern Indonesia to Flores and the southern Moluccas (Nimmo 1972 ; Sather 1993a).

In general, the objective of the study is to explore the language aspects of the Bajaus between three countries- Malaysia, Indonesia and the Philippines. The objective being to examine the descendant between the Bajau language and the Austronesian proto language.

The Sama-Bajau Peoples
In Malaysia and Indonesia, variants of the terms ‘Bajau’ and ‘Bajo’ (for example Badjaw, Badjao, Bajao, Bajo) are applied by outsiders to both nomadic and sedentary Sama speakers, including land-based agricultural communities, some of them, such as those of western Sabah, without an apparent history of past seafaring. In the southern Philippines, the term ‘Bajau’ (and its variants) is reserved exclusively for boat-nomadic and formerly nomadic groups, while more sedentary Sama speakers, particularly those living in the Sulu archipelago are generally known to outsiders as ‘Samal’, an ethnonym applied to them by the neighbouring Tausug, but also used widely by Christian Filipinos and others (Kiefer 1972 ; Sather 1993b). In eastern Indonesia, Sama speakers are called ‘Bajo’ by the Bugis, a term also widely used by others, and both ‘bayo’ and ‘Turijene’ (people of the water) by the Makassarese. In Borneo, they are termed ‘Bajau’ by the Brunei Malays and by other coastal Malay-speaking groups (Evans 1952). At present, the name Bajau has gained wide currency among all groups in Sabah including Sama speakers themselves.
Most Sama-Bajau speakers, with the principal exception of the Yakan and Jama Mapun refer to themselves as ‘Sama’ or particularly in central Sulu, as ‘Sinama’. The term ‘Sama’ (or a’ a Sama, Sama people) appears to be the most widely used antonym, employed in self-reference throughout the entire area of Sama-Bajau distribution. According to Pallesen (1985) the term is also reconstructable as the proto-form of the antonym by which Sama-Bajau speakers have referred to themselves since early in the present millennium.

When used as an ethnic label, in self-reference, the term ‘sama’ is normally coupled with a toponymic duster, or stretch of coastline. Use of these modifiers indicates the speaker’s geographical and/or dialect affiliation (Sather 1993b). For example, ‘sama Sibaut’ refer to the settled ‘sama’ speakers who inhabit or trace their origin to Sibaut island, near Siasi, in the Tapul island group of Sulu. In Sabah and southern Sulu, boat-dwelling groups and those with a recent history of boat-nomadism commonly identify themselves as ‘sama dilaut’ or ‘sama mandelaut’, names that mean literally, the ‘sea’ (laut) or ‘maritime Bajau’, or as the ‘sama to’ongan’, the ‘real’ or ‘true Bajau’ (Sather 1993a; Frake 1980). In Sulu and eastern Sabah, sea-nomadic and formerly nomadic groups are generally known to other ‘sama’ speakers as ‘sama Pala’au’ or ‘Pala’u’, or ‘Luwa’an’, and to the neighbouring Tausug as ‘samal Luwa’an’ (Kiefer 1972). Both names have pejorative connotations, reflecting the pariah status generally ascribed to the Bajau laut by those living ashore.

Curiously enough, the Bajau of Sabah never refer to themselves as ‘Bajau’. Neither do they have a word or a nomenclature for their own group, which bears a phonetic resemblance to the word ‘Bajau’. Rather, they call themselves ‘Sama’. Be it ‘Bajau’ or ‘Sama’, these people have a way of explaining the origin of these term through their oral traditions. According to their stories, when the Bajau met again after a long separation, they instantly recognised one another, and so the remark made between them was ‘sama’ (‘same), meaning that to the same group, fate had separated them across distant islands, and hence emerged the word ‘Bajau’, consisting of the verbal prefix ‘ber-’ in Malay and by Sabah Malay dialect (ba-) and the root-word ‘jau’ (‘far’), meaning ‘living far away from one another’. However, the origin of the words Sama and Bajau as
given above is just folklore. The linking of the Bajau of Sabah to the orang Badjo of Sulawesi and relating the name ‘Bajau’ to a place by the name of Badjoe near Bone (Nimmo 1972), seems more likely. This is due to the well-known fact that the people of the Malay archipelago acquire their group labels from the names of places (inclusive of rivers and hills) where they establish their dwelling.

The Sama-Bajau are coastal people. They are noted for their close association with the sea and are even given the appellation of ‘sea-gypsies’ or ‘water-gypsies’ (also sea-gypsies) of Singapore and Johor. The Bajau are known for being a seafaring people and are warlike in nature. Evans had described them ‘as Proto-Malayan people, who are essentially maritime’. Evans had also recorded earlier in the century that there were still Bajau sea-gypsies and wanderers, ‘who are born, live and die in their boats’. Nowadays, there are few of these wanderers left. However, the tradition of living in houses built in water with high stilts to support them lives on to this day.

In Malaysia (Sabah), the Bajau are present along both the eastern and western coastal plains, from Kuala Penyu to Tawau on the east. In eastern Indonesia the largest numbers are found on the islands and in coastal districts of Sulawesi. Here, widely scattered communities, most of them pile-houses settlements, are represented near Menado, Ambogaya and Kendari; in the Banggai, Sula and Togian island groups; along the straits of Tioro; in the gulf of Bone; and along the Makassar coast. Elsewhere settlements are present near Balikpapan in east Kalimantan, on Maratua, Pulau Laut and Kakaban and in the Balambangan islands off the eastern Borneo coast. Others are reported, widely scattered, from Halmahera through the southern Moluccas, along both sides of Sape straits dividing Flores and Sumbawa; on Lombok, Lembata, Pantar, Adonara, Sumba, Ndao and Roti; and near Sulamu in western Timor. In Sabah, boat-nomadic and formerly Bajau laut are present in the southeastern Semporna district, while Sulu-related groups are found in the Philippines in small numbers from Zamboanga through the Tapul, western Tawi-tawi, and Sibutu island groups, with major concentration in the Bilatan islands, near Bongao, Sanga-sanga and Sitangkai.
The Sama-Bajau Language

Language is more than just a tool for communication. It is often a key to understanding their relation to other cultures and other peoples. A person’s language is an integral part of his identity. The Bajau are a culturally and linguistically diverse people living in the southern Philippines, eastern Indonesia and Sabah, Malaysia. The Bajaus speak a Malayo-Polynesian language which they themselves call ‘Sama’. The ‘Sama’ language is spoken in the Philippines and Malaysia.

The Bajau language, as it is spoken in Sabah, is divided into a number of divergent, though mutually intelligible dialects. The strongest dialectic division separates the language spoken by the Bajau of the west coast from the host of dialects spoken on the east coast. West coast Sama, the language spoken from Papar to Kudat, is subdivided into regional varieties, each the product of years of local isolation. East coast Sama is divided much more sharply into dialects which, for the most part, were brought already formed by immigrants coming to Sabah. From various islands of the Sulu archipelago. Many, like Sama Ubian, Sama Simunul and Sama Sibutu, are named after the Philippine island from which they derive. A few, like Sama Kubung spoken by long-time these Sama dialects are divergent enough as practically to constitute separate languages in their own right.

The Bajau language as spoken along the west coast of Sabah belongs to the same general language group as does the Bajau language spoken on the eastern side of the state. The west coast Bajau, too, sometimes refer to themselves and their language as Sama. But the fact that their language is now quite different from that spoken on the east coast or in the southern Philippines indicates that they have been in Sabah for a much longer time.

Hence, the Bajau language spoken all along the east coast areas of Sabah are very closely related to the southern Samal dialects of the Sama language groups of the southern Philippines. Some have lived in Sabah for several generations, other for only a few months or years, but no great distinctions is found between the speech of these groups and that of the area’s in the Philippines from which
they came. Some of the names by which these east coast Bajau refer to themselves and their language are: Kagayan, Ubian, Laminusa, Bajau Banaran, Bajau Semporna, Bajau darat, Bajau laut, Simunul and Bajau Balangingi. All of these groups are considered to share a common language background, though differences exist between them.

In eastern Indonesia, the Bajau speak what appears to be a single language, characterised by only minor dialectal differences, known as Indonesian Bajau. In the eastern coastal districts spoken, known as central and southern Sama. In Sabah, the two are frequently classed together as east coast Bajau. Both are divided into a variety of local dialects with close links to allied dialects spoken by Samal groups in the neighbouring Sulu archipelago of the Philippines.

A separate language, known as west coast Bajau is spoken in the northern and western coastal districts from Kuala Penyu to Terusan, with some overlapping the east coast Bajau in northern Sabah. Recent linguistic studies show that the boat-nomadic Bajau laut are not a linguistically homogenous population, nor are they linguistically distinct as a group from the shore-based sama-speaking communities present around them. Those living in Semporna and southern Sulu speak southern Sama, while those in western Tawi-tawi and central and northern Sulu speak varieties of central Sama. Except for the division in Sabah between east and west coast Bajau, locally contiguous dialects, whether spoken ashore by settled land-based communities, are usually mutually intelligible, in most areas grading into one another without sharply defined language boundaries.

The list below illustrate the Bajau family resemblances.

The items in the table above shows that all of the languages have similarities including the Fijian language which further clarifies that belong to the Austronesian Proto language family.

**Conclusion**

To conclude, today in Sabah the Bajau peoples are enjoying an earned period of prosperity and importance, whereas in the past, here and elsewhere, they were treated usually as ‘odd man out’, ‘water gypsies’ and other condescending classifications. Initially, the different coastal locations and ecologies seemed to have affected the Bajau to differentiate them into two distinct dialect groups but remained largely mutually intelligible.

We should realized that Bajau language not only been spoken in Sabah but most widely dispersed to Southeast Asia. Hopefully, this preliminary study will unearth some informations about this community. Especially when all this peoples are always referred as maritime community. The close association

Abstract

Social organization theory is emerging as an important conceptual framework for explaining connections between families and their communities. Primary elements of social organization of particular relevance are: social networks, social capital, and community capacity (Mancini, Bowen, & Martin, 2005). This empirical analysis examines three elements of social organization among community residents in the Commonwealth of Virginia. Analyses are based on 769 telephone interviews with a probability sample of adults. The primary measure of social organization is the Community Connections Index (Mancini, Bowen, Martin, & Ware, 2003), a 15-item measure. Based on conceptual grounds these items were organized around three primary social organization concepts: engagement, participation, and community efficacy. Engagement reflects interpersonal action with others, whereas participation reflects involvement with formal organizations; efficacy taps into taking responsibility for and acting in productive ways on behalf of the community. The primary analysis goal was to examine how engagement and participation predict community efficacy. These primary relationships were examined in the context of key moderators: gender, age, education, marital status, income, and location of residence. Six multiple regression analyses were conducted with the social organization measures, one for each moderator variable. On step one of each analysis community efficacy was defined as the criterion variable, with engagement and participation as independent. On the second step the moderator variables were entered, followed by the interactions between each moderator and the primary independent variables (third step). The bivariate relationships between community efficacy and engagement is .592 (p<.001), and between community efficacy and participation it is .655 (p<.001). Engagement and participation correlate .522 (p<.001). These independent variables explain 51.5% of the variance in efficacy. In no instance did the addition of the demographic moderators appreciably change the relationships among these social organization variables, thus indicating model invariance. Commonality analysis indicates that engagement contributes an increase in R Square of .086, above and beyond participation; participation contributes an increase in R Square of .165, above and beyond engagement. Either variable explains 26.4% of the variation in community efficacy. Based on our earlier empirical work, we anticipated that engagement and participation would be substantially related to efficacy, and that these relationships would be independent of a set of moderator variables (Bowen, Mancini, Martin, Ware, & Nelson, 2003). These expectations are supported by the analysis. These results support theoretical assumptions that aspects of involvement in both informal (engagement) and formal (participation) networks have an impact on
an important part of community membership, that is, the sentiment and actions necessary for building the capacity for stronger communities.

MALAYSIAN ETHNICITY: A CRITICAL ANALYSIS ON THE APPLICATION OF THE RATIONAL CHOICE MODEL IN MEASURING ETHNICITY.

Kntayya Mariappan

We may describe as ‘ethnically-salient’ choices, those taking place in situations of action where actors (i) make a choice and (ii) it is presumed that some form of ethnic identification or 'loyalty’ may be expected to guide the choice. Put rather differently, the statements which people make about their intentions or the intentions of others may be taken as indications of the importance they attach to ethnicity, especially when the situation of action poses a conflict between an ethnic and a non-ethnic orientation to action. Two pieces of research on ethnically salient choices are revisited in this paper. The first already published (Banton and Mansoor, 1992) and the second is a study which was designed as a comparison and replication of Banton-Mansoor (Mariappan, 1996).

This paper has three parts. In the first part we briefly recapitulate the argument of the Banton-Mansoor paper. In their paper the empirical data were statements (made in questionnaire responses) by Chinese and Malay Malaysians about how they judged "Husin Ali", a hypothetical actor, would be likely to act. Husin Ali is presented in the questionnaire as a 'typical Malay" and respondents are asked to indicate how he might act in a number of hypothetical situations (described below). In the second part we present the findings of a replication of this study in which Malay and Chinese Malaysians make judgements about how Tan Seng would be likely to act. In the second study Husin Ali the 'typical" Malay was replaced by Tan Seng as a 'typical Chinese Malaysian. Malays make judgements about how a typical Malay would act; so do Chinese (the first study). In the Mariappan’s replication study, Malays make judgements about how a typical Chinese would act; and so do Chinese. In the third part of the reflections on both studies, on the strengths and weaknesses of paper, the methodology of the rational choice model employed in these two studies, and on their implications for our understanding of ethnic relations in Malaysia is presented. Here in this paper a conceptualisation - of micro, meso and macro ethnicity based on levels of social structure in which ethnic salience is manifested - is formulated to clarify our understanding of the influence of ethnicity in multiethnic societies like Malaysia.

The Mansoor-Banton Study

The Mansoor-Banton paper has a number of features and makes a number of claims. Although later we will evaluate these claims, we must first make a brief restatement of them. Ethnic boundaries are maintained (or not) by the actions of individuals making choices which indicate the
strength of their ethnic alignment. This can be measured by comparing it with the strength of other alignments such as class or religion, or with individual motivations such as self-interest. Since self-interest may coincide with ethnic alignment the investigator must construct imaginary but plausible situations in which the actor will be seen as facing a choice which can only be resolved by showing favour to one form of alignment rather than another. These were constructed as situations of conflict; the respondents judge how Husin i.e. a representative Malay, would resolve the conflict.

Banton and Mansoor also argue that ‘It is possible that individuals may believe that, while they have a general interest in supporting – or an obligation to support - fellow ethnics, the situation about which they are being asked is an exception to this rule’ (pp. 601). This places a great onus on the task of constructing the imaginary situations. It is theoretically possible that the investigators could construct situations which were all or mainly ‘exceptions’. The evidence then may appear to tell us that actors are (judged) likely to make non-ethnic choices, disguising the generality of ethnic loyalty interests. However the authors tell us that respondents are being asked to judge how a representative Malay will act in situations in which new patterns of behaviour, alternative to ethnic loyalty, are appearing and in which values are changing. Significantly, no evidence is adduced to show that this is the case (i.e. that new patterns are emerging), but the assumption is crucial to the study. Although Husin Ali is frequently described as a representative Malay we are actually told later (Banton, Mansoor 1992 p. 604) that he is a clerk in a multinational engineering firm. This becomes important in judging how Husin Ali will judge status gains and losses in his behaviour. He is not simply representative Malay, he is clerical worker Malay. We are also reminded that respondents were residents of Petaling Jaya, a satellite town of Kuala Lumpur with its own socio-ethnic profile (i.e. urban, proportionally more Chinese than in other parts of the country), different, let us say, from Sabah to which the findings would not be applicable. However, another assumption is that more of Malaysia is becoming like Petaling Jaya i.e. urban with a certain fluidity in social relations.

The findings are presented by the authors as relevant to what, citing Allport, they call "pluralistic ignorance" (Allport, 1924; Banton, 1986). Malays and Chinese are judging how Husin Ali will act and it is entirely possible that their judgements will differ significantly. To the extent that they do differ, this illustrates a situation which may appear in many inter-ethnic social settings, that is a mis-judgement by group A members of how Group B members will act. It seems that the Malays judgements are taken as a kind of gold standard. The Malays are presumed to know their Husin Ali’s choice of action at any situations of inter-ethnic settings. Of course the gold standard judgement runs into difficulties if the Malays split something like 50/50. Which half are right? In
fact the authors acknowledge in discussion that group A members may be ignorant of how other group A members (their own group) will act, a significant free rider to the gold standard concept. Finally we should note that the whole conceptualisation of their study is couched within the framework of "rational choice theory" (Banton, 1987) applied to ethnic relations. Actors are assumed to make choices even if in some circumstances their choices are constrained. The actor will act to maximise his or her gain and the gains may be of different kinds - for example, of material self-interest or a gain in status. Acting out of ‘loyalty’ to ones ethnic group is a choice, a course that may be chosen in contrast to other gains. Presumably ethnic loyalty is chosen where the rewards of this outweigh the possible gains in self-interest of other kinds as cited. In the Banton-Mansoor paper the authors look at the responses of Malay males and females. The (male and female) respondents judge not only how Husin Ali will act but also how Husin Ali’s mother will act. This allows them to test whether men make different judgements (of Husin Ali) from women, and whether the respondents see an older female ‘representative Malay’ as acting differently. The imaginary situations purport to pit ethnic loyalty against material self-interest, status gain interest, and personal obligation. The actual findings were set against the intuitive expectations of the observers and in discussion they speculate about the reasons for the judgements made. Although other questions are alluded to, responses to only three are reported in detail. To simplify the comparison with the replication we shall confine ourselves to all respondents’ view of the key hypothetical actor, setting aside the male/female comparison and the judgements about the actor’s mother.

The hypothetical questions to which they responded are as follows:

(i) The shop situation
   *Husin Ali has been patronising Mr. Ah Kow's grocery shop, noted for its cheapness and nearest to his house. Husin Ali has been informed that in a week's time, Ahmad will be opening a second grocery shop in his neighbourhood. Where will Husin Ali go?*
   (a) Ahmad's shop  (b) Ah Kow's shop  (c) other

(ii) The trip to the zoo situation
   *Husin Ali is going to take his children to the zoo this coming Sunday. Husin Ali's son has been pestering his father to take along one of his friends on this trip. Whom will Husin Ali suggest to his son to take along on this trip?*
   (a) Ah Seng, a doctor's son  (b) whose mother works as a housemaid  (c) other

(iii) The boss at work situation
   *Mr. Tay, a mechanical engineer who graduated from Oxford, has been the head of Husin Ah's Mechanical department for the past three years. A Malay group within his department is trying to replace his boss with a Malay candidate. Will Husin Ali support his boss?*
   (a) yes  (b) no  (c) other
In a clash of self-interest and ethnic loyalty, of status gain and ethnic loyalty, and of personal obligation and ethnic loyalty, Malay and Chinese males judged Husin Ali as in Table 1 below.

Table 1: Percentages of respondents judging Husin Ali would act out of ‘ethnic loyalty’

(N = 339)

Banton-Mansoor also report that in three other measures of ethnic loyalty versus material self-interest, a clear majority of Malays thought Husin Ali would act out of material self-interest. The evidence is therefore ‘mixed’. Of the three measures in the table above, one shows a clear majority of Malays judging in favour of ethnic loyalty (the trip to the zoo) and in another almost half (the choice of shop). Nonetheless the authors conclude that the findings ‘offer support for the view that economic development in Malaysia has been giving rise to situations in which Malay-Chinese interactions are governed in whole or in part by non-ethnic norms...’(pp. 612).

**The Second Study**

How would a representative Chinese, choose to act in situations of conflict of interest and loyalty? The second study reported here for the first time, was designed as a kind of replication of the Mansoor-Banton study. It was a replication in the sense that Malay and Chinese respondents were asked the same sort of questions as were asked in the first study. This was also in the expectation that judgements of likely action in imaginary situations, constructed as conflicts of interest, would provide a guide as to how Malaysian actors might resolve these conflicts. The choices were seen as being between an orientation to ethnic loyalty as against other alignments or motives. The 318 respondents were divided between Malays and Chinese, male and female. There were some small changes in wording but the principal difference in the questions was that respondents were asked to judge the likely behaviour of Tan Seng, a representative Chinese rather than Husin Ali, a representative Malay. And whereas Mansoor's sample was drawn from the general public in Petaling Jaya, Mariappan's sample was drawn from a list of off-campus students enrolled in University of Science, Malaysia (in Penang) in the year 1992. Using the stratified random sampling method, respondents representing both the Malays and Chinese groups were selected for the second
study. This sample of part-time working students was geographically spread and cannot be said to reflect the social characteristics of a single area (Petaling Jaya) as Mansoor's did. Of 500 questionnaires distributed, 318 were returned completed. Since Tan Seng was the hypothetical actor it would suggest that in the second study we should regard the Chinese responses as the gold standard. The Chinese, we assume, know their Tan Sengs as the Malays know their Husin Alis.

In Table 2 the findings of the second study is presented with respect to the same three questions as Mansoor-Banton present in their study. The following are the questions:\(^1\):

1. *About the low cost and convenience of a Malay owned shop as against ‘loyalty’ to Tan Seng’s co-ethnic, a Chinese shopkeeper (ethnic loyalty versus material self interest).*

2. *About the choice of a higher status Malay child to join a trip to the zoo, as against a co-ethnic Chinese) child (ethnic loyalty versus status gain).*

3. *About the choice to support a potential new boss who is a co-ethnic, as against a sense of obligation to an existing boss who is not (ethnic loyalty versus personal obligation).*

| Table 2: Percentages of respondents judging Tan Seng would act out of ‘ethnic loyalty’ |
|---------------------------------|----------------|----------------|
|                                 | Chinese | Malays |
| As against material self interest (shop) | 14 | 28 |
| As against status gain (zoo) | 66 | 57 |
| Against personal obligation (boss) | 25 | 32 |

(N= 318)

To simplify the discussion I have confined my selves to the male respondents and to the responses to how Tan Seng would act, rather than including Tan Seng’s mother. In two of the instances, status gain and personal obligation, the pattern of Chinese judgements about Tan Seng is similar to that shown in Malay judgements about Husin Ali. A clear majority of Chinese in the choice of friend in the trip to the zoo makes "ethnic loyalty" judgements about Tan Seng; they think he will want his child to invite the co-ethnic on the trip; as did the Malays about Husin Ali. Similarly where Tan Seng’s "ethnic loyalty" is tested against his personal obligation to the (Malay) boss whom he knows, only a small minority (one quarter) think Tan Seng will act out of "ethnic loyalty"; this is similar to the Malay pattern with respect to Husin Ali.
In the case of material self interest, as expressed by the material advantages of shopping with a non-Chinese merchant, very few Chinese think Tan Seng Will act out of ethnic loyalty (i.e. choose his co-ethnic shopkeeper); only 14% thought so compared with 47% of Malays who made the parallel judgement about Husin Ali.

The replication differs however in suggesting that Malays overestimate Chinese ethnic loyalty in two out of the three cases; the reverse was the case with Chinese who underestimate Malay ethnic loyalty in two out of three cases. Malays underestimate Chinese "ethnic loyalty" only in the case of the child and the trip to the zoo. Chinese underestimate Malay "ethnic loyalty" in the zoo trip case and in the case of the choice of shop to patronise when a co-ethnic moves into a shop nearby.

Let us deal first with the two cases where Husin Ali and Tan Seng are judged by their respective co-ethnics - to be likely to behave similarly. In the case of taking children to the zoo a majority (77%) of Malays believe that Husin Ali would encourage his child to take along the co-ethnic child - what Mansoor-Banton would designate as an "ethnic loyalty" choice. Since all the circumstances are specifically designed to present a kind of dilemma - a conflict of interests - we should also observe the opposite side of the same coin, that Husin Ali is expected, by most, to eschew the possibility of the status gain of taking the non-co-ethnic but high status Chinese doctor's son. Similarly, Tan Seng is expected by most (66%) to make the co-ethnic choice, portrayed as the choice in favour of "ethnic loyalty". He too eschews the alternative status gain of taking the high status Malay child. Both cases could be taken to indicate a kind of ethnic chauvinism in which the representative Malay/Chinese discourages his child from bringing along a non co-ethnic. Both may be seen as unwilling to encourage cross ethnic friendships in their children. On the other hand it is possible to argue that the alternative status gain is relatively weak how much is Husin Ali really likely to gain by taking the child of the (Chinese) doctor; or how much is Tan Seng really likely to gain by taking the child of the (Malay) doctor? If the term "community" in the phrase ethnic communities means what it commonly does, then it suggests that status gains will be largely calculated within the group which the individual sees as the relevant reference group. We could only see a "status-gain" choice as genuinely being so if we could be sure that Tan Seng or Husin Ali would see it as such, within a wider reference group. Of course if the hypothetical actor declines the offer of a status reward because he doesn't actually see it as a reward at all (i.e. because his status orientations are within his group) it would fit with the idea that this is an "ethnic" choice. But the reason would be NOT that the actor gives greater weight to ethnic loyalty than a status gain but that the status gain is no gain at all. Furthermore although sociological literature tells us that people are frequently motivated by status it also tells us of circumstances in which the search for
status gains are seen as unworthy. If the status gain is weak, or irrelevant, or uncertain or even unbecoming it may also be the case that Husin Ali and Tan Seng are seen as weighing this against the inconveniences likely to occur when coping with a possibly troublesome cross-ethnic relationship intrudes into a simple day out. Some of these alternative explanations could be viewed as adding up to something like ethnic loyalty. But our putative accounts certainly give the choices a different set of connotations from those evoked by the phrase "ethnic loyalty". The status gain, in our alternatives, is seen as weak, nonexistent or unworthy qua status gain, rather than simply in stark opposition to the loyalty choice; similarly what has been portrayed as ethnic loyalty is seen in our account as something much less grand - a matter of convenience chosen against a not very tempting alternative.

Turning to the second area where Tan Seng and Husin Ali behave similarly the display of personal obligation to the non co-ethnic work boss - there are equally alternative interpretations which may compete with the view that this choice is a rank eschewing of ethnic loyalty. The most likely account in both cases is that Malays/Chinese would view maneuvering in the workplace to oust a boss "simply" because he is not Malay/Chinese as dangerous or too crass a pursuit of pure ethnic chauvinism to attract a choice. Both Malay and Chinese respondents may well be aware of situations, known to them personally or by public accounts, where something similar to this has actually happened. Many of them would certainly be aware of government policy to designed to see a greater number of Malays in this kind of "boss" position. It seems likely that respondents would see it as highly controversial territory. Their inner sentiments may indeed be "chauvinistic" but they hesitate to make them implicit in this kind of circumstance. It is possible that, even in filling out an impersonal questionnaire, respondents are guided to some extent by an albeit weak form of public universalism which causes them to hesitate about expressing frankly chauvinistic attitudes. Again this is an explanation which differs significantly from the implication that workplace loyalties which cross ethnic fines are both becoming more common and are evidenced by the answers to this question.

This leaves the final case where the Malay and the Chinese actors appear to make different choices - at least the proportions in the loyalty direction are quite different. A possible explanation for this is that for Chinese the choice is simpler. For them it may be seen as a simple case of convenience and low cost. For the Malay the calculation has to include the preference for Muslim-appropriate food which weighs with them against mere convenience and (lower) cost. It certainly seems likely that a choice, for Malays, to shop at a Muslim-operated store where it becomes available, would be less controversial than an attempt to oust a workplace boss on ethnic grounds. The gains for
Chinese in choosing a Chinese operated store, against the advantages of a Malay store which they have to date patronised, might well be less.

There is certainly support in both studies for the expectation that the two ethnic groups may systematically miscalculate the judgements of the other, evidence that is for pluralistic ignorance. But taking the three questions upon which have focused, and setting aside for the moment the deviant cases, the 'Ignorance" is in different directions: the Chinese underestimate Malay ethnic loyalty, the Malays overestimate Chinese ethnic loyalty. The Mansoor-Banton interpretation, of the Chinese underestimate of Husin Ali's regard for ethnic loyalty, is that Chinese may project their commercial or universalistic attitudes on to the Malays. This seems implausible in a society where ethnic salience is high and in which groups characterise each other in systematic ways. It is hard to imagine that the Chinese would stand back and say surely they would be just like us". And to say that 'Just Eke us" would mean "as economically calculating as us" is simply to accept one stereotype of the Chinese themselves. It is no easier to interpret the Malay overestimation of Chinese ethnic loyalty. It would of course fit with a Malay perception of Chinese as "sticking together", a characterisation which majority groups quite frequently hold of minorities, especially "successful" minorities. We may at least observe that it is the majority group who overestimate the "ethnic loyalty" of the minority, and the minority group who do precisely the reverse. In a society where there is a high degree of ethnic salience (and, we may suggest, "everyone knows it") and at the same time a certain disapproval of ethnic chauvinism too blatantly pursued, it would be understandable if a majority attributed it to a minority whilst the minority hesitated to do the same about the majority. We will return at the end to the question of optimistic and pessimistic scenarios, but one point is worth noting here. The Mansoor-Banton conclusions are broadly optimistic. They also imply that uncovering pluralistic ignorance can be relevant to policy and practice when it can be shown that group A's fears about Group B are ill-founded. This hardly fits the "Husin Ali" case. Far from being able to reveal (to the Chinese) that Husin Ali is not such a "bad" (particularistic fellow after all the news for Chinese is that Husin Ali is more guided by ethnic particularism than they imagined - or were willing to admit.

Discussion.

Having presented some of the findings of the comparison/replication and contrasted them with the Mansoor-Banton evidence and interpretations we now turn to more general discussion of theory, method and the interpretation of ethnic relations in Malaysia.
The first and most general point is that a number of explanations of the patterns displayed in the responses of all respondents are possible and this for the overwhelming reason that, in the data themselves, there is no evidence for any of them. Put bluntly, we simply do not know why the respondents made the judgements they made about Husin Ali and Tan Seng, because we did not ask them. Even if we had we would have been subject to all the cautions necessary in interpreting the reasons people give for their "actions". In the absence of evidence the only criterion is one of plausibility. In this sense it is not true that "any" explanation is equally likely because some possible explanations would be utterly implausible - to anyone who knows anything generally about how people make judgements, or to anyone who knows anything about how Malays and Chinese are likely to make judgements. But our proffered accounts are at least as plausible as those of Mansoor-Banton. If this is so it is bound to cast doubt on the conclusions drawn about ethnic loyalty, its strength and weakness both absolutely and relative to other alignments and motives. This is also to raise doubts about whether the imaginary situations are really the tests which they are purported to be by Mansoor-Banton i.e. of "straight" choices between ethnic loyalty and other alignments or motivations.

The second point is not about the interpretation of the choices but about the attempt to make conclusions from them to the general state of ethnic relations in Malaysia. This is where the Mansoor-Banton assumption - that there is a growing number of situations of relative fluidity in which non-ethnic choices become more likely - is such a crucial one. There is no evidence presented from these data that this is the case - in the very nature of the hypothetical data there could not be such evidence. The only evidence of an increase in situations of fluidity as understood here must come from beyond the study (or from different data from the same study) and none is presented. To assess inter-ethnic situations of action would require evidence from a wide variety of social contexts in Malaysian life, among them educational institutions, neighbourhoods, work life and private social life. We would not only need to assess the extent to which inter-ethnic social transactions take place but also the quality of them and the context of them.

This suggests that the constructed evidence (based on hypothetical questions in a questionnaire) of the kind found in these two studies needs to be integrated with the evidence and analysis arising from observational studies. In the space of this article we can only do this on a small scale by way of illustration. We can take evidence from a study of trade unionism in Malaysia (Ackerman 1986). In this study it is suggested that trade union leaders frequently seek to persuade their members to follow a kind of co-worker solidarity, even a kind of class conscious strategy. This is not seen as a class strategy of a "revolutionary" kind - trade unionism in Malaysia is highly constrained to follow
a collaborative model - but at least a pursuit of the shared interests of workers in the shape of fair pay and conditions. The author of the article contends that even this modest attempt at class loyalty is continually subverted by pressures from "above" and "below". From below members commonly identify their interests in ethnic terms - a gain for an Indian worker comes via a gain for all Indian workers - both because of the general strength of ethnic identifications and because the circumstances of political and economic life in a macro-sense in Malaysia are highly structured by ethnicity. From "above" political and administrative decisions both within government and the political parties are profoundly shaped by ethnic blocs and the ethnic phrasing of interests. The pressures from above and below effectively subvert any attempts by union leaders to transcend ethnic lines. The implication is that even if workers wanted to escape the ethnic definition of their interests they and their leaders find it extremely difficult to do so.

The study of trade unions cited here was based on observation of actual trade union activities. Action is observed in its real and actual context, rather than in a hypothetical construction. It is our contention that we can only learn from the responses to 'imaginary" situations if two conditions are met: a. the imaginary situations are sufficiently realistic to provide a test of what they claim to test and b. the interpretation of them is constantly set against explanations rooted in observation of actual social structures and contexts of action. If our general sociology of ethnic relations in Malaysia tells us that action is highly structured by ethnicity, then responses which appear to show something contrary to this are bound to be met with great caution. 'Me doubts about the Mansoor-Banton interpretations are two in kind. First are the doubts about whether the imaginary situations really test what they claim to test. Out accounts show that it is just as plausible to interpret them in ways other than a stark opposition of something called "ethnic loyalty" with other alignments and motives. Second are the doubts about whether the imaginary situations are realistic and describe situations which occur with any frequency in everyday Malaysia of the 1990s. To give an extreme example it would be interesting but not so instructive to ask about Tan Seng's inclination to shop at a Malay shop if 99% of Tan Sengs lived nowhere near a Malay owned shop. A further difficulty with the Mansoor-Banton interpretation lies in the implication of changing patterns towards one in which non-ethnic choices become more likely. The difficulty is that in their presentation we have no way of comparing the Husin Ali choices with possible earlier ones. What, in other words, would have Husin Ali (or Tan Seng) done in 1940, 1950, 1957, 1969, 1980, or 1987? Again the conclusion must be that non-observational data (i.e. hypothetical questionnaire data) must be closely integrated with observational data deriving from the study of real structures and processes in Malaysian society over a period of time.
Optimism and cautious optimism and the reasons for them.

If it is possible to harbour these doubts about the Banton-Mansoor interpretations of the data, it becomes *ipso facto* possible to have doubts about any conclusions drawn from them about actual social and ethnic relations in Malaysia today. Their general conclusion is "optimistic", even if it is only expressed (see above) in a single sentence. (This optimistic stance is adopted more generally in Mansoor’s doctorate, 1992). A fuller statement of the optimistic scenario might go something like this. Urbanisation, modernisation and the emergence of Malaysia as a success story of capitalist expansion in South East Asia has transformed the social contexts in which people live. In particular Malays and Chinese have, to an increasing degree, found themselves cheek by jowl in the Petaling Jaya of Malaysian society, at very least in the peninsular regions. As they come into contact “pure” ethnic loyalties are bound to be compromised and personal contacts are established across ethnic boundaries. A kind of non-ethnic pragmatism grows in the interstices of Malaysian society and ever more occasions are met when Husin Ali sees no sense, little sense, or less sense in pursuing lines of action which correspond only with ethnic loyalty. . There is some plausibility in this projected account.

But there is another account, with which the above is not utterly irreconcilable, but which makes significantly different emphases. Just as contact can been as sociologically “healthy” it may also been seen as perilous. Colonial Malaya prevented general ethnic conflict in at least two ways. As long as the British remained as masters, neither of the two main ethnic groups, Malays and Chinese, wielded power over each other. Rather both were subject to British colonial power. Equally British colonial arrangements largely kept Malays and Chinese (and Indians) apart; the Malays as rice cultivators and in other agricultural pursuits in rural enclaves; the Chinese as tin-workers and in business and commerce; the Indians as rubber plantation workers. It was not so much a case of divide and rule, as of separate and rule. This was not a recipe for an integrated multi-ethnic society but it was a recipe for a kind of order, colonial style (breached of course on some notable occasions, including the interruption occasioned by Japanese rule). The coming of independence ended the first of these conditions and paved the way for the ending of the second. Increasingly Malays wielded power over other ethnic groups in Malaysian society which, for the Malays, was much predicated on the privileges of the Bumiputera, the "sons of the soil". The combination of modernisation, urban growth, and the intended results of the New Economic Policy brought all ethnic groups into greater contact with each other but by no means under circumstances guaranteed to make these contacts integrative and harmonious. Indeed a model quite contrary to the implicit Mansoor-Banton model is available to us, one in which antagonisms and ethnic 'loyalties' are very much sharpened under conditions of competition rather than under conditions of paternalistic rule
(Vann Woodward 1971, Van Den Berghe 1967). This is especially so if the preconditions of a new period of competition predispose competitors to see the struggle for power and scarce resources in group (ethnic) rather than individual terms - very much the case, one could argue, in Malaysia. The Bumiputera premise of the Malays predisposes them to see other groups’ advantages as illegitimate; the citizenship status and aspirations of the non-Malays predisposes them to see Malay privilege, entrenched in the Constitution and in the New Economic Policy, as unjust. Political party organisation, the macro-relevance of ethnic group membership in the state of Malaysia, and religious and cultural differences, conspire to make ethnicity an inescapable fact of Malaysian life. It is also a fact of Malaysian life which is frequently tinged (at very least) with bitterness, suspicion and resentment. Only the precarious compromises of the political structure and a tight system of control of both generalised political dissent and overt ethnic antagonism keep the potential for serious conflict in check. As Horowitz has so eloquently and cogently argued, it is a mixture of some key features of the political system and demography with some good luck and some good sense that has enabled Malaysia to avoid the kind of violence witnessed over two decades in Sri Lanka (Horowitz, 1989).

**Micro, meso and macro ethnicity.**

There has never been - and it is difficult to see how there could be - a satisfactory answer to the questions "what are good ethnic relations?" A number of models have been espoused from a liberal model of free and equal citizenship in a mobile and fluid society in which ethnic attachments matter less and less (both *de jure and de facto*) to a model of ethnic autonomies in a multi-ethnic state in which difference is acknowledged, respected and even concretised in a federal structure. (The Mansoor-Banton model tends towards the first of these). At least we could probably agree that most (but not any) systems which avoid the kind of entrenched violence of Sri Lanka are to be welcomed. If Horowitz is right in suggesting that the immediately pre-independence prognosis in Malaysia was more ominous than that in Sri Lanka, then the avoidance in Malaysia of the Sri Lankan scenario is a success story indeed. However the reasons adduced for this by Horowitz differ in major respects from the Mansoor-Banton account (i.e. Horowitz's emphasis on timing, luck, demography, and specific political arrangements rather than the soothing effects of social contacts and pragmatic attitudes).

Part of the difficulty lies in a tendency to neglect distinctions between the levels at which ethnic identities, loyalties and strategies are articulated. We may refer to these levels as the micro, the meso and macro. The terms are deployed here to signify the levels of social structure at which ethnic salience is expressed and organised. We are accustomed to the well-grounded argument that *individuals* have a sense of identity at different levels - as Auckland businessman, as New
Zealander, as a man or woman of the South Pacific, as Maori or as Ngati Porou. We should be equally conscious of the levels of social structure at which ethnic salience may be articulated. The concepts of levels of individual identity indicate a view which places the actor at the centre of things. The concept of levels of social structure places at the centre the very nature, shape and Organisation of the social contexts in which ethnicity takes on relevance. The micro level of social life is face to face life, lived out in the circle of family friends and acquaintances. The meso social life is the world of social institutions, in the modern and modernising society the world of work, primary secondary and higher education, and the world of associational memberships of all kinds - in the interstices of the meso social world, face to face micro social worlds of a rather different order are also found. The macro social world is the grand stage of state political structures and of economic Organisation within and beyond the boundaries of the nation state, frequently beyond the immediate purview of the individual - he or she knows of this world (more or less perfectly, more or less dimly) but does not live in it in the face to face sense, despite the fact that his or her life is profoundly shaped by the tendencies of this macro-world.

If there are micro, meso, and macro structures, there can be found, in societies with even a modicum of ethnic salience, micro, meso and macro ethnicity. If we apply the model briefly to Malaysia it would unfold something like this: Micro ethnicity is to be found and assessed in an analysis of the degree, nature and quality of ethnic salience in kinship arrangements, "private" social life and the daily interchanges often to be found in neighbourhoods. It is a face to face world in which people live out their family lives, meet and talk, make friendships and enemies, worry and relax. It is observed through an examination of the degree to which people of different ethnic groups - Malay, Chinese, Indian and others marry, attend each others weddings, eat and sleep together and walk hand in hand or side by side in the local parks and streets. Meso ethnicity is to be found and assessed in an analysis of occupational educational and associational structures, of the salience of ethnicity for Malay Chinese and Indian workers, students, teachers, bureaucrats and entrepreneurs, even worshippers, travellers and consumers. Macro ethnicity is to be found and assessed in the salience of ethnicity in citizenship, legal statuses and the grand structures of political and economic life in the nation-state of Malaysia beyond the control of everyday life.

If we are to assess ethnic salience we must assess it at all three levels and we must analyse the relationship between salience at each of the levels. Where micro ethnicity is weakened it may have profound effects; in Hawaii, it has been persuasively argued, the absence of a prohibition on intermarriage led to a complexity of ethnic identities and the disappearance of many which created a degree of peace not found in any other societies (Lind, 1974 Adams 1933).
weakening of micro-ethnic salience in 19th century Hawaii the overwhelmingly critical factor in creating the ethnic shape which 20th century Hawaii eventually assumed? Certainly it would probably be absurd to ask most modern Hawaiian islanders any equivalent of the Husin Ali or Tan Seng zoo visit question. Most would almost certainly laugh aloud. By contrast the breaching of micro ethnic exclusiveness in Yugoslavia through Serbian/Croatian intermarriage was not enough to prevent the present bloodshed. Where external political conditions are unfavourable the softening of ethnic boundaries in micro-social spheres may not be sufficient protection against severe ethnic conflict. And in Indianola Mississippi in 1938 it would have been almost inconceivable to even ask questions about inter-ethnic friends and neighbours and intermarriage. (Dollard, 1949) Where meso ethnicity remains highly salient we know that it may lead to bitter labour market competition and exclusion; a thoroughgoing ethnic division of labour in South Africa was only sustained by coercion, in the United States by terror, discrimination and the whole apparatus of white supremacy. In both those societies education has long been a segregated and, later, contested sphere. Macro-ethnicity is very much in the hands of the state in the determination of citizenship status, legal rights and in the power of the state to control access to all manner of social and economic goods. If these are organised ethnically they have the power to manage the form the balance of power in, and the tone of ethnic relations not only in the macro sphere itself, but also in the meso and micro spheres.

The sociological theoretical exploration of micro, meso and macro ethnicity may enable us to make new sense of extant accounts of many societies. But it may help in the more limited task at present - of assessing the interpretations of ethnic salience in Malaysia discussed in this paper. Many of the Mansoor-Banton and the replication Mariappan "choice" situations refer to micro ethnicity and the face to face manifestations of meso ethnicity. From these we should not - without due caution - be making inferences about macro ethnicity in Malaysia. If the findings are about one sphere only they can best tell us something about that sphere. A comprehensive sociology of ethnic relations in any given society requires an understanding of micro, meso and macro ethnicity and of the relationships between them. Put at its simplest Tan Seng may well shop at Jafaar's shop; it doesn't stop him from seeing Jafaar's ethnic group in its macro representation treating him, Tan Seng, with manifest unjustness. Sociologists cannot conceive a category "ethnicity" and measure it one sphere - the micro world or the face to face meso world - and draw conclusions from this for ethnicity in that society, in its totality.
Choice and structure; constructed responses and observation; micro meso and macro ethnicity.

An approach which emphasises individual calculations, a rational choice theory, is one-sided. Of course, individuals make choices. Even where constraints are considerable, choices are made within, or taking account of the constraints. And of course, individual behaviour can be viewed as a pursuit of net advantage. But how much further does this takes us? The real difficulty is not in understanding that choices are made but in understanding how they are made, and in understanding the social contexts in which they are made. Our difficulties are all the greater if we place too great a reliance not only on choices but on choices made in hypothetical situations in questionnaire responses. Sociology is concerned with understanding behaviour in its social contexts, and with charting and understanding the social contexts themselves. We gain little, if anything, by saying that individuals act to maximise their advantage. The difficult part is identifying how individuals view their advantage and how interests and rewards are structured in the society which the individuals inhabit. We need to guard against reading too much into an indication of where Husin Ali buys his rice.

Bibliography

---

1 Hypothetical Questions

(i) **The shop situation**
Tan Seng has been patronising Jaafar's shop - noted for its cheapness and nearest to this house. Tan Seng has been informed that in a week's time, Cheng San will be opening a second grocery shop in his neighbourhood. Where will Tan Seng go?
(a) Cheng San's shop (b) Jaafar's shop (c) others

(ii) **The trip to the zoo situation**
Tan Seng is going to take his children to the zoo this coming Sunday. Tan Seng's son has been pestering his father to take along one of his friends on this trip. Whom would Tan Seng suggest to this son to take along on this trip?
(a) Nasir, a doctor's son (b) Ah Chuan whose mother works as a housemaid (c) others

(iii) **The boss at work situation**
Mr. Rashid, a mechanical engineer who graduated from Oxford, has been the head of Tan Seng's Mechanical department for the past three years. A Chinese group within his department is trying to replace his boss with a Chinese candidate. Will Tan Seng support his boss?
(a) yes (b) no (c) other

The Changing Faces of Female Inmates: 
Incarceration Trends and Co-Occurring Issues

Abstract

The literature on female prisoners suggests that the incarceration of females has increased drastically in the United States since the 1980s (Schmalleger, 2006). Further the literature notes that this increase is more dramatic than that of their male counterpart as the increase of female inmates has increased six times more since 1980. The basic profile of female inmates has been described in the literature as disproportionately minority, undereducated, usually a victim of substance use and abuse, violence and experiencing health issues (Bureau of Justice Statistics, 2001). But, is the aforementioned profile accurate for rural incarcerated females? In a study of female offenders who were incarcerated in a medium secure correctional facility, it was discovered that the national profile was not applicable. This presentation will focus on the profile of these women and there will be discussion of factors that may have contributed to the changing faces of female prisoners in a rural southern correctional facility. Based on the findings, we offer recommendations for future research and policy considerations.
Rescuing Professionalism

Abstract

What is “professionalism”? Today, it seems that our public discourse is filled with multiple usages of this word. Once, the term indicated social status. Now it is so ubiquitously applied, it is a mere synonym for ‘having some training’ or a ‘feel good’ word akin to ‘approval of’. Yet, ‘professionalism’ is more than an empty phatic utterance or euphemism. It is an important, even essential, normative construct. ‘Professionalism’ is deeply woven in a plethora of human behaviors and expectations that have profound consequences in the areas of public policy, law, ethics, management, organization theory and psychological concerns such as self-esteem and self-image. As such, it deserves a more empirically grounded definition.

This paper discusses a nine year effort by this research group to empirically define, even measure, ‘professionalism’. Essentially, we are concluding that the definition of professionalism is a multifaceted, multivariate and interdisciplinary construct based on environmental and behavioral factors. We also are looking at ways to demonstrate the utility of this concept to different career fields. The literature on professionalism is sparse but several key researchers made an attempt to define and measure it. We have attempted to re-visit these structures and perhaps develop new ones. A major question that arose during this process is: “Has the definition of Professionalism changed since the original research in the late 1960s? Have accepted ethics and human behaviors changed, thus effecting what is seen as ‘professional’?”
Introduction

What is professionalism? Our public discourse, both serious and silly, is filled with multiple usages of this word. Tools are advertised as “professional grade,” vehicles and many other products are “the choice of professionals,” and even drain openers are “professional strength.” Pest exterminators are “qualified professionals” as are administrative assistants, lawn service technicians, house cleaners, firefighters, accountants, lawyers, physicians, house painters, asbestos removers, sales personnel, and it seems, just about every occupation one can think of. Once the term may have indicated a measure of social status but now it seems to be so ubiquitously applied as to be a mere synonym for “having some training” or a “feel good” word akin to “approved of” or even “cool.” Everyone and everything seems to be “professional” in our pop and (dare we say?) “professional” culture.

However, “professionalism” is more than an empty phatic utterance or a marketing euphemism for “strong” or “quality” or “expensive.” It is an important, perhaps even essential, normative construct. As such, it is deeply interwoven with a variety of individual and collective behaviors and expectations. These behaviors and expectations have profound consequences in the areas of public policy, law, ethics, management, organization theory, not to mention for psychological concerns such as self-image and self-esteem. There are, of course, definitions of “professionalism” in a variety of books in a number of fields but these tend to range from the formal to the glib. It is unlikely that a final complete definition of “professionalism” will ever be possible. Nonetheless, we believe that a concept as important and central as this should be as empirically grounded as possible. An empirically grounded term opens the possibility for
substantive research across a large number of disciplines. This paper follows the lead of some earlier research and attempts to empirically refine and measure the concept of professionalism. In addition, it attempts to demonstrate the utility of this approach by applying it to a group of secondary and elementary teachers in order to describe and assess the congruence of their self understanding as professionals with their work environment.

Literature Review

At one time, professionalism was seen as a matter of degree. If members of a profession scored high on a scale, professionalism was said to exist. If they scored low, professionalism was said to be absent. Such was the gist of the conclusions from Hall's (1968) seminal paper, *Professionalization and Bureaucratization*. Drawing from the work of Wilensky (1964), Goode (1957), Gross, (1958), and Scott (1965), Hall defined professionalism as both structural bureaucracy and attitudinal The Structural aspects were: a) The work must be full-time; b) The profession must have a training school; c) There must be a professional association, and, d) The profession must have a published code of ethics. All of these can be measured by looking at the organization.

The attitudinal aspects of professionalism are: a) **Professional orientation** a belief that members may look to the organization for guidance, b) A belief in **service**; a belief that one is serving humanity, c) **Calling**, or the belief that one feels pulled to the profession, d) **Autonomy**, or the belief that one can make professional choices in one’s job, and e) **Self-regulation** or the belief that one controls one’s behaviors. These factors interconnect as the presence of professionals in an organization affects the structure and the structure can affect the professionalism process (Hall, 1968). Hall also concluded
that Autonomy has both structural and attitudinal aspects. Using these factors, Hall developed a Likert scaling procedure to measure the five-attitudinal components (Hall’s Professionalism Scale, 1968), and surveyed people from eleven occupations (N=328), including teachers (n=41). Bureaucratically, professions were categorized under three types of organization (Scott, 1965). The first is autonomous where work is subject to autonomy rather than external or administrative jurisdiction, e.g., medical clinics; the second is heteronomous were the employees are subordinated to an externally derived system, e.g., public schools; and third departmental or a larger department within an organization. Interestingly enough, Hall found that teachers scored high in bureaucracy and low in attitudinal factors. Bureaucratically, teaching is categorized as the second type or heteronomous. Attitudinal measures show teachers scored high on belief in service, and calling, and low on autonomy, self-regulation, and professional orientation. Since Hall assumes an inverse relationship between the degree of structural bureaucracy and professionalism, teaching did not score high on professionalism. Hall also addresses the fact that growing professions will not score well because they have not as yet developed all the necessary components. One can, however, assess the degree of professionalism present through out the growth process.

In 1972, Snizek worked to adapt Halls’ scale (n=50 items) to a shorter version. He used rotated factor matrices to assess the empirical “fit” of Hall’s items in relation to the five theoretical attitudinal components. The result was a shorter version of Hall’s scale and total scale reliability. No other substantial research can be found using Hall’s constructs until 1995. At that time, Kenney and Ramsey wanted to evaluate Hall’s scale in terms of its use in the present dynamic business environment. Using Snizek’s reduced
scale (1972), their factor analysis did not support Hall’s five dimensions. Kennedy and Ramsey conclude that perhaps the scale needs to be applied to an established profession in order to assess its validation. They also concur that perhaps differences in workforce and performance expectations may affect the view and requirements of professionalism. Hall may no longer be appropriate for today’s environment. To extend the literature, we chose the established profession of teaching for our work. Based on Hall’s theoretical views, we rewrote some questions and created others to adapt his categories to the measurement professionalism in teaching.

Our latest analysis was derived from the York College MHK Research Project Survey conducted at an annual orientation meeting for new teachers in all county public schools in York PA. This meeting included master and novice teachers (K-12), along with some administrators and counselors. Completed questionnaires were obtained from 357 individuals with an overall response rate of 90.24%. Ninety-five percent were teachers, 0.3% were administrators, and 2.0% were counselors. Of the teachers 56.6% were novice teachers with less than 5 years classroom experience and 40.9% were at the master level having five or more years classroom experience. Twenty-two and seven tenth % were male and 76% were female. Sixty and one half % hold a BA degree, 33% a MA degree and .6% a Doctorate. Sixty-two% were elementary teachers and 33% were teachers at the secondary level. The entire sample ranged in age from 21 years to 56 years.

Measures

In addition to several standard indicators of demographic attributes, questions included in the survey also provided data relevant to respondents’ work environment,
experiences and attitudes. Detailed information was also collected regarding professionalism, job satisfaction and life satisfaction.

**Professionalism.** The researchers modified Snizek’s (1972) reduced-item Professionalism Scale based on the original questionnaire developed by Hall (1968). Snizek’s 50-item scale was further reduced to 42 items and several of the items were reworded to match a sample represented by teachers.

It was decided that although the number of items was reduced, Hall’s (1968) original factors of professionalism should remain in the current study. Results from an earlier pilot study suggested a reorganization of Hall’s categories (Gaitley, Hooper & Kulbicki, 1999, 2000). Two of Hall’s (1968) categories were combined (calling and service) and the three other categories were measured separately using multiple items for each factor (autonomy, self-regulation, and professional orientation).

For each of the professionalism items, respondents used a Likert scale format from 1 to 4 with 1 being ‘strongly disagree’ to 4 ‘strongly agree’. Respondents also had the option of answering ‘no opinion’ for each of the items.

**Results**

Examination of these data indicate that individuals perceive themselves as professionally oriented (mean = 3.18, sd=.36) and consider themselves to have had a calling for teaching or sought out teaching as a service to humanity (mean=3.02, sd=.35). In other words, generally teachers agreed or strongly agreed that they exhibited professional behavior and that the teaching profession, for them and other teachers, is preferred due to a calling/service towards the field.
However, for self-regulation and autonomy, individuals reported lower means (mean = 2.84, sd = .35 and mean = 2.78, sd = .28, respectively). Individuals tended to answer in the disagree to agree range regarding their ability to be autonomous and self-regulated or be able to control one’s own behavior at work.

Further analyses were conducted to examine the relationships between the four professionalism factors. Interestingly, all four factors are significantly positively correlated with each other; additionally, the highest correlation is \( r = .43 \) (\( p < .01 \)). This implies that although the factors are somewhat related they do not overlap and should be conceptualized as separate factors (Hooper, Kulbicki & Martin, 2003; 2005).

Conclusion

Teachers in our sample were found to be high in behavioral factors, however, employees in schools are still subordinated to an externally derived system that has not changed much over time. This reflects the disconnect between teachers’ perceptions and their environment. Teacher’s perceptions of themselves as professionals are interwoven with these. In short, there remains much ambiguity within the profession, which may account for the degree of stress, cognitive dissonance, teacher burn-out, and other issues.

The results described here are based on samples from suburban Pennsylvania schools. Future research must verify these results on populations of teachers from other geographical regions of the U.S. and from urban and county school systems as well. Additionally, future research should identify whether professionalism differences exist across various career fields, especially those which claim to be professional by having such characteristics as a code of ethics. This type of assessment is advocated by those who believe that empirical research will help to better define what it means to be a
professional and also identify strategies in which educators or supervisors can facilitate the integration of professional norms (Forman & Taylor, 2004).

In thinking about professionalism based on our studies of teachers, and in reading literature and general information on professionalism, our view is that professionalism is most definitely a multifaceted, multidimensional construct. Additionally, professionalism is difficult, but not impossible to measure. Indeed, a “potential barrier to fresh construct validation is the apparent complexity of the [professionalism] construct” (Swailes, 2003). Lack of simplicity and lack of research on the topic of professionalism, however, does not mean that the construct is not important. Especially in today’s environment, professionalism has immediate implications in areas of business, law, medicine, education, and public policy. Furthermore, not only is professionalism an individual difference construct but also a construct that can be thought of as systemic. One could argue that a worker might find it difficult demonstrating professional behaviors or being perceived as a professional if, in fact, the organizational environment and culture is ‘unprofessional’ or the rewards structure ignores facets of professionalism. In law, the “aspirational goal of professionalism is looking more and more like a mandate” (Rizzardi, 2005). Empirical research would also allow for the possibility of identifying those characteristics in which organizations and individuals could be assessed for professionalism, and possibly trained to a level that is proficient. The authors of this paper are confident that almost a decade of work has made a healthy first step towards an empirical clarification of professionalism.

Abstract

In 2006 I was involved in two Royal Melbourne Institute of Technology University Tenders which required me to lecture to mature-age highly-ranked police personnel. The first Tender involved me delivering lectures on ‘Crime Prevention and Anti-Corruption’ to a Zambian Anti-Corruption Commission delegation, and the second Tender involved me developing, coordinating and teaching a thirteen-week course in Advanced Crime Prevention to Victoria Police Instructors at the Victoria Police Academy.

During the initial lecture I realized that the majority of the students in both cohorts had no tertiary education or if they did have it was completed many years ago, and as a result they generally felt apprehensive about their abilities to undertake Advanced Courses in Crime Prevention. Accordingly, I applied Brooksfield’s (1995) ‘critically reflective teacher approach’ which consisted of three essential aspects. At the outset I created a climate that enhances a positive learning environment in which I engaged with students at their level of understanding adapting to police culture and humor whilst learning from their street-level policing experience and motivating them extrinsically and intrinsically. As students became immersed in learning about crime prevention they were encouraged to take ownership of their learning by providing suggestions on the most applicable policing-related aspects of crime prevention that they would like to explore in subsequent lectures. Finally, at the conclusion of each lecture I evaluated my teaching practice by initially seeking feedback from the student cohort and then personally self-reflecting on how I can improve my delivery in the following lectures. The results of the course evaluation indicated that the needs and aspirations of the industry were clearly met by the provision of stimulating industry-relevant learning through a flexible delivery. The complimentary
feedback also played a vital role in me being awarded a Student Centered Teaching Award in 2006.
Abstract

Since the mid 1980s legislators throughout the Western world have enthusiastically sponsored legislation to implement home detention programs in order to alleviate the burgeoning overcrowding crisis in prisons as well as the prohibitive costs of building and sustaining prisons. While the United States has been at the forefront in implementing home detention programs as a means of confinement and control, other Western countries including Australia and United Kingdom have implemented modified versions of home detention programs. Comparative historical analysis of US, Australian and UK studies has found that the overarching goal of home detention programs in these countries has remained the diversion of prison-bound offenders from increasingly costly and hardly-rehabilitative incarceration into less expensive more humane community-based settings. This investigation has further revealed that despite the fact that each of the nation state's social and political climates occasionally change the rigorousness of restrictions and obligations that are imposed on home detainees, there is a considerable variation in the severity of restrictions and obligations that home detention imposes on detainees in the US compared with the UK and Australia. This disparity is predominantly existent in relation to the overall severity of conditions that are imposed on offenders, whether offenders are mandated to contribute to their own supervision fees, the extent that the technology is utilised to track and control offenders, and the maximum duration of the sanction. Diverse restrictions and obligations are imposed on home detainees depending on their geographic location resulting in a distinctively unique sanction experience.
Introduction

Ever since the establishment of communities, some form of social control aimed at curbing undesirable conduct has always existed, so, as Welch (2004:21) suggests, “punishment is as old as civilization itself”. It has also been said that the importance of how society punishes wrongdoers must not be underestimated:

The punishment of criminal offenders is barometer of culture. As it represses undesirable conduct, punishment simultaneously expresses civility. Punishment signifies a society's values, morality, sensibilities and reasoning (Ericson, 1992:xv cited in McMahon, 1992:xv).

Legal codes which have served as official guidelines of society were first established by the imposition of the Code of Hammurabi\(^1\) in 1750 B.C. Babylon. The penalties were usually severe in the form of whipping, mutilation and forced labour (Welch, 2004). Unlike in the past when law-breakers were punished with corporal punishment, today’s society imposes sentences of imprisonment and various community based sanctions. Since the 1950s incarceration has increasingly been found to be unsustainably expensive, decreasing chances of reintegration into society, supporting criminal socialisation, providing opportunities for learning more sophisticated criminal tactics, generating racial discord, and supporting gang violence and sexual assault (Enos, Holman & Carroll, 1999). In a nutshell, imprisonment has not been regarded by criminologists to be an appropriate response to most forms of crime.

In 1970s and 1980s, the overwhelming institutional crowding, the felony probationers’ recidivism rates, and the prohibitive cost of building new jails and prisons led to a ‘politically wise’ introduction of intermediate sanctions (Clear & Hardyman, 1990; Petersilia, 1987). A consensus emerged in the mid 1980s to develop mid-range punishments for offenders for whom imprisonment was unnecessarily severe and traditional probation was inappropriately light (Petersilia, 2000). Hence, ‘sentencing alternatives’ were born which were soon renamed ‘intermediate sanctions’ and, most recently, ‘intermediate punishments’ (Petersilia, 1998; Corbett & Marx, 1992). According to McCarthy (1987:1), intermediate punishments are “sanctions that lie somewhere between imprisonment and routine probation on the continuum of criminal penalties.” A number of programs represent intermediate punishments in the United States; these include intensive probation/parole supervision, home detention, boot camps, day reporting centres, community service, restitution, residential community corrections (or half way houses), and expanded use of traditional and day fines (Petersilia, 2000; Petersilia, Lurigio & Byrne, 1992; Byrne, 1990).

\(^1\) This is well known as ‘eye for an eye, and tooth for a tooth’ principle. The basis for punishment under this code was ‘lex talionis’ meaning the ‘law of retaliation’ which refers to vengeance (Welch, 2004).
During the 1980s these alternative punishments were presented as a panacea, and “state legislators were virtually falling over each other” in an effort to sponsor legislation to implement these programs (Clear & Hardyman, 1990:46-47).

The most prominent intermediate punishment, which pioneered as a stand-alone alternative to imprisonment, is home detention\(^2\) (Schmidt, 1998; Blomberg, Bales & Reed, 1993; Maxfield & Baumer, 1990). Home detention programs vary in terms of degrees of offender control, which can range from evening curfew to detention during all non-working hours to continuous incarceration at home (Rackmill, 1994). These programs principally operate as front-end or back-end alternatives to imprisonment (Tonry, 1998; Heggie, 1992). Offenders are placed onto front-end home detention programs by having their sentences of imprisonment fully suspended and being sentenced to instead serve their time in home detention (Smith, 2001; Heggie, 1999; Tonry, 1998). Alternatively only offenders who had been imprisoned are able to be released early and placed onto a back-end home detention program (Dodgson, Goodwin, Howard, Llewellyn-Thomas, Mortimer, Russell & Weiner, 2001; Heggie, 1999; Tonry, 1998; Church & Dunstan, 1997).

The core condition of home detention programs, which necessitates offenders to remain at home for at least some time during a 24 hour period, is monitored and enhanced by the electronic monitoring technology (Bonta, Rooney & Wallace-Capretta, 1999; Byrne, Lurigio & Baird, 1989). Electronic monitoring is therefore utilised as a tool in conjunction with home detention programs (Carlson, Hess & Orthmann, 1999; Renzema, 1992). At the most basic radio frequency (RF) level, the electronic monitoring technology informs the authorities whether the offender is present or absent at a specified place where he/she is supposed to be (Mair, 2006). The more sophisticated global positioning systems (GPS) electronic monitoring technology can be used to restrict the offender from certain individuals and locations by tracking his/her movements via satellite and pinpointing their actual location (Mair, 2006). Technology encompassing various types of electronic monitoring equipment is designed to increase the accountability of offenders in the community, by enhancing the officer’s ability to supervise offenders (Champion, 1996).

An abundance of research has focused on effectiveness-related issues of specific home detention programs such as its cost, potential net widening effect, and recidivism rate, but much less has specifically investigated how home detention as a sanction varies throughout the world. This paper aims to comparatively analyse the operation of home detention programs in the United States (US), Australia and the United Kingdom (UK). These three nation states were selected because they share a number of significant similarities including the fact that they are all highly developed economies with commonalities in their political and legal systems, a relatively high average standard of living, and, more

\(^2\) Home detention is also referred to as home confinement, house arrest and home incarceration.
importantly, they have all operated home detention programs for a substantial period of time (Crystal, 1997; Hayman, 17.11.06; Ryan, 17.11.06; Kaim-Caudle, 1973).

Through comparative historical analysis of US, Australian and the UK studies of home detention programs this paper will discuss each country’s program/s development; core conditions that are imposed on offenders; the types of offenders that are placed onto the program/s; and the overall trend of the program/s. For the purpose of this study, home detention programs were selected on the basis of the following criteria: those that target adult offenders rather than juveniles; those that are designed to supervise post-trial orders rather than pre-trial releases; those that are actual ‘front-end’ or ‘back-end’ alternatives to imprisonment; and those that apply electronic monitoring as well as human monitoring to the offenders.

The US home detention experience

The first time home detention was used in the US as a properly administered sanction was in St Louis in 1971. This program was small-scale, and it was initially limited to juvenile offenders (Ball, Huff & Lilly, 1988). Despite this initial trial, it was not until the enormous and costly rise in prison populations and technical advances in the early 1980s that this sanction became an actual sentence of the court that has been widely utilised (Whitfield, 2001; Whitfield, 1997).

Florida was the first state to implement a state-wide adult home detention program in 1983. It was developed as a front-end initiative aimed at diverting offenders from prison by imposing on them a variety of stringent order conditions coupled with around-the-clock surveillance. The program’s target population was non-violent felons who would not normally qualify for probation due to their criminal history and current offence (United States General Accounting Office, 1990). The length of the order was determined by court, with a maximum term of two years in the program (United States General Accounting Office, 1990; Blomberg, Waldo & Burcroft, 1987). The Florida home detention program subsequently became one of the best known and largest home detention programs in the US, and therefore, the model for other US states (United States General Accounting Office, 1990; Blomberg, Bales & Reed, 1993; Ball, Huff & Lilly, 1988).

Hailed as a modern solution to ongoing complex correctional problems, the utilisation of home detention programs has expanded rapidly across the US, increasing at rates parallel to the increase in prison populations (Payne & Gainey, 1999). The foremost important factor that contributed to home detention’s popularity was the widespread use of electronic monitoring via RF mechanisms which substantially enhanced offender control (Ball, Huff & Lilly,
In 1988, in the US only 95 offenders were subject to electronic monitoring (Friel, Vaughn & del Carmen, 1987), this number rose to 12,000 in 1990 (Baumer and Mendelsohn, 1992), and to a daily count of 30,000 to 50,000 in 1992 and 1993 (Lilly, 1993). By October 1990 home detention programs coupled with electronic monitoring existed in all fifty states in the US (Renzema, 1992). The largest state users continually include Florida and Texas (Whitfield, 2001). Nowadays, it is estimated that on any one day in the US there are about 100,000 offenders on electronically monitored home detention programs. Yet it must be remembered that this is only 1.7% of the ‘potential market’ and that most practitioners and legislators had believed that home detention would have been applied more widely (Whitfield, 2001).

The most sophisticated electronic monitoring technology GPS entered the American criminal justice in 1997 in Florida. It has predominantly been used to track dangerous sex offenders released early from prisons who are willing to have their movements in specified inclusion and exclusion zones tracked. Since its inception, about 20,000 offenders had been monitored throughout the US (Lilly, 2006; Nellis, 2005a).

“Petersilia noted in 2003 that Florida, New Jersey and Michigan were using this method, and that one of the most important benefits of satellite tracking is the increased protection it offers victims because its use permitted specifying and monitoring zones of exclusion, and it could also use pager or text messages to notify victims when offenders broke perimeter boundaries. RF technology cannot do this” (cited in Lilly, 2006:94).

The cost of GPS monitoring is about $8.50-$9.00 per offender per day compared with about $2.00 for RF monitoring per offender per day (Jannetta, 2006; Padgett, Bales & Blomberg, 2006).

Whilst there is no generic home detention program in the US, there are certain core conditions common to most programs (Rackmill, 1994). Most notably, offenders must reside in a suitable residence which is subject to being searched at any time and their co-residents must sign a contact allowing them to serve their order in that dwelling. Offenders are usually required to remain confined to their residence at all times except when they are performing pre-approved activities. Their compliance with this condition is enhanced by electronic monitoring using RF and more recently GPS technology (Carlson, Hess & Orthmann, 1999). It is also often compulsory for them to have to engage in employment, community work and treatment, and to remain drug and alcohol free (Ansay & Benveneste, 1999; Champion, 1996; Schulz, 1995; Rackmill, 1994; United States General Accounting Office, 1990). A further requirement exists in most jurisdictions of the US, unlike in most of its Western counterparts, that home detainees are required to financially contribute to being on the sanction; for example, they must pay part of their own supervision cost, and in some jurisdictions pay for urinanalysis, breathalyzer or blood specimen tests as
well as make specific victim restitution payments (Gainey, Payne & O'Toole, 2000; Whitfield, 1997; Blomberg, Bales & Reed, 1993; Fulton & Stone, 1992). Most home detention programs operate in a few phases meaning that the severity of control that is imposed on offenders declines gradually depending upon their satisfactory progress with the Order's conditions (Whitfield, 1997; Deschenes, Turner & Petersilia, 1995; Schulz, 1995; Fox, 1987). Offenders can be confined to their homes for periods of up to two years.

As home detention programs aim to ease prison crowding, they specify the 'prison bound offender population' as their target group (Renzema, 1992). These programs mostly focus on general offender populations, and are seldom limited to particular groups of offenders, such as drink-drivers (Schmidt, 1998). The review of research has generally indicated that, up until the introduction of GPS technology, most home detention programs were focused upon non-violent offenders (Payne, Gainey & O'Toole, 2000; Schulz, 1995; Rackmill, 1994; Lilly, Ball, Curry & Smith, 1992; Baumer & Mendelsohn, 1990; Maxfield & Baumer, 1990). For example, the Probation Department of the United States District Court for the Eastern District of New York (1985:2) defines the following general criteria for the selection of offenders for home detention:

House detention should be used very selectively. It should never be used for defendants involved in crimes of violence or crimes using firearms. It would not be suitable for defendants with a history of current heroin or cocaine usage. It would be inappropriate for drug sellers. In general, house detention should not be used with any defendant who could be considered a danger to the community, i.e., one offering a substantial risk of further criminal activity.

However, the introduction of GPS tracking technology in late 1990s has made the unimaginable possible – that is placing higher risk offenders such as sex offenders and perpetrators of domestic violence on home detention. This is because the main benefit of satellite tracking is that it increases victim protection as it enables offenders to be tracked 24 hours per day in real time, and if they break the perimeter boundaries by entering an exclusion zone, victims are immediately notified and corrections officers together with the local law enforcement follow up offender's movements (Nellis, 2005a).

Home detention which utilises GPS technology seems to increasingly be the sentence of choice and it is possible in the foreseeable future that it will exceed the use of home detention which utilises RF technology (Jannetta, 2006; Lilly, 2006). This is because GPS tracking technology is becoming cheaper per unit per day for tracking large offender cohorts, it is becoming more compact (now the size of the unit is a little larger than computer mouse), and it is enabling authorities to see where the offender is and where he/she has been making it possible for them to note unusual or suspicious patterns of movement (Jannetta, 2006). It seems probable that as home detention with electronic monitoring utilising RF technology rapidly increased the number of non-serious and non-violent offenders confined to this sanction in 1990s, so too will home detention
with electronic monitoring using GPS technology enhance the number of serious and violent offenders on the sanction (particularly in back-end programs) in 21st century.

**World-wide proliferation of home detention**

The rapid development of home detention coupled with electronic monitoring technology has not been limited to the US, with the proliferation extending throughout the Western world (Heggie 1999; Johnson 1995; Richards 1991). Similar to the US, other Western countries have also experienced burgeoning prison populations and prohibitive costs of building and sustaining prisons (O’Toole 2002; Bonta, Rooney & Wallace-Capretta 1999; Whitfield 1997; Joutsen & Zvekic 1994; Baumer & Mendelsohn 1990). The late 1980s and early 1990s witnessed a quick spread of pilot home detention programs around the world when numerous countries developed varied models of the sanction designed as responses to specific problems identified within the respective criminal justice systems (Whitfield, 2001).

The first countries that embarked on the utilisation of home detention in the late 1980s were Australia, England and Wales, and Canada. These were soon followed by New Zealand, the Netherlands, Sweden and Scotland in mid-1990s (Dodgson & Mortimer, 2000; Doherty, 1995; New Zealand Department of Corrections, 2000; Whitfield, 1997). Subsequently on the cusp of 21st century Switzerland, France, Germany and Spain joined the growing international trend of confining offenders to their homes as an alternative to incarceration (Lilly & Nellis, 2001). It is interesting to note that whilst many countries around the globe were swift to embrace and trial home detention programs, the number of offenders placed onto these programs has been relatively small as sentencers had been very cautious in applying the sanction (Whitfield, 2001). Nevertheless, a number of countries are still investigating the sanction and showing signs of interest; these include some countries of the Russian Federation, Italy, South Africa, Norway, Denmark, and Ireland (Scottish Executive 2002; Lilly & Nellis, 2001; Prison Reform Trust 1997).

**Australian home detention experience**

Australia was at the forefront in following the American suit in the implementation of home detention programs. The first wave of home detention programs was introduced between late 1980s to early 1990s. In 1987, the South Australian and Queensland governments designed home detention programs as back-end alternatives to incarceration aiming to reduce the spiraling costs of incarceration (South Australian Department of Correctional Services, 2002; Heggie, 1999; South Australian Department of Corrective Services, 1996; Dorey, 1988). The Northern Territory government soon followed in 1988 by specifically setting up home detention to divert the increasing number of predominantly Aboriginal persons serving relatively short periods of incarceration (Challinger, 1994). For
similar reasons, Western Australia launched a home detention program also as a post-prison sentence in 1991 (Community Based Services Directorate, 1999). Like in the other states, it is utilised as an option for release of prisoners who were sentenced to short-term periods of incarceration (Heggie, 1999; Community Based Services Directorate, 1999).

The second wave of the launch of home detention programs in Australia occurred between late 1990s and turn of the century. New South Wales started its own home detention scheme (which is not available on a state-wide basis) in 1997 and the Australian Capital Territory commenced its own program in 2001 (Australian Capital Territory Department of Justice and Community Safety, 2002; Heggie, 1999). In comparison to the other Australian programs, both of these programs are distinctively designed as front-end alternatives to incarceration aiming to divert offenders entirely from serving prison time (Keay, 2000; Whitfield, 1997). The final Australian state to embark on an introduction of a home detention program (which is also not available on a state-wide basis) was Victoria in 2004. Three key reasons for the delayed uptake of this program were that Victoria comparatively has enjoyed a relatively lower incarceration rate compared to its Australian counterparts, it has had other pre-existing alternatives to incarceration, and its civil rights movement had been particularly vocal for many years arguing against the introduction of home detention (Melbourne Centre for Criminological Research and Evaluation for the Corrections Victoria, 2006; Whitfield, 2001). The Victorian program operates both as a front-end and a back-end alternative to custody for non-serious offenders (Henderson, 2006). The offender target population for home detention programs throughout Australia has been non-violent and non-serious offenders; these offenders spend up to 18 months on home detention (Henderson, 2006).

In order to be placed onto a home detention program in Australia, offenders must reside in a suitable residence and their co-residents must formally consent to the imposition of the sanction within the confines of their living space. Once on the program, offenders are required to reside at a specific place of residence; allow visits to this place by a supervising officer at any time; engage in personal development, counseling or treatment; not to use prohibited drugs and alcohol; and not to associate with specific persons. In most cases, offenders are subjected to electronic monitoring that uses RF technology (Henderson, 2006). In addition, in Victoria and New South Wales, which appear to have comparatively more stringent conditions, offenders are also required to find or maintain employment; undertake community service work; and submit to searchers of places/things under their immediate control (Henderson, 2006). Victoria, moreover, applies an exclusive condition on its offenders – that is to comply with a restitution/compensation order. Similar to its US counterpart, home detention programs throughout Australia have stages, meaning that intensive control becomes progressively reduced over the time spent on the order providing that offenders are complying with order conditions (Henderson, 2006).
Whilst Australia was quick to embrace home detention and all of its mainland states had trialed it, there has been a very slow subsequent growth in the number of offenders sentenced to it (Whitfield, 2001). The daily average offender number on distinct home detention programs has been very small. For example, in 2004-2005, in the Northern Territory the average number of offenders on home detention was 56 offenders, in Queensland it was 69 offenders, in the New South Wales it was 192 offenders, and in the much smaller Australian Capital Territory it was 6 offenders (Henderson, 2006).

The key reason for the small growth in offender numbers has been the fact that most states have a strict legislative requirement which mandates that the offender pool be confined to non-serious low-risk offenders. Furthermore, the states have generally put in place specific ‘hurdles’ for judges and magistrates in order to avoid net-widening on front-end home detention programs, which in reality has meant that sentencers had been much less willing to apply the sanction. Finally, it has been reported that because sentencers regard this sanction as a ‘slap on the wrist’ punishment which does not really equal incarceration, they had not sentenced offenders to it (Melbourne Centre for Criminological Research and Evaluation for the Corrections Victoria, 2006; Whitfield, 2001).

Due to this slow up-take, home detention programs in many states including Western Australia, Australian Capital Territory and Queensland have eventually become unsustainable and were therefore abolished under legislative amendments (Henderson, 2006). Nevertheless, some Australian states are carefully following the US developments in relation to GPS tracking and are deliberating using GPS technology as part of an early release mechanism for serious sex offenders (ABC News, 26.05.05; Shiel, 02.02.05).

The UK home detention experience

The expansion of home detention in the US was monitored with anticipation in the UK. (The discussion about the UK is confined to England and Wales as Northern Ireland and Scotland do not operate a home detention program for adult offenders). In 1989, England conducted a trial in using electronic monitoring as a condition of bail in Nottingham, London and North Tyneside (Prison Reform Trust, 1997). Despite the fact that the outcome of this ‘experiment’ was a ‘fiasco’, in 1995 another trial was set up analysing a front-end curfew order with electronic monitoring (Prison Reform Trust, 1997). These pilot trials operated in three locations: the City of Manchester, the Borough of Reading and the County of Norfolk (Sugg, Moore & Howard, 2001; Walter, Sugg & Moore, 2001; Richardson, 1999). Following successful findings of the operation of these trials, a form of early release from prison called home detention curfew was introduced in January 1999 throughout England and Wales (Dodgson & Mortimer, 2000:1). Three key reasons have contributed to the marked British commitment to engage in the establishment of this sanction; these were to reduce escalating
expenditure on the rising number of people in prisons, to make community based sanctions more restraining, and finally to symbolically create “a 21st century EM service for a 21st century CJS” (Toon, 2003 cited in Nellis, 2005a:9).

In order for home detention curfew to attract a larger offender scope, the British parliament has made a number of changes to the legislation governing the sanction operation. Whilst initially only prisoners serving between three months and four years were eligible for the curfew subject to passing a risk assessment, the Act had subsequently been modified to state that all prisoners can now be released on the curfew providing that their sentence exceeds three months and the prison governor is satisfied that they do not pose a risk to the public (The House of Commons, 2006; Dodgson, et al., 2001). The length of time that offenders are able to spend on home detention curfew in lieu of prison has also been extended from between two weeks and two months to a new maximum of four and a half months (The House of Commons, 2006). Therefore, even though lower risk offenders are most likely to be released onto the home detention curfew, it is possible that more serious offenders are also released on it providing that it is determined that they possess minimal risk (The House of Commons, 2006).

Similar to home detention programs in the US and Australia, offenders in the UK are required to provide a suitable place of residence, to which they are going to be confined and which is checked by Probation Officers, and the householders of that residence have to agree to the offender serving the order at their home (The House of Commons, 2006). On the other hand, when compared with the US and Australian home detention programs, the UK home detention curfew imposes one very limited specific condition onto its offenders; that is, that offenders are merely required to wear a small transmitter (the tag) at all times which monitors whether they are at home during a pre-set curfew time. Curfew times are typically from early evening to early morning between 9 and 12 hours a day aiming to stop offenders from going out at night and committing crimes (Dodgson, et al., 2001). Therefore, unlike in the US and Australia, offenders in the UK are not subjected to the more stringent order conditions such as mandatory employment, community work and treatment.

Legislative amendments resulted in increased numbers of offenders being sentenced to home detention curfew across the UK. From 1999 to 2001 the average number of offenders on home detention curfew at any one time was about 2,000 offenders, yet in 2005 the average offender number skyrocketed to 10,000 across England and Wales (BBS News, 20.03.05; Dodgson, et al., 2001). The British parliament had reportedly said that it wanted to further double the number of offenders on the home detention curfew by 2008 (BBC News, 20.03.05). More generally, between 1999 and 2005, over 150,000 offenders had been confined to the curfew scheme (Nellis, 2005b). In 2004, England and Wales
followed the US practice by also piloting GPS tracking programs for serious sex offenders; an evaluation report of these pilot programs is currently being prepared (Nellis, 2005b).

**The comparative sanction experience**

Comparative analysis has found that home detention programs throughout the US, Australia and the UK share numerous similarities. The fundamental one is that all programs target a prison bound population (Henderson, 2006; Dodgson, et al., 2001; Renzema 1992). In addition, offenders in all three nation states must consent to being placed on home confinement, they must reside in a suitable residence, and their co-residents must agree for them to serve their order within the shared living space (Henderson, 2006; The House of Commons, 2006; Carlson, Hess & Orthmann, 1999). Furthermore, programs in all three states seem to principally concentrate on offender control and surveillance and not rehabilitative or specifically re-integrative measures. Finally, they essentially control offenders by the utilisation of human monitoring in combination with electronic monitoring that utilises RF technology (Henderson, 2006; Carlson, Hess & Orthmann, 1999; Dodgson, et al., 2001).

On the other hand, home detention programs in the US, Australia and the UK seem to vary significantly in overall procedural and operational terms. First, whilst the US and Australia have a combination of front-end and back-end home detention programs, the UK solely operates a back-end alternative to incarceration (Henderson, 2006; Dodgson, et al., 2001; Tonry, 1998). Second, the maximum length of time that offenders are placed on home detention differs depending on whether they live in the US, Australia or the UK. The maximum length of home detention programs throughout the US is 24 months, in Australia it is 18 months and in the UK it is only 4.5 months (Henderson, 2006; The House of Commons, 2006; United States General Accounting Office, 1990). Third, whilst home detention programs are available generally on a state-wide basis throughout the US and the UK, they are not available across Australia (Henderson, 2006; Dodgson, et al., 2001; Renzema, 1992); therefore offenders who reside in less populated, particularly rural and remote regions of Australia, that do not operate a home detention program, are discriminated against as they are not considered for the program and may be automatically sentenced to prison.

Most importantly, the literature has indicated that there is a considerable variation in the severity of conditions that home detention imposes on offenders in the US, Australia and the UK. The US and Australian home detention programs impose stringent order requirements on offenders by mandating them to remain confined to their residence at all times except when attending pre-approved activities, to engage in employment, community work and treatment, and to remain drug and alcohol free. The US home detention programs additionally require offenders to
financially contribute to being on the sanction (Henderson, 2006; Ansay & Benvenste, 1999; Rackmill, 1994). In contrast, the conditions that are applied onto offenders on home detention across the UK are least punitive as they are only required to remain confined to their residence during a night curfew (Dodgson, et al., 2001). Due to imposing substantially more onerous conditions onto their offenders and the fact that the timeframe that offenders can spend on their programs is substantially longer, the US and Australian home detention programs generally operate in a few phases gradually reducing the severity of control that is imposed on offenders (Henderson, 2006; Whitfield 1997; Schulz, 1995).

Similarly, home detention programs in the US and Australia generally subject offenders to stricter supervision mechanisms compared with the UK. The US and Australian home detention programs usually verify offender compliance through the following measures random face-to-face visits, phone calls and drive-by contacts at home and at pre-approved places, electronic monitoring at all times, and drug and alcohol testing (Henderson, 2006; Carlson, Hess & Orthmann, 1999). In contrast, whilst there is some human monitoring, the UK home detention curfew specifically monitors offenders’ presence at home electronically during a pre-determined night curfew (Dodgson, et al., 2001).

Home confinement programs in the US, Australia and the UK target various offender categories. In the US, home detention programs with RF had traditionally focused upon non-violent offenders but the introduction of GPS tracking has resulted in higher risk offenders also being placed onto these sanctions (Nellis, 2005a; Rackmill, 1994; Maxfield & Baumer, 1990). The offender target population for home detention programs utilizing RF technologies throughout Australia has remained constant in only targeting non-violent and non-serious offenders (Henderson, 2006). The UK model using RF electronic monitoring, on the other hand, does not specify the offender target population and, although it is less likely, it is possible for more serious offenders to be sentenced to a home detention curfew (The House of Commons, 2006).

**Conclusion**

The experience of home detention varies considerably depending on whether offenders reside in the US, Australia or the UK. The US, and to some extent Australian sanction experience, seem to be comparatively more penalizing on offenders than the UK home detention experience. This is because offenders in the US and Australia are overall subjected to more stringent order conditions, stricter mechanisms of surveillance, and their maximum order duration is substantially longer (Henderson, 2006; Ansay & Benvenste, 1999; Rackmill, 1994).

Sentencing initiatives that support prison diversion remain imperative throughout the US, Australia and the UK, and in the future further proliferation and up-take of
home detention programs seems likely. Up until recently, an ongoing concern with home detention programs had been the questionable reliability of the RF electronic monitoring technology for more serious offenders. However, it seems that the advent of the GPS technology had substantially improved the dependability and the steadfast reaction should an offender breach their order (Nellis, 2005a; Nellis, 2005b). Therefore, in the near future it seems likely that increasingly serious offenders will be sentenced to a ‘split-sentence’ comprising of a mandatory prison time coupled with home detention that utilises GPS tracking technology. Finally, it appears that the discrepancies in sanction experience will steadily decline across Western nations as home detention becomes utilised at a substantially higher rate. Increased sanction application will mean that the control mechanisms will become progressively cheaper, more precise, further reliable and less intrusive. It addition, whilst unlikely, these sanctions should incorporate an empirically proven balance of punitive and rehabilitative measures.

ABSTRACT

Emotional intelligence comprises of several important elements which enhance the ability of several key competencies. This study attempts to examine the relationship between emotional intelligence, communication skills and information technology skills among university students in Malaysia. A total of 3101 final year students from 10 public universities were randomly chosen as samples. The Bar-On Emotional Quotient: Short (EQ-i:S) by Bar-On (1997) has been utilized for the purpose of measuring emotional intelligence. An inventory by Moreale, Spitzberg and Barga (2001) was used to measure communication skills while the Computer Efficacy Scale by Murphy, Coover and Owen (1989) was used to measure skills in information technology. Results showed that there were positive significant relationship between emotional intelligence and both communication and information technology skills. This study implicates that students with high emotional intelligence will have better command in communication skills and information technology skills.

   *For practical and historic reasons ‘Vienna’ has replaced ‘Berlin’
   (as originally submitted), for purpose of this presentation.

2. Abstract

The study of imagery and phantasy cuts across a variety of social science disciplines
– sometimes involving stereotypy, distortion and paradox as such imagery/phantasy
I/P) constitutes a powerful perceptual phenomenon shaping a sense of ‘what the
place is like’ and what it represents, to people living within it and for others looking at
it from a distance viz. from the ‘outside’.

Thus Image of Place emerges as a complex concept in the social sciences. It is
particularly of interest in applied fields including real estate, urban and regional
and architecture studies (‘where do people want to live?’), tourism (‘where do people
want to travel?’), political science (the role of propaganda), and marketing (‘hype’; what
kinds of places invite sales, purchasing patterns, and shopping?). – Source
disciplines that enrich our knowledge in this area include int. al. psychology, sociology, anthropology (incl. mythology), political science, and history, as well as sub-fields of philosophy such as phenomenology.

Here we examine in historic perspective three geographic areas: the Islands of Hawaii, the site of Hollywood (California); and the city of Vienna. Regarding Hawaii we go back to its (re-)discovery by Capt. Cook or by early travelers, and its American era. For Hollywood we recall its ‘founding’ in the late 19th and early 20th centuries, its contrasting positions as residential and as ‘movie’ venue (tourist views included), and its present (not very successful) community renaissance. For Vienna, we note its beginnings in archeologic time, its existence and symbolism in the period of Hitler and the Third Reich, its post WWII situation, and its current cultural and urban revitalization.

In each case DISPLAYS: photographs, sketches and transparencies illustrate content as noted.

In conclusion we formulate a systematic framework IMAGES OF PLACE for I/P study, identifying specific contributions by source disciplines proposing interactive templates for inquiry, and elaborating opportunities for use and understanding in several fields of application as indicated in the second paragraph of this abstract. – Do we need a new discipline ‘Placeology’?

2. Abstract

This workshop re-examines ‘from the ground up’ the nature, goals and process of teaching evaluation, and learning in the social sciences. With a generic and systematic overview, in a give-and-take format, presenting KEY CONCEPTS (per coordinator) as starting points for discussion, the session will consider issues such as the following:

a. the values and goals underlying teaching evaluation; (TE):
   what is “teaching” (in participants’ own views) really trying to accomplish?
   how does this set of objectives – expressed or implicit – differ among topics
   and specific fields in the social sciences? Among individual instructors? Or
   are there generic integration values and goals?

b. the several stakeholders (publics) involved in/or impacted by TE: students,
   instructors as individuals, faculties as a whole, academic administrators (deans,
   chancellors, et. al.), the academic institution (and its image), alumni, the
   community, who and what matters in how TE is positioned – teaching ‘versus’
   research, consulting, service rendered to institution and community?
c. the nature of methods used ‘conventionally’ in implementing TE... e.g. end-of-
course questionnaires (made out by whom and just when?), faculty opinion
looking at performance of a particular instructor? – the problem of response
rates, biases, ‘politics,’ relevance/irrelevance of particular questions included?
Modes of tabulation and analysis?
d. the nature of more deeply-probing methods: intensive interviews, open-end
questions in writing, reflective essays, ethnographic methods, students’
introspection.
e. the nature of index construction in TE and adaptation of factor (or cluster)
analysis: multiple-question requirement as basis for factor analysis. index
development: accomplishment ‘vs.’ expectations, instructor charisma ‘vs.’
information source, inspiration/epiphany ‘vs.’ knowledge accumulation.
f. short-term follow-up (“before they get away”): key questions and brief interview –
just when, where, how, and by whom?
g. long-term follow-up and longitudinal studies: some examples represented by
research in counseling, psychotherapy, social work and organization
development; the problems and realities of life flow and complexity affecting long-
term TE.
h. case inquiry into the inner experience of students and instructors in teaching and
TE; the deeper nature of the dyad ‘student/instructor’; guru? expert? info source?
mutual learning and discovery?
i. case studies of “the truly effective teacher”: participant reports, descriptions and
demonstrations.
j. case studies of “the truly effective student”: participant reports, descriptions and
demonstrations.
k. the socio-political environment of TE.
l. the institutional and community culture affecting TE.
m. global perspectives in TE: are there global consistencies and/or culture-specific
differences?

we will conclude by
(I) formulating our view of the current state of T.E. in our
department/institution;
(II) suggesting prototypes – the nature of “truly effective T.E.”;
(III) proposing new perspectives for strengthening T.E.

to be adopted and developed in timeframe 2007-2010.

The workshop may establish basis for preparation of a monograph, co-authored by
participants: EVALUATING TEACHING AND LEARNING IN SOCIAL SCIENCE, 21st
Century Perspectives.

Meeting of the Minds: Challenges and Rewards of Integrating Community-Based Research Projects into a Graduate Social Work Curriculum

Keywords:

Community-based Research, Graduate Research Projects, Project-based Research

Abstract:

In most graduate programs in the social and behavioral sciences, students are required to learn material about experimental research methodologies. Traditionally, this content has been delivered in one of two instructional modes: a lecture-only approach or a lecture and workshop format. However, an innovative model has recently begun to emerge but has not yet been widely implemented. This model uses applied research projects with a community focus to approach teaching research methods and strategies for data analysis.

We will describe the Applied Project Model (APM) used in our curriculum, as well as describe its strengths, limitations, and theoretical foundations. At the heart of this approach is meaningful involvement with agency/community stakeholders, and a move from a traditional, “pure” research model to an applied, “action” model of teaching about and conducting research. Use of the APM involves a shift in moving from a rigid, fixed view of what constitutes research to an open and dynamic approach that has been quite transformative for our students.

We will present detailed case descriptions of community-based, action research projects that have helped shape the delivery of social services in our geographic area. Additionally, practical recommendations for educators and researchers in the social and behavioral sciences will be discussed.

Abstract

Utilising a mixed-methods design to gauge Irish cancer patients’ perception of psychoeducational intervention.

Mc Kiernan, A., Steggles, S., & Carr, A.

The aim of the presentation is to report methodology and results of a mixed-methods study in the area of Psycho-Oncology. The goal of the research was to evaluate a group cognitive behaviour intervention, known as the Time to Adjust Programme, for early-stage breast cancer patients in the Republic of Ireland. Previous evaluation research in the area indicates that standardised measures lack the sensitivity required for a comprehensive assessment of therapeutic processes and psychosocial gains in structured intervention for people with cancer. In addition to responding to a battery of quantitative measures, qualitative thematic content analysis was carried out on patients’ responses to open-ended post-session and post-programme questionnaires in order to highlight the strengths and limitations of the programme. Qualitative analysis was also conducted on participants’ responses to a problems and goals measure to identify patients’ primary concerns and their expectations surrounding their participation in the Time to Adjust Programme. Results indicate that participating in a structured psychoeducational programme is beneficial in helping patients adjust to their illness.

TYPES AND MODELS OF COLLABORATION
USED BY COMMUNITY ORGANIZATIONS
By Jean A. McRae, MSW

ABSTRACT
Collaborative action and coalition formation are of current interest in today’s world. This paper discusses five types of “drivers” for successful collaboration between organizations, and five types of collaboration models. This typology results from qualitative interviews with fifteen local organizations, and a further review of the literature. Efforts such as these are the start of more serious investigation of how organizations work together.

COLLABORATIVE ACTION AND COALITIONS
Coalitions are the result of agreed-upon collaborative action. Collaboration is commonly interchanged with terms such as cooperation and coordination. Cooperation is characterized by informal relationships, and coordination has more formal agreements on what is to be coordinated, as well as a possible minimal structure which is usually temporary in nature. Task forces are examples of coordinated efforts. Collaboration requires a more durable relationship, with effort put into relationship-building, intense goal-setting, and even more intense action con common agreed-upon goals. On a continuum scale from cooperation to collaboration, the action increases as follows:

| COOPERATION: Limited beneficial action on one or more common goals, which may be short-term or ongoing. Regular exchanges of information, meeting spaces, and joint conference participation are examples. |
| COORDINATION: More intense action on one or more common goals, which is usually short-term but may re-occur on a cycle basis. Short-term or long-term task forces are examples. |
| COLLABORATION: Very intense beneficial joint action that requires mutual relationships, mutual goal agreement, and planned achievement steps. |

Figure 1

The term “coalition” comes from the French word coalesce, which means “to come together.” A coalition is an alliance between two or more entities, for the purpose of joint action on common goals. The alliance is assumed by all parties to be beneficial to each individual organization, as well as to the total group. Many examples of beneficial collaborations come from warfare, politics, medicine, economics, and business. In popular culture, the television show Survivor is noted for short-term collaborations for long-term individual survival. This paper will discuss
collaborative action as it is relevant to nonprofit, community, and public sector organizations. It will also discuss collaborative action as it occurs in forming and implementing successful coalitions.

**REVIEW OF THEORY DEVELOPMENT**

Coalition Theory is closely allied to Game Theory. Coalitions have been studied as they arise in the political arena between nations (i.e., environmental collaborative action), or in military terms in studies of inter-nation cooperative war strategy. In computer science, *agents* or *daemons* are entities that can form coalitions. In economics, a coalition refers to a group of companies that develop mutual trust and agreement between each other in order to share space and agreed-upon resources for maximum profit. Examples would be Kentucky Fried Chicken and Taco Bell, or Dunkin Donuts and Baskin-Robbins. Game Theory generally uses a mathematical approach in devising and implementing games which show how players behave individually and as members of coalitions. For instance, in the classic *Prisoner's Dilemma* game, there are two players, each of which have two choices: cooperate or defect. Defection will always yield a higher payoff than cooperation, no matter what the other does. The dilemma arises from the fact that if both defect, they are both left *worse off* than if they had cooperated. Konishi & Ray (2001) investigated coalition behavior as an ongoing, dynamic process with mathematical equations to illustrate the payoffs generated as coalitions form, disintegrate, or regroup. Bloch & Rottier (2000) devised a coalition game wherein players took turns setting the agenda and attempting to form a coalition. They found that coalition formation depended upon the order in which coalition offers were made, with “desirability” and individual assets being important but lesser factors. They used their findings to theorize about political coalition formation. Social Identity Theory was first developed to explain the development of prejudice (Tajfel & Turner, 1979), but it has been used by some researchers to study how people develop group identity in coalitions.

Social Exchange Theory seems to be particularly appropriate in examining coalitions. This theory was initiated by Thibaut & Kelley (1959), consolidated by Homans (1961), and further expanded by Blau (1964), and Cook & Molm (1995). In summary, the theory states that collaborative behavior is based on value exchange, which in turn causes reciprocal behavior. Reciprocity between people and groups depends upon what each person/group feels they are getting from the exchange, considering the costs and resources used in maintaining the exchange (money, time, effort, etc.) and the rewards received. Over time, a beneficial exchange tends to even out between parties, and stability results. People and groups will end the exchange if they feel it is no longer beneficial. A major criticism is that the theory reduces human interaction to a purely rational process that arises from economic theory and is not suitable across society. However, in the context of collaboration between organizations, Social Exchange Theory seems to work well. Changes and
expansion are on the horizon for this theory. In discussing needed amendments to Social Exchange Theory, Zafirovski (2003) argues for a greater multilevel and multivariate theory, which includes non-economic, behavioral and cultural, individual and structural variables alike. As we continue to study coalition formation and collaborative action, an expanded multivariate approach seems to be most appropriate, particularly as we examine public, nonprofit, and community groups.

**REASONS FOR COALITIONS AND COLLABORATIVE ACTION**

According to Reilly (2001), research on collaborations has suggested that there must be several essential components for the successful internal effectiveness of a coalition. Reilly identified five dimensions of collaborations: *purpose, membership, structure, process, and resources*. In more detail, there must be a central purpose with a shared vision, a membership willing to cooperate, a structure that has clear roles with clearly-understood procedures, an open and effective process, and access to the necessary resources to accomplish at least one or more goals. Being successful in implementing these five dimensions can be very difficult. Such collaborative action can be tedious, time consuming, frustrating, and has the possibility of being unsuccessful in not meeting major goals. Therefore, why do people form coalitions and engage in collaborative action? The major reason is that the presumed benefits outweigh the possible negatives, and collaborative members assume that perceived positive action is superior to taking no action. Here are some of the most common functions of coalitions and collaborations:

- They are useful for accomplishing a broad range of goals that reach beyond the capacity of any individual member organization.
- They help to establish a power base around the issue(s) in question.
- They help to stretch limited resources.
- They are useful for helping to close gaps in any individual organization’s knowledge, effort, or outreach.
- The greater collaborative mass helps to focus attention on the issue(s) that a single organization could not.
- Coalitions can articulate a single voice on an issue while preserving the uniqueness of member groups. They offer unity without uniformity.
- Coalitions offer great learning and teaching opportunities. Collaborative activity provides a superior opportunity for action learning, because member organizations are exposed to ideas, tactics, strategies, cultures, and styles from other organizations that nevertheless have a similar vision.
- Coalitions promote innovation. Particularly on the grassroots nonprofit level, many organizations have the task of “doing more with less,” and cooperative action lends itself to on-the-spot or planned creativity.
In considering grassroots collaborations, it has been noted that collaborative action has been very important for communities, organizations, and stakeholders that need to build and multiply their social capital.

**SOME TYPES OF COLLABORATION BETWEEN ORGANIZATIONS**

Particularly in the public sector, it is important for organizations to learn to work together, for the reasons given above and others. However, what motivates organizations to work together above and beyond the basic reasons given. In interviews with community and nonprofit organizations, five *drivers* of collaborative action and coalition-building have been identified. In Figure 3, these drivers are targeted and described as the major reasons for coalition formation.

![Table showing types of collaboration](image)  

The *Issue-Driven* collaboration seems to be the most common and the most powerful. Issues that people feel strongly about stir the most passion and activism. Issues make recruitment of participants easier, and they help to reinforce common goals and speed agreement on any structure and process needed. Issue drivers may
be long-term or short-term. Usually, coalitions formed around one or more issues will disintegrate once the desired successful outcome is produced. However, some coalitions grow stronger and expand depending on the continuous needs that the issue presents.

The **Affinity-Driven** collaboration depends upon a basic interest that covers several issues. These organizations may be in the same profession, may be providing the same types of services (i.e., health care), or may feel the need to collaborate because of a need to bring the particular interest to the forefront. If the collaboration starts to focus on one over-riding issue, then the same passion may develop as in the Issue Driven coalition. Affinity-Driven collaborations are usually long-term. The participating organizations usually feel that it is in their individual interests to work together in the interest area, because each participating organization will grow stronger and enlarge its own base of stakeholders, ideas, and innovative methods. These tend to be participants that are open to learning from each other and trying new and different things.

The **Exchange-Driven** collaboration is based on sharing resources, methods, and ideas. The organizations are open to bargaining, learning from each other, and open sharing without fear that one organization will “steal” from another. Each organization has to provide transparency about the agreed-upon tangible or intangible products for exchange. This means that a high level of trust must exist or be developed among the collaborators. If Agency A, B, and C share meeting space and purchase paper supplies together, then their mutual working relationship must operate in constant agreement. If the collaboration extends to group action, the three (or more) must remain “in sync” on what to share and what actions to take. The continuation of this collaboration depends upon mutual needs, mutual respect, and mutual commitment for each organization to play an agreed-upon role. This collaboration type can be quite beneficial to small grassroots organizations that have few resources but much energy. If individual organizations can put aside their differences and suspicions, and develop real trust, the Exchange-Driven collaboration can develop into a powerhouse.

The **Segmented-Service-Driven** collaboration is not as common, but it does exist effectively. It is usually found in a broad field serving one particular type of client or customer, where one organization cannot fulfill all needs. For instance, in child welfare, one organization or agency may be strong in foster care recruitment and placement, while another is noted for mental health services. Previously, all child-related services may have been concentrated in one large city or county agency, but with the contracting-out of services, organizations feel the need to collaborate with others that are strong in diverse areas. Sometimes a city, county, or funding organization will mandate or organize collaboration between segmented services. In other instances, the organizations themselves will see the need for collaboration and hold meetings. Voluntary non-contracted organizations in a particular interest area
may also see the need for greater collaboration clustered around unique strengths, services, or products. In this type of collaboration, organizations see themselves as collaborators more than competitors. If Company A does child-oriented educational video games, Company B has a chain of child care centers, and Company C furnishes mental health services, then the three have a basis for Segmented Service collaboration. All three make a profit, enlarge their bases, and don't cross turf across their expertise areas. This seems to work best with small-to-medium sized organizations that are not threatened by others and that hold on to their unique offerings. An organization that no longer needs the segmented services will drop out, and if too many leave, the coalition falls apart.

The *Expansion-Driven* collaboration is led by forward looking organizations who want to grow and exceed existing boundaries, but cannot do it alone. As a group they can gain the necessary power and extend influence and service together. Most of these groups are literally called *collaboratives*, although there are a number of other names. These are secure organizations who have similar visions, are innovative, and who trust each other enough to move forward together.

**SOME BASIC COLLABORATION MODELS**

*Strategic collaboration* offers the greatest likelihood of success for the organizations involved. In interviews with community and nonprofit organizations, five basic collaboration models have been identified. These models are illustrated in Figure 3, following.
<table>
<thead>
<tr>
<th>MODEL</th>
<th>DESCRIPTION</th>
<th>DURATION &amp; LINKAGE</th>
<th>BEHAVIOR</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Equal Partners</td>
<td>All organizations are equal</td>
<td>Long-term or short-term; Usually tightly-linked; Motivation can be any one of the 5 drivers, or combinations</td>
<td>Equal sharing</td>
</tr>
<tr>
<td>2. Leader-Team</td>
<td>One organization leads &amp; forms a team of the others</td>
<td>Long-term or short-term; Tight or loosely linked, depending on lead organization; More likely to be motivated by drivers 1, 2, 4</td>
<td>Strong lead organization</td>
</tr>
<tr>
<td>3. Team-Leader</td>
<td>The team forms first &amp; selects or appoints lead organization</td>
<td>Long-term or short-term; Usually more loosely-linked; More likely to be motivated by drivers 1, 2, 5</td>
<td>Lead organization follows team wishes</td>
</tr>
<tr>
<td>4. Leader-Wheel</td>
<td>One organization leads &amp; relates to the other organizations on a “wheel” basis – they rotate in &amp; out as necessary</td>
<td>Usually short-term, but may be long-term; Usually more loosely linked; Usually motivated by driver 3</td>
<td>Strong lead organization</td>
</tr>
<tr>
<td>5. Exchange Coalition</td>
<td>Organizations exchange with each other as necessary, based on Exchange Theory</td>
<td>Usually long-term exchanges over time; Usually tightly-linked; Driver 3 is the motivation</td>
<td>Beneficial sharing and reciprocal actions</td>
</tr>
</tbody>
</table>

**Figure 3**

In *Equal Partners*, all organizations are equal, and are able to come together without prior insecurities, jockeying for position, or turf fights. Usually, these are larger well-established organizations that have secure funding and have enjoyed positive public support. They feel that they can only grow stronger by coming together, and they build on the strengths that they already have. Motivation can be any one of the five drivers, or combinations. The Equal Partners operate from a strengths perspective, and expect to learn from one another and grow together. They are also secure in the knowledge that if the coalition does not serve their needs, they can drop out without blame or hand-wringing, and can “go it alone.” Equal Partners is usually the strongest, most secure, and most enduring of the collaboration models.
In the *Leader-Team* model, one strong organization with a decisive take-charge leader sees the need for collaborative action, and calls the others together. The lead organization shepherds the others through coalition formation, helping to establish mutual goals, set up structure, and plan action. If the lead organization remains strong, this coalition has the possibility of increasing the strength and vision of all participants. Issues, Affinity, and Segmented Service are the usual drivers. The participant organizations have to be willing to “follow the leader,” and they will if they feel that they stand to gain from the association. In this model, some organizations have even thanked the leader for taking the initiative. Those who are dissatisfied, or feel that the lead organization has too much power, will drop out.

In the *Team-Leader* model, several organizations come to a mutual decision that they need to collaborate, and that a need a lead organization because they are not equal partners. They choose a leader, and support that organization in being “out front.” They are more likely to be driven by issues, affinity, and/or need/desire for expansion. Trust in the lead organization is high, and basic agreement is relatively easy. The coalition may break apart when the participants no longer feel that they need a lead organization, or if the lead organization withdraws, feeling that the coalition is too time-consuming or that it wants to follow other pursuits.

In the *Leader-Wheel* model, organizations are loosely linked and relate to each other on a beneficial exchange basis, coordinated by the lead organization. This model is based upon maximizing resources, and is not usually an intense coalition of activism. This model offers convenience and moderate cooperation without awakening turf battles or insecurities over “who has what?”, or who might be taking over. This loose collaboration will not survive if participant organizations feel that they are being “used.”

An *Exchange Coalition* operates on a mutual basis without a lead organization. In contrast to the leader-wheel, these organizations are more tightly linked. They understand each other and can call upon each other for beneficial exchange as needed. There is usually a monthly, bi-monthly, or quarterly meeting, where needs and sharing are reviewed. Organizations may lend support to each other’s issues, without joining in all-out action. This is a way to extend contacts without threat, and a way to ensure friendship and aid in case of emergencies and crises. This is usually practiced by medium-sized organizations with strong and long-lasting community ties. The exchange coalition is the most likely to last a long time because it provides benefits and makes each organization stronger and more secure, without making strenuous demands. If one participant organization feels that it no longer needs the exchange, it simply drops out. If too many leave, the exchange coalition breaks apart.
CONCLUSION

Organizations must be willing to risk experiencing new dimensions in order to work together and enrich themselves. They must be willing to develop high trust and commit to serious consensus-building. The organizations who are able to do this, and to participate successfully using one or more of the above models are to be commended for their positive and dynamic contributions to society as well as to each other. It can be concluded that there are other models of coalition formation and collaborative action. This is still an open field for study. The process of cooperation is ongoing, and new innovations are always arising. A look at drivers and models is a step toward understand the complexity of our collective actions.

Title of Submission: An Action Plan to Improve Undergraduate Learning Experiences: A Qualitative Study to Increase Enrollment and Retention of African-American Students

Topic Area of Submission: Race/Ethnicity Issues in Education; Communication and Information Sciences (Cross Disciplinary Area)

Presentation Format: Paper Session

Name of Authors: Dr. Bharat Mehra and Cheryl Ann Lambert

Department and Affiliation: Bharat Mehra∗ Assistant Professor, School of Information Sciences, Suite 425, 1345 Communications Building, Knoxville, TN 37996 (Phone: 865-974-5917. E-mail: bmehra@utk.edu); Cheryl Ann Lambert, Ph. D. Student, School of Advertising and Public Relations, 476 Communications Building, Knoxville, TN 37996 (Phone: 865-974-8200. E-mail: clamber4@utk.edu).

ABSTRACT

Based on a qualitative analysis of the undergraduate experiences of 8 African-American graduate students, the paper identifies methods to improve the existing learning experiences for minority students studying at the University of Tennessee (UT) (Knoxville campus). Qualitative data-collecting methods of narrative interviews with participants about their undergraduate experiences reveal strategies to increase enrollment and retention of undergraduate minority students on campus. The research elicits participant feedback in order to:

1) Document student’s undergraduate experiences to reveal focused areas of improvement;

2) Identify student suggested recruiting strategies to increase undergraduate minority student enrollment and retention in higher education; and

3) Document student feedback about methods to improve the existing learning experiences for minority students via developing a better teaching and learning environment, enhanced campus services and facilities, and an altogether supportive climate.

Gathered data provides significant information based on graduate African-American students’ undergraduate experiences and expertise about their barriers and challenges faced in their learning process, kinds of efforts needed to improve

∗ corresponding author
existing learning experiences, and potential agencies and partners that can help increase enrollment and retention of undergraduate minority students in the academy.

The following select questions were used during narrative interviews (lasting 1.0-2.0 hours each) with research participants:

1. **[INTRODUCTION]** Let us begin with general introductions- tell us a little about yourself (department, year), your interests, and your prior experiences as an African-American undergraduate student.

2. **[UNDERGRADUATE EDUCATION]** Tell us about your experiences during your undergraduate studies. What were some key experiences and challenges? What specific areas could have been improved?

3. **[RECRUITMENT, RETENTION, MINORITY LEADERSHIP]** (Based on your undergraduate education) Identify some recruiting strategies to increase undergraduate minority student enrollment and retention in higher education on the UTK campus.

4. Identify methods to improve the existing learning experiences for minority students via developing a better teaching and learning environment, enhanced campus services and facilities, and an altogether supportive climate.

Grounded theory principles were applied to generate themes and patterns from participant responses via open, axial, and selective coding. Qualitative data analysis accounted for concepts, relationships between categories and subcategories, and integration with interview questions, and to the broader perspectives of participants. We also developed scenarios or personal stories that capture typical experiences of participants that are threaded together as a mode of data analysis and representation in this paper.

This research forms part of a larger study that is currently examining strategies to improve the learning environment and the information support services for both undergraduate and graduate minority students; the paper presents focused research findings to make the UT environment more inclusive and diverse in its undergraduate student body via suggested improvements in students’ learning experiences. Findings identified in this research are presented as an action plan to improve undergraduate learning experiences of African-American students and provide key directions for UT to strategize and increase its undergraduate minority student enrollment and retention in order to reflect diversity in the 21st century.

Abstract
This paper reports the findings of a study examining the prevalence of overweight and obesity among a sample of Irish adolescents, between the ages of 12-19 years. The sample (n=775), had a mean age of 14.6 with 432 male participants. Psychological aspects of overweight and obesity were assessed using a variety of measures investigating levels of self-esteem, depression and disordered eating behaviours. Age- and gender-adjusted BMI was evaluated, and general lifestyle activities and exercise levels were also assessed. 48.4% of participants had a normal age adjusted BMI, and 28% were classified as being Overweight/Obese while within that 4.8% were classified as clinically obese. Overweight/obese participants reported significantly more episodes of Objective Bulimic Episodes, compared to their normal weight and underweight peers. Total EDEQ scores were negatively related to both overall levels of self-esteem and the Physical Appearance (SPPA-R) domain of self-esteem (r = -.572). Overweight/obese participants were more preoccupied with their weight than normal weight participants, but did not differ significantly with their underweight peers. Compared to normal weight participants, overweight/obese participants engaged in significantly more overeating in response to overall emotional states, and clearly labelled emotional states (e.g. anger, sadness), but did not differ from their underweight peers. This research indicates that overweight and obese adolescents demonstrate disordered eating behaviour, and appear to engage in more disordered eating compared to their normal weight and underweight peers. These results have significant clinical implications in terms of the way in which adolescent obesity is treated in Ireland.

Abstract

The Harvard School of Public Health reported in 2006 that 42 percent of Americans say they are “somewhat concerned” about the H5N1 strain of avian influenza spreading to the United States. As a result, how the American media are framing their coverage of bird flu is important. Using qualitative methods, this study analyzes how The New York Times has framed the disease since 1997, and if and how those frames have changed over time.
Introduction

News coverage of the H5N1 strain of avian influenza and its potential to develop into a worldwide pandemic proliferated after an August 2005 speech by President George W. Bush in which he called on the healthcare community to prepare for a possible outbreak. For many, Bush’s speech represented the introduction of a new risk to public health. Moreover, medical experts and journalists already had been tracking bird flu for several years. In nearly a decade of coverage, news media have shaped public perceptions of the disease by presenting it in a myriad of ways. The purpose of this study is to examine how American news media, specifically The New York Times, have framed the disease and if and how these frames have changed over time.

A recent poll shows the American public is aware of bird flu and is moderately concerned about a possible pandemic, defined by the Centers for Disease Control as a “global outbreak.” The Harvard School of Public Health reports 42 percent of those surveyed describing themselves as “somewhat concerned” about the disease’s spread in the United States and the same percentage concerned about a worldwide pandemic. Effects of heightened public awareness are already evidenced in the reaction of the poultry industry, which points to bird flu as a possible cause of lagging profits in 2006. Moreover, several fast food chains have initiated marketing campaigns to alleviate consumers’ fears of the H5N1 virus. Emergency officials at the federal, state and local levels have spent large amounts of time and money on bird flu preparation, even though experts say the virus has not mutated to a point where it could cause a pandemic. According to the World Health Organization, approximately 230 people had been
infected with the disease worldwide as of July 2006, and at least 132 had died. So far, avian influenza has not spread through human transmission.

**Theoretical Perspective**

Media researchers contend that frames provide the construct in which news can be interpreted and understood. In simple terms, news framing refers to selecting and emphasizing certain aspects of issues.\(^7\) Gamson and Modigliani define a media frame as “a central organizing idea or story line that provides meaning to an unfolding strip of events … The frame suggests what the controversy is about, the essence of the issue.”\(^8\) Media frames organize the world for the journalists who report it and for those who rely on their reports.\(^9\)

Devices such as keywords, metaphors, catch phrases, discussion of the root of a problem or issue, concepts, discussion of the consequences of a problem or issue, and moral appeals all combine to build frames.\(^10\) In general, these devices are brought into an article through the use of sources: who is interviewed, what is quoted directly, how often an individual is quoted, fairness of sides represented, etc. Entman suggests that frames are used to define problems, diagnose causes of problems, make moral evaluations of the agent causing the problems, and to suggest remedies.\(^11\) Entman also notes that “by providing, repeating, and thereby reinforcing words and visual images that reference some ideas but not others, frames work to make some ideas more salient in the text, others less so – and others entirely invisible.”\(^12\)

As several researchers have pointed out, what is left out of the frame is often as important as what is included.\(^13\) The omissions of potential problem definitions, explanations, evaluations and recommendations may be as critical as the inclusions in
guiding the audience.\textsuperscript{14} The omission of certain arguments or points of view makes them less salient for readers.

**Health Framing**

Since its media salience is a relatively recent phenomenon, little academic research specific to bird flu coverage has been published. However, literature on framing of other health-related issues offers insights into patterns that might have emerged in the media’s reporting of the disease.

Lawrence, Winett and Sillars\textsuperscript{15} studied New York Times coverage of the post-9/11 anthrax scare. They used both quantitative coding and qualitative analysis to test hypotheses that a great majority of the stories would rely on official sources and would be influenced by journalistic conventions that distort or oversimplify scientific coverage. They also predicted that the stories would inadequately report on the risks of exposure to anthrax and would fit the information into established frames such as “winners and losers” or the CDC’s “bungling” of the crisis. They found that these predictions based on established framing literature were incorrect, although they said their expectation of “politicized” coverage came the closest to being confirmed.

Blakely\textsuperscript{16} compared coverage of the 1918 Spanish flu pandemic, the 1957 Asian flu pandemic and the 1968 Hong Kong flu pandemic in The New York Times. The study analyzed 835 articles and found the 1918 pandemic incited panic and increased public anxiety, whereas later pandemics had less impact. War metaphors were used in all three pandemics, though more often for the 1918 Spanish flu. Blakely also found that coverage of the 1918 pandemic changed over time. It was initially reported as a foreign disease that the general American population would not have to worry about. However, as death tolls
rose, coverage became more reflective of the panic felt by the public and its perceived notions that healthcare professionals were inept. This pattern was repeated in the 1957 and 1968 pandemics, according to Blakely. In all three cases, health officials became the focus of negative coverage. Thus the “inept bureaucrat” frame appears to be a recurring theme. However, in some cases it is eventually replaced by a new frame emphasizing the individual’s responsibility for his or her own care.

A study analyzing bird flu stories in The New York Times, the Washington Post, the Atlanta Journal-Constitution and the Los Angeles Times found that newspaper stories provided little information on personal protection from bird flu. Information on how an individual can protect himself or herself from bird flu appeared in just nine percent of the stories analyzed. After October 2005, when coverage of bird flu spiked, news stories focused mainly on human infections and the potential for the disease’s spreading.

Part of the job for media researchers at the Centers for Disease Control in Atlanta, Georgia, is sifting through each day’s news stories to see what the media are saying about public health topics. These stories are analyzed according to their frames. The CDC began paying much more attention to news reports after the terrorist attacks of 9/11 and the anthrax attacks that followed. Through those attacks, the CDC was reminded that public health news stories are the primary avenue through which the public gains knowledge about disease.

News media framing of the bird flu is worthy of study because it plays a key role in establishing public opinion on the disease and in shaping public policy. If people fear an outbreak of pandemic flu, they are likely to expect action from government officials, regardless of whether fears of the disease are actually justified. So the notion underlying
this study was to find out what impressions are being formed in the public sphere through media coverage of avian influenza. Toward this end, the following research question was formulated:

RQ: How has the New York Times framed avian influenza since 1997?

Methods

Sampling population

The population of articles from which the sample was drawn was created through a keyword search of The New York Times file in the Lexis-Nexis academic database. The researchers chose The New York Times because of its status as a newspaper of record in the United States, having a strong influence on national news coverage across the country. The paper has a national circulation, is often the source of wire stories that are picked up by local papers, has an influence on national television and radio news coverage, and is often studied as a barometer of how American journalists address specific issues.

Included in the final sample were non-opinion stories of 500 words or more published between December 1997 – the time of the first bird flu outbreak to affect humans – and July of 2006, containing within the headline or the lead the keywords of “bird flu,” “avian flu,” “avian influenza,” and “bird influenza.” Stories with fewer than 500 words were eliminated as they were viewed as too short to allow for an in-depth qualitative analysis.

Coding of the Frame Analysis Sample

After the stories were selected and briefly reviewed to determine that the story was indeed concerning one of the keywords noted above, a sample population of 200 articles was analyzed in this framing study. Three coders examined the articles using a qualitative,
holistic approach aimed at discerning the frames or themes conveyed by the text of each article as a whole.\textsuperscript{21}

After all the articles were read, the coders discussed their findings, using a technique similar to the constant comparative method,\textsuperscript{22} which specifies that the coders first conduct an individual line-by-line analysis of each story, first noting metaphors, narratives and other thematic devices, and then integrating incidents as larger themes took shape. Each of the coders looked for commonalities and differences, constantly noting emerging themes or categories of interest. Then they discussed their findings and determined which themes and categories spanned the entire sample. The coders fine-tuned the themes or categories until they reached a consensus regarding the primary patterns and themes found and a coherent set of frames emerged.

Following in the tenets of the constant comparative method, specific counts of incidents were not taken. However, in keeping with the rigor required of qualitative methodology, great care and time was taken to thoroughly examine each text. Most specifically, the use of multiple coders was used to assure that the categories and themes that developed were accurate interpretations.\textsuperscript{23} The examples shown in the findings that follow are culled from many articles and have been selected as being typical of the kinds of incidents found throughout the data.

**Results**

We analyzed 200 New York Times articles written between 1997 and 2006. More than half (51.5 percent) of the articles originated at the New York Times’ foreign desk; the national desk contributed 15 percent of the articles, while the business and financial desk contributed 11.5 percent of the articles. Another 11 desks (science, health,
metropolitan, Connecticut weekly, travel, Long Island weekly, magazine, cultural, week in review, New Jersey Weekly, and leisure and weekend) accounted for less than a quarter (24.5 percent) of the articles. The frequency of articles concerning the disease increased considerably in 2004, 2005 and 2006. The newspaper contained fewer than 10 articles about bird flu each year from 1997 to 2003, but in 2004 that number jumped to 49. There were 65 articles each in 2005 and 2006.

While reading the texts we noticed The New York Times reporters consistently approached their avian flu stories from a limited set of angles. In our interpretation, these approaches can be summarized in five broad themes.

**Alarming the public**

From the identified themes, The New York Times reporters seemed especially focused on grabbing public attention through sets of warnings and alarming predictions in order to introduce the virus’ threat. We found five specific subcategories that illustrate how The New York Times used this broad theme of alarming the public to frame the bird flu virus.

In the first subcategory, reporters warned the public and promoted fear. For example, in 2005 Gardiner Harris and Lawrence K. Altman cite the Bush administration’s plan of action against bird flu: “If such an outbreak occurred, hospitals would become overwhelmed, riots would engulf vaccination clinics, and even power and food would be in short supply.”24 By presenting this grim situation without offering any solutions, the writers leave the impression that no positive alternatives exist.

Elisabeth Rosenthal and Keith Bradsher provide another example of this subcategory in 2006: “A pandemic flu outbreak in any part of the world would
potentially cripple supply chains, dramatically reduce available labor pools,’ the [American Chamber of Commerce] report said.” 25

Another way The New York Times alarmed the public was reporting the scientific, medical and political communities’ lack of understanding of the bird flu virus. For example, Rosenthal reports in a 2005 article: “But no one knows how well it will work, or if it will work, if and when the animal virus mutates into a strain that can be spread by human transmission.”26 In addition, The New York Times used scientific research and statistics to promote fear. In 2003, Keith Bradsher reported, “According to official Guangdong provincial statistics, the current outbreak of pneumonia has killed six people and sickened 300. But there has been widespread concern here about whether the statistics really reflect the extent of the problem.”27

The idea of using the virus as a threat to prompt action from authorities was also present in the texts. In their 2005 article Harris and Altman report, “The United States is woefully unprepared for what could become the worst disaster in the nation’s history.”28

Finally, some New York Times reporters advanced the idea that the spreading of the flu was inevitable: “Michael Leavitt, secretary of the department of Health and Human Services, declared that it was ‘just a matter of time’ before birds infected with the virus found their way to the United States.”29

**Conflicting actions and opinions**

Another broad theme we identified in The New York Times articles was the reporting of conflict among governments, the scientific community and the World Health Organization concerning avian flu, the extent of its threat and appropriate measures to control it. Specifically, we found five subcategories that support this frame: criticizing
authorities who were responsible for taking action against avian influenza; politicizing
the virus; debating the price\textsuperscript{30} of the bird flu virus; assigning blame; and demanding
action from those responsible for controlling avian influenza.

In the first category, we read several New York Times reporters who criticized
authorities for their efforts in taking action against avian influenza. For example, in 1998,
Altman quoted Peter A. Patriarca, a food and drug administration official, about the
United States’ and the World Health Organization’s draft plans for a pandemic.

\begin{quote}
\textit{``We have been spinning our wheels for two or three weeks because [Dr. Roland
A. Levandowski, the food and drug agency’s top influenza virologist] did not have
the right facilities to work in,’’ Dr. Patriarca said. The problem is still unsolved
because the agency has yet to arrange for him to work at such sites elsewhere in
the Government.''}
\end{quote}

In addition to criticizing, The New York Times also politicized bird flu by
reporting on issues such as what governmental bodies should be responsible for taking
action against the virus. Diane Cardwell writes in a 2006 article:

\begin{quote}
\textit{Mayor Michael R. Bloomberg and the city’s health commissioner, Thomas R.
Frieden, offered a blueprint for identifying an outbreak, containing its spread and
distributing scarce resources like ventilators and antiviral medications. They also
sounded a frequent refrain that the city must rely on itself, and not Washington, to
plan for and react to potential disasters.''}
\end{quote}

Another approach The New York Times used to frame its coverage was
highlighting the discussions about the price tag that officials had placed on preparing for
and researching avian influenza. For example, Robert Pear writes in 2006:

\begin{quote}
\textit{President Bush wants to spend more on bird flu and physical sciences next year,
but would freeze the budget of the National Institutes of Health and would slightly
cut federal support for research on cancer and heart disease, two of the leading
killers of Americans, budget documents show.''}
\end{quote}

Furthermore, we found many examples of New York Times reporters playing the
blame game – accusing governments, agencies, scientific and medical officials, etc. for
the lack of preparedness against the virus. Again, Altman illustrates this subcategory in a
2006 article: “The World Health Organization says that despite agreements made earlier,
many countries are still not promptly sharing information on avian influenza with the
scientific community, potentially harming efforts to learn how the virus is evolving.”

Finally, the fifth subcategory we found under the conflicting actions and opinions
theme was The New York Times’ coverage of the demand for those responsible to take
appropriate action against bird flu. Rosenthal illustrates this subcategory when she quotes
a veterinarian concerning the monitoring of avian flu around the world.

“We encouraged the countries to increase surveillance,” said Dr. Juan Lubroth,
a senior veterinarian at the (United Nations Food and Agriculture Organization).
“But I am not a policeman. What I can do is to ask governments to be more
vigilant.”

Reinforcing positive outcomes

The third broad category we identified – “reinforcing positive outcomes” – shows
the actions of authorities (governments, scientists, World Health Organization) to placate
panic and despair among the public. Although it used this frame infrequently in its
overall coverage, The New York Times portrayed these attempts from three specific
angles. The first one presented a series of statistics and scientific evidence to show the
public the flu was not so powerful and unstoppable as their counterparts, the alarmists,
were depicting.

Good examples of the use of this angle by The New York Times reporters is the
citing of medical authorities like Dr. Saw Thian-aun, deputy director of Hong Kong’s
health department, in 1997: “There is no cause for panic, as available evidence does not
suggest that the disease is widespread.” Thian-aun continues in the article: “Transmission
appears to have occurred only from birds to humans.”
Some reporters used specific words to downplay the official numbers:

The human toll has been slight. Only 108 people have been infected, of whom 54 have died, and alarmingly high mortality rate but one that seems to be diminishing. It is reassuring that millions of people have lived and worked in close proximity to infected birds without harm and even more reassuring that the flu strain has not yet developed the ability to spread easily from one person to another.37

As seen before, the same numbers that were used to inflict terror are now used to calm the public.

A second subcategory also found under this theme was directly downplaying the threat of the virus, as the following example from a 1998 article shows: “Many countries are not particularly worried about influenza. Even in the United States, interest in the subject lags. Influenza is not commonly discussed at most conferences.”38

With this candid example of the authorities’ lack of interest in the flu, the impression left by the reporters is that the readers should not worry because the authorities did not regard it as a great threat.

Finally, reporters placated general fear of the flu by highlighting the preparedness of competent authorities:

Dr. DeHaven added that any surveillance in avian influenza is a good thing. “The chicken industry’s program is stricter than his department’s voluntary one,” he said. Robert Lobb, a chicken council spokesman, said, “We’re not waiting for sign to show up.” In other words, they are taking action now.39

Thinking analogically

Not so easily found, but yet very distinct, is the fourth category used by The New York Times to relate bird flu to other known facts about history, culture, geography and other disasters. When the situation is presented with this frame, the public gets a feeling
that the flu is not something new and mysterious, but something that can be understood through those aforementioned correlations – a feeling of familiarity.

One example of how The New York Times used analogies to familiarize the public with the virus’ potential threat was when it compared bird flu to other diseases.

*The cause [of SARS] has not been identified, and scientists do not know whether it is a virus or even an infectious agent. Although health officials have suspected avian influenza, which has infected a small number of people sporadically in Hong Kong since 1997, laboratory tests have not detected the rare strain, known as influenza A(H5N1).*

Along these same lines, the New York Times compared bird flu to other types of disasters and calamities.

*In the wake of the government’s poor response to Hurricane Katrina, the Bush administration has been at pains to reassure the country that it is taking seriously the threat of a pandemic flu, which some experts see as the next calamity that could befall the United States.*

Another way The New York Times helped the public become familiar with the subject was to historicize the evolution of pandemics, as seen in the following example:

*The worst death rate was suffered in the 1918 pandemic of Spanish flu. That killed 2.6 percent of those who got sick, or about 40 million people. The two other pandemics were less severe. The 1957 one killed two million and the most recent, in 1968, killed one million.*

A clever way The New York Times presented the proximity value of avian influenza was through the use of anecdotes that illustrated geographic and cultural analogies. The following examples emphasize the cultural importance of poultry to specific populations:

*The rooster has been the national emblem since ancient Gallic times... “The fowl is part of our national heritage,” said Pierre Rolland, the mayor of Loue, a poultry-producing town southwest of Paris.*
Cheap and easy to raise and prepare, chicken and other poultry have long been an important staple among Kurds...\textsuperscript{44}

**Emphasizing personal responsibilities**

Finally, the theme we found less prevalent was “emphasizing personal responsibility.” This frame included two subcategories: (1) empowering and educating, and (2) surviving and coping. In the first subcategory, New York Times reporters frequently highlighted situations where individuals could take precautionary action against the disease without having to wait for official aid.

For example, Bradsher indirectly quoted Dr. Yeoh Eng Kiong, Hong Kong’s secretary for health and welfare in a 2003 article.

\textit{The virus was likely contracted from direct contact with chicken feces, and that person-to-person spread was less likely. He urged residents to wash their hands regularly with soap and warned that the disease was probably carried by migratory birds.}\textsuperscript{45}

This information not only educated the public about avian influenza, it empowered individuals to take personal action and preventive measures.

Articles continued to empower and educate throughout the 10-year period we analyzed. For instance, as late as 2006, reporters were attempting to spread knowledge of avian influenza while encouraging personal responsibility. Diane Cardwell quoted Dr. Thomas R. Frieden, New York City’s health commissioner:

\textit{“It’s a low technology, but it works: covering your mouth when you cough or sneeze; not going out if you have fever and cough,” Dr. Frieden said. “These are very important things people can do to reduce the spread of infection, and if there were a pandemic, they would be our first line of defense.”}\textsuperscript{46}

In the second subcategory, New York Times’ reporters offered hope by sharing personal stories of people who were coping with and surviving the threat of bird flu. In 2006, Richard A. Oppel Jr and Yerevan Adham wrote about a Kurdish family:
“It was very good food for us, but now we’ve lost it [all of their chickens],” Mr. Ramadan said. “When our children would come back from school and were hungry, their mother would cook eggs for them.” Instead, he says, the children will get yogurt from sheep’s milk.47

Discussion

After a thorough analysis of The New York Times’ bird flu coverage, we found the newspaper essentially has used the same frames for the past 10 years. Although we noticed changes over time in the number of stories that used a specific frame – for instance, the politicizing frame was used overwhelmingly after 2005 – The New York Times has utilized the same five frames since 1997. In our opinion, this shows little creativity in the ways the publication approached its bird flu coverage.

As mentioned earlier, overall coverage of avian influenza increased sharply beginning in 2004. (In 2003, we found only six articles meeting our Lexis-Nexis search parameters; in 2004, we found 49.) One possible reason for this increase is the 2004 tsunami, which shifted reporters’ attention to Asia and the issues facing its people. Also, the disease itself became more prevalent after 2004.

Of the 200 New York Times articles evaluated, only 23 were published in the publication’s science and health sections. The majority of bird flu stories – a total of 103 – came from the newspaper’s foreign desk. Clearly, The New York Times views bird flu as more of a political issue than a health issue. This is important because when media politicize a health issue, they cause confusion and disproportional fear. For example, after Laos eliminated bird flu in its population, the international community put pressure on the Laotian government to spend millions of dollars to prevent another outbreak of the virus.48 However, the country faced greater threats from other diseases – such as tetanus and rabies – that were killing many more people than bird flu did.
Conversely, when science or health journalists report on health issues, the coverage is usually more educational, and therefore, more helpful to the public. We found that stories that originated from The New York Times’ health or science desks predominately used the “emphasizing personal responsibility” and/or the “reinforcing positive outcomes” frames. For example, in its March 28, 2006, issue, The New York Times dedicated much of its science section to the coverage of avian influenza. For more than a month after this special health feature, we found no stories that used the “alarming the public” frame. This could mean that because of the special coverage in the science section, even the newspaper’s reporters became more educated about – and less fearful of – the virus.

In 2005 and 2006, more articles about the conflicting attitudes and opinions surrounding bird flu were published. One possible explanation for this is the increased amount of money and grants involved in researching avian flu. For example, in 2006 the World Bank created a fund for bird flu, and the United States devised a budget plan for dealing with the disease. Other possible reasons for this increase in the conflict frame include the Sept. 11, 2001, terrorist attacks and the government’s response to 2005’s Hurricane Katrina. After these disasters, the American people may have become more skeptical of their government’s plans to protect the public.

**Conclusion**

This study is limited by the fact that no human bird flu cases have been reported in the United States or any nearby countries. Framing of the potential for a pandemic is likely to be different from the framing of an actual human outbreak should one occur. Secondly, this study is limited because it focuses only on the coverage of one newspaper.
While The New York Times plays a key role in determining the national news agenda in the United States, there remain many news sources not examined in this study. Furthermore, the constant comparative method of qualitative text analysis is limited in terms of reliability. As with all qualitative research, this study’s results are the product of its coders’ interpretations and represent reality as determined by the coders at the specific time the research was carried out. These results would not necessarily be the same if gleaned by other researchers at a different time.

This research area could be expanded in the future with framing studies using other newspapers and news magazines. Coverage of avian flu in print media also could be compared and contrasted with television, Internet and radio coverage. In addition, it would be worthwhile to compare coverage of bird flu in American media with coverage in foreign media, especially in countries where human bird flu cases have already occurred. Furthermore, studies of the effects of bird flu coverage would shed greater light on the subject. Survey instruments assessing people’s knowledge about the disease and fears of a pandemic could be paired with assessments of which media outlets are their most trusted sources of information. From this knowledge base, future framing studies could establish more precisely the impressions being conveyed through news media coverage of the disease.

17 Reporting on a Potential Pandemic: A Content Analysis of Avian Influenza Newspaper Coverage.

20 The sample included only news and feature stories that met the criterion of running 500 words or more. The word “stories” is used throughout the article to describe coded items, but it should be understood that only news and feature articles were included.

21 Coders were instructed to work for no more than three hours straight before taking a substantial (two- to three-hour) break from coding, to reduce the amount of error introduced through coder fatigue.

30 By price we mean the cost of researching and combating avian influenza, the marketing of medicines and vaccines, and the disputes concerning what groups should receive United Nations or other governmental grants.

Looking at Research On Bt Cotton in Southern India

Abstract

In 1998, the Indian Government approved Bt cotton to be grown in trials. Since then, a wide body of literature has been published looking at the economic viability of transgenic cotton in India. Alongside this is the issue of effectiveness. After a spike in farmer suicide helped stimulate debate over the topic, both GM proponents and opponents have looked intensely at Bt cotton’s viability. This paper looks at several studies on Bt cotton in India with a special focus on farmers in Warangal, Andhra Pradesh. After comparing the data, this paper suggests that India remain precautionary and push for more research. Central to this assertion is the fact that Bt cotton’s long-term effectiveness is questionable and that it is subject to significant variations that compromise utility. Eco-friendly alternatives such as organic farming and agricultural development are therefore proposed.
Introduction

No issue in India is ever monological. In one of the most ethnically diverse and pluralist societies in the world, India offers as many exceptions as it does rules. The issue of genetically modified (GM) crops has been shown to be divisive, often pitting green activists against biotech advocates and in the process further blurring the lines between fact and fiction. The fact is we don’t have a large, established and reliable body of research regarding GM crops; the science is in its embryonic phases. The recent advance of biotechnologies into the developing world has posed some very serious concerns over the safety and viability of GM crops. How are GM crop technologies affecting the prospects of Indian farmers?

In this paper I will look at Bt cotton and its implementation by farmers in the Warangal district of Andhra Pradesh, India. This paper will argue that transgenic crops are a novitiate in the slowly established practice of agriculture and therefore that current research is insufficient and poses many unanswered questions.

Biotechnology Policy in India

The advent of India’s expanding biotechnology sector is contingent upon the nation’s movement towards a liberalized market economy. As a net effect, the India of just ten years ago is dramatically different than the India of today. Exponential gains
have been made in virtually every sector of the economy, from industry to information technology. Presently India shows no sign of slowing down and its economic growth rate plays second fiddle only to China. In January 2000, Prime Minister Atal Bihari Vajpayee included the biotechnology sector under the larger umbrella of knowledge-component industries charged with the task of accelerating India’s economy in the twenty first century (Paarlberg 95). Indeed, India’s savvy and innovation in service-related sectors requiring a high quality knowledge-component stands superb, and has distinguished the nation as a fierce global competitor as well as the preeminent leader of such services in the developing world. Delhi has promoted biotechnology as a potentially aggressive sector for generating investment and growth, “capitalizing on India’s scientific knowledge capital (Herring 10)”.

Paarlberg’s assertion that India assumes a precautionary/preventative position on transgenic crops misconstrues the fact that India has had somewhat of an open-door policy on GMO’s coinciding with its liberalized economic policies and subsequently greater acceptance of private sector contributions. The proliferation of biotechnology in India has been aided in large part by the 1988 National Seed Development Policy, which allowed Indian firms to collaborate with foreign firms and import seeds, and the 1989 Plants, Fruits and Seeds Order, which freed seed importation from government controls (Newell 2). This legislative pattern helped lay down a foundation which promoted a stronger private sector seed industry in India during the 1990’s (Dhar 12).

Today, over twelve major biotechnology corporations do their business in India. Monsanto is of course the leading player and the one which has garnered the most limelight, or rather infamy. Other multinationals include Cargill, which has been active
in India for sometime, Dupont, Aventis and Syngenta. Additional policy reforms which proved critical to multinational consolidation of growth include the National Seed Policy of 2001, which set out to provide farmers with access to a range of superior seed varieties (Newell 3).

The problem with Paarlberg’s study is that he looks at four criteria: IPR, Biosafety, Trade, Food Safety and Public Research Investment in order to extrapolate his conclusion. But the issues within the scope of this paper, such as the response of farmers to Bt Cotton as well as the efficacy of Bt Cotton in rural India, are relatively excluded from his equation. At the same time, his thesis pays close attention to the effect of civil society advocacy on GMOs, in particular the ability of NGOs to successfully inhibit the ability of biotech multinationals to penetrate markets. After Monsanto purchased a 26 percent share of India’s Maharashtra Hybrid Seed Company Ltd. (Mahyco), and the Indian Government approved limited field trials of Mahyco’s Bt cotton, activists began directly challenging Monsanto’s GM crop technologies, especially its so-called ‘terminator gene’ patent (Paarlberg 99).

Due to the perpetually changing dynamic of GMO issues, it can be hard for researchers and scholars to stay ahead of the current debate and make inferences that remain accurate. Paarlberg’s book was written in 2000, therefore the section on India that pertains to Bt cotton effectiveness makes assumptions that today could be strongly refuted by government, activists, farmers and even scientists. He writes “Although India’s Bt cotton trials went forward under protest and criticism, they did manage to generate important evidence of this GM plant’s effectiveness against bollworm infestations (Paarlberg 107).” As I will show, research produced right in Southern India
confirms the ephemeral security of this belief. Thus Paarlberg was wise to note that the 1998 trials demonstrated short-term success only: “field trials of Bt cotton in India had seemed to confirm, meantime, that Bt varieties could provide at least a short-term solution (ibid)”. Bt cotton sold in Andhra Pradesh as “Bollgard” was marketed by Mahyco-Monsanto, a joint venture of Jalna-based Indian Seed Company Mahyco and Monsanto, a multinational seed and agrochemical company.

Bt cotton, India’s first GM crop, got approval for its commercial cultivation in South India, in March 2002 (Qayum and Sakkhari 31). When the GEAC (Genetic Engineering Approval Committee) of the Government of India permitted the commercial release of Bt cotton hybrids, it opened a new pathway for Indian agriculturists. The state’s new interest in transgenic materials and technology transfers prompted Mahyco Monsanto Biotech Ltd. to get the approval for release of genetically engineered Bt cotton hybrids MECH Bt-12, MECH Bt-162 and MECH Bt-184 from the GEAC (Ministry of Environment and Forest, Government of India), for 3 years, i.e., from April 2002 to March 2005. Monsanto developed these cotton hybrids by inserting genes responsible for the production of Delta-endotoxin from a soil bacterium Bacillus thuringiensis (ibid, 27 and 35).

Part of the reason why India has become an ideal template for GMO opposition is elucidated by Newell, Seshia and Scoones: “Compared with the green revolution, where trust in public sector scientists was high and the negative environmental impacts of the technologies became apparent only slowly, the gene revolution has started on a more cautious footing (Seshia and Scoones 2003).” Newell continues, saying that “In India, high levels of civil society engagement and skepticism towards scientists, government
and industry combine with both highly uncertain and disputed risks and benefits associated with biotechnology (Newell 4)”. 

Interfacing with this is the scar of colonialism, in which Indians engaged in a highly organized and systematic deconstruction of British rule. The Union Carbide Disaster in Bhopal in the 1970’s proved that Indian Government could not always be trusted and gave greater salience to activist claims that private interests, in particular those that originate from foreign multinationals, often put the health and safety of citizens below the interests of the state and the private sector. Despite India’s horrendous income and wealth inequality, its democracy continues to be exemplary of pluralist perspectives, a point adumbrated by the willingness of actors to organize, advocate and demand political and social change.

With respects to biotechnology, Indian activists were fresh on the heels of the government’s policy reforms and quick to oppose the forward movement of biotech corporations. Well before the issue of Bt cotton had mushroomed, activists were bringing it to the public’s attention. In November 1998, a political leader in Karnataka staged an attack for the media on Bt cotton trial plots. Previously he had made headlines after attacking the Cargill seed company and a Kentucky Fried Chicken restaurant (Paarlberg 100). But by March 2002, “India became the 16th nation in the world to approve a genetically engineered crop for commercialization, albeit provisionally and in the face of continuing opposition (Bharathan 2000, Bunsha 2001 in Herring 9).” Opposition persisted in the context of Bt cotton through charges of market fixing, though this time initiated by activists in Brazil, Chad and other African developing nations. In March
2005 a World Trade Organization appeals panel found that the international cotton market is rigged “to the detriment of poor farmers in poor nations (Herring 4).”

**The Importance and Challenge of Cotton in India**

Add to the complexity of markets and biotechnology policy the challenges of growing cotton in India and the reasons why Bt cotton has become such a prominent issue become clearer. As I showed above, India’s treatment of transgenic crops was not a cut and dry precautionary or permissive approach. Rather, India adopted policies in accordance with the international transformation of economy; as globalization had a greater impact on developing economies by encouraging liberalized market models and preferring private investment over public sector control, policies on GMOs also became more liberal. But India’s powerful democratic voice articulated the dissatisfaction of activists who were opposed to genetically engineered crops. At this time I will look carefully at just what cotton means for India. What factors accounted for farmer suicides in districts like Warangal and did Bt cotton exacerbate the tradition of debt-suicide? Furthermore, how difficult a crop is cotton to grow and how necessary is it to Indian agriculture and the economy?

Simply put, the answer is that cotton is enormously difficult to grow and vital to Indian agriculture and the economy. Cotton is a “pesticide treadmill” crop that farmers spend heavily on in order to combat an abundance of predacious insects (Stone 3). Cotton (*Gossypium Hirsutum*) which belongs to the Mallow (Malvaceae) family, requires substantial inputs to produce good yields. Costly fertilizer and scarce water is needed in large amounts to ensure healthy and productive growth. Cotton farmers in India, many
already teetering on the edge of bankruptcy, are forced to purchase these inputs should they wish to make any profit. And of course, many market variables affect the profitability of cotton harvests.

Invariant of Bt cotton or non-Bt cotton varieties, it is a very involved and expensive crop. India accounts for twenty five percent of all world cotton production. Currently it has more land under cotton cultivation than any other nation and five percent of India’s total cultivatable land is used for cotton farming (Herring 2-3). Cotton is grown in over 87 million hectares in India and ranks third in world’s cotton production (Siddaramaiah, B.S. and Srinivas, B.V. 2). Successful cultivation of cotton requires a long growing season, plenty of sunshine and water during the period of growth, and dry weather for harvest. It can take more than 20,000 litres of water to produce 1 kg of cotton; equivalent of a T-shirt and pair of jeans. Seventy three percent of global cotton harvest comes from irrigated land (WWF). Cotton producing areas in India are spread throughout the country. Panjab, Hariyana, Rajasthan, Maharastra, Gujarat, Madhya Pradesh, Andra Pradesh, Tamil Nadu and Karnataka are the major cotton producing states (ibid). Farmers in these areas are forced to engage in more aggressive methods to sustain profitable harvests, with a heavy reliance on various inputs, especially environmentally harsh pesticides.

Rajendran’s examination of organic cotton viability states that “Cotton productivity in India is quite low as compared to world standards. The modern cotton production technology relies heavily on the use of fertilizers and on chemicals to control insect pests, diseases, weeds and growth regulators. Cotton cultivated on 5% cultivable land consumes 54% of total pesticides used in Indian agriculture, and in some pockets,
the rates are higher than this (Rajendran et. al)”. New strategies to organically grow cotton have attempted to offer an opportunity for cotton farmers to break the cycle of costs and debt.

Multinationals like Shell have also aligned themselves with nonprofit organizations that promote sustained organic cotton farming. These initiatives serve as alternative methods for cotton production, ones that seek to reduce chemically and transgenically dominant cotton cultivation in India. The Shell Foundation, an independent grant making charity, warns that cotton’s heavy use of inputs subjects farmers to ‘cotton treadmill’ behavior. The Foundation insists that “Farmers are enslaved by a cycle of having to invest in more and more quantities of expensive chemicals, but with less output and ever lower earnings. There comes a point when conventional cotton production becomes unviable. If a cotton crop fails, there will be serious social consequences, not least of which is a distressing increase in suicide rates (Kumar).”

Other nonprofits like Christian Aid have also come out strong against GMO’s, approbating farm methods that encourage sustainability through organic alternatives while maintaining the position that GM crops concentrate too much power in the hands of too few (Simms).

Suicide amongst Indian farmers has become a divisive issue. Both biotechnology industry and anti-GMO activists claim that the increase in suicide rates within areas affected by Bt cotton reifies each other’s claims. Representatives at Monsanto insist that suicides in Warangal support the assertion that GM cotton is a way out of the debt cycle while activists like the vociferous Vananda Shiva see suicides as evidence that Bt cotton
has made conditions much worse. One thing is for certain, farmer suicide has been a way of life for some time on the Indian subcontinent and the rise of Bt cotton does not change this. The greater question to ask here is if suicide rates have increased in areas where Bt cotton has been especially prolific and if so, has it been caused directly by the advance of transgenic options.

At this point in time, the latter question appears to be open to speculation as data on suicides is inconclusive. There is a growing body of literature on the internet concerning GMOs and farmer suicides in India and the majority of it appears to reflect negatively on the biotechnology industry. Despite this, even Shiva and other activists have not been able to unambiguously link the increase in suicide rates with the failure of Bt cotton. A study done within Andhra Pradesh that looked at farmer suicides concluded that rates of death were especially concentrated in cotton-producing areas but attributed a number of non-GM factors to the cause including improper land redistribution and adverse weather conditions (Reddy and Rao). However, the association is tempting to make. In 1998, right when India was first tinkering with Bt cotton trials, five hundred farmers took their own lives and the next year that number increased to six hundred (Stone 1).

The epicenter of the suicides was Warangal. The big enemy in cotton production, as all cotton farmers know well, is the bollworm, an insect in the lepidopteran family that feeds on and destroys cotton. Bt cotton has been shown to be effective against American bollworm, reducing the overall cost of pesticide inputs. But in Warangal, there are predacious insects in the Spodoptera family as well which Bollgard, Monsanto’s patented
Bt cotton variety, is not effective against. In Warangal, the main cotton destruction in 1997-98 was caused by resistant insects in this order (Stone 3).

**Looking at the Data**

In the above section I showed that cotton farmer suicides in Warangal have not yet been connected to any indisputable cause. While a wide range of factors seem to have contributed to deleterious outcomes for farmers, they vary from political reasons, such as land redistribution, to the disadvantageous conditions of patron-client schematics, which force poor farmers into exploitative contracts with middle-men and benefactors who finance inputs at exorbitant interest rates. Nonetheless, the spate of suicides by cotton farmers and the subsequent timing of GM trials in India raise concerns. Evidence indeed indicates that regardless of Bt cotton’s declared effectiveness against American Bollworm, it is not an effective control over other predacious insects. It also casts doubts on the economic viability of Bt cotton and its long-term resolve.

In the next section I will look at four studies that examine Bt cotton in India. The first is the ACNielsen study which was sponsored by Monsanto and which predictably concludes that Bt cotton successfully reduces farmer dependency on pesticide inputs and henceforth decreases overhead, thus increasing farmer income. The second study, conducted by the University of Reading, looks at cotton farming in Maharashtra, India and comes forth with the belief that since 2002, Bt cotton has had a positive impact on average yields and the economic performance of cotton growers, though it also states that in some areas farmers have been adversely affected. The third study, conducted by the Deccan Development Society in Hyderabad, the capital of Andhra Pradesh, refutes
ACNielsen’s findings. The fourth study has been produced by two scientists, one at the Central Institute for Cotton Research in Nagpur and the other at Nexgen Technologies of Hyderabad. Their focus is on the adaptability of cotton bollworm to Bt cotton. In other words, they are looking to see whether or not the bollworm insect gained resistance to Bt and if so, is this resistance level outweighed by the potential reduction in pesticide use.

In 2003, a nationwide survey was conducted by ACNielsen and ORG-MARG, claiming to reconfirm the benefits Bollgard cotton provided for Indian farmers (Seedquest). The survey covers five of the six states in India where Bollgard is grown: Maharashtra, Madhya Pradesh, Andhra Pradesh, Gujarat and Karnataka. The survey estimates that that there has been about a thirty percent increase in Bollgard fields, which equates to around 1.7 quintals per acre, when compared to conventional cotton. Farmer profits according to the survey rose by eighty percent, equivalent to Rs. 3126 per acre and the resultant decrease in pesticide sprays translated to savings of Rs. 1294 per acre (ibid). The survey referred to an “interesting revelation” in the data which noted that Bollgard cotton lint fetched a higher market price. Seed cotton from Bollgard crops garnered an eight percent higher premium over conventional cotton (ibid). ACNielsen’s data showed for Andhra Pradesh a bollworm reduction of fifty eight percent and a reduction in pesticide expenditure of Rs. 1856. Yield increases were reported at twenty four percent, equivalent to 1.98 quintals more per acre. The study also boasted that net farmer profit increased to ninety two percent or Rs. 5138 (Seedquest).

---

1 Rs. Stands for Rupees. In 2002, Forty Seven rupees was equivalent to about one USD.
A study that compared 9,000 Bt cotton and non Bt farm plots in Maharashtra, India’s largest cotton growing state, resulted in data that colluded with the findings of the ACNielsen survey. The study was conducted over the 2002 and 2003 growing seasons and was based on a questionnaire survey carried out by extension workers with Mayhco. The data was independently monitored by scientists from the Genetic Engineering Approval Committee and the Central Institute for Cotton Research. The survey indicates that GM cotton had a positive effect on farmers by yielding greater quantities, reducing the dependency on insecticides and ultimately generating greater farmer profit.

At the same time, though the survey is decidedly pro-GM, it makes the reader aware of variations, a reoccurring theme throughout the scientific literature on Bt cotton in India. Variation accounts for why some district farmers in India succeed unanimously and why some fail. If anything, the diverging opinions on Bt cotton do lead to one general consensus: that India agriculture is too heterogeneous to make Bt cotton guaranteed effective across the nation. I will show later that other studies confirm this notion. The survey acknowledges that variation was realized in terms of insecticide applications. Bt cotton does not respond as readily to conventional insecticide treatment and at the same time, some spraying is necessary since the Bt gene does not offer one hundred percent protection from bollworm (Bennett 62).

The survey warns that field data may not be representative of growing conditions in the wider farming community. Moreover, Bennett et al. caution that “this analysis found lower average yield increases of 45% and 63% for Bt plots across the season compared to non Bt. After allowing for differences in pesticide use etc., production
function model estimates were 33% and 48%, respectively (66). Variation was also
realized in terms of yields of Bt and non Bt plots by district. In general, Bt plots
continued to produce greater yields though in 2002, “3 out of 16 districts showed little
difference between the average yields from Bt and non Bt plots (ibid 62).” The survey
does not include data by district in the published paper. The Maharashtra survey also
identifies spatial and temporal variation in the benefit to farmers as “much can depend on
where production occurs and the season (70).”

The Deccan Development Society (DDS) study was conducted utilizing three
different patterns. Farmers that grew Bt cotton were followed over the course of a
season. Two villages were selected from the twenty-two monitored in the study. From
each of the selected villages, two farmers were selected at random. Their monthly
interviews contributed to the formation of data regarding their progress over the season.
A midseason report involving twenty one farmers in eleven villages assessed the status of
crop development over the season. Lastly, the DDS study looked comprehensively at
crop development by interviewing over two hundred farmers selected at random from
over twelve hundred participants, at the end of the season, in April 2002.

The DDS study highlights two key findings derived from their results:
performance and economic results. When comparing the performance of Bt and Non Bt
varieties, the DDS found that overall quality of harvests were notably different. Bt
flowered earlier than non-Bt, grew to be shorter plants and had less branch density. Bt
cotton also produced smaller bolls which tended to shed faster than non Bt cotton bolls.
Bt cotton yielded a lower number of cotton pickings and had twice the number of seeds,
reducing lint quality (Qayum and Sakkhari 33). Though Bt was effective in reducing American bollworm infestations (non Bt cotton experienced ten percent higher infestation rates), Bt cotton was ten percent more susceptible to chlorophyll-sucking insects like aphids. Insects that feed on chlorophyll reduce the ability of plants to photosynthesize and produce growth. During the first thirty days after germination, plants were absent of any sucking insects. After ninety days, when the crop was maturing, moderate to heavy infestations of aphids and whiteflies were reported on both categories of cotton, with a higher rate of infestation occurring on Bt cotton varieties (ibid).

Economically speaking, DDS discovered that farmers were consistently short-changed when they grew Bt cotton. Cultivation cost, average yield, market price and profit were all lower when compared to non Bt results. Cultivation cost came to more than Rs. 1092 more than that of Non Bt cotton. Bt cotton farmers spent slightly less than non Bt farmers did on plant control inputs, amounting to an expenditure of about Rs. 70 per acre. Non Bt growers achieved seven quintal yields per acre while Bt growers reaped only 4.5 quintals per acre, a difference of over thirty percent. Non Bt hybrids commanded prices of nearly Rs. 2,200 a quintal at market, which was roughly Rs. 100 more than the market price of Bt varieties. Taken together this resulted in a net return by Bt cotton farmers that was Rs. 6663 less than that of non Bt farmers. As a consequence of these agronomic factors, twenty nine percent of Bt farmers reported profits compared to eighty two percent of non Bt farmers (34).

The DDS also raised concerns over biosafety, stressing that there were no regulatory checks that prevented contamination of non-Bt cotton strains. In many
instances, farmers trying to make up for the reduced selling price of Bt varieties would mix types before marketing (34-35). Also, according to the study “Small boll size, and short staple length which appeared to be the genetic character of MECH Bt 162, affected the market preference as well as the price of seed cotton (41).” The DDS went on to refute Monsanto’s claim that Bt would eliminate Bollworm attacks in the first ninety days. The data shows how pesticide application is higher on bollworms after ninety days and concludes that Monsanto does not offer any protection for this phenomenon. An attempt to reverse this phenomenon increases the chance that insects will develop a resistance early on (47). The study team reiterated in its observations that “The quest for developing plants, which have greater and greater resistance against dreaded insect pests, may prove to be unsustainable in the long run with the pest developing resistance. This is a dangerous trend fraught with dreadful environmental consequences (52).”

Insect resistance is therefore one of the most persuasive issues regarding Bt effectiveness. The Central Institute for Cotton Research and Nexgen Technologies published their 2004 examination of bollworm adaptability, which suggests that resistance to Bt cotton is an inevitability. The study warns that resistance can develop should growers and governments be careless in using transgenic crops but ultimately refers to properly used Bt cotton as an eco-friendly technology (Kranthi and Kranthi 1106). Scientists consider resistance to Bt as an evolutionary eventuality since Bt cotton imposes intense selection pressure on the target insect over the course of the growing season. The study states that “A progressive increase in the concentration of resistance-conferring alleles in pest populations due to sustained selection pressure, results in a concomitant decrease in the pest control efficacy of the transgenic crop (1096).” Thus
the study promotes careful management of the technology to ensure at least a decade of effective use. On this note, the study admits “Preservation of susceptible alleles indefinitely would mean enforcing severe restrictions on the use of the technology that may curtail the benefits significantly (1096).”

Though Kranthi and Kranthi’s paper ultimately rules in favor of Bt cotton, the reoccurring message is one of precaution and a need for governmental and agricultural management over Bt cotton. The paper strongly suggests that Bt cotton crops be grown along side non Bt intercrops to increase the probability that susceptible alleles will be conserved (1103). The importance of cropping systems, especially in South India, where bollworm has a different seasonal biology, is given special consideration as a technique that may reduce resistance during the peak infestation period (ibid). In order to further delay resistance, the practice of refuge is implemented in the cropping process. Refuge is a preferred management option globally and ensures that a certain area of non Bt cotton is grown in close proximity to Bt crops so that survival of susceptible insect genotypes is more probable (1104). As the DDS study confirms, refuge strategies are only as beneficial as the commitment by farmers and officials to enact them. In the Warangal district, Mahyco-Monsanto did supply farmers with audiocassettes and product-literature on how to plant border rows of non Bt hybrids as refuge. But farmers claimed to be ill-informed as to its purpose. Additionally, there were no proper mechanisms that monitored whether or not refuge was planted in farmers’ fields (Qayum and Sakkhari 49).

The study’s main finding is that the higher percentage of Bt cotton in a given area versus non Bt hybrids significantly increases the level of resistance bollworm acquires. If
an area under cultivation is under twenty percent Bt cotton, it would take 25 years for the frequency of resistant allele to reach 0.5 percent. The study says that “a complete control failure is expected when the frequency of resistant alleles in the pest population reaches 0.5 (Kranthi and Kranthi 1096).” But the study acknowledges that with India’s forty percent Bt cotton level, it would take about eleven years for bollworm to become resistant to Cry1Ac, the most common Bt strain. Furthermore, the research indicates that overall conventional insecticide applications could also affect resistance: “Use of effective insecticides in Bt cotton fields will reduce insect populations that survive Cry1Ac toxin and thus represent resistant genotypes (1105).”

Kranthi and Kranthi admit that scientists do not yet understand the link between alleles conferring resistance and conventional insecticides used for bollworm resistance, though the study states that “Any such association could confer cross-resistance and can be detrimental for the long-term sustainability of the Cry1Ac-based Bt cotton technology as well as for the insecticide (ibid).” As a look at the Warangal district demonstrates, biotechnology has yet to guarantee that integrated resistance management methods can be enforced or that farmers and rural authorities have the know-how and materials to facilitate such a program. Refuge development in Warangal proved to be primitive if at all an effective means to control cross-resistance or resistance.

This said, the study intimates several key concerns; that total Bt cotton effectiveness can be at best offered as a short-term solution, that Bt cotton and other transgenic crops expressing insecticidal properties realize reduced effectiveness when complimented by conventional insecticide applications and that the relationship between
these two is not fully understood, that resistance to Cry1Ac becomes greater as crop maturity gets closer (after ninety days), and that eco-friendly methods need to be employed such as hand-picking of surviving bollworms and cultural control.

**A Look at the Data Raises Concerns**

The four studies I examined take us at times in different directions. No two studies infer the exact same conclusions and each study approaches transgenic technologies with specific precautionary afterthoughts. A comparative look does produce a common ground of sorts that centers on several concerns: first, the cost of Bt seeds compared to non Bt hybrids. Second, the noted variability between districts due to India’s large heterogeneity. Third, the eventuality of insect resistance to Bt genes. Fourth, the fact that poor farmers run the risk of being negatively not positively affected by transgenic technologies.

Two of the four studies report that despite Bt cotton’s proposed benefits to farmer profits, the cost of seed itself can inhibit consumer choice. Bt seeds are patented technologies that make biotechnology giants big profits. Though the initial cost to develop the seed is probably soon offset by the volume of sales, the biotech corporations maintain a high mark-up on the product. In the Warangal District, Mayhco-Monsanto distributed 1550 packets of Bt MECH-162 and twenty eight packets of Bt MECH-12 to farmers. The seeds cost Rs. 1600 per packet which was enough to sow one acre. The DDS writes that “ Seeds of Bt cotton were nearly Rs. 1100 more expensive than Non Bt” varieties (Qayum and Sakkhari 34). According to Bennett, the higher cost of Bt cotton may lead some farmers to give it better treatment, hence resulting in greater yields.
compared to non Bt (70). Also, if a poor farmer’s crop does not produce as expected, and he has paid three times more for his seed, this may increase his propensity to consider suicide as a final solution. It will definitely increase his debt and thus his obligation to creditors.

The data shows that there are differences in yields, pesticide use and market prices across India’s many districts. Variations account for these differences. Maharashtra’s success with Bt cotton contrasts with Andhra Pradesh’s failures. Cropping patterns in India need to be better understood, especially with variation between regions, so as to understand the way refuge impacts insect resistance to Bt toxins. Bollworm has a different seasonal biology in Andhra Pradesh compared to other states. Understanding this difference could lead to new findings regarding bollworm adaptability and pesticide use. Bt cotton has also not been proven to adapt to environmental conditions invariantly. Qaim et al. establish that “The average impacts of Bt cotton technology across states mask the high degree of heterogeneity among farmers (Qaim et al. 52).” This includes what the authors label agroecological conditions. Andhra Pradesh’s severe drought conditions in 2002 and 2003 counteracted the positive Bt effect with a “negative germplasm effect (ibid).” Though water stress should not alter the Bt genes effect on cotton, it was not sufficiently adapted to extreme drought.

Though Bt cotton has been proven to destroy bollworm, it has minimal to no effect on chlorophyll-sucking insects. Bt cotton also has a ninety percent effectiveness rate on certain bollworm species. Therefore Bt cotton must be used in conjunction with conventional controls, including insecticides. The fact that bollworm eventually builds a
resistance to Bt toxins is compounded by several factors that can significantly accelerate this process. If Bt cotton becomes a dominant crop, and the non Bt refuge crops can not conserve the alleles that express susceptibility, then it is likely that Bt cotton could become ineffective within a decade after being used. Good ‘eco-friendly’ alternatives include organic cotton farming as well as improved rural agricultural, providing a tested and stable form of agricultural sustainability.

Finally, these factors influence the effectiveness of transgenic crops and can work against farmers in India. Bt cotton is not necessarily right for all farmers. Strong regulatory policy should be considered to ensure that farmers are not subject to agricultural choices that are outside their best interest. Farmers are also exposed to black markets that peddle spurious seeds, ones that were never approved by the Indian government and have never undergone any trial tests. Furthermore, the market place has been shown to be fixed against poor farmers. Transgenic crops remove the sovereignty of farmers by making them bound to laws under intellectual property rights, which means farmers lose control of their own seed stock. Should Bt cotton prove to be ineffective and uneconomical in the long-term or if a specific district proves disadvantageous towards Bt cotton adaptability, then biotech could push farmers deeper into debt. Agronomic and environmental consequences could be catastrophic to poor farmers and the nation as a whole.

**Conclusion**

Multiple perspectives on GMOs have diffused into the debate via research and public perception. The above studies demonstrate that the lines have not been
definitively drawn and that the issue demands further inquiry. This paper looks especially at Bt cotton’s impact on poor farmers in Warangal. Though I definitely do not see a reason to explicitly prohibit transgenic crops, the research does suggest that the technology promotes many unknown variables and unanswered questions. Additionally, the tendency of international markets to favor private capital and wealthier nations implies a globalization element that produces consequences on the world agronomic order which is outside the scope of this paper.

Yet transgenic crops are intertwined with multinational corporations and private ventures. From the perspective of a poor Warangal farmer, the implications advanced by studies on Bt cotton are ambiguous and paint an uncertain future. Challenges to the benign interpretation of Bt cotton cast doubts on the technology’s ability to provide nation-wide protection. A high level of heterogeneity and variability in Indian agriculture exacerbates this effect. Bt cotton’s ‘shelf-life’ has also been open to scrutiny, revealing that its window of effectiveness could be greatly reduced by a number of variables. In turn, the relationship between transgenic crops and these variables needs to be researched further by scientists.

India’s powerful democracy can be a tool in moving this study forward. NGO’s, activists, scientists, government officials and biotech representatives need to push their interests aside so that unbiased and transparent research into GMOs can be conducted. Better research instead of impassioned debate seems to be a good strategy. Until then, India should take a very precautionary position at the least. Bt cotton has not been
proven to disadvantage farmers. At the same time, it has not been proven to have any lasting effect nor has it been shown to benefit all farmers in India equally.

Phone numbers: 781-866-1655 (Lauren Mizock, M.A.) or 617-305-1926 (Debra Harkins, Ph.D.)
ABSTRACT

Why is more psychological research not inclusive of participants of color? There are several factors that contribute to this phenomenon, including the research institution, the publishing community, and the researcher. The history of racism in psychological research and the aversive power dynamic created between the participant and researcher play a key role in the lack of cultural research. In this paper, we will highlight the findings that seek to explain the lack of research being done on race, problems in current cultural research, and suggestions for future studies. Finally, we will outline methodology for a narrative study of the relation between the White researcher and participants of color that examines the impact of race on the research process. Adding to the research on race and ethnicity is vital to improving: racial identity theory, culturally sensitive clinical training, psychodiagnosis, and clinical treatment. We will argue that ensuring that research and clinical services become representative of populations of color is essential not only to the foundation and future of psychology but also the central American value of equality.
“The education of the second generation as the challenge.
Based on field research among the Chinese Diaspora in Milan (Italy)¹.”

by Agata Mleczko (M.A.)

Abstract:
The identity of the immigrant children, or better said so called second generation, is obviously influenced by the fact of living in a foreign country. Both, on the field of American and European literature, we have a wide spectrum of theories that focus on the different reasons of the successful adaptation or failed integration of the immigrants and their children. The theory that seems very interesting and also most suitable in the Italian context is the one elaborated on the base of Chinese alphabetization and potential profile of identity that can be shaped. The life trajectories of the young Chinese living in Milan can be treated as the good example of such dependence between their language skills and the sense of identity they have.

Key words
immigration, identity, Chinese, Milan, education, second generation, adaptation.

Introduction
The intensification of human migration can be easily observed nowadays. The migration movements is most easily seen effect of globalization. Every year millions of people change their country of residence with hope for better life. The mass migration waves cause serious problems with the integration of the newcomers within the host countries. The current migration movements force every society to face the problem of living in a multicultural and heterogeneous reality. The American society had experienced such conditions for years and the public and academic debate devoted to the second generation has a long tradition. Also the presence of the second generation members at school has been reality in the American schools for years. However, most of the European countries faced this problem very recently and very little is known about the education of the second generation on the European ground.

The problems of the immigrants’ children presence at school and their proper education need to be resolved urgently. Italy as one of the European state is a good example to analyze this phenomenon. With almost 4% of the foreigner pupils in schools, Italy is not the leading European state in the total number of the immigrants, but certainly is among the countries where

¹ The research project was financed by the EU, and was developed in frame of the Research Training Network ‘Urban-Europe’ at Universita degli Studi di Milano-Bicocca.
the immigrants’ issues are unstable and where the number of foreign pupils in the school classrooms is growing rapidly.

This article describes the current situation of the second generation in the Italian primary and secondary schools. The outcomes of the field research presented in this article focus on the education as one of the important factors of the identity shaping process. I argue that the education of the second generation in the Italian schools may be seen as a challenge for the pupils, their parents, teachers and policy makers. The field research had been conducted by using the qualitative approach and was mainly dedicated to the Chinese Diaspora in Milan. Although the Chinese immigrants’ group has particular status in Italy it can be treated as a good example of wide range minority groups presented in Italy (Chinese in Italy are third immigrant group, after the Albanians and immigrants from Morocco).

**The second generation in the American literature**

Using the term created in the United States may appear as unjustified in the European or specific Italian case, but I still argue that such a choice is reasonable. By using the definition of one of the most famous American authors Alejandro Portes I argue that the second generation consists of: ‘three distinct categories: immigrant children, children of immigrants, and native-born children of native parentage’. (1996: ix). Immigrant children category means children who were born in the receiving country or abroad but arrived in the host society after early infancy, before the age of 12. In this situation the crucial factor seems to be the education and socialization that took place in the receiving country. The children of the immigrants are those native-born from immigrant parents but also include those who arrived in the host country at an early age.

But this simple and clear distinction meets a few methodological problems. Firstly, there are some difficulties with the distinction between native-born and foreign-born children. Practically the child born in Italy from the immigrant parents and the child who arrived at the age of 12 are indistinguishable, but in reality the difference is huge enough to use another category. “This is of some pertinence for the Italian case, as migrants’ children assume their parents’ nationality until they reach the majority” (Andall, 2002). For that reason we need to be aware of the extreme heterogeneity within the so called second generation.

Secondly, in Canadian research, scholars (Berry, Phinney, Sam, Vedder, 2006) also talk about the problems of distinction between the first and the second generation. This is because children born in another country, and arriving by the age of 1 year are technically first generation, although they will live virtually all their lives in the new society. In contrast children born a few months after the parents arrive in the new country are technically second generation, but are
virtually indistinguishable from children in the above situation. Thus, the Canadian scholars use ‘proportion of life in the new society’, or ‘length of residence’ in their research, rather than the simple classification into first or second generation. In the Italian case to receive citizenship the child or adult person has to reside in Italy for at least five years but the very recent law on immigration (1992) was increased this period to ten years (Andall, 2002). Based on this law constitute that the children of the foreign parents if remain continually resident in Italy can request Italian citizenship within one year of turning eighteen.

Thirdly, research argue about the detailed determinant of the second generation in general. So, we have researchers who qualify the second generation as “native-born children with at least one foreign-born parent-born parent or children born abroad who came to the United States before age 12 ” (Portes, Zhou, 1993:75). To be more precise Rumbaut (1997) “promoted more detailed definition of second generation by introducing the terms 1.25, 1.5 and 1.75 generation- referring to foreign-born children arriving before the ages of 6 and 12 and after 12, respectively” (as cited in Andall, 2002:391).

Points to such a detailed distinction within category of the second generation shows the complexity of the phenomenon and also difficulties with proper categorization. Despite these methodological problems when we concentrate on the identity problems we can contest that the whole second generation’s members meet some general difficulties with their proper identity definition. These problems will be described in the further part of the article.

Apart from the methodological discussion the second generation category is something more than a just a numeric separation between parents and children. It consists the typical problems that children must struggle with, it possesses some characteristic conditions of identity shaping and dilemmas that need to be resolved. Being member of the second generation results in the sense of similarity with the child who lives in another, quite often far country, then with the schoolmates. Paradoxically, the life trajectories of children who reside in different countries have some sharp similarities even if the conditions and atmosphere in receiving country matters a lot. The sense of belonging to such wide category as the second generation emerge from the consciousness of the individual’s duality. On one hand growing up in a particular society makes one similar to the wider category of nationals but on the other hand there exists the consciousness of being different. Some second generation members are able to resolve such dilemmas. But quite large part of such children meets specific difficulties and some others will never completely resolve their identity issues.
The second generation in the European literature

Even if the conditions in Europe are quite different from the American ones the European literature is based on the leading American studies in this subject.

I would like to present one example of the adaptation of the American theory called segmented assimilation in the Italian case, which, in my opinion, is not very relevant to the current social and political situation.

Basing on the dependence between economic integration and cultural assimilation Ambrosini (Ambrosini, et all. 2003) defined four basic categories within the second generation (see Table 1).

Table 1: The dependence between cultural assimilation and economic integration

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>low</td>
<td>low</td>
<td>Downward assimilation: the young inserted in the marginal community, which develop the contrary toward the host society’s rules attitudes (like the deviant type of assimilation)</td>
</tr>
<tr>
<td>low</td>
<td>high</td>
<td>Segmented assimilation: the school and economic success favor from the maintenance of the local community networks and distinctive cultural codes</td>
</tr>
<tr>
<td>high</td>
<td>low</td>
<td>Anomic or illusory assimilation: acquisition of the occidental life styles accompanied by lack of the tools and means needed for achieving the proper consumer standard</td>
</tr>
<tr>
<td>high</td>
<td>high</td>
<td>Classical linear assimilation: abandonment of the ancestral identity and the local community networks accompanied by economical advancement</td>
</tr>
</tbody>
</table>

The ‘downward assimilation’ is strictly connected with the parents’ material and social status and with the place of residence. When the immigrant family arrives to the host country and chose to stay inside the ethnic community they’ll probably meet more difficulties in the adaptation process then the others, more dispersed throughout the city. Now, there are two opposite directions in the literature: some of the researches argue that the inner city ghettos promote the downward assimilation while the others argue that nevertheless the parents’ low status the child may achieve success in the new host society (Alba and Nee, 2003; Farley and Alba, 2002). “The children of peasant and working-class immigrants are at risk of “downward assimilation.”” (Portes and Rumbaut, 2001:59), In this “alternative path,” immigrant offspring face the prospect of dropping from their “parents’ modest starting position (Portes and Rumbaut, 2001:59)” into “a new rainbow underclass…at the bottom of society” (Portes and Rumbaut, 2001:45) (as cited in Waldinger, Feliciano, 2003:3).

The ‘segmented assimilation’, as result of the high economic integration and low cultural assimilation, concern the situation of economic success achieved with proportionally big ethnic community help. The immigrants using all the resources connected with their ethnicity have worst chances to acculturate with the wider society. Residing inside the ethnic zones and running
some sort of ethnic business they maintain their cultural heritage but at the same time the opportunity to the successful adaptation is rather weak. Geographic proximity to the underclass matters because it leaves “second generation” kids hanging around with the wrong crowd, not a good thing since immigrant offspring then pick up the wrong attitudes of their native-born peers” (Waldinger, Feliciano, 2003:6). Although, in the most recent American literature the ethnic communities appears as the advantage and good opportunity for the immigrant for successful insertion in the host society. The observation made by Zhou in the 90. that the ethnic enclave can play important role in the difficult process of becoming American by facilitating the adaptation process (1992). The Chinatown in New York is seen right as the ‘buffering zone’, spearing the ‘cultural shock’ after arrival. What’s problematic with using this kind of approach is specificity of the Italian case, where classical ethnic communities does not exist in such mode as in the U.S. Even if in Milan we have a Chinese zone it cannot be treated as a typical Chinatown nor ethnic enclave. The zone is more multicultural then just Chinese and it has no strict boundaries. Nowadays lot of other nationalities are residence in the neighborhood and the Chinese who just arrived also reside in other part of the city.

Continuing the discuss on Table 1 content let’s analyze the illusory assimilation. Such phenomenon takes place when the immigrant achieved quite high level of cultural assimilation but for variety of reasons he/she wasn’t able to integrate on the economic area. These immigrants adapted the typical for the occidentals consumers behavior, habits or even opinions, they try to live like the other Italians. Their aspiration and dreams are like the Italians but they meet visible problems with realizing all they’re dreaming about because of low economic status. They also may experience the social ostracism, discrimination on the labor market and prejudice.

Classical line assimilation is like typical assimilation in general and is equal to the American ‘melting pot’. The immigrant who thanks to their work who achieved the economic success are considered as the perfect immigrants and becoming very similar to the natives. Although they leave behind their cultural heritage, sometimes mother tongue, traditions and religion. All their effort are concentrated on the creation of similarities with the natives. I have some doubts if any Chinese may become equal to the native Italians even if he/she possess similar income. What’s important that the children of the immigrants who are seeking of becoming like the Italians are being pushed in this direction. The young Chinese brought up in such family are more Italians then Chinese in their behavior, opinions, habits or identity but, as I wrote before, there are still serious doubts with the totally acceptance from the native Italians.

I think that Ambrosini theory has no strong connections with local context, what’s the reason of its discrete value in the Italian Chinese and any other community case. The specificity
of the Italian context arose serious doubts with the value of this theoretical model of immigrant’s insertion into Italian society. The four basic models of immigrant’s adaptation presented by Ambrosini appear as underestimating the role of the national and local context.

**Education in Italy: new difficulties, new challenges**

The increase of the foreign pupils in Italian schools cannot be denied. Every year Italian teachers meet in their classes hundreds of recently arrived children. The main duty of all of the teachers is to transmit the basic knowledge to every child in the same classroom, with the same resources. Italy, as all of the other European Union countries, is obliged to provide education for each child, in a certain age, who lives in Italy, also these children with irregular formal situation and lack of papers and permission. It is not the aim of this article to present the Italian educational system thus it will focus only on the main educational paradigm. Browsing the Italian literature it seems quite clear that the main idea on education in present situation is *intercultural education*. The theoretical framework of this idea is based on the equal rights for everybody, respect to all cultures and languages and the mutual knowledge of each pupil’s heritage (Favaro, et al, 2004). Although the problem of the presence of the immigrants at schools is a very recent phenomenon there is quite rich literature dedicated to this subject.

Apart from this solid effort of the researches the typical everyday school life seems to be a tough task for the teachers and school in general. The main reason of this difficulty is enormous heterogeneity of the immigrant children, whose origins, in the Italian case, are form more than 170 different countries. Teachers from primary school situated in the “Chinese zone” of the city say about the elevate presence of the Chinese children as a facilitation of the educational process. Although, it can be also seen as the negative aspect of the language acquisition. In this investigated school there was a teacher who had been working with Chinese children for over 20 years and during this time a teacher learned Chinese language and, thanks to her engagement, she became a very efficient facilitator between family and new host society.

Another difficulty might be the different level in the Italian language proficiency. In the Italian school we can meet children who does not know even a word in Italian and those who can speak more or less fluently, but have problems with scientific vocabulary. The teacher describe these children as those with good knowledge of the common aspect of the Italian language, what makes their every day life in Italy quite unproblematic but the difficulties appears during lessons and demand additional effort from these children. That is the reason of necessity of the presence in the classroom of the support teacher or cultural mediator also in secondary school.

The family background may be seen as a very important factor of the child’s development and his/her school progress. Some families care seriously about the child’s Italian language
proficiency because they need help in translation and bureaucratic procedures, when running the family business. But there are also some families who agree for the child’s school attendance only because it is obligatory and just the day after children come an age they stop to frequent lessons and, as a consequence, drop school in general. Even if the school make an effort to facilitate the child’s education, as in one of the visited secondary school, the final decision depends on the family will. The school can propose some advanced solutions, like partial attendance etc., but together with an age the school obligation is finished and the child cannot be forced to continue his/her education.

The atmosphere and attitude of the natives toward foreigners matters because the main part of the intercultural education lay down on the mutuality, thus prejudice and ethnic biases disturb the correct process of mutual adaptation.

The teachers as one of the main “actors” of this reality say about many difficulties and also their own modest knowledge and skills in resolving these problems. The linguistic obstacle appears as the crucial one in the teacher’s opinion. The teachers meet difficulties in communication with pupils and their parents thus local authorities decided to provide linguistic support via email or cultural mediators’ presence at school. According to the teachers it is very useful and they use it always when they need to get the parent’s permission or to inform about the meeting. The cultural mediators in Italian schools are seen as a very good and efficient solution for everybody, but the problem appeared if it is about the salary for these experts who should be paid by the school individually. After the active local pro-immigrant policy in the late 90., then, at the beginning of the new century, the intercultural education paradigm with great external support, schools experienced some difficulties. However, to respond for this new demands there are some social initiatives, like Cooperativa Sociale DEDO\(^2\), Regione di Lombardia. This social association employ translators, cultural mediators, speech-therapists and psychologists who visit schools regularly but also provide support for local society (elderly home assistance, family support etc.). Although such local initiatives exist the general problem of the mediators and their presence at school is highly problematic.

**Education of the second generation in Italy as a challenge**

I would argue that the education, it such difficult conditions as described above, should be treated as one of the most important factor of the positive adaptation.

In the Italian literature exists a very interesting theoretical approach that combine the crucial aspect of the child’s development and social environment. Basing on the general second

\(^2\) http://www.dedo.coop
generation review and short description of the current national condition in Italy, I would like to present the theoretical approach elaborated by Sara Roncaglia and Daniele Cologna, published in 2003. The core of this approach based on the Chinese language knowledge and its influence for the identity building. Language acquisition is treated as a main factor of creation the positive identity and potentially successful life in the Italian society. What’s important we need to remember that the Chinese language knowledge is not the separate skill but it is accompanied by guanxi competence and socialization in general. If the Chinese language supposed to be learn properly it need to be allocate in a wider context of history and culture. So, if we talk about the grade of Chinese language knowledge in fact we mean the integrity of the education experienced in China before arrival. In the case of children who were born in Italy this knowledge is none but sometimes they posses basic knowledge of spoken dialect Chinese learnt at home. However, such skills are not sufficient to read newspapers, books or to continue studies on their own. The Chinese language knowledge refers to the official mandarin language taught in Chinese schools and used in mass media and not to the dialect knowledge used within the family to communicate. Some of the children who were born in Italy are able to communicate properly but using the dialect which is not useful in communications with other Chinese and in official situations.

The first group of Chinese children are these who started attend to school in China but did not completed it before arrival to Italy (1st column in Table 2), and who has generally Chinese identity. Such identity is mostly based on the early memories from China and even if their Chinese language knowledge is weak they are able to understand guanxi. Their identity as the Chinese is primary and rather unchangeable. They have potentially big variety of life trajectories: they can use both, being Chinese and being Italian, as the rich reservoir of social and individual behavior. Also the process of identity building seems to be not very problematic and progresses in rather smooth manner. However, the result of such process may not be as successful as the second group that will be discussed in follow part of the article. The main problem seems to be not very solid knowledge of Chinese (far less then 2000 characters) that is not enough to develop language skills on their own. Apart from the Chinese official language skills they do posses the knowledge of guanxi network even if the knowledge of Chinese is poor. At the same time they can be rather fluent in the spoken dialect of the region that they come from but the poor knowledge of the mandarin official language may be a cause of alienation within the Chinese community. They’re not able to read books or newspapers in mandarin nor official papers. Simultaneously their young age in the moment of arrival can be great advantageous: they have the opportunity to learn Italian language and culture relatively fast. In this case they’re able to create the cosmopolitan model of the identity. Their behavior, style of dress and relations created have
more global character than the typical Italian one. These children treat themselves as the global teenagers immersed in the large global culture of consumption with consciousness of their Chinese roots.

The 2nd column (in Table 2) in the table describe the most difficult situation for the children from the perspective of a process of self creation but also the most fruitful if we mean the possible results. Children who have rather solid knowledge of Chinese before arrival to Italy (at least 2000 characters) may become very successful members of the Italian society but before that they have to get through complicated and demanding process of self definition. Their Chinese allows them to expand the knowledge about Chinese culture on their own. They can read newspapers and watch Chinese movies in original language version. The very important factor in achieving success is the linguistic support. As I've already mentioned their Chinese is quite solid but they need a support to become fluent in Italian, both language and culture. Without such support they become rebellious and as a consequence alienated from Italian society. If they became well adapted or rejected depends on the professional help of educators As a process it's very fatiguing because, first of all they need to study Italian in the adolescent age and secondly they live in permanent impact of two different realities. Perhaps in most cases such conflict will never be resolved but indeed it demand the full consciousness of connection the different models of life and behavior.

It is also such problematic because in big part it depend on the external support that is sometimes very professional and supportive and sometimes there’s nobody who tries to help. Their being Chinese is very deep rooted so they might experience the cultural shock after arrival. Majority of them are in the adolescent or preadolescent age when are coming to Italy, mainly because of the Italian law where it is established that children before the age of 18 have a right to join their families here without any additional formalities. Consequently we have a group of Chinese who grew up in China, who finished their partly education there and are familiar with Chinese rules of behavior. After arrival when their parents decide to send them to school the new reality is far different from the well known Chinese one. One of the possible outcomes might be the alienation and self exclusion. The most serious problem is lack of Italian language fluency but even if they acquire Italian quite fast they sometimes meets serious difficulties in the integration with their Italian friends at school. The very strong faith in the ethos of hard working and studies made them quite different from the school mates who treat studies as a kind of play or game. The Italian school is not so demanding if it’s about discipline and level of knowledge. If the Chinese pupils study as hard as in China and the language acquisition is fast, they can sometimes overleap few levels. But even then, their integration with the school and neighborhood society is not
certain. Some of these children reject the occidental style of life and does not implement any of the Italian element into their behavior at all. The consciousness of being Chinese is much more important for them than possibility of integration with the Italian society. The primary Chinese instruction at school has a crucial influence into their life and opinions. Even if they see some potential problems with functioning of China as a country they value Chinese culture as very close one and actually as their own. They also posses a fully consciousness of guanxi network and they can use it also here in Italy. So this vast group of the children develop within the most complicated conditions and at the same time they have the widest repertoire of choice if it’s about their identity profile. They can achieve a very high level of adaptation and insertion into the Italian reality but before they do it’s needed to posses a consciousness of their roots and also potential possibilities.

The last column, 3rd one (Table 2), describe children very receptive on assimilation. The fact of being born in Italy, fluency in Italian, very often Italian citizenship and prevalence of Italian friends entail to creation Italian identity. The problem is their semblance that always rests Chinese and that means different then the native Italians. Because of their childhood in Italy they don’t posses the practical knowledge of using guanxi. It can be very negative in family perception when they don’t feel Chinese at all. Again we have huge variety of possible outcomes. The first one is self alienation from both groups. Even if child is able to understand perfectly the Italians he/she will never be fully understood by any of them. Such child may feel as a stranger in both groups. They often hear from the Italians that they’re Chinese and from the Chinese that they behave like the Italians. Some of them experience deep conflict of not belonging to any of these two groups. Sometimes they make a decision of being Chinese so they make additional effort to learn mandarin language, they take part in language courses organized in China, they study Chinese culture and sometimes became cultural mediators.

The very interesting remark is their sense of being understood: they feel fully understood and accepted by other Chinese who were born abroad even if in different country then Italy. When they meet during language courses in China they can share the similar experiences with other non native Chinese and they attain a fully affiliation. My field researches shows that when they think about their potential partner they’re dreaming about a person with similar experiences: with Chinese background but ‘international’ instruction. The second possible outcome is full assimilation with the Italian society but from one side there’s always problem of diverse appearance existing and, from the other hand, family may reject such child and treat her/him as a very distant. The instruction and school career may the full adaptation possible. Such adaptation proceed at many different levels: from the Italian language skills till the most important values
and life goals. Even if their appearance if different then the Italians they experience deep similarity to the occidental life style, they have similar passions and desires and have no problems with understanding behavior codes, jokes or hidden intentions of the speaker. The third possible solution, and the very beautiful one, is rediscovering their own roots and being proud of it. So they can be socialized according to the Italian model but in the adolescent age they’re interested in their origin, family ancestry and Chinese heritage in general. That may have a positive influence on the relations with their parents and may create the solidarity between them but also made their identity complete and very rich.

### Conclusions

Talking about migration is never simple because of its permanent changing and dynamics. As a phenomenon it’s always in the move, every time different, fluent and elastic. I believe that talking about migration in general is even impossible because of its constant changeability. The inclinations of the theoretical approaches presented in this article are limited in the space, to the community of the Chinese in Milan, and in time to the most recent migration flows.

This basic characteristic made the migration researches very difficult to any generalization, categorization or even detailed description. The time perspective is, from one hand, needed to state anything certain, but from the other hand present, intensive migration movements need to be solve instantly as the Italian citizens demand from the local authorities. The researches that cope with the most recent trends and phenomenon on the migration field need to also cope with the pressure create by the public opinion and by the local authorities in searching for best solutions, what causes that the field researches and reports published have a high priority and simultaneously great responsibility.

This article concerned mainly the Italian case, or to be more specific the Milan Chinese community. Even if I was using the general Italian approach by Ambrosini it was not
corresponding at the whole particular situation. The most suitable theoretical approach that try to
describe and to explain, in some part, the circumstances were prepared by Roncaglia and
Cologna. They concentrated on the city of Milan and I believe that their analyze of the respective
ethnic communities in Milan, also the Chinese one, is accurate and, even with its heterogeneity,
explains the local conditions in a proper way.

The education of the second generation of the Chinese in Milan appears as multidimensional
but also very important because of the elevate presence of the Chinese in Italy. According to the
teacher it is easier to teach Chinese children in the local primary schools in the “Chinese zone”
but the domination of one national group on a small territory and in one school always increase
the isolation tendencies. The education of the young immigrants should be seen as a very
important issue, especially from the process of positive identity shaping point of view.

Acknowledgements

Special thanks to my demography professor Patrizia Farina, my mentor Daniele Cologna,
Chinese language professor Alessandra Aresu, and Elizabeth Estevez who dedicated me their
precious time, attention and support. I’m also very grateful for Prof. J.W. Berry for his insightful
comments.

Executive Summary

The Plaza Saltillo Station at the southwest corner of East 5th Street at 412 Comal Street will become a popular destination immediately east of downtown Austin, Texas. Overwhelmingly, however, the area is not conducive to a pedestrian/bicycle friendly transit station as little commercial or retail development has been initiated. Also, because there are not very many destinations for retail or other commercial activity, few people have been noticed walking through the area.

Envisioned for the Saltillo District TOD is a multifunction transit node precipitating the unification of the East Austin community by providing a means for commercial, residential, and retail interaction. At the center of this interface is a mass transit station serving regional interests and facilitating a boost in economic development while also preserving local cultural heritage. The vision also requires the provision of market rate and below market rate residential dwellings. Lastly, the station will serve as a magnet for commercial development along 7th Street, helping to extend downtown’s central business district operations eastward.

We propose that a feeder bus system be implemented to collect residents living in or near the TOD and dropping them off at the station. We also propose that affordable housing and location-efficient mortgages should be two implementation tools that Plaza Saltillo
Barrera, McCarthy, Mosadomi

should utilize to both increase and diversify the residential population. Success comes from making the TOD a viable destination by successfully blending residential developments, cultural/entertainment destinations, employment centers, and commercial/office centers.

The purpose of the TOD station is to serve as a primary destination near downtown Austin representing traditional East Austin heritage and blending forward-thinking planning techniques with contemporary quality of life. The station itself should be visually appealing, replete with streetscape improvements and increased vegetation and pandering to very heavy pedestrian and bicycle traffic.
NEWS MEDIA ETHICS: A ROAD MAP

Abstract

Many professions with different objectives affiliate with mass media resulting in overlapping definitions associated with media ethics. This causes confusion in creating a proper ethical structure to which the news media can subscribe. Our paper historiographically examines news media ethics definitions and interpretations according to Clifford G. Christians and John C. Merrill, two of media ethics’ most cited and published authors, and helps lay a foundation for a clearly defined system of news media ethics. We point out that the two authors, even coming from very distinct backgrounds, defend some ideas that can be used as common ground to develop functional theoretical discussion that will assist in the improvement of the field.
News Media Ethics: A Road Map

Weeks after CBS News anchor Dan Rather used unauthenticated memos as sources to charge that President Bush was given special treatment in the National Guard during the Vietnam War, a USA TODAY/CNN/Gallup Poll found that 41% of people believed they could not trust the accuracy of CBS News. Furthermore, the study showed that 47% of people have a negative view of media accuracy in general (Johnson, 2004).

The public’s distrust of the news indicates that the news media are not properly fulfilling their social role, which is to provide society with useful, accurate, and educational information (Christians, Ferre, & Fackler, 1993; Plaisance, 2005; Richards, 2004; Ward, 2005). Based on our research, we believe the media’s failure to fulfill their social role can be remedied with a well-structured and thoroughly defined ethical system. We believe that a thorough definition of professional ethics should take into account the objectives of a profession and their relation to the role a practitioner plays in the construction and maintenance of a healthy society.

Plotting the Course: A Purpose Statement

Many professions with different objectives affiliate with mass media, including journalism, public relations, advertising, broadcast, and cinema. As a result, there are overlapping definitions associated with media ethics. This overlapping causes
confusion in creating a proper ethical structure to which the news media can subscribe. Our paper examines the definitions and interpretations of news media ethics according to Clifford G. Christians and John C. Merrill, who are among the most cited and published authors on the history of media ethics; as such, they are two of the most influential authors in the study on news media ethics (Starck, 2001). This paper will help lay a foundation for a clearly defined system of news media ethics.

Biographies

A print journalist by trade, Merrill (1997) worked on newspapers as a columnist, news reporter, feature writer, and wire editor in four states and has written or edited 30 books, most of them on international communication and journalism philosophy (Merrill, Gade, & Blevens, 2001). Merrill, a professor emeritus of journalism at the University of Missouri, has been teaching for more than 50 years. A supporter of the Libertarian approach to news media ethics, Merrill has a B.A. in English and history, two master’s degrees - one in journalism from Louisiana State University and one in philosophy from Missouri - and a Ph.D. in mass communication from the University of Iowa (de Beer & Merrill, 2004).

Christians, a professor of communication at the University of Illinois, Urbana-Champaign, is considered one of the main developers of the communitarian approach to the study of news media ethics and one of the main supporters of media ethics education (Starck, 2001). Since his early studies on the social responsibility theory of the press and on the history of
communications and media ethics, Christians has written and collaborated in multiple essays and books dealing with various aspects of mass communication and mass communication ethics. He has holds a B.A. in classics, B.D. and Th.M. in theology, and M.A. in sociolinguistics for Southern California, and a Ph.D. in communications from Illinois (Christians, Rotzoll, & Fackler, 1991).

Choosing a Compass: A Historiographical Look at News Media Ethics

We chose the historiographical method to achieve a better understanding of how Christians and Merrill helped create the lenses through which other researchers explore the work of early authors in the field of news media ethics. According to Rousmaniere (2004), “Historiography literally means the study of the techniques of historical research and historical writing” (p. 33). Rousmaniere explains that the historical understanding of any given situation is built not only on the historical data available, but also on the arguments contained in the narratives written by historians and their perceptions of the work of other historians. “These debates shape the understanding of history as much as any specific historical document or any type of historical method” (Rousmaniere, 2004, p. 33).

Additionally, Startt and Sloan (1989) provide a methodological explanation for the influence of historians on our perception of history:

Historians have two primary jobs. One is to describe the essential nature of the past. The other is to explain why that essential nature was as it was. Interpretation helps provide explanation. ... Explanations grow out of historical perspectives; without a perspective in which it is based, historical writing tends to wander. It is a traveler with no
road map or destination – who takes one road or another and never arrives anywhere because he had no place to go (p. 38).

David Paul Nord (2003) clarifies this perception:

Historians, historical sociologists, and the practitioners of the new historicism in literary studies all share a sense that human reality is and was constructed by human beings in particular contexts of culture. ... Thus, both social structure and individual choice, both probability and accident, both the general and the particular, can all carry weight in causal explanation in history (p. 373-374).

**A Plea for Normative Ethics: Starting the Journey**

After this promising beginning, the next important step in the attempt to create a systematic study of news media ethics was taken in 1947, with the publication of *Freedom of the Press: A framework of principle*, by William Ernest Hocking. Hocking, one of the main theorists of the Hutchins Commission, proposed the substitution of the negative concept of freedom, as used by the Libertarian theorists, for a new positive concept, which included the community and the society as an inseparable part of any individual’s freedom (Hocking, 1947). Hocking also offered other important concepts such as intersubjectivity of human experience and freedom of expression.
as an earned moral right. This is in opposition to the idea of inalienable natural rights, which scientific naturalists theorists supported (Christians, Ferré, and Fackler, 1993).

Unfortunately, the results of the Hutchins Commission, a mix of rules based both in the Libertarian and social responsibility approaches to news media ethics, derogated the work of Hocking. Only after 30 years, with the resurgence of the field — mostly due to the works of Christians and Merrill —, researchers started to approach the subject of news media ethics from a more philosophical and academic way, instead of merely writing codes of conduct (Christians, Ferré, and Fackler, 1993).

In 1979, Christians and Merrill debated the practices and problems of teaching ethics for communication students in a roundtable (Sanders, 1979). The discussion included other prominent historians and professors in the field like James Carey, who explained the importance of reemphasizing the theme of ethics after a 30-year hiatus:

It is not enough simply to say that you can teach ethics in every course by the professor acting ethically, or you can teach ethics by having a course in ethics in which you take up the problem of free gifts to the journalists — whether you should take the trip to the golf tournament in Hawaii and how this will influence your coverage. It can only be done well by returning to a much more ancient belief that it’s possible to have rational knowledge about the ethical and moral life and that it is a worthy object of pursuit within the university at large and within programs in journalism in particular. ... But I think that it is necessary, not merely for the proper education of ourselves let alone the students, but also because the ethics of communication ethics is not merely a concern of ours, but is a concern of all men and women in society. The stakes for people in this occupation are very high (Sanders, 1979, p. 33).

After this historical meeting, both Merrill, who was already a renowned professor in the field, and Christians, who wrote the
article “Beyond quandries: a plea for normative ethics,” which provoked the roundtable, became increasingly recognized for their leading roles in news media ethics studies (Sanders, 1979; Starck, 2001).

Findings and Discussion

Tracking Origins: Early Philosophical Influences of Christians and Merrill

As a Libertarian, Merrill (1989a) traces the roots of American journalism to Aristotle, who promoted a spirit of individualism, rationalism, self-respect, and morality. And although Aristotle’s emphasis on self-development and intellectual growth lost popularity in Europe for almost 2,000 years after his death, the Aristotelian spirit flourished once again in 18th-century Europe—the Enlightenment (Merrill, 1989a).

Thomas Aquinas, according to Merrill (1989a), is credited with reintroducing Europe to Aristotelianism toward the end of the Middle Ages, although the Aristotelian spirit did not peak until the first half of the 18th Century. Even before its peak, however, the return to a focus on rationalism and individualism was evident throughout the European Renaissance (14th-16th centuries), which saw the questioning of superstition and the Church’s authority, and increasing emphasis of the human mind, individual potential, and scientific activity (Merrill, 1989a).

However, in part to the philosophies of Kant, who devalued scientific knowledge and realism, the European Enlightenment lasted only half a century. Nonetheless, Merrill (1989a) underscores its
profound impact — it influenced the Founding Fathers of the United States who helped build a nation centered on the idea of freedom, including freedom of expression (Merrill, 1989a).

In particular, the theories and philosophies of John Milton and John Locke — both Libertarians — contributed greatly to the European Enlightenment (Merrill, 1989a). For example, Milton’s “self-righting principle” contends that, concerning freedom of expression, truth will always defeat error. In other words, Milton believed all human beings should have the opportunity to speak their opinion because people are intelligent enough to distinguish fact from falsities (Merrill, 1989a). Likewise, Locke believed liberty to be a natural right of all people; he also understood government to be a creation of the people, and, therefore, a servant of the people (Merrill, 1989a). Locke’s ideas, as well as Milton’s, undoubtedly influenced the U.S. Founding Fathers — and Merrill’s perceptions of the practice and ethics of American journalism.

Merrill (1989a) believes that another Libertarian who promoted the importance of freedom — for the press, specifically — was John Stuart Mill. Although Mill did not see freedom of expression as a natural human right, as did Locke, he believed free expression benefited society (Merrill, 1989a). Mill, who, like Milton, believed truth would always prevail over falsehoods, argued that all opinions are valuable and should be heard because if one is silenced, truth may be silenced. Additionally, Merrill (1989a) says, Mill contended that even “wrong” opinions could contain some truth, and that the challenging of commonly held opinions is
healthy, as it ensures the opinion won’t lose its vitality (Merrill, 1989a).

Machiavelli is another philosopher who influenced the Libertarian views of Merrill. While Machiavelli wrote hundreds of years prior to the Enlightenment, his ideas influenced thinkers like Locke and Mills in many ways (Merrill, 1992). Like Aristotle, Machiavelli is sometimes called the “father of modern American journalism” (Merrill, 1992) because of his discussions about power, government, politics, and history. In fact, according to Merrill (1992), some have labeled him as one of the first watchdogs on government.

Like Merrill, Christians posits that the Western, liberal press operates in an individual and autonomous fashion. He thinks that this autonomy and the belief that the freedom of expression is an inalienable right were prerequisites for a democratic society (Christians, 1989). However, he does not support this individual structure for the news media.

Christians’ ethical background is much more closely related to the social responsibility theory, which is founded on a report by the Commission of Freedom of the Press. The report, which Robert Maynard Hutchins chaired, would later become known as the Hutchins Report (Christians, 2003).

The social responsibility theory states that the media have a duty to serve society as opposed to serving the interests of business or government. Hocking, central theorist for social responsibility, believed that freedom of the press was not an inalienable right, but an earned moral right. He thought that freedom is not a given right, but one that involves the necessity
to work with and perform duties for others. Christians agrees with Hocking and argues that this leads to more truthful, comprehensive, and intelligent reporting (Christians, 2003). Christians thinks the press has a social responsibility for social service. As such, we are individuals but rely on each other (Christians, Ferré, & Fackler, 1993).

In part, Christians’ communitarian beliefs may have fueled his support of the social responsibility theory. As a communitarian, Christians believes that everyone has rights, such as the right to live, create, and communicate. While the community has no standing to hamper these rights, communitarians believe rights only exist in relation to the community. As such, people must create things that expand their resources and help others in the community further prosper in their environment (Christians, Ferre, & Fackler, 1993).

Christians states that when communitarian subjectivity is applied to the press, the safety of autonomy is lost. As a result, this makes individuals accountable for each other’s freedoms as well as their own. Christians sees Hocking’s work as having influence people to be advocates for ethics of responsibility. In other words, journalists should be compelled to act morally based not on professional interests, but because of their humanity (Christians, 2003).

Nonetheless, Merrill believes Machiavelli’s ideas remain strong guidelines for modern journalists (de Beer & Merrill, 2004); Machiavelli’s ethical philosophies also influence today’s news media. In short, Machiavelli believed in individual ethics that help the individual succeed. If adhering to social ethical standards helps one accomplish his goals, then that person should
adopt the accepted social ethic. If, however, the social ethical standard hinders an individual from succeeding, that individual should ignore the accepted ethic and utilize whatever ethic he or she needs to achieve his or her objective (Merrill, 1992).

Indeed, Merrill (1992) contends that Machiavellian journalism is true journalism. This is not too surprising, as Merrill (1997) believes journalism functions best under the individualistic philosophy; however, he notes that news media professionals should not immerse themselves completely in Machiavellism. Instead, he suggests journalists should make ethical decisions rationally, considering the consequences— for themselves as well as others (Merrill, 1997).

In our interpretation, Merrill’s adoption of the Libertarian approach to news media ethics is a reflection of the era in which he worked as a professional newspaper journalist. Indeed, in the 1930s, when Merrill began working, the Libertarian approach was widely predominant. The philosophy may have influenced his belief in ethics as a value within the media that guides the work of news media professionals in an individualistic sense. In other words, the professional should follow ethical standards for personal reasons and for the promotion of the profession.

Because Christians entered the field after Merrill, Christians was most likely influenced by the work of Gibbons (1926), Hocking (1947), and the birth of the social responsibility theory of the press. As such, he advances the aforementioned theory into the communitarian approach. Therefore, Christians argues that unless one’s freedom is used to help others, it is negated. Believing this, he would support that there is no single self, but only
humans who thrive and develop through interactions with others. The role of media in this process is to provide quality information that is educational and useful to society.

News Media Ethics: Searching for Directions

Christians argues that many communicators utilize the same channels, or media, to distribute messages. For example, reporters, sales representatives, entertainers, producers, and public relations professionals all send messages. By acknowledging this, he is also noting the difference in news, advertising, public relations, and entertainment (Christians, Rotzoll, & Fackler, 1991). Christians states that each plays a role in the main functions of media, such as news/journalists reporting news, advertising and public relations professionals conducting persuasion, and entertainers providing entertainment. It is at this point that he distinguishes journalists and the “news” media from forms of entertainment, and in a sense, makes a case that news media are not, or should not be, entertainment (Christians, Rotzoll, & Fackler, 1991).

In addition, Christians (Christians, Rotzoll, & Fackler, 1991) argues that media ethics is based upon critical reasoning related to moral questions. As such, ethical analysis should be conducted with a sense of social responsibility, which involves deciding values, moral norms, and loyalties. While individuals are responsible for making ethical decisions, they should not make them autonomously.

When journalists operate as part of a larger community, they become accountable to others and are interdependent. Christians
also argues that this lack of isolation helps avoid egotistical and deceptive decisions. Media that perform at this level provide a framework for media ethics that is strengthened as individuals recognize, define, and cultivate their position as a responsible citizen within a larger community (Christians, Rotzoll, & Fackler, 1991).

Likewise, although Merrill does not distinguish in specific detail journalism from entertainment media, he observes a blurring of the lines that once separated the two (de Beer & Merrill, 2004). Merrill’s background as a newspaperman is apparent as he laments society’s disinterest in serious journalism and increasing desire for entertainment (de Beer & Merrill, 2004).

Although Merrill opines about the importance of serious journalism, which he said should fill a deeper need than just what people want to hear (de Beer & Merrill, 2004), he recognizes the difficulty of defining a journalist in modern America (Merrill, Gade, & Blevens, 2001). As technology advances, the definition of a journalist becomes more difficult to pinpoint; radio, television, and the Internet have all expanded the role and broadened the scope of journalism (Merrill, Gade, & Blevens, 2001).

Despite a vague description of journalists, Merrill defines journalism ethics as the branch of philosophy that helps journalists determine what is right to do (Merrill & Lowenstein, 1971). Ethics set forth guidelines, rules, norms, codes, and principles that will lead — not force — the journalist to make certain moral decisions (Merrill & Lowenstein, 1971). Despite the disdain most journalists have for rules, Merrill (1997) suggests
that the rules inherent in rational ethics are useful to journalists.

While both authors agree there is a difference between news media and entertainment, Christians furthers the argument by positing that the various forms of media create symbols associated with who we are, what we should believe, and how we should act. As a result, they should be subject to ethical reasoning (Christians, Rotzoll, & Fackler, 1991).

Even though Merrill and Christians recognize the blurred lines between news media and entertainment, we believe that the two authors did not effectively define the differences of news media and entertainment. Because they did not provide clear distinctions of the objectives and purposes between news media and entertainment, we have no foundation for building ethical systems for either.

A Crisis Of Credibility: Are We Off the Beaten Path?

Since the Hutchins Commission of 1947, journalism has been under pressure to be more responsible (Merrill, 1997). Merrill suggests this commission came as a result of the press’s losing credibility in the eyes of the public (de Beer & Merrill, 2004). This loss of credibility, Merrill argues, is a result of, put simply, poor reporting on the part of journalists (de Beer & Merrill, 2004). He cites the media’s quest for part of the market share, which is leading journalists away from truth and significance and toward a more vulgar audience interested in entertainment and sensationalism disguised as news (de Beer & Merrill, 2004). Additionally, Merrill (1997) hypothesizes that the
celebrity status of many media personalities and their increasing attitude of self-importance is another reason journalism ethics concerns the public.

Merrill believes a universal definition of press responsibility restricts and limits the freedoms afforded the press under the First Amendment (Merrill, Gade, & Blevens, 2001). While Merrill (1989b) sees a benefit in the creation of broad ethical principles – such as cooperative attitudes, mutual respect, and empathy – he believes these principles should not be codified and that journalists should not be forced to follow these principles (Merrill, Gade, & Blevens, 2001).

Additionally, Merrill (1997) believes journalists should concern themselves with ethics out of self-respect, and he advises journalists to be concerned about ethics because people in general are concerned about ethics. The media must have a desire to be ethical; they need something to prompt them to act a certain way day-in and day-out. One inspiration may be the need to reestablish credibility (Merrill, 1997).

According to Christians (1989), early journalism educational practices, established in the 1920s, primarily focused on teaching journalists to focus less on values and more on the dignity and status of journalism. The result was an educational system for news media professionals that was based on professionalism, the avoidance of sensationalism, and the encouragement of social reform (Christians, 1989; Christians & Covert, 1980).

The primary goal of the educational system was to develop credibility for the profession while attempting to remove the stigma of journalists as “entertainers” and “jazz journalists”
News media ethics: A road map

(Christians & Covert, 1980, p. 3). This was to be accomplished through educating journalists to become scientific gatherers of news. As journalism grew to incorporate radio and television, it became an enterprise that provided both news and public service without proper codes of ethics and licensing in place.

Professional organizations attempted to remedy this by developing codes, but the result was primarily peer-regulated statements about conduct (Christians & Covert, 1980). In Christians’ opinion, codes have no foundation and “serve as public relations tool[s], like paint over bad plaster” (Christians, Ferre, & Fackler, 1993, p. 135). Christians claims that journalism education became skills-based with emphasis moving from individual ethics toward organizational responsibility and society (Christians & Covert, 1980).

As a result, Christians notes that the term media ethics (and all its cognates) disappeared from all mass communication book titles for 40 years beginning in 1932 (Christians, 2000). Christians speculates that educators thought it was enough for journalists to receive their training and guidance from codes of ethics, history books, and law (the First Amendment). During this time an anti-ethical worldview flourished and scientific naturalism ordered the structure of knowledge. Those things that could be identified with natural laws of hard sciences were seen as supreme. Freedom of the press became the main concern, with ethics falling to the wayside (Christians, 2000).

While ethics has returned to the classroom, Christians (2000) believes students are currently taught to choose the correct (ethical) course of action when practicing journalism (i.e. client...
autonomy, promise keeping, conflict of interest) without knowing how to consider the right course of action. Christians argues that until ethics are applied and appropriately reintroduced into the educational system, the intellectual pay-off from these efforts will be limited. He claims these teachings should be grounded on “credible versions of normativity, organizational culture, accountability, loyalty, and moral agency” (Christians, 2000, p. 30).

Christians also explores the need for media to generate profits and how this need has affected news media—specifically the way these profit-driven ventures have become more about making money than about serving the public. This is important because Christians thinks the press should encourage discussion about important social needs, and that the need to do so is more important than an organization’s needs (Christians, Ferre, & Fackler, 1993).

Christians looks at the media and the technological role they play in cultural pluralism (Christians, 1997b). He addresses that technology embodies values that are incompatible with democracy. It breeds normlessness and leads to challenges that are driven by amoralities in the culture. He claims that the more technical a society becomes, the more individuals become isolated and lose touch with morality. “Moral purpose is ravaged by the spirit of machineness” (Christians, 1997b, p. 193).

Christians states individual autonomy, which is being fueled by monopolistic business practices and technological advances, is currently influencing the mass media. Until they move past this model and adopt the communitarian approach, the mass media will be
unable to truly serve society as a cultural boundary spanner (Christians, 1997b).

Paving a Road for the Future

Christians has made a case that the Western, liberal press is based on individuals and their autonomy (Christians, 1989). However, advances in technology have minimized the implications of previously defined barriers. In other words, Christians argues that media ethics needs to encompass and take into account this rapid growth, which has allowed for mobility and complexity of culture (Christians, 1997b).

As a result, he claims there is an urgent need for new ethical scholarship that moves past simply focusing on country-by-country specifics, such as capitalism and industry (Christians, 1989). In doing so, a communitarian philosophy would support a democratized media in which ethnicity and citizenship are successfully integrated and moral imagination, not electronic networks – which lead to individualism – create a larger global culture (Christians, 1997b).

This requires the promotion and acceptance of international normatives. Christians states that only the “fringes of media ethics theory resist technological and industrialized imperatives in the culture at large” (Christians, 1989, p. 11). As a result, media theory reflects the values of one country at a time and fails to serve as a vehicle of transformation (Christians, 1989). As media ethics shift from local to international, Christians suggests using an international deontological-teleological typology of three ethical principles – regarding natural existence and sacredness of
life — which have been found across cultures: human dignity, truthtelling, and non-violence (Christians, 1997a; Christians, 1997b; Christians, 1989; Christians & Nordenstreng, 2004).

Christians says that instead of searching for neutral principles to which all parties can appeal, or accepting moral relativism uncritically, media theory should rest on a complex view of moral judgments as integrating facts, principles, and feelings in terms of human wholeness (Christians, 2000). It is these principles that will span borders and cultures and create a frame for critiquing news media practices and codes of ethics (Christians & Nordenstreng, 2004).

In contrast, Merrill disagrees with social responsibility theorists and communitarians who continue to call for measures to increase press responsibility. Some communitarian propositions include the establishment of universal ethical codes for journalists, heightened standards for students in journalism schools, and disbarring journalists who act irresponsibility (Merrill, Gade, & Blevens, 2001).

However, Merrill does not believe these efforts will effectively improve the ethical dilemma journalists face — balancing freedom with social standards and increasing dissatisfaction among the public. In fact, Merrill argues that the establishment of normative ethical codes will mute the free press voice (Merrill, Gade, & Blevens, 2001) and turn the press into a predictable, moral-conforming establishment (Merrill, Gade, & Blevens, 2001).

Moreover, Merrill questions how universal journalistic ethics are going to be written, since most media professionals and
scholars do not know what responsibilities the press owes the community, state, nation, or world (Merrill, Gade, & Blevens, 2001). Furthermore, Merrill wonders what defines press responsibility; he posits that responsible journalism is simply a press that supports one’s own truth (Merrill & Lowenstein, 1971).

Additionally, Merrill predicts the idea of civic journalism will generate continued conflict in the future (de Beer & Merrill, 2004). With the trend toward increased democratization of the press, journalists fear they will lose their role as gatekeepers (de Beer & Merrill, 2004). In fact, Merrill says journalists may not be interested at all in advancing democracy within the press; they have vested interests not to do this - financial, security, and political reasons to name just a few (de Beer & Merrill, 2004). Instead, Merrill suggests journalists should return to a focus on more serious news, and, despite the trend of combining entertainment and news, Merrill believes serious journalism still can be achieved (de Beer & Merrill, 2004). However, he labels the current call for journalistic integrity weak, and he foresees more soft, entertainment journalism in the future (de Beer & Merrill, 2004).

Looking to the future, Merrill supports the individualist philosophy in journalism; he prefers the idea of journalists making rational ethical decisions based on their backgrounds, value systems, and political and social environments (Merrill, 1989b). Merrill asserts:

Ethics or moral philosophy, then, must be a “concern” of the journalist, regardless of what code of ethics (written or unwritten) he subscribes to. Personal codes are, of course, always changing to some degree, evolving, becoming refined. But they should always be becoming more demanding – no less
News media ethics: A road map

[320x747]
demanding – on the individual journalist. Demanding in what respect? Demanding in the sense that the standards become ever more difficult to achieve and that they become increasingly more rational (Merrill & Lowenstein, 1971, p. 247).

Simply showing a concern for ethics, Merrill says, instills in journalists a sensitivity to every action – a trait that is becoming more important as the public continues to lose faith in the modern press (Merrill & Lowenstein, 1971).

It seems to us that Merrill and Christians successfully identified some prominent causes for the current credibility crisis in news media. Both authors agree journalism programs should include a specific course in ethics (Sanders, 1979). Although Merrill believed early in his career that the integration of ethics into general journalism courses was adequate, shortly after receiving his degree in philosophy he expressed the importance of teaching specific ethics courses in journalism programs when he said:

But I’m convinced that after last year at Long Beach, (they do have a course in journalism ethics and I taught that last year), that you do need a separate course [in ethics] so you can develop it systematically. If you try to weave it in all the courses, I think you are bound to fail in any systematic attempt to develop this moral consciousness, because you’ve got all these other things like development of technique to do in the other courses (Sanders, 1979, p. 34).

By changing his mind, Merrill exemplifies what Christians believes – that teaching a structured philosophy of ethics can serve as a basis for the cultivation of moral awareness. According to Christians this moral awareness is even more important now as the cultural boundaries are fading due to technological advances, which fuel individualism within the media.
It is clear to us that neither Merrill nor Christians believe that codes of ethics will solve the aforementioned problems. As Merrill states, codes of ethics diminish press freedom. He believes journalists should be autonomous to make their own decisions based upon their backgrounds and value systems. Merrill attributes to the communitarian movement the imposing of ethical codes on the press. However, Christians, as a communitarian, explains that normative ethics are not based on codes of ethics but on philosophical principles. Ironically, this matches Merrill’s view that journalists should rely on their own values and background systems.

**Conclusion: A Rough Guide for Future Research**

The limitations of this work are direct reflections of the historiographical method. As such, even though Christians and Merrill are two of the most esteemed authors in their fields, we were dependent on the limited number of texts they have written. Additionally, since history is told from the perspective of the present, we were imprisoned by the perspectives of our time; therefore, we were unable to fully experience the perspectives of their time of writing.

In our opinion, researchers need clearer and more precise definitions of what constitutes media practitioners and media ethics in a way that relates professional objectives with their societal role. This clarification will help build a common ground for discussion. For example, it seems to us that Merrill and Christians agree more than they differ; however, definitional misunderstanding causes a perception of conflict.
In order to achieve this common ground, the research in this field should be built on a universal structure, which works as a foundation for a large philosophical system of ethics. We hope, in our discussion of these two prominent authors, that we were successful in providing a map that will guide future researchers and help them avoid the overlapping of theoretical ideas, which is hampering attempts to build strong theoretical structure for the study of news media ethics. When this is properly addressed, it will lead to a broad understanding of media ethics and help to fill the definitional gaps.

“Intimate Segregation: Gentrification And Race In Chicago”
Jesse Mumm

Abstract:

“Do you know what gentrification is?” one new Chicago resident poses. “To some people it means just plain white.” I approach gentrification both as a moment that reveals underlying racializations in the United States, and as a process that transforms race through the medium of urban space. How is race revealed and constructed by gentrification? How are interracial interactions, conflict, and avoidance part of the political economy of race? While structural inequalities and shifts in modes of production and finance drive gentrification, its social climate and cultural worlds take shape through elaborate racial discourse. This ethnographic project focuses on the largely Latino Near Northwest Side neighborhoods of Humboldt Park and Logan Square in Chicago. I seek to reveal the reproduction of race by studying whites and people of color together at a crucial moment of urban encounter. I examine this landscape through public events and venues, meetings and structured interviews, and through the discourses of two white residents acting to promote gentrification, and two Puerto Ricans acting to contest its onslaught. Now that white residents are returning to areas formerly abandoned to people of color, both interracial contact and avoidance increasingly operate through mixed discourses and practices of diversity and inclusion on the one hand, and heightened and overt racial signification on the other. Intimate segregation sounds like a contradiction—indeed, it is—but it is a lived contradiction. Its intimacy signifies a new repertoire of practices which internalize the ways we interrelate even when we separate. I argue that the result remakes the form and content of racial segregation in deep, embedded, and often unpredicted ways.
Women Parolees: Hidden Identities and Invisible Lives

ABSTRACT

Women Parolees: Hidden Identities and Invisible Lives

Discussions of citizenship, the common good and social justice in relation to issues of reintegration and rehabilitation of parolees and ex-offenders into society upon release from prison are predicated on definitions of community, which determine “insider” and “outsider” status. While modern communities have to struggle to balance competing rights, including the rights of the individual as compared to the rights of the collective, some groups, in particular parolees and ex-offenders, are inevitably relegated to “outsider” status. This presentation focuses on the parolees’ experiences of reintegration into community through interviews with five women in the first “three-quarters” house in Canada: a pilot project funded by the Correctional Service of Canada and administered by the John Howard Society, Thompson Region (Kamloops, British Columbia). A “three-quarters” house provides less supervision than a halfway house and is the final step for inmates before release into the community on their own. The interviews were conducted using the collective case study approach, and the study was framed within the theoretical perspectives of Critical Theory (Habermas and Foucault), Canadian theoreticians of citizenship (Kymlicka, Taylor and Ignatieff) and Garland’s critical analysis of punishment and the culture of control. Findings focus on the “hidden” identity of the women and their families (most have children), their “invisibility” within the wider community and their loss of citizenship/“insider” status within society at large.
Title: Interpersonal Criticism: Who’s More Prone to Be the Source or Target and Why?

Author: Thomas O. Mwanika

Abstract: The tendency to find fault in others is pervasive in many human relationships including acquaintances, friends, family, and co-workers. Some of the criticisms may be designed deliberately to tear down the other while other criticisms may be constructive in that they are meant to build up the other person on a faulty area. The person may be criticized over a variety of qualities including physical appearance or looks, dress style, timeliness, mannerisms, physical acts, or work performance.

Although interpersonal criticism is pervasive, there is a dearth of systematic empirical evidence in criticism literature about the extent to which some individuals are more prone to being the source or target of criticism and why. This project investigated this question among thirteen undergraduate students in an introductory communication course in a four-year liberal arts public college in Eastern United States. The thirteen students included 9 females and 4 males. Their ages ranged from 18 to 22 years with average age of 20.62 years. Their GPA ranged from 2.0 to 3.7 with an average GPA of 2.53 (4-point scale). Their distribution by major included one in geography, two in economics, in elementary education, in sociology, and in liberal arts, and four in physical education.

These students were given the option to participate in this research project in lieu of one of the tests. To participate, each student was required to write a comprehensive essay under the title: “Understanding Criticism: The Tendency to Find Fault in Others”.

To assist them in organizing their essays, the participants were given a two-page single-spaced document titled “Criticism Project”. The first part of this document was subtitled “Context”. It provided brief background information about the various meanings and uses of the term “criticism”. The second part was subtitled “Topics” which the participants were required to include in their essays. The first topic was definition. It asked each participant to provide their own definition of criticism or fault finding. The second topic was perception under which the participants were asked to discuss the following: (1) Scope—the extent to which fault finding is pervasive, (2) Value—whether fault finding is a good or bad thing and to whom, (3) Gender Differences—(a) the extent to which one gender is more prone to be the (a) source or (b) target of criticism, and (c) whether or not men or women are more prone to criticize men or women, (4) Racial Differences—(a) whether a member of a particular racial group is more prone to be the (a) source or (b) target of criticism, (c) whether a man or a woman is more prone to criticize men or women of his/her own or different race, (5) Religious Differences—whether a member of a particular religion is more prone to be the (a) source or (b) target of criticism and why, (6) Foreign-born Professionals—whether a foreign-born professional is more prone to be the (a) source or (b) target of criticism, and a professional from which of the following areas is more prone to be the source or target of criticism and why: Africa, Asia, Australia, Europe, Latin
America, Middle East, etc., (7) Aspects of Criticism—which person’s features are prime targets of criticism and why, (8) Frequency—whether some features of a person are more prone to be criticized more frequently than others and which ones, (9) Harm—whether some criticisms are more harmful than others and which ones, (10) Motives—the reasons why some people criticize others, (11) Avoidance—the extent to which people try to avoid those who have critical tendencies, (12) Freedom—the extent to which a person would feel relatively freer to criticize the other in the following levels of relationships: (a) strangers, (b) acquaintances, (c) friends (boy-girl, boy-boy, girl-girl), (d) husband-wife, and (e) boss-worker, and (13) Faultless—the extent to which there are people without faults.

**Documentation**—The participants were told: (a) that the review of criticism literature was not necessary. However, if they used information from published sources, they were required to cite the specific information they obtained from those sources, and to compile a complete bibliography of those sources at the end of their essays, and (b) that if they felt necessary to illustrate their essays with specific instances when someone criticized them and/or when they witnessed someone else being criticized in his/her presence or absence, they were encouraged to provide those illustrations. In these instances, the participants were asked to include answers to questions such as: What happened? That is, what did the person say about the other? Why do you think he/she said that? To what extent was that legitimate? What was the mood of the discussion like?

**Requirements**—Finally, the two-page document listed the following requirements: (1) Each submission had to be in essay format without any numbering or use of bullets. (2) Each submission had to have a cover page bearing only the essay’s title without the author’s name since the essays were regarded confidential. (3) They were free to use subtitles they deemed appropriate for a logical development and smooth flow of their essays. (4) They were required to number the pages sequentially; double-space the text; to use no more than 12-point font; no more than one-inch margins on every 8½ x 11 page; the length of the essay had to be at least 15 pages. (5) The essay had to be submitted in two media: hard copy and electronic (on a diskette: Only WordPerfect or Microsoft Word). The participants were told that neither of these submissions would be returned to the author as the data analysis would continue far beyond the end of the winter session in which they were taking the course. However, they were advised to keep a copy of their submission for themselves if they wanted to do so. (f) To ensure further confidentiality, the participants were advised to submit their essays to the Department of Communication Studies secretary who would check the hard copy to determine if the essay met the requirements. If it did, the secretary would check off the author’s name on the participant roster to affirm the author’s participation in this research project. If it didn’t, the secretary would return both the hard copy and diskette to the author to indicate that the submission was unacceptable and why. All the thirteen essays were acceptable in lieu of one of the tests.

**Preparing Dataset for Analysis**—Each student’s electronic version of the essay was uniquely coded for identification.

Through the process of “cut-and-paste”, all the submissions were compiled into a master file and saved as MS Word document which was 186 pages. A copy of this document was then converted and saved as ASCII/ANSI (plain text) with line breaks to facilitate the text analysis under the computer assisted qualitative data analysis software (CAQDAS). In addition, COURIER 12 point typeface (font) with fixed character or pitch (not proportional spacing) was used to ensure that each character in the text took up the same space on the file. Using this typeface, the left and right borders (margins) of the file were set at 2.5 centimeters, for a totally workable setting of 63 characters per line which facilitated the coding and analysis.
Data Analysis—The project’s dataset was coded and analyzed with WinMAX Pro 98 software (Kuckartz, 1998). Using this software, the analysis entailed both the quantitative and qualitative data.

This paper will report the quantitative and qualitative findings and conclusions. In addition, it will outline the project’s limitations for future studies on this topic to consider.

Abstract

Fall through the Cracks of Two Nations: Aging Japanese American Atomic-Bomb Survivors

Earlier historical events surrounding Japanese Americans abound with lessons in the U.S. immigration policy and welfare. The events include the mass relocation of Japanese Americans from the West Coast during the wartime. Little has been documented, however, there was a sizable number of Japanese Americans in Hiroshima when the atomic bomb devastated the city in 1945. For some, being American-born was on forbidden ground at the height of wartime. Following the end of the war, those American-born survivors chose to recover their American citizenship and returned to the U.S. with a hope to be established in their homeland.

Their life in America continued to fill with hardships, however. Radiation exposure caused them unknown physical fatigue and ailments. Furthermore, psychological distress kept troubling them, especially for those who survived over the others. Culturally and experientially, they were estranged from Japanese American community, where the majority shared “the camp” experiences. Both the U.S. and Japan have marginalized them while they need governmental support for their health and well-being as a-bomb victims. It is estimated that nearly 1,000 Japanese American Atomic-bomb survivors living in the U.S. today, who fell through the cracks of two nations for decades.

Drawing a few cases of older atomic-bomb survivors living in Southern California, this case study illustrates biopsychosocial needs of aging Japanese American Atomic-bomb survivors. It also describes the generational needs of this special population that is critical to be recognized in ever diversifying and graying society, as well as in the world of nuclear warfare.
Title of paper: The Saudi Succession: The Incipience of a Change

Abstract:

The Saudi Succession: The Incipience of a Change

Due to variety of reasons, the Saudi crown has been transferred in the past 50 odd years not from a father to his eldest offspring, but from an elder brother to his younger bother, among the sons of Abd al-Aziz (Ibn Saud), founder of the modern kingdom of Saudi Arabia.

That system have proven itself effective even in complicated cases when a certain king was deposed (Saud), or another one was assassinated (Faysal). Endeavors to resort to ‘normal’ succession (from father to son) are sensitive and problematic, yet it seems that biology is about to do what genealogy so far failed to achieve: Among Ibn Saud’s handful of surviving sons some are octogenarians and even the youngest is over sixty.

The Saudi ruling family is well aware of this reality. Since the accession of the present king, Abdullah, in 2005 actually preparations have been made to pave the ground for a possible transfer of power to the next generation.

This paper analyses the origins of the prevailing system as well as the possible consequences and potential problems that are likely to emerge if and when it would be indeed decided to transfer kingship to the one of Abd al-Aziz’s grandsons. It is also discusses the measures taken by the royal family to prevent or at least to minimize the afore-mentioned potential dangers.
Title: *On the Path of History: Privileging the (Ornamental) Language of the Maya*

Name of Author: Heidi Nickisher

This paper is but a trace of a moment in time, although it serves one well to remember that Hegel “taught us that results are nothing without their becoming, outside the locus which assigns to them an itinerary or a method.”¹ These “results” are, to put it casually, the culmination of “thinking about things,” and it all started with the driving question of a graduate seminar in anthropology, “What is culture?” Compounding the interrogation of culture was also being in culture, being there, being in existence. Our existence requires existing with Being, being with others, communicating, talking, language – the principle, the only tool that we have to exist – but how does this relate to culture and what can we do with language that we cannot with Being?

For one, we can recognize, we can create difference. Without language, we are unable to differentiate between things. In other words, binary oppositional pairs such as white-black, light-dark, wet-dry, cold-hot are fundamentally in language. Following this line of thinking, existence, therefore, is differentiation is language. If I cannot name it, I cannot bring it into my world – or at least that is what Heidegger said – and thus existence is constantly penetrated by Being, by insistence – not unlike how the “it” of “it all started with” is insisting on me because I persist in thinking about it. But what is “it”?

Here, finally, I can introduce what interests me, which in turn becomes the body of this trace, a being, if you will, that “[participates] in beingness, in ousia, …[because it participates] in being-present, in the presence of the present, or … in presentness.”²

* * *

² Derrida, 40.
Heidegger privileged language because he saw it as “more playful,” which is why he referred to language as “the home of man’s essence … the house of Being in which man ek-sists by dwelling, in that he belongs to the truth of Being, guarding it.”\(^3\) It is through language that we have a way of experiencing our original relationship with the elusiveness of existence, of Being. But Heidegger’s conception of language can be problematic as well. For example, his vigorous refutation of Descartes, who equated thinking and language as the same, puts him at philosophical odds with German literary critic Walter Benjamin, among others. In the essay, “On Language as Such and the Language of Man,” Benjamin wrote

> Every expression of a human mental life can be understood as a kind of language, and this understanding, in the manner of a true method, everywhere raise news questions. It is possible to talk about a language of music or sculpture, about a language of justice that has nothing directly to do with those in which German or English legal judgments are couched, about a language of technology that is not the specialized language of technicians. Language in such contexts means the tendency inherent in the subjects concerned – technology, art, justice, or religion – toward the communication of the contents of the mind.\(^4\)

Sixty years earlier, Owen Jones, a nineteenth-century British architect, in his catalogue detailing decorative ornament from a variety of cultures around the world, *The Grammar of Ornament*, wrote that, “what we seek in every work of Art, whether it be humble or pretentious, is the evidence of mind.”\(^5\) Elsewhere in the same text, Jones further observed that examples of Mexican pottery in the British Museum “have a remarkable affinity with the Greek fret: and in Mr. Catherwood’s illustrations of the architecture of the Yucatan we have several varieties of the Greek fret: one especially is

---

\(^3\) Heidegger, 237.

thoroughly Greek.”6 This seemingly simple comparative statement thus forms the basis of my discussion of the ornamental “other”—namely, the sculptural ornamentation found on Classic Maya architecture. Yet, this topic is not so much about whether the Mexican fret (or other “Mexican” ornament) is or is not a Greek derivative but rather it is about language and history and “the warranty of truth grounded in writing” as well as in Realist drawing and painting, and, especially, photography.7 Just as Owen Jones had his “grammar” of ornament, we will see that the Maya, too, had their own ornamental language. Yet, what the Maya communicated through stucco reliefs covering the interiors and exteriors of their temples was not always what was communicated to nineteenth-century European and North American audiences through illustrated and annotated travel albums – publications that were not only often bestsellers (as in the case of John Lloyd Stephens’ four volumes on the Maya), but also sparked excitement and scholarly interest in the study of ancient Mesoamerica.8 Jones’ comparison, then, is far from simple. The twenty-first century scholar must mediate discursively through a host of nineteenth-century notions about archaeology, colonialism, culture, and “race” – not least of which are “nature, science and the picturesque.”9

The visual base of information on America was greatly expanded in the nineteenth century when, in 1810, Alexander von Humboldt published the first part of his

6 ibid., 97.
8 The Maya used a hieroglyphic writing system, which, despite a number of breakthroughs made by the end of the nineteenth century, was not fully understood until 1960 when Tatiana Proskouriakoff discovered that there were repeating a patterns in both Maya writing and imagery, and that these patterns could be “read”, thus enabling her to ascribe meaning to glyphs without knowing the equivalent words in Maya.
Voyage de Humboldt et de Bonpland, a thirty-volume album with nearly 1500 plates – both in color and black and white – that was to serve as the visual record of all the mapping, measuring, collecting, and sketching that Humboldt, a geologist, and Aimée Bonpland, a botanist, conducted while the two were traveling throughout the viceroyalties of the Spanish king, Carlos IV. That Carlos granted Humboldt a passport in 1799 might not be particularly surprising or perhaps even noteworthy in light of the fact that Old World artist-scientists had been traveling to the New World since Spanish Europe first encountered the New World civilizations in the late fifteenth century. In other words, the tradition of visually recording the flora and fauna of the New World for the Old World had already begun nearly three centuries before Humboldt’s trip.

What is perhaps more significant is that the Spanish colonies were, for the most part, closed to foreign contact and, of course, they were colonies: the various independence movements had yet to reshape the political landscape. In this context, the publication of Humboldt’s various volumes, which covered subjects such as botany, zoology, comparative anatomy, astronomy, and antiquities, and included physical and geographical atlases as well as political essays on New Spain (Mexico) and Cuba, became immensely popular in Europe (especially his Atlas pittoresque: Vues des

---

10 According to Dawn Ades, Humboldt was probably granted a passport and allowed to travel freely throughout Spain’s “American dominions” because, as a geologist, he specialized in mines, which would have been attractive “to the hungry colonizing powers of Europe.” Plus, Carlos’s father, Carlos III, was a progressive monarch who had already opened the region to free trade and “other liberalizing reforms.” Ades, pp. 45-66.

11 Geography is particularly important here because Portugal’s colony in America was literally, physically closer to Europe and, therefore, easier to visit. Brazil comprises much of the Atlantic coast of the South American continent while the Spanish viceroyalties were clustered predominately along the Pacific. Moreover, it was not until the first decade of the nineteenth century that, with the exception of Brazil, a number of civil wars erupted throughout the continent, ultimately culminating in the creation of new, independent republics.
Cordillères et monuments des peuples indigènes de l’Amérique). As such, they were very influential for the visual cultural history of the nineteenth century in general and in constituting an image of Central and South America for Europeans in particular.\footnote{12} Furthermore, with the dawning of Independence of Spanish America, more and more traveler-reporter-artists set sail for the New World to see for themselves the unknown and the wild, and as a result, many produced their own picturesque and/or historical albums. Given this, and the fact that in Europe there was already a fascination with ruins since the excavations of Pompeii and Herculaneum as well as Napoleon’s campaign in Egypt, the South American landscape was ripe for visual contemplation. There are several significant men to emerge from this proliferation of knowledge; men who are historically associated with the founding of Maya archaeology, but it will be the work of three in particular who change, if not actually set, the course for the study and appreciation of Maya art: Jean Frederick de Waldeck, John Lloyd Stephens, and Frederick Catherwood.

Most of the artists who traveled through Mexico in the early nineteenth century perpetuated a strain of Romanticism that coalesced around the depiction of the native landscape, customs, and popular \textit{types} – e.g., the traveling musician, peasants in the field, or \textit{poblanas} – while highlighting the specific and unusual (relative to the European experience).\footnote{13} In a catalogue essay for the exhibition, \textit{Mexico: Splendors of Thirty Centuries}, Fausto Ramírez observed,

\begin{quote}
These artists depicted the different regions through which they traveled in innumerable views of cities and their inhabitants …. They brought to Mexico a tradition of the plein air landscape … [and] evoked the grandeur of ancient
\end{quote}

\footnote{12} Humboldt’s extensive quantitative work eventually served as the foundation for the modern academic study of physical geography. 
\footnote{13} A \textit{poblan\'a} is one who belongs to a village, a villager. In this particular instance, the women of a village.
monuments … . Their presence in Mexico had major artistic repercussions; the lithographs, in particular, stimulated an exploration of local iconography.\textsuperscript{14}

As of 1838, only three archaeological sites were known in the region now ascribed to the Maya: Cópan in Honduras; Palenque, about 300 miles northeast of Cópan and now in the Mexican state of Chiapas; and Uxmal, about 300 miles to the north of Palenque in Yucatán, Mexico. At the same time, no one familiar with the sites, especially considering the distance between each of them, thought these ruined cities were the work of one culture. Certainly, use of the word “Maya” in connection with these sites was non-existent. Here again, Old World practices regarding the collection and dissemination of knowledge as well as hierarchical notions about non-European civilizations dictated the study of New World antiquity. In the Renaissance, the study of antiquity was considered a branch of humanistic learning while the study of New World antiquity only really began as recently as 1850 and, according to George Kubler, “soon took a scientific turn, relating it more closely to anthropology than to humanistic studies.”\textsuperscript{15} Thus, even today, a discussion about the “art” of ancient America is often (still) mired in ethnography: works of art are “read” more as sources of information about social structure and/or economic life rather than as the “expressive realities” of a given culture.\textsuperscript{16}

When Humboldt was in Mexico, so, too, was former military officer Guillermo Dupaix, who is considered by some to be one of the earliest Maya archaeologists.\textsuperscript{17}

\textsuperscript{14} Mexico: Splendors of Thirty Centuries (New York, 1990), 502.
\textsuperscript{16} ibid., 33.
\textsuperscript{17} See Robert L. Brunhouse, In Search of the Maya (Albuquerque, 1973), 5. Guillermo Dupaix, born in Austro-Hungary sometime between 1748 and 1750. He arrived in
Although retired from military service circa 1800, Dupaix received a royal appointment from King Carlos IV to explore the territory from Mexico City to Palenque and record any antiquities he discovered. The expedition party also included a drawing instructor from the Academy of San Carlos, Jose Luciano Casteñeda, who made quick sketches that he later reworked from memory and with input from Dupaix.\textsuperscript{18} Throughout the expedition, Dupaix kept a personal log of his own observations, often rewriting his thoughts and adding descriptive comments on Casteñeda’s finished drawings. Relying on these observations – observations which were nonetheless rooted in “the idealist philosophical method of considering ‘values’ as resident in speculation about absolute ideas of good, truth, and beauty during the European Enlightenment”\textsuperscript{19} – Dupaix rationally tried to account for what he saw. When he found it difficult to interpret certain forms, for example, what he called the “distorted” proportions of human figures, he reasoned that it was not because the native artist could not draw or carve properly; rather, it was because of “political and religious conventions which dictated a uniform style for deities, as was the case in ancient Egypt.”\textsuperscript{20}

Mexico in 1791 and led three expeditions between 1805 and 1807. The illustrated record of these surveys was not immediately published as Dupaix was unjustly accused of being disloyal to the king in 1808. Once acquitted, his descriptions along with Casteñeda’s drawings were finally published to wide, popular acclaim, and the work is credited for having stimulated European interest in visiting and studying the ruins.\textsuperscript{18} In 1785, the Academy of San Carlos in Mexico City was founded, becoming the first art academy in the New World.\textsuperscript{19} George Kubler, \textit{Esthetic Recognition of Ancient Amerindian Art} (New Haven and London, 1991), 84.\textsuperscript{20} Brunhouse, 22. It should be noted, however, that where Brunhouse attributes changes or “improvements” to Dupaix, it has also been suggested that it was actually Edward King, Lord Kingsborough, publisher of an account of the Casteñeda-Dupaix collaboration in 1831, who introduced the distortions to Casteñeda’s drawings, making them look more Egyptian or Hebraic. A more comprehensive, two-volume edition was published later in France in 1834.
Jean Frederick de Waldeck’s drawings reveal similar artistic intervention, although this most likely owed to drawing what he thought he saw. Perhaps the most noticeable example is when Waldeck claimed to have discovered carved images of elephant heads. When questioned about the veracity of such findings, “that he had mistaken tapirs for elephants, [Waldeck] triumphantly pointed out that the tapir could not throw its snout upward in the air as depicted.” Waldeck was a French artist-explorer who may have made his first trip to Central America in 1821, although by 1822 he was back in Europe, living in London, where he met Henry Berthoud. Berthoud was a bookseller and publisher who recently purchased a copy of the report of Antonio Del Rio’s exploration of Palenque in 1786 and he hired Waldeck to engrave plates based on the drawings done by Ricardo Almendáriz (an accompanying member of the exploration) and translate the text into English. For Waldeck, the encounter with these images was profound.

Whether he made a serious effort to become an archaeologist and/or undertake Americanist studies is not clear but, because he did need to make a living, in 1825 he took a job as a hydraulic engineer for an English silver-mining company in Tialpujahua,

21 ibid., 71.
22 Captain Antonio Del Rio had been sent on a mission to explore the ruins of Palenque and his report reflects not an interest in the remains of an ancient or earlier civilization but rather what he saw as paganism and idolatry. Had it not been for Berthoud’s own awareness of the public interest in American indigenous cultures as well as Romantic ruins, Del Rio would have probably been forgotten.
23 Miguel Leon-Portilla refers to this pivotal moment: “En Londres, hândandose en la casa de un librero y editor de nombre Henry Berthoud, tuvo acceso a un manuscrito que despertó grandemente su interés …. Las figures humanas … avivaron su imaginación.” See Jean Frederick de Waldeck, Viaje Pintoresco y Arqueológico de la Provincia de Yucatán (México, 1997), 16. Brunhouse also cites that Waldeck later “attributed his inspiration to study Maya archaeology to the engravings he made in 1822 rather to firsthand experience at an outstanding site only a year or two earlier.” See page 55.
Mexico. Once back in Mexico, he eagerly studied pre-Hispanic culture and developed strong opinions about the subject. Determined to visit Palenque and the Yucatán, he approached Mexican vice-president Lucas Alamán with a plan to “[invite] citizens, ecclesiastics, and states of Mexico to pledge subscriptions totaling 10,000 Mexican dollars.” For his part, Waldeck agreed to spend the next two years exploring the area and to publish a book with 200 illustrations. He and the project, however, were continually plagued with financial difficulties, and without sufficient funds to publish the proposed book, Waldeck approached Prosper Mérimée and the French Academy for assistance. *Voyage Pittoresque* finally became a reality in 1838 but received little attention until after the discoveries of Stephens and Catherwood.

As an artist, Waldeck claimed to have studied with Jacques-Louis David, thus establishing a connection with the neoclassical tradition in art. He is also a curious figure in the story of Maya art and archaeology as his biography is practically a work of art itself. His own work, however, including drawings of Maya monuments, has been

---

24 Brunhouse, 65.

25 Although there are several biographies to date – namely, C.W. Ceram’s *Hands of the Past* (1966), Robert Brunhouse’s *In Search of the Maya* (1973), Carlos A. Echanove Trujillo’s *Dos Heroes de la Arqueología Maya* (1974), and Miguel León-Portilla’s prologue to the 1997 Spanish-language translation of Waldeck’s *Voyage Pittoresque*, Brunhouse and León-Portilla probably come closest to some semblance of the actual story. Both cite the “detective work” of Howard F. Cline who disproved, or rather, failed to prove a number of Waldeck’s biographical statements, and who subsequently “considers the early adventures apocryphal and Waldeck a poseur.” (Brunhouse, 51-55.) In 1947 Cline published his findings in an article for *Acta Americana* entitled “The apocryphal early career of J.F. Waldeck, pioneer Americanist”. According to Brunhouse, Waldeck “claimed to have been born in Paris, Prague, or Vienna on March 16, 1766”; León-Portilla reports that the date Waldeck gave for his “arrival into the world” was May 26, 1766, although the birth certificate Waldeck was required to produce for the French Ministry of Fine Arts so as to collect the pension that he had been granted by Napoleon III listed the year of his birth as 1768. Waldeck also claimed to have joined François Levaillant’s ornithological expedition to the Cape of Good Hope (his name, however,
criticized for being inaccurate; among other things, he frequently saw elephant heads where in fact there were none.\textsuperscript{26} Additionally, Waldeck claimed to have found “two gigantic figures with European profiles … and an Egyptian monument.”\textsuperscript{27} His drawings of a structure now known as the Pyramid of the Dwarf included four Egyptianized figures flanking the entrance to the temple. Archaeologists who later visited these same sites at Palenque and Uxmal, including Stephens and Catherwood, found neither a basis for his temple reconstruction nor any evidence of the figures. Waldeck’s writings about his “discoveries” were similarly dismissed in his own time – in part for expressing ideas conforming to the diffusionist anthropological notion that the Maya were originally from Asia, perhaps India or Egypt, which could “be easily discerned in the architecture of these monuments.”\textsuperscript{28} The carved elephant heads were additional “proof” of this supposed

\textsuperscript{26} In writing about the contributions of French photographer, Désiré Charnay, to the field of Maya studies, Keith F. Davis pointed out that Charnay’s photographs “corrected” Waldeck, who, in describing a figure in one of his plates in his *Monuments anciens du Mexique, Palenque et autres ruines de l’ancienne civilization du Mexique* (Paris, 1866, n.p.) wrote: “la coiffure de la figure qui se tient debout est bien évidemment une tête d’éléphant.”

\textsuperscript{27} Brunhouse, 71.

\textsuperscript{28} Waldeck, *Voyage pittoresque et archéologique dans le province d’Yucatan et aux ruines d’Itzalane*, translated by V.M. Conrad in C.W. Ceram, *Hands on the Past: Pioneer Archaeologists Tell Their Own Story* (New York, 1966), 329. George Kubler discusses diffusionism as one of the two schools of thought in nineteenth century anthropology. On one side were the Americanists who argued that New World cultures
Moreover, the descriptions Waldeck provided for his illustrations employ a type of racial categorization typical of nineteenth-century ethnography. In one such example, where a figure kneels in supplication to a seated figure with an elaborate headdress, Waldeck wrote: “Cette dernière est évidemment éthiopienne: son origine est prouvée d’une manière incontestable par le caractère du profil et par la couleur noire encore visible sur les chairs … Un detail plus curieux encore est l’ornement nesem répété sur les deux profiles.”

Although Waldeck’s theories have since been disproved and even amused later generations of Americanists, he is important to the beginnings of Maya studies and the categorization of Pre-Columbian art as “art” because “he found Maya art harmonious with European ideals of art.” Waldeck also realized that “[it] is chiefly in the ornaments that we can admire the patience of the craftsmen employed on these buildings, and perceive the taste of these ancient peoples for monumental splendour.”

If Dupaix was one of the earliest Maya archaeologists, then American writer John Lloyd Stephens is the father of Maya archaeology. His detailed accounts of the cities and
sites that he and Frederick Catherwood discovered not only are considered by some as “better than those of his predecessors” but, in some case, are also the only surviving records of ruins that are now just piles of rubble.\textsuperscript{33} Stephens studied at Columbia University where he learned of the phenomenology of J.G. Herder – which, according to George Kubler, gave “esthetics a place within anthropology” – which, in turn, would later prepare Stephens to see in other civilizations, such as the Maya, “its own quality and worth.”\textsuperscript{34} Upon graduating in 1822, Stephens went on to obtain a law degree and was a practicing attorney until the fall of 1834 when, having tired of the profession, and for health reasons, he embarked on what became a two-year sojourn to Europe and the Near East.\textsuperscript{35} By 1839, President James Van Buren recruited him for a mission to Central America that was both diplomatic and archaeological. His friend, English artist Frederick Catherwood, accompanied him as they sailed from New York City for the Gulf of Honduras on October 3, 1839.

The same year that Waldeck traveled to Central America for the first time (1821), Frederick Catherwood traveled to Rome to study the art and architecture of classical antiquity.\textsuperscript{36} In 1822 Catherwood traveled to Greece, continuing to study ancient

\textsuperscript{33} See Richard L. Predmore’s introduction to the Rutger’s University Press edition of Stephens’s \textit{Incidents of Travel in Central America, Chiapas, and Yucatan}, volumes I and II, 1949, xvi.
\textsuperscript{34} Kubler, \textit{Esthetic Recognition}, 9; 127.
\textsuperscript{35} When he returned to New York, he published his first book, \textit{Incidents of Travel in Egypt, Arabia Petraea, and the Holy Land}.
\textsuperscript{36} Catherwood attended art classes at the Royal Academy in London, specifically the architecture lectures given by Sir John Soane. Through Soane, Catherwood was introduced to Giovanni Piranesi and the latter’s \textit{Della magnificenza ed architettura di Roma} (published in 1761). Victor W. Von Hagen writes: “Catherwood … was deeply moved by the manner in which Piranesi rendered Roman ruins [and] … he tried to capture in his own archaeological drawings the same intense emotion of that master.” See Von Hagen, \textit{F. Catherwood: Architect-Explorer of Two Worlds} (Barre, 1967), 22-
architecture and sculpture until the outbreak of civil war when he left for Egypt in 1823 – “at the time that ‘Egyptianism’ … was taking hold.” In Egypt, Catherwood met Robert Hay and became a member of the latter’s expedition to journey up the Nile to explore “each ruined site, known and unknown.” In 1833 Catherwood traveled to Cairo and later Jerusalem, constantly researching and drawing, before returning to London in 1835 where he exhibited his painted panorama of Jerusalem. It was also around this time that he met Stephens, who had recently arrived in London after traveling in the Near East, and the two talked about rumors of fantastic cities of stone hidden in the jungles of Mexico. Shortly thereafter, at the urging of Stephens, Catherwood decided to move to New York.

On November 17, 1839, Stephens and Catherwood were about to make American archaeological history as they ventured into the jungle-covered remains of Copán and encountered the art and architecture of the Maya for the first time. They recounted their experiences in the two-volume *Incidents of Travel in Central America, Chiapas and Yucatan* (1841), followed in 1843 by another two volumes, entitled *Incidents of Travel in*

24. From his association with the Academy, Catherwood gained entry into a group of painters, sculptors, and architects called the “Society of Englishmen.” It is quite possible that it was within this circle that he met and became friends with Owen Jones. Jones cited in his preface to *The Grammar of Ornament* that he “received invaluable assistance from Mr. J. Bonomi.” Joseph Bonomi was not only one of “the best remembered … members of the Society of Englishmen” but also both he and Catherwood were “architectural artists on the famous Egyptian expeditions of Robert Hay.” See Jones, 19.

37 Von Hagen, 27.

38 Ibid., 28. The men on this expedition would eventually form the basis of Egyptian archaeology.

39 Catherwood brought his panorama to New York and exhibited it for six years before it was destroyed in a fire in 1842.
Yucatan – both illustrated by Catherwood’s drawings. Indeed, Mayanist Linda Schele noted that no other work about the ancient Maya has been studied so intensely as [these] four volumes . . . . The books were among the bestsellers of the nineteenth century, and . . . remain some of the best books ever written on the Maya. The illustrations, engravings by Frederick Catherwood, conveyed the romance of the subject, as well as fairly dependable information about the ruins.

Along with the significant expansion in the body of knowledge of Spanish America coincidental with its “opening” to European travelers in the nineteenth century, the number of books and travel albums published on the subject also expanded as did the desire to travel to the New World – so much so that by the second half of the nineteenth century, explorers now came armed with cameras to document sites with all the precision and veracity that was accorded photography. One such photographer was Désiré Charnay who had been so fascinated with Stephens’s accounts in the Incidents of Travel volumes that he, too, traveled to Mexico to explore the Yucatán and produced his own album entitled Cités et ruines américaines: Mitla, Palenqué, Izamal, Chichen-Itza, Uxmal (1863). The publication was important for several reasons – primarily because the album was Europe’s “first photographic vision of the mysterious Mexican monuments,” but also because Charnay’s simple yet engaging narrative was juxtaposed with an essay written by Eugène Emmanuel Viollet-le-Duc who analyzed the architectural ruins. The essay reiterated many aspects of the diffusionist argument, specifically, that “the builders . . . were not endemic to the region and instead migrated from northern Europe, Africa, or

---

40 Edgar Allen Poe reviewed Incidents of Travel in Central America for Graham’s Magazine and said the book was “magnificent.” See Von Hagen, 50.
Moreover, Viollet-le-Duc identified racial characteristics in some of the architectural motifs, remarking, for example, that “if only the Aryan Semites or pure Semites built with dry stone, it is the pure Aryans to whom to attribute wooden construction and whenever we see appear a tradition that indicates a combination of joined timbers, we can be sure it was influenced by the Aryan race.” Yet, in a passage where he described the interior of a room in the Temple of the Jaguars at Chichén-Itza as being covered by a series of flat sculptures of armed men battling against serpents and tigers, Viollet-le-Duc also observed that if the meaning of the ornamental reliefs is obscure (to a nineteenth century audience), the types of heads, clothes and weapons of the human forms furnishes precious information.

Is this “precious information” the “evidence of mind” to which Jones referred? Indeed, many art historians and other writers have commented on how the ornament of a people reveals their aesthetic endowment, and Catherwood, too, seems to have supported this position when he described how “elegant ornament is carved on either side of the arch [at the Casa del Gobernador], very similar to [that] found on Greek and Roman buildings. The twisted cable, or rope ornament, is also of frequent recurrence in Yucatan; it is to be found … in all countries which have made any advance in the art of building.”

---

43 ibid.
45 See Ciudades de Luz, 45: “Los ornamentos … están totalmente recubiertos por una serie de esculturas planas que representan hombres armadas luchando contra serpientes y tigres. Si el significado de esta bajo relieve es obscuro, los tipos de cabezas, las vestimentas y las arma de los personajes nos proporcionan información preciosa.”
The task that Stephens and Catherwood set for themselves in the Yucatán was to record what they saw. Having already published two travel books that were both critical and popular successes in the United States and Europe, Stephens was well prepared to document his thoughts and observations about the cities and sites he and Catherwood encountered. On this trip, Stephens also assisted Catherwood with his preparations, e.g., selecting the view, clearing the area of jungle debris, recording measurements, and erecting the scaffolding for the camera lucida which Catherwood used so as to achieve the greatest degree of visual accuracy and scientific “authenticity”. Stephens remarked that “from the beginning, [the] object and effort was to produce true copies of the originals … Mr. Catherwood made the outline of all the drawings with the camera lucida, and divided his paper into sections, so as to preserve the utmost accuracy of proportion.”

Yet, for all the attention to, and concern for, accuracy, and the consistent acknowledgement of the beauty and workmanship of the ruins, the narrative throughout the volumes is not without equally consistent comparisons to either Egypt and the Near East or the Greco-Roman past. For example, as they were preparing to leave the area, Stephens summed up the ruins found at Copán:

the monuments … standing as they do in the depths of a tropical forest, silent and solemn, strange in design, excellent in sculpture, rich in ornament, [are] different from the works of any other people … . The form of sculpture most frequently met with was a death’s head, sometimes the principal ornament … [with] rows of them on the outer wall … keeping death and the grave before the eyes of the

---

47 *Incidents of Travel in Egypt, Arabia Petraea, and the Holy Land* was published in 1837 and *Incidents of Travel in Greece, Turkey, Russia, and Poland* was published in 1838. Both were published by Harper’s publishing house. The European editions were in England, France, and Sweden.

living, presenting the idea of a holy city – the Mecca or Jerusalem of an unknown people.49

On the one hand, such prose is wholly appropriate: both men traveled to Egypt and Jerusalem, and studying the classical past in situ was part of Catherwood’s education as a student of architecture. On the other hand – and this is where the need to have a better understanding about the relationship between history and culture specifically, and time and culture generally, comes in – history is not simply a series of links between or a serial flow of events through time. Michael Taussig saw history as something that could move forward and backward, be accelerated and condensed, and all of those forms (those different forms of historicizing) become especially visible when looking at non-western worlds, such as that of the ancient Maya. Indeed, Homi Bhabha further pushed the notion (role?) of temporality in history to the point where one needs to find an entirely different temporality all together so as to access the complex (and, therefore, contingent) relationships in the world we inhabit and study like an object. Stephens’s narrative is thus problematized by this dialectic: ruins reminiscent of ancient pilgrimage sites such as Mecca or Jerusalem and yet ruins built not by Egyptians nor the lost tribes of Israel but rather by the original inhabitants of the area, the ancestors of the contemporary Maya. Moreover, Catherwood’s drawings reflect a similar aporia in that they are a mixture of archaeological draftsmanship, the picturesque, and romantic notions of the “noble savage” where primitive man was more in harmony with nature because he was closer to nature. Given the cultural constructs of the nineteenth century under which Catherwood

49 ibid., 124.
(and Stephens as well, for that matter) labored, it is not surprising that he combined careful, archaeological study with *costumbrista* scenes.\(^{50}\)

Yet, can there be a discussion of Catherwood’s scientifically precise drawings and Stephens’s very detailed descriptions of people, place, and ornament *without* first a discussion of the “primitive” or “primitivism” (and its attendant issues of colonialism, racism, and exoticism)? Both have been constructed as something at once exotic and reassuringly familiar and both are culturally loaded (because they are culturally-constructed) terms whose shifted (and shifting) meanings are keys to understanding the representations of indigenous “others.” And, at least for enlightenment-educated and worldly-traveled white European/American men of the nineteenth century, a century in which the positivist embrace of industrialization perpetuated the establishment of a cultural hierarchy between the western, civilized model and the unindustrialized and “primitive”, the “art” of non-Western cultures was thought to offer more “authentic” kinds of experience.

In its most general sense, the word “primitive” means earliest, original, ancient, and/or at a simple level of social and economic organization. By the eighteenth century, many of the Enlightenment philosophical debates on the origins of culture centered on the concept of the primitive. An aesthetic construct developed and defined by Europeans, primitive material culture was representative of early, more rudimentary human cultural

\(^{50}\) From the Spanish for customs or habits; not costumes. Generally, it refers to one of the categories – scientific, ecological, topological, and social – into which one can divide the predominate subjects of the traveler-reporter artists during the years 1810-1860 throughout Latin America and the Caribbean. More specifically, in this context it not only refers to the depiction of a local “customs”, such as bare-breasted women at a well gathering water for the village, but it also corresponds with, or is derived from, the European taste for the exotic.
production. Facilitating this discourse is what anthropologist Shelley Errington specified as the “metanarrative of progress”.\textsuperscript{51} To experience progress, there needed to be a notion of linear time. Teleologically speaking, if something is to exist in a linear format, then there must be a starting point, a middle point, and an end point.\textsuperscript{52} Thus, the primitive was the starting point; all else was about moving forward on the timeline, about change and progress.

The notion of progress, of a systematic and planned improvement of society, among other things, also improved and increased artistic freedom, and by association, increased fine art production – both of which were considered signs of cultural advancement and civilization. Embedded in the story of progress are the tales of parallel discourses about objects in a consumer commodity culture. One discourse is grounded in the art historical classification system: objects were classified either as “fine art” or “applied.” This classification system was derived in the sixteenth century and included the notion of the artist as individual and as autonomous creator. In the eighteenth century, Immanuel Kant addressed the problem of the freedom of the mind (“Reason”) in the realm of the sensuous world (“Nature”) and concluded that, as Michael Podro explains, “by making moral thought govern our intention we could act freely.”\textsuperscript{53} Kant’s art historical writing and philosophy provided the “new” discipline of art history with a

\textsuperscript{51} Shelley Errington, The Death of Authentic Primitive Art and Other Tales of Progress (Berkeley and Los Angeles, 1998), 5. According to Errington, the metanarrative of progress, derived in part from Hegel’s narrative that assumed art always existed, enabled “the discourses of ‘authenticity’ and ‘the primitive’.”

\textsuperscript{52} Again, it is Hegel’s account of a universal story “of the unfolding of Man’s Spirit,” whereby the narrative begins with the Ancient World, moves on the Middles Ages, the Renaissance, and finally arrives at the Modern World, that serves as a model or basis for this particular view of European (or Western) history. See Errington, 50-51.

framework for critically considering visual works of art. Thus, within this aesthetic framework, the “highest” forms of art are those that are the most “free” (“art for art’s sake”) and the “lowest” forms are those objects whose purpose has been dictated by specific function, i.e. utilitarian.

Anthropological theories about the evolution and origins of art constitute a second discourse. By the early nineteenth century, stories of European historical progress had been developing since the Renaissance and were now unfolding, revealing Western (i.e. European) civilization at the front of the imaginary timeline. This “position” not only justified expansionist policies but also provided a way in which to “locate” the Other: if the story of progress was about (European) man’s climb up from a low, “primitive” tribal existence, then the artifacts and people who created them were relegated to the bottom.54 This story also coincided with the formalization of the evolution of human material cultures by European anthropologists – men who “saw in the ‘primitive’ peoples of the European empires a great laboratory for the investigation of human cultural evolution.”55 And while these anthropologists may have been debating the specifics of historical evolution patterns in the process of formalizing theories critical to their discipline, they all embraced Kantian ideas of progress and the “high/low” art binary.

These discourses very much informed Stephens’s artistic/intellectual milieu. Still, Eurocentric prose notwithstanding, he described the façade of a building in Uxmal,

---

54 See Errington, 14-17. The author drew graphs depicting aspects of this imaginary “story of progress.” For example, in one graph there is projected vertical movement along the “Better & Worse” axis and lateral movement along the axis of “Earlier & Later”.

the House of the Governor, as if he were a composer building towards a powerful
crescendo: “This building was constructed entirely of stone. Up to the cornice, … the
façade presents a smooth surface; above is one solid mass of rich, complicated, and
elaborate ornaments, forming a sort of arabesque. The grandest ornament, which imparts
a richness to the whole façade, is over the central doorway.\textsuperscript{56} Stephens observed that the
ornament directly above what appears to be a partial figure with an elaborately plumed
headdress was a type of ornament that appeared throughout the ruins. In fact, it was a
stone projection that “measures one foot seven inches in length … and resembles
somewhat an elephant’s trunk, \textit{which name has, perhaps not inaptly, been given to it by Waldeck},
though it is not probable that as such the sculptor intended it, for the elephant
was unknown on the continent of America.”\textsuperscript{57}

Stephens’s reference to Waldeck was perfectly appropriate and perhaps even
necessary for the completeness of his own research. Prior to sailing to Central America,
Stephens frequented a bookstore in New York City that had received a copy, sometime in
1838, of Waldeck’s \textit{Voyage pittoresque}. Just as Del Rio’s illustrated manuscript about
his travels to Palenque had captured Waldeck’s imagination, Stephens experienced a
similar reaction and set out to read all that was then available on Central America.
(Along with Del Rio’s account, there were also publications by Dupaix and Humboldt,
among others.) Thus armed with the knowledge of others who came before him,
Stephens questioned everything he saw once he arrived in the Yucatán. Although he did
not know that the flattened foreheads of the figures he saw were outlined reliefs were a
physiognomic attribute the Maya admired and did to themselves, the resultant profile was

\textsuperscript{56} Stephens, 1841, II: 166-168.
\textsuperscript{57} ibid., 172. Italics mine.
so different from the local people he met that he concluded that those anonymous earlier inhabitants could not possibly be related to Old World peoples.\textsuperscript{58} It was also Stephens who refuted many of Waldeck’s conclusions.

The Nunnery was a large quadrangular building with little rooms around the perimeter. Waldeck accounted for its floor plan by assuming the name of the building implied its purpose and, therefore, it must have been the priests who arranged for the placement of the rooms so as to “maintain surveillance over the ‘nuns’.”\textsuperscript{59} Stephens, however, thought differently: “The … building … is called by a name which may originally have had some reference to the vestals who in Mexico were employed to keep burning the sacred fire; but I believe in the mouths of the Indians of Uxmal it has no reference whatever to history, tradition, or legend, but is derived entirely from Spanish associations.”\textsuperscript{60} And it was Stephens who identified the “Greek” fret at Uxmal. The motif was just one of the many that comprised a visually distinctive “grammar” that he defined as “very elaborate, sometimes grotesque, but often simple, tasteful, and beautiful … subjects are squares and diamonds, with busts of human heads, heads of leopards, … and the ornaments known everywhere as \textit{grecques}.”\textsuperscript{61} Above the molding on the façade of the House of the Governor is an area filled with ornament and there one can find a variation of this fret that Jones termed “thoroughly Greek.” Catherwood’s commentary

\footnotesize
\begin{itemize}
\item \textsuperscript{58} Stephens recounted their departure from Palenque: “Among the Indians who came to escort us to the village was one whom we had not seen before, and whose face bore a striking resemblance to those delineated on the walls of the buildings. In general, the faces of the Indians were of an entirely different character, but this one might have been taken for a lineal descendant of the perished race.” (Stephens, 1949, II: 305.)
\item \textsuperscript{59} Brunhouse, 75.
\item \textsuperscript{60} Stephens concluded correctly; when the Spanish discovered the building, having no knowledge of its function, they called it “Las Monjas” – the nuns. (Stephens, 1949, II: 359.)
\item \textsuperscript{61} ibid., 357.
\end{itemize}
in his *Views of Ancient Monuments* also provides insight into how these men melded art and science to discuss and represent the Maya in the nineteenth century.

Our understanding of the Maya has changed over the past 200 years or so. Much of the work of Stephens and Catherwood, however, remains *unchanged* for it was the work that laid the ground rules for discussions of Maya art and archaeology. Yet, after all is said and done, to artistically appreciate the Maya we had to make them like ourselves, and we did this through language. All human communication is inscribed in a linguistic structure, even body language, and that language, whether visual, cultural, or temporal, is what constitutes our being.

Law of Demand

In Economics the theory of price hangs on many assumptions and on the single weak thread of assumed 'Demand Curve'. Some data of price - wheat / price - apples, etc. are taken so as to suit the straight line drawn beforehand. In most of the books thus is the demand curve defined. To make it more mathematical, within the next few lines it takes the shape of a curve (with negative slope, convex to the origin, sloping downwards from left to right) which facilitates the researcher's predetermined inferences. Demand curve assumptions regarding price, quantity, taste, time, market conditions etc are not realistic but they are taken because of the advantage of simplicity and convenience. In further discussion it is stated that we have already proved 'that the demand curve slopes downwards from left to right and is convex to the origin'. At this stage this becomes the 'Law of Demand'. Nowhere one finds any justification for calling it a law of demand or a demand curve. Now geometrical properties of a curve or a set of curves (convex to the origin and in the first quadrant) are stated and it becomes a demand function. No author of any book prefers to give a single mathematical equation (other than f(x,y)) for any demand curve. This demand curve starts with the assumption that utility measure is 'cardinal'.

Some explanations from different books are cited below. These would show that while developing the concept of demand no justification is given for inferences.

1. With the use of arbitrary data, points are plotted, a line is drawn and this becomes the 'Demand Curve'. Similar is the case with supply. The point of intersection of these assumed demand and supply curves becomes the point of equilibrium. The author of the book does not feel it necessary to justify straight lines and also the existence of point of equilibrium in the first quadrant. On page 97 demand curve takes the shape of rectangular hyperbola. Further the following arbitrary equation is taken for quantity X.

   Quantity of Good X = Constant – A*price of good X + B*price of Y + C*per capita disposable income. (27)
X1 = \( f(P_1, P_2, \ldots, P_n, Y, A, \alpha) \), \( A \) is advertising outlays and \( \alpha \) is other influences on demand. Another equation, Demand \( X = \text{Constant} - A \cdot P_1 + B \cdot P_2 - C \cdot P_3 + D \cdot Y + E \). These two equations are given with no supporting arguments. The derivation of these equations is not addressed at all. But still the nature of the curve remains straight lines.(7)

2. With no explanation the curves are drawn so that demand and supply curves (not straight lines) intersect in the first quadrant and the author gets point of equilibrium. Fig2.(5)

3. QDX = \( f(P_x, I, P_y, T) \), QDX is quantity demanded, \( P_x \) is price of commodity X, \( P_y \) is price of related commodity, T is tastes of consumers. Another equation similar to equation in (1) above is given \( Q_X = \text{Constant} - A \cdot P_X + B \cdot I + C \cdot P_Y - D \cdot P_S + E \); however no elaboration is made.(32)

4. Some arbitrary data is considered. Nature of demand curve is assumed. Tastes, incomes, prices of other goods, new substitutes, prestige involved etc are totally ignored. No explanation is provided to justify the nature of the curves Fig 2. Both the curves drawn are not straight lines.\(^{(21)}\)

5. Both the curves are drawn as straight lines Fig 1. The assumptions are made for no change in tastes, weather, incomes, prices of other related goods, expectations.\(^{(19)}\)

6. Utility: 'As a metaphysical concept utility has to be defined in terms of itself. Utility is the characteristic of commodities which makes individual want to buy them and individuals buy commodities to enjoy utility in consuming them.' This concept of utility is further used to define demand.\(^{(31)}\)

7. Some arbitrary data is used to draw demand curves. They are not straight lines but cut curves which are convex to the origin. Fig 2 Individuals curves are added ad final demand curve is drawn. No explanation is provided for the nature of the curve. But it states that this is the demand curve. Similar treatment is adopted for the supply curve. No equation is provided.\(^{(18)}\)

8. 'Utility is measurable. Price of a thing can be taken as a measure of its marginal utility to him'. The author is not clear about both Marshall's treatment and Hick's treatment about the demand theory.\(^{(30)}\)

9. Utility is the want satisfying power of a commodity on a service which determines the demand for commodity. Jevons called this 'utility'. He further states that utility is purely a mental concept and is a measure of satisfaction derived by an individual from the consumption of a commodity. Utility is supposed to be a measure of Law of Demand.\(^{(15)}\)
10. 'Law of Demand states that other things remaining same a household or an individual consumer will demand more of goods at a lower price than at a higher price'. 'Marshall's theory of demand is based on law of diminishing marginal utility, combined with a number of assumptions'\(^{(28)}\)

In almost all the books dealing with Price Theory (mainly utility, demand and supply) there are many variations in the definition of the theory. Every author has his own way of interpretation, assumptions, inferences and geometrical representations. May be there are about 20/30 geometrical figures to elaborate demand curve development in every book but one does not find a single mathematical equation to satisfy even a single figure. If there was one then estimation, testing the fitness etc would have enabled to justify the nature of the lines or curves. But basically the theory and the economists do not need any mathematical involvement as that would jeopardize the entire structure of the price theory. Geometrical figures used in this theory have only ornamental value. If only even one concept in price theory gets quantified it has a bright future in the present days of computers and advanced softwares. In the absence of this aspect one can find there is no growth and advances in this theory. Even modern economists talk of mathematical models but one hardly sees geometrical representations and any mathematical equations which would help in estimation and testing.

'Indifference Curves'(ICs)

First, we consider some definitions/descriptions/assumptions made by various authors in their books on Indifference Curves. In almost all the books, data to suit the curve or the curve to suit the convenience are drawn first and then assumed properties are shown as observed by the curve. To suit further assumptions, ICs are drawn so that they do not touch or intersect and have negative slopes. ICs have come through the research of Edgeworth (1881), I. Fisher (1892), Pareto (1906), Slutsky (1919), Hicks and Allan (1934) and Hicks (1939).

The theory and the concept are being studied and taught for the last 70 years or so. The researchers found the cardinal measure 'Marshallian Utility Measure' unsatisfactory and unconvincing. Two economists Hicks and Allan developed the concept of 'Indifference Curves' and considered it to be an Ordinal Measure. The concept has three assumptions:

i) Non Satiety
ii) Transitivity and
iii) Diminishing Marginal Rate of Substitution.

For the purpose of this paper these assumptions are accepted. Further for the ICs, the governing properties are:

a) ICs slope downwards to the right
b) ICs are convex to the origin
c) ICs can not intersect each other
d) ICs can not even meet or touch or be tangent to each other.

These governing properties are themselves all assumptions. No mathematical explanation is provided to support the same. In spite of the above assumptions geometrically and physically the measure is supposed to be 'ORDINAL' that is no quantification and only qualitative measure of grading or rating is possible.

At no stage in the development and the use of ICs, is any mathematical equation used, to represent the ICs. Only f(x,y) or some similar notations are used. This section of the paper deals with the intricacies and contrasts developed in the situation. If two or more ICs are to observe the above conditions, notional, geometrical and mathematical, then what are they actually?
Let us see what different authors have to say in the matter.

- IC shows various combinations of commodity X and commodity Y that yields equal utility or satisfaction to the consumer.\(^{(29)}\)
- Curve is shown (Jeans against CDs) with a comment that preference must be a) rational b) consistent and c) complete to define ICs.\(^{5}\)
- No data. Only two smooth curves are drawn (Gas against electricity units) to define ICs. The author further states that the practical problems of constructing such curves are virtually insurmountable but this does not detract us from their theoretical explanation. Accept that i) Individual ICs do exist ii) they can be meaningfully combined to yield community ICs and iii) they are convex to the origin. The curve is generally postulated as convex to the origin and the slope is declining.\(^{(20)}\)
- IC is the locus of points involving combinations of rates of combinations of the two products or sets of products X and Y with all points on the curve yielding same level of satisfaction. It is ordinal in character, only preference is asked from the consumer. Example is of bread and wine. Curve is drawn first and then inferences are drawn.\(^{(17)}\)
- Diagram is drawn directly. Think of the consumer as sliding up and down the IC. Then he is equally well off at any point on the IC. Commodities in question are divisible into very small units. There is convenience in drawing a smooth curve. Preference means moving North-East on the map IC. Maps are drawn so that curves appear to be parallel to one another. Parallelism is devoid of economic significance.\(^{(37)}\)
- Economists do not believe that utility has a cardinal measure. Only ordinal measure is considered, i.e. 'much or less' and not 'how much'. Consumer behavior in terms of preferences which in turn are defined only by behavior. The results are circular. Hypothesis places definite restrictions. \(^{(29)}\)
- Shape of IC is predetermined. It is either steep or shallow. ICs are convex to the origin.\(^{(34)}\)
- ICs are negatively sloped. It shows diminishing rate of substitution. The measure is ordinal.\(^{(32)}\)
- Utility is ordinal. Indifference map may have \(au+b\), \(a\log x\), \(au.u\). Indifference map is a system of curves \(u(x_1,x_2) = \text{constant}\). \(I_1, I_2, I_3\) ... system of curves are drawn in the OX1X2 as indifference map.\(^{(2)}\)
- With no factual data ICs are drawn, first a three dimensional diagram and then a two dimensional diagram. An inference is drawn that if two points are on the same IC they have the same utility. A comment is made that 'we have come to a remarkable thing about ICs..... with wide economic significance.....given wants............scale of preference \(^{(9)}\)...

It can be seen that most of the authors have presumed the existence of the ICs in the shape of a curve

i. convex to the origin,
   ii. with negative slope,
   iii. not intersecting with each other
   iv. not tangent to each other and
   v. having an ordinal measure.

The author of this paper sees some of the possibilities. The diagrams are in the XY plane and restricted to the first quadrant. Only in the cases of hyperbola all the four quadrants are shown. This is only to show that the dichotomy that creeps in if the curves are to observe the above imposed conditions. None of the definitions/ descriptions / assumptions of ICs by different authors of various books referred have given any significance to its presumed ordinal characteristic.
I) In figure No.3 the ICs are parallel to each other within the imits of goods X and Y.

II) In fig.4 a system of parabolas, one inside the other, is shown. Each curve represents one IC and at any point on one curve, the same amount of satisfaction is derived by the consumer. The IC above it gives locus of points giving equal amount of satisfaction but more than the satisfaction on the curve below.

III) In fig 5 ICs are a system of concentric circles till the time the curve of the circle is convex to the origin.

IV) Similarly fig. 6 shows a system of ellipses one inside the other till the curves are convex to the origin.
Figure 7: System of Hyperbolas

V) Fig 7 shows a system of hyperbolas restricted to the first quadrant and also that the curves are convex to the origin.

VI) ICs have to be symmetrical about a point. If this property is not observed by the ICs they are likely to intersect each other at some point or the other.

VII) Why almost all the books or papers do not give any mathematical equation(s) to represent the ICs.

VIII) The level /grade/ranking of consumer's satisfaction, is it a discrete or a continuous variable. By very nature of assumptions it has to be 'Ordinal'

IX) Even though the commodities along the X axis and the Y axis seem to be discrete, the points on the IC (Amount of Satisfaction) are ordinal. In further analysis use of differentiation, partial differentiation is made and inferences drawn. When there is no continuous variable on the two axes, how far this use of mathematics is justified?

X) Arbitrary and suitable curves are drawn to show and justify substitution and price effects.

XI) Do ICs really support ordinal measurability?

There are ambiguities and inconsistencies in the argument and assumptions in the development of the theory of ICs.

Further once tool of ICs is ready what purpose it serves? With so many constraints and no such market prevailing any where it has become a futile theoretical exercise based on non tenable conditions. So many mathematical curves spread over the development of ICs but there is not a single mathematical equation to justify the nature of the curve. Without accounting for nature of the variable, discrete or continuous, the tools of differentiation and partial differentiation are used freely. This shows no accountability for such uses.

It was Galileo who realized the importance of measurement and wrote, 

*Count what is countable,*

*Measure what is measurable,*

*And what is not measurable,*

*Make it measurable.*
If the consumer is able to give his preference to particular combination of two goods (generally discrete in nature) by grade or rank only while observing all other conditions, mathematical and some assumed, the preference can not possibly be 'ORDINAL.' Further he is also able to distinguish his level of satisfaction even because of very small changes in either of the goods. There is no such possibility.

The author of this paper feels that the very foundation of 'indifference curves' that the measure is 'ordinal' becomes doubtful and not tenable. No purpose is being served by the existence of ICs in the present form. One can do away with it.

**Loanable Fund Theory**

Any assumptions made while initiating the theory and further developing it need to have sound reasoning, need to stand simple practical situations and mathematical tests. Loanable fund theory is a glaring example of a theory which defies logic and mathematics. There are anomalies and aberrations in the present scenario of the 'Loanable Fund Theory'. In price theory in economics there is a branch of 'Interest'. Interest has been defined/described/explained by many economists in different ways. Loanable fund theory explains the rate of interest through the equilibrium between demand for and supply of loanable funds.

**Fig 8**

**Demand Curves**
- DS - Dis-savings
- I – Investment
- H – Hoarding

\[ DL = DS + I + H \]

**Fig 9**

**Supply Curves**
- S- Savings
- DI – Disinvestment
- DH – Dis-hoarding
- BM – Bank Money

\[ SL = S + DI + DH + BM \]

Almost all the books covering the topic of loanable fund theory represent these seven components by straight lines. The three under demand are to be parallel to each other with negative slopes and four components under supply are parallel to each other with positive slopes.

Further the three lines are added and one gets the summation curve, again a straight line(DL). Similarly four lines in the other set are added and one gets summation curve, again a straight line(SL). Another assumption is made that these two DL and SL must intersect and that too in
the first quadrant.
Consider how many assumptions are made which do no exist and are not feasible in practice and also are non mathematical.

1 All the seven parameters, in demand and supply together, which are represented by straight lines are not so in practice, barring few situations. Many important factors (time, duration, risk, productivity, taxation, market standing etc.) are ignored just to get the parameter to follow a straight line.
2 Even if supposedly they are represented by straight lines then why they should be parallel to each other except to suit the convenience of the theory with no accountability for the parallel lines.
3 The summation lines of demand and supply must intersect in the first quadrant. This is because the point of equilibrium, geometrically has to come in the first quadrant to suit the assumptions.
4 Summations must be straight lines.
This is a chain of incorrect assumptions, illogical inferences and free use of geometrical figures to suit the development of theory and there are no mathematical equations. Then why teach this theory and enhance untenable and unproven way of thinking in the minds of students of Economics.

Fig 10

Under supply, savings is one component. Irrespective of any rate of interest, high or low, there is bound to be fund available which individuals and households keep for emergency and safety. Considering the huge number of individuals and households, this fund is bound to be very large. So even for zero interest there is bound to be fund available. It shows that the line for savings would have a point with coordinates \((x,0), x > 0\). The line if at all there is one it perhaps would be as drawn in Fig 10.

Under supply, dis-hoarding is another component. This component is generally not in terms of monetary terms. (For example, Cement, Steel, Cotton, Food Grains, Gold, Shares etc). Hoarding/dis-hoarding can not be in the form of monetary units as it would involve possible violation of law. But most of the books do no discuss whether hoarding/dis-hoarding is in terms of monetary or non-monetary units as they do not cite any examples while speaking of dis-hoarding. This component would have a point with coordinates \((0,y), y > 0\) fig 10. Thus it shows that the line of savings and the line of dis-hoarding can not possibly be parallel to each other. Further somebody's dis-hoarding is someone else's investment therefore it does not make additional fund available in the market. Fig 10.

Under supply, another component is bank money. Because of the very nature of the business, bank money could be in the form of monetary units, guarantees, securities, shares etc, so
irrespective of rate of interest prevailing in the market the fund would always be there and a point on this line, if assume , will have coordinates ( x,0),x>0. The point stressed here is that the lines drawn for convenience can not be parallel to each other.

Firstly savings, disinvestments, dis-hoarding and bank money need not be straight lines under supply. Under some situations if they are straight lines they can not be parallel to each other.

Similar arguments are true for components under demand. No book refers to demand in the form of goods like, steel, cement, food grains, shares, gold, securities etc and aspects like weather, govt. policies, war, famine etc but presumes in the form of monetary values. Hoarding, dis-hoarding, consumption, cost of hoarding, perishable goods, weather conditions, rains, floods etc are given no weight in the analysis of the loanable fund theory. Thus this exercise of loanable fund is like poetry with little logic or mathematical backing. One sees no use of this theory in economics.

Hath (Social) Democrats Forsaken Labor?

Abstract: Sell-outs or master adjusters? This is a question that organized labor has been asking of their political spokespeople - Social Democrats - as income and job insecurity heightens among many skill groups in the last decade or two. To labor groups, the fight over ‘the (output) gap’ is almost over, for the bad, taking activism out of them. Output gap is, materially, what we churn out in a year relative to where we see ourselves as capable of. If unsure of the latter, labor’s demands become just academic as improved information flows (technology) facilitates competition from late-coming countries, necessitating bids to produce our favorite toys by workers the world over. This further puts pressure on labor in the West. Policy response to such developments? Labor suspects Democrats, at the minimum, are all too willing to go along with outward-oriented laws that tends to, ultimately, weaken post-War pro-labor policies. More importantly, these changes comes at a time when fundamental institutional changes are taking place to remove the ‘separation of powers’ of principal economic and political actors, a departure from the post-war stance.

A simple regression analysis with key economic variables leads our theoretical conversation as to whether the declining fortunes of Social Democrats (dependent variable ‘left vote’ as a percentage of the sum of the ‘left’ and that of ‘independents’) is driven by these economic fundamentals (output gap) lagged for a couple of years; earnings of production workers over time; government share of GDP, and voter turnout. It turns out that we did not place enough emphasis on the fact that where we see ourselves as capable of being at (potential output) depends on where the latecomers are, an observation that has significant implications on policy menu and choices thereof while altering internal power configurations, placing a number of Democrats at the ‘scene of the crime’.

Ma ATT: from life support to reunion with lost babies.
Is a reunion possible for U.S. too?

By C. Fiifi Odoom
Dept. of Economics, Fac. of Business Administration

Ma ATT: from life support to reunion with lost babies. Is a reunion possible for U.S. too?

**Summary:** Good name is better than riches, so the saying goes. What if the good name is derived from fast-disappearing riches, and the good name now so tainted that some kids, embarrassed, have walked out of home in disgust? This is the case of Ma USA. Fortunately, even at her moral and material worst, Chomsky’s thought of it being ‘over’ for Ma might very well be an overstatement. True, she is uneasy about the limitation of the retirement income that she will soon receive; severely misaligned items on her balance sheet (aggregate demand/current account); geopolitical realities that are no longer favourable to her; neighbours Asia and South America coming of age and getting more attention. But despite these catch-ups, the belief here is that with appropriate rehab – strategic regional reorientation and selective demand contractions - a reunion is possible with the kids. Her chances will be much brighter especially if she could:

- at the material front, treat her addiction, fast, adjustment that will likely push back key budgetary variables that are out of place - on her current account - that has made her so vulnerable
- At the moral front try to be European by (administratively) depoliticising the all-important Supreme Court whose rulings on major constitutional issues increasingly are being interpreted as un-American in spirit
- Keep the un-European stance at the immigration front by continuing her progressive assimilative policies

Fortunately, reality is on her side. By setting such a low moral standard, she can, in Wall Street parlance, beat it (expectations) handily. So committing a type 1 error will be the least of her concerns. But for ultimate control, she has to realize that kids (neighbours and political allies) are grown and need to be treated like adults.

**I. Background: ONCE INVINCIBLE, NOW VULNERABLE**

Ma ATT’s sales topped $120 billion in the year 2006, and is supposed to double this year, 2007. Hard to believe, considering the fact that at age 121 years, obsolete in her *Telegram* motor skills (as in American *Telegram* and Telecommunications), and comatose, we were quick in pronouncing her dead, on that fateful January 2005 (merger) day. But she did not. In fact she came back in style, in 2006, when, in a dramatic turn of events, SouthWestern
Bell came home and inspired her to come out of her deep sleep. Ma ATT is now almost fulfilled, with only Verizon and Quest still holdout. I guess she cannot win it all.

Another Ma has a similar story to tell, not exactly a comatose one but close, and a more exciting one because she has a much larger extended offspring with different characters and interests to match. But ultimately, it is the comeback story that will provide all the intrigues we can wish for.

II. LINES OF VULNERABILITY

What to do when a country that, previously, just had to show up with third-rated players, ended up teaching the world how to play ball at the Olympic Basketball Games, but now, even with the big guns like the Kobe Bryants, the Shaqs, the Dirk Nowitzkis is denied the top medal three years in a row, even beaten soundly in the recent (2006) World Baseball Classic tournament, a shocker? At the diplomatic front, what to do when a country, whose leader had a line-up of presidents waiting to be received but now considered such a liability they are shying away and turning to Third World leaders (Brazil, India, and China)?

What to do when violence greets a president who used to draw cheers on visits to friendly Latin neighbours, and is lectured by hosts on how to run foreign policy? Militarily, what to do when a country that took just hours to humiliate another from Kuwait, with images of sandals-wearing soldiers pleading for mercy by, literally, kissing the feet of the victors but now finds herself humiliated not even by that country’s national army nor an organized group but rather rebels in rugs and still does not want to get out for fear of being branded, in her own words, ‘a quitter’, a ‘cut-and-runner’, or a ‘loser’? Morally, what to do when a country that used to draw up annual State Department human rights report as a blueprint for a moral world but its recent one ridiculed for human rights gaffs that for reasons not yet well understood had to withdraw from the U.N.’s Human Rights Council? What to do when a country that thought its legal system could stand the test of social, political, and social disruptions but once tested (9-11) resorted to some well-publicised blatant judicial interference that we once associated with dictatorial regimes? What to do when her once almighty economy – just as General Motor’s - is bleeding from the loss of its star economic export (argued here as ‘democratic premium’), but can no longer sell enough to pay for bills,
this premium ‘bond’ (reputation) reduced to junk, and maybe in a danger of, diplomatically, being ‘acquired’ by ‘a Nissan’? You guessed it. This is a story about Ma USA, the humbled parent.

An operational plan for rehabilitation is provided here, drawn from the lesson that ATT just taught us on its reinvention and reunion with its long lost ones. Ma ATT played to her strength to gain the moral right to reunite with lost babies. Now she is even threatening to be even more of a force in this new age. It did it when no one was watching, with a dose of substance, lots of style, and what is left of her good name. Ma USA could very well follow ATT’s footsteps and make quick adjustments aimed at reclaiming lost premium. But she will be in a better position if she recognizes that things are not the same as before. Contrary to what her trade and pop-internationalist advisors tell her, she does not only have to recognize the limitations of her retirement income (real income drop) but will have to get uses to a severely bruised ego (depreciation). Even that, she will have to balances her books well, address some productivity woes, and above all, go back to being inclusive.

III. A PREMIUM LOST

Accountants call the premium on what we own Goodwill, a windfall for ‘good’ name, or deed, able to attract even more premium over time. A ‘good’ neighbourhood, for instance, confers such a premium to a house. Other professions use different names for such intangibles but regardless of profession, undoubtedly, Ma’s huge economic locomotive and deliberate attempts at inclusion presented economic and moral promise that complimented other intangibles to attract hefty premium that is reflected in her greenback, her signature currency and jewel that symbolizes prestige. Let us explore how so much air came out of this greenback lately, an exercise that will involve the examination of both the buy (demand), sell (production) sides, and the windfall that comes with such interactions.

*The buy side, the money trail and*

Easy come, easy go! The premium house in the premium neighborhood needs only a string of bad events (say robberies or murders) to make the premium disappear, in a flash, and Ma
has surely got a lot on her plate lately: shocks to her pocket and a string of expensive and ill-advised foreign expeditions that are weighing so heavily on her purse, tearing a big hole in it.

A short while ago, (please see fig 1) in 2001, she could get €1.20 ($1=€1.20) to shop but five years later by May 2006 the reverse had happened: only €.78 ($1.279=€1) in exchange. Old trade literature has it that this is a typical rich person’s disease and that as she craves for those spiffy foreign goods (higher income elasticity for the imports that she buys relative to what she sells), all she will have to do is to get used to a bit more deflated wallet but as we are finding out, such deflation might not be enough for her to get to her old self. This is because more so now than ever before, exchange/trade is now more than a ‘price’ thing. There are other intangibles (non-price) as well but having things of relevance to sell to neighbors is key to benefits from a diminished premium. As neighbors buy more from her and demand more greenbacks to facilitate that, its value would go up perhaps turn into even more positive intangibles/premium as well. Unfortunately, this is not happening for her. Sales are not generating the income to pay for what she buys. More importantly, she is no longer getting ‘free stuff’ that celebrities get by just showing up at events. A look at her principal trading partners and her balance sheet illustrate this. I use the ‘principal’ here to reflect relationship between ‘equals’ so as to identify significant structural shifts.

In the same period (5 yrs ago), Canada’s loonie could barely bring in $.69USD (CDN$1=.69USD). Now, the two currencies are inching closer to par. Similar stories could be told of Brazil, those in the Eurozone, and Britain, less so for Japan, whom many from Ma’s home have counseled on how to cut (micro-macro) umbilical cord that ties the accommodating central bank to mega (‘inefficient’) firms that benefit from ‘easy credit’. For the latter, never mind the consequential deflation, and the elephant around its neighborhood (China) who has taken some of its thunder. He has been able to hold his own precisely because he has been able to sell more to Ma, lots of it, especially cars. It is exports, stupid!
Obviously, it is not by design that the greenback has taken such a pounding. It is mainly the result of weakening economic fundamentals – what economists conveniently refer to as the twin deficit. That is why David Walker, US Controller-General, the guy who oversees government expenditure, is crisscrossing the country telling anyone who would listen, that Ma needs to go to rehab to curb her only treatable ailment - shopping addiction. For the longest time her trade advisors, Paul Krugman of old amongst them (in Competitiveness: A
Dangerous Obsession\textsuperscript{1} assured her that as a large ‘closed’ and/or self-contained economy, she is too big and too powerful to worry about economic threat from neighbors, certainly not the lowering of her price (devaluation), because doing that would cause those in her house to lose income because that is where the action is, and where jobs revolve around. So, using retail parlance, why cut prices and lose margin when you might not get the volume? This, the logic went, is what would happen if she had cut prices for those outside her household (a small percentage of her activities). One more thing! Ma’s wallet was supposed to be the magic wand from which her spending on those outside her household triggers all kinds of growth. As table 1 below shows, the richer people got in Ma’s home, the more they bought from neighbors, 2.87 of them ((for Krugman and Baldwin’s (1987) measure)) for every dollar rise in income, compared to a value of 2.42 for what others buy from her household. Bolstered by this fact, and the fact that decent productivity growth and associated intangibles (in chart 2 below) stood at 100 while many others less than 100, she figured her house will do just fine while others stalled. No room for rehab was given.

Time changes! A number of emerging giants, at different (but more advantageous) stages of development than Ma are in, and competing hard with her. They are using their capital (human and physical) and labor resources (MFP) more efficiently. As a consequence, a number of them have converged to Ma’s prestigious status, making it look like she is losing out when in fact they are just catching up. So relying on shopping (aggregate demand) to pull the rabbit out of the growth hat might not work this time, even with the decent multifactor productivity showing (fig 2 below) that says that she is putting in 1.8 units of labor and 2.4

\textsuperscript{1} Foreign Affairs, 73 (Mar/April) 28:44.
capital to help churn out only 1.8 (bar chart) by way of effectiveness in producing output, a feat that the emerging giants can beat hands down.

IV. THE BUY/DEMAND SIDE

Put differently in a more pointed way, Ma, arguably, the richest among the bunch, has been borrowing heavily from a poor guy who just got a raise recently (China), and a few others. A quick browse at personal balance sheets tells the story better.

\[
\begin{align*}
\text{Public sector balance} + \text{Private agents balance (consumers & businesses)} &= \text{current account balance} \\
\text{or} \\
\text{Ma's balance} + \text{kids (at home's) balance} &= \text{current account balance}
\end{align*}
\]
What she spends to protect family at home (public sector) is in the red, so are those living in her house (consumers). A brighter spot is businesses, but they have a bit of problems too.

*The genius of a price*

Funny that Ma took her trade advisor’s word that price does not matter but now is doing an about face accusing China of using the same (discredited) ‘price’ to embarrass her. I suspect she realizes that a price (exchange rate) could carry a dynamic effect beyond a simple value calculation. In otherwords, if GM is bought by China and its facilities shipped to his house, would China’s benefit extend beyond direct activities that the car production generates? The answer is yes. That is why such a simple exchange rate manipulation by China is making her look like an intellectual mouse in this (economics) area that she has won all kinds of Nobel Prizes at. China’s simple price scheme, to quote a popular commercial, is ‘so easy a caveman can do it’. It goes like this. It says the best way to keep a nervous addict on leash is *not* to increase the price of what she buys but rather hold it steady or lower it. Illicit drug dealers know this so well. They package their stuff in small packages, cheap enough for addicts to keep coming for their fix. That is the purpose of China fixing its yuan currency to Ma’s greenback. If she lightens up with addiction treatment, there is hope she can manage buy habit, reduce the amount of greenback turned over in exchange for, increasing the latter’s value until the mind game ceases. As for the $1 trillion in reserves that China has piled up? He has the luxury to pile it under his pillow, buy houses with them, give it back to Ma as a loan, invest it in exotic financial papers, or dump it, but he will no longer be assured of continued specie flow, so it will now come to play, maybe as fair as Ma wants it.

*The picture*

To appreciate her buy side woes that has helped transfer all these money to China, she recently had to twist the arm of the credit card company to raise her credit limit in order to accommodate her expected $9 trillion debt on her household – about $30,000 for every man, woman, and child – most of which went into unproductive activities, oversized offspring (military), and poorly-designed Medicare drug benefit plan, and, other pork barrel projects
sold as a hedge against haters (terrorists). We are not even counting the bills that typically total $225-billion in 3-months. In otherwords, what she buys exceeded what she sold by $225-billion in the first 3 months of 2006, up from the $185-billion 3-months prior so she needed $2.2-billion dollars every day to make up for the shortfall. That is not all. Her lawmakers (The Senate) just passed a record $2.8 trillion spending bill for the year 2007, guaranteed to add to the mountain of debt. Do not forget that in May 2006 she signed a $70 billion money giveaway (tax cuts) that will take away from her ability-to-pay. Presented with the fact that all these antics ties her hands to only two families to the tune of 50% of her total debt, some close associates shrugs it off believing that these two lenders just cannot fall out of love with Ma. They claim those lenders have:

- nowhere else to put their savings and that
- Ma offers stability and security that no one else can offer

Oh, Ma has got a little surprise for the debtors who dare threaten or blackmail her by massively demanding their money (dumping her IOUs). Bring it on! Why such machismo posture? Ma figures that:

- The world will not let her die because she will take a lotta borrowed money to her grave so even if it requires everyone else to tighten belts to subsidize her hospital bills and keep her on life support, it is a rational thing to do.
- So Ma’s surrogates have a point, underscored by China’s (Premier) Wen Jiabao’s recent assurance to Ma that his plan to go liberal in the investment of the $1 trillion-plus reserves ($600 in greenbacks) would not depress the premium further. By dumping the IOUs en masse, these creditors lose money because the greenback would be worth less (lower price from the higher supply of IOUs). So true, Ma is sitting pretty, in debt while China is in the driver’s seat, giving mercantilism a new meaning, thanks to Ma. China’s deliberate attempt to go against a pop (economic) culture of unfettered capital and current account liberalization has yielded dividend by controlling Ma’s destiny with all kinds of ‘metals’ in reserves. Ma might be

---

thinking she is doing the creditors a favour by providing a safe place for their savings but she might be very well be digging herself deeper in the hole.

A realistic scenario

Theoretically and practically, if the greenback is dumped, not massively but even gradually, in a panic, Ma’s short-run strategy would to be nice to lenders by paying more by way of interest rate on the debt. In so doing, she will have to live with the negative consequences of high interest rate on her household – for those who rely on bank finances – threatening her attempt at strengthening her sell side: those in her house who want to produce but cannot afford the funds to do so. Nonetheless, her chief confidant, The Fed, has been doing just that, pushing interest rate, rather slowly, upwards, trying to appease these nervous financiers. That will likely shuffle internal cards by perhaps threatening to pop the bubble in the housing market that Ma has seen as a reliable source of strength. An increase in interest rates pushes out marginal borrowers, especially those sub-primers, leaving the banks, especially in a bear market, with a lot of useless properties that the lending banks will rather not have. Hard to imagine where she will begin to change course.

Temptation for relapse?

Just in case Ma finally gets it and shapes up, chances for relapse? Recall this whole addiction culture came from people of all stripes – the ideological left, and right. From the right, a group that calls itself Ricardian equivalence cheered the debt binge by waving their ‘debt does not matter’ flag to any one who dared question Ma’s excesses, a cultures nurtured actively under Ronald Reagan and George W. Bush, leaving them with debt unprecedented in history. At the supply side, debt was justified when argument were convincing that it would put the military-industrial complex rolling.

The left, on the otherhand, huddled around the full-employment tent, well intended but to a large extent built a culture of competitive fiscal bids. Whether the call for oversight will be able to curb such excesses in such an engrained culture, permanently, without relapse is yet to be seen. To make believers out of the concerned, she will have to (a) Construct,
internally, artificially high price for what she buys (relative price)\(^3\) but then would splinter family members go for it knowing that such higher prices implies that they buy less stuff? A second way is to do it the old-fashioned way: cultivate a savings habit. She needs it because her private sector’s surplus (her only surplus unit) is slowly being eating away by higher interest rate on ‘easy money’ being showered on it for unproductive mergers and acquisitions. If not warned, eventually, they would very well join in on the orgy of free spending.

In short, the First Way out, from the \textit{buy side}, for now, is problematic. Let us see how this shopping habit feeds into another side of the democratic premium, the supply side..

\textbf{V. THE SELL/SUPPLY SIDE: and some theoretical ambivalence}

How about the Second Way: selling more to pay for the bills? For starters, Ma goods – just as her offspring GM, Ford, and Chrysler – are not flying outta the shelves despite decent showings in Europe and Asia. In fact it has got to such a psychological point where, in Ma’s household, even if GM makes the best car and puts its logo on it and Nissan builds the worst car and puts its Nissan logo on it, chances are customers will gravitate toward the Nissan car. Testers of cars (Consumer Report, etc) are in on this too, comfortable with consumer’s fixation with imports so less generous in recognizing Ma’s products. This turns Ma into a tennis (sports) player. Being the lower ranked player attracts tougher opponent. Alternatively, if she were ranked higher, she gets to be matched up with weaker opposition. So Ma and GM’s premium loss implies tougher psychological fights ahead as weaker opponents (like KIA Motors) have the opportunity and the confidence to square off with here. It is a mind game now, no free ride. But she has been here before and has been known to be a master at flexibility, only that she needs a different kind of flexibility, not with image-makers that GM has been obsessed with in the past to please shareholders.

These image-makers have also done her an unpardonable disservice, microeconomically, just as the ‘debt does not matter’ advocates did macroeconomically. Take the view derived from the Ricardian and Heckscher-Ohlin (resource endowment-based) models. Building on traditional neoclassical growth models that have it that growth comes from technological advantage, these models also promised jobs and security to skilled people in rich families like

Ma’s, so Ma became, perhaps, too comfortable. If we sneak in the Stolper-Samuelson (1941) theorem, the story loses some sentences because though trade is supposed to be the way through which labor of all kinds – skilled and unskilled - could gain in labor-intensive industries in Ma’s world, it was the unskilled in poorer families too that would benefit the most to motivate them to keep shipping to Ma the low-tech toys and raw materials that she has relied on for decades. For most part the have but they, and Ma in particular, missed an important (backward and forward) links: the extent of benefits to skilled groups in poorer families. Who imagined that China will step up to challenge Boeing and Airbus in commercial aircraft making? But by getting comfortable thinking she will remain an unregulated monopolist over such (high-tech) stuff, Ma assumed away catch-up by all others at a time of decreasing (tele)communications costs and increasing intra-industry trades stemming from joint ventures, facilities that has permitted poorer families their relatively unskilled people to learn and take Ma on squarely.

But perhaps this catch-up is sinking in. Maybe that is why she is holding back her NAFTA (North America Free Trade Agreement) commitments to economically extend her fence northwards to Canada and southwards for as far as she chooses. Weird how she could deliberately frustrate even obedient son, Canada, with petty softwood lumber countervail disputes, and harassment when Canada wants to visit from north of her border. The ‘left’ and the ‘right’ have not helped her either, in Congress, with their political games of protectionism, the latest of which is a reversal of a 20-yr-old policy with imposition of tax on a number of China’s goods, giving her a sense of security. But there are signs that the same Congress is coming to grips with reality as well. In March 2007, it signalled that the stalled Doha, Qatar, round of negotiation will receive a new life with separate deals with Colombia, Panama and Peru, and even South Korea, all intended to remove many inter-family barriers (tariffs), and even the AFL-CIO is hopping on board.

Ma ATT’s reinvention: lessons for Ma

Ma ATT had occupied the enviable position of dominance: the first to build a long-distance network in 1885; an icon who whose name is synonymous with telecommunication, and perhaps of quality. Yet, she was deemed not to have the depth (vertical integration) to be
trusted with the job of control over the industry so had to be broken up in 1984 to start life as a head of a much smaller family, a flexibility challenge. With manufacturing arm in her way, in 2001, she got rid of it, readying herself for the changing world that responds better in packaged units of hybrid cable, wireless, and line products.

Rather than being isolationist as Ma USA, Ma ATT, through collaboration with industry leaders (Intel, BEA Systems and Symbol Technologies), sought to build on its traditional prowess into simple, manageable, secure network solution called frequency identification (RFID) device to pitch to businesses. The target now is to make this network work across diverse hardware platforms. Slowly, she has become a major managed services company with a lot more terabytes (per day) of traffic, a feat that even ‘younger’ industries would only dream of, in addition her leadership in residential long distance services. Perhaps favorite son SBC realized this tenacity that is why despite his deep pocket and youth, he was glad to have Ma ATT ran the show, at least by name, once again. The rest of the story is history: now back as the largest long distance career, wireless Cingular services, and DSL internet access. Not quite the towering figure (unregulated monopolist) she once was but big enough to be a responsible (regulated oligopoly) with considerable leverage. To be fair, Ma USA, she has realized that collaboration pays but will rather do it within her geopolitical prism. Take the March 14th, 2007 comment by one of the most revered person in global commercial-aviation business Steven Udvar-Hazy.

He warned those of us on the Pacific coast, especially Boeing, not to hold its breath on missteps of fellow duopolist Airbus on its spiffy A380 plane for its survival. Instead, he cautioned that there is an air of excitement for something new - like rivals like Russia, China and Japan jumping in. Perhaps, Ma got such drift and recognizing Japanese technical prowess, attempted cooperation (through NASA) with the Japanese counterpart Japan Aerospace Exploration Agency (JAXA) intended to develop a low-noise, fuel-efficient supersonic jet to fill the vacuum that the Anglo-French Concorde left a few years ago. Why go so far when she could have tapped into the expertise? North of her fence, Canada has a smaller family of planes made by Bombardier and to the South, Brazil boasts of Embraer. Teaming up with them into an Airbus-brand of conglomerate, would give her more ‘air power’ in competition with Airbus and anyone who will emerge from Asia. Such a

---

relationship will also cement a southern axis built around the drive to work in Ma’s house by
neighbors. Already, her long lost Mexico is slowly moving back to reclaim areas (in Ma’s
backyard) that he used to call home in the 1850s: New Mexico, Texas, and California. So
once again, these areas will serve as a natural cultural and economic extension, a departure
from the Anglo-European roots.

VI. THE THIRD WAY: Diplomacy

A Third Way – beyond the buy and sell sides – is to amplify her appeal by pointing to her
traditional virtue as a ‘safe haven’. By doing so, irrespective of past wrongs, everyone could
walk back home, maybe this time not unannounced, but certainly be welcome, with all the
money they carry with them. She will need it’. The family spirit will lighten up, once again.
But first, she has to admit to her competitive fate (loss of this premium) and not be an
arrogant debtor. She should not treat subjects as kids, nor play favorites needlessly,
otherwise she alienates others. Rather, she should relate to them adults, an approach that will
certainly whip up the sense of togetherness. More importantly, as reflected in his book Failed
States, Chomsky, Ma might want to address the four principal elements of her democratic
institutions that has sunk morale — arrogance of being above domestic and interfamily
(international) law, lack of true democracy at various levels, inability to protect her family,
and the divide between public policy and public opinion, areas that he sees are fast losing
real substance. Let as expose bits of the arrogance that Chomsky seem to be referring to.

Understanding the lingo, and Ma’s recipe

Ma has shown that she can even be friends with adversaries, even help them out: Marshall
Plan for Europe, and inseparable friendship with Japan. Even when playing favourites, she
could still be reasonably fair. She derives all these virtues from the fact that she has been a
master at borrowing a bit from all cultures and turning them to her advantage, an attribute
that stems from a reasonable level of respect to other cultures. That is how we have come to
know her, and that is why her friends and neighbours are so demoralized that she has gone
back to her ideals.
Specifically, they trusted Ma with assurances on their security even when the issues at stake were too complicated to understand. Sure they did not understand the lingo that goes into negotiations over intercontinental ballistic missiles; the degree of North Korea’s nuclear capability; complexities of the Iran-Contra arrangements. So when, then, the CIA was accused of undermining other (foreign) families sympathetic to another by name the Soviet Union using ‘intel’ scoop that was no better than a New York Times article clipped as classified information, the family believed Ma because she was supposed to know better, and trusted to work to protect family interest since it was too complicated for our simple minds. This was not the case with the pants-dropping Clinton-Monica encounters that was initially denied, nor prisoners on leash being humiliated by an occupying power seeking to impose democracy by force, events that initially Ma claimed did not exist and that we should trust her. A picture is worth a thousand words. Her own arbitrators (Supreme Court) on June 28, 2006 ruled that her military-style trials at Gitmo is were illegal, echoing what other families on the planet have been saying for the past three years, but Ma, though now grudgingly admitting some mistakes, is still sticking to the script.

Perhaps the turning point for Ma came when the respected elder Colin Powell staked his reputation to go to bat for her by conclusively pointing to two trucks as WMD laboratories. He later on admitted that he got it all wrong, or perhaps made up. Where were all the humint (human intelligence), satellites, and other sophisticated tools that her confidant (CIA) had at his disposal to get it right?

All of a sudden, stories in the 1960s and 70s of aggressive Ma making up recipes to destabilise left-leaning neighbours south of her borders and in other Third World families in the name of anti-communism all of a sudden makes sense now. She is now seen as pathologically untruthful and even potentially dangerous. If a conspiracy theorist shows up now with a silly allegation that the CIA pulled the trigger on JFK, it would not sound so absurd. So the Iraq fiasco thus becomes not only a credibility problem for a regime but a value challenge that undercuts Ma as a moral crusader. Thus, for the curious and the open-minded, ‘intel failure’ is now seen as convenient excuse for incompetence and hypocrisy. But for cheerleaders of her recent policies, such horror stories and even the much publicised exaggerating of arch enemy (Soviet) and Saddam’s capabilities are well within the margin of
error. So she is staying the course, almost all alone now but seemingly not bothered by accusations of abuses anymore. Ma is damaged. She could do other wrongs but not lie or make things up just to beat up on a little son. She needs more than words to makeup.

Mediocre competition, and scrambled morals

I remind friends that a true measure of a leftist is if one remains a leftist after becoming wealthy. China and India happens to be good case studies. Representatives of China, repeatedly, when asked at the U.N. and elsewhere why China he is now buddy to the likes of Khartoum, Rangoon, and Ndjamaena, the response has been standard: ‘it is all business and that he is doing exactly what Ma U.S.A. is doing’. All bets are off, and standards are dropping.

Who imagined that China and India would openly cozy up to Rangoon? China used to brag about his support for progressive regimes like Nelson Mandela’s ANC, Sam Nujoma’s SWAPO in Namibia, FNLA in Angola, among others. Natural resources were of little consideration then. This has all changed. Oh, remember the yearly birthday ritual that India used to send to Burmese opposition stalwart Aung San Suu Kyi? Kiss that goodbye too. In 2005 India was one of the few families that did not send a 60th birthday card. Aung San has nothing to offer now in opposition, and in confinement, compared to the lucrative natural gas contract being offered by the regime in Rangoon. When confronted, they cite Ma’s own exploits and her long wrap sheet– support for Saddam of Iraq, Manuel Noriega of Panama, Apartheid South Africa and (then) Rhodesia, Marcos of Philippines, and a litany of dictators and authoritarians. Once richer, these leftists are trading the Mao-like suits for a 3-piece.

But rather than take advantage of mediocre competition and change course dramatically to make up, Ma is, once again, expending political capital sabre rattling on another renegade sibling by name Iran, fearing that she has been a bad influence, recently, on a son that fell out of favour a while ago, Iraq. That fear is warranted because once this indiscipline gets out of hand, it will drag vulnerable Saudi Arabia along if the badly-treated and vengeful Shiites pushes enough to form a triangle out of Iraq into two neighbours (Iran and Saudi Arabia) who could be sympathetic to a Russia-China bloc. So whether Ma likes it or not, she is stuck with her unwanted stay in with Iraq, at least for now..
Sticking by a favourite son

One dominant issue - seemingly benign but morally significant – is complicating Ma’s comeback attempts and undercutting her moral authority. It is her relationship with her favourite son by name Israel, whom her Middle Eastern axis revolve when tensions are high. She has always favoured him for good reasons but in the past has been careful not to push other siblings away so her leverage was considerable. The road to Israel started at Ma’s doorway, so we all believed. Certainly her love is borne out of the deep moral dysfunction in Europe that made a devil out of militarism there. That is where Ma was got her reputation as a moral policewoman capable of putting together:

- her immediate family (Civil War/abolition of slavery) and more importantly
- a credible enforcer and mediator of all families after WWI and WWII.

So when Ma conceived and delivered him, in 1947, with cheers from virtually all families, Ma promised that she will never permit crazies like Hitler to emerge and threaten him. Israel, in little ways, knows how protective Ma was. The fact that the other Semite siblings living in the Middle East, in their minds, see him as the spoilt one does not bother him at all. In fact he relishes it, and the others simply had to be resigned to accept their fate.

But Ma’s measured impartiality has taken a hit, seriously, in the past three years. Some will even argue that the favourite son is telling Ma what to do in the Middle East now. It became evident when she announced that she was going to, just like Israel, build a fence to protect against intruders by from south of her house, an idea that had been considered so crazy that it was only right-wing crazies who would dare float around town. Surprise! Now it is part of Ma’s mainstream thought. It shows how far Ma has come. Then came the real kicker.

Israel had moved into his sibling’s (Palestinian) home, and seized a head of family (cabinet ministers) and by June 2006 had extended the campaign to the other one supportive of the insubordinate sibling, bombing him to submission while Ma stayed mute. Now the revered Shimon Peres is quoted as referring to the Lebanon beating a ‘mistake’ though, then, Ma

---

publicly urged Israel on until Lebanon comes to his senses and ceases to harbour rogues (Hezbollah). Ma had gone too far.

An opportunity came for a make-up of sort when the Dubai Ports World deal arrived on her table but Ma scared residents in her house not to corporate so these petrodollar siblings, uneasy with neo-Cons and the Democrats seeking to be ‘tough on terror’ are staying away. From the above account, Ma has been less than a good parent, especially knowing that the moral reasons these sibling rivalry are questionable ones: from threat to push the Israel to the sea (Hamas), or justification for occupying part of Palestine (Israel). Ma’s authority is severely diminished.

Earlier – in March, 2006- her spokesperson to the world (the State Department) published a list of worst human rights abusers. The list included ‘permanent residents’ – North Korea, Iran, Egypt, etc. But this time reporters and news outlets openly questioned why Ma did not list her off-shore exploits in Guantanamo Bay and Abu Graib. The standard line was that it was a judgment on others, not on herself. Then in May 2006 John B. Bellinger III, leading a 12-member-strong delegation, had to plead with a U.N. body, the Committee Against Torture, that the question is not whether Ma had not tortured but that she has not systematically done so in the war on terror. Reporters also questioned why the favourite son was not cited, and why China’s excesses were watered down. No clear answers could be found but it was clear that pocketbook issues now trumps morals. Ma’s ability to be objective is in question. She has work to do. Perhaps, declining morals will make it possible to impress sceptics, once again, with minimal sacrifice.

**VII. OPPORTUNITIES: domestic virtues**

There is no precise formula for maintaining parental control but, as mentioned earlier, if Ma can deliver at the material level and play fair when imposing sanctions on siblings, morale will be lifted. For a while this seemed to have been the case in her house. This used to be where an overwhelming number of outsiders (immigrants) called their 1st, or 2nd homes. Initially, they were from the ‘culturally compatible’ families of Ireland, England, Canada, and Germany, making the strongly pro-European social policy design easy. A distinctly ‘non-European’ flavour was added by way of a different kind of ‘rule-of-law’, permitting freer
speech on even religion. In Harlem, for instance, one can find all kinds of Muslims who see that religion as one source of vibrant spiritual and political activism. Across the isle in Long Island, the largest concentration of these very Muslims relate to their religion as a cultural and regional identity. Similar dynamics underlie the Irish, Ukrainian and Jewish presence, many of whom have strong European roots. One could ‘ask and tell’ almost anything about themselves and what social forces makes their being without being vilified – notable exception being those who make a living reciting ‘white power’ when such visitors speak their minds. So, arguably, Ma’s house provided avenues for constructive dialogue, and perhaps offered the most achievable path to citizenship, more so than any other family on earth. So irrespective of the axis that links all to Ma, from work permit to green card, one could easily melt into Ma’s pot to attain the all important political and legal citizenship that confers voting right, and access to family jobs, and other services. Even with a tarnished image, not many families units will question her intention to be inclusive at these fronts.

Ma has always been welcoming to intellectuals too who came in to study and wanted to stay. A loose transition from visitor/student status to residency enabled skills to be retained, liberally, and they helped attract the all-important research money. They still do. Even law-abiding folks who sneaked in from underneath her fence ends up being ‘pardoned’ to stay, occasionally, to join Ma permanently for the evening dinner ritual. That is why during times that Ma became mouthy and used the ‘I’ word liberally (‘I’ as in ‘illegal’ immigration), it was understood that she meant no harm and that it was just talk. Almost every group in the power echelon have been in on such loose talk. Lawmakers (Congressional candidates) and the chief executive (President) have been known to promise to do something about their illegal status (deport them) when their backs were against the political wall but then once (re)elected they went to sleep. Ma has always been like that for the longest time: loose talk but practical on the ground. She has been almost always pragmatic but preached conservativism to anyone else who will listen.

There is one more element of the benefit of Ma’s openness: deflationary (wage-price flexibility) benefits of such porous fence to global competition. Our famous midtown, N.Y. streets of Broadway and 5th Avenue, and Chinatown, among others, attract visitors in large part because of the bargain prices that such ‘illegal’ visitors bring. Call it what you may –
sweatshops, slavery or exploitation – but one thing is clear. Even at the non-outsourcable non-tradable sectors (cleaning, construction, and food processing) and farming, areas where almost two-thirds of illegal immigrants go, they are having deflationary effects: undercutting local wages, narrowing the gap between that of the West and the Chinas and the Indias. More importantly, they are expanding capacity, helping us produce more than we were capable of before. As visitors, they tend to complain less, and even accept unsafe working conditions. An unpleasant part of this is that they could undercut some local labor (those with the drive to work) in the non-tradable sector. In the tradeable sector – where they help produce stuff for sale or exports - such undercut might not be that bad. In little ways Wal-Mart has proved that it could be beneficial, especially if they can find ways to tap into the unskilled who complain that such visitors are taking jobs from them. From this vantage point Ma’s deliberateness in looking the other way at her fence could actually be a good thing, economically speaking. Ma can even start selling lots of stuff overseas rather than buy that much from neighbours. Neighbours from across the Atlantic (Europeans) have also be doing this but through the backdoor and so the visitors feel used because they are not made to feel at home and participate in the citizenship project.

Sectorally, the difference between Ma and those who reside in Europe is even clearer, but the latter tend to be in a habit of downplaying it given bright spots like France that has done an extraordinary job being inclusive but ignored some significant groups of underclass. The news magazine Economist’s Look Out, Europe, they Say[^6], for instance, shrugs off Ma’s advantage by pointing out that Ma was only lucky to have upwardly mobile Moslems from Southern Asia, Iran, or African-American converts who have little personal link to Islam’s heartland who might harbour less resentment. The impression is that if the European siblings happened to attract lower skilled people, then such social tensions are expected, and that (by implications) France, and especially all others, could be excused. Despite such differences in emphasis, Fareed Zakaria[^7] summed up Ma’s work at this front pretty well. In his To Become an American, he suggested, in line with the argument presented above, that such a sense of citizenship prevented the radicalization of Muslims, helping prevent a 9/11 for that long. To demonstrate this, he cited the German Green Card fiasco that failed in large

[^6]: June 22, 2006 issue
[^7]: Washington Post April 4th, 2006
part because it was just a work program and not a ticket to citizenship. Who wants to live in a country for 50yrs only to be asked to go back to their family of origin because they are no longer needed?, he seemed to ask.

Perhaps the best thing that made Ma stand out in the past among other families was that social institutions responded well too with significant protection for these visitors. In fact in some cases they even stepped ahead of the usually resentful electorates with reasonableness to applicants, especially for those with a few thousands of dollars to blow on a lawyer. A bunch of loopholes in the law too permitted them and employers to break the rules and claim rational ignorance in the name of the common good. Also, where prosecution is possible, there are so few enforcers that only an occasional sweep in election seasons is possible. In short, even illegal visitors smelt a bit of the democratizing exercise of inclusiveness via work. Life has, in the past, been good at Ma’s house for many immigrants.

VIII. PROMISE

Not a terrific Ma, but worthy of a second chance, hence, the hope for a Third Way out, different from the pre-911 first but better than the present (2nd way). She can pull together a workable coalition of superstars and ‘emerging’ around those uncomfortable with China: Russia (a wild card), Japan, India, Malaysia, the Philippines, Thailand, Taiwan, and traditional allies U.K, Australia. The coalition will be an uneasy one since a number of them have their families tied by trade to China. The extent to which such economic interest dominates political common with Ma will certainly hinge on Ma’s economic strength. A strong economic rebound will be complimented by the fact that the diplomatic table in the land of Asia, there does not seem to be room for three giants – India, China, and Japan, each of them in one way or the other have their own historical grievance against the other.

India stands out as Ma’s natural ally, and to a lesser extent Japan. In fact China will be lucky to pull off any credible political alliance at own backyard. The recent declaration signed between Australia and Japan on security co-operation on March 13th underscores this point. More important is the speculation that India might join in to form a trio of democratic stalwarts in this region, and with Japan, with his pacifist constitution that ties him somewhat
to Ma, they can isolate China. Again, Ma can make it happen if it behaves, and not be overly controlling.

But if China can get to Russia’s good side (a tricky one), then he could make both Japan and the United States really nervous, and there are signs that slowly, that might be possible if Ma keeps rattling saber.
The Global Rise and Defeat of the Party States: A Research Project

Dr. Diego Olstein

Hebrew University of Jerusalem

ABSTRACT

The major aim of the present research is to establish a wider and deeper conceptualization of the party state as a global phenomenon of the “short twentieth century”. Party states will be presented as an extreme version of the modern state. The maximization of the monopoly of violence results from the twofold tools for power accumulation, the state and the party apparatuses, in order to challenge the hegemonic state and improve its position in the world-system. The particular aims of each party state in the world system arena are concomitant to its position in it. Party states in the core openly attacked the hegemonic powers in order to gain their position. Party states in the semi-periphery attempted economic independence. Party states in the periphery struggled initially for political independence. Historically, the confrontations between the hegemonic state and one-party states proceeded in three successive and interrelated waves. Party states in the core openly attacked the hegemonic states in order to gain their position (1922-1945). Party states in the semi-periphery attempted economic independence (1930-1973). Party states in the periphery struggled initially for political independence (1954-1977).
INTRODUCTION

Although there is a plethora of studies regarding one-party/single-party states, to date no attempt has been made to approach them as an ideal type and as a dynamic political formation in a global context. On the contrary, while some party states were approached as such (mainly communist one-party states and African one-party states), most of them were researched from different perspectives and arranged under different concepts, among which the more widely used is that of totalitarianism. The study of totalitarianism began with all-encompassing works that defined the phenomenon as an all-embracing organization in full command of force and ideology (Arendt, H. 1951) or the combined subjugation of state and society, under an utopian, non-political claim to exercise rule (Buchheim, H.1962). Thus defined, the phenomenon was approached analytically, by specifying its component parts. This shift resulted in the empirical study of an aggregation of components such as, a totalistic ideology, a single party committed to this ideology and usually led by one man (the dictator), a fully developed secret police, and monopolistic control of mass communications, operational weapons, and all the organizations involved in a centrally planned economy (Friederich, C. and Brzezinski, Z. 1956). Thereafter, each of these components was specifically approached (e.g. the dictator by Tucker, the secret police by Barghoorn, and the centralized economy by Hardt, P. and Frankel, T.) and additional features were incorporated into the profile of totalitarianism such as it mobilizing character (Montias’s “mobilizational system”, Lowenthal’s “modernizing mobilization regimes”). The usage of this construct was brought into question due to the growth of industrialization and professionalization that had been spawned by the
technical and scientific commitments of the regime, and which weakened statism (Barber and Curtis, 1969). However, during the 1980’s a second coming of totalitarian theory evolved and adopted both a wider time-space scope and new conceptual concerns. To the classic examples of Italy, Germany, and the Soviet Union, more diverse cases were added ranging from one-party states in China, Africa, and the Middle East. The recurrent topics of charismatic leadership, official ideology, and terror were dismissed as no essential features and were replaced by the concern of relationship between state and civil society (Hermet, G. et. al. (eds.), 1984). Recently, for the second time the study of totalitarianism was undermined by approaching this perspective as an artifact of the Cold War (Gleason, A. 1995). Nevertheless, despite criticism, the totalitarian approach still inspired recent works, such as, among many others, the study on modern tyrants as revolutionary idealists guided by an ideology, empowered by nationalism and modern science, and founded on the rejection of individualism and consumerism (Chirot, D. 1995) or as an economic enterprise based on “substantive irrationality” (economic policy relying on the falsification of bankruptcy evidence) that stems from the will of the leader and on a system of forced labor (O’Kane, R. 1996).

Other concepts under which party states were approached are authoritarianism, dictatorships, populism, and national liberation movements. These categories appear as overlapping, confronting or self-enclosed. Although these analytic distinctions are in many cases justified, it is also true that a synthetic perspective should be applied in order to depict the unity underlying the variety. Therefore, the existing wide range of research, including monographic, comparative, analytic and theoretical works could be channeled into this synthetic project. Moreover, the totalitarian approach depicted
above exemplifies a common assumption of all of these perspectives: the endogenous nature of the inquiry.

The present research, in contrast, attempts to relate the profile of party states to the position of each state within the world system. Therefore, the main theoretical framework adopted for this research is the world system perspective. There are three outstanding features of this perspective that compelled a research of the global rise and defeat of the party states. Firstly, nation-states and their concomitant features, depending on their status in the world system are a primary concern of research. Secondly, the hegemonic rivalries between states and the anti-systemic movements constitute central issues for this perspective. Finally, the twentieth century was extensively studied through this perspective lens. However, despite these features of the world system perspective, the phenomenon of party state was not conceptualized and therefore remains under-researched.

In short, there are two large bodies of knowledge relevant to the global evolution of party states. However, the branch of knowledge focused on the nation-state as its unit of research is compartmentalized into various approaches that emphasize the singularities of different kinds of party states, with the result that their common features are overlooked. On the other hand, the world system approach that provides a global unit of research was not applied to the study of worldwide party states as an attempt to confront or resist the hegemonic core powers.
RESEARCH OBJECTIVES

The Global Rise and Defeat of the Party States is a work in progress, which first aim is to establish a wider and deeper conceptualization of the party state as a global phenomenon of the “short twentieth century”. Party states will be presented as an extreme version of the modern state. The maximization of the monopoly of violence results from the twofold tools for power accumulation, the state and the party apparatuses, in order to challenge the hegemonic power and improve its position in the world-system. Considered from an evolutionary perspective, the origins of the party are in a political organization placed in the antipodes of the prevailing state. Nevertheless, at some point of its career the political organization becomes a well organized party, a mass movement, and the head of the state (although not necessarily in this order). Once holding the state power, the party suffers a process of adaptation to the revolutionary transition from the antipodes to the central power, surviving this transformation. At the end of this process, the party state is consolidated. The new type of regime holds at once the power concentrated by the state apparatus and the party organizations proceeds to impose internal unity. One type of means for that purpose is the application of conciliatory policies between social classes. The other type of measures to accomplish the unity goal is a thorough repression of dissidents. Finally, as both the maximization on the monopoly of violence and the internal unity are achieved, party states attempted to bolster their position vis-à-vis the hegemonic coalition under the leadership of the hegemonic power (Great Britain until 1941 and the United States since) and conformed by a coalition of client states in the core (democratic regimes), semi-periphery and periphery (military dictatorships, tyrannies,
or formal democracies). This pursuit of redefining the place of the society ruled by party states in the world system is the source of the conflict between the hegemonic powers and the party states. The particular aims of each party state in the world system arena are concomitant to its position in it. Party states in the core openly attacked the hegemonic powers in order to gain their position. Party states in the semi-periphery attempted economic independence. Party states in the periphery struggled initially for political independence.

The second purpose of the present research is to track the interrelated dynamics of the rise and defeat of party states by applying the world system perspective. There are three global features to party state. First, it is a co-emergent phenomenon, that is, this particular type of regime rose and fell simultaneously in several societies during particular periods. Second, this simultaneity or conversely consecutiveness derives from its second global dimension: the diffusion processes of the party state model and its several components. Third, there is a systemic dimension to the development of party states world wide. The challenges posed by party states (mainly a powerful one or a party states coalition) to the hegemonic states and the attrition they caused to them encouraged the rising to power of this type of regime in other societies. Conversely, the defeat of a party state (mainly a powerful one) by the hegemonic states propels the following defeat of others.
PRELIMINARY OUTLINE

The attempt by the central powers to modify the imperialist map during World War I had failed. In its aftermath, the latecomer (in political unification, imperialist expansion, and/or industrialization) powers suffered setbacks of varying degrees, from loss of power and territory to total extinction as a political entity. Once the conflict in Europe was over, the countries in the periphery as well as the dependent colonies realigned to the hegemonic imperialist ties. In the wake of the situation that resulted, the latecomer core powers adopted a new political model in order to confront the imperialist hegemony: the party-state. The first wave (1922-1945) of party-state formation corresponds to the rise of Fascism and Nazism in Italy and Germany, and that of Stalinism in the Soviet Union. The defeat of the party states during World War II was only partial. The Soviet Union fought on the side of the hegemonic powers, which secured its survival as well as the emergence of the Eastern block, which it accomplished by the formation of party states modeled and controlled by it. Moreover, this survival of a party state of the first wave also inspired and supported the establishment of another communist party-state in China. The conditions derived from the renewed conflict in Europe enabled the rise of party states all over Latin America. However, as soon as the emerging hegemonic power stabilized Western Europe, it proceeded with the attrition and overthrow of the party states in Latin America. In most of these countries it took at least two waves of military dictatorships to clash with these leading parties and their legacies, paving the way since the 1980’s
for the instauration of formal democratic regimes. The third wave of party-state formation (1955-1977) relates to long lasting consequences of World War II, e.g. the debilitation of Great Britain and France, and the consolidation of the Soviet Union and its satellite party states. From the first result follows the process of de-colonization, which leads, eventually, to the formation of party states in the Middle East, Africa, and Asia. From the second derives the affiliation and support for most of them. Through cooptation, attrition, or direct military intervention the hegemonic power was able to defeat all attempts made by party states to modify their place in the world system. The launching of Cold War II (1980’s) ended with the collapse of the major party-state and its directly associated party states, and brought into question the existence of the unsupported remaining party states. The fall of the party states paved the way for the hegemonic powers to freely penetrate all national economies, a result labeled as globalization, as well as to intervene militarily in some of the remaining party states. The emergent substitutes for the party states are formal democratic regimes, and the transition from the former to the latter is defined as democratization. Therefore, two of the main tendencies of current economics and politics – intra-state “democratization” and, inter-state globalization - are, in fact, the result of the triumph of the hegemonic powers over the defiant political formation of the “short twentieth century”: the party states.
CONCLUSION

The Global Rise and Defeat of the Party States aims to yield contributions in several realms. Firstly, the conceptualization of the party state phenomenon in a wider vein than hitherto will contribute to the convergence of several branches of research until now in confrontation or self-enclosed. Secondly, the gathering, arrangement, and linking of information will provide a valuable factual synthesis. Thirdly, by adding to its conceptual array the category of party state and by depicting systemic processes derived from it, the application of the world system perspective to the party states will also result in a contribution to this perspective. Fourthly, this research will provide a new perspective on twentieth century history. Finally, the accomplishment of the proposed research could pave the way to the conceptualization and research into many related phenomena. To begin with, alternative regimes to the party states (formal democracies, military regimes, traditional regimes) should be researched through the three waves. This complementary study will enable a systematic comparison of the patterns of relationship between states along the center, semi-periphery, and periphery vis à vis the hegemonic states of the core: the collective hegemony. The features of this new conceptual construction and its historical study will be dealt with in a separated research. Moreover, in a third future research another political configuration amidst the struggle between the collective hegemony, the party states, and its alternatives will be approached: the regional and interregional coalitions and organizations instrumentalized by all the parties as an attempt to increase their power.
Therefore, the present proposal will open a wide research agenda, the long-term prospect of which is the global history of the struggles and coalitions between the states of the core, semi periphery, and periphery under a new conceptualization entailing the typology of collective hegemony, party states, alternative regimes, and the regional and interregional coalitions and organizations.

Effects of stress management as employee assistance program

Taro Ono
Kansai University of Welfare Sciences

Abstract

This study was aimed at examining effects of a stress management program through an activity of employee assistance program. The subjects were 19 workers (16 men, 3 women) who were in a leave of absence from duty by depression. In this study, a stage of stress management activity based on Transtheoretical model, stress management self-efficacy and state-trait anxiety were examined.

As the result of stress management program, the stage of a stress management activity almost varied with program participation to the action stage. Some subjects had tried for stress management activity before the program. Though their copings before learning the management of stress were not scientific and effective, by understanding stress management, they came to cope with their stress effectively. As for stress management self-efficacy, attention to an affirmative aspect of things, keeping relax, cancellation of feelings irritated by body activities, self-efficacy for coping such as assertion behaviors increased. Furthermore, subjects' state anxiety was decreased.

Although those results almost showed the effectiveness of stress management program, it was recognized that making of a program depending on a personal stage of behavioral change and setting of other measures (e.g. stress reactions, social supports or job satisfactions) were needed.

Lessons from the Crow

Abstract
The purpose of this study was to explore ways of understanding the meaning systems of individuals who are members of the Crow Nation. The study explored utility of understanding the strengths and needs of these individuals through a framework of indicators of identity complexity and evaluative endpoints contained in verbal narrative material. The framework provides flexibility for understanding individual needs and considers meaning of actions within the context of a person’s culture and situation.

The study was undertaken to provide support for the use of the Identity Complexity and evaluative narrative endpoints to understand the meaning systems of individuals from cultures and environments that are diverse from participants in previous studies that have utilized this framework. The importance of one having a complex identity receives research support of Linville (1987) as a buffer against stress related illnesses and depression, and by Guidano (1987) indicating that the greater the involvement of the individual in multiple roles, the more likely the person will be able to continue to function interpersonally and with one’s surround in the event of loss involving one of the roles.

Client narratives were analyzed for indicators & sub-indicators of Identity Complexity, & narrative endpoints utilizing a template for indicators that had been used in previous studies with involved individuals diagnosed with depression Fennell (1998), substance abuse (McDaniel, 1995), and schizophrenia (Opatrný, 2003). In addition to indicators of Identity Complexity & narrative endpoints, the narrative interviews were analyzed for additional emergent themes.

Present study findings indicate that during the early stages of each interview individuals appeared to exhibit little evidence of identity complexity. However, sensitive application of varied interview techniques tailored to the individual and context of the interview situation encouraged discussion revealing strong evidence of identity complexity on the part of most individuals interviewed. Specific study findings will be presented and implications for interviewing and analyzing narrative data of individuals from diverse cultures and backgrounds will be discussed.

   In many countries, today, including the U.S. and Japan, the aged population is dramatically increasing. People are living long, often very healthy and vital lives, but also often ending with a period of chronic health problems, which require various levels of care. How do young people see the issues of aging and of the care of their parents in the future? In the Eastern world, it has always been believed that the elderly are respected and that they will be cared for in their declining years by their children who respect and love them. In the West, on the contrary, the elderly have not necessarily been seen as a valuable part of the society.

   As a way to explore the validity of these cultural assumptions, data from 476 Japanese college students and 362 U.S. college students from the mid-west were collected using a written questionnaire at two data points (Time 1 in 1997 and Time 2 at 2004.) Since a comprehensive Long-Term Care Insurance Program was launched in 2000 in Japan, these two time periods for the Japanese population in particular
represent before and after the institution of this progressive program.

The data from Time 1 yielded the following: contrary to the general belief about the Eastern culture’s respect for the elderly, the Japanese college students had more negative attitudes toward and less accurate understanding about aging and the elderly than the U.S. college students. At time 2, after the institute of the national comprehensive long-term care program, the Japanese sample significantly improved their attitudes toward aging and the elderly. However, the college students’ willingness to care for their parents in their advanced age declined among both U.S. and Japanese samples over the two time periods. The percentage of college students having grandparents in need of care have also declined significantly between the two time periods. The number of students today whose family members are actually caring for elderly members of the family is minimal. The possible explanations for these changes over the two time periods and differences between the two populations will be explored.
Title: Does language play a role when learning fraction concepts? A cross-national comparison between U.S., Korean, French, and Taiwanese children.

Authors: Jae H. Paik, Shinchieh Duh, and Elizabeth B. Johnson

Abstract

Over the past few decades, abundant evidence has accumulated and demonstrated that language plays an important role in conceptual development (see Nelson, 1996 for a detailed review). The fundamental idea is that language is a channel through which culture and knowledge is transmitted and therefore acts as a catalyst for changes in thinking and knowing. Indeed, the role of language on the development of various domains of cognition has been studied extensively.

In attempt to understand the vast difference in math performances between U.S. and East Asian children, many researchers have investigated the role of language in learning math concepts. For example, it has been found that children learning to count in Chinese, a language with explicit base-ten numbering system (e.g., eleven is spoken as ten-one in Chinese), count higher and make fewer errors than age-matched peers who are learning to count in English (Miller & Stigler, 1987). Furthermore, Paik and Mix (2003) found that Korean 1st and 2nd graders outperform their U.S. peers when asked to match fraction names onto pictorial representations. They suggest that Korean children’s superior performance is partly due to the fact that fraction names in Korean appear to make part-whole relations more explicit than those in English. For example, conventional English fraction names (e.g., one-fourth) do not convey any information about the part-whole relations. However, in Korean the notion of part-whole relation is explicit in the fraction names—the Korean fraction name for one-fourth is roughly translated as of four parts, one (Miura et al., 1999; Paik & Mix, 2003). More fascinatingly, it was found that U.S. children’s performance improved spontaneously when they were given the matching task with English translation of Korean fraction names (e.g., the fraction one-fourth is spoken either as “one of four parts” or “of four parts, one”; Paik & Mix, 2003). Such result shows the importance of language support when learning fraction concepts.

In the present study, we have extended previous research and included French and Chinese speaking children. We have particularly chosen these two languages because the structure of French fraction names is similar to that of English names, just as the structure of Chinese fraction names is to that of Korean names. If language plays a crucial role in learning
fractions, we should find French speaking children performing similarly to their U.S. peers, and 
Chinese speaking children performing similarly to their Korean peers. More importantly, all 
children regardless of the nationality should perform better when provided with highly 
transparent fraction names (i.e., fraction names where part-whole relations are explicitly 
expressed) than when provided with their conventional fraction names. We have collected 
Chinese and French data, which are currently being coded and analyzed. Our preliminary data 
analysis shows that all children (i.e., U.S., Korean, French, and Taiwanese children) are 
influenced by linguistic inputs in similar ways—performing significantly better with highly 
transparent fraction name than with their conventional fraction names. Such finding strengthens 
the idea that language serves as a catalyst for children learning fraction concepts. The findings 
from the present study are also important as they may provide strong foundation for developing 
innovative curricula activities for math educators.

Paper Session Format
Sociology—Topic Area
Child development is very important to later life. Familial effects also play a huge part in the development of a person. For example, household structures are important to the socialization of a child. When a child lacks socialization, it can have lasting effects that can affect his/her later life development. One of the most interesting effects of child development is its effect on the development of interpersonal skills. More specifically, the way a child is socialized has an effect on their development of intimate relationships as an adult.

Gender role socialization takes on an interesting twist within the African American community. Given that over half of all black children are being raised by single mothers, the impact of fathers is easily visible within this population. It is important to note that single parenthood is not a phenomenon specific to the African American community, but because of conditions unique to them, both historical and contemporary, the effects are more prevalent within their population group.

Because black single mothers are raising black children on their own, they are depicting a particular scenario. They are being confronted with a “Duality of Motherhood”. Because these mothers are raising their children alone, they are assuming all caretaking responsibilities and roles. It is referred to as a duality because a single mother has to take on the roles of a father and a mother in the absence of a father with regard to raising a child. As a result, she will typically raise her son and daughter very differently. This differential gender socialization may have developed a scenario which I refer to as the “Paradox of the Matriarch”. The paradox lies in the differential and contradicting gender socialization a single black mother gives her son and daughter. The paradox occurs due to the fact that the son and daughter will grow up and assume their adult roles, which happen to be very different from each other.

A black single mother typically will raise her son, providing him with two very different images of the role he is to assume as a man. These two images lie on opposite poles and represent two extremities of a paradigm. I will refer to this polarity as the paradigm labeled “BABY BOY vs. HERCULES”. The first extremity is referred to as the ‘Baby Boy’ pole, in which a single mother will typically spoil her son to make up for the fact that his father is not around. She will usually, out of guilt, overcompensate for her son because he has no role model or father figure in his life. However, on the other
extreme, the single mother will tend to raise her son “to be a better man” than his father and often to be better than the men she has known in her life. This extremity is the ‘Hercules’ pole of the paradigm. It is these two extremes that combine to provide a very contradictory image of the man he is to become. Meanwhile, she typically raises her daughter to be extremely self sufficient. Studies also note that many African American women (mothers) may provide their daughters with negative messages about African American men based on their own experiences with them. These messages are internalized and engrained in the daughter’s memory, which play a huge role in the way she will view future relationships, marriage, and men.

Because of the differential gender socialization, a particular pattern among African Americans, with regards to their formation of intimate relationships, has been noted. The pattern that has been produced is what I will refer to as the "clashing effect", which affects the formation of intimate relationships within this community and may be a causal link to some of the current issues of interest within the black community such as very low rates of marriage, increases in interracial marriages, higher cohabitation rates, higher rates of individuals who forgo marriage altogether, and higher rates of divorce/marital dissolution.
Chapter 1: Introduction

The purpose of this paper is to explain Mencius’ theory of human nature from a new perspective, namely, human composition. The controversy about human nature is one of the most famous issues in the study of the intellectual history of China. Scholars have taken a great deal of effort to find out what Mencius meant by asserting that human nature was inherently good. For instance, Fung Yulan believes
that by human nature, Mencius only meant moral inclinations.\(^1\) Graham argues that human nature should be interpreted as “a thing to start with” or a “dynamic process”,\(^2\) and thus comes up with the idea that “The \textit{xing} of a living thing was commonly understood to be the way in which it develops and declines from birth to death when injured and adequately nourished.”\(^3\) D. C. Lau takes the line that by nature, Mencius meant something that is distinctive, as for what it is in the case of human being in \textit{the book of Mencius}, Lau claims that Mencius’ assertion that human nature is good “does not at all lie in the actual way in which human beings behave, but in the fact that they possess a sense of morality and a sense of shame.”\(^4\) Roger Ames argues that human nature in \textit{Mencius} should be considered more as a cultural achievement than what is innately within human’s constitution. Therefore, he proposes “for the human being at least, \textit{xing} seems to come closer to ‘character,’ ‘personality’ or ‘constitution’ than what we generally understand by ‘nature’”.\(^5\) Irene T. Bloom argues that Mencius’ idea of human nature was actually in a biological dimension.\(^6\) Undeniably, these studies shed great lights on the understanding of Mencius’ notion of human nature. However, as we’ll see in later part, whenever we

\(^6\) Irene. T Bloom explains this idea in her three papers: “Mencian Arguments on Human Nature (Jen-hsing)”; “Biology and Culture in the Mencian View of Human Nature”; and “Human nature and biological nature in Mencius”.
are inspired by some explanations that are drawn upon a series of statements in *the book of Mencius*, there seems to arise another series of statements in the same book that make us can’t help but cast doubt on the idea cited above. In other words, the most confusing issue is why Mencius, on the one hand, asserted that human nature is good; while on the other hand, he criticized the bad behaviors of human beings, implying that he believed there was something bad in human being’s make up.

In this paper, I attempt to tear off the veil that induces the debates, and reconcile the two seemingly contradictory aspects by generalizing Mencius articulation of human nature into three levels in a picture of human composition: human physicality, human mind, and human nature.

I then discuss Mencius’ definition of “human nature”. It is argued that Mencius’ definition of “human nature” is neither human physicality as Xunzi argued; nor, as many scholars understand, virtuous potentials that brew good behavior. Correspondingly, efforts are made to find out what Mencius meant by the claim of “human nature is good”. The concept of “good” is discussed from two aspects: the good of nature and the good of mind/behavior. I will first discuss what causes human’s bad behaviors in Mencius’ view; and why such bad behaviors are not rooted in human nature. I argue that the quality of behavior is a matter of the state of mind.

---

7 What particularly concerns Mencius in this terrain is human being’s biological inclinations. In Mencius’ view, they are what human beings share with animals.
8 It refers to both morality and the schemas and mechanism of human mind.
9 Such as A. C. Graham, Ames, Roger, James Legge, etc. As a matter of fact, although their specific arguments differ from each other, they share the same hypothesis: human nature is something that needs to be developed or accomplished.
and it (no matter it’s good or bad) has nothing to do with human nature. At the same
time, I argue that human nature is not neutral in that we’ll find it perfect when we
have perfected our mind. Again, it’s not a problem of whether we have a perfect
nature, but rather an issue of if we can experience it; consequently, whether we can
experience it is an issue of the state of human mind. Human nature is one thing,
while human mind is another. Human nature is pure and absolute, while human
mind has contrary states of being complete and incomplete, original and lost, etc.
Mencius never equaled human nature with human mind, neither did he ever say that
good nature guarantees good mind/good behavior. The reason why people got
confused is that they fail to distinguish these two fields, or even worse, they try to
measure one with the standard of the other. The Mencius’ story is, in terms of nature,
there is nothing bad; in terms of mind/action, there are good and bad. However, they
are not due to human nature, but to what one chooses to illuminate in the field of
mind.

My conclusion is, the criterion Mencius employed to measure whether human
nature is good or not lies neither in the dimension of human’s natural predisposition
nor in the dimension of his moral development. Rather, “human nature is good” is an
absolute and unchangeable fact.

---
10 This is why wisdom zhi is so important in Mencius’ theory.
11 Please refer to chapter 3 of this paper.
12 I will discuss the differences in detail in chapter 3 and chapter 4.
13 For example, both complete mind and incomplete mind co-exist. Choosing the complete mind leads
to good and choosing the incomplete mind leads to bad. Please see chapter 4 and chapter 5 for details.
Chapter 2: Contingent Problems with Traditional Interpretations

1. Three Types of Traditional Interpretations

In order to reconcile the seeming contradiction in Mencius’ theory, there developed numerous explanations, among which are three main tendencies. The first one believes that there are three types of human nature: purely good, purely evil, and a mixture of good and evil; and Mencius’ claim that “human nature is good” is merely based on the purely good humans. For example, the famous Han scholar Wang Chong 王充 says, “I consider that, in saying that human nature is good,
Mencius considered only human being who are above the average, while, in saying that human nature is evil, Xun Qing considered only those people below the average\textsuperscript{14}. As many scholars have pointed out, one problem that this interpretation has to face is if it could be true that Mencius knew there is bad element in human nature but he just turned a blind eye to it when he chose the good one to discuss. If this were the case, Mencius theory would inevitably amount to nothing; since following this line, it is also fair for Xun Zi to assert that human nature is bad because he saw the bad element.

The second tendency takes the “good nature” as a potential/sprout, arguing that by “human nature is good”, Mencius meant a dormant possibility which, if not harmed, will embody itself in a totally moral manner\textsuperscript{15}. A. C. Graham argues that the term \textit{xing} is more popularly used in pre-Chin literature to refer to a thing’s tendency and inclinations “The \textit{xing} of a living thing was commonly understood to be the way in which it develops and declines from birth to death when uninjured and adequately nourished;” and “to find out the distinctive nature of a living thing one must discover the capacities which it realizes if uninjured and sufficiently nourished. In the case of man these include his term of life and the moral perfection of the sage, and it is

\textsuperscript{15} Just to name a few: A.C. Graham holds that human nature should be interpreted as “a thing to start with” or a “dynamic process” See “The Background of the Mencian Theory of Human Nature” in his \textit{Studies in Chinese Philosophy and Philosophical Literature} Albany: State University of New York Press, 1990 pp. 27–28.

James Legge holds that “Human nature is good is just ‘speaking of our nature in its ideal and not as it actually is.’” See \textit{The Chinese Classics. Vol. II the works of Mencius}. Hong Kong: Hong Kong University press, 1960. Originally published in Asia Major (NS. I, i, 1949), p. 59.
above all the latter which distinguishes him from other species.” Based on Graham’s analysis, Jiyuan Yu asserts, “…When Mencius claims that human xing is good, he refers only to the four seeds.” Philip Ho Hwang argues, “The first that we should remember is that, according to Mencius, man only has seeds to do good, not goodness itself. These seeds must be developed and cultivated to the extent that man can serve heaven and even fulfill his destiny.” This type of interpretation sheds light on the issue by distinguishing possibility from reality. These claims sound reasonable at the first glance: human being has the unique potential to be cultivated into a sage after all. And the good seeds doesn’t suffice to make the assertion that “human is already good”, so we definitely need cultivation. But, some questions present themselves following this line of reasoning: Why, for most people, this potential has not been actualized if it’s our nature? What blocks it from being carried out? And doesn’t the thing that blocks the moral tendency deserve more to be called human nature at the point that it is easier to be nourished and realized? And before the existence of sage, who knows if it’s already in our nature or attained from without? In other words, how can we tell the moral perfection is from our nature? These questions amount to nothing but one doubt: to treat human nature as a potential might not be convincing. As a matter of fact, following this line, we can

only get the conclusion that “human nature is good as a potential” rather than “human nature is good”. In other words, human nature is good is only because there exists such a possibility in his make-up. This analysis does not take the possibility of doing bad things into consideration: if upon the observation that “by nature one could do good”, one can conclude that “human nature is good”, why can’t he conclude that “human nature is bad” upon the observation that people are more possible to do bad things? At least, even though Mencius’ can insist that the claim that “human nature is good” is right, he cannot rule out the claim that “human nature is evil”.

The third tendency among scholars is to transform the form of the question by introducing some new concepts. For example, Song 南 scholars, such as Cheng Yi, Cheng Hao and Zhu Xi etc. attempted to address the issue by resorting to the notion of Qi 氣. For instance, Cheng Yi said, “When the qi is pure, the cai 才 is good, when the qi is impure the cai is bad. One who was bestowed the purest qi is a sage; while one who was given the most impure qi is a wicked man.”19 Hereby we can see that if a person is good or not has nothing to do with his nature, but with his qi, and there are at least two types of qi that determine if a person is innately good or not. “Nature is out of Heaven and cai 才 is out of qi. When the qi is clear, the cai is clear; when the qi is not clear, the cai is not clear either.”20 It seems to explain well why some people are good and some are not, but it still failed to explain why there is the

difference between the good qi and the bad qi, where they originate, and what’s relationship between qi and nature. Therefore, the effort of interpreting Mencius’ theory by loaning concept is not satisfying either.

Other alternative concepts such as “ethical mind”\textsuperscript{21}, “human agency”,\textsuperscript{22} etc. bring forth a series of enlightening explanations; however, they are not successful in explaining the origination of “bad element” in nature either. For instance, Roger T. Ames, taking a Deweyan’s perspective, objects to the idea that human nature is innately decided and upholds the idea that Mencius’ theory of human nature is about the unique particularity of human which comes into being in a process of cultural evolution.\textsuperscript{23} Similarly, a Chinese scholar Yang Zebo, argues that human nature means an “ethical structure” that takes shape in one’s mind; this structure works before one takes action in reality; and this is why Mencius said “the nature is originally within me.”\textsuperscript{24} The question that this theory has to face is: do humans have human nature before the moral system accumulates in their mind? If the answer is yes, this theory cannot hold itself in that there is a nature before the ethical mind which is not yet explained; if the answer is no, a new born baby must not have human nature; however, a new born baby, in Mencius, ideally represents the state of a perfect mind. Therefore using “ethical structure” to explain human nature does not

\textsuperscript{24} See note 18.
work satisfyingly. Another representative opinion is to regard “human nature is good” as a course of human agency. For example, as the scholars we mentioned before, Van Norden espouses the idea that Mencius’ claim is actually “(1) all humans are capable of becoming good”; but Van Norden doubts that this statement “does not distinguish Menczi’s position from that of many of his contemporaries (such as Gaozi).” Therefore, he comes up with four other complementary theses. (2) Humans must do that which they believe will obtain for them what they most desire; (3) Genuinely virtuous acts cannot be motivated by selfish desires. Since Mencius admits that (4) not everyone is already virtuous, but (5) everyone has incipient virtuous dispositions which they are capable of bringing into play via a psychological act labeled “concentration.” Van Norden argues, “Mengzi saw the five theses as closely related and did not carefully distinguish them in his own mind. As we have seen, all of them are important to Mengzi’s position.”25 According to Van Norden, the statement that “human nature is good” can hold only under all the five premises. However, the problem is, is it true as Van Norden argues, that without these underlying theses Mencius could not distinguish his theory from that of Gaozi’s? The point indicated by Van Norden’s explanation, as I understand, is that as far as the “potential” of doing good is concerned, there is no difference between Mencius’ “good human nature” and Gaozi’ “neutral human nature”. However, according to my understanding, this understanding is arguable for there are dozens of

times Mencius claimed “Benevolence, dutifulness, observance of the rites, and wisdom are not welded onto me from the outside; they are in me originally” or statements to that effect. As we’ll see in the later analysis, good nature is not a potential that need to grow, but a factual character that covered by ignorance. Therefore, contrary to all those who take “human nature is good” as a course and believe that “good nature” does not exist beyond this course, good nature does exist before and actually through any psychological act.

No matter taking it as a potential or as a mental course, traditional explanations share a common assumption: in order to attest human nature is good, how human nature can lead to good behavior has to be seen clearly. Unfortunately, this turns out to be a dead end in that parallel to any good behaviors there always goes a corresponding bad counterpart: if good behavior reflects good nature, what does bad behavior reveal? If good potential could be called human nature, what could bad potential be named? If a series of psychological acts that might lead to good behaviors could be considered as good nature, what about the psychological mechanism that underlies bad conducts? Or, let’s take a concession, even if the possibility of good aspect could serve as proof that the thing with this potential is good, is it necessary to rule out the possible counterpart within this thing? Otherwise it is also fair for others to say that this thing is bad based on the observation of its bad potential. However, as the research of human nature has been

---

carried out, there seems to be no effort that has been contributed to this issue. It appears that these explanations just change the form of the contradiction and then center on one aspect to give interpretations while the question, as a two-side issue, is still left untouched.

2. Problems with Traditional Interpretations

The crux of the traditional interpretations, in my opinion, lies in the failure of seeing the whole structure of human constitution, and thus mixed two or three different levels of it. For example, clearly in *Mencius*, human nature, virtuous behavior and natural predisposition are three different concepts; but traditional explanations keep mixing them up. For example, James Legge argues,

> It is quite clear that what Mencius considered as deserving to be properly called the nature of man, was not that by which he is a creature of appetites and passions, but that by which he is lifted up into the higher circle of intelligence and virtue. …there ought to be a cheerful submission so far as the appetites are concerned, but where the virtues are in question, we are to be striving after them notwithstanding adverse and opposing circumstances. They are our nature, what we were made for, what we have to do.27

Actually, as we mentioned above, scholars such as A. C. Graham, Van Norden, etc. all share this assumption that the quality of human nature should be measured by the quality of human behavior. However, this is simply not true to Mencius, because according to Mencius, our nature only provides grounds for good behavior, but does not compel man to do, if any, good rather than bad.28 It is already clear that man is

---

27 Ibid., pp. 63-64.
28 For detailed argument, please see Chapter 3 and Chapter 4.
more likely to do bad than good; although the good seeds in human mind manifest
themselves from time to time. Besides, to do good is a twofold issue: to enforce
external goodness and to follow internal way of good; the former is not Mencius’
idea at all and the latter has nothing to do with mandate.

However, if the perspective of moral is not suitable to see why human nature
is good, do we still have way to explore Mencius’ idea? It becomes necessary for us
to reexamine that if good behavior is the only clue along which we can reach the
conclusion that human nature is good? In other words, is human nature still
practically good without resorting to human’s moral potential or psychological
tendency? My answer is yes. Mencius did use the allegory of someone sees “a baby
is about to fall into a well” to demonstrate benevolence is inborn within human
beings; but did he ever say that without this moral impulse being seen, human nature
would be “bad” or unknown? No. Actually, he argued that even if people become
evil, his nature is still good. “As for his becoming bad, that is not the fault of his
native endowment…Benevolence, dutifulness, observance of the rites, and wisdom
are not welded on to me from outside; they are in me originally.”29 In this spirit, the
traditional way, which takes good behavior as the only evidence of good nature, is
not sufficient in supporting Mencius’ reasoning.

All in all, two relative problems are in the way to discovering Mencius’
theory: how to treat bad behaviors of human beings when addressing why human

---

nature is good; and what is the relationship between the quality of human behavior and human nature? In other words, what’s exactly in human nature: germination of good behavior or of bad behavior, or, both, or, neither? Without this question being paid attention, whether holding “human nature is good” or “human nature is bad”, neither side might be able to persuade the other. In other words, in order to get a clear picture of Mencius’ notion of human nature, we’d better head off the problems that our methodology might meet, which, basically are: we must take both good and bad equally into account; in order to fulfill this task, we have to deal with the relationship between human nature and human mind/behavior; and in order to address this question, we have to examine what standard Mencius applied when he gave the definition of human nature. Actually, these questions are weaved in a three-level structure: human composition.
Chapter 3: Human Nature in the Picture of Human Composition

Before getting into what is in human nature, I would like to examine Mencius’ definition of human nature. A traditional idea about Mencius’ notion of human nature is that Mencius was talking about something that makes humans uniquely human. I would say that this is only part of Mencius story in that besides “uniquely”, there also goes “essentially”. According to the logic in *Mencius*, there are two standards applied in demarking human being: (1) formal difference from non-human or, something tells that human being is not what he is not; (2) essential quality that illuminates human nature or something tells that human being is what he should essentially be.30 In *Mencius*, as we’ll see later, the definition of human nature

---

30 For example, *Mencius VIA7* (p.164), *VIA15* (p.168), *VILA1* (p.182) are all related with the relationship between human and Heaven. And as we’ll see later, Heaven is the source of human nature.
is given with regard to these two criteria. The first criterion is that mental acts
corresponding to the level of human mind; and the representative is morality. In
Mencius’ view, it suffices to distinguish humans from brutes, but it is not enough to
be a definition of human being because one can pretend to be virtuous whereas what
Mencius emphasized is true virtue; so it does not follow that anyone who can
perform virtuously has already lived up to the state of living out “human nature”. In
other words, that humans are human is not merely because they can carry out
something that animals cannot. Thus Mencius came up with the second standard,
which corresponds to human nature in the framework of human constitution, namely,
the criterion that makes humans true to what the heaven designs them to be in the
dimension of essence\textsuperscript{31}. In Mencius’ view, it is the second standard that makes
humans true human; while other standards amount to nothing in terms of essentiality.
For example, in the parable of the Ox Mountain, Mencius compared human nature
\textit{cai} to the wood on the mountain. He asserted that without maintaining this \textit{cai}\textsuperscript{32},
humans would be barely different from animals.

There was a time when the trees were luxuriant on the Ox Mountain. As it is
on the outskirts of a great metropolis, the trees are constantly lopped by axes.
Is it any wonder that they are no longer fine? With the respite they get it in
the day and in the night, and the moistening by the rain and dew, there is

\textsuperscript{31} According to Mencius’ theory, the composition of human is designed by Heaven. For example,
者，則其小者不能奪也。此為大人而已矣。”} For detailed reasoning, please see the following
sections. As a matter of fact, according to Mencius, the only standard that could be applied in defining
human is the nature in that the definition of \textit{“formal human”} is not sufficient to distinguish human
from other forms of life.

\textsuperscript{32} Mencius also employed \textit{qing} 情, \textit{liangxin} 良心, \textit{renyizhixin} 仁義之心 in this paragraph, and the
relationship will be addressed in later part of this paper.
certainly no lack of new shoots coming out, but then the cattle and sheep come to graze upon the mountain. That is why it is as bald as it is. People, seeing only its baldness, tend to think that it never had any trees. But can this possibly be the nature of a mountain? Can what is in man be completely lacking mind of benevolence and integrity? A man’s letting go of his true heart is like the case of the trees and the axes….Others seeing his resemblance to an animal, will be led to think that he never had any native endowment. But can that be what a man is genuinely like? Hence, given the right nourishment there is nothing that will not grow, and deprived of it there is nothing that will not wither away. Confucius said, “Hold on to it and it will remain; let go of if and it will disappear. One never knows the time it comes or goes, neither does one know the direction.” It is perhaps to the heart this refers.33

In my understanding, Mencius was not only talking about the fact of “man’s letting go of his true heart”; but also, he was stressing the fact that even though man’s behavior assembles animals, his cai (good nature) is “genuinely” still there. “Letting go of his true heart” makes a man not distinguishable from animal, this is one of the two most important criteria for Mencius to demark human. But this is not the only one. By a rhetorical question, Mencius implies that the seeming wickedness is not “what a man is genuinely like”. What a man is innately bestowed is his nature that is congruous to Heaven. And it’s the latter that makes humans true to what they are designed to be. In short, according to Mencius, the ingredient that makes humans human must meet at least two requirements: (A) to differentiate human from non-

human, or, making humans formally different from any other form of living beings; (B) to distinguish “true human” from “false human”, or, making humans essentially human. Under the frame of human constitution, A corresponds to human mind, which, if completely realized, is good; B corresponds to human nature, which, no matter what one does, is actually and purely good34.

The second standard we discussed above is the ultimate criterion in that it covers all the content that is carried by the first one. The starting point of Mencius in demarking human, unlike other scholars, is the second criterion: what makes humans essentially human. That’s why Mencius ruled out physicality and formal morality as standards of human nature. As a matter of fact, in Mencius, we can see that Mencius had already taken these things into consideration when he talked about human nature:

This is the way of common people: once they have a full belly and warm clothes on their back they degenerate to the level of animals if they are allowed to lead idle lives, without education and discipline.35

Yao and Shun had it as their nature. T’ang and King Wu embodied it. The Five leaders of the feudal lords borrowed it. But if a man borrows a thing and keeps long enough, how can one be sure that he did not originally have it?36

34 I ignored the physical level here because it is shared with animals.
With regard to physical need, it is what human shares with animals; therefore, it could not be regarded as a demarcation of human nature\textsuperscript{37}. In terms of the scientific, aesthetical, ethical abilities, they are important in defining human beings; but according to Mencius, they’re not able to tell the whole story of the human nature. In Mencius’ story, it is neither physical desires and abilities nor living doctrines and styles that decides a living thing is human or not; it is the essence, whether be lived out in one’s life or not, that makes humans human. This absolute and unchangeable thing is what Mencius meant by “human nature”. Without this nature, all the unique characteristics are no more than an empty form. Physical desires exist, but they are not unique to human. Morality exists and is unique to humans, but it does not make humans “truly” human without human nature. Nevertheless, the “human nature” in Mencius is not like the “holy spirit” in that in Christian philosophy the “the holy spirit” comes down to a person only after he becomes pure in soul; whereas the “human nature” in Mencius is inborn with any person, and remains there even if he becomes evil.

A question might arise from the above reasoning: now that everyone has this human nature, what’s the point to labor in bringing forth such a universal thing as an outstanding mark? My answer is, the ultimate problem is not whether humans have such a nature, but whether humans know that they have such a nature and thus cultivate themselves accordingly. All of the philosophers at that time in China

advocated self-cultivation; and interesting enough, all of them share the idea that different recognition of human nature would lead to different methodology. In Mencius opinion, although everyone has it, almost no one ever noticed it, let alone live it up to the full standard. Therefore it is necessary for him to tell this “truth”.

What’s more interesting is, contrary to most scholars’ belief that “good nature enforce morality in our daily life”, Mencius was never as optimistic as they are; because if the “good nature” bears such a function, there would have been no need to propaganda it; or even, there wouldn’t have been so many antagonists. However, this paper is not aimed at achieving any moral conclusion that who is correct and who is wrong; but, it is aimed at a conclusion that why Mencius’ theory, theoretically, is consummate. Relatively, many attacks and explanations turned out to be not really talking about human nature, but some “human forms” (e.g. physical desire, ignorant action, external moral, etc.). In order to see the whole picture of human nature, I would like to anticipate the issues that have been misleading us when it comes to the discussion of human nature. Based on the content of Mencius, there are three aspects that constitute “human” and where people might set their standard to define human nature. I will argue that Mencius’ theory of human nature is drawn on the whole picture of this composition, while others’ are only based part of this integral unit.

38 For example, Xunzi criticized Mencius by pointing out that “human nature is bad” because they tend to be led by their physical desires. See “Human’s Nature Is Evil” in Hsün Tzu Trans. Watson, Burton. New York and London, Columbia University Press. 1963. pp.157-159. But Mencius’ never said that physical desires are “human nature”. While on the other hand, as I mentioned before, some scholars explain human nature with the quality of human behavior; but the fact is, Mencius did not make that equation either.
1. A Picture of Human Composition with Three Levels

As we pointed out, according to Mencius, the ingredient that makes humans human should meet basically two requirements, the first is to differentiate human from non-human; and the second is to distinguish essence of human from form of human.39 Note, Mencius expressed this idea clearly in the following:

The relationship between the mouth and tastes, the eye and colors, the ear and sounds, the nose and smells, and the four limbs and comfort is natural tendency40, yet there also lies the destiny. That is why the nobleman does not take it as nature. The way benevolence is related to the relation between father and son, the duty to the relation between lord and subject, the rites to the relation between guest and host, wisdom to the good wise man, the sage to the way of Heaven, is the decree, but there also lies nature (as a source that determines what is what) within it41. That is why the gentleman does not regard it (only) as decree.42

Three aspects of human composition are indicated: natural tendency (physical Xing 性), destiny (mental/moral Ming 命), and human essence (humanistic Xing 性)43, each of which has its own function in constituting human. Natural tendency is

39 See also note 8.
40 Literally, the Chinese word here is Xing 性; but this Xing, being more of natural tendency, carries a different meaning from the later mentioned Xing 性, by which Mencius meant “human nature”. Therefore, I render it as “natural tendency”. As I will prove later, Mencius’ “human nature” is not a physical tendency. And it’s has nothing to do with physical tendency: on the one hand, physical tendency is natural, but it’s not uniquely of human. On the other hand, no matter the result of people’s behavior (under the direction of physical tendency) is good or not, the nature remains absolutely and purely good.
41 The Chinese word for nature here is also Xing 性, which does not mean the biological disposition, and bears more moral characters. I render it as “human nature” in order to make difference from the physical Xing.
43 See note 42.
physical predisposition and is natural; but we should not stop here in defining human nature because moral is also predestined (thus is also natural but higher than physicality), thus Mencius negated taking natural tendencies singularly as human nature. Moral decree is predestined (by Heaven), but it’s more of abstract form than of the essence of human which is regarded as human nature by Mencius; therefore, we should not cease at the level of moral fate Ming 命 in figuring out what makes humans human in that it is passive in constituting human. Here, Heaven Tian 天 is the key word in understanding why moral fate is not the source of human nature. In Mencius, there are at least three meanings for Tian: natural heaven, nature, and personalized Heaven. Obviously, the Tian in this paragraph is personalized Heaven. The relationship between sage and the Way of Heaven is decree; but there also exists nature in the relationship. And the nature is imparted by Heaven and thus congruous to Heaven. We can see clues from other chapters: “...The organ of heart is able to concentrate; it will attain the way when it concentrates; but it won’t get it when it doesn’t concentrate. This is what Heaven has endowed me....”44 “In good years the young men are mostly lazy, while in bad years they are mostly violent. It is not what Heaven endowed them that differ, but where their mind is trapped that cause so.”45 Clearly enough, Heaven endows human something; and we can get some clue of the content of the endowment from the following message:

44 See note 32.
45 Mencius VIA7. My trans. 孟子告子上 孟子曰：“富歳，子弟多賴；凶歳，子弟多暴。非天之降才爾殊也，其所以陷溺其心者然也。
…Benevolence, dutifulness, observance of the rites, and wisdom are not welded onto me from the outside; they are in me originally. Only this has never dawned on me. That is why it is said, “Seek and you will find it; let go and you will lose it.” There are cases where one man is twice, five times or countless times better than another man, but this is only because there are people who fail to make the best of their native endowment. The Book of Odes says,

Heaven produces the teeming masses,
And where there is a thing there is a norm.
Humans are endowed with constant nature,
And they love this superior virtue.46

Apparently, virtues are given by Heaven. It is in this sense that Mencius asserted that decree is not human’s essential attribute. The virtues are decree, but they are not from outside enforcement, rather they are out of our own nature. Note the following statement, “He who has developed completely all his mind knows his nature, he who knows his nature knows heaven.”47 As long as human exhaust his mind, he will know his nature, and once he knows his nature, he will know Heaven. What is indicated here is obviously the relationship between Heaven and human nature.

Virtues are endowments of Heaven, but they are only forms, the essence of the forms is nature, which, to some extent is shared by human and Heaven; although humans will not know it until they exhaust their mind.

《詩》曰: “天生蒸民,有物有則。民之秉彝,好是懿德。” 孔子曰: “爲此詩者,其知道乎!故有物必有則,民之秉彝也,故好是懿德。”

Hsü Fu-kuan points out the difference between human nature and moral decree, which is very helpful in understanding Mencius’ definition of human nature, “Human nature arises from inside, upon the realization of which, human stands in an initiative position; while decree arrives from outside, upon the realization of which people is passive.” \(^{48}\) I doubt the idea that “destiny arrives from outside”, but agree that decree is a passive issue. The reason is, as I mentioned above, according to Mencius, destiny is from Heaven, and human beings are originally congruous to Heaven. It is Heaven that determines human’s achievement and failure in their life; and Heaven has certain ways/decrees there. But it’s human being himself who decides what to do and what not to do. In this sense, decree from outside is “passive”; and therefore it is not adequate in defining human.

2. Human Nature is not Identical with Natural Predisposition

Irene. T. Bloom does an amazing job in her analysis of Mencius theory of human nature, and in many aspects, I have similar ideas as hers.\(^{49}\) However, the only point that I might hesitate to support is that she takes natural predisposition as part of human nature. My concern is, natural predisposition, without any further definition can’t be counted as part of human nature for two reasons: (1) without being controlled, they can’t differentiate human from animals; (2) being under control, it is

\(^{49}\) See Bloom, Irene. T. “Menzian Arguments on Human Nature” in *Philosophy East and West* (Honolulu) 47, no.1 (Jan 1997) pp. 21-32
our mind that fulfills this task. As we saw, in the above cited paragraph, Mencius mentioned *Xing* 性 twice and obviously each bears different meanings from the other. The *Xing* 性 mentioned first is physical, which exists in the relationship between mouth and taste, eye and color, ear and sound, nose and smell, limbs and comfort. It is natural, but Mencius did not attribute them to human nature, in that these traits are what human shares with animals. In Mencius’ view, it can’t differentiate human from animals:

This is the way of common people: once they have a full belly and warm clothes on their back they degenerate to the level of animals if they are allowed to lead idle lives, without education and discipline.⁵⁰

What Mencius mentioned in this passage is exactly what Xunzi and some scholars took as evidence in blaming Mencius. They contend that the natural inclination is inborn with human and always cause bad behaviors, so human nature must be bad. But, as we saw, Mencius had already anticipated this problem. That is, this kind of natural inclinations is not what makes humans uniquely human, while the basic standard that Mencius emphasized in defining human nature is the factor that makes humans uniquely human. In other words, these natural tendencies rather than human nature, can’t distinguish human from brutes. In *Mencius*, the comparison between human and brutes is highlighted here and there to emphasize the subtle difference between human and animals.

---

For instance, in VI A, when talking about preservation of “morning air”, Mencius said that if man deviated from human way, he would become close to animals; others, when seeing his resemblance to animals, would think that he lacks good essence in his nature. However, Mencius argued that it is not that he lacks good nature, but that he fails to keep it in the right way.\(^{51}\) Many critiques of Mencius’ idea fail to see Mencius’ account of this kind of “bad behavior”. As a matter of fact, this failure reflects a confusion of natural disposition and humanistic nature.

Kao Tzu said, “The inborn is what is meant by ‘nature’.” “Is that,” said Mencius, “the same as ‘white’ is what is meant by ‘white’?” “Yes.” “Is the whiteness of white feathers the same as the whiteness of white snow and the whiteness of white snow the same as white jade?” “Yes.” “In that case, is the nature of a hound the same as the nature of an ox and the nature of an ox the same as the nature of man?”\(^{52}\)

Obviously, Gaozi was trying to define human nature by identifying human nature with natural predisposition. Mencius refuted him by pointing out that inborn elements by themselves can’t distinguish human from animals and thereby denied taking physical nature as equivalent to human nature. “Slight is the difference between man and the brutes. The common man loses this

\(^{51}\) See note 34.

distinguishing feature, while the gentleman retains it.”

Mencius admitted that the difference between human and brutes is slight; but no matter how slight it is, it is something that differentiates human from animals. Apparently, this slight difference is not what human shares with animals. In short, what makes humans human is not natural predisposition, but something subtle. Hsü Fu-kuan interpreted this passage as,

"By these sentences, Mencius meant that in terms of reactions of biological stimuli such as desires for food and drink, etc., human is same as animals except for a subtle difference. That means, in order to understand the nature that makes humans uniquely human, we can only start with this subtle difference…"

This reading explains very well the reason why Mencius did not count the natural inclination as unique human nature. In other words, by “human nature”, Mencius first stressed the characteristic that is, if anything, “humanistic” rather than (including) “natural” or “original”; the physical inclination of human, although truly exists, can’t fulfill this task.

Now, let’s see another statement of Mencius to get some clue of what he meant by “subtle difference” between human and animals. “Body and complexion are inborn with us; but only sages can completely give it a good account.” The denotation here, as I understand, corresponds to what I mentioned above. That is, only sages can control the body and put it into

---

practice in an appropriate way; as for commoners, they don’t take control over their body (踐形), but are lead by their natural inclinations. Sages present the perfect form into which human can get by living out the rules of human nature; therefore, it seems safe for us to say that the sages’ state reveals, in an exaggerating version, the otherwise unclear human nature in Menius’s theory. In short, human nature should be something that superior, rather than inferior to, or identical with natural inclinations.

3. Human Nature is not Congruous to Moral

As we mentioned in the first two chapters, scholars tend to interpret Mencius definition of human nature by identifying human nature with moral action or principles. Jiyuan Yu’s analysis raises an objection to this idea. Yu convincingly draws distinction between a “moral self” and a “perfect self”. Namely, a moral self is “in oneness with society” while a perfect self is “in oneness with Heaven”, and “a perfect self is the great and accomplished self. For Mencius, however, moral self is one stage in the long and gradual natural growth of the four seeds”. Persuasively, Yu lists several paragraphs in Mencius to support this idea,

A person fully actualizes his nature not in oneness with society, but in oneness with Heaven, although if the society is one in which the way of heaven prevails, there is no tension between these two unities. Mencius distinguishes honors bestowed by Heaven and honors bestowed by man. He

---

claims that ‘Men of antiquity bent their efforts towards acquiring honors bestowed by Heaven, and honors bestowed by man follows naturally.\textsuperscript{57}

He also distinguishes what is truly worthy of esteem is conferred by others.\textsuperscript{58}

All these suggest that there is a higher value beyond social value. Whether social values are really valuable should be judged by that higher value.\textsuperscript{59} I agree with this idea at the point that it sees the difference between human nature and human moral, and pointing out that morality is not the standard by which Mencius confined human nature.\textsuperscript{60}

I argue that morality is only part of the issue, because in Mencius’ view, human nature is not directly equal to morality. After the first mentioned natural disposition, Mencius mentioned decree, which narrows the topic down to human. As the content of decree, benevolence, rightness, ritual and wisdom, etc. are definitely humanistic characters. However, Mencius did not count the moral elements directly as human nature. “There exists nature;\textsuperscript{61} therefore nobleman does not take the predestined thing (only) as decree”\textsuperscript{62} Clearly, after examining two aspects of human constitution, Mencius did not stop exploring the content of human nature on the level of morality and he found that there also exists something more important, which is

\textsuperscript{57} Ibid., 6A:16.
\textsuperscript{58} Ibid., 6A:17.
\textsuperscript{60} But I hesitate to accept Yu’s idea about human nature that “the good is the full manifestation of humanity, or human nature’s own peak and flourishing”. See Yu, Jiyuan. “The Moral Self and the Perfect Self in Aristotle and Mencius” in Journal of Chinese Philosophy 28, no.3 (Sep 2001) p. 240
\textsuperscript{61} Rather than natural inclination, this Xing is human nature (Ren Xing).
\textsuperscript{62} See note 44. This sentence bears the meaning of “gentleman, although should carry out moralities, should not leave it to decree, because there is something that he can do.” For example, Mencius advocated in order to deal with fate, one should “cultivate oneself” and thus serve the Heaven.
called nature. Mencius did not explain what he meant by “nature”, but as we analyzed, we can tell that there is something other than natural tendency and moral virtue that is regarded as human nature by Mencius. The problem is why morality is not human nature in Mencius’ picture and how human nature is different from morality. This is a twofold issue: on the one hand, moral virtues origin in human nature, but they exist only as form (e.g. house, ways, etc.); on the other hand, one can (seemingly) lose it if he is not in the right way, which we can see from the following:

Benevolence, dutifulness, observance of the rites, and wisdom are not welded onto me from the outside; they are in me originally. Only this has never dawned on me. That is why it is said, “Seek and you will find it; let go and you will lose it.” There are cases where one man is twice, five times or countless times better than another man, but this is only because there are people who fail to make the best of their native endowment.63

As we can see, Mencius held that virtues are not welded on to people, but exist innately within people. The statement takes such a confusing appearance that leads many scholars to take virtues directly as human nature. However, Mencius’ went on to assert that although the virtues are inborn in people, they could be ignored and thus be lost. The key question here is, whether human nature could be lost? Logically speaking, human nature is the last thing that could be lost by a man in that without human nature, a living being will not be named as human any more. Take a step back, even if one can still be regarded as human without human nature, it contradicts with Mencius’ theory because Mencius contended that even bad persons bear human nature. Therefore, it is impossible for human nature to be lost by human. However

63 See note 48.
on the other hand, Mencius did say that “let go and you will lose it”. What does this imply? This implies that virtues, according to the logic and Mencius’ premise in debating human nature, although inborn with human, are not equal to human nature. In other words, the difference denoted here is that while human nature is not subject to subjective or objective conditions, but virtues are. Let’s take see the difference from another angle. To some people, being moral is enough for one to judge the nature of humans; but to Mencius, it’s not sufficient because in Mencius’ mind, moral is a twofold issue: internal and innate morality (true morality), and external morality (counterfeit morality).

“Shun understood the way of things and had keen insight into human relationships. He followed the path of morality. He did not simply enforce it.”

As we read in this passage, there are two ways of carrying out morality: to follow or to enforce. James Legge fails to distinguish these: “It is quite clear that what Mencius considered as deserving to be properly called the nature of man, was not that by which he is a creature of appetites and passions, but that by which he is lifted up into the higher circle of intelligence and virtue. …there ought to be a cheerful submission so far as the appetites are concerned, but where the virtues are in question, we are to be striving after them notwithstanding adverse and opposing circumstances. They are our nature, what we were made for, what we have to do.”

---

65 Ibid., pp. 63-64.
This is simply not true to Mencius, because our nature only provides grounds for good behavior, but does not force man to do, if any, good rather than bad. It is already clear that without “concentrating 思”, it is more likely for man to do bad than good; although the good seeds in human mind manifest themselves from time to time. Besides, to do good is a twofold issue: to enforce external goodness and to follow internal way of good; the former is not Mencius’ idea at all and the latter has nothing to do with mandate.

A proof of this difference is the parable of the Song farmer who pulled at his sprouts in order to help them to grow fast. This kind of difference does exist in Mencius idea; therefore, we can’t simply rush to the conclusion that as long as one is carrying out morality, he is manifesting the good nature of human. On the contrary, we have to examine closely the manner of one’s carrying out morality to see if he presents the inborn virtue or not. Another case that proves this understanding of Mencius’ idea lies in his criticism of the five lords. Mencius once said,

Yao and Shun are those who act directly in accordance with their nature; Tang and Wu are those who carry out their nature through their body; the five lords are those who make pretense of being carrying it out.

The five lords were not in the way of carrying out the “human nature”, but they could pretend to have it. And even though the latter could pretend to have morality, they were not as true as Yao and Shun in “being human”. Therefore, morality, by

---

66 Mencius. IIA 孟子公孫醜上 宋人有問其苗之不長而揠之者，芒芒然歸，謂其人曰：‘今日病矣，予助苗長矣。’其子趨而往視之，苗則槁矣。天下之不助苗長者寡矣。
itself, is insufficient to explain the difference between Yao, Shun and the five lords; and because of the existence of enforced morality, we cannot simply draw the conclusion that morality, by its appearance, presents human nature. At least, it’s not Menius’ logic.

As a matter of fact, the enforced (external) morals are what Xun Zi and Mo Zi advocate, and strongly criticized by Mencius for they created another root, which goes against Heaven’s principle of one root\(^\text{68}\) of creating the world. The only root, in Mencius’ view, lies innately within human with complete rules of morality; it is wrong for people to seek them from outside. According to Mencius, the rule of the innate morality is out of heaven, and inborn with human; thus morality must be sought through self-examination. Otherwise, no matter what appearance it takes, it will be nothing more than an empty form.

Secondly, morality itself is not as solid as nature. One can negate or lose morality easily while nature is something unchangeable and can’t be destroyed in human’s construction. Mencius said,

> That which a gentleman follows as his nature is not added to when he holds sway over the empire, nor is it detracted from when he is reduced to straitened circumstances. This is because it is allotted so.\(^\text{69}\)

---

\(^\text{68}\) The root and its principle is innately within one’s mind, rather than learned or created from outside. *Mencius IIIA5.* 孟子曰: “夫夷子信以為人之親其兄之子為若親其鄰之赤子乎？彼有取爾也。赤子匍匐將入井，非赤子之罪也。且天之生物也使之一本，而夷子二本故也。蓋上世嘗有不葬其親者，其親死則舉而委之於壑。他日過之，狐狸食之，蠅蚋姑嘬之。其顚有泚，睨而不視。夫泚也，非為人泚，中心達於面目。蓋歸反篡而掩之，掩之誠是也。則孝子仁人之掩其親，亦必有道矣。” See also *Sishu Jizhu* Hu’nan: Yuelu Shushe, 1993. p. 335.

\(^\text{69}\) *Mencius VIIA21.* I have referred to Lau’s translation.孟子 竭心上 孟子曰： “...君子所性，雖大行不加焉，雖窮居不損焉，分定故也。" See also *Sishu Jizhu* Hu’nan: Yuelu Shushe, 1993. p. 507.
What I want to stress here is, the nature that a gentleman follows is not subject to any change, and it neither increases nor decreases, not to speak of losing or acquiring. But on the other hand, virtues are subject to one’s attitude:

It is not worth the trouble to talk to a man who has no respect for himself (自暴), and it is not worth the trouble to make a common effort with a man who has no confidence in himself (自棄). The former attacks morality; the latter says, ‘I do not think I am capable of abiding by benevolence or of following rightness.’ Benevolence is man’s peaceful abode and rightness his proper path. It is indeed lamentable for anyone not to live in his peaceful abode and not to follow his proper path.\(^70\)

The Chinese words “自暴” (do not respect oneself), “自棄” (abandon oneself) show clearly that it is contingent on individual’s intention whether to follow the way or not. To announce that humans have destined morality in their mind is not sufficient to make the proposition that morality is human nature, in that, in reality, morality is deniable but human nature is not deniable.\(^71\) Morality is merely a path, although it is perfectly good, it is still possible and highly likely that people do not choose to follow it; and if people do not follow it, it’s nothing more than an empty form.\(^72\) In this sense, Mencius did not count on it in defining human nature.

\(^71\) I mean people have the freedom to choose the complete mind or incomplete mind. The choice of the former leads to moral action; the choice of the latter leads to bad action. See also chapter 4.

\(^72\) Someone might argue that the so-called good nature is also no more than a possibility, if it does not get realized. It is not the case, because nature is essence rather than form. Mencius has a complete theory of the relationship of mind, fate and nature, which explains the mechanism of the three elements. We will examine it later.
Nevertheless, one can choose to ignore his nature, but can never deny his nature.73 Whether be conscious or ignorant of his nature is contingent on the state of his mind, which I will explore in later section. This is the reason why right after counted the morality as destined Mencius brought up his idea of nature (as an essence that is unchangeable and determines ideal rules--morality--of mind) that lies with morality.74

To sum up, in Mencius’ theory, there’re three aspects in the constitution of human: the first aspect is a physicality, which consists of natural predispositions. Mencius did not deny its existence, but believed it is not decisive in confining human at all; the second aspect is the human mind, wherein, corresponding to the states of mind lies morality (including two forms: true morality and false morality) and immorality. The third aspect is nature that, although associated with physical action and mental action, is not identical with body and morality. Therefore, by “human nature”, Mencius did not mean “physicality”; or the moral rules. No matter whether Mencius’ whole theory can hold or not, his definition of human nature convincingly resists three kinds of explanations: those which regard physical desires as human

74 The Chinese word for nature here is also Xing (性), which does not mean the biological disposition, and bears more moral characters. I render it as “Human Nature” in order to make difference from the physical Xing.
nature,\textsuperscript{75} those which connect the quality of human action with that of human nature, and those which equate the good nature with moral.

\textbf{Chapter 4: Human Nature, in Relation to Human Mind}

As we have seen, three aspects constitute human and the first two, natural inclination and moral rules, are not human nature. However, although they are not human nature, they are always related to human nature in Mencius idea and thereby are usually mistakenly taken as human nature by scholars. This misunderstanding will be dismissed if we approach the question from another angle, which is, by

\textsuperscript{75} It is nature, but it is not what Mencius meant.
differentiating the function of human mind and the essence of human nature. In this chapter, I will explore the relationship between human nature and human mind, which, I think, will shed light on Mencius’ idea of what human nature is, and the matrix where morality and immorality is hatched. This exploration will also be expected to explain away the impression that evil element dwells in human nature.

1. Human Mind is the Way through Which Human Can Know His Nature.

There have been numerous explanations about what Mencius meant by “human nature”. Generally speaking, most of the studies tend to fathom nature (an object in the third aspect of human composition) with the standard of “if it is morally good” (a standard of the second aspect). This is not the right way in that this method does not distinguish human mind from human nature; whereas in the book of Mencius, the theory of human nature is drawn exactly on distinguishing human nature from human mind. In the parable of the wood of Ox Mountain, Mencius mentioned nature Xing 性, mind of benevolence and integrity Renyizhixin 仁義之心, true heart Liangxin 良心 and Xin 心; and we can find the relationship between mind and nature in VIA876 In this passage, except nature Xing that is used in an allegorical spirit, all of the other terms are used in terms of human mind. Among all the terms about nature and mind in this passage, mind of benevolence and true mind are almost congruous to

76 See note 34.
nature except that mind can be lost whereas nature cannot. A crucial notion indicated here is, although human nature never changes, its embodiment—mind—does change: the original state of mind could be true mind Liangxin, but true mind could be let go of; and when man holds on to it (true mind), it could remain; otherwise it will disappear; upon receiving nurture, it will grow, upon losing nurture, it will wither. Note herein, it is mind, rather than human nature, that changes. With the transitionary function of mind, Mencius successfully bridged the gap between unchangeable nature and changeable quality of behavior. Along this thread, we can get a clear picture of the relationship between human mind and human nature, and thus reach a further understanding of Mencius’ human nature theory.

One of the representative statements of this idea is to know human nature one is supposed to exhaust mind first. “He who has developed completely all his mind knows his nature, he who knows his nature knows heaven.”78 Obviously, as we see, mind and nature are different concepts in Mencius’ thought; and knowing mind is a necessary step in the way to understanding of human nature. According to Mencius, it’s impossible for those who have not exhausted their mind to really know the quality of human nature. That means even though everyone has the good nature, not everyone can know what the nature is before he knows his mind completely, let alone to carry it out in practice. That’s why Mencius said “those who follow it all

---

77 See note 71.  
78 See note 49.
through his life without knowing it are numerous.”

Although what Mencius was really talking about is Tao (the Way of Heaven), it also could be regard as a remark on human nature in that Mencius’ Way is inherent in human nature. It’s common for people to have the ability to tell, superficially, on the moral level, what is good and what is bad; but it’s highly unlikely that they know human nature, because they have not explored deep enough to understand the mind as a whole (盡心) at this stage. In this sense, we can also understand why Confucius sighed, “You can guide commoners to follow, but you can’t let them know (the way).” In order to know the quality of human nature, we have to know all about human mind. Therefore the question becomes an issue of human mind. The key questions here are: (1) the forms of human mind; and (2) the relationship between different shapes of human mind. We will discuss these two questions in turn.

To discover the shapes of human mind, I’d like to start with examining the shapes that human mind could assume. Fortunately we can find all Mencius’ idea about it directly in his book without any subjective assumptions. In *Mencius*, there

---

79 *Mencius VIIA* Tans. Lau, D. C. New York: Penguin, 1970. p.182. 孟子曰：“行之而不著焉，習矣而不察焉，終身由之而不知其道者，衆也。” This is also Confucius idea: “As for the commoners, you can teach them to follow, but you can’t let them know.” Actually, it’s not Confucius or Mencius who wanted to keep it secret from commoners, but the commoners are not in the right way to know it.

80 In Amore general sense, the Way means the principle exists in every action of human, despite moral or immoral. To understand it as a whole means to understand the human nature, because the rules are inborn within nature, as we analyzed before.

are mainly two types of mind mentioned: the ideally perfect mind and the partial mind.

A. The Ideally Perfect Mind

In terms of human composition, this mind is original; in terms of human cultivation, it is accomplished. This complete mind embodies the good nature of human. The content of the perfect mind is virtues.

That which a gentleman follows as his nature, that is to say, benevolence, rightness, the rites and wisdom, is rooted in his heart, and manifests itself in his face, giving it a sleek appearance. It also shows in his back and extends to his limbs, rendering their message intelligible without words. All the four virtues that Mencius advocated are rooted in mind, which makes the original mind good. Moreover, everyone has this perfect human mind. “Not only the sages who have this kind of mind, everyone has it. The only difference is that the sages do not lose it.”

With regard to Mencius,

All palates have the same preference in taste; all ears in sound; all eyes in beauty. Should hearts prove to be exception by possessing nothing in common? What is common to all hearts? Reason and rightness. The sage is simply the man first to discover this common element in my heart. Thus reason and rightness please my heart in the same way as meat pleases my palate.

---

82 Again, the word “embody” means, the mind, although perfect, is not equal to human nature.
83 See note 48.
84 It is not good enough to exclude bad elements in Mind though. But Mencius’ other statement successfully excludes the bad elements in Mind and hence safely drew the conclusion that the original Mind is good.
86 See note 44. Trans. Lau, D. C.
And elsewhere he asked more than once that “as for what exists in human composition, does it lack mind of benevolence and rightness?” These clearly show that everyone has this perfect and complete mind.

However, this mind is open to harm. It could be harmed, lost, and blocked. “A hungry man regards food as delectable; a thirsty man finds drink delicious. In this sense, they do not get the proper measure of food and drink because hunger and thirst interfere with his judgment. Is the palate the only thing which can be distorted by hunger and thirst? The mind, too, is open to distortion.” That means, although in a complete version, human mind is good, it does not ensure that everyone will take the perfect way. When one fails to be aware of the whole mind, the mind will take a partial shape.

B. Partial Mind

This type of mind is not original; rather, it derives from the damage of the original mind. It is the result of the original one being harmed. The terms Mencius used for this type of mind, explicitly or implicitly, include lost mind, partial mind, unexhausted mind, and limited mind etc. For example, the partial mind might be an ensnared one. “In good years the young men are mostly lazy, while in bad years they are mostly violent. Heaven has not sent down men whose endowment differs so

---

87 See note 34. I have referred to D. C. Lau’s translation.
88 Please refer to note 69 and note 70.
89 Mencius VIIA27. I have referred to D. C. Lau’s translation. 孟子盡心上 孟子曰：“飢者甘食，渴者甘飲，是未得飲食之正也，飢渴害之也。豈惟口腹有飢渴之害？人心亦皆有害。人能無以饑渴之害為心害，則不及人不為憂矣。” See also Sishu Jizhu Hu’nan: Yuelu Shushe, 1993. p. 511.
greatly. The difference is due to what ensnares their hearts.” 90 The partial mind could be a blocked one. Mencius once talked to Gao Zi, “A trial through the mountains, if used, becomes a path in a short time, but if unused, becomes blocked by grass in an equally short time. Now your heart is blocked by grass.”91 If we take a clear path as a symbol of a complete mind, then, the blocked path implies a partial mind. Also, the partial mind could be a lost mind.

Benevolence is the heart of man, and rightness his road. Sad it is indeed when a man gives up the right road instead of following it and allows his heart to stray without enough sense to go after it. When his chickens and dogs stray, he has sense enough to go after them, but not when his heart strays. Then the sole concern of learning is to go after this stray heart. That is all.92

As we have pointed out, compared with mind, human nature is unchangeable since human nature does not assume diametric shapes; and it could not be lost even by a bad man.

In terms of the relationship between the accomplished mind and partial mind, Chinese philosophers have conducted a great deal of studies. Zhu Xi’s famous proposition reads like this: there are two minds, one of which is the mind of man Renxin人心, which is not pure and might tend to do bad; the other is the mind of man

90 See note 47.

Way *Daoxin* 道心*, which is pure and good.\(^{93}\) Lu Hsiang-shan criticized Zhu’s idea by pointing out all things should be born from one mind, but Zhu Xi’s theory implied two origins of mind, which in Lu’s view, is impossible.\(^{94}\)

Lu’s idea corresponds with that of Mencius\(^{95}\) and successfully reconciled the mind of human and the mind of Way (the partial mind and the accomplished mind) by reinterpreting Mencius’ idea of original mind, lost mind, and intuitive wisdom. Although they seem to be two types of mind, they essentially are different forms of the same one mind. Lu said,

Mencius said, “He who has developed completely all his mind knows his nature, he who knows his nature knows heaven.”\(^{96}\) Mind is only one mind. The mind of any given person, or that of my friend, or that of a sage of a thousand generations ago, or again, that of a sage of a thousand generations hence—their minds are all only [one] like this. The extent of the mind is very great. If I can develop completely my mind, I thereby become identified with heaven. To acquire learning consists of nothing more than to apprehend this.\(^{97}\)

Lu put it very clear that “mind is only one mind”; and the only difference between partial mind (manifested by commoners) and accomplished mind (manifested by sages) is partial mind is a small part of the infinite mind; when man adhere to a small part while ignoring the entire being, he appears to be a small man, thus his mind is not the “original mind”, and he seems to have “lost” his mind.

---

\(^{95}\) For example, Mencius criticized that Yizi made two roots which was against heaven’s one-root-rule. See note 36.

\(^{96}\) See note 36 and 37.

\(^{97}\) See note 37.
We can find many proofs in *Mencius* for the distinction between the partial mind and the accomplished mind. When being asked that though equally human, why some men are greater than others, Mencius answered, the difference lies in what they follow. Those who follow the big rule turn to be great men, and those who follow the small rule turn to be small men.  

This is another most confusing passage in *Mencius*. My reading of it is both infinite mind and partial mind are essentially the same one; man has the freedom to choose what he wants to be. When he chooses the small one, he turns out to be a small person, and vice versa.

2. The Relationship between Human Nature and Human Mind

Now that whether a man behaves good or bad is contingent on his state of mind, what’s the relationship between partial mind and the complete mind? And what’s the relationship between human mind and human nature? Right after Mencius said that it’s a personal issue as for as what one chooses to be, he was asked why someone chooses the big rule while some others choose the small one. Mencius attributed it to the function of mind.

The organ of hearing and sight are unable to think and can be misled by external things. When physical organs interact with the external objects, they are easily lost. While the organ of mind can reflect, when the mind concentrates on the objects in a right way, one can get it; otherwise, one will lose it.  

From this passage, we can see that the reason why one assumes the partial mind is because he is misled by objects, and why he is misled is because he fails to be aware

---

98 See note 32.
99 See note 48, I have referred to Lau’s translation.
of the complete mind. Then why can one fail to be aware of the complete mind? It might be because he has the freedom to choose in his infinite mind. Mencius once used a metaphor to illustrate this case. A gardener fails to take care of the expensive trees, but pays his effort in nurturing the wild grass. The expensive tree represents the complete mind. The fact that the gardener fails to pay attention to it is not because he does not have it, but simply because he does not realize how important it is. Apparently, we can get the connotation that every human being has this good nature. It has nothing to do with if he has noticed it or ignored it.

(1) The Mechanism of the Evolvement/Degradation of Mind

Based on the analysis above, with reference to the utterance “He who has developed completely all his mind knows his nature, he who knows his nature knows heaven”, we can get a picture of Mencius’ idea about human nature and human mind.

Figure 1: The Relationship between Human Nature and Human Mind

$A$: manifests in be misled to
human nature $\rightarrow$ original mind (infinite mind) $\rightarrow$ confused mind (partial mind, lost mind, unexhausted mind, small mind)

---

100 See note 94.
101 See note 49.
B:

Know heaven          know nature

heaven⇐====human nature ⇐====original mind (exhausted mind)

Exhaust/extend

⇐====confused mind (partial mind, lost mind, unexhausted mind, small mind)

A reflects the fact that human nature is good, and bad behaviors result from the lost mind, which is not from nature but from partially sticking to a small part of mind. The small part of mind is not a different thing from the infinite mind; and the infinite mind (original mind), whose content is goodness, rightness etc., is the embodiment of human nature.

B shows the course of the movement from the partial mind back to the original mind, which starts with exhausting mind (or extending mind). The goal of extending mind is to return to the original mind (exhausted mind), through which one can know his nature. What changes in the picture is not human nature, but the human mind, whose complete version is definitely good, but partial version could be bad. As far as the transformability between the partial Mind and the infinite Mind is concerned, there is no essential disparity between them.

(2) The “Good” of Human Mind is not the “Good” of Human Nature
After explored the position of human nature in human composition and the relationship between human nature and human mind, I would move on to examine what Mencius meant by good. This will be based on the relationship between “human nature” and “human mind”:

Mencius said: “Men all have the heart that cannot bear the suffering of others. The former Kings, because they had the heart that cannot bear the suffering of others, showed this in the way they governed the people. With such a heart practicing such government, ruling the world was like rolling it on one’s palm. This is what I mean by saying that all men have the heart that cannot bear the suffering of others. Now if any man were, all of a sudden, to see a little child about to fall into a well, he would experience the feeling of apprehension an pity, not for the sake of gaining the favor of its parents, not the praise of his neighbors and friends, nor yet because he dislikes the reputation he would otherwise get of being callous. Judging from this, whoever has not the heart of commiseration, is not human, whoever has not the heart of shame is not human, whoever has not the heart of keeping oneself back in order to make way for others is not human, and whoever has not heart of right and wrong is not human. The heart of commiseration is the beginning of humanity; the heart of shame is the beginning of righteousness; the heart of keeping oneself back in order to make way for others is the beginning of observing ritual; the heart of right and wrong is the beginning of wisdom. A man has these four beginnings as he has four limbs. To have these four beginnings and to say to oneself that one incapable of being good is to do harm to oneself, and to say that one’s prince is incapable of being good is to do harm to one’s prince. If having these four beginnings in oneself one knows to extend them, it is as if a fire is beginning to blaze or a spring beginning to flow through. If one is able to extend them, one has all that is required to maintain peace within the four seas. If one does not extend them, one will be incapable even of serving one’s parents.”

The famous “four sprouts” mentioned in the passage have been taken as proofs in reasoning “human nature” is only a potential by many scholars. For instance, Yu holds the idea that “…When Mencius claims that human xing is good, he refers only to the four seeds”\(^{103}\), “Mencius is clearly not talking about the whole of human nature.”\(^{104}\) However, it is the plausible interpretation of the “four sprouts” that lead to the misunderstanding of Mencius’ human nature theory. There are two most representative readings of the “four sprouts” in explaining Mencius’ theory. The first one believes that the virtues innately in one mind of benevolence, integrity, observance of rites, wisdom are only germinations; what Mencius meant by “human nature is good” is no more than saying that humans have these germs which need to be nurtured and developed; if they do not get nourished, human’s good nature exists only as a possibility. The other representative reading is that the virtues are only beginnings; therefore they are very diminutive in dimension. This claim (although usually does not get explained as) often implies that compared to these minute things, what are not innately good are dominantly large. Starting with these assumptions, people try to reconcile the dim “good nature” with the apparently not-so-good behaviors. For example, Chen Ning argues for this view by resorting to *Guodian Chujian*. Chen argues that there are two stages that can be seen in *Guodian chujian*:

\begin{quote}
者，賊其君者也。凡有四譖於我者，知皆擴而充之矣，若火之始然、泉之始達。苟能充之，足以保四海；苟不充之，不足以事父母。
\end{quote}

one is “at birth”, and the other is “full-fledged”.\textsuperscript{105} However, as Philip J. Ivanhoe pointed out, under the situation that “the evidence about where certain ideas about human nature were first discussed or how earlier accounts influenced later accounts is still quite murky”, it “would be rash” to use one to attest the other.\textsuperscript{106} Moreover, the evidence that Chen took from the \textit{Mencius} are not sufficient to falsify Mencius’ other reasoning and statements that are much more apparent than the “seeding” or the “course of development”. As a matter of fact, there is, if not more convincing, an equally persuasive way to construe what is the “beginnings” and what is the course of development.

First of all, the four virtuous minds are not “sprouts” of human nature, but virtue itself. We can’t identify the smallness of the beginning of virtues as the smallness of the beginning of human nature. Mencius never said that human nature has a size that could expand or shrink. On the contrary, Mencius did emphasize that “human nature” which is endowed by heaven can’t be changed by saying “That which a gentleman follows as his nature is not added to when he holds say over the Empire, nor is it detracted from when his reduced to straitened circumstances because it is allotted so.”\textsuperscript{107} It is crystal-clear in the statement that human nature is stable, and it can’t be changed by any means in that human nature is designed by Heaven. Now that human nature does not subject to any

\begin{flushright}
\textsuperscript{107} See note 71.
\end{flushright}
change, how can we measure its size? In addition, Mencius more than once said that everyone has the same stable nature. For example, when he talked about the wood in Ox Mountain, he thought although the mountain became bald after it was lopped by axes, it’s not the mountain’s nature that tends to be bald;\(^{108}\) when he talked about the change of disposition of those young men, he did not owe it to their nature, either.\(^{109}\) Based on what we have just seen, it is clear that human nature is not something that could be changed or nurtured or detracted. Therefore, speaking of Mencius’ thought, to say that human nature is a diminutive thing or need to be developed is not right. Secondly, Mencius did say that there are virtues in human nature, but he never said that those virtuous attributes in/of nature are small in terms of measure. As a matter of fact, in Mencius’ picture, these virtues are perfectly accomplished in nature. “Benevolence, dutifulness, observance of the rites, and wisdom are not welded on to me from the outside; they are in me originally.”\(^{110}\) Mencius did not say that “it is the virtues’ germinations that are originally in me”, how can we deduce that they are only germinations?

In fact, Mencius emphasized strongly that “there is no one who is not good”\(^{111}\), which clearly shows the idea of Mencius that human nature is unconditionally good. Furthermore, logically speaking, Mencius held the idea

---

\(^{109}\) See note 44.

\(^{110}\) See note 48.

“all the ten thousand things are there in me”\textsuperscript{112} and “there is only one root of the creation of the world”.\textsuperscript{113} Therefore, even we take the words that virtues in the nature have a course of growing from a germ, we can’t say that “the ripe virtue” is not in nature, nor can we say “there are two natures: one carries the baby virtue, while the other carries the mature virtue.” In other words, given that there is only one human nature; virtues, both baby and grown-up, are in the nature, and the nature with virtue germinations and the nature with full version of virtues are one, what’s the point to say that “virtue in the nature are only germinations”\textsuperscript{114}?

Therefore, to say that the virtues in nature are sprouts is not convincing at all.

What’s more important is that rather than human nature, what Mencius was actually and mainly talking about in this passage is the sprouts of virtue actions. This can be easily seen from his utterance. “The heart of commiseration is the beginning of benevolence; the heart of shame is the beginning of righteousness; the heart of keeping oneself back in order to make way for others is the beginning of observing ritual; the heart of right and wrong is the beginning of wisdom.”\textsuperscript{115} Mencius did not say, “The heart of commiseration is the beginning of nature”;\textsuperscript{116} nor did he say “the heart of shame is the beginning of nature”\textsuperscript{117} etc. Human nature is not an issue of a sprout or a full-developed thing, it does not need to be developed; what needs to be

\begin{thebibliography}{112}
\item 風子曰：“萬物皆備於我矣，反身而誠，樂莫大焉。強恕而行，求仁莫近焉。”
\item These two statements indicate that (1) there should be nothing out of human, (2) there should be only one Nature. Details of Mencius’ utterance see note 70.
\item See note 15, 16, and 18.
\item See note 105.
\item See note 105.
\item See note 105.
\end{thebibliography}
developed is the virtue in the form of partial human mind. To mix the four hearts with human nature is nothing more than interpreters’ misunderstanding. This misreading is derived from their mixing human nature with human mind. For example, Mencius’ big opponent once questioned him, “(if everyone is equally good in terms of nature) then what reason is there to pay any particular honor to Yao, Yu, or the gentleman?” This question is so typical that people can’t help but bringing forward generation after generation. According to Mencius, as I analyzed in former sections, there are three levels in human constitution; and the fact everyone is equally good in the field of nature does not ensure that everyone’s equally good in the human mind level. What Mencius advocated is not to “learn” Yao and Shun’s nature, but to learn how Yao and Shun acualized their nature. In short, the issue is not of nature, but of how to realize one’s nature. Xun Zi along with some other critics just failed to seize Mencius’ point which is clearly expressed in Mencius’ explanation of heart-mind and nature.

Another aspect might be helpful to understand this point is that the Chinese word Duan is usually rendered as sprouts, germinations or beginnings. In terms of human cultivation, it is correct because man needs to nurture his good virtue; meanwhile good virtues and inborn beginnings could grow. However, in terms of human nature, none of the translation is quite to the point because Duan, for nature, only means end. Like an end of a rope, it does not connote any meaning of immature nature.

---

118 For details, see next section.
or incomplete. We can never say that there is a baby rope behind the door when we see an end of it. Then how can we assure that, by the word Duan, Mencius meant a little sprout of human nature? Or, because of grass, we only see an ear of a rabbit, but can we say that there is only an ear in the grass? That we did not see the whole picture is not because the thing in the grass is incomplete, but because our eyesight is blocked by other things. This is why Mencius used the allegory of a path blocked with grass.

To summarize, in this paragraph, by the term of virtue Duan, what Mencius was discussing is not the situation of human nature, but the situation of human mind. In other words, as minute as they might be, sprouts reflect the situation of heart, but not that of human nature. As I have analyzed above, human nature does not have the problem of expanding or shrink. However, human mind does have the problem of expanding and shrinking, nurturing and starving, losing and retrieving, etc., which I will discuss in the following section.

(3) The Nature of Bad Action

Above I have analyzed that partial mind does not have a root in human nature, rather, it results from sticking to small parts of the infinite mind. Therefore, the quality of action, despite its good or bad, is irrelative to human nature. There are plenty of utterances in Mencius that support and explain this idea. In Mencius’ conversation with King Xuan of Qi:
[Mencius said,] “If you consider my words well spoken, then why do you not put them into practice?”

“I have a weakness. I am fond of money.”

“In antiquity Kung Liu was fond of money too... It was only when those who stayed at home had full granaries and those who went forth to war had full sacks that the march could begin. You may be fond of money, but so long as you share this fondness with the people, how can it interfere with your becoming a true King?”

“I have a weakness”, said the King, “I am fond of women.”

“In antiquity, T’ai Wang was fond of women, and loved his concubines... At that time, there were neither girls pining for a husband nor men without a wife. You may be fond of women, but so long as you share this fondness with people, how can it interfere with your becoming a true King.”

People would think that in this message, Mencius employed a subtle technique to persuade King Xuan of Qi; but as far as I am concerned, Mencius was actually telling a fact, that is, with regard to action, selfish action is different from unselfish one, but in terms of nature there is no substantial difference between the selfish desire and the moral desire. People can change their “selfish desires” into “moral desires” by extending the extent. The transformation one’s mind from selfishness to unselfishness is an extension of quantity rather than a change of quality.

The possibility of the transformation from selfishness to unselfishness serves as an important basis for Mencius to claim that human nature is good. Van Norden takes this possibility of transformation from the selfish desire to benevolent deed as mere evidence that Mencius thought that “humans were capable of becoming good”,

---

and he furthers his argument by asserting that Mencius insisted that “a human must seek what he desires the most”. According to Van Norden, one must distinguish selfish motivations and unselfish motivations. Wherein my point is different from Van Norden’s in that while he regards that Mencius takes selfishness and unselfishness as opposite concepts, I think that Mencius did not separate selfishness and unselfishness on the level of human nature. Both selfishness and unselfishness are of the same essence except that the former is “small” while the latter is “big”. In other words, the differences in motivations are not derived from the nature, but from the free intention, out of which one decides his action. Then, why different people choose different perspectives? The answer is that’s because their ability to tell what is better for them is different.

People tend to misunderstand Mencius’ idea by mixing Mencius’ will of encouraging people to do good with Mencius’ theory of human nature. This is because we can find here and there in Mencius that he tried to persuade people to carry out good deeds, we tend to imaginarily identify it with his theory. One of the conclusions arrived through this is the so-called good nature promotes people to do good. Philip Ho Hwang contends that Mencius’ theory was “particularly designed to meet the challenge” that why human “ought” to do good. His conclusion is, man have good seeds in his nature, and it is natural to “let the original nature grow naturally and the matter of ought disappears or becomes a matter of is”. “It is in a true way to say that man ought to do good and cultivate his nature, but it is also true

to say that it is his very essence of man to do good and preserve his nature.” 122

However, as a matter of fact, what those who insist on connecting good nature theory with the fact that Mencius took effort to promote his benevolence idea, can be safely drawn is nothing more than that the so-called good nature, serving as a basement, offers a possibility for good behavior. But, this does not justify their taking human nature as compelling just in the sense that it fits to serve as a ground of moral advocates. It’s similar to the case that we can’t conclude that water is only made to support boat because water is suitable to support boat. Actually, what Mencius said is,

Benevolence is the heart of man, and rightness his road. Sad it is indeed when a man gives up the right road instead of following it and allows his heart to stray without enough sense to go after it.123

According to Mencius, good nature is simply good nature, while quality of action is quality of action. Good nature does not compel man to do good; instead, it does nothing more than providing destined ways to carry out good. With this nature, man has the freedom to choose: he can choose to be conscious or be ignorant, he can choose follow their physical desires or sages’ way, and he can do whatever he wants. Human nature does not compel him to be what he should be; on the contrary, what he really is due to his own choice rather than his nature.

123 See 66.
This is an issue of choice. When one chooses the virtuous ends *Duan*, he is actually nurturing it and extending it; when he goes astray from the moral way, he is actually covering or losing it.¹²⁴ In chapter 7, Mencius talked about the content *Shi* of the four virtues:

The content of benevolence is the serving of one’s parents; the content of dutifulness is obedience to one’s elder brothers; the content of wisdom is to understand these two and to hold fast to them; the content of the rites is the regulation and adornment of them; the content of music is the joy that comes of delighting in them…¹²⁵

D. C. Lau here translates *Shi* as content, which is reasonable. But in my opinion, *Shi* also carries the meaning of “realization” or “practice”. My reading of this passage would be, “The realization of benevolence lies in serving one’s parents; the realization of dutifulness lies in obedience to one’s elder brother…” The so-called *Shi* is exactly the fact of realizing something. To choose the inborn moral way, one realizes the moral way; to abandon the inborn moral way, one carries out immoralities. This deduction fits perfectly into Mencius’ frame of human composition: as moral ways are there in the mind level, non-morals are there too. People have the freedom to carry out (*Shi*) whatever they want. Both proper ways corresponding to the complete mind and the wild field corresponding to the incomplete mind are theoretically there. One cannot avoid but to choose one and thus realize one. But, when one chooses improper ways, his nature is still good in that the

¹²⁴ Although the good mind is covered, the good nature never disappears.
improper way is out of the limited mind, which is still mind and has nothing to do with nature.

Chapter 5: Why Human Nature is Good

So far, through the above analysis, we have the ideas that human nature is the essential and unique part of human; that human mind embodies human nature, however, instead of reflecting the trait of human nature, the quality of human action only indicates the state of human mind (e.g. be complete or be partial); that the content of human nature is purely good, which could be manifested only when one exhausts one’s mind, but the fact that nature is not completely manifested does not mean that one’s nature is bad; that although most people’s mind takes a partial shape, virtues decided by nature do show up from time to time; that the so-called beginnings are the beginnings of virtuous action rather than beginnings of good
nature, on the contrary, good nature is the root and source of the beginnings. These five topics clear up the concept of human nature, the only question left is, why human nature is good?

1. In the Field of Human Nature

Good of nature is not a relative concept, but an absolute concept. We can’t find an opposite part of good in nature; furthermore, we can’t apply the general standard of good and bad to measure the good of nature. Or, to put it in another way, there is no contrast of good and bad on the level of human nature.

At the same time, the absolute character of nature decides and offers the form of virtue, which also turns out to be virtuous. Therefore, Mencius regarded it as good. One of the most frequently cited passages in *Mencius* is, when asked about by what he meant human nature is good, Mencius answered, “As far as what is genuinely in him is concerned, a man is capable of becoming good. That is what I mean by good”. 126 Hwang takes this statement as an evidence to prove that by “good nature”, Mencius only meant the possibility. 127 But, this is only one side of the story and thus not so convincing in that he failed to differentiate the level of nature and the quality of action, and thus applied a relative standard to the absolute thing. As far as the quality of action is concerned, it is equally

---

capable of being either good or bad, why did Mencius not declare “human nature is bad”? According to the idea that human is consisted of three levels, we can easily explain this question away: human is capable of becoming good is because he has the good source (human nature) to resort to; human tends to do bad is because he fails to resort to the good source. The quality of action is not an issue of nature, but an issue of whether one can realize his nature. As far as human nature is concerned, what Mencius was talking about here, contrary to what most readers conceive, is not a possibility, but a reality. We can tell this from the utterance right after what is cited above, “As for his becoming bad, that is not the fault of his native endowment…Benevolence, dutifulness, observance of the rites, and wisdom are not welded on to me from outside; they are in me originally.”

Clearly we can tell that the “possibility”, although it’s too realistic and too often for us, is “do bad”; while the native endowment (才) is originally good, which, according to the logic in this passage, is the reality.

As for the reason of this misunderstanding, I think it related to the reading of the Chinese word “可以”. If we render it as “possible”, “be able to”, then the understanding will go as: “human is capable of doing good”; but if we take it as “可以以之”, as what is most commonly accepted in classics, then the reading should be “one might resort to this (性), and thereby be good.” Note, the subject of “be good (為善)” is not human nature, but human behavior. Therefore, my understanding of

---

128 See note 48.
this passage is that human nature provides human with the ground of doing good if one resorts to it. The action of resorting to it is yi (以). However, one might choose to do so, might not choose to do so; in this sense it is ke (可). In other words, in terms of human nature, it is consummately good; but a specific person might not avail himself of it.

In sum, that human nature is good is not because it decides or compels people to do good; rather it is because it offers the possibility of doing good. To tell whether an action is good, we have to judge by the quality of his action; to tell whether human nature is good, our standard is simply “if human nature provides a potential for people to do good”. As analyzed above, human nature does offer such a possibility; in this sense, it is good, both unconditionally and stably. As for the bad action, they are out of the partial mind; as for the partial mind, it is not out of the infinite mind, but a part of the infinite mind. The case is similar to the case of water, the water in a cup can’t support a boat, but the water in a sea definitely can do that. It is not because the essence of these two “waters” is different; it is simply because they take different measures.

2. In the Field of Mind

I’d like to go over Mencius’ ideas about human mind in this section. There are two shapes that human mind can take, and these two shapes are transformable. The limited mind and the infinite mind are not essentially different things; the
complete mind manifests human nature; on the level of human mind, “good” is something that can bring benefits. Based on these readings, if we can get the conclusion that the complete mind is good, then, we can safely say that human nature is good. As a matter of fact, that’s exactly what Mencius talked about.

Mencius’ theory that human nature is good is associated with his ideas about human mind, among which the key idea is “to extend one’s mind”. A typical passage about extending mind reads,

For every man there are things he cannot bear. To extend this to what he can bear is benevolence. For every man there are things he is not willing to do. To extend this to what he is willing to do is rightness. If a man can extend to the full his natural aversion to harming others them there will be an over-abundance of rightness. If a man can extend his dislike for boring holes and climbing over walls, then there will be an over-abundance of rightness. If a man can extend his unwillingness to suffer the actual humiliation of the being addressed as ‘thou’ and thee”, then wherever he goes he will not do anything that is not right.

In this paragraph, there are several terms delivering the idea of extending and the relationship between extending and the four virtues. I will try to put these into the system of human composition.

Mencius was mainly talking about the impartial mind. For some reason, people tend to take the partial mind, which features: that cannot bear some certain things but can bear something even worse than the former; that unwilling to do

---

129 There are many terms in Mencius that bear this meaning: 舉斯心加諸彼 (IA7); 皆擴而充之 (IIA6); 達之於其所忍 (VIIB31); 無欲害人之心 (VIIB31); etc.

131 I have discussed the reason in the former section.
something but tend to do something worse than the former, etc. Both of these two
tendencies are characteristics of the partial mind, which is, sticking to some specific
things while ignoring the whole situation. In this case, the partial mind is usually not
good. However, the partial mind could to be extended. When they are extended,
there will be “over-abundance” of benevolence and rightness.

In another passage about the four ends of virtue, Mencius said,

A man has these four ends as he has four limbs. To have these four
beginnings and to say to oneself that one incapable of being good is to do
harm to oneself, and to say that one’s prince is incapable of being good is
to do harm to one’s prince. If having these four ends in oneself one knows
to extend them, it is as if a fire is beginning to blaze or a spring beginning
to flow through. If one is able to extend them, one has all that is required
to maintain peace within the four seas. If one does not extend them, one
will be incapable even of serving one’s parents.  

As for the facts of extending one’s mind, Mencius said,

Treat the aged of your own family in a manner befitting their venerable age
and extend this treatment to the aged of other families; treat your own young
in a manner befitting their tender age and extend this to the young of other
families, and you can roll the empire on your palm….Hence one who extends
his bounty can bring peace to the Four Seas; one who does not cannot bring
peace even to his own family. There is just one thing in which the ancients
greatly surpassed others, and that is the way they extended what they did.

Are the actions of “treating the aged of other families as treating the aged of my own
family” good? The answer is positive. Then, we can safely say that to extend one’s

---

132 See 46.
兄弟，以禦於家邦’，言舉斯心加諸彼而已。故推恩足以保四海，不推恩無以保妻子。古之人
所以大過人者無他焉，善推其所為而已矣。
mind is good. Furthermore, the extended mind is good. If the extended mind must be
good, then, the source that decides the forms of the extended mind must be good.

We can also attest this by other reasoning and parables. For example, in
Mencius’ discussion with Gaozi, who compared human nature to qi willow, and
integrity and benevolence to cups and bowls, Mencius refuted:

“Can you,” said Mencius, “make cups and bowls by following the nature
of the willow? Or must you mutilate the willow before you can make it
into cups and bowls? If you have to mutilate the willow to make it into
cups and bowls, must you, then, also mutilate a man to make him moral?
Surely it will be these words of yours men in the world will follow in
bringing disaster upon morality.”\textsuperscript{134}

According to Gaozi, as we know, there won’t be anything predestined in one’s life,
because his nature has no tendency. Moreover, in order to become virtuous, one
needs to break the original state of nature. What Mencius did in this refutation, is not
just telling Gaozi that “your metaphor is wrong” from a passive aspect. As a matter
of fact, what is indicated in this paragraph is the Mencius’ very idea about human
nature: benevolence and integrity can “grow up” in our mind by following one’s
nature. And if humans follow their nature, they will naturally all become virtuous.
We can see this point clearly by referring to the allegory of the Song farmer who
plucks the seedling. However, a point that demands our attention is that the “growing
benevolence and integrity” is not growing in nature, but growing in behavior. That is,
in nature, all the merits are all completed, and they don’t grow or wither; but as we

猶杞柳也；義，猶桮棬也。以人性為仁義，猶以杞柳為桮棬。”孟子曰：“子能順杞柳之性而
以為桮棬乎？將戕賊杞柳而後以為桮棬也？如將戕賊杞柳而以為桮棬，則亦將戕賊人以為仁義
與？率天下之人而誅仁義者，必子之言夫！”
all noticed, in our behavior, the merits are usually weak; therefore, it’s our mind from where our behavior derive that needs purification. Apparently, what humans need to do, instead of enforcing anything, is just to follow his nature. This is also a proof that wherein Mencius’ theory differs from Gaozi is by the definition of “human nature” itself. Without any condition, it is purely good.

Actually, artificiality and enforcement, in Mencius’ view, are exactly the source of humans’ pettiness. Note, in another passage that has caused so many guesses, Mencius said,

What people in the world mean, when talking about human nature, is origin. The root principle or origin is unimpededness. What is bad of cleverness is that it bore its way through. If clever men could act as Yu did in guiding the flood waters, then there would be nothing to dislike cleverness. The way Yu guided waters was to impose nothing on it that was against its natural tendency. If clever men can also do this, then great indeed will their cleverness be.\footnote{Mencius IVB26. Tans. Lau, D. C. New York: Penguin, 1970. p.133.}

This is one of the rare cases in which Mencius addressed human nature directly. Let alone if Mencius was talking about others’ opinion or his own opinion, his idea about human nature is clear enough: human nature is some “original state”. The principle of this original state is \textit{Li}. As to the understanding of \textit{Li}, A. C. Graham renders it as “benefit”\footnote{A. C. Graham, “The Background of the Mencian Theory of Human Nature”. p. 52.} and thus interprets that Mencius objects to this “benefit opinion”. However, this might cause a conflict with the statement at the end of this passage. A traditional interpretation of \textit{Li}, just as D. C. Lau does, is to take it as
“unobstructed”.137 According to Menicus, if everybody follows the principle of nature, everything would be fine. The problem is, humans have their “human cleverness” which features boring through. If one can carry out like Yu’s guiding flood, there is nothing wrong with cleverness. This paragraph serves well as a proof that humans can follow their nature to recover their goodness. The point here is, the way Mencius differed from Gaozi is not that “humans have an agency that compels them to do good” (which indicates that the realistic “good” is something to be attain); but “if humans follow their nature, they become good which is the original state of nature” (which indicates that the good state is originally one’s nature, to achieve realistic good is just to recover it).

In short, although partial mind could be bad, the complete mind is definitely good. Inasmuch as the complete mind is good, the essence that the complete mind embodies is good.

Conclusion

In order to discuss the quality of human nature, I have two clues in this paper: Mencius’ concept of human nature in a picture of human composition; and how to rule out the “bad part” that always goes with the “good part”.

The composition of human includes: a. physicality; b. mind; and c. nature. In terms of physical function, Mencius did not call it bad, but if it’s not under the control of conscious mind, it tends to mislead human; in addition, the uncontrolled function shed no lights on the difference between human and non-human. Therefore, Mencius did not take much account on it when he elaborated on human nature. In terms of mind, mind is the form by which humans can behave as human. Mind takes two shapes: the complete mind, and the limited mind. The complete mind is decided by human nature and is perfect; but if one does not choose (or exhaust) it, he cannot know it. The limited mind is a partial section of the complete mind, thus it usually causes trouble; and because common people tend to stick to it, they cannot see or carry out the complete mind. Thus people need to extend the partial mind. With regard to nature, it is something essentially confines humans as human. It is manifested by mind, carried out by body, but it never equals to body or mind.

In terms of “good”, there are also two types, one is in the level of human mind and the other is in the level of human nature. The good in the level of human mind is a relative one, which means, contrary to good, we can find something bad as its counterpart in this level, say, bad. The good in the level of human nature is an
absolute one, which means, no matter what action (to benefit others or harm others) one takes, it is still there, and unchangeably good. What we usually judge as good or bad is not human nature, but human action which is guided by the state of human mind. Again, the state of the partial mind can’t represent human nature; human nature can only be manifested in a fully realized state of mind, and this state, as an embodiment of human nature, is absolutely good. For a common man, even though his mind is usually partial, his partial mind is no other than the whole mind, which as analyzed above is unchangeably good; therefore, he still owes the whole mind (as embodiment of his nature, although not being illuminated), and thus, his nature is absolutely and practically good.

Therefore, we can arrive at three conclusions. The first one is that instead of merely a possibility, Mencius’ human nature is a real fact, because everyone has this nature (even when he does bad). Secondly, instead of something in its beginning and needs to be developed, human nature is accomplished, because it is not subject to the change of moral state. Finally, instead of something mixed with other bad elements, human nature is purely good, because bad elements do not have root in nature.

Korea and Its History: Forming the Identity of the Korean Woman

The Middle-Class and Upper-Class Primary Caregivers

How does a nation form a woman’s identity? With the colorful and diverse history of Korea, can there only be one identity of the Korean woman? In 1981, the Korean GNI per capita was U.S$ 1,800. In 2004, it was U.S$ 14,162. In addition, the rate of education in Korea has been increasing, with the number of female students moving on to university to be 79.7% in 2004 and the number of female university graduates being employed to be 62.6% (Korean National Statistics Office, 2005). These are just a few numbers indicating how rapidly Korea has industrialized and modernized since a few decades ago. In this paper, we explore how the path of Korean history, especially since the Japanese colonial period when modernization took place in the form of rapid industrialization and influx of western ideologies, influences the nation – the social structure of Korea. The ‘legacies’ that have been left by these processes have produced an interesting outcome on the identity of Korean women. The focus is on the upper- and middle-class Korean primary caregivers of Korea today, whose perspectives on their own identity and marriage show clear distinctions. As we learn, these distinctions are due to the different impacts the modernization process had on the upper- and middle-class. Here, the perspectives of these women on their marriages and desired number of children, give us an indication of the difference between the identity of the Korean upper-class and middle-class woman. The degree of parental influence (both their own parents and in-laws) is the major factor that distinguishes the upper-class women from the middle-class women, thus forming strikingly different forms of the ‘Korean women’ identity. Both the upper-class and middle-class women live in modern Korea, a country that has developed at a rapid rate, following the foundations of ‘democracy’ and interacting more with the outside cultures, especially that of the West. However, for one particular class, this is an environment that lies outside the glass dome they live in – an old, traditional society that has not changed much from the ‘pre-modern Korea’.

Where Did Modern Korea Come From?
What is modernization? When we think of this word, we have a tendency to think of developed technology, capitalism, an influx of western trends, change in ideology (usually towards democracy), higher literacy rates and sometimes a stronger civil society. So when did Korea shift from being a pre-modern nation to a modern nation? If all the factors above are applied, the period when Korea stepped on the path towards modernization would be the same path that took the nation towards a past that would never be forgotten. The year 1895, when Queen Min of Korea was assassinated, was the year that gave way to a contradictory Korea – one that started to modernize, but under the rule of another nation. Korea had already been under the influence of Japanese power prior to this year, however, this was the turning point in Korean history, an event that is still strongly symbolized by Korean nationalists, which gave way to a very suppressed but developing country. Since the event, the Japanese policy makers started to plan projects for railroad concessions (Duus, p.136) which later yielded to the construction of a railway system in Korea. This may be seen as the initial stages of developed technology. As Japan’s hold on Korea grew fierce, capitalism was introduced – industrialization took place with many peasants moving from agriculture to factories, becoming industrial workers (Park, 1999). In addition, Korea’s education system was altered to fit the demands of the Japanese. The Korean language was prohibited in school, making Japanese the main language used in educational institutes. However, enrollment of students increased and the education inequalities between those residing in the country and those in the city are said to have narrowed (Tsurumi, 1984). Under all these changes in Korea, perhaps not completely initiated by Japan but at least influenced by Japan, was the driving force that served as a foundation for Korean modernization during and after Japanese colonization – western ideologies and the desire to be like the west.

The strong will of the Japanese to be acknowledged as a super power in the same right as those of the western powers was itself interestingly contradictory. While they look to the West for ideologies and education, the West did not look keenly towards the Japanese whom they believed were an inferior race (Dower, 1986). The racist remarks and discrimination must have been a devastating blow to the Japanese who had the strongest desire to ‘be like the West’ — be as industrialized and modernized, with western thinking. Thus began Japan’s own quest for legitimizing their nation in the modern world. While they were being looked down upon by the West for being the ‘yellow race’, short, with small eyes, the Japanese were constructing their own identity — a kind of immortalization of their race as more superior than others. At the same time, however, the Japanese were adopting Western ideologies and technologies, thereby
producing their own highly industrialized and westernized territories, both home and colonies. Korea, being a colony of Japan naturally having these principles forced upon them, started to become influenced by these very ideas and practices. These western ideologies that created capitalism, advanced technology and democratic social behavior gave way to a modernized nation. Korea had left the pre-modern era and was now embarking on a journey towards becoming a modern nation.

Korea’s Social Encounter with Japanese Colonialism and Modernization

Prior to the colonization of Korea by Japan, Korea had been a largely hierarchical agrarian country. Monarchies were the highest order, with yangban as the significant upper-class of society. Those outside these orders were considered to be ‘ordinary’ citizens or very low-level citizens who were usually employed as servants or even slaves of the upper-class. However, a new hierarchy emerged under Japanese rule. While the Japanese had ended the yangban system, an “overdeveloped state” as termed by Alavi, was formed where the power had shifted quite favorably to the state (Koo, 1993). This hierarchy can be seen in the Korean military, large conglomerate companies like Chaebol groups, at school, and even in personal familial relationships. An authoritarian, dictatorship-like rule became the highest order of this hierarchy, with the upper-class following, then the middle-class, and lastly the lower working classes such as the industrial workers and peasants. The industrialization of Korea thus brought about a new hierarchy – the presidents of a company would employ masses of industrial workers, usually as very cheap labor and from the countryside (ex-peasants) who would be exploited terribly by a few managers in the company factories. These industrial workers, forced to identify with one another start to distinguish themselves from the peasants they left at home, thereby producing a working class and peasant class. Like virtually every country in the world, Korea too, formed a modern hierarchy of upper-class, middle-class and working class, where usually there would be an authoritarian order at the very top of the pyramid, exploiting and discriminating against the lower classes while co-operating with the upper-class. Despite the end of the Japanese colonization of Korea in 1945, this ‘legacy’ left by the Japanese continued to thrive in Korea. The US military government that had occupied South Korea ironically adopted the very same system while preaching democracy to the people of Korea. The presidents that followed – Syngman Rhee, Chung-hee Park, and Doo-hwan Chun all revived this long-standing system of an overdeveloped state that suppressed civil society. With this political setting in mind, we must ask how this affected the social classes of Korea.

Like many rapidly industrializing countries, South Korea’s upper-class was
quite conservative and at times co-operative with the authoritarian state. For instance, Park Chung-hee’s government continuously co-operated with the large conglomerates (chaebols). This was a win-win situation for both parties, where the chaebols would be granted large loans by the government whilst the state was able to strive for an “international capitalist economy” through the developments of these industrial companies (Eckert, 1993). Therefore, the relationship between the upper-class society and the state was usually co-operative in the economic sense. The combination of an authoritarian regime and a conservative upper-class managed to keep the traditional hierarchy of power in place. Unfortunately for this relationship, the continuous dictatorship-like hold of power on Korean civil society started being questioned by the other classes – the intellectuals, working class and sometimes middle-class. What emerged was a struggle for democracy by these classes, often expressing their frustration through labor conflicts and demonstrations. Throughout the Chun regime, the state’s effort to convert civil society into a dormant one failed, and what resulted was an even stronger, more educated group of workers and intellectuals that formed strong solidarity (Koo, 1993, pp.131-162).

Thus, what resulted from the Japanese colonial era was a social order that has been revived throughout South Korean history – a highly conservative upper-class, sometimes radical but pro-democratic working class, and a middle class that stood in between the two, fluctuating from conservative to pro-democratic according to their interests. This framework is vital in understanding how Korean social order has shaped the identity of Korean women, in this paper, the Korean primary caregivers of the upper- and middle-classes. The cultural and social differences between women of these classes will be observed through their perspectives on birth and family relationships.

**Korean Primary Caregivers in the Upper- and Middle-Classes**

About 50% of Korean women are primary caregivers (also known as “housewives”). Here, we focus on the primary caregivers of the upper- and middle-classes – those who are financially stable and have usually completed tertiary education. Although the educational backgrounds of these two classes may be similar, we find that one particular factor – the relationship between the married couple and their parents (especially with the parents of the husband), produces strikingly different responses between the primary caregivers of the upper-class and those of the middle-class. These differences in perspectives are shaped by the contrasting values they possess, which affect many decision-making processes in their lives, especially those concerning the family. The argument presented in this paper, is that these differences are largely due to
the ways in which modernization has affected the social classes. Here, the upper-classes of South Korea remains highly traditional, holding onto values that derive from the yangban class of Yi Dynasty which persisted throughout Japanese colonialism as collaborative upper-class, and through authoritarian regimes in the form of highly conservative upper classes that allied with the state. On the other hand, the middle class of South Korea has welcomed the modernization process into their personal and social perspectives, by adopting a large number of westernized principles, thereby becoming personally more independent of strict traditional values, and leaning towards liberal ideologies and practices. Therefore, Korea has produced two very different concepts of a ‘Korean woman’. What is expected of them by society is also distinctive.

The Upper-Class Woman

“My husband doesn’t let me wear the things I want. I want to dress up nicely and wear short skirts, but he forbids it.” Ms. K (personal communication, October 20, 2006), an upper-class housewife in her mid-thirties who lives in an expensive district in Seoul tells me her husband does not let her even take dance classes, something she has wanted to do for sometime. A university graduate with a degree in science, Ms. K was an exceptionally bright student during her school years, being so studious that her friends always teased her. She is a beautiful woman, with an appearance younger than her years, and she gives off an air of sophistication and elegance. She married her husband after several years of courtship, had a lavish wedding and currently has two children. Despite this exterior appearance of perfection, Ms. K is currently unhappy with her marriage. As we talk, I find that the life of an upper-class Korean woman is startlingly different from that of a middle-class Korean woman. As implied in historical official nationalism (Moon, 1998), women of the upper-class contemporary Korean society are hardly different from those upper-class women during the authoritarian Korean governments. They are still expected to be subordinates in the existing social order, having primary roles as a reproductive organ and domestic housekeepers. This is more so for upper-class primary caregivers who take on a very similar role to that of their mothers and grandmothers. They have been part of an upper-class for generations, being educated on traditional values and roles that they must play – the exact roles their mothers took in their marriages. Therefore, if one was to look at how a modern day Korean upper-class housewife lived like, one would only have to flip through history books or records on past Korean upper-class housewives to see they have virtually a similar life. The lives of these upper-class women now are hardly different from those fifty years ago. The only differences may be that today, most do not live with their
parents-in-law, are able to drive their foreign-imported cars and are members of five-star hotel fitness clubs.

So how similar are the past and present Korean upper-class primary caregivers? Ultimately, it is the relationship between the upper-class couple and their parents that is clearly unchanged. Although most do not reside with their in-laws, during every conversation that takes place with an upper-class woman, the biggest burden and navigator of their married life are the in-laws. In-laws influence the lives of upper-class couples to an extreme extent. According to Ms. K, the biggest reason couples are giving into the continuous ‘guidance’ of the in-laws is because the in-laws are usually still wealthier than the younger couples. It is not only the in-laws who do not feel ashamed to offer ‘financial packages’ to their children in return for more grandchildren. The women themselves obey their in-laws commands in the hope that they would be granted some kind of inheritance later. Agreeing to give birth to another child in return for large sums of cash, guaranteed childcare expenses or even real estate, is not unheard of. This desire for the in-laws to have more grandchildren is usually interpreted as desiring more grandsons – another traditional concept that has recently started to decline among the Korean popular mass. During interviews, it was astounding to hear numerous accounts on how upper-class women view the importance of a son. One couple, a young couple in the mid-thirties pondered deeply on whether they should seek medical treatment in the United States that could guarantee them a son. How one may go about doing this is unclear, however, the constant pressure the woman received from her in-laws for having only two daughters daunted her. In another account, a woman describes how at a social gathering of upper-class women, one of them asked how many mothers present had only daughters. This particular woman who had two sons, declared how difficult it was to get along with mothers who only had daughters, implying that the ‘daughters-only’ mothers were too sensitive because they had not succeeded in giving birth to a son. This preoccupation with having a son is an old concept, deriving from the importance families placed on lineage. Throughout Korean history, this particular value has caused much pain to women (Cha, Chung and Lee, 1977). Women of all classes were affected in the past, however, in contemporary Korean society, it is the upper-class women who must carry on this tradition.

The influence of parents on a younger couple’s life does not stop at the desire to have more grandchildren. These parents are usually very influential from the start of the couple’s pre-marital relationship, often playing the deciding role on whether the couple may be married or not. Interestingly enough, nearly 50% of young singles in Korea do not mind a marriage with a spouse that was set up for them by a third party. The
majority of the rest prefer love match marriages, and a small percentage prefers a joongmae (introduced and set up by another party) marriage (Korea Marriage Culture Institute, 1999). In addition, when asked what they would do if their parents opposed to a marriage, a striking 35.3% of single females replied that they would end the relationship with the potential spouse without hesitation. 66% of single men and 55.3% of single women say they would continue to gain approval from their parents, but if this fails, would end the relationship. The importance of parents’ approval of marriages is therefore crucial to young Koreans. These couples adjust their decisions according to their parents’ opinions, often marrying at earlier ages and giving birth to multiple children. According to a study in Taiwan, another country that has industrialized at a rapid rate, and bears similar Confucian traits to Korea, couples who do not maintain such close ties with their parents have had 2.1 births on average, as opposed to those who have close relationships with their parents, and have had 3.6 births (International Family Planning Perspectives, 1985). So how much influence do parents have on middle-class women and couples?

**The Middle-Class Woman**

While the upper-class of Korean society embraced the rigid forms of tradition and values that have continued from the Yi Dynasty through Japanese colonialism and authoritarian Korean governments, modernization that evidently took place during the colonial period had a different impact on the other classes. The middle-class, who was less conservative and often open to democracy, accepted the ideologies of the West, such as equal rights, freedom of speech, feminism etc. and in combination with some existing Korean traditional values, synthesized their own form of ideology and values. Like the political stance of the middle-class, the perspectives middle-class women have on marriage and their identity as a woman is a hybrid of traditionally Korean and Western. These primary caregivers are not confined to a solid cut-out framework that has been established by their in-laws or husband like the upper class. Rather, they are quite independent from both sets of parents when making decisions. As the status of their class says, most are married to self-made husbands who usually may have to provide (financially) for their parents. This is very contrasting to the upper-class who would be more on the receiving side, depending on potential inheritance or other financial benefits given by their wealthy in-laws. Therefore, in the middle-class it almost seems as if the in-laws do not have any say in the decisions made by their children as they must rely on their children. To the middle-class women, having more children is not forced upon them and they are not constrained to the traditional values of
continuing on a family name. Whereas children have great bearing on an upper-
woman’s life, children does not seem to be the focus of the middle-class woman’s.
These women are not ones to dedicate all their energy to children and a husband, despite
their title as “housewife.” They are dissatisfied with this traditional stereotype (Kim,
1998) and place great importance on ‘lifestyle’. The relatively loose hold of the parents
on their decisions, starting with the freedom of spouse-choice allows the middle-class
woman to move away from identifying herself as merely a ‘baby-machine’ and
subordinate dedicated to the husband and household. Instead, she identifies herself more
as an individual (influenced by liberal ideologies), where she may carry out the roles of
a primary caregiver, but can make decisions according to her own desires and well-
being. . Mrs. Ko, a middle-class primary care-giver in her early thirties has one young
son, who is four years old. She graduated from university and was in graduate school
when she met her husband. Her husband is a professor in a prestigious university. When
asked if she had any plans to have more children, Mrs. Ko immediately replied with a
shake of her head. She shudders at the prospects of having more children because of two
reasons: the incredibly expensive private education costs and cost it will be on her
lifestyle. Mrs. Ko enjoys taking care of her son, but she feels sometimes her social life
is quite damp. She hopes to be more active in her social life and work after her son is
older. Like Mrs. Ko, many women are now feeling the presence of children are
hindering their own lives – perhaps it could be called a selfish perspective, but lifestyle
for oneself is now important in Korean society. Mrs. Lee, a woman in her mid-thirties
lives with her parents as her husband works as a coach to a sports team and rarely is
able to come home. Her child is 7 years old. She has no plans to have more children.
Having had an active social life before marriage, Mrs. Lee who is the primary care-giver,
earns her own income through private tuition with which she travels abroad several
times a year with her friends. Her son is usually left in the care of his grandparents who
also work, but have a flexible schedule as they are self-employed. When asked why she
does not desire more children, she immediately talks of how busy her life has become
after her son started elementary school. Now, she cannot travel much but rather spends
her time shuttling her son here and there for his extra-curricular activities. The
percentage of Korean women who traveled during the year between 2003 and 2004 was
9.2% compared to 11.3% of men (only 2.1% difference) and of these women 77.8% of
women traveled for pleasure (Korean National Statistics Office, 2005 Looking at the

In addition to traveling, many women are also spending more time going to
sports games and cultural performances such as the cinema, museums, musical concerts
and many have plans to take a course in a field they are interested in. Compared to 2000 where 39.3% of females aged 15 years and above spent time at sports games and art performances, the percentage rose 11.7% to lie at 51% in 2004. Of these women, those in their teens and twenties mostly went to performing areas, whereas those in their thirties preferred museums and exhibitions. Approximately 58.9% of women also say they have a particular area in which they would like to study further, for instance in computer education, languages etc. (Korean National Statistics Office, 2005 Looking at the Lives of Women Through Statistics). The impact of modernization of Korea has influenced the middle-class women to opt for a single child, rather than several in order to maintain their personal and social activities. Therefore, here, the presence of children is a hindering factor to the lifestyle of these women. However, it is important to note that the process of modernization did not directly influence the middle-class women of today. Rather, modernization has impacted the parents of the middle-class woman. Higher education, higher income, and the adoption of ‘modern’ ideologies by the parents influence their children who are brought up in a much less conservative atmosphere than the upper-class, who strictly adhere to tradition.

Conclusion

There has been too much concentration on the working women of South Korea and the relationship between female employment and the declining birthrate. The identity and role of primary caregivers has been given too little attention, considering they make up nearly 50% of married females in Korea. The focus of this paper, the primary caregivers in the middle- and upper-class have been influenced greatly by the process of modernization that started at a large scale during the Japanese colonial period. The results are startlingly distinct – the upper-class has held on to the yangban and Confucian traditional values where a woman is the domestic housekeeper and child-bearer who must make sure she produces sons to continue the family name. This tendency of the upper-class to be highly conservative has continued through the colonial period, authoritarian regimes, and even today where we see a Korea that although cannot be said to be ‘completely’ democratic, stands as a pro-democratic country. The influence of the in-laws, therefore, still remains to be vital in the decision-making processes between the upper-class woman and her husband, which we may observe through the number of children they are opting to have. Unfortunately, there are no statistics available that show the birthrate according to class, however, interviews conducted on upper- and middle-class women allows us to generalize the trends.

For the middle-class woman, the influence of their parents on the decision-
making processes in their marriage is weak compared to the upper-class. Most likely, the parents of these women, who were working class, or middle-class Koreans, embraced the democratic or liberal ideologies that came along with the modernization process. Their interference in their children’s lives were therefore low – as indicated by the fewer number of children they have or plan to have.

History, it seems, plays a critical role in not only the political and economic aspects of a nation, but even the personal relationships between family members. The impact of modernization that started during the colonial era produced a couple of very different classes that were not only different in political and economic position, but in ideological position. This then influenced the relationship they formed with their daughters and sons, leading to one class producing a relatively uniform number of children throughout the years, and another class giving birth to a much less number of children, that has contributed to the decline of the birthrate. To the upper-class Korean woman, therefore, she is not an individual, but one who must base all her decisions according to her family needs and obligations. She is the face of the Korean woman that we have seen since the Yi Dynasty. In contrast, the middle-class Korean woman identifies herself as an individual. She is not tied to a rigid framework of ‘traditional housewife’. She is the independent, free-willed, Korean woman whom we see in modern Korea. South Korea has developed at an immensely rapid rate, one that has alarmed the world. The concept of equal rights seeped into Korea sometime during this development, leading to both men and women to regard the two genders as close to being equal. This can be measured by the increase in female workforce – more women in Korea are working than ever, many delaying marriages or childbirth in the face of career development. However, it is also important to take a better look at the women ‘at home’. As we peer in, we see that only a portion of these women have been part of the ‘equal rights’ process. The rest have been left out by the resistant character of their class, becoming outsiders to the changing identity of their own sex.

Abstract:

“At the Intersection of Anthropology and International Relations”

Glenn Petersen

Although anthropology is by definition concerned with international issues, anthropologists tend not to deal with questions, problems, or ideas from the realm of international relations, especially in matters of theory. Nor have many in the field of international relations turned to anthropological knowledge and theory for insights. This paper seeks to point out several ways in which the two bodies of work might cross-fertilize. It draws in particular from perspectives on common patterns of organizing traditional, small-scale societies (that is, one of the time-honored spheres of anthropological study). Socio-political organization in these societies depends heavily upon overlapping, intersecting, and interacting groups focused, respectively, on the two distinct domains of kin ties and territoriality. On the other hand, modern notions of the state and the nation-state, which trace their roots back to the Treaty of Westphalia and the systematic legal theory of Grotius, emphasize the sovereignty of a territorial state over all its people, and underpin the presumption that the state, its physical territory, and the people residing within it constitute, or at least should constitute, an essentially unitary entity. This paper points to the many social systems, especially those of the Pacific islands, acknowledging that individuals and small groups tend to divide their loyalties between communities in which they reside and their kinsfolk who reside in other communities. These divided loyalties are not perceived so much as posing threats, as most theories of international relations would have it, as they are instead viewed as providing stable, constructive, and resilient ties that are to be cultivated during ordinary time and can be relied upon for succor during times of trial, including natural disasters and social upheaval.

Reinventing Lebanon: The Search for Lebanese Nationalism During Syrian ‘Occupation’ 1991-2005

Chris Phillips,
PhD Candidate, International Relations, London School of Economics

In 2005, following the assassination of former Lebanese Prime Minister Rafik Hariri, a series of mass demonstrations known as ‘The Cedar Revolution’ erupted in Beirut. These displays, that eventually led to the end of Syria’s 29 year presence in the country, were contrasted by equally popular demonstrations from Damascus’ allies in Lebanon pleading for them to stay. Both groups waved Lebanese flags and were of a nationalist nature. In a country ravaged by civil war from 1975-91, where confessional ties outstripped any loyalty to the nation, locating a popular Lebanese nationalism has never been easy. However, with over a million protesting against the Syrians, and a further 500,000 supporting them, from a population of 4 million, evidently the Syrian question was something that could transcend confessional ties and unite the Lebanese on a political issue – albeit in two camps. The purpose of this paper is to consider the effects of these years of Syrian ‘occupation’ on popular Lebanese nationalism.

The principle aim of this study is to demonstrate that there has been a conscious effort by Syria and its Lebanese allies to dramatically ‘reinvent’ Lebanese nationalism after its civil war. Moreover, it will show that the 2005 demonstrations largely represent not only the failure of this reinvention to gain popular support but the success of a rival form of nationalism. A further aim is to examine the factors that have popularised Lebanese nationalism away from the elite declarations at Taif that ended the civil war in 1989 towards the mass displays of 2005. Additionally, wider theories of nationalism will be applied to this single case study, including raising questions about the malleability of any nationalism and its ability to be ‘reinvented’. These aims will be pursued by examining the hypothesis that Lebanese nationalism has been principally influenced by three factors: how Syria has tried to reinvent Lebanese nationalism; how Israel has affected Lebanese nationalism; and how anti-Syrian feeling has developed into mass nationalism.

Abstract

Specialised ecological knowledge on how to manage, utilise and sustain local natural resources is a product of generations of daily collection activities and traditional management techniques by resource-dependent communities. These knowledge bases are vital to the future of species-rich ecosystems with dependant local human communities and to date little is known about them. However local ecological knowledge is now being lost from resource-dependent communities with marketisation and economic development that does generate job diversity, but which subsequently leads to declining community resource management capacity. This study is cross-disciplinary in nature, and combines social and natural sciences to examine the interaction between communities and their ecosystems under current economic pressures. It analyses the effect that increasing job diversity on the remote island of Kaledupa in Wakatobi Marine National Park, Indonesia, has had on ecological knowledge and community capacity to manage local marine systems. This region was chosen for its continued resource dependence, remoteness and emerging development pressures. Two separate communities co-exist on and around the island of Kaledupa, the islanders (Orang Pulo) and the indigenous nomadic boat people (Bajo), the latter of which retain more traditional livelihood activities than the islanders. This study found a strong negative relationship between job diversity and ecological knowledge and a strong positive relationship between diversity of fishing practices and depth of knowledge. This demonstrates that with modern economic development, a level of important livelihood specialisation is being lost, which in turn is eroding local knowledge systems and capacities to manage natural resources. Where livelihoods are still centred on resource collection activities, and a wide variety of techniques are still practiced, local people still retain their specialist knowledge. With current rates of economic growth in the region, these changes will have implications for the ability of local communities to manage marine systems into the future. Wider lessons about community responses to economic development, particularly in terms of self-management of natural resources, can also be learned.
Redefining security:

Social Movements in the Philippines and Japan

Vincent K. Pollard
Hawai‘i Research Center for Futures Studies
University of Hawai‘i at Manoa

During 1945-2007, military globalization, an information and telecommunications revolution, international system transformations, political democratization and skillful local leadership in Asia and elsewhere have interacted with surprising outcomes. As a result, the playing field for social movements and their transnational allies has been reorganized. Among social movements demanding post-colonial withdrawal of U.S. military facilities, a redefine
d and increasingly refined concept of security has become a strategic social and political asset.

The Anti-Bases Movement in the Philippines and the Movement to Demilitarize Okinawa exemplify these developments. In opposition to American military bases, the power to redefine security as freedom from the threat of being targeted in unwanted interstate hostilities, sexual violence to women, destruction of the land, and disruption of harmony with the environment has triggered surprising international changes. Unexpected partial successes have been achieved with the communication of demilitarized notions of human security to local, national and transnational publics.

The summarized policy histories are also a resource for future generations in postcolonial societies sharing similar aspirations. If experiences of social movements in the Philippines and Okinawa are part of global democratization, they are at odds with objectives of the U.S. presidential administrations of “Bill” Clinton (1993-2001) and George W. Bush (2001- ), each of whom selectively advocated democratization backed by veiled and overt threats.

Claims and inferences in this research paper are documented with primary and secondary public sources. These include newspaper reports, television broadcasts, interviews, pamphlets, and scholarly publications, as well as once-secret, declassified U.S. Embassy cablegrams.
Shattering Fetters, Setting Standards, Restraining Radicalism:

Revolutionary Marriage Laws in China, 1931-1944

Vincent K. Pollard
Asian Studies Program
University of Hawai‘i at Manoa

During the Chinese Civil War (1927-1949), competition for the political loyalties of radicalized women sometimes centered on guidelines, goals and policies embodied in marriage laws. While China was increasingly convulsed with military combat, terrorism and social strife, the State intervened to regulate the heterosexual marriage contract.

According to incomplete records for the period 1931-1944, revolutionary marriage laws in areas under the control of the Communist Party of China reflected and experimented with contradictory elements of liberation, state security, bureaucratization and social control.

Interestingly, some of the more radical regional Chinese communist marriage, divorce child custody and property settlement policies are not reflected in the later *Marriage Law of the People’s Republic of China* (1 May 1950).

Sources include contemporaneous eye-witness accounts, retrospective interviews, translations of marriage laws and post-divorce regulations, and secondary scholarly analysis. Marriage contract prohibitions and requirements are summarized, as well as innovative rules for post-divorce property settlements and children’s rights in areas under the control of the incipient Party-State during eight periods from as early as 1931 and as late as 1944.

Acknowledgment: I want to take this opportunity to thank Dr. Victoria Wohl of Ohio State University for her excellent advising and guidance both as a professor and chair of my master’s thesis. Her positive criticism and suggestions throughout my program at Ohio State helped me grow both as a person and as a student. I also wish to thank to Dr. Mark Griffith from the University of California at Berkeley for his kindness to answer my e-mail full of questions about his article. I am also very grateful to Dr. William Nethercut from the University of Texas at Austin who took time to proofread the final version of this paper and express his valuable opinion.
Within the scholarly works that analyze the classical Greek play the *Eumenides*, the traditional position is to consider the Erinyes as non-constitutional and non-democratic elements, primitive in their reaction and fortunately replaced in their action by the luminous force of democracy/constitution represented by the couple Apollo-Athena. The Erinyes are seen as earthy and instinctual deities, incapable of thinking and creators of chaos, while Apollo, the true power of the mind and solar order is (together with Athena) the creator of a real constitution/democracy. In the present paper we propose a different form of reading of Aeschylus’ play. Using mainly concepts from S. Wolin and M. Griffith’ articles on modern theory and Athenian socio-political systems, and occasionally those of J. P. Vernant, D. Nelson and P. Euben\(^1\), we will show that the Greek political thought expressed within this play does not necessarily dismiss the character of the Erinyes as chaotic or non-constitutional. On the contrary, they belong to a very organized system. The fact that this system pre-existed the new order introduced by Apollo or that it is based on violent retribution does not make it less well-structured or primitive. According to Wolin’s theory we will prove that the Erinyes are actually the perfect constitutional forces while Apollo, contrary to the common opinion, is actually a turbulent agent. Nevertheless, his perturbing potential is not incompatible with democracy. He is actually a democratic leader. Moreover, the god’s affinities with democracy do not hinder in our vision the Erinyes’s capability to represent

constitutionalism. Why? Because according to Wolin’s theory a constitution represents attachment to conservative principles while democracy, contrary to the common opinion, is actually a short term rebellious movement that intervenes between two constitutional structures. The second constitutional momentum in this play will be represented by Athena, a political force who actually has the last word. Her part is different from Apollo’s role. She will introduce a hybrid form of government which is conceived during the transit between the former constitution and the emerging democratic movement. This is the reason why, instead of the traditional dichotomy Erinyes-blind forces of a primitive, chthonian ruling system vs. Apollo-promoter of a democracy/constitution, we suggest the dichotomy Erinyes-constitutional forces vs. Apollo-democratic rebel, and a final congruence of both these forces.

**The Erinyes-deficient constitution or other variation?**

Within the play the character of the Erinyes oscillates between constitutional authority and anarchic instincts of blind chasing. First of all they define their own attributions in terms of instinctual behavior. They look like dogs, with their deformed and aggressive faces and they act like ones, following the blood traces and their irritating smell (vv. 245-248: εἰςν: τὸδ’ εἵτε ταῦταρ, εἴρανες τέκμαρ/ἐπον δὲ μηνυτῆρας αφθέγκτον φραδαῖς/τετραυματισμένον γὰρ ὡς κόνων νεβρον/προς αἶμα καὶ σταλαγμον εἵματεώμεν). Nobody seems to be able to integrate them in a permanent and coherent system. At the beginning of the text, the Pythia is making an excursus about the venerable divinities of the places, about their attributions and signs of power (prophetic power most of all): vv. 1-8) προσεϊν μὲν εὐφη τηδε πρεσβεῖον θεοῦ· τὴν προτομάντην Γαίαν: εκ δὲ τῆς Θέμιν,· ἃ δὲ τὸ μιντρίς δεύτερα τὸδ’ ἐξέθο/μαντεΐον, ὡς λόγος τις: εἰν δὲ τῷ τρίτῳ//λόγει, θελούσης,
Old and new divinities seem to coexist within this system based on gentle succession: Gaea, Themis, Phoebe and Apollo. The priestess even mentions local minors (Pleistos v.27) and even “newer” and more turbulent forces, like Dionysos and his bloody hunting of Pentheus (vv. 24-29). The Pythia’s system does not include the Erinyes and she actually does not seem to have any idea of them. When she meets them, she is both scared and confused, and more than this, she is unable to identify them. Her description follows strictly their physical appearance (no other more subtle defining terms) and she has difficulties in naming them. Actually her only image about the Erinyes comes from a graphical representation and seems partially contradicted by their actual physiognomy (vv. 47-52: εὐδει γυναικῶν εὖ θρόνοισιν ἡμένας/οὐτόι γυναῖκας, ἀλλὰ Γοργόνας λέγω,/οὐδὲ αὐτῇ Γοργείοισιν εἰκάσω τύποις εἰδὼν ποτ' ἦδη Φινέως γεγραμμένας/δειπνὸν φερούσας: ἀπέρετοι γε μην ἰδεῖν/αὐτῶ. μελαιναῖ' εὖ τὸ πᾶν ᾠδελίκτροποι. She does not recognize them, because she is unable to associate them with anything plausible within her coherent (and limited?) universe. She is aware of the system of retribution, penalties and purification, she can recognize a repentant suppliant when she sees one (she does not know Orestes but she recognizes the branch with white wool and his kneeling position vv. 403-45: ἐροτε' εἷλαις θ' νήψανθην κλάδον/λήνει μεγίστῳ σωφρόνος εὔσεβην/ἀργῆτι μαλλον: τιθε γάρ τραγωτ' ἐρω). but she is unable to associate these creatures with any form of functional divinity. They are simply abominations. A similar thing actually happens to Apollo. He knows them but he refuses to integrate or credit them. He denies their natural relationship with the superior sections of the Justice system (governed by the Olympian hierarchy
where Dike serves a constitutional guiding principle\(^2\) and keeps banishing them at the level of mere executioners driven by sick impulses and cruelty in a sector where *dike* is synonymous with the physical punishment: vv.185-193: \(\text{ou}/\text{toi} \text{ do}/\text{moisi} \) 
\(\text{toi}=\text{sde} \text{ xri}/\text{mptesqai} \text{ pre}/\text{pei}/\text{a} \text{ll}' \text{ ou(= karanisth}=\text{rej} \) 
\(\text{o)}\text{fqalmwru}/\text{xoi} / \text{di}/\text{kai} \text{ sfagai/} \text{ te} \text{ spe}/\text{rmato}/\text{t} \text{ t}' \text{ a)}\text{pofqora=}\) 
\(\text{/pai}/\text{dwn} \text{kakou}=\text{tai} \text{ xlou}=\text{nij}, \text{h})\text{d'} \text{ a)krwni}/\text{a}, \text{/leusmo}/\text{j te, kai} \) 
\(\text{mu}/\text{zousin o}i\text{ktismo}/\text{n polu}/\text{n} \text{ /u(}\text{po}\text{ r(a/xin page/ntej. a)}=\text{r}' \) \(\text{a)}\text{kou/ete} \text{/oi}/\text{aj e(orth}=\text{j e)}/\text{st' a)}\text{po/ptusto}i \text{ geoi=}\) 
\(\text{/ste/}\text{rghqr'} \text{ e')/xousai; pa=j d'} \text{ u(fhgei}=\text{tai tro/poj / morfh=j} \) 

Instinctuality is one form of behavior that fails integration in any constitutional system, since the latter represents order by excellence and is incompatible with any anarchic elements. In exchange, they appear to be compatible with democratic movements. As Wolin suggests, "democratic politics appeared as revolutionary and excessive, irregular and spasmodic."\(^3\)

Apollo also has alternative solutions that could substitute their presence both in terms of procedure and in terms of iconic representation. He opposes to their hideousness and thirst for blood the luminous icon of Athena and the protection (escort) of some Olympian presences (solar equilibrium against their turbulent power) and instead of their perpetual chasing, he proposes lustration, and sacrifice. From Apollo’s point of view, the Erinyes are outcast, primitive forces unable to adhere to any coherent system or to sustain any forms of relationship; therefore, their jurisdiction is deniable. 69-74: : \(\text{γραι απαί παλαι} \) 

\(^2\) Wolin, *op.cit.* p.47.

\(^3\) Wolin attributes this instinctuality to democracy and rebellion which oppose essentially in his theory, the constitutional concept, *op.cit.* p.48
παιδές, αἰτὶ οὖν μεῖναι θεῷν τις οὐδ’ αὐθροπος ουδ’ θήρ ποτε./κακὸν δ’ ἐκατ’ καφένοντε, εἶτει κακὸν/σκότον νέμονται Ταρταρὸν θ’ ὑπὸ γθονος/μισήματ’ αὐθροῦ καὶ θεῶν Ὀλυμπίων.

Actually, everything that has been ever attributed to them was a negative form of attribution: it was based on tacit acceptance on the part of the others, without any previous integration and without any form of mutual respect. Even more, the Erinyes are surrounded by the others’ disgust and fear (not veneration, typical for constitutional system of consecrated and revered functions4). Even at the end, Athena will accept them out of concern for her beloved city and not as a necessity within the new system that she intends to create (vv.829-831). As Griffith sets out, there is not hetaireia for them, no functional network: they are “metic”, “barbaric”5.

Still, they exist, and their presence is not superfluous. Their origin as daughters of the Night is undeniably old. This could be a sign of venerability, but also another emphasis on their isolation from the Olympian system, the only “ruling” system which remained after the re-structuring performed by Zeus. Still, their belonging to the older generations does not necessarily mean automatic exclusion. The mythology offers an early compromise solution that would speak in their favor: for example, the supreme divinity offered positions to the previous divinities and to Hecate6, the Titanid, reintegrating the less turbulent forms within the new world of order. Nevertheless, in this case, the compromise Zeus made to them was not to offer them a function by positive investiture,

4 Wolin, see op.cit. p. 36-37.
5 Griffith, op.cit. p. 107; according to Griffith they do not participate within the game of hetaireia; they are exterior and defeated.
6 Hesiod and his Theogony, vv.410-415 will be the basis for what the scholars considered to be his treaty with the previous divinities, within his reorganizing process.
but by restraining himself from any contact with them and their field of influence (v.365-
Ζεὺς δ' αὐτὸσταγεῖς αἴξιόμισν ἐθνὸς τοῖς λέσχασι/ας αὐτηξιώσατο).

Withdrawal is still a form of acceptance and investiture, within a system in which the
field of punishment is left almost completely to them. Not everybody knows them,
because, in a perfect constitutional way, their action is restricted to a field (which here is
represented by murder) and does not intersect with other fields (Pythia). They definitely
have a function and they are almost obsessed with their “office”. As a notion, “office” is
perfectly compatible with the idea of constitution, as it uses particular groups and creates
specialists: As Wolin says “(institutionalization) tends to produce internal hierarchies, to
restrict experience, to associate political experience with institutional experience, and to
inject an esoteric element into politics.” Also, “constitution might be defined as the
theory of how best to restrain the politics of democracy while ensuring the predominance
of the social groups and classes represented by ‘the best men’.”

The Erinyes are the most conservative form of this bureaucratic, constitutional specialization. Even more, the
office itself seems to be a natural calling: they were born for this job of punishing. The
Fates spun their thread for this purpose (v.322-324: μοντερ α' μες, ομοτέρΟν Νύξ,
αλαοίην και δεδορκόσιν/ποινάν, κλαβ'); see 335: Μοιρ' επεκλουσαν επιπέδος είχειν) and their
mutilated faces and anti-social behavior is another testimony of their competence within
this field of fear and torture. Their loyalty to their function is also impressive and pretty
coherent. From the point of view of their attributes, their specialization is perfectly
compatible with the constitution. Their initial inability to define their job within the trial,
their tendency more to describe the procedure than to explain the legitimacy of their role

7 Wolin, op. cit.both quotations at p.36.
8 According to our main theorist (Wolin, Ibidem), “natural rights” are what a constitution encourages and a
democracy challenges.
and their predilection to keep mixing psychological, religious, and social elements in their exposition is not a problem that should create the impression of deficiency in their function\textsuperscript{9}. This phenomenon does not necessarily signify that their institutionalized “office” is scattered, non-circumscribed enough, or with a tendency to accumulate other functions and to invade other fields. The problem of “definition” comes from the novelty of the concept which is closely linked to the novelty of the trial itself. The Erinyes’ punitive function, being more or less genetically inherited and performed out of birth investiture was never subject of any contestation and need of definition. They have a problem of adjusting to other forms than their own (like the trial), but this is just a natural result of their over-specialization which is, in fact, perfectly compatible with a constitutional system. This reason could also explain their isolation and lack of necessity to mingle or establish relationships with the others. They are what Griffith\textsuperscript{10} would call “socially inept” beings, but this inability is functionally motivated. Their hyper-specialization is the one that requires a certain degree of reclusion within a cell, reclusion that is not at all incompatible with a constitutional settlement. This does not mean that they are unaware of the system itself and the other functions, network and functions that might exist within. They understand that the Olympians avoid their presence. It is a normal consequence of their specialization in revenge and punishments. They also know and ratify the network (another potentially constitutional form, as it deals with

\textsuperscript{9} Their natural tendency does not go in the direction of definitions. It is more directed towards action. The verses present their predilection for describing more their procedure of chasing than the motivation of their legitimacy in this aspect.

\textsuperscript{10} Griffith, \textit{op. cit.} p. 82, “Aeschylus presents his citizens with a parallel and interlocking structure of elite and international relations, in which the brilliant dynastic families of Argos, Phokis and Athens, together with the supremely ‘aristocratic’ family of Olympians, first to victimize the foreign and decadent Trojans, and later to restore and confirms one another’s power and prestige (at the expense, chiefly, of the transgressive usurpers, Klytaimnestra and Aigisthos, and of socially inept and uncouth Erinyes), while at the same time assuring their respective communities a mutually profitable and honorable outcome”.
established aristocratic traditions\textsuperscript{11} and they have no problems in recognizing Athena and her birth from Zeus. They just do not participate, as their efficiency does not come from participation, but from withdrawal, lack of contact with the lustral and apparently from chaotic violence. They serve the system by being outsiders. They do not exceed their sphere of influence and this is also in accordance with a constitutional structure. Their office requires residency below the Earth and perpetual contact with the impure ones, or with Tartaric principles, closer to their nature. They actually have a better view over the system, unlike Apollo who denies them and Athena who needs them to define and identify themselves, as she initially ignores this presence within the divine system.

Another constitutional predisposition is their affinity for concepts. Their entire vocabulary is dominated by conceptualization and abstraction: “office”, “honor”, “guilt”, “bloodshed”, “motherhood”, all this terms comes perpetually within their vocabulary. It is a constitutional tendency, since constitution is seen as “the means of stabilizing a way of life according to certain principles” (Wolin).\textsuperscript{12} Their confidence in the semantics of these terms is also one of the Erinyes’ constitutional tendencies. If Euben affirmed that within tragedy “the mistakes are … linguistic and epistemological as well as political” and Vernant\textsuperscript{13} considers that the ambiguities of all kinds and lack of definition of concepts are, together with other tensions, among the sources of tragedies, then the Erinyes are tragic figures, because of all their excessive confidence in the “natural” semantics of their concepts. For them, the terminology they use has inherited venerability

\textsuperscript{11} Griffith. \textit{op. cit.}, p.102: “If this reading is correct, the outcast Erinyes appear to be acknowledging (rather clumsily?) the respectability of the Olympian family-in terms that unwisely echo their earlier remark about Zeus’ disrespect for them (366) and thus draw attention once again to their own déclassé status.”

\textsuperscript{12} Wolin, \textit{op. cit.} p. 47.

\textsuperscript{13} Vernant, \textit{op. cit.} Chapter II \textit{Tensions and Ambiguities in Greek Tragedy}, p.36-38. Also see Euben, \textit{op. cit.} p.158.
and once set, they do not need redefinition. Still they are able to define their “apportioned part” when they are pushed to do it, even if their definition is initially scattered and comes in steps, by help of Athena. Even this slight hesitation proves their loyalty to the system and their lack of interest in being questioned and questioning, a pretty obvious tool of democracy and democratic movements: As Wolin sets, “a disposition to change the laws, which is one of the most persistent charges leveled against democracy from ancient to modern times, allegedly undermines the power of law and the habits of obedience to government”.  

Their only moment of questioning and interest for definition is when they are in front of the new concept of trial, an Athenian innovation they do not comprehend. This “misbalance” is provoked only by novelty of concepts and it is not functional within their previous systemic equilibrium. Questioning (only this time) is here a way to show inflexibility towards change or invasion of their attribution by new representatives that come as parasites and change their old functions. Opposed to them, the newcomers’ investigation, their claims, and their tendency to regenerate the system, are all forms of a movement to deny their old attributes, a movement which is essentially democratic and rebellious.

Apollo—or the beginning of a democratic motion

If the Erinyes are attached to fixed/established concepts and are only occasionally inquisitive, Apollo represents the questioning source par excellence. He is not only displaying his lack of reverence for the Erinyes, but he also tries to compete, and redefine, and even to annihilate their office. As Wolin writes “democracy is a rebellious

---

14 Questioning is a very discreet form of denial. It goes with the regularly admitted undermining power of democracy. Wolin op.cit.p. 48 and op.cit., p.56.
moment. It involves the taking back of one’s power, not just revocation of legitimacy”.\textsuperscript{15} Apollo’s revolutionary/democratic potential, in Wolin’s terms, comes from his overly-critical response to the old principles. Within the tragedy’s force of ambiguity\textsuperscript{16}, in which Erinyes are the victim, Apollo is definitely the engine. His entire attitude is both openly aggressive and subtly undermining. His contestation of the old authority, his initial ambiguity and refusal to define are parts of a design in which he expects the Erinyes to make their definitions and provide him the territory for redefinition. “Lord of prophecy” and “oracular ambiguity”\textsuperscript{17}, he masters the power of polysemantism and its opposite: the power of definition. He represents the critical moment that is assaulting the constitutional settlement by his denial, challenge and ultimately his counter-point discourse, which is also a democratic exercise. Apollo has what the Erinyes usually lack: appetite for agora, disputes, energy of discourse and argumentation. If for these old telluric forces the trial, with its coherence of speech, definition and self-justification is new and a little bit disturbing, for Apollo it is a welcome exercise that he encourages. His appetite for cross-examination is also one of the traps in which he catches the open-hearted Erinyes, in their frank hate and “unfolded” grudge\textsuperscript{18}. With the help of Athena he will assign layers of guilt and responsibility upon human deeds, opposed to the uniform and almost mechanical hate these goddesses display (vv.425: \textit{άλλαις ανάγκαις, ἥ' τινος τρέων κότον}, versus vv.355 357:\textit{εὴ τὸν ὤδ' ἑμεναι/κρατερὸν ὄνθ' ὁμος αἰμαν'-/ρωμεν ψ' αἵματος νέου}).

Nevertheless, Apollo still deals with attributes that pushed him back within a constitutional field. His succession at the oracle of Delphi was actually non-turbulent and

\textsuperscript{15} Wolin, \textit{op. cit.} p.56.
\textsuperscript{16} See the previous note 13 on Vernant.
\textsuperscript{17} Vernant, \textit{Ibidem} as we mentioned in the previous reference.
\textsuperscript{18} See Griffith, \textit{op. cit.} p.96-98 for this kind of behavior (Appolo’s attitude) and for the dual game (Athena); also for their “network” and patrilinial affinities.
non-revolutionary. It was a quiet, benevolent gift from the previous divinities. He was entitled with the prophecy and, under a certain aspect he was also (constitutionally) endowed to receive wrong-doers and suppliants for eventual purification. Apollo’s power to absolve guilt seems actually so well-anchored in the reality of the place, that Orestes is even shocked when he cannot escape from the Erinyes by use of this absolute remedy against guilt.

The conflict does not consist in him following his allotted authority, but in crossing territories in a way in which he could even be associated with Hermes. It is no wonder that he actually entrusted Orestes to this one (vv.89-93). The Erinyes are really the ones that remain in their very circumscribed field of action. They pursue a particular type of murder, in which they posses the complete and exclusive jurisdiction, and they do not interfere with other types. As mentioned before, their hesitation of speech should not be taken for confusion, or ignorance of their role. When they refused to pursue Clytemnestra for her murder, they were actually acting in conformity with their strictly allotted power (vv.211-212: Apollo: τί γὰρ γυναικὸς ἦτις ἀνδρα νοσφίσῃ; Erinyes: οὐκ ἄν γένοιτθ ὁμαμος αὐθέντης φόνος). The only one who tries to undermine and trespass “territorial” boundaries is Apollo. As Athena later admits, they are entitled forces that govern the specific field of matricide. They are also important because they are ferocious: vv.476-478: αὐται δ’ ἐγὼσι μοιραν οὐκ ευπέμπελον/καὶ μὴ τυνουσαι πραγματος νικηφόρον) As the play will later show, by the necessity itself of the trial’s introduction, the jurisdiction of Apollo is limited to “partial” lustration, a practice that coexists with, but does not substitute for, that of perpetual pursuit. We should not consider his capability to purify to be superfluous or revolutionary. It was ratified by other divinities and endowed with the
venerability of detailed sacred rituals. Athena admits its usefulness and legitimacy. It is effective when a suppliant needs to purify his hands in order to touch a sacred image (vv. 473-474: ἀλλοις τε καὶ σὺ μὲν κατηρτυκώς ἐμίοις/ικέτης προσηλθός καθαρὸς αφλαβής δόμοις), but it does not work to absolve a matricide of his guilt just by means of this ritual. This is why the Erinyes do not cease to follow Orestes. Here comes the revolutionary and trespassing potential of Apollo: when he tries to use his purifying ritual to substitute for their function. His attitude is therefore either an abuse or a revolutionary signal that restructuring is necessary. It cannot be ignored, nor can it coexist with the other form of expiation.

Interpretation is his most obvious form of trespassing: he fights by means of definitions; he uses apparently consecrated concepts with slightly different senses and, when necessary, even chameleonic changes of his roles within the trial. He is all together accomplice, advocate, host for a suppliant, and tentative judge, until the Erinyes manage to protest, forcing him by their denial to look for a new solution. Only then, does he entrust this task to Athena and to the Areopagites.

This actual polymorphism is more democratic than constitutional, even when Apollo uses (and abuses of) weighty concepts and venerable principles (a “constitutional” territory). He will always try to re-determine them (see the definition of the maternal womb:vv.658-659: οὐκ ἐστι μήτηρ η’ κεκλημένου τέκνου/τοκεύς, τροφὸς δὲ κύματος νεοσπόρου).

Polymorphism itself enters the democratic vocabulary. Democracy tends toward plurality since, according to Wolin “far from evoking images imitative or monochromatic, mass society, is diverse and colorful. Democracy is unique in being
related to all constitutions; it is not so much amorphous as polymorphous”\textsuperscript{19}. Within his rapidly adjustable behavior, Apollo combines and uses alternatively all methods in order to save his favorite: physical protection (the shelter space defined by his altar and by Ayhena’s statue: vv.79-80: \textit{molw} \textit{de} \ Palla/\textit{doj poti} \ \textit{pto/lin / i(/zou palaio} \textit{n a)/gkaqen labw} \textit{n bre/taj}), verbal support (vv.81-83: \textit{ka)kei= dikasta}\j \textit{tw=nde kai} \ \textit{qelkthri/ouj/ mu/qouj e})/\textit{xonte}j \textit{mhxana}\j \textit{eu(rh/somen,/ w(,/st' e)}j \textit{to/ pa=n se tw=nd' a)palla/cai po/nwn}), and the network influence (vv.88-93: brotherly network; he entrusts him to Hermes; and in vv. 723-724 the Erinyses are complaining about his tendency to use influence: \textit{toiau=t' e)/drasaj kai} \ \textit{Fe/rhtoj e)n do/moi}j: /Moi/raj e)/\textit{peisaj a)fqi/touj qei=nai brotou.}) He prefers to change masks and avoid uniformity and frankness. He switches functions, he adjusts and reinterpret gestures and speeches (vv. 202-205: \textit{Xor: e})/\textit{xrhsaj w(,/ste to\n ce/non mhtroktonei=n./ 0Ap:e)/\textit{xrhsa poina}\j \textit{tou= patro}\j \textit{pra=cai. ti/ mh/n;/ Xor: ka)/peiq' u(pe/sthj ai(/matoj de/ktwr ne/ou./ 0Ap 0:kai\ prostrape/sqa}i to/sd' e)pe/stellon do/mouj./ Xor: kai\ {ta}\j \textit{propompou}\j \textit{dh=ta ta/sde loidorei=j;/ 0Ap: ou) ga'r do/moisi to/sde pro/sforon molei=n.}) and he permanently shows his predisposition for changing, reversing and extending, both in his acts of encouragement and in his biased redefinitions. His use of precedents within the trial (vv.664-665: \textit{πατὴρ} \textit{μὲν ἀν γένοιτ' ἀνευ μητρός: πέλας/μάρτυς πάρεστι παίς} \textit{Ολυμπίου Διός, /ουδ' ἐν σκότοις νηθός}

\textsuperscript{19} Wolin, \textit{op. cit.} p 50.

\[\text{τεθραμμενη}\) has the same undermining power. In his concept it is not the venerability of the rule that wins credit, but the novelty of the vivid example, its potential to alter and innovate within a stable system of customs and rules. Apollo is definitely an anomalist in his speech, always looking for an alternative to the uniform. Its metamorphic potential is also obvious in his predisposition to rely in his discussion more on persons than concepts. Even if he talks in a formal theoretical way, his speeches are bringing “personalized” arguments (like the case of Athena or Zeus, brought in discussion vv.660-666 and in where he opposes to the Erinyes speech on principles the power of Zeus who does what he pleases). What he does is coherent with the democratic power set by Wolin, power that opposes to the constitutional question “what should rule”, the problem of “who should rule”\(^{20}\). This view opposes the constitutionalism since “the essence of the contrast, which became, as well, the essence of constitutionalism, was between depersonalized principles and partisan politics”.\(^{21}\) Apollo is convinced that non-abstract instances have more power than the governing abstractions and this is why he keeps bringing the image of Zeus father and all the emblematic figures that could support his authority.

In Griffith’s terms, Apollo is a (disgusting) “aristocrat”, since he uses hetaireia as a tool of bribery and doryxenia as its associated arsenal. “We have already noted how, in the first two plays, Zeus is presented as Agamemnon’s ‘spear-friend’ (doryxenos) in the capture of Troy, and how Apollo and Hermes operates as Orestes’ ‘sworn companions’ in his return from exile and conspiracy for revenge.”\(^{22}\) Griffith has an entire beautiful theory about hetaireia and doryxenia among gods and the protagonists of Aeschylus’

\(^{20}\) Wolin \textit{op. cit.} p.46.
\(^{21}\) Wolin \textit{op. cit.} p.46 and 47: Law is according to him defined by “depersonalization and objectivism”, concepts that Apollo defies by his personalized and subjective examples of authority.
\(^{22}\) Griffith, \textit{op. cit.} p. 98. He also will demonstrate in a very useful way for us, how democracy is eluded by the end of the play by this aristocratic elite and its networking.
trilogy that extends to his entire article. In a different system, in Wolin’s terms, Apollo would be actually called a “democratic demagogue”. The Erinyes are pretty aware of his previous ”disrespectful” actions of insubordination and predisposition to work subtly and opportunistically to arrive at the end he desires. (vv.198-200: οὐναξ Ἄπολλον, οὔτακουσον εν μέρει/αντίς σὺ τούτων όν μεταίτιος πελὴ ἀλλ ἐι τὸ πάν ἐπιραξας όν παναιτῖος). He accumulates both the qualities of a culture hero (protective, trespassing and trickster with his enemies) and those of a democratic agitator. His noble lineage should not surprise us as unusual for the democratic game. Often prominent elite figures were agents of democracy (see Wolin on democratic demagogues, p. 41-42).

His demagogic skills are actually pretty coherent with his non-constitutional predisposition. As Wolin was underlining, democracy, as opposed to constitutional government likes to focus more on persons than on concepts and this is exactly what Apollo’s predisposition is: to interfere, to agitate and impose his presence within the political practice. He also uses images of personified forces, when he tells Orestes to go in the “safe” company of Hermes or to hold onto Athena’s image that could protect him. He is combating the Erinyes’ force of gnomic concepts with the refreshing power of personifications.

Athena- a compromising presence

If Apollo is showing by his polymorphism a more obvious orientation towards the democratic moment, Athena has an innate predisposition for compromising and partial reconciliation with the old principles. Although acquitting Orestes, she will actually take care of the Erinyes and reform them into fertility forces, honored by the city and established at its foundations. The question asked here is: does Athena have a
predisposition for a “democratic rebellion”? It is a quite complicated argument, since
according to the text, she shows both democratic and constitutional characteristics in a
more balanced form than her brother. She is highly subjective and she admits it, stepping
beside any sterile concepts to affirm her position within a speech in which she uses the
example of her biological father (subjective argument) to solve a conceptual problem
about paternity (vv. 736-738: \( \mu	hetaηρ \gammaιρ οντις \varepsilonτιν \eta \mu \varepsilon\iota\iota\nu\iota \tauο \delta' \alpha\rho\sigma\nu \alpha\iota\iota \\piα\nu\tauα \pi\lambda\nu \nu\alpha\iota\nu \tauυ\gamma\iota\nu \alpha\'\alpha\nu\nu\tauα \\thetaυ\muο\nu \kappa\alpha\tauα \delta' \varepsilon\iota\iota \tauο\nu \pi\alpha\tauρο\zeta \)). Contrary to Apollo, her
final message is non-hesitant and less sinuous. She does not use tricky definitions and she
firmly prefers “palpable” relationships to concepts (her lineage to Zeus). Still, during the
trial she shows similarities with her brother’s polymorphism and tendency inward
questioning, as she interrogates the Erinyes leading them to develop their personal view
and explain their position in terms of abstract notions and venerable concepts.

Again, her attitude remains inconsistent when she decides to use a positive form of
reconciliation, instead of a brutal and more “according to democracy” solution of crisis,
like ostracism\(^{23}\), a method that was unsuccessfully used by her brother when the Erinyes
juridical field and the physical space of his altar (temporarily used as a shelter) were
intruded upon (in both geographical and semantic ways: vv. 208-209: Erinyes: \( \alpha\iota \iota \varepsilonτιν \eta\mu\iota \tauο\nuο \pro\sigma\tau\epsilon\tau\alpha\gamma\mu\epsilon\iota\nu \). Apollo: \( \tau\iota \eta\iota\deltaε \tauι\mu\iota \kappa\omicron\pi\alpha\sigma\omicron \gamma\rho\omicron \kappa\alpha\lambda\omicron \).). Athena’s
method, less radical than the absolute denial used by Apollo, is based on negotiation and
compromise. She is still disposed to vote without any further hesitation, a gesture that
makes her a rebel against the Erinyes’ authority. Nevertheless, she does not totally deny
their prerogatives, but actually tries to reshape them, according to the democratic crisis

\(^{23}\) See Wolin, *op.cit.* p. 46.
she just witnessed, but in view of a new form of constitution. Settlement of honors is in fact a constitutional gesture for her, even if it is filtered through a democratic movement of rebellion and fraternization with the opposite force, represented by Apollo.

She actually shows a slight discomfort towards the democratic moment, first of all because she is related to what is stable yet endangered in this game of political practice: the city of Athens. She definitely understands the political importance of the reform, but, unlike Apollo who is satisfied with the acquittal and ready to leave the scene, Athena tries to push the democracy to a new form of constitution in which the opposing forces and sides will be more or less neutralized and integrated within institutions. She is the only agent of this play who looks for a compromising form, still without showing any preoccupation for consensus: what she is actually looking for is not total satisfaction from all points of view (this would be actually impossible since there are already “losers” in this game) but a form of stability and a pact of mutual non-aggression. Here, as anywhere else, “the need for consensus, for unity, is demonstrated to be structurally ‘false’, procedurally unnecessary” 24.She is actually combining the form of constitution and democracy within a system, in which, if the forms are not perfect, they are at least “perfectible”25.

Even before her ballot, Athena showed a predisposition to use concomitantly both forms of democratic vocabulary and constitutional terms. Even her redefinitions were dealing with already existent structures and institutions. She defined the trial as a confrontation of two opinions that should be equally heard; she talked about Justice and Injustice, and she asked about the proper purification that was necessary for Orestes

---

25 Nelson, op.cit. p.236. Contrary to our expressed principles, Nelson integrates this concept into one of her democratic models, that of the “imperfect” Davisonian democracy: still, a form of democracy.
before touching her image. Within a double game of “political correctness”, she admits
the traditional function of the Erinyes (475-479) and their malignant potential and also
acknowledges the purifying function of Apollo. Griffith noticed her dual game, even later
in the play, when she summons the jurors: "So Athena, in creating and supervising (and
voting with) the Court of Areopagos, operates correctly and impartially as chief
magistrate of the city. But she also, in personally offering protection to Orestes and
representing him at law, is in effect serving as proxenos in Athens for the Argive royal
family."²⁶

Her opening speech of acknowledgement for the Erinyes and her implied fear are both
forms of ratification of their office. She even conducts the trial in a constitutional way.
This newly created institution is from very beginning endowed with ancient practices
(oath taking) and weighty concepts (Truth, Justice); nevertheless, she will still play the
undermining role, by gently substituting the leading abstract principles with more
concrete forms of relationship, based on personal acquaintances. She asks both the
Erinyes and Orestes about their lineage, and according to their answers she delicately
gives them more or less credit (vv.418-420 and for Orestes 436-437). Griffith is right
when he notices that Athena tends from the very beginning to be biased. “Although
Athena does not know why she has been summoned, and is unaware of the identity of the
suppliant crouched on the stage, her opening speech has neatly reminded the audience
(and, if he needed reminding, Orestes, too) of the connections established earlier in the
trilogy.”²⁷ Her interest in lineage is actually both a non-constitutional form (it substitutes

²⁶ Griffith, op. cit. p. 97; about her apparently impartial form of interrogating both the Erinyes and Orestes
see the following notes and references.
²⁷ Griffith, op. cit. p. 100.
concepts with persons) and an aristocratic practice operating within the patrilineal network (so, in a way, profoundly undemocratic).28

The inconsistencies and ambiguities can go even further in her final interaction with the Erinyes. She has just taken away their power and they enter into a form of crisis, which, paradoxically follow the “democratic” pattern of rebellion: in verse 978-their angst and fury is called plainly stasis by the Erinyes themselves (after they have been pacified). It is an apparent inconsistency, an “embrace” of a democratic moment, pretty surprising for these elements that belong to a constitutional realm. Still, if we look closer the Erinyes destructive tendencies are sufficiently motivated. By Athena’s ballot, they have been dissolved as representative of the punishing institution and, outside the constitution that was circumscribing carefully their action, their destructive potential runs wild and is exacerbated. They loved longevity, stability and authority. Once deprived of all these, they are also deprived of their constitutionality that was keeping them on their allotted territory: they will not pursue now just murderers, but they will infect with their venom entire Athens. They have always been violent by their nature, but at this point their violence is no longer contained by any office, institution, legislation and they “mutate” under the influence of this invasion.

Athena is wise enough to understand that what will restrain their force is a new form of constitution. Banishment, as a radical and democratic method, does not work for these forces. It can only irritate them. Her negotiation offers them a new constitutional realm, a mutated one in which they will instantaneously adjust themselves to their new function and become…benevolent. By investing them with fertility potential and by naming them

28 Depending on theory (Wolin’s or Griffith’s), this gesture could be integrated in opposing systems. It is not unusual as the gesture itself is interpretable and polyvalent.
(within a constitutional act) as benevolent, Athena appeals to their constitutional
tendency to “serve” and follow with total devotion their allotted “office” whatever this
might be. She tries to talk in their language from the very beginning and she uses her
intelligence to persuade them and adjust her speech to their needs. She knows that
Persuasion itself is going to be on her side. Apparently a notion that serves democracy,
used in the disputes of agora, it becomes here a capital accredited concept for an incipient
institution. Therefore, a democratic practice (demagogical also?) will be reinterpreted in
terms of a constitutional territory.

**Final ambivalences and possible solutions**

Athena’s initial problem with the Erinyes follows one more time Vernant’s pattern. She
needs to learn how to speak their language, to understand that between her use of terms
and theirs, there is a gap and a problem of definition. She keeps telling them about
exterior signs of their future honor, about “seats”, and adornments, without realizing at
the very beginning that they need a description of their “office”, more than of its exterior
signs (804-807: εἴρο γὰρ μὴν πανόικος νώσομαι/έδρας τε καὶ κενθμοῦνας ενόδου
χθονος/λιπαροθρόνοισιν ἡμένας ἐπὶ εὐχάραις/ἐξειν υπ’ αότων τοῦτο τιμλοφομένας while
they still complain about their lack of “honor”: 821-822: μὲ μεγάλα τοι κόραι
dιστυχεῖς/Νυκτὸς αἰτίμωθεν θεῖζ.). Both sides use time, with a different sense, but
fortunately, she will finally translate her thoughts into their own system. They will only
be mitigated when they will understand their functional, not just formal, reintegration
within the new hierarchy.

Another problem of ambivalence is that of the use of persons and weighty names of
gods and goddesses. As we mentioned before, this could be both non-democratic
(“aristocratic network”- in Griffith’s terminology) and non-constitutional (undermining of the prevalence of concepts). Apollo and Orestes use Zeus, Athena and Hermes as persons, in a demagogical form. They appeal to their influence and weight to undermine principles. Athena is a little bit more subtle. She uses persons to defy concepts, too, but she also creates concepts and abstractions out of persons. She reduplicate herself within an iconic image (the statue that Orestes embraces), but in that very moment her image detaches itself from her physical person, becoming an abstraction of herself and even an institutionalized new form. Similarly we could interpret the oracle of Apollo as an institutionalized abstraction of his person. We never totally denied his belonging to a constitutional system. Zeus can also be seen as a personification of a concept of power, rule and order therefore, any reference to him is sometimes ambiguous, as we do not really know if he is mentioned for his personal influence or for the influence of the supreme concept of authority he embodies. Actually, when Athena’s lineage from Zeus is mentioned, the Erinyes chose to credit her (vv.434-435: Athena: ἤ καὶ εἰμὶ τρέποιτ’ ἀν αἵτιας τέλος; Erinyes: ποι δ’ οὐ; σέβονσαί γ’ αξίαν καὶ αξίων.), possibly, because they see in Zeus a proof of a centralized system that gives them comfort in their thirst for constitutional order. In the same way can be interpreted also the problem of the Erinyes after their “restructuring”: they are mitigated, apparently stripped of their malefic potential and power and buried underground within a new beneficial form (vv.1022-1023: πέµψω τε φέγγει λαµµάδων σελασφόρων/εἰς τοὺς ἐνερθὲ καὶ κατὰ χθονὸς τόπους/ζῶν προσπόλοισιν, αἴτε φρουροῦν βρέτας τοῦ μόνον δικαίως.). Are they actually attracted by this act of mitigation, trapped to accept a solution of compromise that strips them of all their energy and basically eliminates them? Is the democratic power of speech so
overwhelming that even its enemies are controlled and neutralized by it\textsuperscript{29}? The principle of institutionalization might help us to redefine this thorny problem: the apparent gentle banishment of the Erinyes underground is a form of conceptualization. They are not dissolved but transferred to abstract beneficial principles. Their agreement and joy (all the last chorus lines in processional escort) is not necessarily a product of deceit. They are re-institutionalized and reintegrated (in proper and figurative sense) within the land of Athens. They are given a form of power, compatible to their values. They have never complained before, for their isolation or for the avoidance from the part of the Olympians. So, this “burial” underground is not something incompatible with their previous and natural predisposition: they have never been too social. A more delicate matter will be their inactivity and benevolence, incompatible with their innate tendencies of hyper-mobility and aggressiveness. Still, within a context of redefinition of functions, they will gently mutate to whatever is apportioned to them. Their innate (constitutional) predisposition for obedience in front of authorities, and “offices” will overcome any possible resistance in front of the mutation.

Wolin will come again in our help to clean a little bit the ambiguity that dominates the stage. According to his theory, we do not need to use pure concepts as “democracy” or “constitution”. We can therefore reintegrate this mass into extended principles of “democratic constitution” and “constitutional democracy”. Wolin uses “‘constitutional democracy’ and democratic constitutionalism” to signify alternatives rather than similar. The first term refers to a situation in which constitutionalization has priority over

\textsuperscript{29} The articles quoted in this paper and especially the arguments of Mark Griffith created an interesting dispute during the Greek literature seminar lead by Dr. Victoria Wohl. The question that was raised then and we point out here, is: “Are the Erinyes tricked by the final deal, by being seduced to hand over their power?”
democracy; the second, to a situation in which democratization dictated the form of constitution.”30 Therefore we are able to define the Erinyes as an initial more “pure” and therefore deficient constitution, in need of revitalization of principles. Here comes the democratic momentum/revolution, sustained by a polymorphic centrifugal force that requires reform: Apollo. The trial moment accumulates strongly democratic elements (speech, argumentation, ballots and “equalitarian” freedom of opinion31). Still it is a transitory moment of democratic victory, as it is meant to end with a new establishment and a new balanced form (democracy cannot survive, as it is unstable, and it can never constitute a form: ”Democracy … lapses ‘in course of time’. Democracy is a political moment, perhaps the political moment, when the political is remembered and recreated.”32) Therefore the trial moment is a combination and it can be called an attempt at “democratic constitution” in which we see the investiture of the jurors with equal rights, but also their silence in front of the elite, that ultimately will have the power to cast the decisive ballot33. We deal with what Griffith calls “a discourse produced by the elite, but licensed and approved by the citizen masses”34. As a corpus, jurors are amorphous and they basically neutralize each other’s power and permit Athena (the elite) to impose her

30 Wolin, op. cit. p.39:”The democratic practices of rotation, lot, and ostracism, by emphasizing ‘taking turns’ in office or banishing those whose power or prestige seemed to threaten democracy, struck directly at the debasing effects of rule conceived as a superior-inferior relationship”, also: “Democracy does not complete its task by establishing a form and then being fitted into it. A political constitution is not the fulfillment of democracy, but its transfiguration into a ‘regime’ and hence a stultified and partial reification.”

31 Casting lots and ostracism are democratic principles according both to Wolin (op. cit. p.46) and Griffith (p.109).

32 Wolin op. cit. p.55. He also added that democracy has an improbable realization (p.38-“impractical scheme of government”). As Euben said, “real politics requires that things, events and people be or become measurable and commensurable, and action be or be made calculable”, op. cit. p. 158

33 For all the problems and solutions in this paragraph see also M. Griffith’s article, mostly the quotations from the following notes.

34 Griffith, op. cit. p. 111; again we see at Griffith this fine analysis of biased behavior cleverly disguised.
non-democratic view. 35 This trial is controlled by democracy but has a certain centripetal motion towards a centralized authority.

Therefore, what she will install in the end, as a new constitution creator and mediator will be a “constitutional democracy” (construction “designed not to realize democracy but to reconstitute it and, as a consequence, repress it.”-Wolin, *op.cit.*, p. 32) in which even if in impossibility of consensus 36, the forces will balance each other. As Wolin considers, in fact, democracy, rebellion and constitution do not necessarily exclude each other, but in a way, succeed chronologically and eventually install each other in more or less “normal forms” :”When they (revolutions) succeed, most of the constitutions subsequently adopted were characterized as ‘democratic’. Yet, a vast change had taken place in the character of politics from the revolutionary to the constitutional moment.”37.

---

35 See Griffith, *op. cit.* p. 97, also present at p.103 and 111 “neither elite nor demos probably realize to what extent they are collaborating in the affirmation of social hierarchy and inequality.” In a slightly different key-code Griffith affirmed the same thing about this victory of non-democracy: “no less interesting, I suggest is the process whereby within the new apparatus of democratic government, the old families are revealed as continuing to find ways to maintain their prestige and integrity through the old channels”.

36 This would probably fit what Nelson calls “the ugly democracy”, as opposed to the utopist/ideal form of consensus. See also Griffith-“solidarity without consensus”-p. 110, talking about the political “happy ending” in *Oresteia*.

Abstract

Computer assisted learning (i.e., Lasarenko, 1995; Levine & Moore-Diaz, 1996) and the use of multimedia materials (i.e., Eastment, 1996; Turner, 1992) in classrooms have been found to be effective on teaching and learning practices. Although there is a still-developing industry on educational software, some researchers suggest that the use of digital media and internet as tools for learning may enhance learning and teaching activities (Chapelle, 1997).

This workshop will provide a hands-on experience on how to create simple and inexpensive video materials for the classroom and how to share it with colleagues, teachers, and students on WorldWideWeb. Furthermore, several electronic assessment tools to enhance the teaching/learning practice will be introduced and their uses for educational purposes will be demonstrated with examples. Participants will learn how to easily create their own multimedia materials, engage in collaborative learning activities on the internet, collaborate with other teachers and learners all over the world, and enhance their learning and teaching experiences with the use of digital media and the electronic assessment tools.

THESE ARE THE TIES THAT BIND:

BONDS OF INTELLECTUAL AND EMOTIONAL INTIMACY WITHIN POLYGyny IN SOUTHERN OMAN. A PILOT STUDY.

Profanter Annemarie, Cate Stephanie Ryan

This pilot study using social science methods of community based participatory research explores the intimate bonds associated with polygynous marriage in the southernmost region of the Sultanate of Oman, Dhofar. The target population is derived from traditional tribal society. The study centers around the inter-generational and cross gender experiences of marital partners involved in polygynous marriage. A combination of quantitative measurements and in-depth interviews was used to investigate the hypotheses. The variables investigated include marital arrangements, emotional impact, and intellectual validation. A highly significant effect on the variable parental involvement is overall found for gender. Statistical analysis shows a high percentage of parental involvement for daughters' marriages but no significant difference of the involvement in relation to their marital position. Parental involvement for sons' marriages is comparatively lower and significantly different in relation to their marital precedence. The analysis reveals further that there is a highly significant gender difference on the variables emotional impact and intellectual validation of polygynous marital arrangements. The statistical findings are further supported by the categories emerging from the qualitative analysis: “fertility”, “marriage as a reward for men”, and “marriage as a protective institution for both genders”. These findings raise issues of freedom of choice, justice and equality of rights for husbands and wives in polygynous marriage arrangements.

Introduction

The cultural context of marriage in this primarily tribal society of Dhofar, Oman, is significantly different than that experienced in more industrialized and urban societies. Cultural factors shape the formation of basic societal structures such as marriage and influence human behaviour within these social constructs. Factors such as tribal beliefs and artefacts, as well as values and ideas surrounding the concept of marriage are taken into consideration during the study and in data analysis. This cross cultural interpretation of an indigenous marital tradition allows a stronger comparison to be made to those marital systems more common in western environments.

Polygyny as a marital custom in this region is regulated by both tradition and Sharia law, which limits the number of wives per husband to four. The marriage process in this society involves numerous family and tribal members. Extended family and their involvement in the procurement of a suitable union through extensive use of the tribal connections, as well as the ongoing development of
the new family are embedded thoroughly within the traditions of polygyny in Dhofar.

The developmental processes which form the basis of this polygynous marital tradition are investigated as they relate to the variables arrangement of marriage, emotional impact, and intellectual validation. The researchers explored these impact factors holistically, taking into consideration the societal conditions surrounding such unions. The emotions, beliefs and values that are reflected in the participants’ responses highlight the impact of long standing traditional mores as well as the collision with the phenomenon of globalized mass culture and the changes occurring in this traditionally tribal and slow changing area. The goal of this paper is to analyze parental involvement in coalitions for mate seeking in Dhofar and the emotional impact and intellectual validation reported by polygynous partners within those coalitions.

Theories around Polygyny

“Cultural relativism […] cannot condemn any culture as a whole and hence no outsider can condemn any cultural practice […] If assessments or values are always derived from some culture, and there are no universal moral principles, then no culture can itself be assessed, because there could be no transcultural values to stand in judgment over any particular culture” (Windschuttle, 2004, para. 25). Cultures are dynamic sites of compromise, exchange, and incorporation. There has been extensive discussion within the academy, especially with regard to the phenomenon of cultural encounter as it relates to cultural exchange and acculturation. There are many marital systems and reasons for such unions, some of these are universal in nature and others culture specific; thus, in studying the ways in which the intimate bonds of marriage in this region are reflected in the polygynous practice in Dhofar the researchers attempt to expose some of the differences associated with the ideas and symbols of marriage and the various perceptions surrounding the system itself. The processes that are at the centre of cultural encounters have largely been explored outside the cultural context; however, the researchers of this study were intimately involved in the culture as both participants and observers over a five year period.

Polygyny, as understood by people from more monogamous sociocultural milieus, is often associated with exotic isolated societies where geographical conditions have influenced the variations in the form and frequency of polygyny. “Indeed a wide range of otherwise very different societies allow a man to be married to more than one wife simultaneously, and polygyny is even today a quite viable form of marriage in large parts of the world” (Bretscheider, 1995, p. 11).

The study of marriage and family interactions has formed a large part of anthropological and sociological research; thus, many theories have developed to support statistical data and expound upon these findings. Common theory holds that polygyny is often associated with two primary factors; one economic, associated with pastoralism or a combination of pastoralism and farming, and the other internecine fighting, which leaves greater numbers of unwed women due to
the loss of life of fighting age men. The first theoretical model regarding economic constraints has been detailed by many researchers; most recently with Low’s statement “[…] Developing nations today are undergoing demographic transitions to smaller families, as the West did in the 19th century (Low, 2005, p. 78). Martin and Voorhies (1975, p. 349) found that pastoralists who practice some agriculture tend to marry polygynously while those pastoralists who farm extensively tend to marry monogamously. This study’s findings tend to corroborate their results in that the Jibbali people of Dhofar who are pastoralists practicing some limited agriculture also have a general pattern of polygyny. The division of labor along gender lines can often indicate the incidence of polygyny. White (1988, p. 558) states that polygyny cannot be seen as “a single syndrome but is produced by diverse strategies and […] comprises different systems of meaning and function”.

The second theoretical model regarding warfare has been much less thoroughly examined (Bretschneider, 1995); however, in the region of Dhofar tribal warfare has been consistent and ongoing for centuries over territory, water rights, and herd animals; yet, since Sultan Qaboos took the throne in the early nineteen seventies such warfare has diminished substantially. However, the tendency to strengthen the tribe through polygynous bonds has continued until the present day.

Conventional sociobiological theory regarding polygyny states that there is a direct link connecting the diversion between male and female reproductive imperatives (Hartung, 1982; Symons, 1979; van den Berghe, 1979) that lies in the desire of males for more sexual diversity (Symons, 1979; Betzig, 1992). Kanazawa and Still (1999) argue in favor of “female choice theory” and disagree with the “male compromise theory”. Thus, they stress females’ role in determining mates. However, criticism put forward by Sanderson (2001, p. 330-331) states that the authors “ignore the importance of male choice, which surely must be at least as important as, and possibly even more important than, female choice”. In the Dhofar pilot study it was shown that the male dictates the lineage of the prospective spouse, whereas numerous generations of females influence the spousal identification and arrangement of the marriage. This is accomplished using communal ties involving tribal ceremonies such as birth, engagements, marriages, funerals, and visitations.

Religion, Culture and Polygyny

The ties that bind in the tribal society of the southern most region of Oman are multitudinous and far ranging. They extend through many layers of society and incorporate all generations. It is important to remember that Islam, unlike many other religions is a socio-political, socio-religious, socio-economical, educational, legislative, judicial and militaristic system. “The Qur’an mentions Shura as a principle governing the public life of the society of the faithful rather than a specifically ordained system of governance. As such, the more any system constitutionally, institutionally, and practically fulfills the principle of Shura—or, for that matter, the democratic principle—the more Islamic that system becomes” (Sulayman, 1996, para. 17). This principle acts as the guide for
determining aspects of public life that, in the West, are often associated with individual rights and family choice.

One tenet of Islam is that each Muslim must be able to read the word of God as it has been dictated, in standard Arabic, therefore this is a prescription that tightly binds all those who profess to be Muslim. In Oman there are 13 living languages; thus, many Dhofaris' first language is not Arabic; for example, the Jebbali people of the eastern Dhofari mountain region are raised speaking Jebbali and the Mehri, who inhabit Eastern Yemen up through the border of Oman, a desert area near Thumrayt, communicate in Mehri as their first language (Gordon, 2005). This requirement reinforces the pervading element of the Shura which is found within each Islamic society regardless of native culture, although the interpretation and application are often regionally shaded.

The societal approbation provided by the Sharia system of Islam affords each male the right to four wives at any given time (Yusuf, 1983, Sura 4, Verse 3), as well as an unlimited number of divorces, if called for, and is found throughout the Qur'an and Hadith etc. The process of polygynous marriage is embedded in the tribal culture of Dhofar and today prescribed and overseen by the parameters assigned by Islam. Cultures are liminal spaces within which transformation and concession are constantly taking place and stimulating evolutionary change at an idiosyncratic pace. Pastoral and agricultural societies often reflect the need for societal stability through a process of slow acceptance of change and rigid hierarchical structures.

Religion has traditionally been associated with revelatory processes and those who receive such revelations (Honderich, 1995). Yet, in this light Islam fulfills the cultural functions. Culture encourages reflection on human opportunities as they relate to a specific set of values regarding a perception of what life could be. So in this interpretation culture is seen as that mechanism which exerts control over the direction that the species is taking (Honderich, 1995). Thus, the religion-culture polarity/dichotomy (Bonney, 2004) might be readdressed in light of the argument as it relates it the contemporary and historical practice of Islam. “The Qur’anic philosophy of gradualism is predicated upon the fact that fundamental changes in human consciousness do not usually occur overnight. Instead, they require a period of individual or even social gestation” (Al-Hibri, 2000-2001, pp. 55-56). The cultural landscape of Oman is strewn with historical tribal affiliations which have often been renewed through the process of consanguineous polygynous unions which have been condoned and incorporated through Qur’anic interpretation. Thus, this region, isolated through both geographic locale and later through political intervention, has retained a strong semblance of cultural traditions present since the advent of Islam. Studies have shown that “there is a strong effect of geographic region on many variables such as parental proximity and degree of polygyny, even after controlling for other variables like mode of subsistence, stratification, and political organization, which suggests culture may be as important as ecology” (Marlowe, 2000, p. 56). In keeping with gradualism the effects of cultural inertia are easily observable through the collected data.
Cultural Construction and Individual Experience of Polygyny

Polygyny is inscribed within the cultural logic of the Dhofari people and is a subject of varied discussions. These arguments and ongoing dialogues are found within same sex interactions, between inter-generational communication, transversely cross gender encounters and cross economic lines. They are occasionally addressed as humorous, or as the state of being, and at times unavoidable conflicts that relate directly to the process of living. “There is every indication that polygyny is a highly problematic institution, surrounded by a considerable degree of ambiguity. The strongest criticism of polygyny is put forward by women, and in some cases a polygynous marriage might even be dissolved because of irreconcilable conflicts among co-wives” (Wittrup, 1990, p. 118). This is not necessarily the case for all women as seen in Dhofar: the situation is complex and full of cultural nuance. The societies in this region have utilized this form of marital system for centuries with few changes and as such there are many cases where it has proven itself to be an effective social structure. The following quotes, by wives in the study, represent some of the perspectives held by participants on polygyny: “The other wives are very nice, they helped me in the house with their children, to the extent where I almost never did anything anymore in the house. Also, my children were happy with them and helped them also”; “Advantages are the love that can be created between the wives and the support they can be for each other in housework. Also, lots of children is an advantage”.

The kinship system, a fundamental variable in this study, is essential to studying nuptiality patterns in Dhofar. One of the prime incentives for this study was the lack of research in the region regarding marital systems and these particular variables. However, the outcomes of other researchers in polygynous societies, often centered on the African continent, give insight into the manifestation of these variables cross culturally. For this study attention is paid to the interpretation of such data as it relates to the variable parental involvement in coalitions for mate seeking as well as emotional and intellectual investment those coalitions retain in the marriage itself. For example, according to Assimeng (1981) in a polygynous society of Ghana, marriage is seen to be relational between two lineages and not just a personal matter but communal in nature.

Historically, the strength of the tribe has been associated with the birth of more children; thus, one of the primary reasons stated for remarriage is a need for more children as well as offspring being seen as an Islamic imperative. Effah’s (1999, p. 382) finding support the statements of the Dhofari study participants: “Remarriages may be seen as not only a sign of dissatisfaction with one’s marriage but also as a quest for children”. Western assumptions predicate unhappiness with subsequent marriages due to perceptions related to martial satisfaction based upon a societal predilection for monogamous marriages. However, Small (1992, p. 146, 148) notes that “often marriages are arranged, but there is no reason to assume that the interests of females in an arranged marriage are necessarily different from the interest of the families involved […] Thus, arranged does not necessarily mean the woman is forced or coerced”. In this study some participants’ experience echoed Small’s statement: “His first wife
convinced him to marry me because I'm her best friend and she was not able to have more children so she saw that I was the best choice. But his first son didn't like me at first but now he is just like a son to me. We do a lot of activities together and we almost don't separate”.

In line with this study’s findings Buss’s (1994, p. 91) position is that, “even where matings are arranged by parents and kin, however, women often exert considerable influence over their sexual and marital decisions by manipulating their parents, carrying on clandestine affairs, defying their parents’ wishes, and sometime eloping”. The marital coalitions’ decisions regarding appropriate mates are also bounded by economic factors and differ depending upon the spouses’ relationship within the tribal system. As these research findings have highlighted, “African marriage is, to be sure, more than just a substitute for a tenancy contract. Traditional marriage is a transfer of woman’s sexual and reproductive rights, in addition to her labor, from her family to her husband, usually in exchange for money or gifts” (Jacoby, 1995, p. 942). These findings apply to Dhofar as well: the institution of bride-price is universal among Dhofars’ many ethnic and linguistic groups. One possible motive for polygyny, described by Posner (1981), is tribal stability through networks of kinship: “A man might marry several wives to form lasting ties of exchange among a large set of in-laws, thereby compensating for a lack of credit or insurance markets” (Jacoby, 1995, p. 942). This refers back to the economic model of polygyny cited above. The foundations of nuptial kinship coalitions in Dhofar are often organized around the patriarchal line with the females instigating the initial searches and the parents of the prospective spouses being involved extensively in almost all levels of negotiation. These coalitions reflect the shared tribal identity of the region and enhance the unity between those affiliates, thus reinforcing historical patterns of alliance building.

“Socioculturally speaking, consanguineous marriages are favoured in populations in which marriages are mostly organized within the geographical boundaries” (Padez & Abade, 1995; Naidu & Mascie-Taylor, 1997). However, Sueyoshi and Ohtsuka’s (2003) findings show the strongest influence upon closely consanguineous and polygynous marriages coming from Islamic teaching focused on traditional interpretations of the Qur’an. Thus, Dhofar’s demographic chart falls within their prescriptive outline as it has been a bastion of traditionally integrated Islamic Sharia. Research in Ghana has shown that “unable to prevent their husband’s second marriage, women are more concerned with their relationship with the new ‘rival’. Women often see the husband’s new marriage as an addition of potential burden, as the wives in polygynous marriages are expected to help each other, especially with childcare” (Agadjanian & Ezeh, 2000, p. 434). In Dhofar, first through fourth wife participant responses to their husbands’ subsequent marriages encompasses a spectrum of emotional expressions. For example, one first wife participant stated: “Husband starts paying too much attention to the new wife and neglects the old wife”. Study participants’ negative emotional responses are often bounded by: feelings of abandonment, a loss of trust in self, and frequently, the breakdown of normalized relations between husbands and wives:
“A woman is forced to share her husband, money, love, appreciation, with the new wife. That is horrible”; “I needed to marry again because I wanted more male children, because in my family I was the only man. I don’t want my children to grow up alone and lonely so, my wife was the one who encouraged me to marry again”. Both genders interviewed eloquently express their commitment to and understanding of, what is seen as both tribal and Islamic duty, which consistently override individual inclination. This coincides with the previous study’s findings; however, as reflected upon earlier the situation is multi-faceted and multi-textured.

The numerous opportunities for inter-relational connection and intra-familial ties expand exponentially when the numbers of polygynous partners increases. “In polygynous societies, cowives may be important reciprocators. If cowives are able to cooperate, collectively they may be able to gain more control over resources. […] However, conflicts among an individual woman, her husband, their joint offspring, and her cowives and their offspring can arise over allocation of resources as interest diverge (Yanca & Low, 2004, p. 11). “But simply to argue that women are ‘against’ while men are ‘for’ polygyny oversimplify a rather complex matter” (Wittrup, 1990, p. 118). This study found that positive emotional responses reflect an abiding sense of duty to the tribe and the sociocultural Islamic norms for more children and the husbands’ greater satisfaction as well as the need for single woman to find fulfilment within the social accepted structure of marriage.

In addition to the variable emotional impact, the variable intellectual validation as used by the participants for continuing the polygynous tradition was investigated. Ukaegbu and Ahmed delineated these reasons for men’s choice of polygyny in Muslim regions of Nigeria: the desire to reflect growing social status through subsequent wives (Ukaegbu, 1977; Ahmed, 1986); to marry consecutively in order to achieve status and social standing as well as to produce more labor for agricultural purposes (Ukaegbu, 1977). Dorjahn and the van de Walle’s both adhere more closely to the sociobiological theory referenced above and outline the following rationales for the practice: to meet the reproductive imperative due to infertile wives (Dorjahn, 1958), as well as to meet sexual needs due to societal norms regarding the taboo of sexual relations with breast feeding wives (van de Walle & van de Walle, 1989). One of the Dhofari male participants gave this motive for his move into polygyny: “She had a caesarean and it became dangerous for her to have more children and I didn’t want to risk her life because she’s the most precious person to me and because we understand each other”.

Women participants expressed intellectual reasoning which has both negative and positive connotation regarding the practice of polygyny. Some research on women’s intellectual responses outline that “in the higher-polygyny setting, polygyny is by no means an appealing option, but they also admit that ‘the man would go on to do what pleases him’” (Agadjanian & Ezeh, 2000, p. 434). This Dhofari participants’ experience reflects the finding outlined above: “Because men require attention all the time in every way and he is a selfish man and loves himself a lot and more than he loves his wife, so he is always looking
for renewal in his own life, by having a new woman to change his routine a bit". Intellectual responses are often expressed fatalistically and with a sense of duty and adherence to tribal custom but also with a sense of adaptability within the confines of these structures: “Of course the idea of multi-marriage is wrong to me, but circumstances forced me to accept it and I now consider the new wife as a sister and more.”; “It is therefore necessary to look into the nature of polygyny as it is culturally constructed and individually experienced” (Wittrup, 1990, p. 118).

Methodology
During a five year period from 2001-2006 the researchers were embedded in the sample communities and actively engaged in collecting data. Quantitative and qualitative data was collected by using observational and participatory social science methods. The parameters of the target population are reflected in the sample which consists exclusively of Muslims but includes Dhofaris of different ethnic and linguistic groups. For the variables analyzed in this paper, questionnaires, in-depth interviews and analysis of canonical secondary material were used as well as correlation coefficients and chi-square analysis to explore coalitions for mating strategies, intellectual validation and emotional impact. Questionnaires were devised using both open-ended and closed ended questions tailored to the target population and following cross cultural guidelines a back translation technique was used. Open-ended questions prompted subjects to investigate their own experiences of polygynous family arrangements and the social issues surrounding it, such as: familial involvement, kinship ties, and tribal influence. Interviewees were interviewed privately and questionnaires were also handed over on the same occasion. Participants were asked to list all marriages they had entered into and elaborate on the form of marriage arrangement for each marriage; furthermore, they were invited to elaborate on the coalitions for mate seeking encapsulating the tribal nuptial traditions. Moreover, the intellectual validation and emotional impact of remarriage on wives and husbands were assessed. Confidentiality was maintained at all stages. It is hypothesized that participants’ responses, both intellectually and emotionally, to the impact of polygyny, a foundational component of tribal life, and its effect upon and development of inter-tribal coalitions would be distributed across a broad range of reactions.

Results
1,192 people were involved in the field study on polygynous marital arrangements, the breakdown being 231 wives, 459 children and 103 husbands, all of whom were involved in polygynous unions and 399 from the local university’s student populace. The wives involved in polygynous relationships represent a cross selection of the general populace of women in the region. The ages at which these women first married range from 11 years old to 46 years old (M = 19.65, SD = 5.67) and the numbers of children they bore vary from 0-15 (M = 5.62, SD = 3.60). The various marital positions of the wives are as follows: 39.6% were first wives, 38.7% were second wives, 14.8% were third wives, 5.2%
fourth wives, and 1.7% were outside the sample parameters. The sample was analyzed by taking into consideration the composition of the individual polygynous families and the coalitions they formed, for example, the second wife could actually be the last married wife in a polygynous grouping—hereafter referred to as “last wives”—, and also first cousin to the first wife and second cousin to the husband.

Inter-generational assessment of potential marriage partners is conducted by both genders including such relatives as: aunts, uncles, grandparents, older siblings, mothers and fathers, and cousins on both sides, but primarily the patrilineal side. However, parents have a crucial role and will therefore be the main focus of this analysis. The search for suitable partners often occurs as early as childhood when local cabals of extended family members gather and begin assessing prospective spouses’ personality traits, societal behaviour and learning strategies, over tea or “ghawa” (local Arabian barley coffee) at a local matriarch or patriarchs living room or “estraha” (a resting place or picnic spot) often frequented by relatives. Female respondents commented on the opportunities for spousal evaluation afforded them because of tribal familial bonds: “I used to see him when he visited the family because he is related to us and from the same tribe. I also used to hear his news through family members”; “Yes I have seen my husband before the marriage, because he was my sister’s husband and my first cousin, and we live in the same village”; “He was a cousin so it was ok to see him and visit with the family”.

In general 63.5% of the participating wives stated that their marriage was arranged by parents but 36.5% stated that their parents were not involved in arranging their marriage. More precisely, 70.3% of first wives and 59.6% of second wives stated that their marriage was arranged by parents; moreover, 55.9% of third wives and 58.3% of fourth wives declared that their marriage was arranged by parents. Parental involvement in the arrangements of marriages does not differ whether daughters are married as first, second, third or fourth wives. The statistical calculations show no significant difference for first, second, third and fourth wives regarding the involvement of parents in the arrangement of their marriages ($\chi^2 = 3.406, df = 3, p = .333$).

The breakdown for the husbands, however, reveals a distinctly different picture: in general, 72.7% of husbands claimed that they chose their spouse without parental and family involvement, whereas 27.3% alleged that their marriages were arranged by their parents. More precisely, 48.5% of the husbands stated that their first marriage was arranged by parents, 14.7% declared that their second marriage was arranged by parents. Furthermore, 10.5% of husbands regarding third marriages and 7.7% of fourth marriages stated that their marriages were arranged by parents. The statistical calculation shows a highly significant difference for parental involvement in men’s first, second, third and fourth marriages ($\chi^2 = 37.806, df = 3, p = .000$). Parents are significantly more likely to arrange their son’s first wedding and less likely to arrange their second, third or fourth weddings. Consequently, parental involvement in the arrangement of their son’s marriages differs according to marital precedence.

10
The results obtained are supported by the husbands’ statements in in-depth interviews. The following quote belongs to a husband in a long term polygynous marriage; he illustrates a solid understanding of his position and ability to choose a spouse: “I have married the one that I have chosen and loved from the bottom of my heart and not my parents’ choice”. Moreover, the next quote exemplifies that after fulfilling tribal and family demands through the communal choice of the first and second wives, the subsequent marriage is associated with personal choice: “The first wife I married because of family pressures and so was the second wife but the third wife was of my choice”.

A cross gender comparison reveals interesting results: a significant gender difference is found for parental involvement in the first marriage of daughter and son ($x^2 = 9.350, df = 1, p = .002$). Thus, it is significantly more likely for parents to arrange their daughters’ marriage as first wives than their sons’ first marriages. Moreover, it is significantly more likely that parents arrange their daughters’ nuptial as second wives and significantly less likely that they arrange their sons’ second nuptial ($x^2 = 39.856, df = 1, p = .000$). Moreover, the same results can be found for daughters marrying as third wives and sons’ third marriages ($x^2 = 16.980, df = 1, p = .000$), as with fourth wives and sons’ fourth marriages ($x^2 = 7.354, df = 1, p = .007$).

The statistical outcomes support the findings revealed by the qualitative data; that is, the dominance and acceptance of male choice over women’s ability to choose for themselves, as shown in the following interview extract: “My family married me off to my cousin without asking for my opinion, because they saw that he was my cousin, so he has the full right to marry me”. One wife commented on her husband’s remarriage as follows: “Asking for my approval before they married me off was not important to my family. If they felt that the man was suitable for their daughter they arranged the marriage without asking their opinion”. The quotes emphasize the role of the family in nuptial arrangements of daughters which is based on the principles of the collective society structure rather than on personal choice.

The emotional impact of polygynous marital arrangements is related to the variables gender and marital order. As a consequence of the husbands’ remarriage(s) wives frequently mentioned having faced emotional problems: in particular, 63.3% of first wives, 22.4% of second wives, and 12.2% of third wives. Moreover, 2.0% stated that they didn’t know whether or not they faced emotional problems due to the remarriage(s) of their husbands. The statistical calculations show no significant difference on this variable between the wives in relation to their particular marital positions. Specifically, no difference is found between first and second wives ($x^2 = .003, df = 1, p = .960$), first and third wives (two-tailed Fisher exact $p = .344$) or second and third wives (two-tailed Fisher exact $p = .293$). In addition to the emotional impact faced by first through third wives due to their husbands’ remarriage(s), 46.7% of last wives reported facing emotional problems due to the particular polygynous family arrangement they were marrying into.

The percentage of husbands who report having faced emotional problems related to their remarriage(s) is only 5.2%, comparatively quite a bit lower than
for wives. Husbands being married to four wives, however, show the highest percentage of emotional problems faced after re-marriage(s). The inter-gender analysis reveals a highly significant difference in the emotional impact of remarriage on wives and husbands. Wives (first, second and third) are highly significantly more likely to face emotional problems due to their husbands’ remarriage than husbands themselves ($\chi^2 = 36.100$, $df = 1$, $p = .000$).

The qualitative data support the statistical findings as shown in the following interview extracts from first through third wives: “I have huge emotional problems. I often begin questioning my husband’s love for my children and I”; “In the beginning I suffered from emotional problems. I was devastated because he preferred another woman to me, but in the end I got used to it”; “I faced emotional and psychological problems because I am a wife who cannot stand to have a co-wife”. The following statements by husbands outline the range of emotional impact for them: “I faced emotional problems because I felt guilty towards my first wife”; “My life changed for the better because I was emotionally happy after my new marriage”; “I feared to lose my first wife emotionally because no woman feels okay if her husband married again but my wife was okay with it and me too”.

An analysis of the intellectual validation of polygynous marital arrangements likewise reveals an interesting picture: only 11.6% of wives indicate that they approve of polygynous marriages as a good marriage choice as opposed to 37.3% who do not approve; a total of 51.1% limit it to specific situational circumstances. A more detailed analysis shows that only 8.4% of first wives compared to 12.4% of last wives consider polygynous marital arrangements to be a good marriage choice. However, 39.8% of first wives disapprove of it compared to 33.0% of last wives. 51.8% of first wives and 54.6% of last wives limit approval to certain situational circumstances. The statistical calculations show no significant difference between first and last wives on this variable ($\chi^2 = 1.292$, $df = 2$, $p = .524$).

29.6% of the husbands validate multi-wife families being a good marriage choice as opposed to 19.4%. 51.0%, however, confine their intellectual appreciation to specific situational circumstances. The statistical calculations show a significant gender difference in the intellectual validation of polygyny: husbands are highly significantly more likely than wives to claim that polygyny is a good marriage choice ($\chi^2 = 19.861$, $df = 2$, $p = .000$). This result suggests that women’s intellectual validation of polygynous marital arrangements differs significantly from men’s, which raises issues of: freedom, equity of choice, and gender related power differentials as well as many others.

Among the situational circumstances mentioned above, the following three were most prevalent across genders and generations: “fertility”, “marriage as a reward for men” and “marriage as a protective institution for both genders”. The following interview extracts exemplify the three categories, for example, the following quote from a first wife shows her reasoning in the light of her husband’s remarriage in relation to the category “fertility”: “I am the one who insisted on his remarriage because I discovered that I had a sickness where I couldn’t give birth to children and because my first child was a test tube baby so I asked my
husband to marry my friend. We are one family and we live together and work together and we are waiting for a new baby from the third wife”; “[Polygyny] gives the man a chance to have more children if his wife cannot give birth”. The following statements demonstrate intellectual validation of other wives related to the category “fertility”: “He had already decided to marry and there was nothing I could do about it. To be honest, I encouraged him because he wanted more children”; “I agreed because I didn’t want to be unfair. I still hadn’t had any children by then and it had been ten years”. The next statement by a second wife relates to the category “marriage as a reward for men”: “He is his parents’ only child, and he had heart problems and was forced to undergo a dangerous operation. Due to the operation’s success, he decided to celebrate by remarrying. I didn’t feel anything negative because I am a second wife and I shouldn’t complain. In the beginning, I was horrified at his idea of marrying the third wife but when he explained his situation I understood and wished him happiness”. The subsequent statement from a first wife shows her intellectual validation for remarriage which is focused on the protective mantle of marriage: “He was studying abroad and needed someone to serve him and help him”; “Wanting to raise the children of his deceased brother”.

The following statements are examples of husbands’ intellectual validation of remarriage(s) related to the three categories “fertility”, “marriage as a reward for men” and “marriage as a protective institution for both genders”: “I married the second wife because I wanted more children”; “I told the first because she is my cousin and she knew my reasons for remarriage, which are raising the children of my brother who died”; “I told my first wife that I loved a woman, I want to get married so that I didn’t have to commit adultery and look for excitement outside marriage and I told her that I needed renewal in my marriage”.

Discussion

This study breaks new ground by investigating participant responses to polygyny in a cross generational and cross gender approach, shifting the focus from a feminine perspective to a more inclusive study of both genders’ responses to polygynous marriages, intellectually as well as emotionally.

The results could be interpreted as a first indication of what the interviewees have observed: apparently wives are more likely than husbands to observe or talk openly about the emotional impact of polygynous family arrangements. In the interpretation of these results, however, some possible bias has to be taken into account: reason for the bias could be that females are more sensitive towards the issue and therefore observe and report more precisely. On the other hand, it could also be that females want to provide the “expected” results to the researchers. In particular, considerations of “social desirability” could have affected wives’ answers and they could have been motivated to answer in line with what they believe the interviewers wished to hear, perhaps in order to please or to be helpful to the interviewers. Furthermore, it could be that the answers of males are purposely biased due to a moral or emotional conflict so that a tendency to under-report emotional impact factors could have been come into play and, therefore, reveal a biased picture of family reality. This opens
a broader discussion regarding problems with interviewer bias (Wimmer & Dominick, 1997) and raises issues about the validity of the information gathered with interviews in general (Robson, 1993). However, the researchers made every effort to attain clean data and use social science research methods which were culturally appropriate from both an ethnographic and statistical standpoint.

The study population has maintained traditional Arab marriage norms, represented by high rates of parental involvement in nuptial arrangements as well as in coalitions for mate seeking. The bonds which exist prior to consanguineous polygynous marriages are further reinforced and strengthened thus ensuring a continuation of traditional practice which continues fairly undiminished to date; however, the preceding sections show the breadth of response from a comparatively homogenous sample of Dhofari tribesmen developing the hypothesis that intricate and elaborate rationales are often employed to validate polygyny in today’s world.

The principle of Shura that provides the societal web of jurisdiction in conjunction with tribal tradition remains an integral facet of Omani life. The Sultan’s commitment to more gender integrative workplaces has at times called into question his commitment to more traditional interpretations of Sharia. Hilsdon and Rozario (2006, pp. 333-334) argue that “At the international level, the shari’a as a code of laws underpins the Universal Islamic Declaration of Human Rights (UIDHR). However, as Mayer (1995, pp. 79-92) and Bielefeldt (2000, p. 105) argue, the notion of equal rights in UIDHR is not the same as in UDHR (Universal Declaration of Human Rights) or CEDAW [Convention on the Elimination of All Forms of Discrimination against Women]. Rather it is underpinned by ideas of male and female complementarity. This brings it into conflict with CEDAW, which precludes treating women differently on the basis of their sex. In fact, Muslim feminists have formed alliances with secular feminists to protest against the gender biases of law derived from the shari’a (Mir-Hosseini, 1996, p. 318). The 1993 World Conference on Human Rights in Vienna and the 1995 Beijing United Nations Decade for Women Conference, for example, exposed the exclusion of the family from the definition of human rights (Kazi, 1997, p. 143; Bielefeldt, 2000, p. 111), and provoked considerable debate about laws that govern relations between men and women in marriage, divorce, inheritance, guardianship and custody of children (Kazi, 1997, p. 141). Historically, in the West “[…] the Christian Church in the 4th century AD imposed the regulations that made the monogamous nuclear family the predominant family form (i.e. […] condemned polygyny […] and remarriage” (Korotayev & Bondarenko, 2000, p. 204). Goody (1983), made the suggestion that the church was motivated by more than spiritual principals in its efforts to obtain property from couples without legitimate male heirs. As seen in the study’s results the emphasis placed on offspring in this region negates or minimizes that concern.

The net of development has encircled this historically tribal and traditional region with a fast growing economy, an influx of tourists from around the world and a fast growing media with a strong Muslim focus. These impact factors are slowly encouraging a reassessment of embedded cultural behaviour patterns; however, the insights gained from this study reflect this areas strong identification
with its historical cultural identity and its commitment to retain as much as
possible of that identity while adapting components of mass global culture to its
own advantage. “Culture may be thought of as a causal agent that affects the
evolutionary process by uniquely human means” (Bonney, 2004, p. 31); thus, this
study’s glimpses into the ways in which traditional tribal marital coalitions are
negotiating a path through these new influences while retaining their position as
the arbiters of marital success reflect that evolutionary process.

The individual responses to, the need for, or rationales to polygyny reflect
these negotiation strategies as reflected in the categories outlined above:
“fertility”, “marriage as a reward for men” and “marriage as a protective institution
for both genders”. These categories highlight the perceptual differences in the
East and the West regarding male and female needs and responsibilities and
even base natures, which are supported by traditional values and Islamic
guidelines. Indeed, “in Islam, fertility is highly prized and children are seen as a
gift of God to bring ‘joy to our eyes’ (Q.25:74)” (Bonney, 2004, p. 28). Dhofar
remains concerned with the productive alliances which can be established
through polygynous marriage and are supported by sections of the Hadith and
the Qur’an. “Among those norms, females’ […] lack of freedom in choice of
marriage or divorce, and their subordinate position in the family” as being closely
related to high fertility, are outlined by Sueyoshi and Ohtsuka (2003, pp. 521-
522). Their findings are confirmed by the significant gender difference in the
intellectual validation of polygynous marital arrangements found in this study
which, indeed, raises numerous issues, some of which are: freedom, equity of
choice and gender related power differentials. Moreover, the qualitative
categories emerging from the study—with the category “fertility” clearly being the
strongest argument for intellectual validation—, encompass further evidence for
this line of discussion.

To conclude, children are an omnipresent facet of the polygynous marital
debate and provide both validation and continuity of line and tradition in Dhofar.
The coalitions that form to facilitate their arrival, as well as to ensure marital
status for all, are ones that derive their roots from long held traditional patterns.
This region’s experience of its ethnicity and shared racial identity continues to be
evincing in these strong bonds which have stood the test of time and continue to
form the basis of familial support and stability.

March 2007
AN “EDUCATIONAL EMERGENCY” HAS BEEN DECLARED:
CORPORAL PUNISHMENT AND ITS IMPACT ON CHILDREN AND YOUTH IN PAKISTAN.

Profanter Annemarie

Children throughout the world from Asia to America are exposed to domestic violence; however, the prevalence and forms of violence differ from society to society (Save the Children 2001). The process of officially and internationally outlawing corporal punishment of children has been supported by such international organisation as the United Nations. And although a number of nations have officially banned corporal punishment of children and youth by signing and ratifying the UN Convention on the Rights of the Child (United Nations, General Assembly 1989)—one noticeable exception is the United States of America which has signed it but not completed the ratification process (Office of the United Nations High Commissioner for Human Rights 2007)—, the issue is a matter of public concern due to the importance of the signee, and as such on the global agenda. From the moment this international document entered into force in September 1990, non-negotiable standards for all governments have been applied to protect and ensure the rights of children of signatory states: “state parties shall take all appropriate legislative, administrative, social and educational measures to protect the child from all forms of physical or mental violence, injury or abuse, neglect or negligent treatment, maltreatment or exploitation including sexual abuse, while in the care of parent(s), legal guardian(s) or any other person who has the care of the child (United Nations Committee on the Rights of the Child 2003, article 19).

The Islamic Republic of Pakistan—“Pakistan” in Urdu means the “land of the pure” (Reference Library Encyclopaedia 2001)—was one of the first states of South Asia to sign and ratified the convention in 1990 (United Nations, International Children’s Emergency Fund 1998b; 1998c). The implementation of legislation and of impositions stipulated by the convention, however, are a major concern repeatedly pointed to by
The Committee is deeply concerned that the State party’s Penal Code (sect. 89) allows for physical punishment to be used as a disciplinary measure in schools and at the fact that physical punishment is widely practiced, especially within educational and other institutions and within the family, many times resulting in serious injuries. [...] 43. The Committee recommends that the State party, as a matter of urgency: (a) Repeal section 89 of the Penal Code of 1860 and explicitly prohibit all forms of physical punishment; [...] Undertake well-targeted public awareness campaigns on the negative impact of physical punishment on children, and provide teachers and parents with training on non-violent forms of discipline as an alternative to physical punishment. [...] g) The code of conduct for teachers does not prohibit physical punishment, nor does it deal with the problem of violence against children in school. [...] (h) Introduce, strengthen and systemize human rights education, including on the rights of the child, in school curricula, beginning in primary school; (i) Take proactive measures to eliminate violence against children in schools, notably by including in the code of conduct for teachers the prohibition of physical punishment and by limiting the role of school counsellors to those functions that help the pupil and revoking their disciplinary functions” (United Nations Committee on the Rights of the Child 2003, pp. 8-9, 13, 14).

Although this report details straightforward recommendations, its impact on the social life of children and youth as well as on the legal status of children was barely noticeable. National legislation, e.g. section 89 of the Pakistan Penal Code, allows for “moderate” and “reasonable” punishment: “acts committed in good faith for the benefit of children under 12 years of age by or with the consent of the guardians” (Khan 2003, para. 26). Conditions for legal actions against adult-offenders rely on the principles of: a) it being administered in bad faith and b) causing severe injury. This regulation clearly conflicts with articles 28.2 and 37 of the Convention on the Rights of the Child which protect children against all types of corporal and psychological violence from adults: “[...] no child shall be subjected to torture or other cruel, inhuman or degrading treatment or punishment” (United Nations Convention on the Rights of the Child, 1989, p. 10).
The United Nations Committee on the Rights of the Child (1994; 2003; see also United Nations Convention on the Rights of the Child 2000) pointed to the need for alignment of provincial legislation especially in tribal areas where the situation appears to be worse, such as in Provincially Administered Tribal Areas (PATA), Federally Administered Tribal Areas (FATA), Kashmir and Northern Areas (United Nations Committee on the Rights of the Child 2003; cf. Raza 2004). However, through various actions the government demonstrated willingness to tackle the problem: for example, in December 2003 Federal Education Minister Zobaida Jalal launched an attempt to outlaw all forms of corporal punishment in educational institutions (Daily Times 2003) following news reports of thousands of runaway children due to mistreatment by teachers and parents (OneWorld South Asia News 2003); moreover, particular provinces such as Punjab attempted to outlaw corporal punishment but implementation fell short (Bitensky 2000; Khan 2004), a “Relief and Complaint Cell” for reporting incidences of corporal punishment was launched (Daily Times 2003), an official letter by the Ministry of Education was sent to all teachers addressing the issue and at the same time the formation of 80 laws dissenting the UN Convention on the Rights of the Child was designed (OneWorld South Asia News 2003). Also in the North-West Frontier Province corporal punishment was outlawed in 2003 and through an educational campaign application of alternative educational methods was promoted (Khan 2004; United Nations, International Children’s Emergency Fund 1998a).

Although judicial foundations would promise a confinement of incidences of corporal punishment, the “blue reality” in Pakistan’s provinces appears not quite as bright (SPARC 2004): “Corporal punishment remained prevalent at the vast majority of schools, and students reported being violently beaten with rods, rulers, shoes, iron bars and shoes. In a number of cases, students suffered serious injury as a result of such beating—meted out for offences such as failing to complete homework, giving an incorrect answer to a question or not having the right textbook” (Human Rights Commission of Pakistan 2003, p. 308). Repeatedly reports of corporal punishment in the N.-W.F.P., where data for this study were gathered, highlight that legal provisions have little impact on the educational and social reality. For instance, research shows that the majority of school heads in that province consider corporal punishment as inevitable (United Nations, International Children’s Emergency Fund 1998a).

Another study carried out in the province by UNICEF and the National Coalition on Child Rights demonstrates that commonly corporal punishment in primary schools is justified as the most appropriate means of keeping discipline, building character and facilitating learning, that headmasters are scarcely aware of any code or regulation concerning corporal punishment by the Education Department, that a range of methods are used to corporally punish students from pulling ears to beating with sticks, and that severe injuries of students such as the following reported by a head teacher of a governmental primary school in Jalala, in the District of Mardan, proved to be no rarity: “A boy fell unconscious as a result of severe beating. Next day the boy’s uncle came to school. The concerned teacher had brought a loaded pistol with him. I intervened and sent the man back. Next day, I circulated an order, prohibiting physical punishment. The teacher involved in the incident, refused to sign the order. Instead he put the pistol’s magazine in the order book” (NGO Coalition on Child Rights–Pakistan 2001, p.15). Moreover, the study reveals corporal punishment being endorsed by the majority of parents in a belief that it facilitates learning and builds character. Likewise, severe incidences of corporal punishment of children are reported, for example: “My son lost consciousness as a result of severe beating. He was taken to hospital for treatment” (NGOs’ Coalition on Child Rights–Pakistan 2001, p. 20).

Following alarming reports like this, the author makes an attempt to provide some insights behind the curtain of statutory provisions by studying the issue of corporal punishment in Pakistan. The issue is analysed by using student and teacher data obtained through a combined structured and semi-structured interview technique in a study carried out in one of Pakistan’s traditional strongholds: the North-West Frontier Province. Within this province the focus of the analysis is limited to the District of Peshawar. The daily experiences of children and youth at home and in formal educational settings is one major study focus. Furthermore, the twofold involvement of teachers, firstly, as potential victims during their upbringing, and secondly, as potential punishers due to the fact that they are now working as professionals in the
educational field, is analysed. Contemporary attitudes and personal feelings of former victims and current punishers are analysed and presented along with personal experiences of the issue.

In summary, the results support previous findings on the high prevalence of corporal punishment of children and youths. Likewise, results support the frequently found gender imbalance with regard to the practice of corporal punishment and in relation to fundamental beliefs. The controversial nature of the issue is discussed by taking into account traditional beliefs with an aim to identify some basic recommendations in order to effectively deal with the problem in the future and to contribute to the dispel of the conservative and culturally motivated idea of childhood and education prevalent in the country. One major aim of this research is to increase understanding of the basic educational and social realities in Pakistan and to build awareness in the community for this issue which—in the clutter of precarious issues which warrant attention and further study—tends to be underrepresented internationally.

To conclude, the Human Rights Commission and other International Organizations have declared an “educational emergency” for Pakistan in terms of the effectiveness of its educational system and the educational methods utilized by teachers and parents (Human Rights Commission of Pakistan 2003, pp. 326-327). The country’s educational system ranks among the world’s least effective in terms of its ability to educate its citizens. This article highlights one of the major challenges posed to the educational system and attempts to give some insights into the educational reality of the Islamic Republic of Pakistan.

This paper is one of an ongoing series addressing corporal punishment in Pakistan as the country is trying to cope with this increasingly prevalent issue. A more detailed illustration of the findings and the impact of corporal punishment on children and youth can be found in the following monograph: Profanter, A. 2007. “Che Charta Dab Dey, Halta Adab Dey” A Pushto Saying Meaning “Where There is Physical Punishment, There is Order and Respect”. Frankfurt am Main et. al.: Peter Lang Verlag.

Personal Advertising: Building Trust in a Distrusting Society

Abstract

This paper addresses personal advertising as an example of trust-building and describes the various ways in which personal advertising is used to engage in building interpersonal relations in U.S. society. The paper frames the discussion of personal advertising within the larger framework of social trust, restating the impact of technology and globalization processes on interpersonal relations. In a period when issues of diminishing trust, attenuated social ties, and the collapse of community are being touted, personal advertising represents a mode of trust-building embedded within various constraints (lack of face-to-face interaction or the screens of family and friends). The liberating aspects of personal advertising are also highlighted along with the ways personal advertisers build trust so that anonymous others become acquaintances, friends, and even significant others. Other postmodern forms of courtship (speed dating, coffee-mating, safari flirting, video dating, “just lunch” or “eye contact”) are also described and recommendations are made regarding the impact of technology and the ways in which persons negotiate, innovate and meet the challenges of the postmodern world.

RESUMEN

The report purpose is to show how grow up one community when is oriented to improve themselves by non formal capacity program. This is a study in progress support by strategy alliance between “Simón Bolívar” University, “Technological Park Sartenejas Foundation and Citibank Foundation. In this moment, the planning phase and execution phase are ready. The program is designed to provide knowledge, tools, strategies and motivational elements to encourage the socio productive initiatives of the populations in Naiguatá (Vargas State, Venezuela). This region was damaged in December 1999 by flood. The population of that region had very difficult to live, was to leave behind poverty, destruction, misemployment and a lot of difficulties. Now each aspect social-economical are enhancement, but is necessary built a new social-productive net.

** Fundación Parque Tecnológico, Carretera Nacional Hoyo de la Puerta-Baruta, Municipio Baruta, Estado Miranda

INTRODUCTION

Camurí Grande is a small town located in the east side of the Vargas State, Naiguatá zone, Venezuela, has been lowered by two processes of mudslides, one in December 1999 and another one in February 2005. After these natural events the conditions of the region have been very fragile, some of the characteristics that describe the present situation are: destruction of broad part of the populated center, important damages on university and recreation zones; destruction of the social net, many of the social networks were dismantled, since many people had to migrate to other regions; loss of the employment and occupation sources, related fundamentally to the tourism area; important damages in the public services, there is not white and served water network, and there is not telephone service. This region includes in its space a campus of the Simón Bolívar University.
Figure N° 1. Area photography of Camurí Grande and the USB-Litoral (1999’s mudslide)

It has been very difficult and expensive to recover the infrastructure of the zone, nevertheless already today important advances can be observed, has been constructed a canalization to the Migueleno and Camurí Grande rivers, those that originated all the damages, the Camurí Grande Club has restored and its operatives after repairing the damages, the Simón Bolívar University decided to make a new physical infrastructure on the hill, far from the valley, the buildings of vacation apartments little by little have been recovered and the State Government has constructed a new beach facilities.

All these works are surrounding to the populated center, also is necessary to recognize that it has not been made enough to recover the life conditions for a community that resists leaving the zone, although they were being recognized like a risk zone. So far the feature is they are “a town that refuses to die”. Serious problems they oppress, lack of occupation for the young people, lack of sport spaces, drug consumption, delinquency, nonexistence of a ordering urban plan that delimits the zones that could be occupied with the smaller possible risk.

From the beginning, the neighboring University as seriously affected by mudslide (it lost 90% of its equipment and 80% of its building); in the next months the university installed its academic community and its programs in the other campus that it has in the Miranda State, but it decided to contribute to the recovery of this community. In order to reach that goal it integrated to Civil Association Camurí Grande (ACCG) along with the neighbors Associations, the Camurí Grande Club, the Vacation Buildings Condominium, the Retailers Associations and the Church.

The University assumes the social responsibility trying to help the communities. UNESCO (1998) established on the Art. N° 1 the Higher Education mission like “b) to constitute an open space for the upper formation that favor the permanent learning, offering an optimum range of options and the possibility of entering and to leave easily of the system, as well as opportunities of individual execution and social mobility in order to forming citizens that participate actively in the society and they be open to world, and to promote the strengthening of the endogenous capacities and the consolidation in a of justice of the human rights, the sustainable development the democracy and the peace”
For this reason the University designed with the support of Technological Park one plan to recovery the surrounding zones of the University with the purpose to improve the life conditions of the people, the plan is considered a echo-technological model of development for the region, with possibilities of being applied in other communities (M. Da Silva, G. Libretti and N. Ramos, 2006). Of the diverse initiatives to diminish the desolation atmosphere of the zone, the last one has been to undertake a training program oriented to the communitarian leaders and the entrepreneurs, in a program of strengthening of the socio-productive initiatives.

This report have like objective synthesized qualitative and quantitatively the information derived from the execution of the program of “Strengthening of socio-productive initiatives for the communities of the Naiguatá zone, State Vargas” (FISP-Naiguatá) during October 2005-December 2006 period. It is a pilot program promoted through a strategic alliance between the Simón Bolivar University, the Technological Park Sartenejas and the Citibank-Venezuela Foundation.

**OBJETIVE**

The objective of this study is to estimate the impact of the Strengthening of Socio-productive Initiatives Program on the communities, in order to improve the life’s conditions of the population.

**THE PROGRAM’S ORIGIN**

During the active participation of the University in the construction of actions for the communities, a series of formation necessities and qualification were detected, as in aspects related to the communitarian organization, in order to helped them to be more effective in the resolution of the common problems; in subject like entrepreneur skill, that allowed to be developed them like a self sustainable community, considering they have a tourist vocation. It is possible to emphasize in this last aspect, that this populated center is located in a zone with high possibilities of recreation and rest, its counts with an exuberant landscape sea-mountain-river, which turns it a privileged region. These necessities were analyzed, selected and discussed within a profile that it looked for to integrate them in a single program, with specific objectives and scopes. In this way begin the program “Strengthening of socio-productive initiatives for the communities of the Naiguatá zone, Vargas State” (FISP-Naiguatá). The mayor limitation for implantation was the financing founds.

In October 2005, the university was invited to participate, along with other institutions, to access to Citibank Foundation (Venezuela) founds, it had destined to the recovery of the Vargas State; these economic resources came from a series of donations, including those of the employees of the bank, collected after the 1999 tragedy.

In 2006 first months this program was approved by the Citibank-Venezuela Foundation and in April an agreement between the parts was signed, immediately the activities summarized in this report began and the work team was organized in order to assume the responsibility.
THE PROGRAM’S STRUCTURE

The program “Strengthening of socio-productive initiatives for the communities of the Naiguatá zone, Vargas State” (FISP-Naiguatá) is constituted by four components that are described next.

- Component 1: The entrepreneur: tools for the action (Productive Projects, PP)
- Component 2: Formulation and evaluation of social projects of communitarian organizations (Social Projects, SP)
- Component 3: Training in local financial formation (Local Financial Organization, LFO)
- Component 4: Successful management of communitarian organizations (Communitarian Organizations, CO)

THE PROGRAM’S STAGES

Promotion
The promotion was developed through meetings with the social actors of the zone, generally in the University facilities; guests as much by communications written customized as by social mass media. In spite of it the attendance was low, if it considers that the expectation was to catch 105 participants and the attendance average was around 25 people. There was a promotion by journals and radio with it program reaches, their objectives and to who were directed.

Registration
A registration form was designed and it was distributed during each informative meeting. This registration form permits to collect useful information about how to organize the groups. The registration period was in July 2006 and it received 110 requests. The Graph Nº 1 show the interesting by each component and the Graph Nº 2 the wish of each participant, it is necessary clarify than some people wished to take two or more component.

![Graph Nº 1. Applicants number by each component](image-url)
Selection

In order to optimize the time, to balance the groups and to try organizing the best match course-selection by participant who offered greater probabilities of success, the four groups organized themselves; guarantee that each aspiring was registered in a course. Diverse criteria was take in account to distributed the 135 requests; finally, they were organized like follow: 40 people for component N° 1, 35 people for the component N° 2 and 30 for components N° 3 and N° 4. This selection considered accepted 5 additional applicant to compensate the usual dropout rate in each course.

Execution

The operative activities, whose details appear down, are defined like those where the participants was taken part with directly. They can be classified in: courses, technical attendances, monitoring actions and oral presentations. This section displays information on the form as it were made. The activities were planned and executed according to the following chronogram (See Table 1)

<table>

Technical attendance
Each component included several sessions of technical attendance with the intention of complementing with more customized attention the activities than they were developing. The definition of technical attendance varied between the different components.

Monitoring Activity
Therefore, the monitoring activity was centralized in two people and it became a activity based in interviews to the teachers and some participants, another technique was the observation, it permits to compile excellent information in order to determine the quality of the courses and its possible impact.

Complementary Lectures
A complementary lecture was made by the voluntary personnel of CITIBANK, the only one in this period, entitle “Financing of micro-enterprise projects, understanding like extending the possibilities of obtaining it”. Said to char it I concentrate in a presentation of motivation and information for the entrepreneurs and in a session of questions and answers. Of the commentaries of the participants it is extracted that there was good reception.

PARTICIPATION
The participation study will help to design the strategies and to determine the scopes of application of other similar programs. It is clarified that in the following lines deserter was defined as “that person who, after to be enrolled and to have selected, attended less of the 2/3 of the total sessions” and “spontaneous participant” was the people who participated in the activities without to be registered or to be selected.

However, it is necessary to clarify that the desertion was calculated solely with respect to the participants selected initially, without including the spontaneous participants, whose his or her participation was not rejected nor diminished in any case. In Graph Nº 4 and Table Nº 4 one can observe the effect of this type of participants on the final approval score was significant.

</table>

As much as the factors that motivated the participation, the following ones were detected:

- a) “The fulfillment of the dreams” of many participants with personal or collective ideas and projects, some of them are old person.
- b) Secondly, the good valuation of the knowledge offered to them motivated the participants to go at the courses.

As far as the factors that discourage the participation stands out fundamentally:

- a) “The necessities of the current day”, they had many economic difficulties; this situation made many participants had to invest their time and effort in order to obtain their subsistence resources.
- b) The lack of final incentive like a possible financial sponsor once completed the effort.
- c) Additionally, the competition by other paid programs like Government Missions, executed simultaneously to this program, was one of the reasons to some participants was not concurred any more.
d) Finally, one detected that another desertion factor was the obtaining of short employments during the course period.

PARTICIPANT’S SOCIO-ECONOMIC CHARACTERISTICS

Next section describes the participants according to their socio-economic characteristics (considering solely those that indeed approved the component that attended). This gives a general panorama about the population that has been hit by the program and gives one possible measure of its effectiveness.

![Graph Nº 5. Participants approved according type of employment](image)

a. In the first place, an analysis relative to the kind of employment of the participants, which is showed in Graph Nº 5. Of this one stands out that the great majorities of the participants are unemployed or are independent worker. This proportion stays more or less constant in all components.

b. The following factor considered was if the participants are associated to some community organization, as they can be the communal organization, neighbors associations, local cooperatives with communitarian work, etc. It is evident that the most of the participants indeed are on this type of organizations.
c. Another measured factor was the gender. In the components Nº 1 and Nº 2 the men predominated, whereas in the component Nº 3 are women. Finally, this gives a proportion balanced enough.

d. As far as the age of the participants it is possible to be noticed that the great majority was people greater to 40 years. In this respect it is mentioned that a great amount of them are retired or unemployed people with desires to initiate an independent productive activity or to improve their community.
e. Although it was not measured with the initial instruments, another reviewed element was the previous qualification. It is known that the great majority of the participants have secondary studies, a good proportion is superior technicians and single few have university qualification.

f. On the execution of the program it was made a diagnosis on the weaknesses and strengths of the projects displayed by the participants, in components N° 1 and N° 2, which gave like result the following thing:

Weaknesses:
- Deficiency in the elementary mathematical calculations, especially financier operations.
- Lack of knowledge on the details related to their projects, like requirements of investment, operative, market and handling of the human talent.
- Lack of knowledge on the land location for the projects (the project is had but it is not known where to install it).
- Lack of qualification on the information systems (use of PC and its programs, electronic mail, etc.)

Strengths:
- One detected that, although with deficiencies in the quantification, greater part of the projects had good definition of the market or the beneficiaries (in the case of social projects), knowing itself to use in some cases the survey and other studies.
- The greater strength detected when the programs culminated was a great motivation to continue with their proposals
- They demonstrated a great capacity of assimilation of the technical contents presented.

RESULTS AND IMPACTS
It is even premature to measure the impacts, because these will be considered to more long time; nevertheless, already some results can be commented. In general, one is due to emphasize that all the participants showed to a remarkable improvement in the handling of terms or professional lexicons, numerical and organizational abilities, methods and formats of presentation and increase of the motivation to crystallize its proposals or initiatives. Qualitatively, the results of components Nº 1 appear in first term and Nº 2 in the form of projects, whose status before and after the activity, is in Graph Nº 9. In Table Nº 6 one lists the titles and people in charge of such.

TABLE Nº 6 - PROJECTS (Components 1 y 2 only)
These projects were classified according to the economic sector or influence area. This is in the Graph Nº 10, which it is possible to be noticed that the tourism and light industrialist sectors predominate. Despite it is important to emphasize all the projects have certain positive impact on the community, in special those cultural and welfare ones. Also, the technological innovation is pronounced in productive projects related to the fishing and agriculture areas.

As far as a component 3, stands out that the Local Financial Organization formed satisfactorily. This account with 17 shareholders and a total of 20 placed actions creating an initial capital of versus. 600,000.

**ACTIVITIES TO EXECUTE**

Summary next the following activities necessary to culminate the program:

- Preparation, promotion and execution of new component Nº 4 “Successful Management of Cooperatives” directed to 30 participants

- Preparation, promotion and execution of the second group with the component Nº 1, directed to 20 participants, orienting the same one to the participation of young people. Also it is hoped to improve the execution on the basis of the experience of the first application.

- Phase of attendance and support to the Local Financial Organization (component 3) recently established.

- Deepening and complementation of the monitoring, analyzing all factors but indicating it impact.

- Precise attendance to the projects elaborated in components Nº 1 and Nº 2
- Preparation and accomplishment of at least one new lecture with voluntary service of Citibank workers

- Incorporation into the training program of the students like tutor, according to the Communitarian Service Law for the Superior Education Students (2006), with support of an ONG Venezuela Option.

CONCLUSIONS

Factors that affected the execution of the program:

- Attributable to the external factors: difficulties in the communication roads with rains time, vacations seasons that jeopardized the participants to take advantage of the opportunity to work in beaches, lack of payment of scholarships to the participants (what they will receive if participate in training programs by the government), participant’s external activities made difficult the organization of the schedules.

- Attributable to the course and the professors: also several of the used materials affected the execution the lack of update, lack of didactic tools in some professors to maintain the attention and motivation of the participants, among others.

- Attributable to the participants: it was stated a great deficiency in the use of information tools and communication (Excel, Word, email, etc.).

- Attributable to the organizers of the Program: Lack of experience to anticipate and to take care appropriately about situations that appeared around the component Nº 4, in which a factors combination oriented to make the decision to cancel it and to redesign it to attend other formation necessities.

The monitoring activities had to be adapted on the execution, because contracted personnel to make this activity could not participate by the communication difficulties between Caracas - La Guaira, by the fall of Viaduct Nº 1; this activity was assumed by the program coordinators.

There was a great difference between the number of awaited participants and the number that finally participated, but it is usual in programs of this type, in which everything depends on the intrinsic motivation of the applicant, since we are not offered economic, labor or academic incentives.

As far as the enthusiasm of the participants, those that continued until the end demonstrated great quality, motivation and an enormous capacity to assimilate information and to grow intellectually.

Unlike the hoped situation, it emphasizes as the people retired and more age are the main ones interested on this type of programs, looking for to create occupations and income additional to assure their present and immediate future. Call the attention how the younger people exclude themselves from this training program.

It could be inferred that the promotion was not absolutely successful, since by the type and number of participants who got up themselves, it was let take care of an important segment
of the population that could contribute more long-term social and productive networks over time.

**RECOMMENDATIONS**

The promotion of this program must improve to try to include the different groups that conform the community, special attention deserve the young people, calls perhaps focused through the neighbors associations could help to obtain this objective. To maintain speech introductory but to turn it a motivation and promotion activity, that it maintains and even it increases the interest, instead of concentrating itself in the look for a consensus schedule.

Associate to the previous point, a factor important to obtain a satisfactory result could be a possible financing (grants to scholarship) or another type of compensation or stimulus, or recognition by assertive plan or concluded project or better presented/displayed project, to design the courses with this aim could be the more effective. Another option could be an academic incentive, organizing a set of formation components that give to them a Continuous Educational Certificate.

To program in better way the technical attendance activities, this would have to be oriented to resolve in a few sessions the weaknesses that can have been detected during the development of the course and to promote that the participants obtain tangible and feasible objectives.

With the acquired experience, to design information instruments (surveys, observation scales and interview guide) to be applied to participants and professors, that would be facilitate the monitoring activity. To promote a global monitoring form, planning this activity to evaluate each component separately and the execution and effects of all program (although also it would be necessary to analyze particularities of each component). For this it is recommended to establish an interdisciplinary and general equipment that can be alternated in the participation in each one of the components and make analysis altogether.

To define with sufficient advance the availability and the subjects, that the specialists of different institutions and the volunteers from Citibank can give, to organize a series of talks in correspondence to the necessities and interests of the general public and candidates, this will contribute to suitably program and to promote the lectures cycle.

To make more emphasis in obtaining strategic alliances with private or public organisms of the country in order to obtain financial support to micro-industrialists, social and/or enterprising promoters, if they have a feasible and sustainable project. To take advantage of the public policies the national Government destined to support through to the public and private companies, that they must investment in social responsibility. The Law of Science and Technology (2001) in is good opportunity, which the Universities can take advantage to identify funds in order to invest on the organization and execution formation programs in areas related to the communitarian development.

Due to the weaknesses detected during the training, it becomes necessary to include technological formation elements (use of computational and communication tools) in the
different training activities, must be part of the formation the handling of some programs and the electronic mail.

Buddhist Communication for Peace and Happiness of Mankind:
The Future Trend in Human Communication.

By Asst. Prof. Dr. Pratoom Rerkklang.

Communication Arts Faculty, Bangkok University.

Abstract

Buddhism is the religion which was founded over 2547 years ago. It is certain that Buddhism has influenced the way of life of eastern world people. Buddhist principles cover the teaching of human communication, interpersonal communication, intrapersonal communication, spiritual communication and psychic communication. This doctrine emphasizes the practice of perceiving, talking, listening, exposing, thinking, and believing. In other word, it is a means to purify oneself to perceive one’s original soul. The Buddhist human communication principles can be applied in various circumstances. These principles aim to increase effectiveness, good relationship, ethical communication, that provides peace and happiness to humankind, therefore, Buddhist communication is the future trend in human communication.

Introduction

Einstein (1954) have said that "Buddhism has the characteristics of what would be expected in a cosmic religion for the future: it transcends a personal God, avoids dogmas and theology; it covers both the natural & spiritual, and it is based on a religious sense aspiring from the experience of all things, natural and spiritual, as a meaningful unity." A widely cited, but spurious quotation attributed to Albert Einstein. (www.religioustolerance.org)

Buddhism is one of the largest religious in the world and also is philosophy and psychological science. Buddhism is the fourth largest religion in the world, being exceeded in numbers only by Christianity, Islam and Hinduism. It was founded in Northern India by the first known Buddha, Siddhartha Gautama. In 535 B.C., he attained enlightenment and assumed the
title Lord Buddha (one who has awakened). As Buddhism expanded across Asia, it evolved into two main forms, which evolved largely independently from each other: (www.religioustolerance.org)

**Theravada Buddhism** (sometimes called Southern Buddhism; occasionally spelled Therevada) has been the dominant school of Buddhism in most of Southeast Asia since the 13th century, with the establishment of the monarchies in Thailand, Burma, Cambodia and Laos. **Mahayana Buddhism** (sometimes called Northern Buddhism) is largely found in China, Japan, Korea, Tibet and Mongolia. Mahayanna Buddhism, wisdom (prajna) plays a central role. It is the wisdom and enlightenment that the bodhisattva seeks rather than nirvana. These are the virtues in which one can realize their true Buddha - (the giving of gifts, moral behavior and belief, patience, zeal, meditation and wisdom.)

**Tibetan Buddhism**, which developed in isolation from Theravada and Mahayana Buddhism because of the remoteness of Tibet. **Modern Buddhism** has emerged as a truly international movement. It started as an attempt to produce a single form of Buddhism, without local accretions, that all Buddhists could embrace.

**Core beliefs of Buddhism**

Buddhism, like most of the great religions of the world, is divided into a number of different traditions. However, most traditions share a common set of fundamental beliefs and practice (www.religioustolerance.org). One fundamental belief of Buddhism is often referred to as reincarnation, the concept that people are reborn after dying. In fact, most individuals go through many cycles of birth, living, death and rebirth. A practicing Buddhist differentiates between the concepts of rebirth and reincarnation. In reincarnation, the individual may recur repeatedly. In rebirth, in a person does not necessarily return to Earth as the same entity ever again. He compares it to a leaf growing on a tree. When the withering leave falls off, a new leaf will eventually replace it. It is similar to the old leaf, but it is not identical to the original leaf. After many such cycles, if a person releases their attachment to desire and the self, they can attain Nirvana. This is a state of liberation and freedom from suffering.
The Three Trainings or Practices consist of Si la, Samadhi, and Prajna.

1. Si la: Virtue, good conduct, morality. This is based on two fundamental principles: the principle of equality—that all living entities are equal—and the principle of reciprocity. This is the "Golden Rule" in Christianity— to do onto others as you would wish them do onto you. It is found in all major religions

2. Samadhi: Concentration, meditation, mental development. Developing one's mind is the path to wisdom which in turn leads to personal freedom. Mental development also strengthens and controls our mind; this helps us maintain good conduct.

3. Prajna: Discernment, insight, wisdom, enlightenment. This is the real heart of Buddhism. Wisdom will emerge if your mind is pure and calm. The first two paths listed in the Eightfold Path refer to discernment; the last three belong to concentration; the middle three are related to virtue.

The Four Noble Truths: The Buddha's Four Noble Truths explore human suffering which may be described as follows:

1. Dukkha: Suffering exists: (Suffering is real and almost universal. Suffering has many causes: loss, sickness, pain, failure, the impermanence of pleasure.)

2. Samudaya: There is a cause for suffering. It is the desire to have and control things. It can take many forms: craving of sensual pleasures; the desire for fame; the desire to avoid unpleasant sensations, like fear, anger or jealousy.

3. Nirodha: There is an end to suffering. Suffering ceases with the final liberation of Nirvana. The mind experiences complete freedom, liberation and non-attachment. It lets go of any desire or craving.

4. Magga: In order to end suffering, you must follow the Eightfold Path.

The Five Precepts are rules to live by which describes behaviors to avoid.

1. Do not kill. This is sometimes translated as "not harming" or an absence of violence.

2. Do not steal. This is generally interpreted as including the avoidance of fraud and economic exploitation.
3. Do not lie. This is sometimes interpreted as including name calling, gossip, etc.

4. Do not misuse sex. For monks and nuns, this means any departure from complete celibacy. For the laity, adultery is forbidden, along with any sexual harassment or exploitation, including that within marriage. The Buddha did not discuss consensual premarital sex within a committed relationship; Buddhist traditions differ on this.

5. Do not consume alcohol or other drugs. The main concern here is that intoxicants cloud the mind. Some have included as a drug other methods of divorcing ourselves from reality -- e.g. movies, television, the Internet.

The Buddha’s Eightfold Path consists of Panna, discernment, wisdom:

1. Samma Dtiithi: Right understanding of the Four Noble Truths.
2. Samma Sankappa: Right thinking; following the Right path in life

Sila: Virtue, Morality

3. Samma Vaca: Right speech: no lying, criticism, condemning, gossip, harsh language
4. Samma Kammanta: Right conduct by following the Five Precepts
5. Samma Ajiva: Right livelihood; support yourself without harming others

Samadhi: Concentration, meditation

6. Samma Vayama: Right effort: promote good thoughts; conquer evil thoughts
7. Samma Sati: Right mindfulness: become aware of your body, mind and feelings
8. Samma samadhi Right concentration: meditate to achieve a higher state of consciousness

Meditations

Meditation is the way or method that helps persons to purify their mind from the unreality of the world and it the way for a person to consider the life that can help people reach nirvana or enlightenment. The basic understanding of meditation comes from the Eight-fold Path: the first two steps, right belief and intention. The next steps focus on the preparation of a proper life; these are right
speech, actions, and livelihood. The last three focus on the meditation itself: right effort, right mindfulness and right concentration. This brings one to wisdom or prajna, which can be seen as the right belief and right intentions.

In Theravada Buddhism, the goal of nirvana is achieved through two forms of meditation (www.uwacadweb.uwyo.edu/religionet/er/buddhism/Belief.htm)—Samadhi and Vipassana. Samadhi meditation stresses on controlling the mind/soul or concentrating on the original soul by thinking outside the world. Vipassana meditation is the realization of existence. It is a way to seeing life as suffering (dukkha), the impermanence of all things (anicca), and the non-existence of the soul (anattaman).

Human body consisted of 4 elements (tat) which are soil, water, fire and wind, and the five aggregates (or Khun 5) which are corporeality, feeling, perception, mental formations or volitional activities, and consciousness. These will help you to not commit to yourself, and to be free from desire, and suffering.

**Buddha’s viewing on communication process**

The teaching of Buddhist principles can be related to human communication. It can be classified into two types; lay person and person who want to reach nirvana.

The Buddha stated that individual or human body consisted of form and name which have five aggregators;

1. Corporeality or physical: the whole of human body.
2. Feeling: human emotions as happy, suffering, sad.
3. Perception: The meanings that human interpret circumstance. These is similar to perception process in communication arts theory.
4. Mental Formations or Volitional Activities: the mind that bring to expression behaviors both in verbal and actions.
5. Consciousness: the perception which occur through 5 perception organic which are eyes, tough, nose, ears, skin and mind.

This concept of human communication are explain how human perceive stimulus from the outside world and the process of information in human mind and body including the output or effect of human communication. Buddha’s concept of human communication do not stress on source and receiver like western’s model.

These expansions are similar to the concept about channel of human communication of Berlo’s theory which compose of eyes, ears, nose, tough, and touch (Berlo, 1960). However, Buddha’s concepts of exposure goes beyond Berlo’s theory by including mind as one of organic that make human expose to the circumstance. By these components make human perception and brought to consciousness (Vinnarn), memory and meaning (Sanya) and emotion (Vattana). Vinnarn, Sanya and Vettana are the basic of your verbal or talking and behaviors (Vichaenchot & Vichaenchot; Puriwattano, 2005).
The above statements show that Berlo’s explanation of communication channels is very similar to Buddhist perspective of five aggregators. However, Berlo’s communication channels (i.e., seeing, hearing, smelling, tasting, and touching) are basically in the physical level, while Buddhist perspective of five aggregators go beyond such level to the spiritual level--mind or soul. These show that Buddhist perspective perceive communication channels in a deeper level. As Buddhist perspective pays much attention to human communication, this article will be discussing mainly on intrapersonal communication and interpersonal communication.

**Buddhist Interpersonal Communication Principles**

1. **Principle of speaking**

   According to the five precepts mentioned earlier, the first precept is “not to lie,” which also include gossip, picking on other people’s name, saying bad thing etc. Buddhist interpersonal communication states that one who lies can do every sin. Lying can easily be seen through verbal and action. Through lying, one can make up false report and false evidence to mislead other people. The concept of lying can be identified as follows (Auttapat, 1980 : 162-163):

   1. Lying
   2. Swearing
   3. Making up story
   4. Pretending or overacting
   5. Misleading
   6. Exaggerating
   7. Saying half truth in order to undercover bad thing

   The aforesaid concept of lying has also been mentioned as unethical issues in many fields of communication, such as public relations, adverting and news reporting.

   1.1 Person should not talk too much.

   Buddhist interpersonal communication states that one should not talk too much as it might cause harm in five manners--lying, satire, rude word, nonsense
speaking and go to bad position in the future life. Instead, one should speak with wisdom to protect no harm (Mahamongkut University, 1996).

1.2 Person should talk less but do more.

One, who talks more, tends to forget to walk his/her own talk, while one, who talk less, has more time to concentrate on his/her own saying and acting. Consequently, such person will be able to reduce his/her own need and desire, create no misconception, reduce anger, develop right living, purify mind, attach to nothing, and be able to enlighten oneself (Mahamongkut university, 1996).

Buddhist interpersonal communication poses that most scholars/intellects deliver their speeches through their four good manners (Auttapat, 1980: 162-163):

1. Speaking truth
2. Speaking to create and maintain good wish and good relations.
3. Speaking from the bottom of one’s heart, and
4. Speaking good/proper words based on solid evidence

In addition, Buddhist interpersonal communication describes the way to deliver “the right speech,” the basic law for individual as follows:
(Dhamapittaka, 1995. p. 769)

1. No lying, only speaking the truth, and walking one’s talk
2. No satire, only speaking for harmony or love.
3. No improper words, only speaking proper ones.
4. No useless word, only speak useful one.

Buddhist principles of speaking can help maintain good relations, love, and common/ understanding which are the hearts of communication.

2. Principle of Listening

Buddhist interpersonal communication teaches people to “listen to all good things,” or dhammma. By listening to good things, one will be able to (Mahamongkut University, 1996):

1. Increase opportunity to learn new things.
2. Increase right understanding
3. Reduce suspense
4. Make right opinion.
5. Establish and Maintain happy mind

The principle of listening also covers the following matters:

(Dharmapitakka, 1995 p. 647)

1. Do not listen with underestimated felling.
2. **Do not listen with challenge mind.**
3. **Do not listen by watching bad thing or guilty.**
4. Do not think you understand every issue that has not been stated clearly.

Some Buddhist principles of listening have already been presented in Berlo’s theory, as it is said, the way to increase effectiveness in human communication is to have good attitude toward oneself, receiver and message, and to provide good knowledge via good communication process, to good receiver, culture and social system.

**Principle of listening and communication exposure.**

Buddhist principles of listening also teach about how to expose. People perceiving through seeing, hearing, smelling, touching and tasting can create unhappiness and suffering. In the same manner, people will have a chance to expose to good things like dhamma or morality that can turn into happiness. In other word, to be happy one should learn when to close his/her eyes, mouth and ears, to prevent him/herself from seeing, hearing, and speaking bad things--see no evil, hear no evil, and speak no evil. (www.en.wikipedia.org). By doing these, one will be able to communicate with original soul, and will eventually help increase one’s power of mind.

3. **Principle of believing.**

Buddhist principle of believing can be described as follows; (Attapat, 1980; Puriwattano, 2005)

1. Do not believe anything just because you listen to it for such a long time.
2. Do not believe anything through tradition.
3. Do not believe anything just because it is a rumor.
4. Do not believe anything just because it was written in canon.
5. Do not believe anything just because it is logical.
6. Do not believe anything just because it is inductive.
7. Do not believe anything just because you think it is reasonable.
8. Do not believe anything just because it is conform to your former opinion.
9. Do not believe anything just because it looks credible.
10. Do not believe anything just because the teacher said.

In other word, it means that one should think, analyze, and use judgment before believing anything. It is also taught that one should believe when consider that it is good, show no harm, offer benefit, and make us happy.

4. Principle of audience analysis

Buddhist principle uses dharma to analyze the audience. According to the Buddhist Doctrine, there are four kinds of audiences.

1. Person who is very intelligent and easily to be taught
2. Person who can understand dhamma from the very first start.
3. Person who can understand dhamma only if he listen it more often.
4. Person who never understand dhamma at all

These are Buddhist communication principles for individual and households. Next is the practice of Buddhist communication for those who want to purify mind and nirvana.

Meditation as a means to communicate

Theoretically, mediation is a means applied by monks, and those who want to enlighten themselves. Buddhist principle categorizes things into two levels: physical matters (Rub) and psychic matters (nam). People will reincarnate because of their own doing and their own deed in the previous life. Buddhist teaching believes that rebirth is suffering. The highest goal of Buddhist teaching is to nirvana or not reincarnate. The way to reach nirvana is to ignore or not to attach to your ego or yourself to do such will help to empty your desire. The Noble Eightfold is the way to the cessation of suffering, the fourth path of the four Noble Truths, which consists of the right viewpoint, the right value, the right speech, the right actions, the right livelihood, the right effort, the right
mindfulness and the right meditation. These principles can be summarized into three practices steps: (www.en.wikipedia.org/wiki/buddhism)

1. Sila or morality or ethics. It refers to moral purity of thought, word, and deed. Sila refers to principle of ethical Behaviors. There are several levels of sila, which correspond to basic morality or five precepts, basic morality with asceticism (eight precepts), novice monkshood (ten precepts) and monkhood (vinaya or patmokkha). Lay people generally undertake to live by the five precepts which are common to all Buddhist schools. The five precepts are training rules in order to live a better life in which one is happy, without worries, and can meditate well.

2. Samadhi or meditation. Buddha taught two types of meditation, Samathi meditation and vipassana mediation. Samathi help one’s mind become purified of defilement, peaceful, calm, and shining. When the meditator achieves a strong and powerful concentration or Jhana, his mind is ready or penetrate and gain insight (vipassana) into the ultimate nature of reality, eventually obtaining release from all suffering, physical and psychic. The cultivation of mindfulness is essential to mental concentration, which is needed to achieve insight. Samadhi can do in natural way by think put – tu (Buddha) every breath. Put when inhale and tu when you exhale. Some schools may use word yub nho – pong nho.

After your mind go to Samadhi, mediators should step to Vipassana stage by consider your physical body. Meditator should Consider that human body compose of four materials, soil, water, wind, fire. It is not we or he. It will destroy and back to earth. Only mind or soul are everlasting, that collect goodness and Khumma from life to life.

3. Panya or wisdom is the wisdom that is able to extinguish afflictions and bring about bodhi. When person get enlightenment, he attain in nirvana, through its revelation of the true nature of all things. Nirvana will make human free from samsara and not born again.

People who practices Buddhist principles to achieve the nirvana goal can be classified into four levels according to potential in reduce desire and the close to nirvana, which are:

1. Sodabun, will born 7 or 5 times.
2. Sakitakamee, will born 3 times.
3. Anakamee, will born 1 times.
4. orrahuttapol, not born anymore.

In Thailand, Buddhism can prove orrahuttapol level from their bone after death. Their bone goes to crystal since the effect of meditation which have insight in their body.

All stage of meditation, are the method of communication which may called intrapersonal communication. Intrapersonal communication means language use or thought internal to communicator. The individual becomes his or her own sender and receiver, providing feedback to him or herself in an ongoing internal process. Intrapersonal communication can encompass: dreaming, writing, speaking, communication between body parts. (www.answers.com)

Meditations can classified to be interpersonal communication which is deeper than western knowledge. When practice meditation, someone see vision or nimit. Nimit is old record phenomenal of the meditator. Beside these, meditation help to increase awareness of inner potentialities, to fortify will power, increase self-confidence, provide mental calm and free mind from restlessness, agitation, fear, and worry. More over, meditation promotes mental health, positively influence physical health and help the mind to concentrate and become better organize. Meditation also promotes virtuous qualities like compassion, good will, confidence, wisdom, energy, perseverance, determination. Meditation helps to purity the mind of defilement such as greed, selfishness, hatred, jealousy and free from delusion that prevent proper insight into reality. Meditator practices can get power of mind or supernatural or psychic which called magic ears and magic eyes. These people can see and talk to god, ghost.

They can tell future phenomenon, previous phenomenon. (Chanchamnong, 2003). The effect of meditation also make someone can send message, talk and watch another person whom are far away by telepsychic or power of mind. Some guru can live for 1000 years and young forever. In Thailand, you can read and hear all these unbelievable happening. Someone may have experience by own self. But all effect of meditation are different from one
to one and can not prove show exactly. Buddha called these are Put Jut Tug or can known only by yourself. Some event you prove by your own. Although It is difficult to prove by quantitative research but it can do by qualitative research.

So if we concentrate on effect of meditation, we can classified meditation as the tool or mean of telecommunication by use telepsychic and spiritual communication. Buddha taught his follower not fascinate in these magic and prohibit to show these power because no one believes. Including, should not fascinate in happiness in samathli. Because it will be obstacle of nirvana. Follower should use psychic power to eliminate desire and yourself to reach the nirvana.

**Conclusion**

Buddhist Communication means the theory and practice of human communication of Buddha which are different from current principles of human communication. Buddhist communication teaching cover both interpersonal and intrapersonal which stress on how to communicate to make yourself and others to be happy and peaceful. Buddhist communication stress on finding original spirit and make it purify in order to accomplish nirvana. The important for normal person is that on the way to practice can make effect person to have spirit, physical power and happy mind.

So practicing as Buddhism meditation are very interesting to study, practice and prove as the new tool for communication of mankind. Since it can give the miracle power in communication like spiritual communication, telepsychic communication, intrapersonal communication. Beside these, it can convey happy mind, happy life, good health, good relations, peace, wisdom in mediator and expand to society. So the principles of Buddhism communication will be a significance tool of communication of mankind in the future. Buddhism are science religions that everyone can practice to prove truth by yourself. So try it and you will experienced, touch, feel all of information in this article.

Pitfalls in Understanding Some Feminist Issues in Africa

RHEE, Suk Koo

It seems that Igbo women in a traditional society enjoyed economic autonomy to a substantial degree. They were able to purchase and then own the land, although they could not inherit it. They not only had a right to sell the product of their labor for money but also were able to acquire a title according to the reputation and wealth they earned. Flora Nwapa also supports this view in an interview with Marie Umeh. Igbo women also seemed to wield political influences collectively. The wonderful documents on the Igbo gender relationship corroborate Leopold Sedar Senghor’s and Ali Mazrui’s views that women have always been liberated in Africa. Have women indeed been liberated in Africa? The wide disparity between the testimonies and representations concerning African women’s rights puzzles both non-African scholars and laymen. This paper focuses on the issue of African women’s autonomy under the colonial and postcolonial periods. This paper brings to light diverse perspectives on and responses to these thorny issue by delving into related interviews and documents, including this author’s personal interview, and then moves on to pointing out what kind of pitfalls an outsider’s interpretation of these testimonies may fall into.

One of the first images that is most likely to occur to the literati outside Africa, when asked about their impressions of African women in a traditional Igbo society, will be one of Okoknko’s wives, the one who, as depicted by Chinua Achebe, gets beaten up by her mighty domestic ruler for trifles like killing a banana tree or failing to cook for him in good time. Yet, such ethnographical reports as Male Daughters, Female Husbands portray the situation in such a way that offsets the somewhat conventional conception of male and female relationship in a traditional Igbo society. Even some African-origin feminists and female writers join in obfuscating non-Africans’ general outlook on the status of women in a traditional African society. This paper focuses on the issue of African women’s autonomy under the colonial and
postcolonial periods. Among the vital and sensitive issues concerning African women’s autonomy are marriage, polygamy, inheritance, education, and female circumcision. This paper brings to light diverse perspectives on and responses to the thorny issues of polygamy and inheritance by delving into related interviews and documents, including this author’s personal interview, and then moves on to pointing out what kind of pitfalls an outsider’s interpretation of these testimonies may fall into.

It does not take a lot of strenuous efforts to find local testimonies in support of polygamy in Nigeria and Kenya. The old tradition has certainly revived in contemporary Nigeria and Kenya and, unlike in the old days, apparently involves women’s right of choice. Certainly there are good reasons for this new revival of the old custom that this paper intends to illuminate. To quote Flora Nwapa, the first African female writer, from Marie Umeh’s 1995 interview with her:

In my own language we say, “No matter how beautiful one is, if she doesn’t get married she’s nothing.” It’s left for us who have received a Western education to de-emphasize this tradition. However, you discover that a woman who has gone to college, who is working, who has a profession, who is a lawyer or a doctor, who doesn’t have a husband, then she will not mind being a second wife. In fact, polygamy is becoming very fashionable in Nigeria these days among Western-educated women. (27-28)
The reason for this revival of an old custom is provided by intellectuals like Chikwenye Ogunyemi and Wanjira Muthoni. According to Ogunyemi:

[Young Nigerian women] want to marry into polygynous households so that they do not get oppressed in marriage the way my generation was oppressed by men. Hence, they would marry somebody who was already married, and then they would live in their own house and have children. They want children, but they also want to be free in marriage. That is why they are rearranging marriage: if you do not like how marriage is evolving in the society, you start making your own arrangements. (Arndt 716)

It is not a new phenomenon belonging to a contemporary society that Igbo women secure freedom within the tradition by manipulating it shrewdly for their own benefit. According to certain testimonies, Igbo women did and still enjoy great political and economic privileges that have not been unthinkable in other African countries. Theodora Akachi Ezeigbo asserts, “Igbo women right from the pre-colonial days had always risen or fought to defend or enforce decisions taken in their social and political organizations, if need be. They were enabled to do this in the past through the powerful political machinery of the Association of Daughters and the Association of Wives which existed in each community.”(150). They were also able to purchase and then own the land, although they could not
inherit it. They not only had a right to sell the product of their labor for money but also were able to acquire a title according to the reputation and wealth they earned. As Ifi Amadiume observes in *Male Daughters, Female Husbands,*

The sexual inequality entailed in the patrilineal principle of inheritance with regard to access to economic resources for daughters was quickly offset by women at marriage. This was usually achieved through their economic resourcefulness, supported by Nnobi matrifocal principles in domestic organization and encouraged by the ideology of female industriousness…. Following the principle of the sexual division of labour and gender division of crops, women kept their own profit and what was considered theirs; nothing considered as female and nothing belonging to women was sold by men. But women marketed most of what was considered to be male and as belonging to men, and kept some of the profit. (37, 39)

Nwapa also supports this view when she in an interview with Marie Umeh claims that “In Ugwuta, women have certain rights that women elsewhere, in other parts of the country, do not have.”(20) Ezeigbo’s and Umeh’s statements seem to corroborate Leopold Sedar Senghor’s and Ali Mazrui’s views that women have always been liberated in Africa.

Despite this affirmation of polygamy as a trend in Nigeria and of female privileges in Egbo society, it
will be committing a gross overgeneralization to believe this view to be applicable to all Igbo women, not
to mention women in general in Nigeria or other African countries. Rural areas in Nigeria are a case in
point. Girls in these still poverty-stricken areas cannot afford a choice when it comes down to polygamy
as Dr. Harry Garuba asserts. They are forced to marry into polygamous households according to the
wish of their poor parents who set their eyes on the bride price the marriage will bring to them. The idea
of having a choice over the matters of monogamy and polygamy as a means of securing autonomy within
the patriarchal system is an inconceivable luxury for most poor females in the country where women
enter into prostitution in order to survive and girls are forced into child marriage. Even human
trafficking is still very common in Nigeria, as revealed in a 2003 UN commissioned report on the Edo
state. Although human trafficking is strictly prohibited in Nigeria, about 10,000 Nigerian prostitutes,
according to “Trafficking of Nigerian Girls to Italy,” are estimated to be operative in Italy alone, which is
mostly attributed to human trafficking. In this regard, the Western-educated Nigerian feminists who
seem to see a positive side to the ages-long tradition cannot speak for their poor female compatriots.

To Ezeigbo’s claim that attributes a great autonomy to Igbo women, pointing to the socio-political
power wielded by social and political organizations such as the Association of Daughters, one might
respond with the answer that the Association of Daughters, despite their prestige and respect, actually
functioned as the bodyguards to the patriarchal society. It is worth noting here that although these
patrilineage daughters certainly enjoyed a special collective power in the family matters, the power was
usually employed in castigating and controlling the members of the same sex, the women married to their brothers. Let me quote from Amadume again: “It was their[the patrilineage daughters’] duty to ensure that their father’s household was strong and at peace.” (59) The reality of women’s status in a traditional Igbo society is testified to by someone like Buchi Emecheta, the diasporic female writer from Nigeria. She would probably affirm from her own experiences the truth of Achebe’s portrayal of Igbo women, although she feels that Igbo women could have been rendered more colorful by Achebe. As Umeh in her introduction to Emerging Perspectives on Buchi Emecheta recounts (xxv), Emecheta, from an early age on, was frustrated by such regressive cultural norms as prioritizing boys, rigid sex roles, and the custom of bride price. In a sense, Emecheta grew up fighting against the male-centered institution of Nigeria. For instance, when her parents did not allow her school education, her persistent visits to her brother’s school made them change their mind; she even appropriated some of her family’s food money in order to pay for a high school entrance exam. Furthermore, when her family opposed her marriage with Sylvester Onwordy, the man of her choice, because of his inability to pay the bride price, Emecheta eloped with and married him without the blessing of her family. Yet, Emecheta’s fight against patriarchal culture did not end with her marriage and emigration to England with Onwordy. Her husband’s lack of understanding towards her passion for writing put a constant strain on their relationship. After he burned up the manuscript of her first novel, the couple separated.

Although it may be true that Igbo women during the pre-colonial days enjoyed a certain amount of
freedom, it is also true that it was always within the limits set by the tradition. Practices like “female husband” may seem to trespass on or violate the tradition by allowing an heirless elder widow to marry another woman. The woman proper is supposed to procure a son for the female husband from an extramarital relationship, and the son belongs to the elder woman, not to the biological mother or father. The elder woman is also free to choose a man she would prefer her wife to have sexual relations with. This cheating of the traditional heterosexual relationship may be seen as benefiting the widow in the sense that she can prevent the property left by her deceased husband from being claimed by her male in-laws. Yet, viewed in a larger social context, this practice ultimately serves the patriarchal society that wants to see property inherited by male heirs alone. A tentative conclusion to this analysis will be delivered during the presentation.

IMPLEMENTATION OF CONCEPTS AND TECHNOLOGIES AIMING AT SUSTAINABLE DEVELOPMENT

Prof.ir. L.C. Röling ¹, dr.ir. A. van Timmeren ¹,²

Abstract

For sustainable concepts with respect to the built environment, urban planning and development, we can discern two future paths: the ones that comply with the principles of ‘the scale economy’ and concepts that follow ‘the economies of scale’. The role of sustainable technologies in this case mostly is presumed to be of major importance. The presented research distinguishes three models for the development and supposedly successful application of technologies: the ‘quasi-evolutionary model’, the ‘collective problem definition’ and the ‘network theory’.

The present use and development of sustainable technologies can be described as processes in accordance with the quasi-evolutionary model in combination with the network theory. The historical development and the scaling-up of technologies based on prevailing paradigms determine its quasi-evolutionary nature. A characteristic is the small but strong networks with one or two dominant ‘actors’ for each of the different circuits or ‘flows’ (energy, waste, and water-related flows).

In the end, the necessary threshold to a sustainable society is being hindered by these separated circuits: new sustainable technologies are continually being developed in all sectors, but the assimilation by society often falters, for there is a matter of the so called Collingridge dilemma.

To resolve this it is necessary to reflect fundamentally the societal conditions of the needed approach to implement sustainable technology and concepts. Three options exist, referred to as technological-, economical- and social-constructivist determinism. The first two perspectives can be named unshakeable, as far as the sustainable technologies and infrastructure concerning the energy, waste and water flows are concerned. Therefore, the solutions towards real sustainable- and in the end possibly autarkic concepts should be found within social-constructivist adaptations. If one handles the ‘dynamic interpretation’ of the Brundtland definition of sustainability this means that the process side should be emphasised in stead of the formulation and handling of rigid (static) limits.

In this paper the need to focus on liveability is argued as a precondition for sustainability. So users, besides of other “relevant” parties (stakeholders), will be involved into the planning processes as early as possible. This should preferably be realized through a pluricentric method of interaction based on a transdisciplinarity, with emphasis on integrating social learning processes, or ‘place making’.

Keywords: Sustainable Technologies & Concepts, Participation strategies.

1. Introduction

There is a need to compare sustainable concepts and accompanying structures as alternatives for conventional sanitation and energy generation with respect to a greater number of aspects than the ones being indicated by the existing paradigms and dominant actors in urban planning and development. This is the background for the present research. The basis is formed by urban planning that is based on ‘interconnection’ to achieve far-reaching sustainability (autarky/self-sufficiency), as well as the introduction of participation strategies involving all stakeholders in urban development, with special emphasis on user participation and the role of administrative and technical decentralization.

The research [Timmeren, 2006] was commissioned by the Delft University of Technology (TUD) as part of the Climate Design group (CD), within the DISC research programme (Design Integration of Sustainability & Comfort).

2. The challenge: from ‘re-design’ towards fundamental ‘re-thinking’

If we want to give the third world as much prosperity as ourselves, alike the points of departure of the Brundtland committee or the 'equity principle' [WCED, 1987], this will, according to the Ehrlich, Speth and Comoner formulae [Ehrlich & Ehrlich, 1990] imply the need for the changing society to reduce the use of 'environmental space' of its consumption goods to 5% of the actual. It is inevitable to consider a discontinuity in trends when striving for sustainability. This implies radical technological innovations, and a change in lifestyle, culture and organisation and production structures [Bras-Klapwijk and Knot, 2000] mentions three knowledge systems that play a part in this matter: a system of scientific explanations, a system of socio-scientific explanations and a system of personal values. These are summarized by Jansen and Van Heel [1999; Vergragt, 1999] as “technology”, “culture” (behaviour and needs) and “structure” (institutions, economics, etc.). Ehrlich and Speth’s formula is one of two interpretation directions of the much supported description of Sustainable Development by the Brundtland Commission. The central characteristic of this first interpretation is its starting from a limitation: the ecological system limits our actions. This interpretation is called “the ecological position” [Korthals, 1994]. It claims that “nature is well-organized and self-organizing, that the science of ecology gives us directions what this self-organization of nature looks like, and that society should organize itself according to the directions”. The shortcoming of this approach is that the pursuit of sustainability is made absolute, while the amount of environment to be used is taken as the basis for the policy. However, as long as ethical matters are not at stake, e.g. issues of life and death, the extent to which a standard or aim can be fulfilled depends on the extent to which it is at the expense of other standards and aims, and cannot be made absolute into concluding whether or not the intervention is sustainable. Moreover, the implications of sustainability for actions are not always evident, since it is not clear how the various criteria are related.
The second group of interpretations of the Brundtland Commission’s definition of Sustainable Development puts more emphasis on the word “development”. Claimed in this interpretation is that a search direction is of importance, rather than environmental limitations that are apparent and not to be exceeded. Sustainable development is considered a dynamic process, an unlimited perspective, rather than a delimited amount to be used. It is known as “the process or interactional approach”\(^1\). This approach does not take the maximization of the environmental interests as its starting point, but the optimization of these interests in relation to other interests. There is a prescription problem: “no standard is mentioned. It recognizes the various interpretations and aims of the parties involved, and recommendations can therefore only be made if any of all the possible definitions of reality is chosen” [Ruis, 1996].

The interactive approach is based on network theories and originates from the recognition of the many uncertainties that belong to the pursuit of sustainable development.

The two approaches of the factor 20 process in the Brundtland Commission’s objective described above agree with the so-called “weak” and “strong” sustainability. The difference focuses on the question to what extent sustainable development based on scientific grounds can be established and put into operation. The “strong” interpretation claims that this is possible, whereas the “weak” interpretation finds that there are too many technical and scientific uncertainties for this.

There is a so called 'prescript-problem': no norms are being indicated. It admits the different interpretations and goals of the involved actors and recommendations therefore can only be accomplished in case of a rather arbitrary "actuality-definition". An additional problem is that environmental and economic interests differ fundamentally. The environmental problems are often diffuse. The problems are spread over a larger area or shifted on to the future. Contrary to this, economic interests are more concentrated. An example can be seen with the (public) utilities, such as the energy supply, that are supposed to be a “public (necessary) good”. As a result of privatization and quotes on the stock exchange, the profits are for specific parties involved, that run only limited (investment) risks where the project costs are concerned. The specifically sectoral interest can differ strongly from the general economic interest. The biased representation of interests can have a restraining effect on innovation. New ideas not fitting in with the current interests will not easily be taken seriously. There is some improvement in this process, also because of the privatization that has started in some of the sectors and therefore the need for ‘redesign’, inspired by market demands (competition): the adjustment of their interests and plans into a direction more environmental-friendly (So-called “socially sound entrepreneurship”). The phase of “rethinking”, which would actually be necessary (taking care of further integration of future economic and environmentological interests in the present), is still too far away from these parties. As yet, this seems a task for the government and science.

3. Towards real-sustainable technologies

The booming technology necessitates worldwide changes in structures that can direct (sustainable) spatial development. Ehrlich and Speth’s metaphorical formula based on
work by Bary Commoner [Ehrlich & Ehrlich, 1990] makes this clear. Both the factor of time and the factor of economy are of great importance: the former presses, the latter forces. Some older economists, including Pen and Goudzwaard (Jan Pen and Alex Goudzwaard, together with Arnold Heertje, are prominent Dutch economists who involved the importance of the environment into their analyses early on), put clearly into words that time, economy and ecology are closely related and sometimes are in each other's way. They say, “If you want to pursue a good environment policy, you must have a view on the kind of economy you wish.” However, straight opposite to this view, is the opinion of others who say that economic growth is a prerequisite for ecological action.

Most authors make a distinction between two types of environmental technologies, the 'cleaning' or 'end-of-pipe' technologies and the 'process-integrated technologies'. The cleaning technologies primarily aim to reduce the environmental pollution. End-of-pipe-systems in this case are being defined as at the closing of production chains applied solutions that aim to clean the caused waste flows before they are being dumped. The most important disadvantage of end-of-pipe solutions is the fact that these technologies can be characterised as 'following' while they can no longer be used to influence developments. In the process-integrated technologies the environment-saving measures become part of the production- and realisation process. The process integrated technologies aim to convert raw materials into useful, durable goods. The environmental demands in this case are only pre-demands, comparable with other demands like costs, quality or efficiency. But the question of how the sustainability can be achieved remains unanswered: can or should this be accomplished by being more sensible and, consequently, more economical – “the economy of ‘enough’” – or can the environmental problems (only) be solved by becoming better and better in a technological sense [Röling, 1996]? In the development of (modern) architecture, the expression of technological progress has always played an important role. Examples are early modernists including Le Corbusier and Walter Gropius, who looked on technology as a “transforming force for change”. Nowadays, when looking for a more holistic approach of design, people are more aware of the fact that the built-up environment is part of a much larger and much more complex whole. The influence of social, political and economic forces is becoming stronger and stronger.

There is also the awareness that it is too simple to look for all answers in technology. Progress started by technology can only function well when applied in a socially profitable way. The philosopher Michel Foucault once said, “Technology must be social before it is technical.” In this respect, Peter Rice mentioned, “Technology is the answer, but what was the question?” [Buchanan, 1992]. David Puttnam adds the importance of the creative notion: an innovative mutual tuning, integral design, so that the whole is more than the sum of its parts, “It is unarguably true that there are only two primary sources of wealth available to us: what we get from the earth itself and what we get from our own creative imaginations. Unless we start relying less on the former and much more on the latter, it is inconceivable that we can sustain the growing population of the world with anything approaching decent, civilised and broadly comparable standards of living.” [Rogers, 1997]. Richard Rogers continues to say that we should place the role of technology within this context.
One can distinguish three major models for the development and application of these former discerned types of environmental technologies: the ‘quasi-evolutionary model’, the ‘collective problem definition’ and the ‘network theory’ [Vergragt, 1992]. The first model can be seen as a process of 'modification (variation) and selection' [Nelson and Winter, 1977; Dosi, 1982].

Most of the sustainable technologies still belong to the so called 'new technologies'. The main reason for the development and application of new technologies is the lack of progress in the development of the existing paradigms, which mostly imply incremental improvement. The technology itself, the existing (infra)structure and the lack of knowledge and information can be obstacles for a successful implementation. As for the economical factors the high costs and 'seated' (less innovative) competitive technologies can hinder, while out of social-cultural and political side existing standards and use concerning comfort, hygiene, convenience, besides of the resistance from within the existing networks and governmental policies, can become obstacles. The process of 'modification (variation) and selection' and the use of (far-reaching) technologies will be inspired by the 'technological paradigm', which contains basic ideas consisting of insights, heuristics and a certain amount of already developed technology. Most of the time one dominant design exists. This dominant design can be seen as 'exemplary technology' for the discipline and therefore mostly will function as a starting point for further developments and (incremental) improvements. The normal developments of 'variation' will be influenced highly by the existing paradigms and the accompanying paths. This (first) model is called the 'quasi-evolutionary model', due to the fact that the separation between variation and selection in this case is not definite.

The second model, the ‘collective problem definition’, assumes a technology development within a 'problem-controlled process' [Callon, 1980]. Technology- and science developers in this case are confronted with scientific, technical and social problems that ask for (immediate) solutions. In this case, the development, implementation and improvements will be accomplished when the involved 'actors', or 'stakeholders', come to an agreement about the actual (definition of the) problem. The third interpretation for the development and application of environmental technologies came up as result of this second model. The essence of this so-called 'network theory' is the supposed starting-point of the development of technology in a network of mutual relations between intervening stakeholders. The development of technology comes together with the construction of a technological system, in which a reverse salient in the system is determinative for its development [Hughes, 1983].

The existing practice can be described in terms of the creation of one or two 'dominant actors' and strong, rigid actor-networks that become the supporters of the paradigm following technologies with only incremental improvements [Callon, 1980]. The present development of use of sustainable technologies in the built environment, including the infrastructure can be described as processes in accordance with the quasi-evolutionary model in combination with the network theory. The historical development and the scaling-up of technologies based on prevailing paradigms determine its quasi-evolutionary nature. There is a matter of a small but strong network with one or two dominant 'actors' for each of the different circuits or 'flows' (water, energy, and waste). In case of the (waste)water flows there is a matter of dominant actors that in general adopt a non-flexible attitude towards new technologies.
To some extent this is also in force for the waste- and energy flow. Although this at first was changing due to the liberalization of the energy- and waste market. However, in the course of time due to takeovers and combinations again (new) dominant actors are originating. The main difference is that these new dominant actors are semi- or even totally independent of the authorities, with additional disadvantages. The historical development and the scaling-up of the solutions for the generation and treatment of the energy-, (waste)water- and waste(material) flows take place according to the quasi evolutionary model with some shifts inspired by social problems (like the first and second energy crisis). The appealing of this quasi-evolutionary character of the development of technology is its relative simplicity, which could mean a simple extraction of policy recommendations. The recent genesis of dominant actors who are no longer (directly) related to the (controlling) government(s), together with the globalisation, could complicate this simplicity of change.

4. The need for transdisciplinarity and decentralization

Within the environmental research tradition the care for water- and energy saving through reduction of demand, efficiency improvements and use of renewable sources always has been obvious. The field of (inter)national energy policies still can be characterised by a certain institutional fragmentation, that results in contrasts between different sectors of the energy-supply, the energy supply side (orienting for expansion of capacities) versus the demand side (orienting for energy management and - reduction). Most research projects concerning the environmental related flows don't attempt to extract themselves from their sectarian policy field.

The last few decades, in a large part of the publications on environmental issues, a rising awareness can be noticed that the (environmental) credo of “Think global, act local” should be the basis for any possible solutions. But this is exactly the problem in the consciousness-raising of present-day society: for many people, it is difficult to acquire insight into the relationship between their own behaviour and global environmental effects for the short term as well as the long term. Wilson [2002] claims that the awareness of “the earth’s health” has increased strongly, but the pace with which habitat is destroyed has not decreased significantly. “If the destruction of the habitat (such as rain forest, oceans, freshwater basins and rivers) continues, the breeding ground for natural reserves on which mankind depends will be lost. Or, in other words, the natural economy on which the market economy depends is getting weaker and weaker.” [Wilson, 2002; Vitousek et al., 1997].

Key solution might be the visualisation of the effects of personal acting. A lot of times this is translated into the need for solutions nearer to the users, like in the eighties Schumacher [1973] did. But this doesn't inevitably mean that the solutions should be decentralized, or implemented at the smallest scale. Obviously (environmental) innovations that are technically considered as successful can't necessarily count on extensive and fast social application [Brezet, 1994]. This applies even more to most of the specific, vulnerable and to natural processes related solutions. Therefore most of the times the smallest scale of implementation is chosen for these new (natural) technologies. This is not only the strength, but also the weakness of these concepts.
The existing ‘centralization paradigm’ is taken as a starting-point for the (mostly economical) comparison of these kind of alternatives [Collingridge, 1980]. New (decentral) technologies are being developed constantly in all fields, but the assimilation by society often is faltering. Besides the former stated ruling 'centralization paradigm' and 'dominant actors' another cause lies in the 'separate circuits' within the developing technology. The solution could be found in a broadening of the development-networks around technology, in a transdisciplinary approach. Another possibility might be the improvement of social involvement through communication, documentation and successful case studies / examples. However, this isn't as simple as stated. If a technology is still young, the social implications are barely known and if the social implications are known, the technology is indebted in such a way that it is impossible to adapt it to the desires of the different actors. This is called the Collingridge-dilemma [Collingridge, 1980]. To resolve this dilemma it is necessary to reflect fundamentally the societal conditions of the needed approach to implement this sustainable or even autarkic, self-sufficiency aiming technology.

The three main movements concerning the question if this is possible can be summarised as technological-, economical- and social-constructivist determinism. The first group of authors think that (sustainable) technologies develop autonomously out of themselves, and therefore can’t be influenced by society. The second group state that technological innovations can only be successful if they are profitable, while the third group state that there needs to be harmony between all actors about the course of the development of (sustainable) technology. The first two perspectives can be named unshakeable, as far as the sustainable technologies and technical infrastructure concerning the energy- and (waste)water flows are concerned. Therefore the solutions towards real sustainable- and in the end autarkic concepts should be found within social-constructivist adaptations. Sustainable development can not be enforced from above but should be realised via a bottom-up process. If one handles the dynamic interpretation of the Brundtland definition of ‘sustainability’ this means that the process side should be emphasised in stead of the formulation and handling of rigid (static) limits. Main focus should be the consciousness and involvement of people, which can be achieved through the visualisation of the relation city-nature in the design, putting the human habitat in the basis conditions and creating space for self-activation. This strategy reverts to the theme liveability as being a precondition for sustainability [Dorst, 1999] and puts emphasis at the organisation of the process in time. This means that the creation of space for initiatives and change after realisation are equal or even more important than (only) participation during the process of planning.

5. Conclusion

In the democratic triangle in the built environment formed by the three main groups of parties involved, viz. government, market and citizens, the relation between the first and the third is changing at the moment, because of the withdrawing government and the accompanying liberalization processes. The former relationship between State and citizen, to be characterized as linear (a modern society, fragmented with respect to
power), has been transformed into alternating networks of collaborative structures. The result is a changed margin for the co-ordination and participation processes of spatial areas. This leads to a larger interest to involve users and other “relevant” parties into the planning processes as early as possible, or, in other words, to aim for more commitment.

A sound method of decision-making following should imply ‘co-production’: recognizing the existence of mutual dependence between the various parties and interests. This can possibly be made more effective by putting in new (possibly interactive) information technologies. In such a complex interaction and integration process, it is crucial to appoint a so-called “leading actor”. An interesting option is to appoint the designer for this purpose, preferedly in close collaboration with a concept manager and/or process manager. Within this approach of integrating social learning processes, or ‘place making’ it is important how to deal with the various parties concerned and their interaction and learning processes.

A pluricentric method of interaction based on a transdisciplinarity, combined with a concept of “open design” offers perspectives, and is particularly suitable because of the current “specialists’ society” and the many parallel dynamic processes playing a part: it is an interactive learning process, in which participants may only develop and tune (adjust) their goals during the process. The emphasis is on directing the transformation process and developing alternatives while the process itself is going on.

Changing the balance of power: Minimizing the hierarchy among teachers, directors and consultants.

Power is present in every relationship and according to Foucault (1983) an inescapable facet of life. Organizations comprised of individuals that assume various degrees of responsibility for the leadership of the group become hierarchical. While such power differentials may seem only natural, it is possible to minimize the relative degree to which these structures exist and create an environment where everyone has a voice. The purpose of this paper is to illustrate change over time in the degree of power differences within an organization. A process oriented (Schein, 1999) consulting approach was utilized in an educational setting whereby consultants worked with the leadership team (directors) and teachers in a collaborative relationship with the group. Team meetings and individual interviews were reviewed for change in language reflective of power and qualitative examples are provided. Structural analysis involved the examination of how long each team member spoke and turn taking (the distance between more and less powerful individuals when speaking) and was reviewed for change across time (i.e. do less powerful members speak longer, does the distance between more and less powerful individuals change?). Findings will be discussed within the framework of community models of change.

Ready or Not—Online Education Is Here

The world is changing too quickly and there is too much information for our old methods of instruction to work any longer. We need to embrace online education for our personal and collective well-being.

--Greg Kearsley

Introduction

Oblinger (2000) pointed out that Education has begun to be viewed as a market. Between pre-school, K-12, higher education, and adult learning, the education market brings in over 665 billion dollars annually here in the United States of America. Higher education alone accounts for 225 billion dollars per year. This increase in spending on higher education is viewed as a substantial market. The strength of this market and the room for growth attracts many investors who are eagerly investing money into online educational opportunities. The expected pay-offs for online education are enormous and far exceed the other huge Internet industries, such as music downloads, Compact Discs (CDs), and flowers.

Within our capitalistic system, providing online educational services promises to be a highly competitive market well into the future. Online education should not be viewed as a way to turn current face-to-face students into online students, but rather as another way to “offer important new options and opportunities for women and men interested in higher education, courses, or degrees” (Kramarae: 4), who are not able to—for whatever reasons—attend face-to-face classes. While the investor’s goal is to make money, the core idea is to increase educational opportunities for potential students who otherwise would not be able to attain higher education.

Besides the lucrative moneymaking opportunity, technology has also been the driving force behind a drastic paradigm shift in the area of higher education. There has been a significant change in how education is delivered to students; students no longer
have to choose between freedom of scheduling and live interaction with the instructor and other students. Consequently, Allen (2006) argues there are currently over two million students taking online classes from educational institutions within the United States, and this number is rising steadily over the past few years by almost twenty percent.

Allen (2003) argues that public institutions still overwhelmingly lead the way by having online student numbers outnumber the private institutions by well over three-quarters. Scarafiotti and Cleveland-Innes (2006) claim that online education has entered the mainstream, and that the long-term growth strategy of most schools encompasses online course offerings. In order for many public educational institutions to meet their recruitment goals, they must provide innovative online delivery of instruction and a multitude of online student services. In fact, Allen (2003) from The Sloan Consortium points out that ninety-seven percent of all public higher education institutions already “offer at least one fully online or blended course.” (Allen: 2). She also states that forty-nine percent of all public institutions offer complete online degree programs. The long term strategies of most public educational institutions include the further development of online programs, because it will enable learning institutions to expand access to more potential students, despite projected constraints on capacity.

Judy Nix (2005) argues that, “Learning is not the medium. It is about the outcome” (Nix: 114). She argues that a blended learning approach improves the student-learning outcome. “Blended learning is the combination of two or more delivery modes to meet a specific set of learning objectives. So in some respects, blended learning has been with us since the beginning of time” (Nix: 109). In essence, matching the learner’s
needs can attain this goal. An online course has the ability to facilitate the learner’s specific needs by offering the ability to learn at his or her own pace, at anytime, anywhere, and anyplace; hence, the optimal learning outcome can be achieved.

While there are many aspects to online education, such as technological advances, financial opportunities for investors, meeting recruitment goals for public schools, and so forth, this paper addresses the overarching question posed by institution administrators, instructors, and students of what it take to be a successful online student. In other words, I am attempting to answer how a strictly online learning environment affects the student-learning outcome when compared to conventional face-to-face classes. In order to address these valid concerns, I will begin by providing a short history of how online education has developed, and then provide an extensive review of the current literature, followed by a conclusion that includes some suggestions based on the literature review.

**The Development of Online Education**

Online learning programs are an offspring of distance education, which is “defined as learning experiences in which students and instructors are separated by space and/or time” (Cavenaugh, Gillian, Kromrey, Hess, and Blomeyere: 5). In the early 1930s, according to Cavenaugh et al. (2004), distance education via the use of radio was brought into schools in order to bring courses to student and to help teachers learn the progressive Deweyan methods of teaching. Later, television, audio and video-conferencing, the Internet, and other technologies were being adapted in order to meet the needs of diverse learners.
Nasseh (1997) argues, that because of the political and social changes in women’s position within the family and society women’s participation in distance learning increased immensely in the United States during the 1980s and 1990s. Other contributing factors were technological advances in the workplace, and the necessity of women’s contribution in the job market. Sixty-seven percent of all participants in distance education during that time were women.

Televised distance programs are still available to students in many areas of the world. Students can watch classes broadcasted live on local cable station on their televisions. In most cases student will have a direct hot-line number into the classroom and can pose a comment or question to the instructor for the entire class to hear. The exams can be proctored and the assignments must later be sent in via mail, or e-mail. A great advantage is that the student can videotape the lecture for later. Some colleges will even tape each lecture and provide them to the student to watch in a designated area on campus. With this method, the students get freedom of scheduling and some live interaction.

According to Keegan (2005), CSU Chico, a provider of distance education over the last thirty years, provided satellite service throughout the 1990s. For example, this service was also available at College of the Redwoods, Del Norte campus in California. Students used to be able take classes taught at the California State University Chico (CSU Chico) by sitting in a small room and watching a television hooked up to a satellite. These classes were synchronous and the student could pick up a telephone provided in the room and pose questions to the instructor and the class. The students would do their assignments after the lecture and either e-mail, or mail them in via United States Postal
Service (USPS), them to the professors at CSU Chico. These satellite courses were offered during CSU Chico’s class time and the students had to be present in order to view and participate in the class. Using this kind of delivery, the students were able to interact live with the instructor and the other students, but did not have scheduling freedom.

Pollock (2002) explains that the field of distance education was already mature when the Internet became public. Correspondence, audio-only, and audio-visual sub-fields of distance education had developed due to technological advances, but were constrained by the limits of those very media. The limits no longer existed with the introduction of the Internet, which resulted in a drastic restructuring of the distance education field. Now, via the Internet, distance education bridged the gap and courses could be offered on either a synchronous and/or asynchronous basis.

Keegan (2005) points out that in 1998, CSU Chico started investing funds into exploring ways it could offer its satellite-based classes over the Internet. By 2001, CSU Chico’s delivery format was upgraded to a combination of live and on-demand web-based systems, with the technological combination of WebCT and Horizon Wimba. WebCT is the online management software that provides instructors and students with the ability to create, manage, organize and house a web-based learning environment. Horizon Wimba is a voice tool that allows for courses to be enhanced with synchronous and asynchronous voice recordings. It also provides live audio discussions between students and between students and teachers. The biggest advantage of WebCT and Horizon Wimba is that faculty and students have around the clock access. “The combination of these two technological systems resulted in the marriage of the best live and self-study tools rolled into one web-based solution” (Keegan: 129). With the help of this
technology, instructors were able to help establish a sense of community between themselves, the students in the classroom, and the distant students. The added benefit of Horizon Wimba is that it retains many of the same elements of a face-to-face classroom, by offering a live video streaming component for the students.

Basically, the students could log into a live, face-to-face classroom through the CSU Chico website and observe and interact with the class on a live basis because of the streaming video. One advantage of this method is that the students can type their input and questions into a live scroll, which is monitored by a technical teaching assistant. If necessary, students had the choice to log on later (asynchronous) at their own convenience and watch the class. Of course, by offering this kind of format, the students can log on later. They can also watch a lecture as often as they like, and wherever they like. This can all be done at from the comfort of their own homes in their PJ’s if they so wish. The students can pause, rewind, fast-forward, stop, or whatever they wish to do with ease.

As Desmond Keegan (2005) points out, CSU Chico has successfully delivered over 200 live courses since 2001 with the participation of over 100 instructors and over 1000 students. CSU Chico currently offers two Masters of Science and four Bachelors degrees, in addition to two minors and two certificates.

Online education has come from being interaction between computer and student to advanced interaction between student and instructor--mediated by computer technology. This kind of technology offers the students the best of both worlds— asynchronous and/or synchronous learning. Now a student receives real-time interaction with the other students and the instructor and the freedom of scheduling.
Clearly, distance education is nothing new and online education is a natural progression of the distance paradigm. Despite this natural progression, many professors still feel uncertain and uneasy about online education. Instructors are worried about issues such as the quality of the education, and the student learning-outcome. According to The Sloan Consortium (a consortium of institutions and organizations committed to quality online education), “faculty is perceived as lagging in acceptance of online education” (Allen 2006: 14).

According to Schrum and Hong (2002), the advancement of any educational situation is a multifaceted task. Moreover, when it comes to changing teaching methods, faculty members have had an especially difficult time adjusting to the online milieu. Teaching online classes requires more than just getting familiar with technology. Online education flattens the traditional hierarchy and redistributes power and control. The new technology challenges instructors to design activities and interactions in new ways, while they are urged to move toward offering a deeper learning experience.

Educators are seeking empirical research to address the specific issues of quality in online education and student learning outcome. The value of new research includes new ideas about what works and what does not, and the sum effect is that online education gains legitimacy. Fortunately, there is plenty of current literature that addresses these concerns, because many academics are trying to understand “this new portion of the educational landscape” (Dutton: 18).
Review of the Literature Addressing Learning Outcomes

In the recent years, a body of literature has begun to emerge addressing the nature of online learning. Garrison, Cleveland-Innes, and Fung (2004) bring up a very interesting point by examining the adjustment in student roles online education presents. In order for a student to be a functioning member of an online learning environment, an online learner role is both independent and interdependent. Participants of online education “…must move from a relatively passive classroom experience into a more active online community of inquiry” (Garrison et al.: 63). The student needs to privately reflect and process the course material, as well as interact with the instructor and the other students. More responsibility is placed on the student for more of the learning process—autonomy is essential. This represents higher standards that more closely match those of “real” life outside the classroom. “Educationally, this is a considerable advantage as students must become more self-directed and learn to learn” (Garrison, Cleveland-Innes, Fung: 64). French, Hale, Johnson, and Farr (1999) point out as well that self-directed learning is a strong asset business companies look for when hiring. Students will acquire this particular skill when taking classes online.

“A primary characteristic that sets successful distance learning apart from classroom-based counterparts is their autonomy” (Cavenough et al.: 6). Interestingly, Cavenough et al. (2004) argue that distance education needs to be integrated into the K-12 curriculum delivery format in order for younger students to learn the valuable skill of autonomous learning. Autonomous learning is an important skill for children to acquire in order to be successful independent learners later on. Cavenough et al. (2004) report that out of the two thousand charter schools nationwide, over one hundred of them are
now virtual. Cavenough et al.’s (2004) synthesis included data from ten virtual charter schools. All ten of these virtual charter schools performed at the same levels as the non-virtual, non-charter public schools in their states. Cavenough et al. (2004) point out that according to the National Assessment of Education Progress, traditional charter schools overall under-perform when compared to non-charter public schools. Based on their meta-analysis study Cavenough et al.’s (2004) conclude that,

“…When compared to traditional instruction, …no factors were found to be related to significant positive or negative effects. Students can experience the similar academic success….a student’s education online can be as effective as it is in the classroom…” (Cavenough et al.: 21).

With the autonomous learning skill, Cavenough et al. (2004) argue, online education could be as effective as face-to-face education. They based this conclusion on their extensive literature review, and a synthesis of fourteen empirical studies published in reputable journals since 1999.

According to Garrison et al. (2004) and Cavenough et al. (2004), online learning requires for the students to have certain skills in order to succeed in an online environment. Both of these studies emphasize also that autonomous learning is essential. The best way to master this skill is by letting it become “second nature” as early in life as possible. In many western nations, children born in the 1980s, and later on, are raised with interactive video and computer games. Through playing these games, children learn how to operate computers before they even enter kindergarten. The few that have not been exposed to computers by the time they enter school will have plenty of time to catch up once they start school. By the time children reach their teens, electronic interactivity is second nature to them. Field (2003) predicts that the interactive nature of online
education will be a perfect fit for young minds that have been raised in a world of interactive games and multimedia simulations.

Meyer (2003) comments in her review article, “A Review of Recent Research Reveals Three Areas That Can Enlighten Current Online Learning Practices,” that the interesting development along generational lines is that students arriving at colleges now, have greater abilities in online learning and the expectation to learn that way.

Moving away from education from K-12 and examining higher education specifically, Eva Schwencke (2005:33-47) claims that the learning result is in direct correlation to active student participation. In order for students to achieve the highest possible student-learning outcome, emphasis must be given to pedagogical principles that address this. One very important aspect of this is the student’s active involvement in the learning process. “…[B]y design, the success of many online courses is dependent upon the nature of student to student and student to faculty interaction” (Picciano:33).

Schwencke (2005) points out that getting students to actively participate is always a challenge, whether the classroom setting is face-to-face or virtual. She argues that in order for students to learn the material, they must both listen, and actively participate. Schwencke outlines the distinction between two general theories of education, namely the behaviorist (active/passive) and the constructivist (active/active) approaches.

According to Schwencke (2005), the behaviorist approach focuses on learning being based on the teacher’s presentation and the student having to do the memorizing. Performed tasks are based on comprehensive instructions and repetition. The students are frequently required to take short tests encompassing the material and in return receive
prompt positive feedback. This method yields short-term confirmable results for the students because it focuses on the learning result at any given time. The method is based on an active/passive process between the teacher and the student.

The constructivist approach, on the other hand, requires active and meaningful participation from the students. The lecture component delivered by the teacher is an important part for the student’s knowledge formation. The students are given ample opportunity to discuss questions with other students and apply their reasoning to find answers and reflect on the subject matter. The role of the instructor is to facilitate and guide such discussions so that the students are partaking in a meaningful way in the teaching situation themselves. This kind of approach challenges the traditional roles of instructor and student and promotes an active/active process between the teacher and the student.

Schwencke’s (2005) main point is that, just as with conventional classes, online classes can be approached in different ways that make the learning experience for the student either passive (lacking in interaction and collaboration) or active (collaborative, informative, and offering a high level of interaction). It is up to the instructor to create a stimulating active learning environment regardless of the delivery format used. Schwencke argues that there must be an emphasis on interactivity, which can be achieved by offering breakout rooms, video, text chat, application sharing, and web exploration assignments to the students. Schwenke (2005) stresses that the emphasis of any learning environment—virtual or face-to-face—must be based on pedagogical principles that enhance the student-learning outcome by actively involving them in the learning process.
Two political science professors, Carol S. Botsch and Robert E. Botsch (2001), conducted a study comparing face-to-face classes to online classes for the same American Government class over a two-year period. The two instructors found that the mode of instruction made little difference in the students’ learning outcome. There were no significant differences between the two delivery formats on retention or student grades with the exception of the factual knowledge gain in lower Grade Point Average (GPA) students. The lower GPA online students gained slightly more factual knowledge than their counterparts, the lower GPA face-to-face students. Botsch and Botsch (2001) concluded that this happened because the online students were forced to engage with the material on their own, while the face-to-face students could depend on the traditional lectures alone. There was more active participation required from the online students than from the traditional classroom students who were only required to passively listen to the lectures in passivity. Botsch and Botsch’s (2001) argument parallels Schwenke’s (2005) point about the importance of actively involving the students in the learning process.

Duffy and Kirkly (2004) also claim that educational quality does not depend on the delivery mode but rather on learning design and learner engagement. As measured by faculty, online education is “right in the mix with all other courses in the dimension of quality” (Duffy and Kirkly: 4). They point out that little, if any, research evidence supports the claims of the online education opponents that traditional classroom learning is superior.

Abel’s (2005) findings were based on the responses of online students and faculty who participated in learning institutions. Fifty-nine percent perceived the online courses to be successful and “of higher quality due to the e-Learning initiative” (Abel: 24). Fifty-
four percent “felt that they had revolutionized the teaching process” (Abel: 24). Most significant was the finding that sixty-eight percent reported that online courses provide learners with the capability to be more contributory in the learning process itself.

All five studies mentioned above, Abel’s (2005), Schwencke’s (2005), Picciano’s (2003), Botch and Botch’s (2001), and Duffy and Kirkly’s (2004) agree that it is essential to enhance the student-learning outcome by actively involving students in the learning process.

Another interesting fact, pointed out by Duffy and Kirkly (2004), is that distance education has prompted educators to pay more attention to the quality of pedagogical approaches in traditional classrooms as well as on the web. However, much more scrutiny is focused on distance education programs than face-to-face ones. Institutions that offer online classes are concerned about assessing and comparing their programs nationally and even internationally. Institutions can learn from each other’s success and failures. Kay Kane (2004), the Quality Matters Project coordinator of the Sloan-C View journal (a publication of the Sloan Consortium), examines how to assess quality in online education in her “Quality Matters: Inter-Institutional Quality Assurance in Online Learning” article. She points out that “quality is much like recognizing art – you know it when you see it, but everybody sees something different” (Kane: 1). Because quality is such an abstract concept, the Quality Matters Project has identified forty elements of online learning that impact student learning positively in order to promote inter-institutional quality improvement. Composed of these forty elements, is a new web-based rubric that is used by trained faculty teaching online courses.
Abel (2005), in conjunction with The Alliance for Higher Education Competitiveness, did a comprehensive quantitative study using surveys and interviews on the students and faculty of “twenty-one higher education institutions of various types that consider their usage of e-Learning as successful” (Abel: iii). He looked at how achieving success in internet-supported learning in higher education” was achieved (Abel: iii). His “case studies illuminate success factors, challenges, and future direction” (Abel: iii). Abel (2005) compared student outcomes by measuring retention and the level of quality ascertained through the student interviews. Students agreed that they are at least as satisfied with online courses as they are with traditional face-to-face courses.

A pilot study conducted by Julio C. Rivera and Margaret L. Rice (2002) at the University of Alabama at Birmingham concluded that the problem is not student performance and learning outcome, but rather student satisfaction. This study compared one class delivered in three different formats. First there was the traditional face-to-face lecture/discussion format. Second there was the web-based format, which was offered almost exclusively on the web, and the third format was the hybrid combining a mix of traditional and web-based means. All three formats assigned similar assignments, used the same text, and the same test bank tests in order to allow for direct comparison. Two professors taught the three sections studied. The student performance was remarkably consistent across the three delivery formats, and the students’ learning outcomes were almost identical; there was no significant change in the learning-outcome. However, there was a significant change in how the students perceived the class. Riviera and Rice (2002) felt that while their study should lay to rest the fears of diminished student learning outcome for online delivery format, academics should conduct more research trying to
find out why online students, even though they tested equally as well, felt less satisfied with their class experience in general.

Concerned also with the issue of student satisfaction, Picciano (2002) conducted a study addressing the assumption that there is a significant correlation between the student’s perception of satisfaction and student’s actual performance and learning-outcome. Interestingly, his study did not come to a clear conclusion that would support the assumption between the two factors; because, the results were mixed and inconsistent. Picciano’s (2002) recommendation was to further study this complex pedagogical phenomenon.

Koory (2003), a professor at the University of California Berkeley taught “An Introduction to Shakespeare” simultaneously in the traditional face-to-face on campus format as well as in the online format. She conducted a comparison study based on these two sections of her class. Here again, as with the Riviera and Rice (2002) study, the course objectives, assignments, and exams where basically the same in both course format deliveries. However, in Koory’s study, the same instructor taught the two sections—no variations in instructor. Koory’s (2003) findings, contradict Riviera and Rice’s (2002) conclusions, as both of the sections taught by Koory received equally positive student satisfaction in both sections. An additional contradiction was that the online learners in Koory’s online course achieved dramatically higher overall scores than the face-to-face students. Fifteen percent of Koory’s face-to-face students received an A or an A-, compared to fifty-eight percent in her online class, whereby the online students in Riviera and Rice’s (2002) study performed the same as their face-to-face counterparts.
Koory (2003) offers several explanations for this drastic difference. To begin
with, her online students are a self-selected group, plus less than half of the enrolled
students actually finish the online course. Over half the online students lack the
motivation and ability to do well in her course and therefore drop out early on.
Wojciechowski and Palmer (2005) also conclude that a higher percentage of online
students drop courses—“online education is plagued by high dropout rates…”
(Wojciechowski: 2). Whereas, according to Koory (2003), the face-to-face students are
neither self-selected nor have an attrition problem, because “the traditional undergraduate
environment supports a high rate of completion regardless of performance” (Koory: 31).
Another important factor is that the online format allows for a self-paced learning, while
the traditional format does not, and communication with the instructor is requisite in the
online course, while it is optional in the classroom. The verbal communication is often
times less substantive and ephemeral, because no written composed responses are
required for either the student or the instructor.

Koory (2003) argues that while campus students spend more actual time in class
than their online counterparts do, the comprehension level does not suffer. The
“entertainment value” of an actual in-class lecture is supplemented by the “reference
value” that is continuously available for the student’s review and reflection. In addition,
the time spent by online students engaging with the material is focused, compared to the
face-to-face students who may frequently be lured off topic by trivial non-issue
contributions. The discussion requirement for all online students was to post messages for
others to see and respond to. While face-to-face discussion may be momentarily more
entertaining and emotionally satisfying, they are defined by a lower standard of discourse
and allow many students to remain silent. Koory (2004) concludes that ultimately the
difference between the online and face-to-face classrooms is, that the online environment
“supports student’s abilities to practice adult learning styles” (Koory: 33).

Dutton, Dutton, and Perry (2002) conducted a similar study comparing students of
two large sections in a course that was offered in the traditional lecture style format and
the newer online format. While the main objective of the study was to find out how
online students differ from traditional students, they also explored student performance
differences. While they did identify significant differences in the characteristics of the
students themselves, they concluded that none of these differences influenced the student
learning-outcome significantly at all. Most importantly, while their findings confirm that
online students perform slightly better on exams, and that their course grades on average
are slightly higher than those of face-to-face counterparts, none of these performance
differences were statistically significant.

Conclusions

With this paper I have attempted provide a short history of online education and
an extensive review of the current literature. I also explored what it takes to be a
successful online student, and how a strictly online learning environment affects the
student-learning outcome when compared to conventional face-to-face classes.

According to the literature reviewed, autonomous learning in an essential skill an
online student must master in order to perform well in an online environment.
Fortunately, most of the younger generation students entering higher education
institutions have been raised in a world of interactive games and multimedia simulations;
the autonomous electronic interactivity of an online learning environment is like second nature to them.

Experts agree that the best learning outcomes come from an active learning experience regardless of the delivery format. Therefore, instructors are working towards providing an online learning environment that requires the student to be actively involved.

The issue of student satisfaction still needs further research. This literature review includes articles with opposing conclusions on how satisfied students are with online classes. The levels of student satisfaction range from being more satisfied with online classes, to equally satisfied with online classes, to less satisfied with online classes when compared to face-to-face classes. Despite the different levels of student satisfaction, online students that actually finished a course either performed as well or even out-performed their in-class counterparts by comparison. There was no correlation between student satisfaction and student performance. However, further examination is needed in order to establish the (what seems to be an obvious) correlation between student satisfaction and the high dropout rates in online courses.

The teaching process has undergone a huge transformation over the past seventy years. We have come from an in-class-lectures/everything on paper only format, to adding an online/distance/paperless format to the former, in order to accommodate the changing needs of our students. Changes in our education system have also been financial in nature, “education in the twenty-first century is a billion dollar business and in a capitalist economy it is understandable that the corporations will subsidize Internet education to a large degree” (Keefer: 10). Online education has become a prime
commodity and public institutions are in direct competition with private ones springing up everywhere trying to get a piece of the pie. Since many investors are concerned about returns on their investment, and since many public colleges are concerned about meeting recruitment goals, online education is here to stay and grow—regardless of the concerns and level of comfort faculty has with this medium. If public schools continue to lag, private schools will happily pick up the slack. All we can do now is try to improve it, by conducting more research and expanding our knowledge about this fairly new development that is sweeping across developed nations.

Clawson (2002) argues, as more technological innovations are used in online courses, more research is needed in order to evaluate its pedagogical effectiveness. While pedagogical issues of online education are examined, even face-to-face education can benefit from the research. The quality of education in general can be improved by bringing forth the concerns of online education.

The Healthcare Beliefs of impoverished rural Mexican women regarding cervical cancer and screening using ethnographic research methodology

WOMEN'S STUDIES

PAPER SESSION

DEBORAH SANTIVANEZ
2925 SAN VERBENA WAY
CHICO, CA. 95973
SANTIVAN@AOL.COM

530-520-0503
The prevalence of cervical cancer in Mexico is high. As a human service professional, the researcher began to inquire about the nature of the problem in an attempt to understand the reasons why women who had free and accessible healthcare failed to obtained these life saving screening tests. An ethnographic study with its ability to bring forth-relational theory and cultural knowledge was chosen. Ethnographic designs have been proven to serve as guides in the reconstruction of cultural meanings. Since using symbols creates cultural meaning, Spradley’s DRS design allowed for patterns of meaning to emerge. Participant observation and ethnographic interviews were the primary data collection activities. The culmination of the data, provided the reader with an understanding of its meaning. The conclusion was the cultural knowledge gained from 13 Mexican women who resided in San Quintin and Tijuana, Mexico, through the analysis of 3 domains and the discovery of 2 cultural themes. They were: 1.) Mexican women make health care decisions with the support and guidance of their women’s social group and 2.) positive image of women in the media has an influence on health care decisions. These two themes guided the women in making health care decisions. The women accepted them as true and with a high degree of generality. The themes were tacit because they came to be taken for granted and they slipped into the area of knowledge where women seldom find the need to express what they already knew.
Abstract

Almost all professional sports leagues engage in joint sale of broadcast rights and often maintain exclusive rights to broadcast rights. In this paper, we explore whether these exclusive broadcast rights may be an attempt to gain or exploit market power. Specifically, we compare the European soccer leagues to the American baseball league and conclude that the specific format of exclusive contracts entered into by Major League Baseball are an exploitation of market power.

I. Introduction

Almost all professional sports leagues, in the United States and in Europe, engage in some form of joint selling arrangements whereby the league maintains an exclusive right to sell the broadcast rights to at least some of the games played by its member teams. The leagues also place several restrictions on those broadcast rights which are retained by the member teams. In this paper, we investigate whether such joint sale agreements are anti-competitive from an economics perspective. The European Commission (EC) recently challenged joint sale arrangements amongst soccer teams in Europe as anticompetitive. In its case against the Union of European Football
Associations (UEFA), the EC eventually decided that joint selling provided several benefits to consumers and so broadcasters were exempted from the application of antitrust sanctions under Article 81(3) of the EC Treaty. Sports teams in Europe however, do not enjoy a territorial monopoly like the sports teams in the United States. There are several other significant organizational and structural differences in the American and European sports industries which imply that the European Commission’s findings and conclusions have limited relevance to the joint selling arrangements of sports leagues in the United States.

In the United States, exclusive broadcast agreements in the professional sports industry are most often a manifestation of the territorial monopoly of member teams in sports leagues. Exclusive territorial restraints are common in many industries such as automobiles, fast food, retail franchises and sports. The exclusive restraints in the sports industry are however different in nature than the exclusive restraints in other industries such as automobile or fast food industries. We argue that sports leagues are more appropriately characterized as horizontal joint ventures rather than as a vertically integrated industry. There exist many economic efficiency rationales for granting exclusive territories in vertical relationships. The theoretical economics literature generally predicts that exclusive territories help to prevent free riding by dealers, provide retailers with the incentive to invest in promotional activities and provide franchisees with the incentive to maintain the quality of the product and help protect the franchisor’s strong brand image. The exclusive restraints in the sports industry generally are in the form of exclusive territories granted to members of the sports league, in return for which the teams agree to share revenue. In section III, we examine the economic efficiency of
exclusive territories in general, and compare and contrast the exclusive broadcasting arrangements in the European and American Sports industries. In conducting such a comparison, it is important to keep in mind the significant organizational differences in the structure of the sports industry of Europe and the sports industry in the United States. So we begin with a description of the organizational structures of European and American sports industries, in Section II, highlighting the important differences that may have a bearing on the ultimate question of whether joint selling arrangements are economically efficient. Section IV concludes.

II. American and European Sports Leagues – Basic Organizational Differences

Sports is a unique industry and demands a business model that is like no other. Courts have long recognized that unlike other industries, the sports industry requires some level of cooperation amongst competitors in order to be able to produce anything. At the very least, teams have to agree on common rules of the game in order to compete against each other in the sports arena. In fact, the historical evolution of sports leagues was precisely due to this motivation of achieving agreement on standards for sports equipment and on common rules of the game. However, the need for common rules does not necessarily mean that there should be a single league. As the multiplicity of European soccer leagues demonstrates, standardization of rules of the game can and does come about without a single league monopoly. In England, for example, soccer has two

---

1 “[Sports is] an industry in which horizontal restraints on competition are essential if the product is to be available at all” *NCAA v. Board of Regents of the University of Oklahoma*, 468 U.S. 85, 101 (1984).

national level professional leagues while almost every sport in the United States, including soccer, has only one major national level professional league. Historically, whenever a competing national level league emerged in the United States, the competing league was either merged into or driven out of business by the incumbent league.

For clarity of exposition and to simplify the comparison of organizational differences in the continental sports industry, we will focus here mainly on the organization of soccer in Europe and the organizational structure of Major League Baseball in the United States. There are fundamental differences in the organization of the sports industry in Europe and in the United States. As a recent story in the Economist explains, the soccer industry in Europe is “competitive, globalised [sic] and financially self-sufficient”, whereas the Major League Baseball in the United States is “monopolistic, inward-looking and accustomed to handouts from the tax payer”. While there is some truth to this statement, there are economic problems associated with both organizational models as explained by Szymanski and Zymbalist in their recent book.

II.A. The American Sports Industry and Major League Baseball

American professional sports leagues are best described as cartels of a limited number of teams which play against each other. Once a team is admitted into the League,

---

3 For example in American football, several leagues emerged as competition to the NFL but were either merged with NFL or driven out of business. The relatively successful AFL founded in 1959 was merged with NFL in 1970 after the Sports Broadcasting Act became effective. A recent attempt at establishing a competing league, the XFL lasted only one season before shutting down.

4 “Bat and Ball” in the April 28, 2005 edition of The Economist.

6 Most scholarly articles on economics of sport treat sports leagues as horizontal cartels though recent scholarship is beginning to ask whether sports leagues are better described as vertical franchise.
it rarely, if ever, is removed from the League no matter how weak the team’s performance in the game. Each team is associated with a geographic territory that is assigned to it exclusively and so enjoys a monopoly over its assigned territory. The League may and occasionally does relocate a team to a different geographic territory and also may redefine the geographic territories assigned to each team. The limited number of teams coupled with the desire of cities to have their own team, makes it possible for leagues to extract considerable subsidies from the cities to fund the building and renovation of stadiums. For example, Major League Baseball recently relocated the Montreal Expos to Washington D.C where the team took the name of Washington Nationals. The city of Washington, which did not have a team associated with it for a long time, agreed to fund the renovation of the RFK stadium with taxpayer money for the benefit of the team. The league may also expand the number of teams in the league and charge the new entrant a hefty entry fee to be included in the Major League.

Sports economists Stefan Szymanski and Andrew Zymbalist argue in their recent book that Major League Baseball teams have managed the expansion and relocation of teams in such a way as to always ensure “excess demand for franchises from economically viable cities. With excess demand, MLB has been successful at getting cities to bid against each other for a franchise. The result is public subsidies far in excess of the economic and social benefits generated by a team.” The authors cite empirical evidence that cities which subsidize the baseball teams only reap negligible benefits in arrangements. Whether the sports leagues should be described as horizontal cartels or vertical franchise agreements is a question that we will deal with in section III of this paper. We conclude that sports leagues in the United States have more characteristics in common with a monopoly derived by cartel action rather than a franchise monopoly derived by a strong brand image.

the form of new jobs and businesses created as a result of the relocation of the baseball team.

II. B. European Soccer Leagues

European soccer leagues are open and hierarchical in nature as opposed to the closed system of the American Leagues. Any city, town, or village can host a ‘major league’ team as long as it can assemble good enough players. The new local teams, or clubs as they are called, enter at the bottom of the hierarchy of leagues and do not have to pay any entry fee. The teams compete with each other in order to be promoted to a higher league. Teams in higher level leagues that under-perform on the other hand get relegated to lower level leagues. For example, England alone has some 40,000 football (soccer) clubs playing in about 2000 leagues. The Football Association (FA), which was created in 1863 and incorporated as a limited company in 1903, acts as the national level association that has jurisdiction over all football (soccer) games played in England and is responsible for all regulatory aspects of the game. The FA by governing both the professional and amateur leagues in England acts as the link between the professional and amateur games. This ensures a uniformity of rules in a hierarchical structure and illustrates how it is not necessary to have a single league monopoly to ensure uniformity of rules. Along with 51 other European counterparts, the FA is governed by the Union of European Football Associations (UEFA).

Figure 1 illustrates the hierarchical nature of the National League System in England. New leagues enter at the bottom of the hierarchy at step 7 and are promoted according to performance criteria and regulations established by the Football Association to higher steps of the pyramid structure. Teams at the higher steps can be relegated to
lower levels if they fail to perform at the top levels. For example at the conclusion of each season the National League System regulations currently provide that clubs finishing at the bottom three places of Step 1 will be relegated to Step 2 and clubs finishing in the first position of each division at Step 2 will be promoted to Step 1.\textsuperscript{9} 

Not only do the European football (soccer) clubs not enjoy an almost permanent membership in the top professional leagues, they also do not enjoy the territorial monopoly of the American sports teams. Szymanski and Zymbalist (2005) argue that this is the main reason why European soccer teams are unable to extract public subsidies for stadium facilities while the American baseball teams almost always are able to extract substantial public subsidies.\textsuperscript{10}

\textsuperscript{9} See Regulations for Establishment and Operation of the National League System available at \url{http://www.thefa.com/Grassroots/Leaguesystem/Regulations}, last accessed on May 11, 2005.

\textsuperscript{10} See Szymanski and Zymbalist supra note 5.
Another difference between American sports leagues and European leagues is evident in the exploitation of television broadcasting revenues. The sports leagues in the United States recognized the commercial potential of television broadcasting early and exploited it by showing live games on television albeit with some restrictions. European soccer on the other hand did not begin exploiting the revenue potential of television broadcasting until the early 1990s. The recognition of the potential of exploiting TV revenues was responsible, at least in part, for the formation of the Football Association Premier League (FAPL) in 1992. All the First Division clubs of the Football League resigned *en masse* from the Football League, (the top national level league) in 1992 to form the FAPL. The FAPL was formed as a new league under the jurisdiction of the Football Association but managed to wrest commercial independence from the FA as
Preliminary- Please do not cite or quote without author’s permission

well as the license to negotiate its own broadcast and sponsorship agreements\textsuperscript{11}. The exploitation of television revenues played a major role in the rise of the FAPL. In its first five seasons broadcast on TV, the FAPL raised £191 million. In less than a decade, it was able to negotiate an exclusive contract with BSkyB worth £1.024 billion for the three seasons staring August 2004\textsuperscript{12}. Unfortunately for the FAPL though, its exclusive TV deals along with the TV contracts of the UEFA, attracted unwelcome attention from the European Competition Commission.

One common feature of European and American sports leagues is the joint sale of television broadcast rights. Whether it is the Major League Baseball (MLB), the Union of European Football Association (UEFA) or the Football Association Premier League (FAPL), broadcast rights to most games played by individual member teams are sold jointly by the respective leagues on an exclusive basis.

II. C. 1. Europe- Sale of Telecast Rights by UEFA

The broadcast agreements of European soccer leagues first came under the antitrust scrutiny of the European Commission in February 1999, when the UEFA applied for a negative clearance under Article 81(1) of the EC treaty for the joint selling arrangement of commercial rights to the UEFA Champions League competition. The UEFA’s Champions League is European soccer’s most prestigious and popular competition. In the 2003/2004 season the competition was to involve 80 national level

\textsuperscript{12} Id.
football clubs playing against each other in three initial qualifying rounds. Sixteen teams eventually would qualify to play in the UEFA Champions league. Due to the competition to play in the league, neither the UEFA nor the football clubs know beforehand which clubs will be in the Champions League competition. The 80 national level clubs retained the right to sell the broadcast rights to the games they played in the initial three qualifying rounds. The UEFA retained the exclusive right to sell the commercial rights of the UEFA Champions League so that the member clubs cannot individually sell these rights to the games played by them. UEFA sold the broadcast rights in a single package on an exclusive basis to a single broadcaster per member state (each country that is a member and sends its top national level teams to the competition). In July 2001, the EC issued a statement of objections finding that the joint selling arrangement restricted competition in the “upstream market of acquisition of TV rights for football.” The EC also objected on the grounds that since football in most European countries is “the driving force for the development of TV markets”, the restrictions prevented competition between broadcasters in the downstream market. And that the sale of TV rights in a single large package covering several years prevented the smaller pay-tv services from competing with larger broadcast companies.

In June 2001, on its own initiative, the EC opened an investigation into the joint selling arrangements of England’s Football Association Premier League (FAPL). The Commission made similar conclusions with regard to FAPL’s arrangements as it did with the UEFA, namely that the joint selling arrangement harmed competition in the

downstream broadcast media market because of the importance of football for the viability of TV markets.

Both the UEFA and FAPL proposed to settle the respective matters by agreeing to split the broadcast rights into smaller packages so that small pay-tv services could also bid for the rights in a meaningful way. This proposed agreement though favored by the EC, drew criticism from some broadcasting and pay-tv services because the splitting up of rights packages and the diminished exclusiveness of the broadcast rights would lower the value of the rights to the broadcasters. The segmentation of rights could also mean that there would be too much football on TV and viewers would have to buy several different subscriptions in order to be able to get all the games they are interested in watching.

In its final decision on UEFA’s joint selling arrangement\textsuperscript{14}, the EC accepted that a single point of sale achieved through the joint selling arrangement offered several significant benefits. The UEFA argued that joint selling arrangement was a prerequisite for the existence of the UEFA Champions League product. “Since no individual club knows before the start of the season how far it will get in the tournament, it could not sign a commercial agreement with a broadcaster giving the broadcaster any certainty that the football clubs will make it to the very end of the UEFA Champions League season.”\textsuperscript{15} The EC admitted that the joint selling arrangement lowered transaction costs of acquiring broadcast rights and benefited the broadcasters. The joint selling arrangement also lowered the financial risk to broadcasters who would otherwise have to buy rights from

\textsuperscript{15} Id. at 47.
individual clubs and bear the risk that such rights would become worthless because the club did not end up in the pool of the 16 qualifying clubs. The EC recognized that a single point of sale was a benefit to the commercial partners and sponsors of the UEFA Champions League as well. The final decision in the EC’s challenge to the FAPL joint selling arrangement is yet to be announced.

II.C. 2. United States – Sale of Telecast Rights by MLB, NFL, NHL and NBA.

We looked at the distribution of telecast rights in the National Hockey League (NHL), National Football League (NFL), Major League Baseball (MLB) and the National Basketball Association (NBA). Generally, each individual team retains the right to sell the telecast rights to its games in its own geographic territory whether the game is played at home or away. Teams have no rights to telecast a game outside their local territory. For example, the LA Lakers can sell the rights to all games played by them, whether at home or away, to local or regional television networks in the Los Angeles area. But they cannot sell telecast rights to stations broadcasting the game outside the Los Angeles geographic area.

The rights to these so-called “out-of-market” telecasts rest exclusively with the respective leagues. The leagues sell the rights to some of the out-of-market games to national TV networks either on an exclusive or a non-exclusive basis. All the Leagues also offer out-of-market games via cable or satellite premium packages - the NFL’s Sunday Ticket, the NBA League Pass, the MLB Extra Innings and the NHL Center Ice. All these packages however come with some blackout restrictions meaning that not all of the out-of-market games will be available through these packages.
Blackout Restrictions: The nature of the blackout restrictions vary from league to league. But there are some common characteristics. Whenever a team is broadcasting locally, the game is available only on the local/regional channel and not through the satellite/cable premium package. This local broadcast blackout restriction protects the local channel’s exclusivity. The NHL and the MLB blackout the home team’s games in the home territory regardless of whether the team sells its rights to broadcast its games.16 This implies technically, that if a game is being televised locally, it will be available nationwide to subscribers of special sports programming packages. But when a game is not being televised locally for some reason, it may still be available to viewers outside its area but not to local viewers.17 Whether such an incident has ever occurred could not be ascertained but if it does occur on a regular basis, it would be interesting to inquire as to why such an arrangement exists.

The NFL blacks out a team’s home game in the home territory if the game fails to sell out at least 72 hours before the game.18 For the stated purpose of protecting home game attendance, the NFL blacks out the home team’s game to both the local broadcast channel viewers as well as the NFL Sunday Ticket subscribers in the home team’s territory. The game however is made available to viewers outside the local area through the premium package.

---

These blackout restrictions simply indicate that each local team is allowed to sell exclusive broadcast rights to a local television broadcaster in the local broadcast area. By selling exclusive rights to broadcast its game, each team is able to extract monopoly rents associated with the exclusive territory assigned to it. Any revenues associated with out-of-market broadcasts are reaped by the League and distributed to the teams according to a pre-determined formula. It also seems that as long as a game is being televised somewhere, it will be available to viewers nationwide if they subscribe to special premium sports packages. These blackout restrictions, designed to protect team revenues and exclusivity of team territories by protecting home game attendance, are generally exempt from antitrust scrutiny under the Sports Broadcasting Act\(^{19}\).

The MLB however, imposes extra blackout restrictions which may not be exempt from antitrust concerns under the Sports Broadcasting Act\(^{20}\). The MLB has 30 member teams and schedules over 150 games each season. But only a few of the games are telecast. In addition to local blackout restrictions that are similar to restrictions imposed by other professional sports, the MLB prohibits local teams from telecasting any games when the league is telecasting select games nationwide on FOX or ESPN. Currently, FOX has an exclusive window for all MLB games on Saturdays until 7:00 pm during the regular season and ESPN has an exclusive window on Sunday nights. Any games that are played during these exclusive windows and not being televised on FOX or ESPN cannot be broadcast on any local channels. Only the games chosen by FOX and ESPN are

\(^{19}\) 15 U.S.C. §1291 provides that section 1 of the Sherman Act will not apply to joint agreements of professional team sports of football, baseball, basketball or hockey, by which the sports league jointly sells all or a part of the broadcast rights of its member clubs.

\(^{20}\) 15 U.S.C. §1292 provides that the exemption provided by §1291 will not protect blackout restrictions other than those which blackout telecast of games in the home territory when the home team is playing at home.
available for TV viewers on these days during the exclusive windows and all other games are blacked out everywhere. This seems to be designed to protect the exclusivity of telecast rights of ESPN and FOX rather than protecting the exclusivity of the team’s territorial rights. The question that arises then is why would a profit maximizing league choose to forgo potential television revenues from more than half the games played on weekends. Two explanations come to mind. First, the League is maximizing its long-run profits at the expense of short-run profits by preventing over saturation and maintaining the attractiveness of its sport to viewers. Second, it is maximizing its long-run and short-run profits by acting as a monopolist and choosing to sell only the most popular of its quality-differentiated product and reducing quantity in order to be able to raise prices. The long-run and short-run profit goals are not in conflict from the League’s perspective if we buy the second explanation. From a consumer welfare perspective however, the strategy of maintaining a product’s attractiveness by restricting sales of output seems suspect.

III. Law and Economics of Sports Broadcast Restrictions

The broadcast restrictions imposed by Major League Baseball can be characterized as either horizontal restraints restricting horizontal competition between member clubs or as vertical restraints designed to promote the brand image of MLB. Whether these restraints must be treated as horizontal or vertical can be important from an antitrust law and economics perspective. Resolving the issue from an economics perspective however, is largely an empirical matter. From antitrust law perspective, the question of whether the League structure should be regarded as vertical or horizontal becomes irrelevant to some extent since in either case, a rule of reason standard is likely
to be applied\textsuperscript{21} and a similar analysis of competitive effects will be required even though the burden of proof may still vary. In this paper, we explore the economic efficiency aspects of exclusive territories in horizontal and vertical industrial structures and identify the types of empirical evidence that may be required to resolve the issue.

**Sports Leagues - Franchise Monopoly or Cartel?**

In a recent article, Carlton \textit{et. al} suggest that restrictions placed by a sports league on franchise relocations may be similar to the restrictions placed by McDonalds on its franchisees thereby implying that a sports league is like a vertical arrangement with a brand image to protect\textsuperscript{22}. Leagues certainly exhibit some characteristics in common with vertical franchise operations such as McDonalds. They assign exclusive territories to the teams, provide a strong brand name under which the teams compete, place several restrictions on how the teams may compete and make rules as to sharing of revenues between the teams and the league and distribute these revenues among the teams in a prior-agreed manner.

In industries where the upstream monopolist has created a strong brand image for its product, the upstream monopolist may grant exclusive territories to provide franchisees the incentives for undertaking investments in quality and protecting the monopolist’s brand name. Exclusive territories are also used in industries where manufacturers depend on the downstream retailer’s specialized knowledge about customers for promotion and marketing of products to prevent free riding by dealers/retailers. In the absence of exclusive territories free riding occurs when the inputs

\textsuperscript{21} The United States Supreme court in \textit{NCAA v. Board of Regents of the University of Oklahoma}, 468 U.S. 85, 100-101 (1984) held that it is inappropriate to apply a per se rule to the sports industry since no product can be produced by the industry without some degree of cooperation among horizontal competitors.

required to sell the retail product cannot be sold together with the product. Customers can learn about a product from retailers who invest in promotional activities and then buy it at a lower price from retailers who do not invest in promotional activities. The scope for free riding creates disincentives for retailers to invest in promotional activities and harms the manufacturer by lowering overall sales of the product. Granting exclusive territories is one way of overcoming the free riding problem but it is neither the only solution nor is it necessarily the most efficient way of dealing with the free riding problem. Vertical integration and resale price controls are other solutions to the free riding problem.

Other significant differences exist between sports and franchise operations such as McDonalds. Whether it is hamburgers sold by McDonalds franchisees or mattresses by Sealy franchisees, the product sold by the franchisees is homogeneous and of the same brand. The products sold by league members (games) however, are highly differentiated. In addition, the sports teams may have brand images that are much stronger than the brand image of the league itself.

Consumers of sport can watch live games either in the stadium or on television. While consumers watching directly in the stadium pay a per user fee in the form of ticket prices, consumers of television broadcasts do not pay directly for the games. Telecasters

---

24 See Patrick Rey and Joseph Stiglitz, “The Role of Exclusive Territories in Producers Competition”, 26 RAND J. of Economics 431 (showing that in imperfectly competitive markets, producers will use exclusive territories to curb interbrand competition leading to an increase in producer’s profits but a reduction in consumer and overall welfare). See also Willard F. Mueller and Frederick E. Geithman, “An Empirical Test of the Free Rider and Market Power Hypotheses”, 73 Review of Econ. and Statistics 30 ( finding evidence that removing territorial restrictions on distribution of Sealy mattresses resulted in a decrease in price and increase in output contrary to the predictions of the free-riding hypothesis. Evidence showed that advertising and promotional expenditures by retailers also increased in both absolute and relative terms after territorial restraints were removed.)

25 Resale price maintenance however is illegal under the Colgate Doctrine. See U.S. v. Colgate, 250 U.S. 300 (1919).
pay for the game and extract revenues from advertisers. To determine whether a sports league possesses market power in dealing with telecasters we, therefore, need evidence that advertisers view baseball telecasts as a unique product with no close substitutes. If the demographic data available from television rating companies such as Nielsen would show that baseball is a product separate and distinguishable from other sports in the eyes of advertisers, a case can be made that baseball wields market power in its relationship with television. The limited number of teams and the ability of the league to extract substantial public subsidies can also be evidence of overall market power.

Secondly, the leagues offer several pro-competitive justifications for the broadcast restrictions such as the need to ensure competitive balance, to sustain fan interest etc. Almost every empirical study of competitive balance in sports uses a different measure of balance making it very difficult to draw any inferences. The best lessons, therefore, can be learned by comparing and contrasting the American league structure to the European league structure. European soccer retains horizontal competition and does not assign exclusive territories to member clubs. It recognizes that the amateur players are also the fan base for professional sports and has been able to capture international audience bases and fans. The success of the European model demonstrates that while joint selling of telecast rights may not be anti-competitive, granting exclusive broadcast territories may still be anticompetitive.

IV. Conclusion

Whether economists call the phenomenon free-riding, presence of positive externalities or complementarities in sports, they are referring to the same theoretical phenomenon of weak sports teams benefiting from the promotional efforts and
performance of strong teams. However, as explained in this paper, the granting of exclusive broadcast territories is not only unnecessary but may not even be economically efficient as a solution to the free-riding problem. The only empirical studies of free-riding in vertical franchise industries show that exclusive territories did not prevent free-riding but instead only inhibited intra-brand competition.
Abstract

There has been several effective conservation strategies put into practice lately in order to conserve the remnant urban green spaces and the biodiversity they shelter. Compared to the pristine forests, conservation of urban green spaces is highly complex due to the presence of multi cultural communities. Bangalore is known as the IT capital of India, has attracted people from all over India, thus causing urban sprawl. As the city is growing outwards, the rural areas are developing in a haphazard manner. Moreover, peri-urban and the rural areas which once were green lungs for the city are now being destroyed at a tremendous rate. The socio economic status of the rural community has not improved in spite of the developments. Initiating an urban conservation and conservation conscious society may depend on the socio cultural background, their attitude, mindset and varying levels of exposure to nature. The most popular biodiversity conservation model has been trying to recreate habitat using the nearest wilderness as reference site. This may be irrational in many cases as the social system may not be resilient to this change in their surroundings as they have long been used a manicured lawns and gardens. This calls for an approach that transcends all the dimensions of such complexity. We explored the possibility of using butterflies as flagship species across many sections of the society to make many existing landscapes and gardens in Bangalore more eco-friendly so as to regain some of its natural functions. Through the involvement of Women Self Help Groups based in the peri-urban of the city, who completely depend on the Non Timber Forest Products for their livelihood, we have developed a sustainable package, the Butterfly Kit, through which they make an extra regular income and also forges the urban-rural link. This has been successful and we have managed to reach out to several people who are working towards developing their home gardens into a butterfly garden. Also, through this initiative, an independent urban outreach program has emerged and here we present some of our successful interventions and on-ground experiences.

THE ETHNIC IDENTITY DEVELOPMENT AND ADJUSTMENT OF EASTERN
EUROPEAN CHILDREN ADOPTED INTO NEW ZEALAND HOMES:
AN EMPIRICAL STUDY

ABSTRACT

Intercountry adoption (ICA) is a growing socio-political phenomenon around the world. Research into ICA has focused largely on racial issues such as race-matching policies or the ethnic identity development of transracially-adopted children, as well as the internationally adopted children’s overall adjustment. Yet, through all of this research, the focus has been almost exclusively on transracial adoptions, where the children are racially different from the adopting parents. Almost nothing is known about the role of culture and/or the ethnic identity development of internationally adopted children, raised in racially-similar adoptive homes.

In New Zealand, research was carried out to investigate the ethnic identity development and overall adjustment of internationally adopted children who are racially-similar but culturally-different to their adoptive parents. Fifty-two adopted children (a sub-sample from an initial study of 162 families) were interviewed on their ethnic identity and adjustment. The focus of this phase of the research was on the children’s ethnic identity development; their overall adjustment; and the relationship between the two constructs. Results and implications for policy will be discussed.
INTRODUCTION

New Zealand has a long history of adoption, with the earliest adoption legislation dating back to 1880 (Griffith, 1996). In fact, in the 1960s and 1970s, New Zealand had one of the highest domestic adoption rates of the western world, with almost 7% of its children being placed for adoption (Iwanek, 1997). However, strong interest in intercountry adoption (ICA) did not begin until 1990, when stories of over-crowded Romanian orphanages made local news (e.g. Barber, 1990; Nissen, 1990). With the country’s supply of adoptable children quickly decreasing, New Zealand joined ranks with countries like the U.S.A, Italy, France, Belgium, Switzerland, and Britain, to begin adopting orphaned Romanian children (Dominion, 1990; Griffith, 1996).

As the number of New Zealanders participating in ICA began to increase, debate over the political, moral and ethical implications of ICA in New Zealand ensued. Strong opinions were voiced on both the potential benefits and dangers of ICA (McDonald, 1994), issues that ran parallel to the debate originating in the U.S.A. regarding transracial adoptions (TRA) and the race-matching politics of the 1970s.

Transracial adoption and race-matching

In the beginning, it was the National Association of Black Social Workers (NABSW) in America who argued that white families could never adequately equip or prepare a minority child to function in society, or cope with the anticipated racial prejudices that would certainly befall her/him, since visually, the child would always be seen as a member of the minority group from which s/he came (Russell, 1995). Opponents of TRA went on to suggest that the ethnic identity development of transracially adopted children would be impaired if they were raised by white parents. This socio-political stand fuelled the growing trend of “race-matching”, the philosophy that adopted children should “look like and be like” adoptive parents (Modell & Dambacher, 1997, p.4). Modell and Dambacher (1997) believed that race-matching was an historical reflection of early beliefs in “biologism” in America; that ideally the child should appear to be born to the adoptive parents. As such, matching was seen to preserve “sameness” in adoptive
families (Freundlich, 2000; Griffith & Duby, 1991), and to be in the best interests of the child (Gaber & Aldridge, 1994). This wisdom was legitimised and institutionalised by social workers systemically matching parents and children, initially on a number of characteristics, including religion and class, as well as race (Freundlich, 2000). Today, the practice of matching focuses almost exclusively on race.

Concern over white adoptive parents’ abilities to adequately meet the needs of non-white children, particularly those needs related to the children’s ethnic identity, became one of the key points of argument in the race-matching debate. Some researchers argued that while white families may be able to instil positive racial identification in their children, it is the coping and survival skills necessary as a minority person in a majority culture, that they would be unable to provide (Hayes, 1993; McRoy & Hall, 1996). Bartholet (1994), in contrast, suggested that it is white parents who are better able to teach a child of colour how to manoeuvre in a white majority society.

Despite the controversy over race-matching, this principle went on to form the foundation of adoptive placements not only in the U.S.A. (Bartholet, 1994), but in the U.K. (Hayes, 1993), and other European countries (Hoksbergen, 1986), at various times over the last several decades. The ideology also found its way into New Zealand practices (Ludbrook, 1990). Where once the placement of Maori children into Pakeha (European or non-Maori) homes was commonplace, by the mid-1970s, social workers in New Zealand also began to prefer same-race placements for Maori children (Rockel & Ryburn, 1988). In New Zealand, concern over the adopted children’s ethnic identity development was a primary issue, particularly in light of the literature suggesting that transracially adopted children could become marginalised between cultures (e.g. Dalen & Sætersdal, 1987), as well as the numerous studies that were emerging, predominantly from the U.S.A., claiming that transracially-adopted children had an overwhelming tendency to identify with the dominant culture (e.g. Andujo, 1988; Kim, 1977; McRoy & Zurcher, 1983; Simon & Altstein, 1992). Yet, despite those concerns, most of those
same authors were also finding the majority of transracially adopted children to be scoring in the normal range, if not higher, on indices of adjustment.

The research, and the associated debate, continues still. For example, Westhues and Cohen (1998) investigated the international adoption into Canada of 155 children from predominately Asia, Latin America and Africa. They measured ethnic identification, and found that the participants (with a mean age of 17.3 years) tended to ethnically identify with their host culture; only one-third were reported to identify with their respective birth cultures. They also measured self-esteem, using the Rosenberg Self-Concept Scale, and found the participants had scores higher than the general population.

In a Norwegian study involving 36 adoptees from Korea and Columbia, Brottveit (1999) noted that many of the participants in the study expressed little interest in their “roots”. However, Brottveit argued that this lack of birth culture interest was not something negative. “…Their insistence on their Norwegian-ness, or their refusal of giving special importance to their ‘roots’, could as well be seen as an act of negotiating their social identity. It can be a sign of strength, not weakness or failure or not coping or false consciousness or what so ever …” (p. 128).

Irhammar and Cederblad (1999; 2000) were interested in the ethnic identity development of Asian and Latin American youth adopted by 181 Swedish families. The study’s focus was on the adoptees’ interest in “ethnic origins” (birth ethnicity) as contrasted with their interest in “biological origins” (birth family). Like many of the preceding studies, the investigators found that most (88%) of the adoptees had a majority ethnic self-identity, “experiencing themselves as Swedes, with a Swedish cultural practice” (p. 156). Yet, and again like the earlier studies, this was correlated with neither mental health problems, nor low self-esteem. On the contrary, the group scored higher than the norms on their measures of mental health status. Of particular interest, however, was the contention by the authors that having a Swedish self-identity did not equate to a denial of ethnic origin. They reported that a third of the group took an active interest in their ethnic origins, despite identifying with the majority culture. This finding suggests that a
child can have a majority culture identity, but still show interest in the birth culture (even if not identifying with it). It also suggests that ethnic interest and ethnic identification may be separate phenomena, a point with some support from within the ethnic socialisation literature (e.g. Bernal, Knight, Garza, Ocampo & Cota, 1990; Phinney, 1990).

Overall, it is clear from the empirical research conducted thus far that the children of TRA/ICA have a tendency to ethnically identify with the dominant (white) culture, more so than with their own ethnic groups (e.g. Andujo, 1988; Irhammar & Cederblad, 1999; McRoy & Zurcher, 1983; Sætersdal & Dalen, 2000; Simon & Altstein, 1992; Westhues & Cohen, 1998). Those same adoption studies have also provided strong evidence that TRA children, independent of ethnic identification, are very well-adjusted, based predominately on measures of self-esteem or self-concept. This clearly suggests that having a majority-culture identification is not necessarily a negative outcome. The relationship between ethnic identity and cultural interest is less certain but there is some evidence that these constructs are also operating independent of one another (e.g. Brottveit, 1999; Irhammar & Cederblad, 1999).

When ICA is not transracial

What if the internationally adopted child is not racially different from the adoptive parents? What if the child is racially similar, and only culturally different, such as when white, European parents adopt Eastern European children? Despite the tendency to see ICA as involving only transracial placements, many international adoptions do not cross racial boundaries. Hence, somewhat different issues may be faced by ICA children who are racially similar to their adoptive parents.

Unfortunately, research on ICA from Eastern Europe, which is prolific in its discussion of the effects of institutionalisation (e.g. Rutter et al., 2000) is conspicuous in its lack of inquiry into the importance of ethnicity and culture, especially in light of the TRA/ICA literature, and its almost singular focus on ethnic socialisation. Instead, research on this population has focused almost exclusively on the adopted children’s medical problems (e.g. Hostetter, Iverson, Dole & Johnson,
1989); behavioural problems (e.g. Marcovitch et al., 1997); developmental issues (e.g. Rutter & The English and Romanian Adoptees (ERA) Study Team, 1998); attachment problems (e.g. O'Connor & Rutter, 2000); and indiscriminately friendly behaviour (e.g. Chisholm, 1998).

Freundlich (2000), in her book on the role of race, culture and national origin in adoption, is one of the few authors to acknowledge the absence of research on the cultural needs of children who are racially similar to the adoptive parents (also see Irhammar, 1999; Sætersdal & Dalen, 2000). She is also one of the only researchers to theoretically speculate about the ethnic identity development of Eastern European children adopted in other countries. Freundlich raises the question of whether cultural identity is less critical to self-esteem for white children. She contends that “Caucasian” ICA children would be more likely to identify with the dominant culture, irrespective of their national origin, the same tendency seen in the TRA studies. However, she speculates that Eastern European adoptees may suffer fewer identity-related issues, than would intercountry adoptees of colour. In their physical similarity to the majority culture, Eastern European adoptees would likely experience less discriminatory behaviour as well (Freundlich, 2000).

It was the absence of any empirical research into the ethnic socialisation of children who are racially similar, but culturally different, to the adopting parents, that was the leading rationale for the present study. The fact that ICA is a growing phenomenon in New Zealand and around the world, and that Eastern Europe looks like it will continue to be a leading “source country” (Selman, 2002), led to further justification for a study on Eastern European adoptees and how they are faring with regard to their ethnic identity. In particular, the present study chose to focus on: (1) ethnic identity, (2) self-concept, and (3) any possible relationship between these two constructs, for Eastern European children adopted into New Zealand homes. Additionally, the study sought to determine if any of these factors were influenced by the children’s ages, ages at placement, or number of years spent in the adoptive family, factors found to be relevant to adopted children’s development in general (e.g. Brodzinsky, 1993) and transracial adoption outcomes in particular (e.g. Harper, 1986; Verhulst, Althaus & Bieman, 1990).
**METHODOLOGY OF CURRENT STUDY**

Following on from an earlier phase of the research in which the adoptive parents were surveyed (see Scherman & Harré, 2003), the current study involved a group of 52 internationally adopted children living throughout New Zealand, who were recruited through the country’s leading agency for inter-country adoption. Twenty-two were boys (42%) and 30 were girls (58%), ranging in age from nine to 19 years, with an average age of 12.9 years (SD = 2.1 years). Seventy-four percent were Russian, 26% were Romanian, and the remaining two were from Thailand and Peru respectively. These latter two children were retained because their experiences provide at least some tentative insight into racially different adoptees in New Zealand. However, they were not included in the analysis of questions that related specifically to racial congruity. The average age at placement was 4.4 years (SD = 3.7 years; Range = 1 month to 14 years). At the time of the study, the average number of years the children had been with their families was 8.5 (SD = 3.1 years; Range = 3 to 14 years). Eighty-nine percent of the children spent some time in an institutional setting before being adopted; the average time being 29.9 months (SD = 23.6 months; Range <1 month to 7 years).

The children were interviewed in their homes. Information was gathered on the adoptees’ identification with their birth and New Zealand cultures; relationship with the host culture; their interest in their birth cultures, and cultural activities; and how other people perceived and treated them. Other questions were asked but are not analysed here. Many of these questions were structured items using Likert-type rating scales (with opportunities to elaborate), based on research reporting that children frequently fail to respond to open-ended questions, or they respond with too little information, as compared to adults (Waterman, Blades & Spencer, 2001). To avoid repetition in this paper, further details on the questions and response scales are given in the Results section. There were also some open-ended exploratory questions, some of which appear in the Results section below as quotations to further illustrate the children’s responses.
In addition to the interview topics noted above, data was also collected on ethnic self-identification (Phinney, 1992) and self-concept (Piers, 1984) using two standardised tools. Finally, all of the data collected was considered in light of the children’s ages, ages at placement, and length of time in the adoptive family.

The Phinney Multigroup Ethnic Identity Measure

To measure the degree to which the children identified with their birth culture, the Multigroup Ethnic Identity Measure (MEIM) was used (Phinney, 1992). The MEIM was made up of a series of self-statements (e.g. “I have a lot of pride in my ethnic group and its accomplishments”) of which the children had to agree or disagree using a 4-point Likert scale (1 = strongly disagree; 4 = strongly agree). For use in the present study, the survey was modified slightly to exclude items measuring ‘other-group orientation’ since it was not relevant to the aims of the present study. This modification reduced the number of self-statements from 20 to 14. The overall MEIM scores were determined by averaging the children’s responses to each of the 14 items, resulting in a possible score that ranged from one to four. A high score represented more identification with the birth culture. The Cronbach’s alpha reliability for the 14 items was .83.

The Piers-Harris Children’s Self-Concept Scale

To measure overall adjustment, the Piers-Harris Children’s Self-Concept Scale (PHSC) was used (Piers, 1984). This survey, subtitled “The way I feel about myself”, originally included 80 self-statements (which was reduced to 50 after deleting two subscales to do with popularity and school status, deemed unnecessary to this study). The children had to respond Yes or No to questions such as “I am smart” or “I am often afraid”. Using a more simplified scoring system, a score of two was given when answered in the direction of positive adjustment (e.g. saying Yes to “I am a happy person”), whereas a score of one was given when the child answered in the opposite direction (e.g. saying No to “I am a happy person”). In this way, the lowest possible score was 50 and the highest was 100; the later representing higher self-concept and better overall adjustment. Cronbach’s alpha was calculated at .88.
Results

Ethnic identity
Using a 5-point rating scale, with “all New Zealand” at one end, and “all birth culture” at the other, the children were asked how they would describe themselves ethnically. (Note: response choices here and throughout the results are given in italics) Nineteen percent said all New Zealand; 27% said more New Zealand than birth culture; 39% saw themselves as an equal mix of New Zealand and birth culture; 14% said more birth culture than New Zealand; and 2% (one child) chose all birth culture. The children were asked to indicate how much like other “Kiwi kids”, they felt they were. The majority of adopted children felt they were a lot like other Kiwi’s (58%); 25% said some; 15% said not much; and 2% (one child) chose not at all like other Kiwi kids. The children were also asked to rate how important it was to them to be like other Kiwis. Twenty-three percent said it was very important; 35% said it was kind of important; 27% felt it was not very important; and 15% indicated that it was not important to be like other Kiwi kids.

Cultural activities
At the time of the interviews, only two children said they were actively learning their birth language (Yes/No). When asked if they were interested in possibly learning the language, 44% of the children reported they were very interested; 37% were kind of interested; 12% were not very interested; and 8% were not interested. Open-ended questions regarding specific cultural activities engaged in garnered inconsistent answers, as many children struggled to recall specific activities, or when prompted, did not always recognise that some of the activities they were doing, were in fact, related to the birth culture (for example, cooking ethnic foods or attending the Russian ballet). Nonetheless, 91% reported enjoying the activities that they did engage in (Yes/No). When further asked if they felt the quantity of activities was enough, 31% responded affirmatively; the remaining 67% said they wished they did more.
The children were asked if they ever felt pressure to learn more about their birth culture, or felt pressure to engage in cultural activities (Yes/No). Only one-third of the children reported feeling some pressure to learn more about the birth culture, as illustrated by the following quotations:

“[I feel pressure] sometimes; by other Romanian adoptees.” (From a Romanian girl aged 13.)

“My god-mum would like it if I learned the language.” (From a Romanian girl aged 13.)

“From kids at school.” (From a Russian girl aged 12.)

Birth culture (knowledge and interest)

Table 1 shows how much knowledge the children had about their birth culture, which for the majority was some or not much. The table also describes their level of interest in various cultural activities. As can be seen, the categories of media and sports appeared to be of the most interest, followed closely by food.

Related to their interest in sports, the children were also asked if, while watching the recently televised Olympic Games, they took an interest in the competitors from their birth country; 81% responded affirmatively to this Yes/No question. The children were then asked to imagine a
sports competition between New Zealand and their birth country, and to choose which team they would want to see win. Fifty-two percent wanted their *birth country* to win; 38% wanted *New Zealand* to win; the remaining 10% were undecided, and could not, or would not, choose between the two countries.

**Treatment by others**

The children were asked to describe how other people (outside their families) treated them. From the three options they were given to choose from, the vast majority (94%) reported that they were treated mostly *like a Kiwi*; two percent (one child) reported being treated mostly *like a foreigner*; and four percent (two children) said that they were treated somewhere in-between, or *a mix of both*. (It is interesting to note that the three who did not select “like a Kiwi” for the above item, also described themselves as *more birth country than New Zealand* on the earlier question of ethnic identification.) To measure their perceptions of similarity or dissimilarity to their parents, the children were asked if they thought that a stranger, seeing them out with their adoptive parents, could tell that they were adopted. The majority answered *No* (69%); only 31% felt a stranger could tell that they were biologically unrelated to their parents.

Less than a third (27%) of the children reported experiencing some negative treatment related to being adopted from another country (*Yes/No*), as illustrated by the following quotations.

“A boy said he wouldn’t want to be me; his family hates people who are adopted.” (From a Russian girl aged 12.)

“It happened at camp. Some girls got real catty, saying ‘go back to your own country’.” (From a Romanian girl aged 14.)

“It happened once. Hoons in town bashed my bike and kicked me. They got kicked out of town.” (From a Russian boy aged 18.)

“Taunting that ‘your parents didn’t want you’.” (From a Romanian girl aged 13.)
Birth culture identity score (MEIM)
The mean MEIM score for the group ($n = 52$) was 2.54 (SD = .57). This represents almost exactly the mid-point of the scale. The lowest score achieved was 1.30, while the highest score achieved was 3.60.

Self-concept score (PHSC)
The mean PHSC score for the group ($n = 52$) was 86.46 (SD = 7.68). The lowest score achieved was 67, while the highest score achieved was 98.

Relationship of measures to other child variables
The relationship of all the quantitative measures discussed above was examined in light of the child’s age at placement, current age and number of years in adoptive home. The only significant results were finding that the MEIM score was significantly related to the number of years the children had been with their adoptive families, $r = -.334, n = 52, p = .016$ (2-tailed). It seems that the longer the children were with the adoptive parents, the less likely they were to ethnically identify with the birth culture.

Relationships between birth culture identity and self-concept
The existing TRA/ICA literature suggested that ethnic identity is not related to self-concept. Consequently, in the present study it was expected that the children’s MEIM scores would not correlate with their PHSC scores. The data bares this out as no such relationship was found, $r = +.001, n = 52, p = .997$ (2-tailed).
DISCUSSION

Ethnic identification

On a number of measures, the children showed identification with both their birth culture and New Zealand culture. With regard to their New Zealand identification, this may be related to the adoptees’ racial similarity to other New Zealanders, and the children’s perception of being treated as Kiwis. It has been suggested in the ethnic socialisation literature that how others ethnically describe children influences how they ethnically label themselves (Aboud, 1987). It also stands to reason that children who have been in New Zealand most of their lives, and thus grown into the New Zealand way of life in a very fundamental sense, will see themselves as New Zealanders. This argument was also made by Irhammar and Cederblad (1999), Brottveit (1999), and Sætersdal and Dalen (2000) in their respective studies.

However, the children also showed clear identification with their birth culture, demonstrated most obviously through the overall average MEIM score for the group of 2.54 (SD = .57), representing at least moderate birth culture identification. This identification was stronger the more recently children had entered the adoptive family. This may indicate assimilation to New Zealand culture subsuming some degree of birth culture identification, or possibly a gradual waning of parents’ commitment over time to maintaining the child’s links to their place of birth. (See Scherman & Harré, 2004, for more discussion of the parent’s role in the ethnic socialisation of the adoptees.).

It is also noteworthy that the two children placed after the age of ten had an average MEIM score of 3.22 (SD = .30), which was at the higher end of the range. Finding higher ethnic identity scores for the adoptees who were placed at an older age, is on par with the TRA literature, which has suggested that the older a child is at placement, the more likely s/he is to engage in ethnic behaviours associated with the birth culture (Kim, 1977), and the more likely the child is to ethnically identify with the birth culture (Lydens & Snarey, 1989). This also supports the idea that older adoptees “bring culture with them” when they arrive, and therefore, may be less
likely, or slower, to assimilate (Berry, Trimble & Olmedo, 1986), as compared with those children who were adopted younger.

Clearly, more research is needed to see if developing a dual ethnic identity is achievable or desirable, and if so, how families can promote biculturalism within their adopted children. According to Westhues and Cohen (1998) and others (e.g. LaFromboise, Coleman & Gerton, 1993), biculturalism involves having a sense of understanding and belonging to both cultures, which suggests that indices of biculturalism must include how much the person identifies with both cultures. While the current study found that the children often saw themselves as an equal mix of birth culture and New Zealand culture, there was no measure of New Zealand identification equivalent to the MEIM measure of birth culture identification. Friedlander (1999) states that measuring one’s identification with the majority culture is difficult. This may be due to difficulties in operationally defining that which encompasses the majority culture, or the tendency to see ethnicity as pertaining only to minority groups, or persons of colour.

**Children’s interest and participation in the birth culture**

There has been some recent speculation within the TRA literature (e.g. Irhammar & Cederblad, 1999; Westhues and Cohen, 1998), that ethnic identity and birth culture interest may operate independent of each other. For example, Irhammar and Cederblad (1999) found that while the adoptees in their study had predominately Swedish ethnic identities, this did not preclude them taking an active interest in their birth cultures. Conversely, Phinney (1990) states that a child can have a clear ethnic identity, but still choose not to participate in the cultural activities associated with it. The present study found that 90% of the children enjoyed the birth culture activities they engaged in, even if they did not know a great deal about their birth cultures, or had only moderately high ethnic identity scores. Overall, this provides additional evidence that internationally adopted children can enjoy aspects of their birth cultures, even if they do not ethnically identify with them. Nonetheless, the contention that birth culture interest and identification operate separately needs further investigate within the context of ICA, as well as
the possibility that children are engaging in cultural activities without a conscious or explicit awareness that the activities are related to their birth cultures.

Due to New Zealand’s strong sporting culture, several questions were asked about interest in birth culture sports, which showed that for the majority of children, they took an active interest in watching or supporting the competitors from their birth countries. In light of the literature on sports fan identity, this may be evidence of greater birth culture identification than revealed on the other measures, for the majority who expressed a desire to see the birth country win in a hypothetical sporting match. In her review of sports fan research, considered in the context of social identity theory, Jacobson (2003) noted that the feelings commensurate with being a sports fan include belongingness and a sense of group membership and community. Supporting the competitors from the birth country may allow the children to exercise a socially acceptable affinity with the birth culture in a way that does not disrupt their connection with the host culture.

**Similarity to majority of New Zealanders**

Due to the racial similarity between children and adoptive parents, several questions were asked to test the assumption that the racial congruity would influence the degree to which the children would perceive themselves, and be perceived by others, as similar to the dominant culture. Overwhelmingly, the children reported that other people treated them like Kiwis. Only two children said they were treated sometimes like a Kiwi and sometimes like a foreigner, and only one child reported being treated like a foreigner.

Additionally, the children were asked if they thought that a stranger, seeing them out with their adoptive parents, could tell that they were adopted. With 69% responding *No* to this item, it would appear that the majority of children also perceived themselves to look very similar to the adoptive parents. Finding that the vast majority of internationally adopted children see themselves as Kiwis is on par with the TRA literature. On the other hand, finding that others tend also to see the children as New Zealanders is in stark contrast to the experiences of many
of the adoptees in the TRA literature, where numerous authors described occasions where the adopted children had been mistaken for immigrants instead of members of the majority culture (e.g. Brottveit, 1999; Dalen & Sætersdal, 1987; Irhammar & Cederblad, 2000; Rørbech, 1991). For instance, 60% of the adoptees in the study by Irhammar and Cederblad (2000), and almost 100% of the adoptees in the study by Brottveit (1999) were reported to have been treated as immigrants or foreigners, at one time or another, despite the adoptees being raised most of their lives in their respective communities, and experiencing themselves as members of the dominant community.

**Experiences of prejudice and discrimination**

Freundlich (2000) speculated that Eastern European children would be less likely to suffer the same race-related problems reported for transracially adopted children due to their racial similarity to the host culture. This seems to be the case with the present population. It was reported that very few children had experienced acts of prejudice or discrimination by others. This was encouraging, although not surprising, since, as reported above, over 90% of children felt that others saw them as Kiwis. Not being seen as different would likely have a strong influence on the children’s lack of experiences of discrimination. However, it must be acknowledged that these comparisons are between racially similar children raised in New Zealand, and the racially dissimilar children described in the literature from North America or Europe. On the other hand, the two children in the current study, who were racially different, also reported experiencing no prejudice. It is difficult to know if this reflects a more tolerant environment in New Zealand, perhaps particularly in regard to children, especially since studies suggest that New Zealand has the same tendency to be racially intolerant towards minority groups seen elsewhere (e.g. Rasalingam, 2003).

**Self-concept**

On the Piers-Harris Children’s Self-Concept Scale, the overall mean for the group was 86.54 (SD = 7.59), indicating these children generally had strong self-concepts. This was not unexpected, based on the TRA literature. On a number of indices of adjustment, including self-esteem and
self-concept, the transracially adopted children described in the research literature were often found to be doing very well (e.g. Andujo, 1988; Brottveit, 1999; Kim, 1977; McRoy & Zurcher, 1983; Simon & Altstein, 1992; Westhues & Cohen, 1998).

On the other hand, research on the adoption of Eastern European children who have had a history of institutionalisation, has found that it is not uncommon to see negative outcomes in adjustment (e.g. Chisholm, 1998; Hostetter et al., 1989; Rutter et al., 2000). Finding, in the current study, that so many of the children scored highly on the measure of self-concept, despite their early institutionalisation, could be the result of a response bias on the part of the adoptive parents; they may have agreed to let their children participate due to their perceptions of their children’s high degree of functioning overall. Parents of children with the greatest adjustment difficulties may have chosen not to participate. On the other hand, it is also possible that the children’s high self-concept is related to being racially similar to the parents and wider society, as was theoretically suggested by Freundlich (2000). Given the lower rates of discrimination and prejudice experienced by the children, combined with the high tendency to be perceived as members of the host culture, this “blending in” to the family and larger society, may have positively influenced the children’s self-concept scores. However, it should be noted that the two non-European children in the study had the highest PHSC scores, suggesting that racial incongruity with the adoptive parents may not, on its own, be a key factor in adjustment (although this point is based on only two children).

Based on the extensive body of research on transracial placements, which has suggested a lack of relationship between ethnic identity and adjustment, the current study expected to find the children’s ethnic identity (MEIM) scores to be statistically unrelated to their self-concept (PHSC) scores. This was, in fact, the case. Consistent with the TRA literature, it appears that for Eastern European children adopted into New Zealand homes, ethnic identity and self-concept operate independent of one another. With high self-concept scores and moderate ethnic identity scores, it is clear that not having a strong ethnic identification does not equate to poor self-concept. Furthermore, with the children in the present study also ethnically identifying with the New
Zealand culture, this further suggests that ethnic identification with the host culture is not commensurate with poor adjustment or marginal status.

Limitations of the study
The findings of the study must be considered in light of the limitations. For example, while it would have been more methodologically sound if the study could have compared the racially-similar ICA families in New Zealand to those with racially-different children, this was not possible, as there were too few ICA families with racially-different children to adequately compare. Consequently, it is not clear if differences observed between the children in the current study, and those transracially adopted children in North America or Europe, are due to the New Zealand children’s racial similarity to their parents and the dominant culture, or due to something different in the New Zealand context. Furthermore, with 100% of the families being recruited through a single non-profit agency that facilitates intercountry adoptions, there are clearly some concerns about generalisability to the adoptive families that have not utilised this service.

Conclusion
Our study found that the children adopted from Eastern Europe had an interest in their birth culture, and that their ethnic self-identification incorporated a mixture of New Zealand and birth culture identities. They also had high self-concept scores. Overall, these findings suggest that the Eastern European children adopted in New Zealand are well adjusted, and interested in their ethnic origins. Several intriguing questions remain, such as whether these findings are particular to New Zealand, and whether the ethnic identification of these children will change as they reach late adolescence and early adulthood. These await further research.

The start of the new millennium corresponded with the emergence of a new and yet unheralded movement – the impact of the growing number of female leaders worldwide on decisions to choose war or peace. From Liberia to Chile, female heads of state are advocating cooperation, negotiation, and equality in an effort to change long-standing societal norms and political structures that traditionally led to war. In this paper we discuss the far-reaching impact of female leaders on their societies’ futures, the increased emphasis they place on human rights, and their attempts at restructuring their societies’ long-held norms and mores that in the past have resulted in conflict over cooperation.
Christians in Predominantly Muslim Societies: A Comparative Study of Indonesia, Kazakhstan, Sri-Lanka, and Egypt.

The growth of anti-West sentiments in predominantly Muslim societies has significant effects on the lives of Christian minorities living in these cultures. In this paper we discuss the ramifications of these changes on asylum seekers to the US. We use a comparative approach to illustrate the considerable hardships Christian minorities experience in their home countries, and the factors that have been and should be considered for immigration asylum cases from these countries.

Innovative Educational Techniques in Supporting Linguistic and Cultural Rights of Indigenous Peoples of Siberia

"European Charter on the languages of regional and minority peoples and languages of minorities" was signed by Russia in 2001. At present this multinational country is undergoing a complicated process of selecting corresponding paragraphs and subparagraphs of the Charter acceptable for or corresponding to the needs and possibilities of more than 130 linguistic minorities. Among these there are over 30 indigenous peoples of Siberia (two federal areas of the Russian Federation with a total territory of 10.000.000 sq. km or 58.8% of
The territory of Russia). These are Aleuts, Altaians, Buryats, Chuvans, Chukchi, Dolgans, Evens, Evenks, Enets, Eskimos, Itelmens, Khakas, Khanty, Kets, Koryaks, Mansi, Nanai, Nganasans, Negidals, Nenets, Nivkh, Oroks, Oroches, Selkups, Tofalars, Tuvinians, Ulchi, Shors, Udehe, Yukaghirs, Yakuts. It is impossible to tell the exact number of peoples because there are constantly processes under way connected with self-identification of ethnological groups within different peoples of Siberia. For instance, "Altaians", who were considered to be a single people, during the last decade present themselves as five separate ethnic groups: Tubalars, Kubandins, Chalkans, Telengits and the Altaians as well.

The state of the languages and the security of the linguistic rights of these peoples does not correspond to the requirements of the Charter at all. Since the Soviet times up to now ethnic minorities and indigenous peoples have been meeting with considerable difficulties in preserving their national cultures and native languages, their traditional ways of life, obtaining a high level education and full-fledged development of the personality. Specifically the infringement of the linguistic and cultural rights the Siberian minority peoples consists in as follows.

- Insufficient attention is paid to the native languages of the children of the indigenous peoples at educational establishments.
- Some ethnic minorities have no schools at all, especially those for small numbers of pupils in places of their compact habitation, which makes inevitable the teaching of all subjects at boarding schools in Russian.
- The side consequence of the universal education of children at boarding schools in isolation from their mother tongues and their family traditions is the appearance of marginal persons joining neither the Russian nor their traditional culture.
- Restricted sphere of using the mother tongue even within one’s family results in a gap between the generation of the parents who still continue speaking their mother tongue in the family, and the generation of the children who speak Russian both at boarding schools and at home.
- The school textbooks draw an incorrect picture of the Russian society; they contain no information on the existence of Siberian indigenous peoples, on their history, their contribution to the region’s culture and to the human culture in general.
- There are too few academic descriptions of indigenous languages and cultures, few research collectives dealing with these problems.
- Too few representatives of the indigenous peoples receive higher education in the humanities, there are few people capable of defending the rights of their people both at federal and international levels.
- The legal provision of the needs of the indigenous peoples is not adequately explored, the administrative and public monitoring is developed insufficiently.
- The Russian and international public sufficiently is not informed enough on the problems of indigenous peoples.

Thus one can ascertain the absence of many legislative, scientific and administrative foundations of securing linguistic, cultural and educational rights of the Siberian indigenous peoples. The consequence is some bitterness and aggressiveness as a result of accumulated tension in discriminated groups, on the one hand, and the responsive bitterness of the groups of the dominating population who fail to understand what this irritation has been caused by, on the other. The natural opposition "We are as we are, and they are different" is replaced by the antagonistic «We are good, and they are bad." An insufficiently deferential attitude to the customs, traditional beliefs and culture of the Siberian indigenous peoples may, under certain circumstances, form the basis for interethnic conflicts.
There is a pressing necessity of developing enlightening and many-levelled education programmes and methods making it possible to overcome the discrimination of the indigenous peoples and ethnic minorities.

Any educational work with the youth of Siberian indigenous peoples has to view the fact that their native national culture certainly needs external educational, scientific and administrative support. Otherwise, as has been the case for decades under the totalitarian rule, both the older generation and the children inevitably lose the command of their native language (the latter lose it almost completely).

At the same time, education in the Russian-speaking surrounding, as has been pointed out above, retains its foreign-ethnic character. There arises a barrier, at times insurmountable, in the teacher-pupil interrelation due to which the teacher experiences the feeling of acute dissatisfaction with his own work, the sensation of their potential being unrealised. The situation calls for purposeful educational and enlightening work among the teachers and lecturers of the territorial educational institutions aimed at preserving and developing the languages and cultures of the Siberian indigenous peoples. These teachers are facing a double task: (1) they must be highly skilled professionals trained outside their national districts, at leading federal higher educational establishments, and (2) they must obtain a good knowledge of life, work and culture of the population of the national district to whom the teacher is called upon to bring his educational potential.

Taking up the best positions among elite educational establishments of Russia and being located just in the centre of Siberia Novosibirsk State University (NSU) makes its special efforts in broadening the educational possibilities for the indigenous peoples of Siberia. Disposing of 108 chairs and 12 departments under State Certificate it accomplishes training specialities of Economics, Sociology, Linguistics and Philology, Psychology, History, Philosophy as well as specialists of Mathematics, Applied mathematics and computer science, Physics, Computer complexes, systems and networks, Software and automated systems, Chemistry, Biology; Geology, Geophysical methods of search and exploration of useful minerals, Ecology and nature management.

In 2002 NSU had established a special Laboratory for innovative educational technologies (NSU LIOT). This Laboratory had created in 2002-2004 a huge complex of special innovative technologies of the integrating ethnic minorities and indigenous peoples of Siberia into a system of high level education. The technologies mentioned were implemented by NSU LIOT together with NSU Chairs and departments in 2003-2007. The implemented LIOT technologies had formed together a targeted educational space for the indigenous peoples' youth with 4 large domains according the target groups of indigenous population:

1. gifted young indigenous people from 16 to 30 years of age for creating the national scientific potential of indigenous peoples in native linguistics is developed with a 5-models structure;
2. senior school pupils – representatives of Siberian indigenous peoples from the remotest districts of Siberia;
3. training and retraining the teachers of the remotest schools being situated in places of compact indigenous peoples' residing;
4. children and juveniles at an age of 5 to 15.

The concrete descriptions of these educational domains and the educational technologies included are presented below.
1. Gifted indigenous youth: creating the national scientific potential of the indigenous peoples of Siberia in mother-tongues and native cultures.

There were constructed and implemented by NSU LIOT 6 technologies for scientific Humanitarian potential of the indigenous peoples' of Siberia formation.

1.1. Targeted searching for the most gifted representatives of Siberia’s indigenous peoples residing in the remotest areas of Siberia for the further specialization in mother-tongues and native culture at the Humanitarian Department of NSU. The selecting process runs by the following criteria:

- Level of the interest in his/her mother tongue and culture manifested by the qualitative parameters of his/her participation in special NSU activities on the problems of preserving and maintaining the languages of Siberian indigenous peoples – the Regional and Interregional Olympiads in indigenous Peoples of Siberia Languages and Culture;
- Level of activity in the Project measures to form the educational space for children and juveniles in native places;
- Progress in studies in the framework of the adapted programmes for the representatives of Siberian indigenous peoples.

1.2. Creation of special training programmes at NSU Chair of the Languages and Folklore of Siberian Peoples for the representatives of different ethnic groups of Siberia to educate highly qualified specialists from representatives of Siberia’s indigenous population in the field of their mother tongues and their native culture. Creating a special adaptive program for these students with a special care to the objective Russian-dominating environment, maintenance of indigenous students' adaptation to this environmental without any loss of native traditions.

1.3. Preferential admission of the gifted and industrious representatives of Siberian indigenous peoples in Novosibirsk State University on specialty "Languages and cultures of the indigenous peoples of Siberia".

There are two ways of implementing the preferential admission into NSU for the indigenous peoples' youth.

The first one is the well-adjusted system of admitting the winners of Interregional Olympiad in studying native language and native culture. This way is described in detail below (section 2).

The second way ensures NSU LIOT created the technologies of involving the pupils from the communities where the language has practically disappeared (for example, Aleut, Orok, Ulch, etc.)

The main requirement of the target group in question is the children’s enthusiasm for humanitarian thinking. Here success in competitions in humanities subjects appears not to be enough. For this reason, training for the privileged admission of students is provided by a special campaign publicised by the Project, as well as by a number of supplementary arrangements:

- distributing information letters to the territorial bodies of local authorities with invitations to co-operation;
- negotiating with the heads of national administrative units and creating dialogue platforms in the territorial bodies of local authorities on the questions of providing a high-level education to representatives of Siberia’s indigenous peoples;
- distributing supplementary information letters to educational institutions of the corresponding territorial formations;
• defining the selection criteria and preparatory tasks for young people from Siberia’s indigenous peoples.

A privileged admission is offered to young people who officially express their interest and is accomplished by search and individual selection from among school pupils finishing national boarding schools or rural schools in national republics as well as by talks with students of national higher educational establishment completing the first year of their studies there.

1.4. **Training these graduates at the Post-Graduate Courses** of NSU with a specialization in the field of the languages of Siberia’s indigenous peoples. Encouraging the potential young leaders to promote the achievements of their native languages and cultures.

1.5. **Training to adequately presentations their work in international forums.** A research team was created by the NSU Laboratory for innovative educational techniques together with Turkic Philology Institute at the Frankfurt University headed by Prof. M. Erdal as well as with Finno-Ugric Languages Institute at the Munich University headed by Prof. E. Skribnik. The internships for gifted indigenous post-graduate students were run according to the following plan:

- series of lectures by leading German experts on the history, cultures and languages of the USFE indigenous peoples (Frankfurt – Turkic languages, Munich – Finno-Ugric and Samoyed languages), and on the problems of recording and preserving the languages of indigenous peoples;
- the work at the libraries on the preliminarily selected subjects, consultations by German specialists on the subjects of research;
- the participation of the target groups’ representatives in the work of the International conferences and symposiums on the problems of preserving the languages of indigenous peoples with contribution of their own reports on native language preservation and development.

1.6. **Further NSU investigations for external preservation and support of the disappeared languages of the indigenous peoples of Siberia.**

Even the representatives of humanitarian trades, although they are quite aware of the merits and significance of their native languages, without external support are losing the command of their native languages - the older generation to a considerable degree, and the younger generation practically by 100%.

Only a comprehensive description of the linguistic continuum will make it possible to correctly choose a supporting dialect on whose basis it will be possible to create educational literature comprehensible to the speakers of different dialects. At present the number of investigations of this kind is negligible, and so is that of investigators capable of accomplishing them, as well as that of organisations realising the urgency of these investigations.

Novosibirsk State University supports the national cadres by:

- recording oral speech including specimens of folklore (musical folklore as well);
- experimental - phonetic analysis of oral speech;
- creating of data bases;
- producing audio and video cassettes with recorded texts in the languages of indigenous peoples;
creating a base with a complex of video materials permitting the older generations to maintain their knowledge of their mother tongue, and the younger generations to master it.

- Resuming the practice of publishing bilingual reading materials as the fairy-tales, stories, information texts of historical, geographic and ethnographic character. For example, in 2003 there were published 2 of them which were written just by the young Khakas and Shorian leaders trained at NSU program presented here.

There were constructed and implemented by NSU LIOT 4 educational technologies aimed at broadening the possibilities of indigenous school-leavers in obtaining higher education.

2.1 Promotion of the youth education programmes targeted at preserving and developing the languages of these peoples, their national culture, ethnic memory.

A complex system of measures had been carried out to educate the representatives of indigenous peoples’ communities both as good specialists in professions needed in the market economy and as indigenous peoples representatives who are able to support the linguistic and cultural rights of native peoples. That is the reason why every activity for the youth people’s education starts with participation in a 3-staged Olympiad in their mother-tongue and native culture where the young representatives of the indigenous peoples’ communities who wants to receive higher education at NSU within the privileged admission system has to demonstrate his personal knowledge of his own ethnic roots and his native people’s history.

Stages of the Olympiad in indigenous languages and culture:

- The first stage takes place at the local communities' schools during lessons of the native language; the tasks for the Olympiad are prepared by the teachers of native language who had got special training at NSU (see below in details).

- The second stage is held at the regional level for the winners of the first stage. The tasks are prepared by the specialists of the Educational Department or sent by NSU and his partners’ teachers.

- The third stage is held as Interregional Olympiad annually in March at Novosibirsk with participants’ presentations of their native culture.

2.2 Regional Olympiad in Mathematics for the school pupils- representatives of indigenous peoples' local communities.

Those young representatives who are gifted and interested in technical subjects much more than in Humanities are to be involved in a network of 2-staged Regional Olympiad:

- The first stage takes place at the local communities schools during the special tasks, adapted to a level of studying Maths at village schools, sent by the teachers of NSU Computer Sciences College to Antennae multipliers for spreading these tasks in the remotest villages. The most industrious pupils, winners of the first stage, are to be invited to a contest in Mathematics at the Antennae Centres for visiting teachers.
• The second stage is held in January during the school holidays. The College teachers leave to Antennae for organising there special intensive trainings-courses for the most gifted and industrious youth, winners of the 1st stage, and special training courses for their teachers as well. The courses for children are ended by a Regional Olympiad in Mathematics and Physics.

• The winners of the regional Olympiads are to be invited to the Summer Computer Science School at Novosibirsk. During the time rest for summer these pupils will receive from NSU College individual tasks; preparing those they could get he education enough for starting the next stage – Summer School training.

2.3 Arranging and holding the Remote (External) Mathematical, Physical, Chemical, Biological and Economical contests through implementing them in the languages of the indigenous peoples of Siberia as well.

Every year about 130 teachers and research workers of NSU go to the towns of the Eastern zones of Siberia and the Far East to hold Olympiads in natural sciences among the talented youth to select gifted schoolchildren for the Summer School in Mathematics and Physics.

A Summer school is a necessary stage in the system of revealing, supporting and developing the talented youth of the ethnic minorities and indigenous peoples of Siberia when for this youth first adaptation classes, and then regular educational classes are arranged. The classes are concluded by tests indicating the efficiency and expediency of teaching.

In accordance with the results of the Summer school, on the competition basis, the best pupils are admitted to the Specialised Science-Education Centre (SSEC NSU). In addition, annually the NSU arranges away Summer schools in the remotest regions (in Sakhalin, Kamchatka, etc.) with the support of the administrations of these regions.

Through these contests the NSU will select pupils from the regions of compact residence of the indigenous peoples of Siberia. The main tasks of these Remote (External) contests are:

- arousing and developing interest of the talented youth representing the Siberian ethnic minorities and indigenous peoples for natural sciences;
- offering the pupils of general education schools located in places emote from scientific centres an opportunity to get an in-depth knowledge of mathematics, physics, chemistry, biology, economics;
- raising a level of teaching natural-science subjects at school, methodological help to teachers in teaching the key items of the programme and of the optional courses.

The educational programmes of the External School are well adapted by NSU LIOT to the level of readiness of the target group representatives who had got their education starting at their remotest regions very far from the leading universities and schools. The adaptation process includes:

- Organising and conducting intensive preparatory courses in the places of compact residence of Siberia’s ethnic minorities and indigenous peoples.
- Arranging consultative, psychological, social and other kinds of help to representatives of Siberia’s ethnic minorities and indigenous peoples.

2.4. A privileged enrolment of the winners of Olympiads for the further education in non-Humanities.
There are two LIOT branches for further education of the senior pupils - indigenous peoples' representatives.

**NSU LIOT branch at Chukchi Versatile College** offering:
- Ethnic-sensitive Teaching;
- National Art and Culture;
- National Economics;
- Law and Social Security;
- Management Psychology with additional education in specialised areas (cutting and sewing of national dress; traditional national trades; leather and fur work; organization of workshops in - welding, joinery, metal work, electrics).

**NSU LIOT branch at Higher College of Computer Sciences (HCCS)** offering:
- A Summer School in Programming - annually in July, 21-days-long, 144-hours of courses in computer sciences;
- A year-round, distance-learning school in Mathematics which organises once a year (in January, during the school holidays) Winter Schools at Antennae as intensive preparatory courses in the areas of compact residence of indigenous peoples USFE;
- Stationary education at HCCS for the most industrious pupils – participants of the HCCS activities mentioned before.

### 3. Improving the professional skills and retraining of the school teachers in places of indigenous peoples' compact residing.

The organisational core of improving the teachers' professional skills in the remotest schools of a huge territory in millions of square kilometres of Russian North and Far East is an innovative technique of the "Novosibirsk University Antennae’.

#### 3.1. Formation of an educational network (NSU Antennae) for spreading and implementing the modern and innovative NSU LIOT technologies.

Each Antenna is NSU LIOT branch located very far from NSU (at the local municipal Educational Departments) to assist in implementing NSU LIOT educational technologies for indigenous peoples. Being founded at the Educational Departments the Antennas do not have any formal problems of registration, licensing etc.

NSU LIOT Antennae is not an alien body in the structure of municipal Educational Departments at places of indigenous peoples' compact residing because they simply give official form to a system of remote communication between territorial educational bodies and a uniting centre, Novosibirsk State University. This formalisation allows the Antennae to carry out various other functions along with organisational and financial support of the project.

- Antennae also serve as a support for solving the every day problems of the teachers' of the remotest schools. Here reliable and free consultation should be given, above all on the most vital and urgent problems – those of tolerant interrelations between representatives of different ethnic cultures.
- Antennae lobby for the interests of the school teachers in the remotest districts of Russian federation. Forming an integral part of the local authorities, they are capable of stating and presenting proposals that arise from everyday educational work with the youth, women, children and adolescents of the ethnic minorities and indigenous peoples to representatives of a higher level power.
• Forming part of local administrative centres, the Antennae will create a network of contacts in various spheres with representatives of ethnic minorities and indigenous peoples of North Siberia and Far-East Russia inhabiting localities more distant from the administrative centres.

3.2 Functions of the Antennae.

There are two main functions of NSU LIOT Antennae in improving the school teachers' abilities: 1) help in the targeted search and selection of potential young indigenous leaders who is to be trained first and who could multiply further the innovative educational technologies for the other teachers at remotest places; 2) to implement the innovative NSU models of and additional education for children and juveniles- the education based on the tolerance dialogue ideas.

The first function is to be realised through a two-stage process.

❖ Evaluating the level of ethnic self-awareness. This innovative technique has been developed by NSU LIOT in 2003 and consists of:

- special questionnaires to define the specific character of the target subgroup;
- selection of interesting material, adapting it for teaching (planning of tasks and exercises and the defining of stages of understanding;
- selection of methods to stimulate active involvement of the seminar participants in the learning process (role-playing games, discussions, creative workshops, brain storms, role-playing tasks).

The implementation of these innovative techniques gives the opportunity to observe the behaviour of the participants of the working seminar when placed in the position of a representative of a different culture, how they behave in situation of direct contact and cultural shock, evaluate the level of understanding of their own cultural identity and, correspondingly, the potential of their personal leadership skills.

❖ Acquainting the teachers of the remotest schools with the following ideas:

- One comprehends one’s own culture through interrelation with other cultures;
- Understanding of oneself and others is achieved through direct contact and interaction with a representative of another culture.
- Increased understanding of oneself and others is possible through a knowledge of symbolic forms of cultural expression (language, habits, customs, rituals, art).

The second function is to be realized through a system of intensive courses for the school teachers at places of the schools’ residing.

Every year in either January or March (during the school holidays) NSU Professors visit Antennae for implementing the special intensive training and improving the professional skills of the school teachers in the Russian North and Far East. The special methodological seminars and lectures are implementing as well as testing functions for further improvements in retraining school teachers and coordinating the educational help to them.

4. The educational space for children and juveniles: promoting tolerance dialogue of ethnic cultures.

Supporting the linguistic rights of ethnic minorities should objectively be started from the appropriate bringing up and education of children and juveniles. The specific status of this target group is due to the fact that children and juveniles are subject to mutual intolerance and to elements of aggression in the highest degree.
It is quite evident, however, that the hostile attitude of children to those of the same age but with a different national culture is not of natural origin. It is only caused by an improper education in the family, by negative examples in the surrounding life, and, last but not least, by elementary lack of knowledge of the other culture. It has become an urgent task to acquaint young citizens with the diversity of ethnic cultures, to form a target educational space for the Siberian children and juveniles on the questions of interethnic interrelations.

NSU had created the innovative education techniques for making a target ethnic tolerance education space for children and juveniles of 5-15.

There are three models of additional education for children and juveniles which construct together the educational space of ethnic tolerance.

**The first model of additional education “Me – my family – my Motherland”** for children below school age and junior schoolchildren, who attend the seminar together with their parents and elderly members of their family. Their practical activity includes three measures:

- a series of talks on the history of the family in different ethnic groups;
- a quiz “We used to....
- a network project “Children’s rights through a drawing.”

**The second model “Me – my family – my people”** for school pupils of the middle age group contains four measures:

- arranging a course of lectures for school pupils “The indigenous peoples: who are they?”
- holding a competition of essays “ My Forefathers: What do I Know About Them?”
- schoolchildren’s conference at Chukchi VC “Pages of the History of Indigenous Peoples of Russian North”
- An intellectual marathon at NSU “The History of UFEA Indigenous Peoples: People and Their Achievements.”

**The third model of additional education “Ethnic Tolerance Lessons”** is an innovative educational technique of NSU, approved in 2003 and implemented in 2004-2005 in the North and South Siberia, which achieved the best recommendations through its wide expansion among 15 non-numerous indigenous peoples’ NGOs. It was examined also in details by the Educational Departments of local authorities of Novosibirsk oblast, Khakas Republic and Taimyr (Dolgan-Nenets), Chukchi, Koryak, Aga Buryat Autonomous Areas; the official appraisal was also very positive.

The project consists of special training for adolescents and both senior school pupils and students of colleges and includes an exciting contest between 5 teams (7-15 participants each one) in studying the foundations of international mechanisms and procedures for promoting the support for ethnic minorities and indigenous peoples’ rights:

- United Nations Declaration on Elimination of All Forms of Racial Discrimination.
- World Conference against Racism, Racial Discrimination, Xenophobia and Related Intolerance.
- European Conference “All Different - All Equal”: from Theory to Practice.
- Durban Declaration against Racism, Racial Discrimination, Xenophobia and Related Intolerance.
- Europe against Discrimination. Conference report.

The complex educational space of ethnic tolerance and supporting the linguistic and cultural rights of indigenous peoples is implemented in capitals of the 13 national reas of
Russia as well as in the remote districts of every one of them. The computer network and the information technologies of NSU allow it to develop remote teaching and extend the sphere of the NSU activities making it possible to repeatedly replicate the positive results and ensure high effectiveness of the process.
Imagery and Therapeutic Communication: Implications for Public Health

Imagery and Therapeutic Communication: Implications for Public Health

Sonia K. Sheikh, MPH.

Anees A. Sheikh, Ph.D.

It is commonly recognized that there are three major modalities of cognition and expression (Sheikh 1983, 1994). To put it simply, there are three major ways to get to know our world and to express ourselves. These have been termed enactive, lexical, and image modalities (Horowitz, 1978). The enactive mode involves our physical behavior or the motoric aspects of our life. The lexical or linguistic mode is largely coordinated through our left hemisphere which tends to be linear, logical, analytical, and rational. The image mode, on the other hand, seems largely dependent on the right hemisphere of the brain. It is very perception-like and gives a sensory quality to our ideas and feelings. Contrary to the common misconception, mental images are not all visual; they exist in all sense modalities, and can be visual, auditory, olfactory, and so on. A definition of mental imagery, such as that by Richardson (1969), is generally implicit in the clinical uses of imagery: "Mental imagery refers to all those quasi-sensory or quasi-perceptual experiences of which we are self-consciously aware and which exist for us in the absence of those stimulus conditions that are known to produce their genuine sensory or perceptual counterparts" (Richardson, 1969, p. 2).

Of the three modalities, imagery is considered to be the most free one. It largely escapes society's approval or disapproval. Because of the process of socialization, our motor and verbal behaviors begin to conform to society's expectations; whereas, imagery stays free, nonconforming, and very personal. Also over the years a large body of research has
clearly established that "experiencing something in imagery can be considered to be in many essential ways psychologically equivalent to experiencing the thing in actuality" (Klinger, 1980, p. 5). This makes imagery an excellent tool for psychotherapy (Achterberg, 1995; Sheikh, 2002).

Psychotherapy has often been compared to communication between two friends with one important difference. While in communication between friends both parties have equal status and both expect to benefit and grow as a result, in the psychotherapy situation there is a power differential, and it is only the health and growth of the patient that is the focus. And of course there is payment involved. The client is "purchasing" friendship. He is missing something in his life which the therapist is assumed to be able to deliver. However, the process of communication is basically the same. It goes on at two levels, intrapersonally and interpersonally. Covert dialogue is expressed overtly by one which leads to covert dialogue in the other who in turn expresses it overtly.

It appears that some of us are habitual verbalizers while others are habitual visualizers (Richardson, 1977). For verbalizers, both intra and interpersonal communications occur in words; whereas, in the case of visualizers (imagers), interpersonal communication happens in words, but the intrapersonal communication largely occurs in images. It has been claimed that habitual visualizers are able to express themselves better if they are encouraged to bring their images into their minds, concentrate on them and then try to describe them in the present tense as they are experiencing them. Also, recently it has become clear that in the cases of posttraumatic stress disorder, something goes awry with the linguistic system, and at the same time visual ability becomes exceptional.
Consequently patients can be helped successfully by shifting the emphasis to the image modality (Naperstek, 2004; Sheikh, 2003).

Imagery is now generally perceived as an effective therapeutic tool for a number of reasons. Singer (1974) asserts that the effectiveness of imagery primarily depends upon the patient’s clear attention to the ongoing fantasy process, hints from the therapist concerning alternate approaches to various situations, awareness of the often avoided situations, the therapist’s encouragement to covertly rehearse alternative responses, and resulting decrease in fear of avoided stimulus situations. Meichenbaum (1978) suggests that the therapeutic success of images lies, among other factors, in the sense of control that the client acquires from monitoring and rehearsing various images, and from the changed meaning or internal dialogue that precedes, accompanies, and succeeds undesirable behavior.

In addition to the processes outlined above, Sheikh, Kunzendorf, and Sheikh (2003) provide a summary of numerous other features of the imagery mode that contribute to its clinical effectiveness:

1. Experience in imagination can be viewed as psychologically equivalent, in many significant respects, to the actual experience; imagery and perception seem to be experientially and neurophysiologically similar processes (Klinger, 1980; Kosslyn, 1980; Richardson, 1969, 1994; Sheikh & Jordan, 1983).

2. Verbal logic is linear, whereas the image is simultaneous representation. This trait of simultaneity gives imagery greater isomorphism with perception and, therefore, greater capacity for descriptive accuracy (Sheikh & Panagioiou, 1975).

3. The imagery system fosters a richer experience of a range of emotions (Singer, 1979).
4. Mental images lead to a variety of physiological changes (Richardson, 1984; Sheikh & Kunzendorf, 1984; Sheikh, Kunzendorf, & Sheikh, 1996; White, 1978).
5. Images are a source of details about past experiences (Sheikh & Panagiotou, 1975).
6. Imagery readily provides access to significant memories of early childhood when language was not yet predominant (Kepecs, 1954).
7. Imagery appears to be very effective in bypassing defenses and resistances (Klinger, 1980; Naperstek, 1994; Reyher, 1963; Singer, 1974).
8. Imagery frequently opens up new avenues for exploration, after therapy has come to an impasse (Sheikh & Jordan, 1983).
9. Images are less likely than linguistic expression to be filtered through the conscious critical apparatus. Generally, words and phrases must be consciously understood before they are spoken – that is, they must pass through a rational censorship before they can assume a grammatical order. Perhaps imagery is not subject to this filtering process, therefore it may be a more direct expression of the unconscious (Panagiotou & Sheikh, 1977; Sheikh, Kunzendorf & Sheikh, 1996).
10. The failure to think imaginistically creates disharmony in the mind and body (Ahsen, 1978; Schwartz, 1984).

In view of the foregoing characteristics of the imagery mode, it seems reasonable to place faith in its healing potential. A significant body of research generated over the last three decades supports this belief. It has been demonstrated for instance that imagery is effective in the treatment of obesity (Bornstein & Sipprelle, 1973), insomnia (Sheikh, 1976), phobias and anxieties (Habeck & Sheikh, 1984), depression (Schultz, 1984), sexual malfunctions (Singer & Switzer, 1980) chronic pain (Korn, 1983; Johnson, 1983; McCaffery & Beebe, 1989), fibroid tumors (Pickett, 1988), and cancer (Hall, 1984). It has also been found to lower blood pressure, reduce cholesterol (Bennet & Caroll, 1990) and lipid peroxides (Schneider, 1998), speed up healing from cuts (Ginandes et al., 2003), fractures (Ginandes & Rosenthal, 1999), and burns (Fratianne et al., 2001), cut blood loss (Dreher, 1998) and length of hospital stay (Halpin et al., 2002) in surgery patients, strengthen immune function (Gruzelier, 2002), reduce bingeing and purging in people...
with bulimia (Esplen et al., 1998) and to improve motor deficits in stroke patients (Page, 2001)

In addition, findings of clinical trials at many teaching hospitals, clinics, and universities demonstrate the effectiveness of imagery and relaxation in healing (see Dreher, 1998, for a review). Recent investigation supporting the therapeutic value of imagery have been conducted at the following centers: College of Physicians and Surgeons, Columbia University, UCLA School of Medicine, Maine Medical Center, Central Maine Medical Center, Eastern Maine Medical Center, Harvard Medical School, Medical College of Wisconsin, University of Akron, University College, London, Medical College of Ohio, Mount Sinai School of Medicine, NY, University of Texas-Houston School of Public Health, Department of Family Practice, University of Texas Health Science Center, San Antonio, Center for Stress Management and Research, Monash University, Victoria, Australia, Children’s Hospital of Denver, University of Arizona, Tucson, Stanford University, University of Wisconsin-Green Bay, University of Akron, and Cleveland Clinic Foundation (Bauer, Hoffman, & Sheikh, 2003).

Imagery has been proven particularly effective in the treatment of trauma for several reasons. The fact that imagery “is taken in primarily through the right hemisphere, by way of primitive, sensory, and emotion-based channels in the brain and nervous systems, using our capacity for sensing, perceiving, feeling, and apprehending rather than our left-brain-brain thinking, judging, analyzing, and deciding” renders it an excellent intervention for post-traumatic stress disorder (Naparstek 2004, 150). Moreover the reports of survivors of a traumatic event make it clear that spontaneous images play a
large role in their continued suffering. Patients often will complain about seeing images from the event which are then accompanied by a response in the body (quickness of breathe, increased heart rate, etc). If images play a role in the complaints, they also can be a modality in the healing process (Taal, Krop, 2003).

Imagery is also beneficial because words can only partially express the experience; whereas, “images provide a more comprehensive picture of what matters” (Taal & Krop 2003, 397). Images often hold complex metaphorical meaning that cannot be expressed with words, sometimes because even the patient is unclear about the meaning. It is precisely because imagery bypasses logic, that it can directly impact unconscious assumptions and deal with defeating self-concepts in the context of reminders of health, strength, meaning, and hope (Naparstek, 2004).

In view of the demonstrated efficacy of imagery, it holds significant promise in the field of public health. Its value lies in the fact that it is low-cost, preventative and curative, and often fast acting. Furthermore, it is effective regardless of a person’s intelligence, education, socio-economic background, age, or strength. And as Naparstek put it, subjects can be “bone-tired, disgusted, depressed, disbelieving, listless, resistant, distracted, mentally disabled, physically unfit, or at death’s door, and imagery will still be something they can use, because it requires so little of them (2004, pp. 150-151).

Imagery is perhaps especially underutilized in the area of global health, because most developing countries struggle against a shortage of health professionals, of health clinics, of drugs, and of funding. Imagery is an inexpensive tool. Moreover, the global burden of mental health is a major public health problem. The World Health Organization (WHO) has taken the initiative to include mental health in treatment packages and has
specified that treatment should be effective, transportable, sustainable, and cost-effective (Ustun, 1999). There is perhaps no other technique that so thoroughly fulfills these requirements. The imagery modality is eminently sustainable, since the client requires only initial guidance and then become his/her own guide.

In the context of global health, trauma is especially relevant. Currently roughly 40 violent conflicts are active and nearly 1% of the world’s population are refugees or displaced people (Summerfield, 2000). Most of these people will experience the symptoms of posttraumatic stress disorder at some point in their lives. Many of these people could be effectively reached through imagery, as it only takes one trained professional to train an entire refugee camp. Jeanne Achterberg (1992), one of the world’s leading imagery experts, has begun work in this area, but in order for this technique to reach its potential, it needs to be recognized and implemented by the public health community.

ABSTRACT: The Social and Behavioral Sciences Curriculum Integration Project at Eastern Washington University: Progress and Sustainability

Purpose: The purpose of The Social and Behavioral Sciences Curriculum Integration Project was initiated in 2000 to revitalize the social and behavioral sciences curriculum. It addressed critical problems facing the social and behavioral sciences at Eastern Washington University (EWU) and at institutions throughout the country:

- Declining enrollments in core social and behavioral science disciplines;
- The loss of students from social and behavioral science curricula to professional schools and career-oriented programs;
- Boundary disputes among the social and behavioral sciences that lead to overlapping curricula and duplication of courses; and
- The lack of coordination and cooperation among the disciplines of the social and behavioral sciences, increasing competition for available resources.

Initial funding for this project was provided by a 2000 Fund for the Improvement of Postsecondary Education (FIPSE) Grant. Total funding for a three-year period was $350,000. The College of Social and Behavioral Sciences (CSBS) has continued to support the curriculum integration project with budget and resources.

Scope: The Social and Behavioral Sciences Curriculum Integration Project was designed to address the problems above, allow for the integration of the disciplines in the social and behavioral sciences and maintain disciplinary integrity. It did this by developing a curriculum model for the majors in the social and behavioral sciences that strengthened the role of theory, quantitative reasoning and research in all the disciplines and increased the career-focus of the curricula, thus strengthening the foundational, disciplinary and interdisciplinary curricula in the college. The disciplines included were: Anthropology, Children’s Studies, Communication Studies, Justice Studies, Economics, Geography, Government, History, Interdisciplinary Studies, International Affairs, Military Science, Psychology, Social Studies Education, Sociology, and Women’s Studies.

Results: The Social and Behavioral Sciences Curriculum Integration Project awakened in every discipline a sense of themselves disciplinarily and collegially. The faculty in each of the departments and programs had to consider the place of their discipline in the general education curriculum, their relationships to other disciplines in the social and behavioral sciences, and the distinctive nature and characteristics of their field of study as an academic discipline. In addition, they were called on to rethink the minimal requisite theoretical, quantitative and methodological foundational literature, the essential core areas of their disciplines, to anticipate the direction of disciplinary and interdisciplinary changes, and how best to provide students with the kinds of tools to translate their academic interests into success in a career.

Departments and Programs within CSBS:
- Revised their introductory survey courses and compressed their interdisciplinary core coursework.
• Created a range of College-wide foundational courses in theory, statistics and research methods.
• Created a number of topically-focused interdisciplinary courses and internships as well as experiential learning-oriented certificates.

Additionally, the college created a number of task-specific committees, committee chairs, and ultimately, involved fully 60% of the full-time faculty in the college. The Social and Behavioral Sciences Curriculum Integration Project improved the quality, cost efficiency, and effectiveness of instruction.

**Current Challenges:** Currently, the university is undergoing a new strategic planning effort to support an integrated academic environment, which fosters connections among disciplines, between faculty and students, and with campus and community.

As part of the CSBS Strategic Plan (and in support of the University strategic goals), the college is reexamining and rededicating its efforts to the curriculum integration project. Although much has changed and enrollments and quality are up significantly in the college, the college is facing sustainability challenges in uncertain times. These challenges include:

• Inadequate numbers of faculty to teach all of the classes.
• Unrealized potential in the development of certificates.
• The Methods courses originally designed are problematic and need to be revised.
• Resources across the college are strained.
• Faculty attempting to balance curriculum integration demands while still engaged in their own research and research involving students.
• Funding uncertainty. The university’s strategic planning process will require a new budget model that will drive the efforts and resources for the immediate and near future. The model has yet to be developed.

**Background:** Eastern Washington University is a student-centered, regionally based, comprehensive university. Its campus is located in Cheney, within the Spokane metropolitan area, with additional learning centers in the region and elsewhere in Washington State. Its mission is to prepare broadly educated, technologically proficient, and highly productive citizens to attain meaningful careers, to enjoy enriched lives, and to make contributions to a culturally diverse society.

CSBS contains seven departments, five interdisciplinary programs, a center, one shared institute and is the home for several university wide efforts. There are 80 full-time faculty and enrollments have increased by 240 full-time equivalent students in just two years. Additionally, CSBS faculty teach 65-75% of the universities undergraduate General Education and upper level International and Cultural Diversity requirements and two of the three fastest growing majors (Communication Studies and Sociology/Justice Studies) are in the college.

**This Session:** Dean Vickie Rutledge Shields and Associate Dean Jeff Stafford will report on the successes and problems of this program and discuss how the college is facing the challenges of this innovative interdisciplinary social science core. The presenters will facilitate an exchange of ideas ranging in scope from the strategic and budgeting issues to the development of courses and
certificates. The focus will be on sustainability of the project and will provide examples of how to develop similar programs on other campuses.
Title: College Student Usage of Mass Media: Online or Traditional

ABSTRACT

College Student Usage of Mass Media: Online or Traditional

As our options for accessing and retrieving news, advertising and entertainment continue to expand with the introduction of each additional electronic device, audiences gain more control of their media fare. The type of information and opinion they select to read or view becomes ever more their choice rather than that of an editor or producer. Their options for recorded or live shows or events are increasing rapidly. The audience now can select from a variety of options not available before. As a result, the concept of “mass” media and “mass” audiences has changed.

What are the implications of these changes for our students? What impact do these changes have on their views of the world and its inhabitants? What impact might this have on the way we teach our students?

This study looks at the mass media usage of college students to see how they spend their time with the traditional mass media and the new media. The investigation looks at how our students learn about the world in which they live and examines their preferences related to sources of information and opinion.

Title: The Framing of a President: Ronald Reagan’s Campaigns and Legacy

Author: Dr. Linda J. Shipley

ABSTRACT (# 709)

The Framing of a President: Ronald Reagan’s Campaigns and Legacy

Several U.S. Presidents have biographies that include details about their Presidential campaign strategies. In the 1960s, Theodore White wrote a book entitled The Making of the President that described John Kennedy’s successful campaign for the White House. In the 1970s, Joe McGinnis profiled Richard Nixon’s bid for the Presidency in The Selling of the President.

However, very little research has been done to look at the press coverage that ran parallel to these campaigns. Mass communication researchers often use the term “framing” when they describe the techniques and approaches used by journalists to cover an issue or event. According to communication theorists Severin and Tankard (Communication Theories: Origins, Methods, and Uses in the Mass Media), a frame can be defined as “a central organizing idea for news content that supplies a context and suggests what the issue is through the use of selection, emphasis, exclusion, and elaboration.” Media scholars have found this concept of framing useful for examining media coverage of political candidates and political issues.
This study looks at the framing that was used during the 1980 and 1984 campaigns of Ronald Reagan. Michael Deaver gave us a portrait of his thirty years of working with Ronald Reagan in his book, *A Different Drummer*. This study examines the coverage of the campaign as described by *Time* and *Newsweek* writers from July to November of 1980 and 1984. In addition, it looks at the framing that was used by the print media at the time of President Reagan’s death in 2004. An additional content analysis of the front pages of newspapers from 48 states on Sunday, June 6, 2004 offers a view of the framing that outlined Reagan’s legacy for a final time.

Reagan became one of the most popular Presidents, but had little political experience before taking office. His resume included stints as a life guard, radio announcer, and movie star. He also was featured in early television commercials. His pedigree was not that of a Presidential hopeful.

The research question for this study is: How was Ronald Reagan “framed” by the U.S. print media? To answer this question, the study looks at how two major U.S. news magazines portrayed him during his 1980 and 1984 campaigns and considers whether the framing changed between 1980 and 1984. It also investigates what the news magazines said about him at the time of his death and what legacy the nation’s daily newspapers attributed to him in 2004. Results of this study will provide a look at how the candidate Reagan and the former President Reagan were framed by the U.S. print media.

Title of the submission- Toward the Development of a Structural Counseling Intervention to Enhance the Social and Emotional Development and Performance of Gifted Adolescents

Topic area of the submission: Psychology

Presentation format: Workshop

Name of the author: Dr. Dorothy Sisk

Department and affiliation: Professional Pedagogy at Lamar University.

Mailing address: PO Box 10034, Beaumont, Texas 77710

E-mail address: siskda@my.lamar.edu

Phone number: 409-880-8046 (O) 409-286-5941(H)
ABSTRACT

TOWARD THE DEVELOPMENT OF A STRUCTURED COUNSELING INTERVENTION TO ENHANCE THE SOCIAL AND EMOTIONAL DEVELOPMENT AND PERFORMANCE OF GIFTED ADOLESCENTS

The purpose of the investigation was to identify key components of the Dabrowski theory of positive disintegration that have been found to be useful in working with gifted students in research settings, and to apply these components to the development of a structured counseling intervention to enhance the social and emotional development and performance of gifted adolescents. The methodology included a critical analysis of the Dabrowski theory to identify the component that would be most appropriate for a structured counseling intervention. The component identified was the overexcitabilities. Objectives included developing a greater understanding and acceptance of the students’ overexcitabilities, as part of their normal development; introducing a variety of social-coping, time-management, and self-regulation skills; and exploring the positive aspects of perfectionism. Outcomes included a structured counseling intervention with specific strategies suggested by a critical analysis of related research on the psychosocial issues of giftedness, and the theory of Dabrowski that included journal writing bibliotherapy, small group discussion on real problems, role playing, simulation, and the study of the biographies of eminent people.
Title of the submission- University and Public School Collaboration-Positively Impacting Science Instruction and Achievement of Under-represented Students.

Topic area of the submission: Education

Presentation format: Paper session

ABSTRACT

University and Public School Collaboration—Positively Impacting Science Instruction and Achievement of Under-represented Students

Impressive gains can be made by under-represented students in Science when their teachers use inquiry, problem-solving related to real-world scientific problems, and a variety of teaching strategies and manipulatives. Lamar University in Beaumont, Texas in collaboration with Beaumont Independent School District is providing secondary school teachers opportunities to build greater understanding of inquiry and advanced content knowledge in Science. The major goal of the research project Scientists-in-School is to build greater confidence in the teachers’ use of appropriate strategies and to increase the students’ achievement in Science. The major objectives include providing inquiry-based teacher education, and identifying high potential under-represented secondary students. The outcomes include increases in: achievement as measured by the Stanford 9 and 10 Achievement Test; the number identified as gifted and talented; the number of students graduating from high school; and the number seeking admission to colleges/universities with Science as a major. Results include ninety teachers have received graduate training in Natural Science and Gifted Education; 300 high potential 8th grade students have been identified and 340 10th grade students; significant growth in achievement of the experimental group of students on the Stanford 9 & 10 with 1.5 years of growth in year one; 1.6 in year two; 1.8 in year three. The control group’s growth was 0.6 for year one, 1.3 for year two, and .11 for year three; All 60 of the first group of experimental students graduated from high school, and applied to colleges and universities; 52% identified Science as a career focus; and 56% of the students have been recommended for the Gifted and Talented program as gifted in science. Two units Aquatic Science and Environmental Systems have been developed by teacher/scientist writing.
Is Mere White Person Presence Sufficient to Prime Stereotype Threat Arousal in Minority Diagnostic Testing Settings? Evaluation by the Out-group may be Required.

Lloyd Sloan¹, Grady Wilburn¹, Deborah Van Camp¹, James Barden¹, Terrina Price¹ and Daniel Martin²

This research manipulated the influence of the presence and likelihood of evaluation by a potentially stereotyping out-group (White) researcher on Stereotype Threat’s damage to intellectual performance in a negatively stereotyped (African Americans) group. Earlier research suggests an apparently needed elaboration upon Steele and Aronson’s (1995) original theory because challenging, stereotype-related, diagnostic testing in exclusively in-group settings doesn’t damage performance (Sloan, 2000, Marx, 2005), but does when the social context or test-givers are White. Do stereotype threat effects also require out-group presence, perhaps as a reminder of possible negative stereotyping? Is the threat of White evaluation also necessary? African-American Howard University students (n=263) took verbal (SAT) tests described as individually Diagnostic or Nondiagnostic by White or Black experimenters. In two other Black experimenter conditions, (1) the White researcher interrupted the Black experimenter for 30 seconds just before the SAT test saying that he (the White experimenter) would return during the session (to convey impending White evaluation); or (2) while the Black experimenter conducted the session, a White male sat to the side near the front of the room, uninvolved and saying nothing. This situation was intended to provide continuous White out-group presence along with the minimum, if any, expected evaluation of the minority test-takers. White experimenter’s produced stereotype threat performance decrements while African American experimenters’ didn’t. Neither the White researcher’s brief interruption stating that he would return before the study ended, nor the White researcher’s inactive presence had any detrimental effect on performance. This is in strong contrast to the impact of the continuously present and evaluating White experimenter who produced the stereotype threat predicted performance decreases in minority students’ performance in the Diagnostic Condition compared to the Nondiagnostic Condition as noted above. These findings suggest that neither expected or perceived evaluation bias alone nor White presence alone may be adequate to produce Stereotype Threat Effects in minority contexts. Perhaps it is more likely that the negative impact of such expectations of evaluation may require the multiplying impact of a persistently present reminder cue of a potentially stereotyping out-group member-evaluator to create Stereotype Threat’s negative consequences on the performance of those stereotyped.

Why do differences in academic achievement on standardized tests persist? Many possibilities have been suggested across a spectrum from systemic, institutionalized social structure to innate group differences. Steele and Aronson (1995) proposed a novel alternative. They demonstrated a situational psychological phenomenon that they labeled Stereotype Threat. Extensive investigations discussed below tend to support those authors’ suggestion that Stereotype Threat affects may account for a
notable part of the frequently reported persisting academic achievement performance discrepancies between majority and negatively stereotyped minority performers on challenging intellectual tasks like the Scholastic Aptitude Test (SAT) and general aptitude measurements. In contrast to structural or innate causes, Stereotype Threat theories and the research reported here, focus on the motivational and cognitive consequences of situational differences that may make the test taker more aware of or more concerned about a known negative expectation of their group’s ability on such tasks.

**Stereotype Threat: A Robust Reality, But Why Does It Happen?** Steele and Aronson, (1995) described Stereotype Threat as resulting from a situation that placed one in the possible position of confirming a negative stereotype about one’s group through one's own behavior and performance. Those authors hypothesized that Stereotype Threat could be aroused by taking a difficult, frustrating test in an area (e.g., intellectual) that is an existing part of a negative, in-group stereotype. The individual’s fears that they might fulfill or lend credibility to the stereotype through personal weak performance in turn may create additional threats to the individual’s self-evaluation which could harm performance through several mechanisms including increased self or group consciousness, lower performance expectations, reduced task effort, increased evaluation apprehension, or competing distraction from the task. Such explanations are analogous to proposed causes of the negative performance effects of Social Facilitation on difficult, challenging tasks undertaken in social settings versus doing the task alone (no social impacts). Some mechanisms proposed for Social Facilitation include; the mere presence of others (Zajonc and Sales, 1966), evaluation apprehension (Cottrell et al., 1968) and distraction produced conflict with task attentional demands (Baron, 1986). Huguet et al. (1999) supported the latter explanation recently by demonstrating that the presence of others produced a narrowed focus of attention that could hinder performance.

It appears to be possible that Stereotype Threat could diminish performance through any one of these mechanisms or through the combined effects of several. For example, contemporary findings have found small affects of performance anxiety on performance (c.f., Sawyer and Hollis-Sawyer, 2005), but found more notable affects on other negative cognitive consequences. Many investigators have reported that Stereotype Threat situations reduce working memory capacity, a damaging threat for high intellectual performance (c.f., Schmader and Johns, 2003; Chasteen, Bhattacharyya, Horhota, Tam and Hasher, 2005), apparently by introducing extra mental load (Croizet, Despres, Gauzins, Huguet, Leyens and Meot, 2004) and by inducing negative self thinking in the performer (Cadinu, Maass, Rosabianca and Kiesner, 2005). In a somewhat different explanatory approach, Wheeler and Petty (2001) suggested that Stereotype Threat arousal may be a simpler cognitive priming event.

**Initial and Contemporary Stereotype Threat Findings:** Steele and Aronson (1995) found the expected performance drops for African American students on challenging verbal ability tests when the test was said to be “diagnostic” of their personal ability. Performance drops did not occur, when the task was described as a "nondiagnostic" activity in a verbal problem solving study. In other studies, Steele and Aronson (1995)
found activation of, and avoidance of, negative ethnic stereotypes when African American students were in the diagnostic condition and expecting to take a difficult verbal ability test. As hypothesized, White students didn’t show any performance drop in the diagnostic versus the nondiagnostic condition, nor did they respond in a manner suggesting avoidance of stereotype typical preferences and traits belonging to the minority group. This was as hypothesized because the stereotype related to this verbal task did not apply to them. Together these findings offered convincing support for Stereotype Threat Theory.

Stereotype Threat has shown itself to be very robust and generalizable across many negatively stereotyped social groups and numerous challenging performance tasks. A few representative examples include; Hispanic students in verbal tests (Salinas, 1998), women on difficult mathematics tasks (Spencer, S.J., Steele, C.M., & Quinn, D.M., 1999; Inzlicht, M. & Ben-Zeev, T., 2000; Oswald, D. L. & Harvey, R. D., 2000), low (versus high) socioeconomic status students in SAT-type testing in France (Croizet, J.C. & Claire, T., 1998), White men in math-computer tests when in the presented context of higher performing Asia competitors (Aronson, J., Lustina, M.J., Good, C., Keough, K., Steele, C.M., & Brown, J., 1999), White men in stereotypically lower performing (compared to African American men) athletic tests (Stone, J., Lynch, C.I., Sjomeling, M. & Darley, J.M., 1999) and White men’s performance on social sensitivity tasks (compared to women) (Koenig and Eagly, 2005).

Researchers pursue understanding Stereotype Threat from several approaches. While some seek to better understand how Stereotype Threat actually damages performance, many others are investigating the specific sorts of events or factors or mechanisms acting in performance situations and how they may influence the activation or increased awareness of the stereotype and subsequent performance decrements. For the latter investigators the central issue is to identify the mechanisms that contribute to the individual’s perception or feeling of Stereotype Threat phenomena. For example, beyond the originally hypothesis that stereotype awareness may be increased by being faced with a negatively stereotyped difficult test, other suggested factors that possibly increase stereotype awareness include simple reminders of race or race differences, expected bias and perhaps the implied comparisons and biased evaluation that reminders of stereotypes may suggest.

Would Stereotype Threat Occur in an Exclusively In-group Minority Environment? Sloan, Gurira, Starr, Sloan and Jackson (1999) questioned whether the performance decrements observed by Steele and Aronson (1995) at Stanford University and by others at largely White universities would occur in a uniformly African American university environment. In fact, that prior research was conducted in a pervasively White social context lying just beyond the laboratory doors at those largely White institutions, whether or not it was conducted by a non-White experimenter. Thus the challenging, stereotype-relevant test may not the only cue present that could contribute to the activation of the stereotype for the test-taker; it could be that the arousal of stereotype threat is intensified by the proximity of out-group, potential stereotype holders (majority member Whites for example). If so, would stereotype threat effects be found in a minority institution environment in an
ethnically homogeneous testing setting? Is the presence of majority group members important to stereotype threat arousal?

Sloan, et. al. (1999) pursued these questions by measuring stereotype avoidance, stereotype activation, other indicators of stereotype threat and of course intellectual test performance at an overwhelmingly African American University. They employed many of the measures and methods from Steele and Aronson’s 1995 research but importantly added variation of the race of the experimenter. Half of the African American subjects in each condition in this homogeneously African American (in-group) testing and social environment were tested by a male African American experimenter and half were tested by a male White experimenter.

Although the essential Diagnosticity manipulations were successful in both the African American and the White experimenter conditions, only the White experimenter condition showed Stereotype Threat effects. This was in contrast to the Steele and Aronson (1995) findings and their original stereotype threat hypothesis. Experimenter ethnicity and the diagnosticity manipulation interacted such that increased stereotype avoidance occurred in the Diagnostic Condition with the White Experimenter, but not with the African American experimenter. Subsequent investigations found performance deficits paralleling those above of Sloan, et. al. (1999) for Stereotype Threat arousal and awareness. Black Participants showed the Diagnostic condition performance decrement, relative to the Non-Diagnostic, when tested by the White Experimenter, but not when tested by the Black Experimenter in this nearly homogeneous Black environment (cf., Sloan, Phillip, Starr, Ridberg and Oleson, 2000; Sloan, Glenn and Craig, 2002; Sloan, Wilburn, Martin, Fenton, Starr, Craig, Gilbert, and Glenn, 2003; Marx and Goff, 2005). Inzlicht and Ben-Zeev (2000, 2003) found that women taking math tests with versus without men test-takers present produced similar results.

These results seem to indicate that Stereotype Threat arousal and consequences may require some additional salient, stereotype-related cue to interact with or to intensify the impact of a stereotype-relevant, challenging test. The out-group context or (White) experimenter could then be a reminder of the stereotype or may cue possible stereotype-related bias or evaluation fairness concerns which then have performance impacts. Collectively these above findings suggested a needed refinement to Stereotype Threat theorizing in that the nature of the ethnic environment surrounding the research may be critical in influencing the outcome.

**Why Might a Potentially Stereotyping Out-group Member (or Social Context) Presence Be Needed For Stereotype Threat Effects?** The findings just reviewed above suggest that an exclusively African American environment may not have all the cues to stereotype salience that are found in a largely White institution and that those added cues appear to be needed to produce Stereotype Threat consequences. The White social context may act to intensify the performance disruption or, earlier in the process, as an element in the arousal of stereotype threat. In exclusively minority settings, only the White experimenter conditions caused the predicted effects of diagnosticity on Stereotype Threat. It may be then that the occurrence of Stereotype Treat could require cues or reminders of possible stereotyping from out-group members in addition to diagnostic testing on stereotype relevant tasks.
Out-group (White) presence could have impact resulting from potential cultural mistrust. Terrell and colleagues found that African Americans who were high in Cultural Mistrust performed substantially worse on intellectual IQ measures (i.e., the Sanford-Binet and the WAIS) when they were administered by a White tester, as opposed to an African American (Terrell & Terrell, 1981; Terrell, Terrell & Taylor, 1981; Terrell & Terrell, 1983; Nickerson, Helms, & Terrell, 1994). Possible expectations of prejudice and negative stereotyping of the minority test-taker by the White test-giver may produce lower perceived test-giver trustworthiness and credibility. Whaley’s (2001a; 2002) meta-analyses of cultural mistrust research suggest similar impacts of high levels of cultural mistrust in mental health services and in other areas of psychosocial research. Greater negative bias and stereotyping expectations are associated with the higher levels of cultural mistrust in their out-group (White) test-giver.

Other recent findings in our laboratory confirms that African American students from the same participant pool as in the current study do expect a significantly higher likelihood of negative stereotyping and bias from White Americans than from other American subgroups or any of the other nationalities we have examined. Thus, negative expectations and cultural mistrust may be an important part of the Stereotype Threat phenomena. If many African Americans feel cultural mistrust, then they likely feel increased concern with being stereotyped and unfairly judged thus further exacerbating worries that they might perform poorly and embarrassingly confirm the negative performance stereotype. Such an added test performance anxiety during testing could diminish performance and would be consistent with Stereotype Threat theorizing. Stereotype Threat theories then suggest one account for some negative perception and assessment performance findings reported in the literature on ethnic matching and cultural mistrust in client-therapist relationships.

Two Approaches to Identifying Underlying Mechanisms in Stereotype Threat.

Can Factors be Eliminated from the White Experimenter Condition Which Would Eliminate the Stereotype Threat Effect? The Importance of Perceived Evaluation Fairness. The search for moderators of Stereotype Threat may take various approaches. An approach employed earlier attempted to remove one potential negative element from the stereotype threat arousing situation, that is, the perceived fairness of the White experimenter. Later research (Sloan, Philip, Jones, Starr, Ridberg and Oleson, 2000; Sloan, Maitland, Starr, Philip & Jones, 2001) examined minority students’ perception of the unfairness of the intellectual test used in the stereotype threat setting (i.e., Black test-takers with a White experimenter). The White Experimenter’s presence may increase participants’ awareness of the related stereotype, or it may suggest the possibility of biased testing or evaluation. In Sloan, et. al. (2000), the White experimenter told participants that the test being used had been selected because it had been pre-tested and found to be, “culture-fair, that is, that Black, White and Hispanic students did equally well on the test”. With only this additional statement, the White Experimenter condition no longer produced diagnostic condition performance decrements. This suggested that the participants’ concerns underlying stereotype threat had been diminished, perhaps by alleviating the concern that one could confirm the negative, own group stereotype through one’s own
performance failure. Similar observations have been found in employing fairness assurances to reduce performance decrements typically observed in diagnostic testing of women in challenging mathematics examinations (Oswald and Harvey, 2000).

Are There Factors That Can Be Added To The All Minority (Black Experimenter) Environment Which Would Induce Stereotype Threat? Alternative approaches to discovering the underlying mechanisms of Stereotype Threat could employ the finding that a Black Experimenter did not produce performance drops under diagnostic conditions in exclusively Black environments while a White Experimenter did cause such decrements. Such an approach attempts to add theoretically related negative elements to a situation that typically doesn’t produce the stereotype threat performance decrement (the Black experimenter in an exclusively Black environment). Several examples which logically lead to the current research presented below.

To attempt to add or emphasize ethnically unfair evaluation, Sloan, et al., (2003), employed an African American experimenter giving standard diagnostic or nondiagnostic instructions to Black participants but he also stated that the test was known to be culturally and ethnically biased and unfair. This added Stereotype Threat relevant manipulation induced no diagnosticity effect, leading the authors to speculate that out-group member presence might be required to make an unfair test a real threat.

Comparison to the performance of others may be a cause of evaluation concern. Comparison to a negatively stereotyping out-group may therefore arouse concerns central to Stereotype Threat arousal. Sloan, Glenn, & Craig (2002) manipulated perceived stereotype relevant out-group comparison by having a Black experimenter inform African American students (in both Diagnostic and Non-Diagnostic Conditions) that their performance would be compared with that of White students at another university. All prior results were replicated but the comparison threat manipulation did not diminish performance in the diagnostic condition as hypothesized based on Stereotype Threat conceptualizations. Perhaps then other possible mediators like perceived fairness or bias in testing may be of more importance in Stereotype Threat phenomena.

To further examine the role of concerns over unfair evaluation or stereotyping judgments in contributing to Stereotype Threat in minority settings, Sloan, Wilburn, Camp, Craig-Henderson and Martin (2005) tested even more blatant threats of possibly biased evaluation. In Black experimenter conditions, Black students were told (1) that their performance data was being collected for later evaluation by a White experimenter, or (2) that a White researcher would arrive before the end of the session to score their performance test with them, providing immediate evaluation of performance. Neither condition produced a diagnosticity effect in this exclusively in-group context where stereotype threat is typically absent. An unfair test or biased evaluation may be of little concern when one’s performance will be evaluated only by other in-group member researchers or if the evaluation will happen only after one has departed.

In an initial attempt to provide a more prominent reminder of potential evaluation by White persons, Sloan, Wilburn, Camp, Barden, and Martin (2006) had a White experimenter appear briefly prior to the performance test during a Black experimenter
conducted testing session and mention that he would return before the end of the session. This was done to make evaluation by the out-group seem more likely and perhaps would more likely serve as a priming or distracting element suggested to be involved in stereotype threat. This condition produced no diagnostic effect however, possibly because the White researcher’s duration of appearance was too brief or not adequately clearly evaluative in nature. The current investigation employs this approach to identify elements of the Stereotype Threat phenomenon by adding theoretically related factors to the standard diagnostic-versus-non-diagnostic conditions administered by the Black Experimenter.

Central Research Questions:

Performers concerns over unfair evaluation or stereotyping biased judgments appear to be implicated as part of the cause of Stereotype Threat in minority settings as noted above. Would this concern be increased by a White researcher actually appearing just before the Black experimenter began the challenging intellectual test and announcing that he, the White researcher, would return at the end of the testing to help score? This should make anticipated out-group comparison-evaluation very credible, but if White presence is instead an immediate, quickly decaying prime or distractor, then this brief appearance may have little impact on the later majority of the challenging tasks on the test. In contrast, would non-evaluative, uninvolved, silent but continuous White “mere presence” alone be sufficient to create Stereotype Threat effects during an additional Black experimenter, standard instruction condition? If so then perhaps this presence may account for the impact of the White experimenter condition so often observed before.

METHODOLOGY

Women and men, African-American students at a historically African-American University (n= 263) participated in this research as part of an introductory psychology course and received course credit. Students from this nearly homogeneously Black American institution participated in the research in moderate sized experimental groups, ranging from 5 to 20 persons, composed of other Black students from the same university.

Randomly assigned participants in four conditions took a timed, 15-minute test (paralleling a past SAT exam) described as a difficult-to-complete, 28-item, SAT-type verbal ability’s test composed of one “analytic” read-and-interpret passage with seven questions, followed by 21 verbal analogies problems (this was similar to Steele and Aronson's, 1995 test). Scores on this difficult test could range from 0 to 28. A White male experimenter or a Black male experimenter described this SAT-type verbal test as “diagnostic” of their personal abilities, that is that it would serve, “to provide a genuine test of your verbal abilities and limitations”, or as a “non-diagnostic”, non-evaluative study of the verbal problem solving process. In both conditions, participants were strongly encouraged to try as hard as they could to perform well on the problems.

To examine the impact of potential evaluation in Stereotype Threat, there were two other conditions with the Black experimenter testing African American students. In the
first a White researcher interrupted the Black experimenter for 30 seconds just before the SAT test began to remind the Black Experimenter that he (the White experimenter) would return before the end of the session. This was done in order to investigate whether increasingly expected out-group involvement and implied evaluation would enhance any impacts of perceived test bias-evaluation on performance. In the second condition while the Black experimenter conducted the session, a White male sat to the side near the front of the room completely uninvolved, uninterested, saying nothing and looking through a folder of papers. This situation was intended to provide continuous White out-group presence with minimal, if any, expected evaluation of the minority test-takers.

Following the performance test, participants completed a series of items including measures of distraction, performance concern, academic engagement, stereotype avoidance, self-handicapping, manipulation checks and ethnic group identity. The entire procedure required about 40 minutes, after which participants received explanations, credit and thanks.

RESULTS

Diagnostisity was successfully manipulated in subjects’ perceptions ($X^2=10.4 (1)$, $p<.001$). As expected, African American participants tested in exclusively minority contexts (Black experimenter only present) showed no performance decrement in the standard “diagnostic” compared to “non-diagnostic” testing ($F<1$), but participants did show significant performance decrements when tested by a White experimenter in those standard instructional conditions ($F(1,76)=5.80$, $p<.04$; see Figure 1).

Figure 1: Percent Correct on SAT Verbal Task (African American Subjects)

In a third condition, the White researcher briefly interrupted, just before the Black experimenter started the SAT test, to state that he (the White researcher) would
return before the end of the study to help with testing. This manipulation had no decremental impact on performance in the diagnostic condition ($F < 1$; see Figure 2).

**Figure 2: Percent Correct on SAT Verbal Task: White Researcher Appears at Test Beginning Saying He Will Return at End**

Finally in the last Black experimenter condition, the White male’s uninvolved and inactive but visible presence similarly had no damaging effects on minority students’ intellectual performance ($F < 1$; see Figure 3). This is in strong contrast to the significant impact of the continuously present and evaluating White experimenter who produced the stereotype threat predicted performance decreases in minority students’ performance in the Diagnostic Condition compared to the Nondiagnostic Condition as noted above.

**Figure 3: Percent Correct on SAT Verbal Task: Uninvolved White Male Sits Inactively at Front of Test Room.**
CONCLUSIONS

Perceiving tests to be ethnically fair eliminates performance decrements in out-group, White experimenter conditions within otherwise exclusively Black contexts. This suggests that perceived unfairness in testing and evaluation is an important factor in arousing Stereotype Threat. However, the converse does not occur. Neither proclaimed unfair and biased tests given within entirely in-group contexts (with a Black experimenter), nor threatened immediate, potentially unfair evaluations by out-group researchers (not yet present in person) have lead to performance decrements within in-group settings, even when these concerns are reinforced by the White evaluator’s brief appearance at the beginning of the performance test.

Perhaps an even more surprising finding was that the mere continuous presence of a non-evaluating, uninvolved White male in the test taking room did not lead to stereotyped minority members’ performance decrements in the diagnostic compared to nondiagnostic conditions. These findings suggest that if perceived or expected bias in evaluation may be a significant part of the concerns that drive the Stereotype Threat effect, that those factors may require some amplifying impact of the presence of potentially stereotyping out-group members to create Stereotype Threat’s negative consequences on the performance of those stereotyped.

Thus the current results reported here suggest that neither expected nor perceived evaluation bias alone nor White presence alone appear adequate to produce Stereotype Threat effects. Perhaps it is more likely that such expectations of evaluation may require the multiplying impact of a persistently present reminder cue of a potentially stereotyping out-group member in order to create Stereotype Threat’s damaging effects. Here only the White experimenter test-giver condition produced the diagnostic-nondiagnostic manipulation predicted performance decrement effects for African Americans. In this White experimenter condition the White person is continuously present and is in an evaluative role in which bias may be present. This Stereotype Threat effect however seems to occur only when the White out-group member is present for the entire portion of the intellectual task, perhaps acting as a stronger reminder of the stereotype or of the threat of biased evaluation or perhaps through increased White presence priming greater levels of cultural mistrust in experimenter evaluations (Whaley, 2001).
It is notable also that the simple presence of the White test-giver produces performance decrements but that when that White test-giver asserted that the test was unbiased and culture-fair, that the performance decrements disappeared (Sloan, et. al., 2000b). Consistent with the explanation offered above here, even if the test-giver is suspected of biased evaluation or stereotyping, the measure’s own culture-fairness would serve to mitigate or negate the adverse impact of the tester’s personal motives.

Finally, these present findings suggests that any out-group member presence effects, if they occur at all in a brief appearance, may be short-lived once the White stimulus person leaves the setting while the performance task continues. That finding implies that the White stimulus person’s or evaluator’s impact on disrupting performance may be very dynamically brief and limited immediately to the segment of the task being undertaken at that moment rather than being a long-acting cognitive prime cuing the Stereotype Threat phenomenon.

The Native American and European Perception of Place in the New World

Abstract
The Native Americans who originally settled North America and the Europeans who followed had disparate views of place in the New World. This analysis considers the social, economic, and religious systems of various North American tribes, from the nomadic hunter-gatherers of the Great Plains to the permanent settlers of Chaco Canyon. The Native American lifestyle stands in stark contrast to that of the Europeans. The Spanish saw the New World as an opportunity to spread Christianity while achieving wealth and power in the form of gold and slaves. The English desired to create colonies and expand their land holdings at the expense of the Native Americans while the French sought to establish a trading network by cooperating with the indigenous inhabitants. These dissimilar concepts of place brought tragedy to the natives whose philosophy seems more akin to that of environmentalists who regard Earth as home rather than a resource.

The Native Americans
Approximately 10,000 years ago when temperatures and sea levels were lower, land bridged the Bering Strait. Aboriginal people from Asia crossed the land bridge on foot to enter what is now North America. For many millennia prior to the arrival of the Europeans, this land and its resources sustained manifold civilizations many of which were highly sophisticated. The thousands of years that the Native Americans occupied North America are now separated into the Paleo-Indian, the Archaic, the Woodland, the Late-Prehistoric, and the Historic periods. About 1000 years before Christ, while Mesopotamia and Egypt were building sizable structures and societies, the ancestors of the Hopis and Zunis of America's southwest were constructing intricate terraced buildings with hundreds of rooms in their villages (Cordell, 1984; Zinn, 1980).
The Village Politic

When all of pre-history is considered, most Native Americans did not settle in villages. As hunters and gatherers, the people migrated with the herds. However, in places where food supplies were dependable, such as in the region around the salmon-rich streams of the Columbia Plateau, permanent settlements arose. Later, when agriculture took hold, villages, village clusters, and ceremonial centers (kivas) were built (Nelson, Gabler & Vining, 1995).

The League of the Iroquois was the most powerful band of the Northeast. The Iroquois houses and villages were shared in common and worked in common. The Iroquois established a matrilineal line of descent, and society was neither matriarchal nor patriarchal. While there was a distinct division of labor, neither the males nor the females dominated relationships. The women were treated so well as to astound the Europeans. "Thus power was shared between the sexes and the European idea of male dominance and female subordination was conspicuously absent in Iroquois society" (Zinn, 1980, p. 20).

Anyone who acted shamefully, by failing to constrain anger for example, was ostracized until moral purification had taken place. Clearly, acts that were considered "wrong" among some of these tribes varied from those considered "wrong" by Europeans. For some of the Plains people for example, stealing horses from the contender was considered proper trickery. The practice was viewed as a sporting contest of wit as well as a means of enhancing status.

Among the Crow, property owned by the mother was passed down to her children. Property owned by the father usually descended to other of his relatives within his tribe. If a horse was given to someone in another tribe and the giver died, unless the recipient mourned, the horse was given back to the tribe of the deceased (White, 1959).

Settlement Patterns and Livelihoods

Around the time of Christ, the Mound Builders of the Ohio and Mississippi valleys sculpted the earth into forts, burial sites, and enormous birds and serpents to construct their villages. One of these mounds was over 5.5 kilometers in length and encompassed over 40 hectares. That group of Mound Builders began to decline in population around AD 500. Another group of Mound Builders followed which was centered near present day St. Louis with the group's village cluster occupying approximately 30,000 people. The settlement was comprised of thousands of villages, and the people developed advanced methods of agriculture,
tool making, weaving, engraving, pottery, hide dressing, jewelry making, and ceramics (Zinn, 1980).

Some of the most complex Native American settlements are those of the Anasazi. The Anasazi dwelt in Chaco Canyon, which is located in the San Juan Basin of northwest New Mexico. The Anasazi were part of the larger group of Pueblo people that included the Zuni. Researchers agree that during prehistoric times Chaco Canyon was densely populated. From around AD 1025-1125, Chaco Canyon flourished and population numbers were the largest. Estimates vary, but it is reported that the population ranged from 4,000 to 25,000 people during that period (Cordell, 1984; Hayes, 1981). During the last half of the eleventh century, Chaco Canyon served as the hub of a large integrated system of regional development. Most of the communities of this period and within this region were far less complex. Yet the Chaco Canyon regional system demonstrates an advanced form of social organization.

The Chaco Canyon phenomenon of the San Juan Basin eventually encompassed 53,107 square kilometers. The system was comprised of planned towns, unplanned villages, roads, and outlier communities. The Chacoan outliers were distanced from Chaco Canyon by about 30 to 90 kilometers. The outliers are considered by archaeologists to be part of the larger regional system because they have Chacoan forms of masonry, ceramics, and kivas (Cordell, 1984).

Multistory pueblos enclosed plazas or multiplazas. Great kivas had elaborate floor features, such as benches, niches, and paired vaults. These outliers were connected to the nodal center by roads and visual communication systems. The large labor pool in and around Chaco Canyon allowed the Anasazi people to develop agriculture in an area with 20 cm of annual precipitation. Only 40% of the precipitation occurs in the summer while the crops are growing, and the growing season lasts only 140-150 days (Cordell, 1984). While there is some disagreement, paleoclimatologists generally concur that the climate during the time in which the Anasazi flourished was similar to the climate of the present. However, dendrochronology records show that precipitation later became more variable (Betancourt & Van Deveer, 1981; Hall, 1977).

The Anasazi of Chaco Canyon adapted to the aridity of the Southwest in various ways. In addition to contoured terraces, the people built complex prehistoric water conservation systems consisting of dams and reservoirs, canals, ditches, and headgates, which led to the gardens below. Earthen borders surrounded the garden plots in order to decrease runoff. The
system used runoff from precipitation of the inter-cliff zone located above the canyon and below the mesa. The water was then diverted to the gardens of beans, squash, and corn on the canyon floor. The soil of the region, where it is present, is alluvium silt from the Quaternary period (6 million years ago to the present), and sand dunes are abundant. In the areas lacking soil, large deposits of sedimentary shale or sandstone are exposed at the surface (Cordell, 1984). By the time the Europeans arrived in North America, Native Americans had developed agriculture to an art form, sculpted, weaved, built irrigation systems, made cloth from cotton, made tools and worked with copper, and had intricate organizations of human relations. For the most part, Native Americans used their skill and ingenuity to further physical and spiritual wellbeing.

Philosophy and Religion

While the many tribes of the various regions of North America spoke different languages, observed different customs, and adapted specifically to their particular surroundings, the general view of the natural world was similar among Native Americans. The Great Spirit is the Creator, the Master, and the good and powerful being, and Earth provides (White, 1959). The entire concept of land ownership was foreign to the Native Americans. The absurdity of the idea of possessing the land is most eloquently reflected in the immortal words of Chief Seattle (or Stealth). In a letter written to President Millard Fillmore in response to Fillmore's request to buy tribal lands in order to accommodate the growing number of newcomers to America, Chief Seattle wrote:

The President in Washington sends word that he wishes to buy our land. But how can you buy or sell the sky or the land? The idea is strange to us. If we do not own the freshness of the air and the sparkle of the water, how can you buy them? Every part of this earth is sacred to my people. When the last Red Man has vanished with his wilderness and his memory is only the shadow of a cloud moving across the prairie, will these shores and forests still be here? Will there be any of the spirit of my people left? We love this earth as a newborn loves its mother's heartbeat. So, if we sell you our land, love it as we have loved it. Care for it as we have cared for it. Hold in your mind the memory of the land as it is when you receive it. Preserve the land for all children and love it, as God loves us all. As we are part of the land, you too are part of the land. This earth is precious to us. It is
also precious to you. One thing we know: there is only one God. No man, be he Red Man or White Man, can be apart. We are brothers after all (Campbell, 1988, pp. 34-35).

To the Native American, life is sacred, and religion is a way of life. Plains Indians were told by their elders to show their happy faces when the precious rains came. The people gave thanks, and were frugal in times of plenty. There have been thinkers in Western society who view the world in a way similar to the Native Americans. For example, Aldo Leopold (1887-1948) formed the "land ethic" in his book *A Sand County Almanac*. Leopold's ethic simply states, "a thing is right when it tends to preserve the integrity, stability, and beauty of the biotic community. It is wrong when it tends otherwise" (1970, p. 262). Leopold and Native Americans perceived the natural world as a community to which we belong rather than a commodity that belongs to us.

Similarly, in her enduring testament against the chemical sabotage of Earth, *Silent Spring*, Rachel Carson (1962) spoke of something infinitely healing in the repeated refrains of nature and the assurance that dawn comes after the night and spring after the winter. While the views of these thinkers did not immediately become the prevailing perception of the West, their attitudes have had an incalculable impact and have helped forge the way for the evolving Western perspective of the environment.

Today, the Native American perspective of the land is called anything from pantheism to holism, from deep ecology to neo-paganism. Regardless of the efforts to pigeonhole, it is safe to say that the Native American land ethic is radically different from the dominant view that came across the Great Waters. While it may seem presumptuous to say that the Native American land ethic is far superior to the prevailing ethic in America today, time bears out the supposition.

One need only compare the state of the environment following several thousand years of occupation by the Native Americans to the condition of the land, air, oceans and streams after just the half millennium following the arrival of the Europeans. The Native American perspective was demonstrated through sound environmental planning and management practices. Sustainable development is more than an esoteric buzzword humming around circles of academia. Sustainability is an ecological imperative, and the only means for survival on a planet that is being stressed to the outer limits of its capacity to provide.
Arrival of the Europeans

By scrutinizing the nature of earliest encounters between the Native Americans and the three dominant groups of Europeans arriving in the New World, various ideals of the groups become apparent. In turn, this insight allows one to deduce the mainstream perspective of the different cultures.

The Spaniards

When Columbus landed in the New World, he and his crew first encountered the Arawaks. As the Santa Maria approached the shores of San Salvador in the present day Bahamas, the native people swam out to greet the mariners. Once ashore, Columbus and the crew were given food, water, and gifts. The hospitable Arawaks had no way of knowing what was to follow the arrival of the newcomers (Sale, 1990).

Columbus thought that Hispanola (then Espanola) was an island off the east coast of China, and that Cuba, to the southwest, was Asia. This was the content of the report that Columbus sent back to his financiers in Spain, King Ferdinand and Queen Isabella. Therefore, Columbus named the island chain the West Indies, and called the people Indians. Quite by accident, the nomenclature Columbus chose for the people he encountered, who originated in Asia, was not entirely inaccurate.

Christopher Columbus, or Cristobal Colon, is credited with discovering America in 1492 according to most elementary school history books. Columbus Day is celebrated as a national holiday. Yet, to demonstrate the changing perspective in American society regarding whose rightful place is America, a currently popular slogan reads, "Columbus did not discover America, he invaded it." A look at the Spanish society within which Columbus lived is helpful.

Columbus was a native of Genoa, Italy. At the time of his commission to sail to the New World, he was a merchant seaman living in Cordoba. The spirit of the times elucidates the context within which the expeditions of Columbus were arranged. Similar to the nature of the Crusades of the Middle Ages, Spain in the latter part of the fifteenth century was ablaze with militant religious fervor. The Church was desperately determined to save all souls from eternal damnation (Sale, 1990).

Also like the Medieval Crusades, beneath the overarching mission of salvation was a furious attempt to acquire new territories, to claim all rights to riches found there, and to expand
the circle of trade along with the sphere of influence of the funding country. At that time, Spain had just thrown off Arab-Moorish domination and had unified to become a modern nation state like France, England, and Portugal. The population was comprised of 98% peasantry who worked for the nobility. The 2% noble class owned 95% of the land (Zinn, 1980). The elite, already owning the land, developed its seemingly insatiable hunger for gold, which could buy anything.

The Spirit of the Times

The Inquisition was established by Pope Gregory IX in AD 1231 and was an agency of the Roman Catholic Church. The Spanish Inquisition, however, was founded by Ferdinand and Isabella and was exempt from papal authority. The Spanish Inquisition was designed primarily to extirpate the Arab and Moorish peoples from Spain.

As Spain succeeded in "cleansing" itself of many non-Catholic people, it also lost quality merchants, capable food producers, and some of the most educated of its population. The Arab and Jewish people played an important role in Spain's economy, and the Moors were knowledgeable in animal husbandry and agriculture. But Spain concentrated on controlling its own economy and converting, exiling, or executing all of the so-called heathen idolaters (Sale, 1990).

Columbus was a man of his time and a victim of his culture. The prevailing belief in Spain during the late-fifteenth century was that the end of the world was very near. It has been said that Columbus spent numerous hours each day searching Scripture in order to determine the exact year of the second coming of Christ. He determined it to be in 155 years, the time at which the Church estimated the Earth would be 7000 years old. Columbus was compelled to accomplish two missions before the arrival of the last days. He felt he must convert all "heathen" to Christianity and lead a military assault on Jerusalem to free the city from the "infidel." Originally, "Columbus was obsessed with the idea of Armageddon," but upon arriving to the New World, his thoughts soon turned to gold (Sale, 1990, p. 4).

Bartolome de las Casas is an important source of information concerning the events that followed Columbus' arrival in the islands of the Bahamas and in the Greater and Lesser Antilles. Bartolome was a young priest who transcribed the journal of Columbus. At first, he helped
Columbus in his conquest of Cuba, and he owned a large plantation worked by captive Arawaks. However, Bartolome later became a fierce critic of Spanish cruelty and wrote:

> Endless testimonies prove the mild and pacific temperament of the natives. But our work was to exasperate, ravage, kill, mangle and destroy. The admiral was so anxious to please the King that he committed irreparable crimes against the Indians (Zinn, 1980, p. 6).

Bartolome de las Casas told of the arrogance of the Spaniards, which he said grew worse each day. He reports that eventually the Spaniards even refused to walk, choosing instead to ride the backs of the natives. Spanish soldiers made the Native Americans run relays wherein the Spaniards were carried in hammocks, shaded from the sun by large leaves while being fanned with goose feathers (Zinn, 1980).

**For the Love of Gold: Mining, Monarchs, and Materialism**

There exists a correlation between the exploitation of people and the environment by the powerful agents in Bartolome de las Casas' day and the same by those forces today. He describes the exploitation of the Native Americans in gold mining operations as well reporting that the mountains were stripped from top to bottom as the natives dug, split rocks, moved stones, and carried dirt on their backs to wash it in the river. As the Native Americans struggled with an impossible task, they were forced to actively desecrate their mountain home. A copper token was placed around the neck of one made to mine, and if someone fled into the wilderness and was discovered without the token, his hands were cut off and he was left to bleed to death (Zinn, 1980).

Columbus promised King Ferdinand and Queen Isabella back in Spain that he would bring them as much gold as they needed and as many slaves as they would ask boldly stating that "thus the eternal God, our Lord, gives victory to those who follow His way" (Zinn, 1980, p. 3). The problem was, however, that Columbus promised what he could not provide. The only gold to be found was scattered about in small flakes or dust. Columbus had some of the dust melted down into a nugget and sent it to Spain to show the king and queen a sample of the bounty to be extracted from the New World.

Excited by the prospects, the monarchs awarded Columbus seventeen ships and over 1200 crewmembers for his next expedition. His obligations to his patrons stockpiled as did the
pressure to produce. In 1495, Columbus commanded his great slave raid. He and his crews sailed from island to island in the Caribbean capturing Arawak children, men, and women to be enslaved on plantations, in the gold mines, or to be shipped back to Spain and sold. Columbus examined and chose 500 of the most fit-looking Native Americans to be loaded onto the ships bound for Spain. Perhaps if enough slaves disembarked in Spain, the gold that was promised would be forgotten. Two hundred of those Indians died on the way. The survivors were sold in town by the archdeacon, and Columbus wrote, "let us in the name of the Holy Trinity go on sending all the slaves that can be sold" (Zinn, 1980, p. 4).

Back in Cuba, the scratching and scrambling for gold continued. Writing again in his journal, Bartolome de las Casas laments:

Thus the husbands and wives were together only once every eight or ten months and when they met they were so exhausted and depressed on both sides they ceased to procreate. As for the newly born, they died early because their mothers, overworked and famished, had no milk to nurse them, and for this reason, while I was in Cuba, 7000 children died in three months. In this way, husbands died in the mines, wives at work and children died from lack of milk and in this short time this land, which was so great, so powerful and fertile was depopulated. My eyes have seen these acts so foreign to human nature, and now I tremble as I write (Zinn, 1980, p. 6).

On Haiti, huge slave labor estates founded on sugar cane were worked at a fierce rate, and more Arawaks died by the thousands. Conservative estimates place the population on all of Hispanola at 250,000 in 1494. Between being sold in Spain, the forced labor on the plantations and in the mines, and European diseases, almost 200,000 of these people vanished in just twenty years. By 1515, about 50,000 Indians had survived the maltreatment. But by 1550, there were a mere 500, and by 1650, there were none (Zinn, 1980).

The population depletion of the Native Americans occurred at a staggering rate. Technologies devoted to the development of firepower enabled the Spaniards to overpower and subjugate a people from which they had much to learn. In this way, ideologies that favored the pursuit of material wealth prevailed over those of a spiritual people who lived in accordance with the land. A century after Columbus discovered the Arawaks in the Caribbean, the English encountered the Powhatans in Virginia.
English Colonists

Englishman Richard Grenville and seven ships landed on the coast of Virginia in 1585. The Powhatans greeted them hospitably. When Grenville noticed that a small silver cup was missing from his stuff, he burned the entire Powhatan village. In 1607, Jamestown was established inside the Indian Confederacy territory. The leader, Chief Powhatan, watched as the number of settlers continued to grow. However, during the winter of starvation in 1610, some of the English went to live with the Indians. The following summer, the governor of Jamestown sent word to Powhatan to release the so-called hostages and eventually burned the houses of the Powhatan village, killed a number of Native Americans, and stole the queen and her children, who were probably the wife and children of Chief Powhatan. The lady and her children were put on a boat. The children were thrown overboard and shot while in the water, and the mother was taken elsewhere and stabbed to death. Twelve years after this attack, the Native Americans, taken back at the increasing number of English people, tried to stop them once and for all. The Indians retaliated, killing 347 men, women and children. From that time onward, there was no more peace (Zinn, 1980).

A similar situation developed in the Massachusetts Bay colony. The governor, John Winthrop, took land occupied by Native Americans by referring to it as a "vacuum." Since the people had not "subdued" the land they had only a "natural" right, not a "civil" right to the land. "Natural" rights carried no weight in the court system that was brought by the newcomers. The Puritans settled in what is today southern Connecticut and Rhode Island. When their populations began to expand, they wanted Pequot land and wanted the Pequots out of their way. War was made on the Pequots in 1636. The Puritans used the same war tactics that Cortez used against the Aztecs when noncombatants were attacked in order to terrorize the enemy. There was a massacre on a Pequot village on the Mystic River near Long Island Sound led by John Mason. Puritan theologian Dr. Cotton Mather commented, "It was supposed that no less than 600 Pequot souls were brought down to hell that day" (Zinn, 1980, p. 14).

The Spanish wanted gold and the English wanted land on which to establish colonies. The Native Americans were viewed first as slave laborers and then as obstacles standing in the path of progress. As the English colonies grew, so did the need for more and more land and other resources. The English perceived the Native Americans as a hindrance rather than as the land's most valuable resource.
The French, Furs, and Free Trade

Fortunately, the French had a far better rapport with the Native Americans than did the Spanish conquistadors or the English colonizers. Not only were the Native Americans skilled hunters, horticulturists and fishers, but they were astute trappers and traders as well. The Native Americans had interlaced this country with well-worn footpaths and were a wealth of information. The French were rational enough to recognize their expertise, and realized the absurdity in reinventing the wheel.

In the early-seventeenth century, the French began to construct forts, such as Detroit and Chicago, along the Great Lakes, as well as to the northeast along the Saint Lawrence River. The Huron, Neutral, Nippising, and the Wyandot of that region were familiar with the characteristics and habitat of the animals in their area. They knew which materials made good traps, how to preserve meat, and how to treat hides. The French were prudent enough to befriend the Native Americans (Trigger, 1990).

The Huron had established far-reaching trade relations, and had a reputation as traders that went back to prehistory. The Huron were named such by the French. "Hure" connotes a rustic or hillbilly, and the French described them as a robust looking people. The people called themselves Wendat, meaning Islanders. One of the earliest written accounts of the Native Americans in the Upper Great Lakes region is by a skilled cartographer, explorer, soldier, and fur trader, Samuel de Champlain. Champlain lived among various groups of the Huron in 1615 and 1616. He had worked for trading companies in the West Indies and had been advised to win the confidence and respect of the Huron (Trigger, 1990).

During that period, there was a growing demand for beaver pelt hats in Europe, and the Upper Great Lakes region was beaver-rich. The Huron had traded and given furs to appease angry and aggressive Iroquois chiefs in order to establish good relations. The French introduced to the Huron market-hunting. One or two centuries following the fur trade, the landscape showed signs of its impact from southern New England to Maine. The abandoned beaver dams collapsed and the plentiful ponds drained. Many of the nutrient-loaded marshes laden with silts eventually became bogs, and later grasslands upon which white tail deer and moose fed. In time, cows and pigs whose adverse impact on the landscape became widespread, widely known, and yet widely accepted, replaced these native creatures.
Priests of the Jesuit order documented other early French and Native American encounters. *The Jesuit Relations and Allied Documents* were published annually in Paris both to satisfy the curiosity of the French, and to gain support for the work of the Jesuits in New France. These were printed from 1634 to 1650 and provided detailed accounts of the law, government, and religion of the northeastern Native Americans (Trigger, 1990).

Toward the latter part of the seventeenth century, journals were kept by French military leaders. These, too, provided interesting accounts of the groups of the Great Lakes Region. Antoine de la Mothe Cadillac and Pierre Liette wrote of their hunting trips with the people of the Western Country. The French were impressed by the Native Americans' sense of direction, their "detailed technical knowledge" in the ways of agriculture, their acute hearing and vision, and by their "powers of reasoning and memory." The latter were demonstrated partly in lengthy recitations (Trigger, 1990).

The benevolent relationship of cooperation that the French developed with the Native Americans was further manifested in the French and Indian Wars. As France and England vied for world domination, the Native Americans allied with the French. In each of the four major battles fought, the French lost ground. In 1753, George Washington traveled to the Upper Ohio Valley to tell the French that they were trespassing, and to ask them to retreat. Although the French refused, in 1763 they were forced to leave the Great Lakes region of North America thus ending any hope for dominance in the New World (Harkavy, 1991).

**Summary**

Many Native American tribes were nomadic hunter-gatherers migrating across the heartland of North America. Others created complex settlements such as the Mound Builders of the Ohio and Mississippi valleys and the Anasazi of Chaco Canyon. Although the numerous Native American tribes populating North America did not speak the same language or observe the same customs, their perception of the natural world was similar. They believed in a good and powerful Great Spirit who had given them the Earth to provide all their physical needs.

The three dominant groups of Europeans, the Spanish, English, and French, varied somewhat in their interests in North America. However, the emphasis remained on material resources and the non-sustainable exploitation of them. The Spanish sought slaves and gold, the English continued to encroach upon territories on which to develop colonies, and the French
established an overseas fur trade. These disparate views would lead to conflict among the various groups with the number of Native American tribes eventually declining as thousands were decimated at the hands of the Europeans. In short, ideologies that favored the pursuit of material wealth prevailed over those of a spiritual people who lived in accordance with the land.

ANTI-FREE TRADE MOVEMENTS AND THE STATE IN KOREA

Sehee Son  
University of Cambridge  
DongAh@102-1405 Umsari Gyeryong City 136915 Korea  
ss635@cantab.net
ABSTRACT

Scholars conflict sharply on the issue of globalization’s emergence and the role of the nation. The significance of the state factors into each scholar’s perspective differently, depending on his or her understanding of globalization. The Korean government has remained an important actor, in no sense reducing its role and authority despite the intensification of globalization. The anti-free trade movements of Korean civil society in particular illustrate how the state passes the impact of the free trade agreements (FTAs) on the civil society and delivered the civil society’s claims to the international negotiations. Analyzing the triangular relations between civil society, the state and international agreements made in Korea, this paper demonstrates the role of the government that actively intervenes between civil society and the international arena. Showing significant changes in Korean society that can be called globalization -- distinguished from internationalization -- this paper contributes to the strength of globalist arguments. At the same time, it also fortifies the counterargument, which stresses the importance of the state, by revealing the state’s arbitral role between the civil society and FTAs. This paper attempts to strike a balance between the two conflicting camps: globalists and skeptics.
INTRODUCTION

One of the most frequently discussed topics in social sciences is “globalization.” However, it has not yet seen clear definition, and many use the term globalization to refer to different phenomena. Scholars disagree on whether globalization is a real phenomenon, dividing themselves into two groups. The globalists, who support the idea of globalization, argue that the features of the world currently apparent are differentiated clearly from those of internationalization, and emphasize the reduced power of the nation-state vis-à-vis multinationals. Internationalization merely refers to “increases in interaction and interdependence between people in different countries,” which is based on a territorial framework. However, current form of the interconnectedness between countries increasingly shows “deterritorial” or “supraterritorial” relations (Scholte 2000.) On the contrary, skeptics of globalization take issues with such arguments, asserting that globalization is a tool for politicians and governments to manipulate people to accept neo-liberal policies, and the state still plays a significant role (Gordon 1988; Hirst 1997; and Hoogvelt 1997.) Considering these two conflicting arguments, this paper sheds light on the major role of the state under globalization in Korea. It will illustrate that the symptoms distinguished from those of the early 20th century arose increasingly in Korea. In particular, this paper will argue that Koreans were able to witness the signs of globalization not only in economic sector, but also in cultural spheres.

The role of the state in Korea does not seem to be decreased as globalists claim. Rather, it remains an important mediator conciliating the different interests between the civil society and international agreements. This paper will demonstrate this role of the
state as an arbiter, paying particular attention to the triangular relationships between civil society, the state, and Free Trade Agreements (FTAs.) First, it will analyze Korean civil society’s anti-free trade movements, revealing how the Korean government responded to the civil society’s claims in negotiating for the FTAs. It will argue that civil society cannot solely influence the FTAs, bypassing the government. Moreover, the impact of the FTAs is also transmitted to the civil society only through the government. Finally, it will demonstrate more complex interactions between the civil society, the state and FTAs, showing the collective pressures from domestic and global civil societies on the government. This transnational activism of civil societies will also illustrate the significant role of the Korean government, which maintains its critical role of protecting civil society, on the one hand, and on the other, participating in the flow of globalization through FTAs.

This paper pays particular attention to the Korean civil society’s activities against the Korea-US FTA, Korea-Japan FTA and Korea-Chile FTA to analyze how civil society affected international agreements by challenging the state. However, the discussion focuses on the role of the Korean government revealed through the civil society’s anti-free trade movements, rather than on the impact of the protests. The final result of the negotiations on Korea-Chile FTA, which included some level of Korean farmers’ requests, highlights the critical role of a government that successfully delivered civil society’s interests, rather than the success of collective actions. The resistance against the Korea-Japan FTA, which led to suspension of negotiations, also stresses the role of the government that reflected the civil society’s claims to the international negotiations for the FTA.
GLOBALIZATION AND THE STATE

The modern state’s core characteristics, such as territorial sovereignty, the formal equality of states, non-intervention in the internal affairs of other recognized states and state consent as the foundation stone of international legal agreement, started operating as major principles in the modern international system in the late eighteenth and early nineteenth centuries (Crawford and Marks 1998). The well-known origin of the modern state traces back to the Peace of Westphalia of 1648, which ended the Thirty Years’ War (Krasner 1995; Keohane 1995.) However, the principles of the modern states demonstrated in the Treaty of Westphalia were not accepted fully until the late eighteenth and early nineteenth centuries (Crawford and Marks 1998.) Since then, modern states have transformed, and the debate between globalists and skeptics on whether the importance of nation-state’s role in this era of globalization (as the globalists argue), or internationalization (as the skeptics argue) has been increased or decreased continues. These two contrasting perspectives about nation-states in the twenty-first century will be studied in this section as an important preliminary discussion for the study of the Korean middle class’ anti-FTA movements and the state, which will be dealt with in the following section.

The Globalist View

The End of the Nation State

Ohmae (1990) states in his book *The Borderless World* that there no longer exists national interest and national security is nowadays only a myth. Insisting on the minimizing role of governments, Ohmae pays special attention to the significance of
firms. In particular, he argues that today’s global corporations or multinationals better serve the people’s interests than the government. He opposes the view that they exploit local resources and work forces and then repatriate the profits back home, thus leaving only more poverty than before they arrived. Rather, they advance local areas by investment, training local people and paying taxes. He states that in terms of real flows of economic activity, “nation-states have already lost their role as meaningful units of participation in the global economy of today’s borderless world [emphasis original].” From his point of view, the firms, particularly multinationals, have already taken over the nation-state’s traditional role with respect to the global economy.

**Dependent State; Decreased Power and Authority**

Jessop (1994) argues that the world has moved from Fordism to post-Fordism, and the state is undergoing a fundamental restructuring. First, the Keynesian welfare state, which operated effectively in the Fordist era, has changed its key features and functions to a Schumpeterian workfare state, which works more appropriately under post-Fordism. Jessop explains that unlike the Keyesian welfare state, the Schumpeterian workfare state “promote[s] product, process, organizational, and market innovation in open economies in order to strengthen as far as possible the structural competitiveness of the national economy by intervening on the supply side; and subordinate[s] social policy to the needs of labour market flexibility and-or the constraints of international competition.” Second, Jessop holds that in the multi-layered world of supranational, national, regional or local and translocal, the capacities and roles of the nation-state are “hollowing out.” Whereas the nation-state still holds political importance and national sovereignty—although it is nowadays less effective and only jurisdictionally
meaningful by the international community of nations—the capacity to exercise its power even within the national boundary has weakened considerably. This weakening is due to the transformation toward internationalized and flexible production systems, and the threats and challenges the global environment poses.

Held and McGrew (2002) further discussed the debate between globalists and skeptics. What matters most for globalists, according to Held and McGrew, is a concern with power. In particular, globalists pay attention to the instrumentalities, configuration, distribution, and impacts of power, which are reordered and expanded under globalization. Power relations, therefore, extend between and across different regions of the world. With current globalization, power is no longer concentrated within a national boundary, where it can be immediately exercised. Their discussion on political power demonstrates how national power has been transformed—or weakened—under globalization. First, the increasing interplay of foreign and domestic policies has made national coordination and control of government policies difficult. Also, the strategic policy options available to the government are decreasing, due to a growing global interconnectedness. In this case, the government may further experience a decrease in control over its citizens and other people operating within its borders. For instance, the balance of power between states and markets shifts with an increased mobility of capital. If the state does not satisfy the market’s demands—i.e., developing market-friendly policies, reducing tax, and adopting privatization—private investors can always cross the national border to find better conditions.

Without conducting multilateral forms of collaboration with other actors, such as firms or other nation-states, the state can no longer serve the traditional activities and responsibilities of defense, economic management, health, and law and order. “[T]he
modern state is… unable to determine its own fate.” As revealed through Held and
McGrew’s explanation of the globalist position and Jessop’s related, but less extreme,
argument, these globalists—moderate globalists—take a slightly different position from
the “hyper” globalists, such as Ohmae. Both types of globalist agree that nation-states
have undergone a fundamental shift due to globalization; however, the former is
distinguished from the latter in that it still recognizes some aspects of the nation-state’s
role, albeit its reduced power and authority. The moderate globalist’s view partially
explains the increasing impact of globalization in Korea. In particular, the moderate
globalist’s view argues that decreased power of nation-states can be applied to show the
Korean government’s role in international negotiations, which is affected to a large
degree by global regulations such as those on free trade.

The Skeptic View

The Myth of Globalization

Skeptics of globalization such as Gorden (1988), Jones (1995), Hirst (1997),
and Hirst and Thompson (1996) are reluctant to recognize the emergence of
globalization. They suggest that if what is truly global is not satisfactorily explained, the
term globalization is merely a synonym for Westernization or Americanization (Held
and McGrew, 2002.) Thus, for skeptics, it is important to examine how the
contemporary world is fundamentally different from the belle époque of international
interdependence (1890-1914) (Gordon 1988; Jones 1995; Hirst 1997.) Through such an
investigation, they assert that the current transformation and trends of the world are
more close to internationalization (a growing interconnection between national
economies or societies), and regionalization or triadization (the geographical consolidation of economies and social exchanges) (Hirst and Thompson, 1999.)

Scholars like Gordon (1988), Hirst (1997), and Hoogvelt (1997) criticize the globalist view, saying that idea of globalization is used only to justify the neo-liberal global project\(^1\). They argue that globalization does not explain real transformations of the contemporary world; rather, it serves as an ideology to legitimate and fortify the global free market and Anglo-American capitalism. Pointing out that the debate of globalization has been intensified as the neo-liberal agenda spread, they insist that the idea of globalization is a “necessary myth” with which politicians and governments manipulate citizens to adjust themselves to meet the requirements of a global market.

Some international relations theories, particularly realists’ perspectives (Morgenthau 1948; Waltz 1979; Gilpin 1981), also challenge the globalist argument that power and authority of nation-states have been limited considerably. From the realist point of view, it is still the major powerful states and their agents, both of which have economic and military impetus, that play the most important role in the existing international order (Waltz 1979). As a result, the policies and preferences of the great powers inevitably determine the existing international order, since only they are capable of creating or maintaining the liberal international order within their economic and military hegemony.

---

\(^1\) “Neo-liberal project” refers to a Washington consensus of deregulation, privatization, structural adjustment programs and limited government.
While skeptics do not accept that globalization has occurred, arguing that the contemporary world is more close to internationalization, Mann (2000) acknowledges the existing international order as globalization; however, he still agrees with the skeptic view that the nation-state has not completely lost its power and authority to the markets. Analyzing the globalists’ four threats to the contemporary nation-state—capitalist transformation, environmental limits, identity politics and post-militarism—he makes three criticisms: 1) having little sense of history, globalists overstate the power of the nation-state in the past; 2) they do not understand global variety, and hastily prospect the decline of the nation-state; and 3) they overlook the plurality of the nation-state, and depreciate international relations. Mann, therefore, urges that the threats raised by the globalists need to be re-examined considering the following: “(a) differential impacts on different types of state in different regions; (b) trends weakening and some trends strengthening nation-states; (c) trends displacing national regulation to inter-national as well as to transnational networks; (d) trends simultaneously strengthening nation-states and transnationalism” [all emphasis original]. Criticizing the globalists’ depreciation of the nation-state in the existing international order, however, he emphasizes that global interaction networks are indeed strengthening.

Cerny (1994) also acknowledges both the emergence of globalization and the nation-state’s role in the globalized world. He analyzes the American policy process in relation to the transnationalization of finance. In particular, Cerny demonstrates the interaction between pressures from globalization of the financial market, from the international activities of American firms and from the domestic politics of regulatory reforms. In spite of the globalization of finance and the establishment of international
regulatory regimes, he argues domestic politics still play a critical role in regulating the financial sector. They operate as an important mediator to prevent financial crisis and market failure under globalization.

THE CIVIL SOCIETY, THE STATE, AND THE FTA

Between the Globalists and the Skeptics

Globalization in Korea

While the discussion of the globalists and the skeptics regarding globalization and the state mostly focuses on economic globalization (i.e., the role of state and multinationals), Korea demonstrates more broad impact of globalization that includes not only economic sector but also other spheres of agriculture, education, health, and culture. In particular, the upcoming Korea-US FTA, which is currently under negotiation, reveals the impact of free trade on Korean culture and agriculture. When the Korean government proposed the FTA to the United States, the U.S. government requested either reduction or removal of the screen quota and the opening of rice markets as the preliminary conditions before commencing any negotiations. To contract this fourth FTA, following the FTA with the European Free Trade Association in 2005, the Korean government finally agreed to halve the screen quota from 146 days to 73 days a year\(^2\) and started importing “bapsangyoung ssal (table rice)"\(^3\) from March 2006.

\(^2\) The screen quota is the system to protect the domestic movie industry. It was first introduced in 1966 in Korea, and required movie theatres to play Korean movies at least for 146 days a year until July 1, 2006.

\(^3\) Korea has been importing rice already. But the government strictly restricted the use of such rice to processed food; hence, it was not possible for Korean consumers to buy imported rice for cooking. However, table rice, which can be used as meal, has been
To begin, the impact of the regulations of the World Trade Organization (WTO) and FTAs on Korean agriculture shows the increased phenomenon of globalization in Korea. Ever since the agricultural markets were opened in 1995 with the establishment of the WTO, Korea relies heavily on imports for food supply, and the self-sufficiency of agricultural products was only 26.8 percent in 2004. This is, however, when including rice products: it was only 5 percent excluding rice products. Most other grains such as wheat, potatoes, corn and soybeans were imported from other countries, such as the United States and China. With the Korea-Chile FTA contracted in 2003, fruit imports also increased sharply, and this resulted in the closing of one-third of Korean fruit farms. The immediate damage was particularly noticeable in grape farming, but it ultimately led to a domino effect, decreasing the price of other fruits. Tropical fruits mainly imported from the United States and the Philippines also affected the price of other fruits, although Korea rarely produces tropical fruits. Due to the very low price of tropical fruits, consumers often tend chose tropical fruits, such as bananas and oranges, as substitutes for Korean apples or pears. Korean fruits, therefore, became disadvantageous as price competitors.

The impact of the imported agricultural products on Korea transcends the effect of regionalism. Trade partners vary across the globe, and cannot be blocked regionally; therefore it shows much more complicated interactions between countries than bilateral relations between Korea and each country. It also shows supraterritorial relations between trade partners, which surpasses the effect of internationalization. Under the global regulation of free trade, the interactions between Korea and other foreign countries in agricultural industry transcends national borders. As Scholte (2000) argued, imported since 2006, and this is why farmers are infuriated.
free trade is not “cross-border exchanges over distance [emphasis original],” but “trans-border exchanges without distance [emphasis original].”

The Korean cultural sphere has shown increasing effects of globalization, especially the movie industry. The most noticeable cultural globalization phenomenon is the increase of foreign films, including Hollywood movies. This does not, however, merely mean the quantitative measure of imported movies. The cultural impact of such foreign movies is more significant, and becoming expansive. A movie does not only show a story, but introduces the general culture of a country. People enjoy the natural environment, dance, music, food, and costumes of foreign countries while watching movies. This naturally leads them to be familiar with foreign cultures, and sometimes makes the foreign culture become a part of the people.

Cultural globalization does not narrowly mean the huge impact of American culture mostly delivered through Hollywood movies. For example, many people are enjoying Indian traditional dance and music in Korea. They make a social gathering with others who also like Indian culture, and enjoy Indian dance and music together. According to one Korean TV documentary, VJ Teukgongdae, most first became interested in Indian culture by watching Indian movies. These hobbyists said the music and dance shown in the movie were much more impressive than the story itself. It has now become a part of their lives to learn Indian dance, and listen to Indian music. As exemplified by the Indian culture infiltration into Korea, cultural globalization means the co-existence of diverse cultures, transcending national boundaries, rather than the dominance by one superpower such as the United States. Given that Korean people are enjoying many different cultures of Europe, the United States, India, and other Asian
countries, it is evident that cultural globalization has proceeded to a considerable degree in Korea.

The current situation of Korea demonstrates much more complex and diverse society that cannot be explained with internationalization or regionalism. Unlike most of the discussion on globalization, which focuses on the economic sector, globalization has been expanded to broader spheres. The impact on agricultural industry and cultural sector are particularly noticeable in Korea. The transnational trade in agricultural products shows multilayered interactions among several countries, and the impact of foreign movies on Korea demonstrates how the diverse cultures co-exist, transcending national borders. These changes are considerably different from the internationalization or regionalism; therefore the phenomenon of globalization has emerged in Korea.

The State Under Globalization

The impact of globalization on Korea is significant, and it sometimes weakened the authority and power of the government. For instance, when the financial crisis occurred in 1997, the Korean government did not have much power vis-à-vis the International Monetary Fund. Nonetheless, a nation-state still plays an important role domestically and internationally. First, the nation-state remains as an important actor that plans, negotiates, and executes global regulations. As global regulations sometimes restrict the power of nation-states, nation-states also modify and govern global regulations. It is true that the regulations of the WTO heavily influence the policymaking; however, the government actively communicates with the WTO or the partners of FTAs, and expresses its opinions rather than passively acquiescing to their demands.
The interactions between civil society, the state and international organizations in Korea show the significant role of the Korean government to intervene between its civil society and the FTAs. Particularly, Korean civil society's resistance against globalization demonstrates the role of the government. When the global pressures affected Korean civil society through the government by forcing free trade, the civil society also responded indirectly to FTAs by challenging the government. The regulations of FTAs cannot influence civil society without negotiating with the government, and it is also quite difficult for civil society to directly affect FTAs, although it is not entirely impossible.\(^4\)

To begin, the interaction between the government and FTAs shows how the latter indirectly influences the civil society through the state. Although Korea has been forced continuously to follow the regulations of the WTO in broader fields, the government did not accept all the requests, to protect the weak sectors of society, such as the agricultural industry. This is why it took such a long time to conclude the Korea-Chile FTA, and why Korea is experiencing difficulties in conciliating to the United States in negotiations for the FTA. Ever since the negotiation for the FTA with Chile began, small and big farmers’ protests to deter the ratification by the National Assembly have been ceaseless. The resistance against the FTA expanded to other areas of society, such as the working class, and they criticized the government harshly, demonstrating continuous and collaborative protests. Though the FTA was finally contracted in 2003, the negotiation included some requests from civil society. In particular, Korean government excluded rice, apples, and pears—the most sensitive farm products to

---

\(^4\) The resistance against the WTO ministerial meetings in Seattle, Cancun, and Hong Kong demonstrates how the global civil society directly interacts with an international organization.
Korean farmers—from free trade. This illustrates how the civil society successfully challenged the government, and therefore, ultimately affected the government’s negotiations on the FTA.

The resistance against the Korea-US FTA has been also demonstrated by several sectors of society. The farmers and the working class are the most significant actors of the anti-Korea-US FTA movements, and the movie industry has also participated since the end of 2005 galvanized by the U.S. request to reduce the screen quota system as one of the preliminary conditions for the FTA. This FTA with the United States is threatening particularly to Korean farmers, since the United States is asking for complete free trade in the agricultural industry, and accordingly, farmers’ organizations are protesting fiercely against it. As the resistance from civil society expands, the Korean government is undergoing difficulties in coordinating different views within Korea with the positions of the United States.

Korean civil society’s anti-Korea-US FTA protests seem to show some influences on the government’s negotiations on the FTA. In October 2006, the fourth negotiation of the Korea-US FTA lasted for five days in Jeju. The results of this negotiation reveal the effect of civil society’s actions on the Korean government, which tried to deliver the demands of civil society to the U.S. government. Jeju is the major producer of mandarins in Korea, and the Korean government tried to inform the United States of the significance of mandarins for Korea during the negotiations. Although the government had not been active in delivering the farmers’ claims of excluding agricultural industry from the FTA, this time it exerted significant effort to make the United States understand the importance of mandarins. The Korean government delivered the proposition to exclude mandarins and oranges from negotiations, and
Wendy Cutler, the U.S. delegate, responded positively, stating that Korean mandarins are meaningful not only economically, but also culturally and historically. It is difficult to confirm to what extent civil society’s anti-FTA movements influenced the government’s negotiations with the United States, because they are still in progress at this writing. It is, however, meaningful at least in that civil society’s resistance against the FTA affected the progress of negotiations by challenging the government, regardless of the final results.

During negotiations for the Korea-Chile FTA and Korea-US FTA, the Korean government has played the role of active arbiter to coordinate different requests from civil society and the international arena rather than simply delivering the requests of free trade to the civil society. Also, civil society’s interaction with the state reveals indirect pressure of civil society on FTAs via its government. Having the ultimate target of FTAs, civil society leveraged its government to influence negotiations on FTAs, and the Korean government played an important role as a mediator between civil society and FTAs.

![Figure 1 Anti-FTA Movements](image_url)

The Global Civil Society and the Nation-State
The resistance against globalization in Korean civil society sometimes involved global civil society. This activism transcends national boundary, which reveals more complicated interactions between civil society, the state, and FTAs. Keck and Sikkink (1998) explained transnational social movements with a “boomerang model,” in which they showed how domestic civil society indirectly challenges the state through global civil society. When the domestic civil society is prevented from expressing its claims, it takes advantages of international political opportunity structures by allying with global civil society, and makes the global civil society pressure the government.

The Korean civil society’s anti-FTA activities during international film festivals also show this boomerang effect. Protesters against the Korea-US FTA took the opportunity to be visible at international film festivals, and were successful in drawing international attention. It particular, this shows how the global civil society gradually came to participate in the Korean domestic issues. When movie-industry resistance against the Korea-US FTA, which heavily affected the film industry by asking to reduce the screen quota, first surfaced in Korea, it was solely accomplished by Korean civil society. After a few international film festivals in which Korean directors and actors demonstrated anti-FTA activities, however, the global civil society began to show interest, and finally participated in the resistance.

The movie-industry resistance against the Korea-US FTA was accelerated by the relay of one-person demonstrations. Korean movie stars and directors pressured the government, criticizing its decision to halve the screen quota, mostly in front of

---

5 The relay of one-person demonstrations is one of the most frequently used repertoires of actions in anti-globalization protests in Korea. Only one person participates in the demonstration, and a different person continues the same protest on the following day. The participants usually demonstrate by picketing.
government agencies such as the Office of the President, the Ministry of Finance and Economy, the Ministry of Foreign Affairs and Trade, and the Ministry of Culture and Tourism. These protests of one-person demonstrations still did not provoke the global civil society. With the Director Park Chan-Wook’s protests at the International Berlin Film Festival in February 2006, however, it became the first chance to make domestic claims appeal to the global civil society. Participating in the film festival, Director Park chose times and places of international focus. While protesting, he interviewed with several reporters from diverse countries, and it became an opportunity to draw attention of the global civil society. He could earn some support from movie stars and directors of other countries, and some foreign reporters also supported his protest. Also, by criticizing the Korean government during the interviews with foreign reporters, he increased the strength of the pressure on the government.

Later on at the 63th Venice International Film Festival (VIFF) in August, Korean actors’ and directors’ protests against the Korea-US FTA continued, and finally saw the direct involvement of the global civil society. In particular, Marco Müller, the chairman of the VIFF, participated in the Director Seung-wan Ryoo’s protest, holding the picket reading “Support Screen Quota Against Cultural Imperialism!” Finally, at the Pusan International Film Festival (PIFF) in October 2006, the collaborate activities of domestic and global civil societies against the Korea-US FTA became more active and systematic. Throughout the PIFF, the anti-FTA activities abounded, and protesters pressured the Korean government to undo the reduction of the screen quota. More direct pressure from the global civil society on the Korean government showed up in the International Conference on the Korea-US FTA and the Screen Quota, with one-person demonstrations this time by foreign protesters. Also, the Congress for Reconstruction of
Japanese Cinema, and Murali Nair, an Indian director, showed their support to the resistance against the Korea-US FTA.

These protests and gaining support against the Korea-US FTA revealed how Korean civil society collaborated with the global civil society to increase their collective power vis-à-vis the state. Although it first started domestically, the protests became global through international film festivals, and the pressure on the government increased accordingly. Although it does not clearly show what impact the civil society’s protests brought to the negotiation between the Korean government and the FTA (because the negotiations for the Korea-US FTA are still in progress), it at least demonstrates the role of the state that affected civil society by deciding the reduction of the screen quota, a request from the FTA, and the authority only the state has to undo the reduction of the screen quota system.

The resistance against the Korea-Japan FTA demonstrates more clear effects on the government’s policy. Korea and Japan embarked on negotiations for the FTA on December 22, 2003, and the Korean working class’s resistance was particularly fierce. They built inter-organizational networks with Japanese trade unions, and drew considerable attention from the global civil society through international conferences and press interviews with foreign affairs reporters. The Korean working class’ resistance together with Japanese labors and other international civil societies impacted particularly on the Korean government, and finally led to the cease of the negotiations. The Ministry of Agriculture and Fishery of Japan blamed the suspension of the negotiations upon the Korean government, stating that the Korean government was too suggestible to the working class’s resistance. Also, one Korean protester of the Korean Confederation of Trade Unions (KCTU), who participated in the collaborate protests of
Korea and Japan, testified that he experienced himself the importance of transnational collaboration and the significant result of their protests heavily relied on the support from the Japanese civil society. This transnational resistance illustrates how the state intervenes between the civil society and international forces by, on one hand, delivering the impact of free trade to the civil society (as it initially intended by trying to contract the FTA), and reflecting the civil society’s demands to the international agreement on the other.

Figure 2 Collaborate Anti-FTA Movements with Global Civil Society

The anti-Korea-Japan FTA movements were also active domestically. The KCTU was particularly influential among many protest groups. It harshly challenged the government through numerous protests, and finally made the government modify the contents of negotiations. When the FTA negotiation between Korean and Japanese governments first opened, the agricultural industry was not included. However, as the resistance of the working class increased drastically, the Korean government tried to counterbalance expected losses in the manufacturing industries (as argued by the working class) by exporting agricultural products. This new request of Korean government for free trade in agricultural products became a serious obstacle of the
negotiations, which has not seen significant progress to date. By directly challenging the government domestically, the KCTU forced the Korean government to face difficulties in negotiations.

This resistance of Korean civil society against the Korea-Japan FTA illustrates a more complex interaction between civil society, the state, and the international agreement than the boomerang model. It consisted of both transnational and domestic movements. Korean civil society sometimes interacted directly with the government, protesting domestically, and sometimes challenged the government indirectly by allying with global civil society. In both cases, however, the state showed its important role to transmit the civil society’s claims to the FTA negotiations.

The protests against the FTAs in Korea together with global civil society show that even actors whose domestic arena is not blocked will use the international political opportunities to increase the influence of their activities. It is not discouraged in Korea to express one’s discontents through protest, and many demonstrations against the FTAs have taken place. This slightly challenges the boomerang model of Keck and Sikkink, which bases itself on oppressive states that keep the domestic actors from expressing their discontents. As Tarrow (2005) argued, the domestic blockage is “sometimes a simple lack of responsiveness to domestic claims [emphasis original],” but not the necessary condition for the boomerang effect to occur. International collaboration of Korean protesters against the FTAs increases the effect and influence of domestic attempts, but does not aim to overcome the domestic blockage.
Many factors are at play in 21st century Korea. The impact of Korean multinationals is expanded, and other multinationals of foreign countries are also playing more significant roles than ever before in Korean society. The role of these multinationals became fundamentally different from that of internationalization. They were not mere firms that sell and buy products, but rather became important actors transcending national borders (Ohmae 1990.) Such change in the roles of the multinationals and the state distinguishes the current era from internationalization, and it is frequently called “globalization.”

The phenomenon of globalization, however, is not restricted to the economic sector. We can witness globalization in broader sectors including social and cultural spheres. In Korea, diverse cultures co-exist. It is not dominated by one culture of superpower, but different cultures from several countries are present. Although it is true that the influence of each culture varies, it shows the cultural globalization maintaining diversities.

The role of the state has undergone some changes under globalization. Nonetheless, the state has maintained its significant authority and role. It is still one of the most important actors in international arena, and actively intervenes between its civil society and international agreements. Therefore, it is fair to say that the role of state has changed rather than decreased. It plays a significant role as a mediator that decides, controls, and executes international influences such as free trade. FTAs rarely influence domestic civil society directly without negotiations with the state, and therefore, the state is the most important actor that transmits the impact of FTAs on its civil society. Directly interacting with civil society, the state also delivers civil society’s
demands to the tables of negotiation on international agreements. It plays a role like a bridge between the civil society and international agreements, making the indirect interactions possible between the two. Sometimes the state tries to persuade civil society so that it can contract international agreements, and sometimes it modifies the global regulations in order for the civil society’s demands to be reflected. The anti-free trade movements in Korea particularly illustrated how the Korean government is intervening between Korean civil society and the FTAs. The civil society actively used the government as a channel through which it expressed its claims, and the counterparties of the FTAs could influence Korean civil society only through negotiating with the Korean government. These anti-free trade activities sometimes involved global civil society, and they showed a slightly modified form of the “boomerang effect,” which demonstrated that rallying of international support can occur without domestic blockage.

A few cases of anti-FTA movements by Korean civil society show the role of the Korean government under globalization. Though the interaction between civil society, the state, and international agreements, of each case is slightly different; however, the state showed its important role as an arbitrator in every case. Further research that can show the role of the state when the civil society and international agreement or international organization interact directly would be helpful to illustrate more clearly the significant role of the state in this era of globalization.

Orchestrating Classroom Interaction: What Constitutes a Productive Classroom Discourse?

Serpil Sonmez

Multilingual/cultural Education Program
College of Education
Florida State University

Abstract

This study investigates the functions that the teacher and student talk served in a second language classroom. Being one of the key medium in teaching and learning, classroom discourse has been investigated by scholars in various areas of education (Cullen, 2002; Ellis, 1988; Lemke, 1990; Long & Sato, 1987; Mehan, 1979; Nassaji and Wells, 2000; Rogoff, 1995). Beginning from 1970s, the triadic dialogue (IRE/F sequence) is accepted to be the main discourse pattern in classrooms. Analysis of video-recorded classroom sessions revealed that the triadic dialogue is also the main characteristic of discourse in this particular classroom. However, it is noted that there were instances when the IRE/F (Initiation-Response-Evaluation/Facilitation) pattern is disturbed by student initiated participations. Further analysis of observations and interviews suggested that student initiated participations may hint for the need to a more learner centered classroom practice. In earlier research, the triadic dialogue is associated with teachers’ authority in the classroom. Although the teacher’s self-initiated participation is usually the dominant pattern, students’ taking the floor by self-initiated participation has been considered to be a desired practice in collaborative construction of teaching and learning. Consequently, this study suggests that student initiated participation is in fact collaborative construction of teaching and learning. However, the findings suggest that further analysis of student participation is particularly necessary in classrooms where the dominant discursive practices are teacher-initiated. It is concluded that student initiated participations may in fact be student feedback when there is a contradiction between student goals and their classroom experiences.
Reading in ESL/EFL classrooms: A discussion of research to inform mediational role of reading in language classrooms

Abstract

There has been an increasing amount of research on the use of authentic literary texts in language classrooms for the last ten years. It has been widely discussed that using authentic literary texts and encouraging students to join literary discussions enhance language development (Adair-Hauck & Cumo-Johanssen, 1997; Adair Hauck & Donato, 2002; Carter & McRae, 1996; Kramsch, 1993; Lafayette1993; West & Donato, 1995). However, little had been understood and discovered about the use of literature in language classrooms. This review addresses to the following questions: (1) What is the role of text-based discussions in second language classrooms? (2) Do text-based discussions have any influence on language development? (3) Could literary texts be used in L2 classrooms at all levels? (4) What is the role of the teacher in text-based discussions? (5) What is the role of teacher questions and evaluations? A step by step review of the earlier research addressing these questions reveals several gaps in research practices. There is a need for empirical studies and detailed micro-analyses of literary discourse particularly in English language classrooms. Further implications for research and educational practices will be discussed.
The Implication of Sharia Implementation on Human Rights
A case study: Qanun (Regional regulation)–related to women (Islamic Dress Code) in Aceh, Indonesia

Abstract

The application of Sharia (Islamic law) is granted by Indonesian laws and is enshrined in the Helsinki Peace Agreement between the Government and the Free Aceh Movement. The demand of majority people in Aceh to live in accordance with its unique Islamic culture also contributes for Sharia application. However, the implication of Sharia implementation in the practice seems to violate women’s rights. The attempts to implement Sharia by new Sharia agencies, such as Sharia Police may violate women’s human rights under international regulations i.e. CEDAW. This may due to the ambiguity of Qanun leading to misinterpretation by authorities and community. Moreover, the lack of competency of new Sharia institutions seems to contribute to continuing the violations on women rights. The biased perception of the community in interpreting the Islamic laws, the fiqh-male biased may also contribute. The provisions on Islamic dress in Aceh are in fact not too rigid. They do not provide a harsh punishment. Instead, the provision gives three warnings prior to imposing the punishment. The Government and NGO’s should be concerned with the violations which have been occurring during the attempts of the Sharia implementation. It is suggested by providing training the Syariah Officer as means to understand the international human rights standards and promote the equality between men and women. Otherwise, Indonesia’s international human rights obligations under CEDAW maybe becoming seriously threatened.

ORGANIZATIONAL STRUCTURE, COMMUNICATION, TASK AND ORGANIZATIONAL EFFECTIVENESS

Dr. D.K. Srivastava

ABSTRACT

In this study, an attempt has been made to investigate the relationship between organizational structure, communication, nature of task and organizational effectiveness. Three dimensions of organizational structure namely, formalization, participation and centralization were considered. Organizational effectiveness was measured using perceptual method. However, the measure included output (quality), output (quantity), proper utilization of resources, flexibility and future orientation. Data have been collected from manufacturing organizations belonging to public sector, private sector and multinational companies during management development programmes in India. Multiple regression technique was used to analyse data. The findings indicated that communication openness was positively related to effectiveness. Two dimensions of structure i.e., formalization and participation were positively related and centralization was negatively related to effectiveness. It was found that routine task reduces effectiveness. Among all the independent variables communication, openness and formalization explained more variance in dependent variable i.e., organizational effectiveness. Implications of the finding have been discussed in the paper.

Hawai International Conference of Social Sciences, 2007
INTRODUCTION

All organizations try to achieve survival and growth. Organizational effectiveness is a comprehensive measure of success of any organization. Organizational effectiveness has been defined in multiple ways.

1. Etzioni (1960) "The ability of an organization to achieve its goal.
2. Katz and Kahn (1966) "The maximization of return to organization by economic and technical means (efficiency) and by political means".
3. Yuchtman and Seashore (1967) "Organization's ability to acquire scarce and valued resources".
4. “Organizational effectiveness is a combination of several measures”. Pfeffer & Salanick (1978)

These definitions indicate that organizational effectiveness has multiple meanings. Its meaning depends upon perspective of researchers also. Organizations have multiple stakeholders like employees, owners, govt, customers etc. Therefore, there may be conflict in criteria of effectiveness sometimes. Organizational theorists differ regarding the meaning and criteria for effectiveness. This indicates that effectiveness has no universally accepted criteria. As a construct effectiveness is beset with problems.(Steers 1975, Campbell 1977, Cameron & Whetton 1983). Campbell (1977) concluded - "Effectiveness is not one thing. An organization can be effective or ineffective on a number of factors that may be relatively independent of each other. Perhaps a better way to think of organizational effectiveness is as an underlying construct that has no necessary and sufficient operational definition but that constitutes a model of what effectiveness is”.

Models of Organizational Effectiveness

At present the following models of effectiveness dominate research in this area -

Goal Attainment Model

Organizations are viewed as a rational set of arrangements between people and resources that are instrumental for attainment of specified agreed upon goals. From this perspective, effectiveness is defined in terms of goal attainment. In this approach the closer an organization's output gets, to its stated goals or objectives, the more effective is the organization. This approach is useful when goals of the organization are clear, consensual
and measurable. This model has been used by researchers like Price (1962) Campbell (1977) etc. This model has some limitations also. Firstly, an organization does not pursue only one goal but multiple goals. Sometimes one goal may contradict other goals of the organization. The organization can be effective on one or several goals but may be less effective or ineffective on others. Secondly, the goals are decided by the owners of the organization. An organization’s public goal may bear little resemblance with its real objectives. The operative goals of the enterprise are likely to shift with the changing power distribution among interest groups. Another problem with this approach is the determination of whose goals shall rule. There are various groups within an organization. Pickle and Friedlander (1967) found that expectations of organization held by each interest group were quite different.

**Systems Model**

The systems perspective in a sense feeds upon the inherent in the goal weaknesses attainment model of organizational effectiveness. Two systems approaches have dominated research:-

1. Viewing organization as an open system, Katz and Kahn (1966) emphasized two basic factors which contribute to the determination of effectiveness. The first factor is efficiency, which is an energetic ratio of inputs to outputs. The second factor is political effectiveness which is defined as short run attempts to maximize the return to an organization through advantageous transaction and exchanges both with the organization's members and forces outside the organization. Both factors, efficiency and political effectiveness, will, in the long run, exhibit the four proposed characteristics of long-term organizational effectiveness - growth, energetic storage, survival and control over the external environment. The major focus of this model is not so much the end state but the processes by which the organizations come to arrive at the end state.

2. Under the system resource conceptualization effectiveness is defined as the ability of an organization to secure an advantageous bargaining position in its environment and to capitalize on that position to acquire scarce valued resources. Yuchtman and Seahore (1967) state-
"The concept of "bargaining position" implies the exclusion of any specific goal (or function) as the ultimate criterion of organizational effectiveness. Instead, it points to the more general capability of the organization as a resource getting system". Specific goals, however, can be incorporated in this conceptualization in two ways:-

1. As a specification of the means or strategies employed by members of this organization, (2) as a specification of the personal goals of certain members or classes of members' within the organizational system. The better the bargaining position of an organization, the more capable it is of attaining its varied and often transient goals and the more capable it is of allowing the attainment of the personal goals of members.

2. The assessments based on this model have emphasized the interdependence between important functions within the organization and its elements in the external environment. It assumes that some means have to be devoted to such non-goal functions as survival, maintenance etc. Such activities are functional and contribute to organizational effectiveness. The systems model is oriented towards a more long term objective of assessing the organization, i.e. ability to survive in its environment. Systems models implicitly emphasize criteria designed to reflect the concept of the organization as a social system. Some of the criteria used or assessment of effectiveness are organizational flexibility, capability of dealing with conflict, coordination of subunits and allocation of resources etc.

**Ecology Model**

Miles (1980) proposed this model of effectiveness wherein organizational effectiveness is defined as the ability of an organization to mainly satisfy the expectations of its strategic constituencies. Strategic constituencies are those individual, interest groups, coalitions and organizations upon which the focal organization is critically dependent. These include major stockholders, or owners, rank and file employees, suppliers, consumers etc. The ecology model has the features of both the systems model and the goal attainment model. But instead of focusing on means as the system model would argue, this model treats structures and processes within and between organizations as determinants of effectiveness. It recognizes the role of internal and external constituencies in shaping the goals, operations and ultimate
survival of the organization. A central proposition is that before assessing an organization in terms of goal achievement, a prior determination must be made of the appropriateness of the goals themselves. The assessment has three steps:

1. Identification of the strategic constituencies and their expectations
2. Assessing the relative power of these constituencies.
3. Preference ordering of the expectations for the organization as a whole.

The expectations held by these constituencies may be viewed as the goal they seek to impose on the focal organization. Organizational effectiveness can be assessed in terms of an organization's ability to mainly satisfy these goals in accordance with the preference ordering, reflecting the relative power of its strategic constituencies. Firstly, it undermines the value added to maximization of internal resources in organizational effectiveness. Secondly, the linkages, between satisfaction of goals, imposed by the strategic constituencies and internal processes is not elaborated.

As organizations have multiple constituencies, any assessment of effectiveness should have multiple measures. Raymond (1984) compared such models of effectiveness and suggested that organizational effectiveness is both value based and time specific. An analytical model of effectiveness was suggested by Morgan (1995). He suggested a number of internal organization system and external environmental influences affect effectiveness of an organization. Awasthy & Gupta (2004) analyzed perception of Indian executives about organizational effectiveness. It was found that Indian executives tend to define organizational effectiveness as adaptability, innovativeness and accountability to the stakeholder’s interest by following human resource systems and policies. Khandwalla (1985) proposed that organizational effectiveness is determined by a large number of variables which are given below:

1. Contextual variables: Industry in which organization operates, legal and political environment, the type of organization and ownership etc.
2. Strategic variables: Goals of the organization, strategies of the organization, growth rate, and style of top management.

3. Structural Variables: Centralization, formalization, specific functions, division of labour etc.

4. Process variables: Communication, leadership, and conflict resolution

A major gap in research is how does configuration of context, management style, goals strategy, and culture affect different indicators of effectiveness. This study is based on Khandwalla (1985) model of effectiveness. Organizational structure can be rigid or flexible. Earlier studies have not examined the relationship among such variables in Indian context. Three dimensions of organizational structure namely, centralization, formalization and participation in decision-making have been selected for the study. In addition, communication and nature of task have been considered as antecedents of effectiveness.

Centralization describes the locus of decision-making authority along vertical dimensions of organizational structure. A study by Negandhi and Reiman (1973) of thirty manufacturing firms in India examined the relationship between decentralization and effectiveness and found positive relationship between theses variables. Mott (1972) found that decentralization could in some cases have positive effect and in some cases a negative effect, but that depends on specific circumstances of each organization. However, in large organizations centralization of decision-making authority can adversely affect organizational performance.

In addition to centralization, formalization is significant dimension of organizational structure. Hall (1962) defined formalization as a set system of procedures for dealing with work situations and a system of rules covering the rights and duties of members of organization. High degree of formalization can make the work monotonous. Dewar & Walsh (1987) proposed two outcomes of formalization i.e administrative efficiency and influence. It can contribute to effectiveness in an organization’s earlier part but it may contribute to ineffectiveness in the later life cycle of organization. Kasperson (1985) examined the relationship between organizational structure and performance. It was found that greater the formalized structure, lower the satisfaction of employees and performance. Smith (1996)
found that high level of formalization generates large clientele and high revenues in voluntary organizations. A moderate degree of formalization contributes to high effectiveness.

Participation refers to involvement of employees of different hierarchical levels in decision-making about policies, programmes and other business issues which are likely to influence organizational functioning. It can facilitate performance of individual members in the organization by increasing their satisfaction and organizational commitment, and improving interpersonal relationship among employees. Studies have indicated that a decentralized, participatory organizational structure is most conducive to effectiveness in term of confidence and self control and encourages employees to achieve high production goals (Collins, 1996; Srivastava & Ghadially, 1996). Organizational performance is determined by organizational structure, communication as well as nature of task. In any organization, there are routine as well as non-routine activities. It influences job performance as well as job attitudes.

Organizational effectiveness can be measured by subjective as well as objective criteria. In general objective measures include financial indicators like profit, return on investment, share price etc. and subjective measures have focused on overall effectiveness of the organization. Subjective measures are very popular in research studies on effectiveness. Reiman (1982) reported that subjective evaluation of an organization’s effectiveness or competence was found to be an excellent predictor of the subsequent survival and growth of the organization. Des and Robinson (1984) reported the validity of assessing firm performance through subjective measures. Baer & Frese (2003) in a study of 47 medium size firm found positive correlation between subjective and objective measures. In this study objective indicator was an accountancy based index of return of assets. Questionnaire measure assessed degree of goal achievement and success of organization in comparison to other organizations. In another study, Guthrie (2001) found high positive correlation between objective and subjective measures of effectiveness. Sample included 164 firms in New Zealand. Therefore in this study effectiveness has been measured using subjective variables.
Objective of the study

In this study a multivariate model of effectiveness has been examined. Following independent variables were considered:

1. Formalization
2. Participation
3. Centralization
4. Communication openness
5. Nature of Task

The study has been designed to investigate how configuration of dimensions of organizational structure, communication and nature of task influence organizational effectiveness.

Hypotheses:

1. Participation in decision-making will be positively related to organizational effectiveness.
2. Centralization will be negatively related to organizational effectiveness
3. Formalization will be positively related to effectiveness
4. Communication openness will be positively related to effectiveness.

METHOD

Sample

Three hundred executives participated in the study. Some of them were working at middle level and some of them were working as senior level managers. These executives belonged to public sector, private sector and multinational companies. Data have been collected during
management development programmes in India. Educational qualification of respondents varied between B.Tech, M. Tech, M. Sc, MBA etc.

**Measurement**

Following scales were used for measurement of variables:

**Organizational Effectiveness:** It was measured by Mott (1972) scale. It measured five dimensions of effectiveness namely output (quality), Output (quantity), utilization of resources (money, people, etc.), flexibility and future orientation. There are five dimensions in this scale having five point rating, varying from low to very high.

**Formalization:** It was developed by a questionnaire by Hage & Aiken (1967). It has six items.

**Centralization:** It was developed by a questionnaire by Hage & Aiken (1967). It has five items.

**Participation:** It was developed by a questionnaire by Hage & Aiken (1967). It has four items.

**Communication:** Reilly & Roberts (1977) developed a questionnaire to measure two dimensions of communication i.e. accuracy and openness.

**Nature of Task:** It was measured by Hage & Aiken (1967) scale having four items.

Reliability and validity of these scales have been established in earlier studies (Srivastava, 1991). Cronbach alpha coefficient for the scales is given below:

<table>
<thead>

</tbody>
</table>

**RESULTS**

Table 2 gives mean and standard deviation of variables. Table 3 presents inter correlations among variables and table 4 gives results of multiple regression analysis. Multiple regression analysis indicated that all independent variable explained 27.47% of variance of effectiveness. Communication openness was positively related to effectiveness. It explained maximum variance i.e., 19.85%. Formalization and participation were positively related to effectiveness also. Two variables i.e., centralization and nature of task were negatively related to effectiveness. All independent variables were significant predictors of effectiveness.

**DISCUSSION**

The objective of the study was to investigate impact of structural dimensions, communication and nature of task on effectiveness. The findings indicated that communication openness was positively related to effectiveness. Communication among employees of different organizational units enhances integration of units. In any organization, it improves understanding of role and responsibilities of executives. Similarly, openness facilitates free exchange of ideas and creativity. It improves job satisfactions also. Therefore, it is likely to improve overall effectiveness of the organization. Thus hypothesis that communication openness will be positively related to effectiveness was supported.
Formalization was positively related to effectiveness. Formalization provides stability to any organization. It ensures that employees working in various groups regularly perform the task, which are assigned to them. Srivastava (1991) found that formalization was positively related to job involvement as well as job performance. It enables the organization to ensure compliance with requirements of internal and external customers also. It provides stability to organization by clearly specifying role of every executives. However, it should be kept in mind that it can create rigidity in organizations.

Participation in decision-making was positively related to effectiveness. In any organization participative climate exhibits more initiatives and show higher motivation level. It improves job involvement and commitment to organization as it provides opportunity for greater attainment of higher order needs such as self-expression, respect and independence. Srivastava (2001) found that flexible organizational structure has positive relationship with job attitudes like, job satisfaction, and organizational commitment. Therefore, it is likely to improve effectiveness.

It was found that centralization was negatively related to effectiveness. It is generally observed that centralization in decision-making reduces speed of the organization. In such a situation needs of customers are likely to be ignored. Employees experience low job satisfaction as well job performance in centralized organizational structure, Srivastava (2003). Thus hypothesis that centralization will be negatively to effectiveness was supported.

Routine task was negatively related to effectiveness. In any organization routine activities reduce motivation and innovative spirit of executives. Executives find the work monotonous and de-motivating, which can reduce their performance. All independent variables explained 27.47% variance in effectiveness. The results of this study provide support for Khandwalla
(1985) model of effectiveness. Schmid (2002) established that there is causal relationship between structural properties of organization and effectiveness. Thus, results of the study suggested that organizational effectiveness is determined by multiple variables like dimensions of organizational structure, open communication and nature of task. The findings have implications for organizational development interventions for improving effectiveness of any organization. Organization should try to create conditions of open communication and provide opportunity for participation in decision-making process for employees. Similarly, there should be opportunity for job rotation, which will help employees to experience variety at the workplace. It will help in improving innovation in organizations. Such efforts will improve organizational effectiveness.

Introduction

India is one of the most culturally diverse nations of the world. There are 32 major spoken languages and many other dialects. Approximately eighty percent of the Indian people are Hindu and belong to a religion, which consists of more than 2000 different castes. There are also big communities of Moslems and Christians, as well as Buddhists and Jainists. India has the second largest population after China, with over a billion people. It achieved its independence in 1947, after a wave of nationalism swamped the country. Mahatma Gandhi was the main force behind the peaceful resistance movement that led to India’s independence over fifty years ago. He was a strong advocate for equality and the Hindu/Muslim unification – both important factors in making India one nation. However, shortly after India’s independence many Indians abandoned the idea of a unified people. They felt that India’s independence was achieved, and no further unification was necessary. However the truth is that India still struggles with the unification of this immensely diverse population.

Today the need for independence has shifted in its nature. India is already an independent nation politically, yet it tries to move out of poverty and gain economic freedom. One of the factors that are hindering India in its progress is the lack of unity that rises from various Indian classifications such as religion and castes. The kind of unification that is needed today is not for the purpose of gaining independence or some kind of political unity. Rather, there is a need for a cultural unification in this grandiose melting pot of over a billion people. In this paper I argue that the highly successful Indian Cinema Wave called Bollywood, is an industry that can help find and strengthen a new Indian cultural identity, by comparing it to Sigmund Freud’s definitions of group psychology.

Method of Analysis

In order to understand what role Bollywood plays in Indian Cinema today, it is necessary to gain a concise understanding of the history of Indian Cinema and the character of Bollywood today. For this reason I will give a brief history of Indian Cinema first. Then I will give a background on the nationalistic movement in India today with an emphasis on Hindu nationalism. Following the accounts on Indian Cinema and nationalism in India, I will move to Sigmund Freud’s definitions of identification and group psychology. I will elaborate on the items that Freud lists concerning the unification of a group, such as leadership, identification, elimination of distinctiveness, images, extremes, and finally love. I will give examples from the pattern of a typical Bollywood film in order to make a connection between Freud’s definition and Bollywood films.
Analysis

Brief History of Indian Cinema

In the early days of Indian Cinema film industries were scattered throughout the country. They could be found in Calcutta, Madras, Lahore and other cities. Bombay however was and is the center of Indian Cinema. The name Bollywood was invented by combining the words Hollywood and Bombay (now Mumbai). Bombay hosts one of the biggest film industries. Every year there is a production of over 1,000 feature films in all of India's major languages and in a variety of cities.

Indian Cinema started to emerge in the 1930s, however many critics would not associate Bollywood with these early films, because it has become so commercialized. In the following years several classic genres were created in Bollywood. Some examples are the historical epic, the curry western, the courtesan film, and the mythological movie. The genre that mostly comes out of Bollywood today is called Marsala, the name of an Indian spice mix. It represents a film that has many different elements as for example mythology, melodrama, romance, action, suspense, and the expression of sexual feelings. All of these components are accompanied by a variety of songs and dances.

Ashish Rajadhyaksha writes about the increased awareness of Bollywood films:

For something like the past decade, leading up to Newsweek’s final consecration, a range of print and television media have been claiming some rather dramatic developments in the Indian cinema. Practically every newspaper has commented, usually in the same breathless prose as Newsweek, on the phenomenon: there is a craze for ‘Bollywood’ masala that quite exceeds anything we’ve ever seen before; from Tokyo to Timbuktu Khan are circulating in places where people may never have heard of Indira Gandhi, and there seems to be an opportunity, there is apparently money to be made.¹

Rajadhyaksha further said it is not a surprise that this idea of India is one that is sustained by popular Indian culture. To him, he says," Indian films, with all their limitations and outright idiocies, represent part of the hope for India’s future. In a country that is still 50 per cent illiterate, films represent the prime vehicle for the transmission of popular culture and values." One of these values is a new sense of nationalism that has reached India over the last decade.

Nationalistic Movement in India

India is a country that struggles with economical and social problems, such as poverty, food shortages and violence between Hindus and Moslems. The Kashmir conflict is an external manifestation of a problem that also plagues India internally. Continuously growing high-tech industries and economic reforms have been taking place over the last decade or so. They have been giving the nation hope and optimism for a better India. Closer ties to the West, such as

¹ Rajadhyaksha, Ashish. Inter-Asia Cultural Studies; Vol. 4 Issue 1, (Apr2003): 25
improved relations with the United States, have also given reason for a bright Indian future for
many. “India will soon be a great power, and if the economy really picks up, it could be a
superpower at some point as well,” says Ashutosh Varshney, a political science professor at the
University of Michigan at Ann Arbor.

Even though there are great hopes for the Indian future, the present does not look very
rosy. India still struggles with the aftereffects of colonization. An ever more globalizing world
requires a new approach to nationalism. Phrases like ‘Phir Bhi Dil Hai Hindustani’ and ‘Yeh
mera India/I love my India’ show the desire Indians have to become a unified people. These
phrases are found in nearly every Bollywood film in some way or another. Indians hope to move
the country forward with a ‘cultural nationalism’, which is a form of nationalism that is
independent from the State and its citizenship or political rights. It is a form of nationalism that
works from the inside out, and has to come through the minds of the people. These changes are
taking place slowly, because century old traditions cannot easily be done away with in a decade.
There is certainly more than one way possible and needed to move this trend along. Film is one
of these forms and has been uniting the people with the recent Bollywood movement. Another
trend that attempted to unite Indians culturally was the Hindu nationalist movement.

Hindu Nationalism

Even though this is a rather hot topic I would like to mention the Hindu nationalist
movement. Nowadays it has become a problem, because it evolved into a Hindu only interest
group. In its beginning however, it had a different focus. It played a major unifying role in the
years before India's independence in 1947. After that, the fruits of this movement shifted to a
rather exclusive Hindu approach. One of the accomplishments of this fraction of Indian society
was the creation of the Ganesha festivals. These festivals were initiated to focus on the most
powerful and common gods like Ganesha, the epic Krishna and Durga. The purpose of this
practice was to find common ground for all Hindus, because each community worshiped their
own less significant regional gods. In order to unify the people it was necessary not only to
create a new tradition, but also to keep foreign things out, like components of other religions. It
was not uncommon for Indians to individually add aspects of other religions to their worship
practices. A Moslem could worship at a Hindu temple and vice versa.

The Hindu nationalist movement's primary purpose is to unite all Hindus into a
single "community" that can be the foundation of a strong, Hindu Indian nation.
Disunity among Hindus, especially caste divisions, must therefore be overcome
and marginal groups must be integrated into the body of Hindu society; at one
and at the same time, the distinction between Hindus and non-Hindus,
particularly Muslims, has to be reinforced.3

This movement is interesting to look at in regards to Bollywood and its ability to influence
India's nationalistic movement. Since superstars like Shah Rukh Khan are worshipped like gods,
the parallelism lies close. The nationalist Hindu movement is very concerned, especially recently

2 Bratten, Clare L. Can it remain an open and tolerant society? Middle Tennessee State University.
in keeping foreign things out of the Hindu religion. This way, true “Hinduness” can be preserved. Bollywood does something similar with the focus that it puts on Indian values and a new sense of Indian identity. It tries to reform society by sticking to Indian traditions and values, and not letting foreign things in.

Identification and Freud's group psychology: What unites a group?

Leadership

_The film firmament is studded with 'stars' and 'starlets' of greater and lesser magnitude and luminosity. Their position is important, for not only do they rule in their own realm but even influence the lives of those who see them in all their brilliance on the silver screen. They are very often the determining factors in the popularity and financial success of a film, luring audiences to the box-office with the much publicized aura of glamour and fascination surrounding their names._

In the early days of Indian Cinema megastars were often the driving force behind films and not a director or a plot. Even though the audience has become progressively more aware of directors, most of the admiration of the audience still goes to the actors. In 1936, Ashok Kumar and Devika Rani emerged as the first major star pair. Other male film heroes were Raj Kapoor, Dilip Kumar, and Dev Anand in the 1950s and '60s, Rajahs Khanna in the '70s, Amitab Bachchan in the '80s, and Shahrukh Khan in the '90s. Female stars were Madhubala in the 1950s, Mumtaz in the '60s, Zeenat Aman in the '70s, Hema Malini in the '80s, and Madhuri Dixit and Kajol in the '90s.

Maradur Gopalamenon Ramachandran, also known as MGR, is a good example of a superstar and his influence on Indian society. He was a popular actor and a politician. MGR used his popularity and became the leading mascot of a political party. After his death he was deified with a temple in his birthplace Madras. It is not uncommon for Indian actors to be compared to gods or to be worshipped like Gods. A young woman said about a popular Indian actor: "We believe Shah Rukh is God, who has incarnated himself on the Earth." The Cinema has become a place to worship gods like Shah Rukh Khan. This is a temple that can be used by all religions equally, and therefore has a unifying effect on the Indian people. Shah Rukh Khan, who is Moslem himself says: “It’s so strange that in a Hindu nation like India they think of me as God.”

Every group is in need of leadership, and in Bollywood films this role is fulfilled by the protagonists. Gods are a type of leaders, an object of idealization and admiration. Both film superstars and gods, play similar roles in India. This lays the foundation for the comparison between gods and film stars. They each represent a certain kind of ideology, which is a necessary trait for a group leader.

---

“Crowds want their leaders to be fascinated by a set of ideas, a faith, an ideology, and to possess what LeBon calls ‘prestige’. This can be attached to a person or a set of ideas or both. The concept has similarities to Max Weber’s notion of ‘charisma’ – leader with a gist of grace, who can convince followers of his extraordinary powers.”

Identification

Sigmund Freud describes the relationship of a child with his parents as narcissistic. When a child realizes that he will not be able to win over the father or the mother, this narcissistic notion is partly replaced by identification with the parent. The girl strives to be just like the mother, and the son wants to be exactly like the father. Later in life, other figures substitute the father and the mother. Stars are one of the objects of identification that are chosen as a replacement.

Whatever the reason for individual likes and dislikes, the significance of stars lies in the fact that they become the objects of identification. Terry Ramsaye observes: “Stardom is a job of a vicarious attainment for the customers. The starring player becomes the agent in advance for the box-office customer. The spectator tends to identify himself with the glamorous and triumphant player, just as the tense weakling little ribbon clerk in the last run of seats clenches his fists and wins the winner of the prize-fight.”

The stars are the link between the film industry and the audience. They are the focal point on which the critical faculties of the audience centre. The channel through which the stars maintain close contact with their audience is the fan mail and more so the fan magazine.

The contact to the desired object of identification, the actor, is sustained by such services as fan clubs, magazines and websites. Bollywood cannot be simply defined as Indian films only. There is a whole web of supportive features that viewers use to keep or create a connection to their idols. Sara Dickey illustrates a group of young men and the way they connect to their “leaders”.

“On certain evenings in a Madurai neighborhood, crowds of young men cluster on the streets under brightly painted signboards. Each board shows a movie star in a characteristic pose – dancing, giving books to school children, or simply reclining in a track suit and sunglasses, inviting the adoration of his fans. These signs bear names like “Disco King Rajni Fan Club,” ‘Prince Kamal Social Welfare Club,’ or ‘Heroic Leader of the people MGR Fan Club’. The animated young men discuss the star, his movies, the club’s plans.”

---

Eliminations of Distinctiveness

In Group Psychology and the Analysis of the Ego Freud claims that: “In the individual’s mental life someone else is invariably involved, as a model, as an object, as a helper, as an opponent; and so from the very first individual psychology, in this extended but entirely justifiable sense of the words, is at the same time social psychology as well”.  

This quote states that the tendency of an individual to identify with someone, applies to a group as it does with an individual. In cinema this object or model translates to the Bollywood movie star. Even if a fan does not go as far as worshipping the actor like a God, the viewer still can identify with the actor to a different degree. In fact, this kind of identification is necessary in watching a typical Marsala film, as the world that is portrayed in it would otherwise seem very unrealistic. When an audience watches a film, something happens not just to the individual who sits there, but also to the community of the viewers as a whole.

In his chapter “Le Bon’s Description of the Group Mind” Freud refers to Gustave Le Bon and his definitions of a group. Le Bon says that the acquirements of the individual diminish in a group setting. This phenomena supports the community of the group and eliminates distinctiveness. He says that what is “heterogeneous submerges in what is homogeneous. As we should say, the mental superstructure, the development of which in individuals shows such dissimilarities, is removed, and the unconscious foundations, which are similar in everyone, stand exposed to view”. India with over 200 castes is a country that needs this kind of unification. A movie theatre is one of the few places that are open to people from all castes. When the viewers sit side by side in the theatre, it does not matter what cast one is from any more, what matters is the world and the happenings of the protagonists of the film that is being seen.

Moti Gokulsing and Wimal Dissanayake comment on the viewing style of Indians: “Another noticeable difference between Indian spectators and those in the West is that watching a film is an interactive/participatory experience. Some spectators, generally men and usually those in the inexpensive seats near the screen, comment on the parts of the story that make them uncomfortable and whistle or clap if they particularly approve of a scene.”

Images

Le Bon further explains that a group is very easily influenced. It is very credulous and does not criticize. The notion of improbability does not exist within a group. Just as individuals think in images when in a state of free imagination, so do groups make associations with images. Marsala films use the power of images and emphasize its communicative power. Extreme close ups are a widespread technique to show the emotion of a protagonist. Feelings are expressed very visually in flashes to an imaginary moment at the river or any other visually magical location.

“The feelings of a group are always very simple and exaggerated. So that a group knows neither doubt nor uncertainty.”

_The Hindi film labors under the disadvantage of having to explain things for an audience with diverse tastes and backgrounds and who range from the totally illiterate to the highly sophisticated. To find the right common denominator is virtually impossible. It creates a never-never-land that exists nowhere outside the silver screen. Regional differences are more than a matter of language. If the average Punjabi peasant finds the Tamil peasant incomprehensible, it does not necessarily mean an inability to understand dialogue. The Hindi Cinema, concentrating as it does on a common denominator of general appeal at the visual level acts as a unifying factor, because it is generally ‘understood’._

Indian films are of the most visual kind. They make good use of the power of images in order to communicate to a broad and diverse audience. These images encourage the viewer’s imagination, so they enter a state where criticism is eliminated and implausibility does not exist.

**Extremes**

Another group characteristic is the inclination to all extremes. If one wants to excite a group he or she needs to use excessive stimulus. It is not so much logic that is necessary, but a means of communication that “paints in the most forcible coolers, that exaggerates, and that repeats the same thing again and again.” Cinema communicates in each of this ways. Bollywood films are, as mentioned earlier, specifically colorful and follow a similar pattern in most of the films. There always is a crisis concerning the family and the traditional values that needs to be resolved.

Many authors wrote about nationalism in Indian cinema, with the intent to prove the reflection of the nationalistic Indian movement in Indian Cinema. There are some nationalistically oriented films that are very successful, like Ashutosh Gowariker’s 2001 release “Lagaan: Once Upon a Time in India.” These kinds of films are still an exception however, and not the norm. The main concern of most of the Bollywood films is finding and preserving a cultural identity. This tendency shows us that the present day Indian nationalistic movement is much more than an ambition to unify India physically. It has reached a deeper level, which is the quest for cultural unity. Only cultural unity can create a freer India with equal opportunities for everyone.

---

13 Freud, Sigmund. Group Psychology and the Analysis of the Ego. New York: W.W.
The power of Bollywood

Cinema in India has reached as never before, an extreme amount of popularity. Now even villagers can watch the latest Bollywood product in special viewing tents. Madhava Prasad describes the popularity of Bollywood films in Bagalore in his article “This thing called Bollywood.”

It is hardly necessary to list them, so widely recognized are these films, which like teachers in Bangalore schools, are known by their initials. They have figured prominently in the emerging new culture of India, where consumer capitalism has finally succeeded in weaning the citizens away from a strongly entrenched culture of thrift towards a system of gratification more firmly in its (capitalism’s) own long-term control. They have produced yet another variation of the nationalist ideology of tradition and modernity, and, most interestingly, they have relocated what we might call the seismic centre of Indian national identity somewhere in Anglo-America.16

Prasad further described the NRI (non resistant Indian) as a more stable figure in Indian identity than anything that can be found indigenously. This is why NRI productions have become more important than indigenous ones.

Another supporter of the notion that Bollywood has a powerful influence on Indian society is Jyotika Virdi. In his book The Cinematic Imagination he supports this idea.

In this book I take some first steps in a relatively uncharted terrain, reading popular Indian cinema as narrating the nation’s social history. I trace the lay of cultural politics along the topos of Hindi films. The logic of the colonial Empire produced a nation concretized through political, economic, and legal measures. But it is through cultural productions that the nation is imagined: the sphere of education, history, literary fiction, newspapers, television, and the most overlooked of all – Hindi cinema, which popularizes the imagination.17

Virdi not only refers to a sense of nationalism that is created through cinema, he also uses the wording that Le Bon used in describing a group. He claims that “Hindi cinema popularizes the imagination” and Le Bon says that imagination is a common characteristic found among groups. Considering his and Freud’s group psychology, we thus see that Indian Cinema strengthens a group feeling in several ways.

The last characteristic I would like to mention is the powerful role love relationships play in Indian Cinema. Love relationships are a major theme in Bollywood. Almost every movie plot is entangled in some kind of love complication. Freud claims that emotional ties or love relationships are the basis of the group mind. He makes two specific statements about the nature

16 Prasad, Madhace. This thing called Bollywood.
of a group. First, he says, there is some kind of a power that unites the group. “To what power could this feat be better ascribed than to Eros, which holds together everything in the world?”  

Secondly, he says, each individual gives up his distinctiveness to be part of the group. He or she lets other members of the group influence him or her, in order to be in harmony with everyone else. Freud says that one gets the impression that the individual does this “because he feels the need of being in harmony with them than in opposition to them- so that perhaps after all he does it ‘ihnen zu Liebe’ (meaning ‘for their sake’. Literally: ‘for love of them’)”. According to Freud the most important of all the reasons that have been listed so far in uniting a group, is love.

Virdi makes an interesting statement about the role of love in Indian Cinema.

In fact, next to the hero’s “action” in Hindi films, romantic love is the most potent force that overcomes the nation's ills. The all-powerful force of heterosexual love resolves class conflict, the city-country divide, and communal strife. Asserting bourgeois individualism is still unwelcome in the family's code of sexual conduct, so romantic love becomes a perfect site to stage these conflicts and contradictions that are then overcome by “true” love. The family is trope for the ideal nation, a site to invoke the nations; problems through the protagonist relation with his antagonist-his father, brother, or the villain.

Virdi describes the same group characteristic that Freud mentions in group psychology. The unshakable unifying power of love relationship in Indian Cinema is also Freud’s most powerful item on his list of what unifies a group. Some Indian films have shown remarkable unifications through love stories. A couple from different castes fights for the right to love each other against the rest of the family and society. This is a common theme in Bollywood love stories. Love is so powerful that eventually the family ceases their resistance and accepts the relationship. These are very powerful and moving images for the Indian viewer who lives in a society, where this kind of behavior has not yet become reality.

**Film Examples**

'Veer-Zaara' is a film that was directed and produced by Yash Chopra in 2004. It tells the story of an Indian man and a Pakistani woman, who cannot be together and have to overcome obstacles in order to do so. This film is unique in two ways. First it touches on a subject that has not really been addressed in this way before - the separation between India and Pakistan. The second unique character of this film is the fact that an Indian man and a Pakistani woman can be together and overcome obstacles through their love. The film illustrates a kind of love that has no boundaries.

Karan Johar’s ‘Kabhi Khushi Kabhie Gham’ is a more typical Bollywood film considering the theme of the movie. Nevertheless it shows barriers that are broken down and

---

boundaries that are crossed, all of which can be attributed to the love of a man and a woman. The main character Rahul falls in love with a girl that is below his class, and marries her. His father is outraged and rejects Rahul. Only after much pain and suffering is the heart of the father softened and the love between Rahul and his wife overcomes their caste difference. This film was released in 2001 with two Bollywood superstars as main figures Amitabh Bachchan (father) and Shah Rukh Khan (Rahul).

‘Lagaan’ is one of the first films that achieved international acknowledgement. It was released in 2001 and directed by Aamir Khan. This film is set in 1893 in an Indian village that has to pay a giant amount of tax called Lagaan. The British authorities decide to settle the question of Lagaan over a cricket match. Hindus and Moslems join together to fight the British authorities in this match. Castes and class barriers are overstepped in an attempt to save the village. Miraculously they are able to win the game and are from then on free from the British authorities and their tax obligations. This film was a big hit with the story of a unified India as it had not been told before. It is truly remarkable to see the Untouchables being able to join in with members of other castes in order to save the Indian people.

Evaluation of the Data

Factors that have not been considered in this discussion are the impact of Indian Cinema on other nations where Bollywood is extremely popular. Some of these places are found in other South Asian countries, Asia and the Middle East. In order to understand the entire impact that Indian Cinema can have, it would be necessary to also look at foreign markets. Demographics would be a helpful hard fact tool to show how immense the Bollywood industry actually is. However I have not been able to find any listings of sales or production costs.

There is a specific characteristic that is part of the description of LeBon and Freud on group psychology, which is not discussed. This characteristic refers to the cruelty of a group and explains what leads violence outbreaks in a group. I have not elaborated on that topic, because I have not found any record of violence outbreaks amongst movie goers.

Besides the lack of demographics and the extension on international impact of Indian Cinema that is very brief, I have a given an extensive explanation of how Freud’s group psychology description applies to the current Bollywood movements. I have backed my claims with quotes from numerous authors that have written on Indian Cinema.

Bollywood Abroad

Bollywood films have raised sales drastically since the early nineties. India’s large population certainly has part in this immense success. However, Indian Cinema is not just important to the Indian citizen. For many that are living in Diaspora today, it has become the only connection with mother India. The Newsweek quotes Plus Channel’s Amit Khanna saying that ‘Indian movies are feel-good, all-happy-in-the-end, tender love stories with lots of songs and dances… That’s what attracts non-Indian audiences across the world.’ and to this we could add ‘family values’ and their palpable, if not entirely self-evident, investment in ‘our culture’.  

21 Inter-Asia Cultural Studies, Volume 4, Number 1, 2003
These in Diaspora living Indians have an influence on the Indian citizens that is highly visible. Since the opening of the borders of the European Union the population of Indians has been increasing in all European countries. Part of the big Indian population in England has moved to Germany were Bollywood films have gained great popularity in the last few years. There are German websites about Bollywood; TV channels like ‘RTL 2’ show Bollywood films. Bollywood films on German TV stations are not only translated, but are now being dubbed. This shows clearly that the audience of Bollywood films does not just consist of Indians living in Diaspora. Germans are also watching these films.

Future research

For future research papers it would be interesting to take the data that has been collected, and project it into early Hollywood successes. Is there a parallel between the development of Bollywood and Hollywood? Was Hollywood also a tool in helping Americans define a new American cultural identity? Did these films help move along a nationalistic movement. Considering the important role that Hollywood plays today in American culture, these would be crucial questions to ask. Then there could be a comparison made between Bollywood and Indian nationalism to Hollywood and American nationalism; which would be a very interesting parallelism, because both countries have big and diverse populations.

Conclusion

Bollywood films are influential in many different layers. They promote a quest for unified Indian culture, not just within India, but also for Indians living in the Diaspora and other fellow South Asians. Many aspects of these films help unify, because they concur with Freud’s group unifying attributes. Some of these are identification with a role model (an actor), the elimination of distinctiveness, the use of images and imagination and the breaking down of barriers between castes. The most important one however was the power of love relationships.

The thought that love has the power to change a society, gives hope and changes the mindset of Indians slowly. Even though India still has a long way to go, and many barriers to break down in order to unify the Indian society, it has a valuable tool in Bollywood films. They are the representation of the quest for a new cultural identity. This is a very different kind of nationalistic movement, not striving for physical unity, but for a unity of the Indian mind.

The cinema being a powerful instrument for the dissemination of ideas and for the stirring of human emotions, the very foundations of a future world civilization depend upon whether we understand this medium and make it work for our good. The film, if properly handled, can create far greater understanding between nations, at the same time being capable of causing widespread trouble if it is allowed to become the plaything of self-interested and self-seeking producers.22

Understanding this topic is important, because film is a very powerful medium that can be used for good or for bad. The influence that Bollywood films have had, in the use of Hindustani being the national language of India, is enormous. This has been a good development for India, because a national Indian language helps define Indian nationalism. I hope that there will be an increased awareness of the influence that media has on the Indian nation, on behalf of those that are involved in making Bollywood films. They can help move India out of poverty with films that emphasize and suggest even more than now, the breakdown of barriers like castes and religions.

Sylvia_stoll@gmx.net
During the single week of May 8 to 15, 2006 approximately 900 refugees from West African countries such as Senegal and Mauritania arrived by boat in the Canary Islands, from where they hoped to later get to the European mainland. In the three weeks preceding the 15th of May four hundred fleeing Africans were killed. These fatalities are caused by the absence of political and economical freedom. Therefore, refugees act as voices to make a statement about the wants and hopes of the people in their countries. Those answering these cries for help work in multiple fields ranging from public health to micro finance hoping to improve living conditions in developing countries in all regions of the globe.

Those who manage these development initiatives deal with a twofold problem. For one, there are not enough of the necessary partnerships between policy making government officials and grass roots organizations who work directly with people at the wide bottom of the social and financial pyramid. Often times, large sums of national donations are swallowed up in a labyrinth of corruption and barely reach those for whom they are intended. On the other end, grass roots organizations often work diligently to help individuals and then see their efforts destroyed by the effects of government policies.

The second problem these managers of social initiatives deal with is the lack of interdisciplinary cooperation. Some see the high rates of AIDS in South Africa and concentrate on fighting this disease, when the truth is that it is not just a health problem. It is not enough to educate about AIDS when raping of young girls continues infecting innocent children. It is also not enough to develop and offer medical help for AIDS patients, when there is not enough economical strength available to the patients in order to purchase these services.

This paper will outline ways to build bridges over the just presented gaps in social management. These bridges are not only strategies to combine different areas such as health and micro-credit to benefit both; they also demonstrate ways in which governmental policy makers can work with grass-root practitioners. For this paper I have gathered opinions and suggestions from a variety of people that are
active in the social sector, ranging from the undergraduate anthropology student Jason Brown to Georg Kell, the executive head of the United Nations Global Compact.

**The benefit of networks**

Good networks can help solve the earlier presented problems by increasing interdisciplinary cooperation, and by forming partnerships between government officials and grass roots organizations. Andrew Shipilov, a faculty specializing in networking at INSEAD, has shown by example of investment banks that both generalists and specialists benefit from networking with each other. “Several studies have shown that firms improve their performance as a result of maintaining such relationships.”

This insight can be applied to any kind of firm or organization. Big governmental or public organizations may be compared to generalists, and grass roots or other specialized groups share attributes with specialists. Thomas Friedman claims, “We’re going from a world where value is largely created in vertical silos of command and control to a world where value will be increasingly created by who you connect and collaborate with horizontally.” In order to reach such a state, coordination between these groups needs to be improved horizontally and vertically.

**Horizontal Networking**

One example of horizontal networking is the Scojo Foundation. Their interdisciplinary efforts in the fields of healthcare and micro-franchise not only address the need of reading glasses for those who are the poorest of the poor; they also create jobs among this group.

---

Through the application of business and management skills coupled with an unwavering desire to solve the problem, Scojo Foundation has developed and continues to create permanent channels to deliver reading glasses to those in need at a low-cost while generating awareness thereby creating a market. The Scojo Vision Entrepreneur Program, which trains low-income women to accurately dispense reading glasses for profit, is one way in which Scojo Foundation provides access to the 1.6 billion in need.³

Vertical Networking

A fairly new movement is the Egyptian youth initiative called SDA (Sustainable Development Association). Its mission is “to contribute to the education of young people, to help build a better generation where young people are self-fulfilled as individuals and play a constructive role in society.”⁴ It partners organizations from various hierarchical levels such as GTZ, Bibliotheca Alexandrina, Swedish Institute, IISD (International Institute for Sustainable Development), USAID, UNIDO, MCIT, Ministry of Social Affairs, Microsoft and others.

Examples and Opinions about Horizontal and Vertical Networking

I asked my interviewees about the types of networks they are aware of and what could be done to improve them. My fellow student Jason talked about decentralization initiatives for certain institutions in Guatemala.

“Large institutions will put offices in small regions who coordinate efforts with local populations which is happening within the forestry sector. The national institute of forestry has initiated that program under pressure from international organizations. They also coordinate efforts with civil society and reforestation projects. They have connections to international organization such as the forestry sections of the FAO (Food and Agriculture Organizations).”

Aida Perez, a recent graduate of BYU’s Public Administration program referred to the CESR (Center of Economic Self-Reliance) as an example.

³ [http://scojofoundation.org/2_1_1_social.html](http://scojofoundation.org/2_1_1_social.html), retrieved August 11, 2006
“Although it is a rather small organization, its entire purpose revolves around the very idea of creating networks. The Center facilitates discussions between practitioners, academia, and students. It organizes weekly discussions and once a year they have the Self-Reliance Conference.”

Georg Kell from the UN Global Compact said “such initiatives exist in many different shapes and forms already.” Some examples he mentioned were the churches, the Red Cross, and Save the Children.

“In general these networks often respond to demand, like gaps or things that are not happening, which are responsible for all the new opportunities immersing -discovering something new at the bottom of the pyramid; discovering that poverty can be turned into opportunity. So I think it’s a phenomenon that comes with culture and time, and is responsive to demand and opportunities. And in order to gain critical mass, because it needs to somehow be related to the Zeitgeist, the idea must be understood by many at the same time. In other words, it doesn’t help you if you have a great idea and you sit in a basement. And while the idea may be great, but if others are not willing to share your addition, it doesn’t help you. So it must be contextualized with the Zeitgeist.

Enoc Velazquez who works Forestour Tropical Investments Business Development in Panama, has been active in the private, non-profit and consulting arena. He says that without over simplifying „the management and networking challenges found in the world, but really, let’s look at some of the root causes of the lack of attention, resources and cooperation.“ According to Enoc the problem begins with the fact with a society that is „quantifying or monetizing the economic worth of human life.“ He calls for a paradigm shift, which would automatically cause institutions and governments to look at „ALL the issues.“ He realizes that it will not be possible to make this happen immediately, however there needs to be a continual and immediate effort to distribute resources more fairly. He further says:

„As change agents and social entrepreneurs find success in witnessing a changed behavior(s) of a small men’s or women’s group in some small village in the world (pertaining to health, community development, education and harvesting, etc.), we too can utilize a similar approach in addressing better cooperation through stronger policies, regulations and requirements for the private, non profit and educational institutions. If the Coca Colas, Wal-Mart’s, Mitsubishi’s and other like minded entities banded together, although very idealistic, I cannot see anything but more and better cooperation, with them leading the way. For much too long, lines have been drawn in the sand between the private, non-profit and educational worlds. I believe it’s time to erase those and create more overlapping ‘crossroads’ of sorts, where this type of cooperation is not the exception, but the norm. Do we have a choice? Time is of essence.“
Georg Kell and Enoc Velazquez both emphasized how important the mindset and Zeitgeist are in networking efforts amongst so social and global change agents. Graham Macmillan, who is the director of Scojo Foundation points out that “when you are talking about vertical networking from the large entities down to the singular individuals let’s say the village level, often times that’s probably the most difficult networking that takes place.” He says that it is difficult for a poor farmer in Ghana to express his concerns to the highest level such as the prime minister or the president. This communication needs to be taking place through a representation of organizations. The Scojo foundation carries out this kind of advocacy, while applying two important principles. First Scojo Foundation always works through the objectives, ideals and the message they promote to find networking partners. Second it works with existing networks.

“As a result we have been able to work with a variety of organizations and companies, be it large multinational companies such as Hindustan Lever to small community based non-profits in Guatemala and the only reason, and the only way that’s ever done is through clear communication of our message.”

Here Graham gives a precise example of how this kind of networking can take place:

“One of our founders Jordan Kassalow is a member of the counsel of foreign relations, … he was in charge of the health program there. He got the chance to meet some of the world thought leaders in public health issues, and one of these leaders happened to teach at Columbia just for one year. This gentleman is one of the depute executives of BRAC. BRAC is the second part one of the world’s largest NGO and basically is on all parts of Bangladesh. It is in virtually every village of Bangladesh. And they also have a network of about 30 000 community health workers who sell condoms or re-hydration salt, sanitary napkins, that sport of thing. And just networking between Jordan and this depute executive Mushtaq Chowdhury -who actually was awarded at the BYU conference the same award with Jordan- they recognized this opportunity. So they talked about it and they next thing we know, we were working in partnership with BRAC in Bangladesh. Why is that advantageous to us? The same reason it’s advantageous to us as Hindustan Lever. They have an existing network of providers who share the same values and philosophies although they are not distributing the same products.”

The recent MPA graduate Aida made a similar point by referring to a common goal. “I think that each of these organizations can be improved by extending and utilizing their respective networks.
Creating organizational synergy in efforts and resources can bring amazing results in achieving common goals.”

Georg Kell has also commented more specifically on what makes a networks successful. He argues:

“Networks need to deliver. The strength about networks whether they grow or whether they grow weaker - They have a projectary. Networks have to act on a life cycle projectary and some and get stronger, while others stay away. The question is: What makes successful networks? Which ones achieve greater impact, and here the answer is quite simple: If they can demonstrate to those who sustain the networks the value of what they are doing, if they can demonstrate impact, then they come to grow. So it is the ability to produce real change and to be able to communicate this.”

Networking Summary

1. Networks are created through the pressure of international organizations.
2. Networks can be created through discussion groups and conferences.
3. Networks fill gaps and need to be in accordance with the Zeitgeist.
4. Existing networks can be used by more than one supplier.
5. Networking partnerships should be formed through common ideals and goals.
6. Networks will grow stronger when they are able to produce real change and communicate it.

The power of economic force

In his book Micro Franchises as a Solution to Global Poverty, Kirk Magleby compares franchises with networks and gives several reasons why franchise networks are social liberators. Some of these reasons are:

- Networks tend to empower participants by broadening their horizons and giving them a voice
- Networks can be adapted readily to accommodate local diversity
• Networks are often transparent—they generally foster an environment of full and open disclosure

These are some of the reasons why Magleby believes that micro-franchise can not only strengthen a country’s economy, it also can shape politics and decrease corruption by teaching people to play by the rules. Another initiative that encourages businesses to play their part in fighting corruption is Global Compact. It is the UN’s initiative to “bring companies together with UN agencies, labour and civil society to support universal environmental and social principles.”

Examples and Opinions about the Power of Economic Force

Having created sixty country level networks the UN Global Compact franchises out it’s own organization on country levels. It franchises the branch and the authority to commute. Georg Kell says,

“We also franchise access to companies, which are engaged and UN agencies, which are working on the ground. So we basically franchise the organization model of the global contact on community level. And we are still experimenting, so it is still an ongoing experiment, because it works in some places and not in others. It works well in Brazil in SA, in Egypt, some European countries including Germany. Singapore works very well and also Japan. Where we still have challenges is China, in Central Asian countries and in some of the poorest countries in Africa. That is so, because the value proposition is not equally understood and shared. In China we are running a big education program and training program on the issues of human rights. It takes time to establish the same value system.”

When I interviewed Ellen Dietrich, the director of Haus der Hoffnung (meaning house of hope, a German non-profit organization that runs an orphanage in Nepal), she talked about the authority that a powerful and global organization like the UN Global Compact represents. She suggested a network between Global Compact and microfranchise institutions. “Each microfranchise institution should have a label at the store that says they are supported by Global Compact or the UN.” She further says that using a label that represents a powerful organization not only stands for quality, but it also helps microfranchise initiatives to become better known.

Graham Macmillan from the Scojo Foundation mentions that the question for all the participants is always:

“What’s in it for me? Is it because we want to give back to the community as a corporate social responsibility approach, sort of a philanthropic perspective? Is it about linking our employees to a cause or purpose so they feel that their company does something of value to the community? Or is it a growth opportunity in terms of opening up new markets, sort of as a base of pyramid approach? In my perspective microfranchise actually addresses all those issues. And why does it add value specifically to Global Compact? Well two reasons in particular.

One is that franchising and microfranchising provides a blue print for success. And it is an approach to providing proven business models to micro entrepreneurs in impoverished and marginalized communities to give them an opportunity to success economically. And then I would argue on the Scojo foundation’s approach, that that particular product or service that franchise is offering or selling needs to have a social benefit. It can’t just be about making money for an entrepreneur in our view. In our view it needs to be about adding social value. In our particular case it would be going to see which in turn enables one to earn a living, be more productive and have a better quality of life. It is not just about selling widgets just to make money for the entrepreneur, it should have a social impact. Why is that of value of a company that is involved with the Global Compact? One is that you are obviously empowering the poor to have access to economic opportunities. Microfranchising I argue provides better access to money making opportunities than most approaches. It is not a traditional development approach where you’re just giving away products and services for free. It’s not just microcredit, which only provides access to capital and does not necessarily grantee success in entrepreneurship. Not everybody is an entrepreneur. Microfranchising is a blue print for success; it’s the rules to doing well with your business. An entrepreneur is somebody who conceives, makes an opportunity that most average people can’t. And so from the perspective of creating economic opportunity for people who are marginalized and poor, microfranchising is an added value beyond the traditional approaches to stimulating economic development in these communities.

The second point is that from a growth market perspective microfranchise is creating consumers at the bottom of the pyramid. You are stimulating the demand by respecting the rights and the dignity of the consumer in these particular markets. Traditionally these markets are - I will argue -cheated, because of middlemen, inferior quality, price problems, etc. Microfranchising - I argue in particular to the Scojo foundation’s approach - recognized the right and the dignity of the consumer to have a choice for a product that is of good quality and that has an affordable price, so that they have the opportunity to make the decision of purchase. Well that purchase and transaction represent economic value to potential companies. So it sort of comes back to the base of the pyramid approach where the four billion people who live on four dollars a day or less become potential consumers not just producers. And so there is a huge growth market, it’s just that the companies that are interested in this space need to tailor the products and services to be affordable, to be of high quality and to be of value of these consumers who don’t have as much income as maybe you and I do; whereas more powerful in terms of
purchasing powers than the markets that these companies traditionally focus on. So really to answer the question (How an organization like Global Compact can use the economic force that stands behind micro credit institutions): it’s really economic development and allowing people to provide for their families, providing products and services and adding value and benefit to these communities. And the second point is to know these potential growth markets for these companies.”

Microfranchise Summary

1. Microfranchise principles are already being used by large global organizations like the Global Compact.
2. A microfranchise institution can benefit form the Global Compact or UN label.
3. Microfranchise is a blueprint to entrepreneurial success.
4. Microfranchise creates consumers at the bottom of the pyramid (economic development).
5. Microfranchise institutions can help organizations like the Global Compact to know the potential growth markets.

A power shift through networking

John Hatch, a successful social entrepreneur in the field of micro-credit has said, “What will happen when youth does what it is asked, gets educated, and still can’t find a job? Answer: They get very angry. I submit that youth unemployment, if unchecked, will cause decades of global terrorism. France today is only the tip of the iceberg.”7 To avoid such escalations in youth that feel powerless, it will be necessary to empower the youth specifically in micro-finance and franchise organizations. These network-like organizations will help provide them with the economic force they are lacking.

Innovations and Networking

Within an effective network new ideas are potential catalysts for innovation. They could cause a power shift in a society, but many innovations never come to fruition as a result of inadequate funding.

Personally I experienced how powerlessness hinders innovations. During my undergraduate years as an international student I often experienced that because of a lack of funding, ideas for research projects and other initiatives kept piling up on my desk and could never be realized.

In a review of Friedman’s “The World is Flat” Thomaz Wood argues that,

*Population and economic activity are both spiky, like innovation. For example, using data from the World Intellectual Organization, Florida claims that Japan and the U.S. receive two-thirds of the world’s patents. This does not mean Brazilians, Indians, or Chinese are unable to innovate; instead, they just lack the environment for their capabilities to materialize in new products, services, and business.*

8 Thomaz Wood, Globalization or Brazilianization? The Academy of Management Perspectives, Vol. 20 Nr. 2 May 2006, Page 81

An English proverb claims, “Necessity is the mother of invention.” Within the base of the social-hierarchical pyramid there are countless innovations taking place daily which never become accessible to a wide audience.

*Examples and Opinions about Innovations*

Graham Macmillam agrees with Thomaz Wood’s argument about the lack of a supportive environment for people from the poorer parts of the world. He says that in fact, there are innovations happening, but no civil society to support them.

“So I don’t know if I have an answer how that can actually happen other than to say that factors that support entrepreneurialism at the base of the pyramid need to be aligned so those people can be successful and often times this is not the case. To give an example why there are so many patents in the United States, there are a lot of reasons why that is the case. One is because the government supports innovation and research and development in a whole variety of sectors. The laws protect the individuals who happen to create new ideas and label them to patent it. Also the educational institutions that teach people how to learn and be creative and support them, allow them to be risk takers. So
from an educational standpoint, but also from an economic standpoint entrepreneurs shouldn’t be afraid to fail and a lot of entrepreneurs in these developing countries in these communities have so little room for air, so little margin for air. If they do fail, then they’re in big trouble, so maybe they can’t take as many risks and survive economically.”

To solve these problems the anthropology student Jason Brown suggested using microcredit for entrepreneurial ideas that should be patented. There should be “specific funds for patenting, or courses and orientations on how to get something patented.” Ellen Dietrich from Haus der Hoffnung says that these innovations “should be more evaluated incase there are outstanding ideas that can’t be patented by the individuals.” She further says that there should be competitions in all these countries. “Boards will be created, rewards are give for good ideas, and there should be regular conferences hosted by donors where people can exchange ideas.” Another reason why it is important to pay attention to these innovations is that they

“also teach us something about the culture of this country. The ones who give the money, the donors, should therefore look very carefully at these innovations, because they may help them to understand the culture of the country better, and a better understanding of the culture contributes to more efficient work.”

**Innovations Summary**

1. Innovations, research and development need to be supported by the government.
2. Individuals who have new ideas need to be protected by the law.
3. People need to be allowed to be risk takers through educational institutions that allow them to be creative and support them.
4. Use Microcredit for and educate about patenting.
5. There need to be innovation competitions where little patenting exists.

**The Media and Networking**

It is common knowledge that the media can spread news in a manner of seconds. Today even the most remote places are starting to have access to television sets. When a network uses the media
correctly it can become a very influential tool in shifting power. Rudolf Speth from the *Freie Universitaet Berlin* has researched the influence of economic campaigns on political decision processes. Economic campaigns are networks, because people from different sectors and backgrounds work together on one or on several projects. They use the media to push forward certain ideas with the goal to have an influence on the mass. By economic campaigns Speth means messages from businesses that are distributed through the media. His findings show that there has been a significant increase in influence on political decision processes among focused economic campaigns during the last 10 years.\(^9\)

*Examples and Opinions about the Media*

Georg Kell from Global Compact says these about working with the media:

> “I think the media, the press is fundamentally important for any social change movement, because much if what this change is about is contextualized in the Zeitgeist. Therefore it’s extremely important to keep the issues alive and to use present media to reinforce it - extremely important; also to write background stories, but to be a check and balances. The media and the press often identify real abuses, real bad situations, so they put the spotlight on it. The down side is that the press, the media is very biased, you know they pick one example but not another. And then another down side is that the present media tends to focus on negative stories only, this is what sells better –negative stories, but you also need the positive stories to be around.”

In working with the media Kell suggests that it is best to work with the press and the media directly. He says that it is important to know the journalists, to know what they write about, to be in contact with them, to feed them stories, and to invite them to meetings.

Warner Woodworth, a faculty from the Marriott School of Business at Brigham Young University says that

> “The big need from the media is to tell the story of new global networks in a way that captures the public's heart and builds a new awareness. For example, the microcredit movement was stuck in low-key performance growth for over 2 decades. It wasn't until the late 90s that the print and electronic media became aware of this new innovation. But with their coverage beginning to grow, so did the movement. Then came the Internet and there has been a veritable explosion of information and interest around

the world.”

Woodworth is convinced that the “most efficient tool for using the media is that of the Internet. Everything else pales in comparison.”

Graham Macmillan also mentions how difficult it is to get the media to tell the right story. “What a challenge it is to have a small organization like Scojo foundation not a big cooperation which has a huge PR-department, is telling the story to the media outlet, but then having the media outlet accurately portray the story that you told them.” He says that often things get lost in translations, and that fact requires associates of small organizations like Scojo to be more media savvy. It is important to “what the media is looking for in terms of what’s the story that needs to be told.” When one understand what a compelling story is “then you need to understand how to pitch that story effectively, so the media says “Oh that’s really interesting. We feel like we should tell this story.” And then the third point is as I mentioned is how to teach the media to effectively tell your story.”

Ellen Dietrich says that the media can always be used to inform, but it has been shown that informing the public does not always solve the problem. It is the personality that has to be strengthened. In order to do that “we must show films and give examples of good people with confidence in themselves, so that they become models for others. It is not enough to inform through the media, but to strengthen the personality and character.” These comments go along with the earlier mentioned need in a shift of mindset or principles that are in harmony with the Zeitgeist. Dietrich just explained how the media could help facilitate these changes. According to her there are other ways to use the media in networking “The media can announce the competitions (patent competitions she suggested earlier), show the results and encourage through advertising spots to participate in and develop ideas.”

Jason Brown emphasized that global and social change agents “need to adapt their message to the audience. The imagery has to be appropriate for the group.” They need to send their messages at
appropriate times and advertise for events if they want to create bigger networks. There should be opportunities for managers with limited resources to advertise for their causes. “TV channels could give cheaper rates for social messages.” An entire channel devoted to social and environmental causes would be an even more effective resource for global and social change agents.

Media Summary

1. Global and social change agents should work with the press and the media directly, know the journalists, know what they write about, be in contact with them, feed them stories, and invite them to meetings.
2. The most effective tool for using the media is the Internet.
3. Global and social change agents need to be more media savvy, understand what a compelling story is, and to learn how to teach the media to tell their stories effectively.
4. The media can help build character and encourage through advertising spots to develop new ideas.
5. An entire channel for social and environmental causes should be created.

Conclusion

The participants of this paper have made numerous suggestions for global and social change agents concerning networking in connection with microfranchise, innovations and the use of media. Some of their suggestions were: using existing networks, creating competitions to support innovations, and creating a TV channel that is completely dedicated to social and environmental causes. This paper, which contains a collection of opinions and suggestions, serves as a recourse for those who work on benefiting the world by using business principles. I hope that the information I gathered will be helpful and welcome feedback from readers. In closing I quote Bill Drayton, a very successful social entrepreneur and the founder of Ashoka: "Social entrepreneurs are not content just to give a fish, or teach how to fish. They will not rest until they have revolutionized the fishing industry."10 In that manner, let’s keep pressing forward with

reaching and changing the roots of problems, which will eventually result in a change of system.
April, 2007

Voter Rewards: A Field Experiment on Economic Incentives and Voting Turnout*

Santiago Suarez†

Abstract

What is the effect of monetary incentives on voting turnout? Rational choice and consumer theory have long predicted a direct and positive correlation between economic incentives and voting turnout. The larger the incentives, the higher the turnout. We test this proposition by conducting a randomized field experiment in Arizona for the 2006 election. We find that, contrary to expectations, the offering of potential monetary incentives does not lead to an increase in voting turnout and may actually lead to a decline in voting rates. Furthermore, we also test whether gain- and loss-framed have different effects on voting behavior as predict by Prospect Theory, and we do not find evidence supporting such predictions. However, we do find that both economic incentives and the gain and loss frames may have considerable, negative impacts on voting turnout amongst key constituencies. We discuss the implications of these findings.

*I would like to thank Alan Gerber, Donald Green, and Dean Karlan for their outstanding advice and very helpful suggestions, and the participants of the Yale Mellon Forum for their helpful comments. Financial support was generously provided by the Yale MacMillan Center for International and Area Studies, the Yale Institution for Social and Policy Studies, and the Mellon Fellowship. All remaining errors are my own.

I. Introduction

The study of democratic participation has long been one of the fundamental concerns in Political Science. Greek philosophers pondered how to encourage citizens to participate in the polis; in modern times, the study of democratic participation has focused on the act of voting. In American democracy, voting has become the main and usually the only way for citizens to take an active role in democratic government. Unfortunately, recent national elections have seen only 60% of the voting-eligible population (VEP) show up at the polls. Understanding why people turn out to vote allows us to issue policy recommendations that could potentially increase voting turnout.

As important as this may seem, the methodological issues of early studies made it almost impossible to confidently identify the drivers behind an individual’s decision to vote. These studies did show a correlation between canvassing and turnout, but the absence of unbiased statistical analyses limited their ability to draw causal inferences. The advent of experimental research in voting turnout brought a welcome change into the field, allowing scholars to use experiments to identify the drivers behind voter turnout. Early experimental studies (Green and Gerber, 2000) identified door-to-door canvassing as the most effective method to increase voter turnout. Later studies experimented with other canvassing methods and, more importantly, other messages targeted at specific constituencies (Green, 2004; Michelson, 2005). Appropriate to an area dominated by political scientists, most of the messages in these canvassing drives included either appeals to community or civic duty.

Given this encouraging experiments, testing the effect of extrinsic economic rewards on turnout may be substantively interesting. Neoclassical consumer theory has long assumed and predicted rational behavior by each individual agent; therefore, from an economic perspective, we have a strong theoretical case for a positive effect of economic
incentives on voting turnout. We should expect voters who are more informed about these economic incentives to vote more often than those voters who are not. It is along these lines that rational choice theorists have long argued for a rational explanation of voting, where individuals vote because it is in their economic interest to do so. However, we could also imagine how voters may feel reluctant to "put a price tag on their votes." Individuals may see voting as a higher-duty, firmly linked to their political existence, and thus may not respond positively to an economic-based appeal to vote.

The study of the effect of advertising monetary incentives on voting turnout is closely linked to the study of how framing such advertisement can lead to different behavioral alternatives. Prospect Theory provides a predictive account of how people will react differently to equivalent messages that are framed as potential losses or potential gains. Previous studies in psychology (Rothman and Salovey, 1997; Detweiler et. al., 1999) and economics (Bertrand et. al., 2006) have found that different frames have significantly different effects on individuals’ behavior. The lingering question is whether these framing effects also affect political behavior. Empirically, these are two separate questions. Does the advertising of extrinsic economic incentives lead to an increase in voting turnout? Secondly, are the different effects predicted by Prospect Theory evident in the area of political behavior?

This study tries to answer to these questions. Leveraging a ballot initiative in the state of Arizona that proposed retroactively awarding one million dollars to a randomly selected voter after every election, we designed a randomized field experiment to assess the effect of advertising these potential monetary rewards on voting turnout. We added an additional intervention to assess whether people’s voting behavior changes according to whether the message advertising these monetary incentives is framed in terms of prospective gains or prospective losses.

We find that, contrary to our expectations, the mailings did not have a positive effect
on voting turnout. If anything, they may have actually discouraged some voters from showing up at the polls. At the very least, this finding challenges the neoclassical consumer models of voting as a rational, economic calculation. We also find that neither the loss nor the gain frame had a substantive and positive effect on voting turnout, raising questions about the universal applicability of Prospect Theory to political behavior. Interestingly, the results suggest that registered Democrats, and low-income and low-education voters reacted negatively to the mailing and may have turned out at lower rates than other constituencies as a result. Further, we also find suggestive evidence for the existence of different, but still negative, effects of the gain/loss frames on these voters. These last two findings are in the spirit of recent research in Economics emphasizing the importance of context when analyzing framing effects (Bertrand et. al., 2006)

This paper proceeds as follows. In Section II, we review the relevant background on economic voting, Prospect Theory, and experimental studies. The subsequent section describes the Arizona ballot initiative. In Section IV, we describe the sample, the experimental design, and the experimental procedure. Section V presents the results of the data analysis, and we discuss the main findings in Section VI. Finally, we offer concluding remarks in Section VII.

II. A Brief Overview of Economic Voting, Prospect Theory, and Experimental Studies

Our study benefits enormously from the vast amount of research available in these areas. Importantly, we can draw on the economic voting literature to formulate theoretically-framed \textit{ex ante} hypotheses concerning the effect of advertising potential monetary rewards on voting turnout. Similarly, we can draw on Prospect Theory and its applications in psychology and economics to generate hypothesis regarding the different effects of the gain
and loss frames on voting turnout.

1. Economic Voting

The discussion on the economic drivers of political participation extends as far back as Aristotle, who paid considerable attention to this issue in *The Politics.* Aristotle worried about the effect economic inequality would have on democratic participation, as rich citizens did not have enough time or incentives to participate in the *polis* and poor citizens did not have enough time to do so themselves. Eventually, Aristotle crafted perhaps the first market-based solution to a classic problem of institutional failure: he proposed that the government should fine rich citizens who did not participate politically and should offer poor citizens economic incentives to alleviate the economic burden of political participation. Though not the only one, Aristotle was certainly the first of the early political scientists to consider the fundamental interaction between economic incentives and political participation.

The formal analysis of economic voting goes back to Downs (1957), who first formulated the now famous rational choice paradox of voting turnout. The paradox highlights the apparent irrationality of an act that carries with it a high cost (the cost of voting) and a very low utility (the probability of actually affecting the outcome of the election). Downs himself tried to solve the paradox by arguing for the existence of a "Consumption Benefit" - i.e. a benefit emerging from continuing democracy that would lead citizens to vote because it was in their interest to ensure the continuation of democracy. Notwithstanding a few attempts at solving the paradox, Downs’s challenge went basically unanswered until Riker and Odershock (1968) reformulated the calculus of voting equation, adding a new term, which they label $D_i$, to represent the "expressive" component of voting. Given the importance of Riker and Odershock’s paper, it is worthwhile to revisit their voting

---

1 See Aristotle, *The Politics,* Books III-IV.
equation. Formally, we have

\[ U_i = pB_i - c_i + D_i \]

where \( U_i \) is the utility of voter \( i \) as a function of the probability \( p \) of being pivotal times the utility \( B_i \) of his preferred outcome, minus the cost \( c_i \) of voting plus the expressive utility \( D_i \) of voting. The innovation of Riker and Odershock was to add the "non-economic" benefits of voting to an economically-based utility equation. They did so without incurring the tautological fallacy that had prevented previous scholars — Downs included — from formulating this utility calculation. The paper also signaled the split of economic research of voting turnout into two different camps. A first camp devoted itself to the study of the effect of macroeconomic conditions on voting behavior, while a second camp devoted itself to the study of the rationality of voting turnout taking the utility calculus as the foundational pillar.

In the former camp, Fair (1978) presents a presidential vote prediction equation based exclusively on economic factors. While Fair’s paper highlights the importance of economic factors regarding voting behavior, his research, similar to most of the research in this area, focuses on candidate choice rather than on voting turnout. Radcliff (1988) provides a great overview of the literature in this area, focusing on the absence of an account for the individual-level mechanism behind the effect of macroeconomic conditions on voting behavior regarding house elections. Indeed, a series of studies prior to 1988 (Kinder and Kiewiet, 1981; Fiorina, 1978; Wides, 1976) finds no evidence supporting a correlation between an individual’s economic well-being and his posterior voting behavior in House elections. Radcliff blames this phenomenon not on the irrelevance of economic conditions, but on the decreased relevance of individual House members regarding economic policy. Radcliff argues that voters are able to discern whether the candidates have an impact on
economic conditions and then vote accordingly. If they realize that House members do not have an impact on policy, then economic concerns will not influence voter choice in House elections.

The seminal paper on the subject of macroeconomic drivers of voting turnout remains Erikson’s (1989) study of the economic drivers of presidential voting. Erikson finds that per capita income predicts presidential voting as well as, if not slightly better, than candidates’ ideologies do. The paper argues that voters will punish incumbents when they feel their income has dropped over the past four years - a phenomenon called retrospective voting. While some recent studies (Wlezien et. al., 1997) argue that Erikson’s findings are substantially overstated, it is hard to dispute the considerable body of evidence showing a relationship between macroeconomic voting and candidate choice. Notice, however, that Erikson’s paper, as do most studies in this field, concerns the subject of voter choice, rather than voting turnout.

The second camp of the economic voting literature has focused on studying the "paradox" of voting turnout under a utility maximization framework. Since as early as 1971 (Stigler, 1971, as cited in Filer and Kenny, 1980), scholars have tried to refine Riker and Odershock’s utility equation to solve the paradox of turnout. Not surprisingly, Filer and Kenny (1980) find that voting turnout is a function of the probability of being a pivotal voter minus the cost of voting. This basic result remains constant throughout the literature. The challenge is identifying the other components of voting (other than the utility of being pivotal) that lead people to vote. Aldrich (1993) tries to solve this problem by reframing voting not as a low-benefit, high-cost affair, but rather as a low-benefit and low-cost affair. If such is the case, then voting, from an economic point of view, does not seem that paradoxical.

---

2For a great overview of this literature, please refer to Lewis-Beck (2000) and Suzuki and Chappell (1996).
Matsusaka (1995) expands this area of research by adding the element of information into the voting utility equation. According to Matsusaka, the better-informed a voter is, the more likely he is to show up to the polls, as he knows enough information to be confident about the optimality of his choice. For our purposes, we can easily extend Matsusaka’s implicit argument and postulate that better-informed voters also have a clearer understanding of the benefits of voting. The field attracted substantial attention, with Feddersen and Pesendorfer (1996, 1997) using a game-theoretic approach to formalize how the lack of information makes abstaining a better strategy than voting. Others have followed Matsusaka’s lead (see Larcinese, 2000; Degan and Merlo, 2004), but their refinements are beyond our primary concern with economic incentives and voting turnout.

Dhillon and Peralta (2002) review and expand the research on turnout within a bounded-rationality context. Under a bounded-rationality framework voters learn by trial and error about both voting choice and voting behavior. Of particular interest to this inquiry, Dhillon and Peralta argue that, under a bounded-rationality framework, voting becomes a rational phenomenon; as a result, turnout and cost of voting are inversely correlated (see also Demichelis and Dhillon, 2001; Lassen, 2005). This argument brings back to the forefront one of the earlier conclusions found in the literature: perhaps voting is not a high-cost and high-reward exercise; it could also be that voting is a low-cost and low-reward undertaking. The bounded-rationality framework preserves the intrinsic link between voting and economic considerations and adds psychological elements to the voting equation.

Recent research has shifted its focus to group-based theories of voting utility and voting as altruism (Fowler, 2006), as well as to refining the understanding of voting as a learning process. This new literature has merged elements from the fields of soci-

3 See Geys (2006) for an excellent overview of the most recent advances in the field of rational choice-based research on voting turnout.
ology, social psychology, and anthropology into the basic utility equation, making the game-theoretic analysis of voting behavior more realistic. Nevertheless, the literature overwhelmingly establishes and predicts a direct, positive link between economic incentives and voting turnout. As monetary rewards lower the cost of voting, turnout should increase in turn. This will happen, however, only if voters are informed about the existence of such rewards. Based on these two simple insights, we posit that better-informed voters are more likely to include the monetary incentives into their utility calculus of voting than average voters would. This basic conclusion will guide most of the theoretical framework we outline in Section III.

An alternative to this consensus stems from literature on the crowding out effects of extrinsic economic incentives. Pioneered by Titmus (1970), this literature argues that offering extrinsic economic rewards to increase participation in civic and altruistic activities may actually decrease overall participation rates. Titmus proposes the existence of this effect after he finds that people tend to donate blood at lower rates when offered economic incentives to do so. While later research (Mellstrom and Johannesson, 2005) finds a suggestive link between extrinsic economic rewards and a crowding out effect, the lack of large-scale and replicable studies should make us weary of taking the authors’ conclusions at face value. The suggestive links found by these studies illustrate an interesting perspective on the effect of economic incentives on civic duties, and merit our attention.

2. Prospect Theory

Prospect Theory dates back to Kahneman and Tversky’s (1979) seminal paper that introduced and defined the concept. Further developed in Tversky and Kahneman’s (1991, 1992) more recent papers, the theory postulates that individuals will modify their response to equivalent messages if these are framed differently. That is, individuals’ behavior in
response to a message is sensitive to whether the behavioral alternative is framed in terms of potential losses or associated costs (loss frame), or in terms of potential gains or benefits (gain frame). Accounting for this change in behavioral attitudes, the theory proposes that individuals are more willing to accept risks when they evaluate options based on the potential losses and are less willing to accept risks when they evaluate options based on potential gains (Tversky and Kahneman, 1981).

In Psychology, Peter Salovey and colleagues have tested the effect of loss and gain frames on individuals’ response to messages about health-related initiatives (Bankst et. al., 1995; Rothman and Salovey, 1997; Detweiler, et. al., 1999; Apanovitch, et. al., 2003; Steward, et. al., 2003). They find that Prospect Theory holds in a variety of settings. Moreover, they operationalize Prospect Theory by conditioning its effects on the relevant context. Thus, Salovey and coauthors argue that the loss frame is more effective than the gain frame is when prescribing a behavioral alternative that is "illness detecting" (such as an HIV test); on the other hand, the gain frame is more effective than the loss frame when prescribing a behavioral alternative that is "health-affirming" (such as applying sunscreen). In practice, then, the relative effects of the gain and loss frame will depend on the relevant context. In a recent economic experiment, Bertrand et. al. (2006) find evidence for a differential effect between the loss and the gain frames in a field experimental context. The authors find that prospective borrowers were significantly more likely to take-up a loan offer when the offer was framed in terms of potential losses than when the offer was framed in terms of potential gains.

Given the important amount of evidence for the existence of different behavioral responses to each of the frames, it is natural to inquire whether these different effects are also present in political behavior. In this particular case, loss aversion should lead voters who receive the loss frame to turn out to vote at higher rates than those voters who receive the gain frame.
3. Experimental Mailings

Modern political campaigns have come to rely on direct mailings as an inexpensive and easily deployable canvassing method, and most campaign managers would probably find it impossible to run a campaign without relying on them. Despite their prevalence, and unlike traditional door-to-door canvassing, direct mailings are a relatively recent phenomenon in American political campaigns. The first large experimental study on the effect of large-scale mailings on voting turnout goes back only to the early 1980s. Miller and his colleagues (1981) conduct a multi-method experiment to measure the effect of canvassing on voting turnout for a 1980 primary election. They find that the effect of mailings, and of other GOTV methods, depends on the age of the receiving voter. Further, the authors find that mailings are not particularly effective amongst the youngest potential voters — a fact the authors ascribe to a "general trend in American Society towards a less personal communication environment." (Miller et. al., p. 458). This finding is at odds with later, nonexperimental studies (Hannahan, 1999), which find a strong link between voting turnout and mailing canvassing. The observational character of this and some of the previous studies, however, raises significant identification and self-selection bias problems, effectively undermining our ability to draw causal conclusions from the study's data.

Voting turnout research takes a dramatic turn after Gerber and Green’s (2000) large-scale canvassing experiment in New Haven, which brings experimental GOTV studies back to the center of Political Science.\footnote{See Gerber and Green (2004) for an excellent overview of the literature on door-to-door canvassing, phone calls, and direct mailings. See Stollwerk (2006) and Nickerson (2006) for two accounts of the effect of emailing on turnout.} The authors find that the most effective and cost-efficient method of canvassing is face-to-face contact. They also find that direct mailings increase turnout by a small but statistically significant amount (about 0.5 percentage points). Unlike previous studies, Gerber and Green’s experiment provides a solid statis-
tical foundation for causal inference. Imai (2005), however, disputes the study’s findings and instead proposes a different statistical framework — based on matching on covariates — to analyze the experimental data. He argues that, under such framework, the effect of mailings on voting turnout increases considerably. Further experimental studies in this area (Gerber et. al., 2003a; Green, 2004; Cardy, 2005) have tended to validate Gerber and Green’s (2000) initial findings. Moreover, Gerber et. al. (2003a) show that, even when matching on all covariates, the non-experimental estimators remain biased when assessing the effect of canvassing tools on turnout. Green (2004) goes a step further and suggests that mailings may be more effective in elections where traditional campaign advertisement remains relatively low.

Overall, a consensus has emerged identifying mailings as a statistically effective canvassing method. The question remains on how effective these mailings are, and, consequently, on whether direct mailings can be a cost-efficient tool for increasing voting turnout. Notwithstanding a small subsection of the literature, we also find a consensus regarding the potential effect of extrinsic economic incentives on voting turnout. In this paper, we explore these two key empirical questions by leveraging a ballot initiative in Arizona to conduct a randomized field experiment.

III. Background: The Arizona Voter Rewards Initiative

The Arizona Voter Rewards Ballot Initiative (AVR) was the brainchild of Mark Osterloh. A one-time politician and local doctor, Mr. Osterloh had long advocated for extrinsic economic incentives to increase voting turnout. The AVR proposed awarding one million dollars to a randomly selected voter after every election. In effect, this would have amounted to establishing a standard lottery where people would not buy tickets but

5For more information on the initiative, please see www.voterrewards.org (accessed on March 15, 2007).
would vote to be eligible to participate. Aware of the slim chances the Initiative had of making it through any state legislature, Mr. Osterloh focused his efforts on getting the AVR on a state ballot. In early 2006, he started a political action committee in Arizona with the objective of collecting the necessary signatures to get the proposal on the ballot for the November 2006 elections. By mid-summer 2006, the Arizonans for Voter Rewards PAC had succeeded in collecting the 185,000 signatures required by state law to get the proposal on the ballot. A key provision in the final wording of the proposition established the retroactive nature of the AVR; thus, had it been enacted, the initiative would have applied to both the October 2006 primary and the November 2006 general election.6

As soon as the news of the AVR’s inclusion on the ballot spread, the Initiative received considerable attention. Major Arizona newspapers editorialized against the it, while the national press picked up on its somewhat unusual character.7 While some news outlets, such as The Wall Street Journal and Fortune, supported the ballot, the majority of Arizona newspapers and media outlets opposed what they saw as an attempt to trivialize democracy. Most of the national news coverage, however, limited to describing the unusual nature of the proposal and on profiling Mr. Osterloh as a failed politician who was willing to go to great lengths to see his initiative on the Arizona ballot. Somewhat surprisingly, community-based enfranchisement organizations, such as ACORN and We are America, offered their support for the Initiative, including the AVR in their canvassing materials in the weeks prior to the election (Archibold, 2006). Of relevance to this study, Mr. Osterloh’s PAC did not spend any money in publicity and instead decided to rely on the free attention the proposal generated in local and national news outlets.

On November 7, 2006, Arizonans went to the polls. By the end of the day, the Initiative had been defeated by an overwhelming 32 percentage-points margin, with 66% of voters rejecting the AVR and only 34% of voters supporting it. Nonetheless, the lack of paid canvassing by the Initiative’s supporters, as well as the broad nature of news coverage (emphasizing the macro implications of the proposal rather than the potential individual gains) made the AVR the perfect vehicle for a randomized voting drive using mailings to advertise the pure economic gains the voters stood to make were the initiative to pass.

IV. Experimental Design: Sample, Interventions, Procedure

1. Sample

The original sample frame consisted of all registered voters in two legislative districts in the State of Arizona, districts 19 and 20, totaling 175,041 registered voters. Geographically, the two districts include the southwest Phoenix area, as well as the city of Mesa, where the ASU campus is located. From a socioeconomic perspective, these two districts host mainly middle class families and students, with the median household income at $51,881 dollars in 2000. According the 2000 census, the two districts are predominantly white, with minority residents comprising just under 13% of the population.

Politically, the two districts experienced a slightly higher level of participation than the rest of the state. In the 2004 presidential election, 75% of registered voters made it to the polls, compared to only 71.76% throughout the state (GMU, 2004). For the November 2006 election, 63% of the voters from legislative districts 19 and 20 turned out at the polls, and the statewide turnout rate was a little over 60%. About half of the voters in the district identify themselves as Republicans, and the average age is about 45 years. These differences conform to the socioeconomic and demographic profile of the
district, as middle-class and white voters tend, *ceteris paribus*, to turn out at higher rates than the average voter. In the analysis below, we break out the sample using different demographic and economic indicators to elucidate the differential effect the mailing may have had on different voters.

An early matter for concern was Arizona’s widespread early voting rules. Under current law, Arizona voters can start voting at the polls 30 days before the election and until the last Friday before election Tuesday. Many voters decide to take advantage of this service, and thus they become immune to mailings reaching them after they have voted. This raises potential outcome measurement issues, as it would be difficult to elucidate whether the canvassing effort happened before or after the recipient voted. In this specific case, however, the timing of the mailings excludes that possibility. Given that the mailings used in this experiment only reached voter homes in the afternoon of Friday, November 3 (the last day of early voting), we can safely conclude that the early voters received their mailings after they had already voted. Therefore, we exclude these voters from the experimental sample and perform the statistical analysis using data from those voters who had not voted by November 3. The resulting sample consists of 119,611 voters, of whom 55,039 voted on election day. Table 1 presents the summary statistics for this sample, which will remain the sample frame for the statistical analysis.

2. Treatments

The experimental design consisted of one main intervention — the "overall treatment" — and a sub-intervention consisting of two treatments. This design aimed at maximizing the experiment’s statistical power and at providing an unbiased estimate of the effect of advertising extrinsic economic incentives on voting turnout. The design also provided the opportunity of assessing the different effects of the gain and loss frames on voting

behavior.

1. Main Treatment: The Economic Mailing

The main treatment consisted of sending registered voters a mailing that outlined the potential economic gains of voting if the initiative were approved. Specifically, the mailing emphasized the fact that voting could earn you the chance to win one million dollars. The mailing also described the nature of the AVR Proposition and the lottery process, explaining how the million-dollar award was conditional on the AVR’s receiving enough votes to become law. Finally, the mailing contained key information on the on the date and time of the election, before finishing with a sentence linking the act of voting to the possibility of becoming a millionaire. The nonpartisan character of the experiment meant that the postcard did not instruct voters to vote for the AVR but only provided information about it.  

Classical economic and rational choice models predict that the mailing should increase voting turnout. We can describe the mechanism driving such an increase as a two-stage process entailing an information update and a posterior utility calculation. First, the voter uses the mailing’s information on the potential monetary rewards of voting to update his economic priors. Secondly, the voter recalculates the utility of voting using the updated economic priors and changes his behavior accordingly. This increase in turnout will come as "marginal absentees" — voters whose voting utility was only slightly negative before receiving the new information — recalculate their voting utility and now find voting economically sensible. Unlike "marginal absentees," voters whose pre-treatment voting utility was substantially negative or positive are unlikely to change their behavior. Formally, if we take the basic utility equation, 

---

8Please refer to the Appendix for the exact wording/design of the mailing.
$$U_i = pB_i - c_i + D_i$$

then we can define a new component $\alpha E_i$, such that $\alpha$ represents the probability of both the electorate approving the AVR and voter $i$ winning the subsequent lottery, and $E$ represents the monetary amount of the lottery. Clearly, $\alpha E_i > 0$. If we let $U'_i$ be the post-intervention utility calculation,

$$U'_i = pB_i - c_i + D_i + \alpha E_i$$

It follows that $U'_i > U_i$, we should expect voters who receive the postcard to turn out at a higher rate. This utility comparison also presents the possibility of different effects on certain constituencies. For instance, the relative impact of the utility increase will be higher on low-income voters than it will be on high-income ones. Thus, we should expect low-income voters to turn out at higher rates than high-income voters after receiving the treatment. This view is consistent with previous studies that have found a strong inverse correlation between gambling (in the form of state lottery) and income (Kearney, 2005a, 2005b).

We also expect the treatment to have different effects according to voters’ educational levels. Highly-educated voters may already be aware of the economic repercussions of the AVR, and thus will find the information on the postcards irrelevant or superfluous. On the other hand, those voters with low levels of education may not have been able to discern the economic implications of the AVR and may use the information on the postcard to update their economic priors. However, we note that the strong correlation between low-income and low-education will make empirically difficult to identify whether the different effect is a result of low-income or low-education levels.

Thirdly, we also expect a different treatment effect along party lines. As evidenced by
the reaction of the press, *laissez-faire* leaning voters may be more willing accept extrinsic economic incentives as a legitimate tool to increase voting turnout (both *Fortune* and *The Wall Street Journal* were sympathetic to the AVR). At the same time, traditionally democratic leaning organizations, such as ACORN, supported the proposal, so one has to be careful before making predictions about the differential effect based on different party identification.

An alternative view suggests a radically different prediction. Proponents of this view, which goes back to Titmus (1970), would argue that the postcard should decrease voting turnout because it frames voting as a transactional, almost trivial, economic act. This view stems directly from Titmus’s (1970) experiments, and from subsequent studies, on blood donation drives that found evidence to the effect that extrinsic monetary rewards crowd out civic and altruistic behavior. Nevertheless, the overwhelming theoretical and empirical evidence favoring rational attitudes towards economic incentives leads to the following hypothesis:

- **Hypothesis 1:** *The mailing outlining the potential monetary gains of voting should increase voting turnout amongst those voters who receive it. Further, the magnitude of effect will be dependent on party registration, income levels and educational attainment.*

2. **The subtreatments: Gain and Loss Frames**

As Bertrand et. al. (2006) argue, "the framing of prospects in terms of losses versus gains can trigger discrepancies in attitudes towards risk, and thereby influence choices." To evaluate the potentially different effects of the loss and gain frames on voting turnout, we designed two versions of the mailing. One version the gain frame, sent to half of the voters in the treatment group, framed the potential monetary rewards in terms of
prospective gains; the second version, the loss frame, sent to the remaining voters in the
treatment group, framed the potential monetary rewards in terms of prospective losses.
We emphasize that both frames contained the same information, but just framed its
contents differently.\footnote{Please refer to the Appendix for the full text and the design of the mailings.}

Prospect Theory posits that individuals tend to be loss-averse when presented with
a sure gain. In this case, the loss frame presented the voter with a sure loss in the case
of his not voting, as the voter would have lost the opportunity of entering into the one-
million-dollar lottery. The gain frame presented the voter with a sure gain in the case of
his voting, as the voter would have earned the opportunity of entering into the lottery.
Notice that former option frames voting in terms of a sure economic loss (you lose the
expected value of the lottery), while the former frames voting as an economic gain (you
gain entrance to the lottery). Left unsaid in both frames is the behavioral alternative: not
voting. Under this framework, voters should react more positively to the loss frame than
the gain frame because they want to avoid losing something they have for certain (the
expected value of the lottery). Hence, voters who receive the loss frame should turnout
more often than those who receive the gain frame.

How do these different effects change turnout amongst different constituencies? Prospect
Theory says little about how different demographics will change their behavior as a result
of receiving gain/loss frames. In theory, we expect a relatively uniform difference be-
tween the effects of each frame on the subsamples identified before. We do not expect the
frames to have different effects based on party registration, income level, or educational
attainment.

- **Hypothesis 2:** The two frames should have different effects on voting turnout. In
  particular, voters who receive the loss frame should experience higher turnout than
  those voters who receive the gain frame message. Further, the difference between
the effects should not depend on party registration, income levels and educational attainment.

3. Experimental Procedure

Table 2 presents the final experimental design. We conducted a non-proportional stratified randomization, where we first randomized the mailings at the individual level and then grouped the voters by household. This is roughly equivalent to conditioning the share-odds of a voter being in the treatment group on his corresponding household size. Voters in two-person households were, roughly, twice as likely to be assigned to the treatment group than those in one person households, but only half as likely as those voters in four person households. Statistically, we can control for this conditional share-odds by weighting individual observations using the probability the observation had of being included in the treatment group. For the regression analysis, we include controls for household size.

The randomization yielded about 14,000 voters in the treatment group, making up approximately 12% of the entire sample. Within the treatment group, approximately 7,000 voters were assigned to each the Gain Frame or the Loss Frame treatments, with
272 voters (0.2% of the sample) receiving both. The remaining 105,000 voters were assigned to the control group. This final design maximized statistical power given our sample size. Table 1 reports summary statistics for the entire sample frame, as well as for each experimental group using weighted means.

To confirm the success of the randomization, we regressed the treatment assignment on the covariates, including past voter history, using a multinomial logit. The results, which we report in Table 3, seem to confirm the success of the randomization. As expected, most of the coefficients are statistically insignificant. Yet, Table 3 also shows that voters in the gain frame sample frame were less likely to vote in the 2004 election — a difference that is statistically significant. Given that recent research (Gerber et. al., 2003b) has found evidence that voting may be habit forming, it is reasonable to assume that, ceteris paribus, voters who voted in the 2004 would be more likely to vote in the 2006 election. Thus, any analysis that does not control for past voting history will yield downward-biased estimates for the effect of the Gain Frame intervention on voting turnout. We address this issue by controlling for past voting history when conducting the analysis below.

After assigning voters to the experimental groups, 5.5x4" postcards were designed with the objective of emphasizing the economic dimension of the two messages. A leading mailing services provider in Arizona printed the postcards and mailed them on the Wednesday immediately prior to the election. After the election, the U.S. Postal Service confirmed that postcards were delivered at voter homes between the afternoon of Friday, November 3, and Saturday, November 4. This time window confirms both that the postcards arrived after the early voting period was over but before the general election day.

10This unintended situation (voters receiving both treatments) is the result of the randomization at the individual level, when the analysis and assignment is performed at the household level.

1. Statistical Power

Following the literature (Gerber et. al., 2003a), we calculate the experiment’s statistical power to detect an increase in voting turnout using a one-sided test. Given the strong theoretical framework predicting an increase in voting turnout, a one-sided power test is appropriate in this case.\textsuperscript{11}

Given the sample size, the experiment’s ex ante power to detect turnout increases of or over one-percentage point is considerable. The experimental analysis will correctly identify a one-percentage-point increase about 82% of the time. Further, the experiment will identify a two-percentage-point increase over 99% of the time. For smaller positive effects, the experimental power decreases quite considerably. Indeed, the experimental analysis will correctly identify a 0.5 percentage points increase in turnout only 35% of the time.

In the end, we are primarily interested in identifying effects that are over one-percentage point in magnitude. Our reasons for focusing our inquiry on such effects are twofold. First, the strong theoretical background in rational choice and Prospect Theory predicts significant and noticeable effects on voting turnout; thus, we want to elucidate whether such predictions actually have a substantive and positive impact on voting behavior. Secondly, we believe that effects under one percentage points have little policy and actual implications outside their statistical significance — that is, effects under one-percentage point are neither cost-effective nor substantively interesting variations in voting behavior.

\textsuperscript{11}Calculating power is an often-overlooked but key component of experimental research. By having an estimate of the experimental power, one can then draw sound causal inferences about both the effectiveness and the ineffectiveness of an experimental intervention. In the absence of statistically significant results, one can then draw upon the experimental power to infer whether the lack of statistical significance is hinting at an absence of an effect or just at the experiment’s inability to correctly identify the presence of such an effect. Of course, the former is as interesting as, if not more so than finding the expected statistically significant result.
V. Results

A few remarks are in order before presenting the results. Following the practice of clinical research, we present all of the relevant coefficients (Karlan and Zinman, 2006; Gerber et. al., 2001). Secondly, to account for the imbalance between the experimental subsamples, we include controls for voting history dating back to 1998 in all stages of the analysis below.\footnote{Specifically, the voting history controls include indicator variables for the general elections of 2004, 2002, 2000, and 1998, and the general primaries of 2006, 2004, and 2002.} Unless otherwise noted, we report robust, cluster-adjusted standard errors, using households as the clustering unit. These standard errors correct not only for the systemic characteristics amongst members of the same household, but also for heteroskedasticity - a common issue in OLS estimations using binary dependent variables.

1. The Effect of the Mailing Turnout (Overall Effect)

We first turn our attention to the effect of receiving the mailing on voting turnout — ignoring the potentially different effects of the gain and loss frames for the time being. To adjust for the non-proportional stratified randomization, we include controls for household size.\footnote{I include four indicator variables, accounting for two-, three-, four-, and five plus-person households. One-person households are the base category. Results remain unchanged when estimating the effect using eight controls for all possible household sizes.} In the interest of easing interpretation, we use a Linear Probability Model (LPM), which we define as follows,

\[
d_i = \alpha + \beta_0 T_i + \sum_{j=2}^{5} \omega_j H_{S_{ij}} + \theta VH + \gamma X + u_i
\]  

(1)

where \(d_i\) equals unity if voter \(i\) turned out to vote, and \(T_i\) is an indicator variable that equals one if voter \(i\) belonged to the treatment group and received a postcard. \(VH\) is a vector containing voter \(i\)’s voting history and \(X\) is a vector of covariates. \(H_{S_{ij}}\) are

indicator variables for household size.\textsuperscript{14} Table 4 presents the effect of receiving a postcard on voting turnout on the entire sample frame.

How does receiving the mailing affect an individual’s voting behavior? The first column of Table reports the estimated effect of the mailing without controlling for voting history or demographic characteristics. We include this initial, biased estimate for comparison purposes only. At least at this initial stage, the regression estimates suggest that the mailing had a negative and barely significant effect on voting turnout — decreasing the probability of voting by 0.09. To account for the imbalance between the experimental samples, we re-estimate the model controlling for individuals’ voter histories. Notice

\textsuperscript{14}Given the binary nature of the dependent variable, a nonlinear estimator may seem more appropriate (King, 1989). For comparison purposes, we present probit estimates for the equivalent models in the Appendix. The probit specification is

\[
\Pr(d = 1) = \Phi(\alpha + \beta_0 T_i + \sum_{j=2}^5 \omega_j H S_{ij} + \theta V H + \gamma X + u_i),
\]

with variables and vectors defined as before.
that the estimated effect, reported in Column 2, is now much humbler. The coefficients here suggest that the mailing decreased voting amongst voters in the treatment group by four percentage points vis-à-vis voters in the control group. The inclusion of controls for demographics further dampens the estimated effect of the mailing on voting turnout to a humble 0.3 percentage points. Not surprisingly, the estimates are not statistically significant.

It is tempting to dismiss these statistically insignificant preliminary findings as the consequence of the low statistical power of the experiment. However, a second interpretation may be in order. These initial estimates suggest that, even if the treatment had a small, unnoticed effect, it would be a far cry from the substantively significant effects predicted by the literature. Contradicting the theoretical expectations, the analysis so far shows the absence of a considerable effect on voting turnout. If anything, the negative signs of the estimated effects suggest the mailing have actually decreased turnout amongst voters in the sample. We revisit and expand this discussion in the next section.

1. Subsample Effects

We expand the scope of the analysis to the three classifications of interest we identified in the previous section. Even in an experimental context, we have to be careful not to perform post-hoc comparisons not foreseen in the ex ante theoretical framework. We limit this stage of the analysis to party registration, educational attainment, and income level. Even after limiting the analysis to the subsamples identified ex ante, we still have to be mindful of the perils of performing multiple comparisons. Thus, when discussing statistical significance in this section, we emphasize the importance of using the Bonferroni correction for multiple comparisons.\(^\text{15}\)

\(^{15}\)The widely known, but often overlooked Bonferroni correction states that, when performing multiple comparisons, the necessary \(\alpha\)-levels should be divided by the number of comparisons. Thus, if one is performing two comparisons, the p-value necessary for a significance level of 5%, is actually 0.025 (for a
Table 4 reports the estimated effects of the mailing on both registered Republicans and registered Democrats and Liberals. Amongst Republicans, the mailing essentially had no effect, barely increasing turnout by 0.3 percentage points — an estimate that is not statistically significant. We also find that the mailing had a negative effect on Democrats and Liberals, decreasing voting turnout by 0.8 percentage points. The coefficient is not statistically significant, but it indicates that the mailing did not increase turnout amongst these voters; if anything, receiving the mailing discouraged Democrats and Liberals from showing up to the polls. We note that while the mailing was ineffective at increasing turnout, the results suggest that it affected these two groups differently. The difference in the effect estimates suggest — but do not establish — that Democrats and Liberals reacted more negatively to the mailing than Republicans did.

We now consider the effect estimates on voters with different levels of educational attainment. As it is the case with most voter lists, the Arizona voter list lacked information on each voter’s educational attainment. Instead, we relied on 2000 Census data at the zip-code level to create a proxy for educational attainment in each of the 20 zip codes in the sample. For each voter we were able to generate a measure of the educational attainment — defined by the percentage of the population in the zip code that holds a college degree — in the voter’s zip code. In turn, this procedure allowed us to rank the zip codes by the level educational attainment. We used such ranking to classify voters in three categories: high-educational attainment, mid-educational attainment, and low-educational attainment. While imperfect, this classification serves as a good proxy for educational attainment.

discussion, see Altman and Bland, 1995).

16 For the following analyses on the subsamples of interest, I present only the estimates for the full model specification of Equation (1). As expected, substantive and statistical results remain essentially the same when controlling just for voting history.

17 The results are robust to other measures of educational attainment, such as percentage of the population with a high school diploma.
Table 5 reports the estimated effect of the mailing on turnout amongst voters in each of the three education-based sample frames. Amongst voters in the low-educational-attainment sample, the mailing had a substantial and negative effect on turnout. Specifically, the mailing decreased turnout amongst these voters by approximately 1.3 percentage points. The finding appears to be statistically significant the 10% level, but this significance level does not reflect adjustments for multiple comparisons. After applying the Bonferroni correction, it becomes clear that the finding is certainly not statistically significant. Nevertheless, it is clear that the mailing did not have a positive effect on turnout amongst low-education voters.

Columns (2) and (3) of Table 5 report the estimated effect of the mailing on voters in the mid- and high-educational attainment sample frames. For the two sample frames, the
estimated effects are essentially equal. Amongst these voters, the mailing was basically ineffective at increasing voting turnout; the estimated increase is a mere 0.2 percentage points and not statistically significant. We note, however, that the analysis does suggest the existence of a differential effect of the mailing by educational level. While the mailing was certainly ineffective at mobilizing mid- and high-educational attainment voters, it may have decreased turnout amongst low-education voters. This challenges our initial predictions, which expected low-education voters to react more positively to the mailing than voters in the other two educational sample frames. We revisit this discussion in the next section.

Finally, we estimate the effect of the mailing on voters according to income levels. Again, the lack of individual data on income requires us to use zip code data instead. Following a procedure analogous to the one used to estimate educational attainment, we used 2000 Census data to obtain the mean per capita income for each zip code.\textsuperscript{18} We matched this information with each individual voter’s zip code. With this information, we classified voters into three different subsamples based on income at the zip code level, much in the same way that we classified voters into three samples based on educational attainment at the zip code level.

Columns (4), (5), and (6) report the relevant estimates for each of the income sub-samples. Surprisingly, and certainly in contraposition to the hypothesis, voters in the low-income sample frame experienced a one percentage point decrease in turnout as a result of receiving the mailing. The estimate is not statistically significant, but it essentially rules out a positive effect and actually suggests the a possible slightly negative effect on turnout. We also highlight that even though the estimated effect disputes the initial hypothesis, it is in agreement with the decrease in turnout we found on low-education voters as a result of the mailings. Education and income are highly correlated, and thus a de-

\textsuperscript{18}The results are robust to other measures, such as median household income.
crease in turnout amongst voters at the bottom of the educational scale should correspond to a decrease in turnout amongst voters at the bottom of the income scale.

Concerning voters in the mid-income sample frame, we find that the mailing had a barely negative effect on voting turnout. Voters who received the mailing were less likely to show up at the polls than voters who did not by about 0.2 percentage points — an estimate that is not statistically significant. Amongst voters in the high-income sample frame, the mailing had a similarly small, but positive, effect. It increased turnout by about 0.3 percentage points. Overall, the mailing was quite ineffective at changing voting patterns of mid- and high-income voters, but it did seem to have had a slightly negative effect on turnout amongst voters in the low-income frame.

In general, we do not find that the mailing had a positive effect on turnout; quite the opposite, the analysis hints at a possible negative effect on voting rates. We do not underestimate the significance of these initial findings. A significant body of work in Economics and Political Science has argued for the existence of a very strong and positive link between economic incentives and voting turnout. Our findings present an interesting challenge to this prediction, suggesting that political behavior may not be as sensitive to economic incentives as the literature would suggest. Surprisingly, our findings also suggest that registered Democrats, low-income and low-education voters may actually experience a decrease in turnout. We revisit and explore the causes behind this decrease in Section VI.

2. Loss and Gain Frame Effects (Frame Effects)

We now shift our attention to assessing the different effects of the gain and loss frames on voting turnout. Numerous studies in Psychology and Economics have found evidence supporting the existence of these effects, and, thus, it is natural to inquire whether these
effects are present in political behavior. Empirically, the analysis of differential effects can take one of two forms. One can either present the results of each manipulation separately before pooling the manipulations (Bertrand et. al., 2006), or one can obviate the first step and focus on the pooled results. The choice will depend on whether the overlap between the intervention warrants both a separate and a pooled analysis. The almost entire lack of overlap in this experiment (only 229 voters received both mailings) allows us to obviate the separate analysis and focus on the pooled analysis instead.

We estimate a slightly modified version of the model described in Equation (1). Formally,

\[ d_i = \alpha + \beta_0 G_i + \beta_1 L_i + \sum_{j=2}^{5} \omega_j HS_{ij} + \theta VH + \gamma X + u_i \]  

(2)

where \( d_i \), \( VH \), \( X \) and \( HS_{ij} \) are defined as before. \( G_i \) is an indicator variable that equals one if the voter received the gain frame mailing and zero otherwise; similarly, \( L_i \) equals one if the voter received the loss frame mailing and zero otherwise.\(^{19}\)

Table 6 reports the estimated effects of both frames on turnout for the entire sample. For comparison purposes, we include the biased estimates for the regression without controlling for demographics or voting history. This first regression estimates the effect of the gain frame on voting turnout at a negative 1.1 percentage points; the estimate for the loss frame is a smaller but still considerable negative 0.7 percentage points. Columns (2) and (3) of Table 6 report the estimates controlling for voting history, and for voting history and demographics. After controlling for voting history, the estimated effect of the gain frame on turnout drops to a decrease of 0.5 percentage points — the same estimate obtained

\(^{19}\)We also present probit estimates for the equivalent models in the Appendix. The probit specification is

\[ \Pr(d = 1) = \Phi(\alpha + \beta_0 G_i + \beta_1 L_i + \sum_{j=2}^{5} \omega_j HS_{ij} + \theta VH + \gamma X + u_i), \]

with variables and vectors defined as before.
after controlling for both voting history and demographics. The estimated effect of the
loss frame on turnout also drops dramatically after controlling for voting history. Indeed,
the negative frame had a very small, negative effect, decreasing turnout by approximately
0.2 percentage points. None of the coefficients is statistically significant.

The estimated effects strongly suggest that neither frame was effective at mobilizing
voters. Indeed, this initial analysis shows that the slightly negative effect found in the
previous stage of the analysis seemed to have been a result of the negative effect of both
frames. Consequently, these initial findings would indicate the two frames did not have
substantively different effects on voting turnout. We note that such a situation is in
contraposition with our initial expectations and do pose somewhat of a challenge to the
applicability of Prospect Theory to the field of political behavior.

a Party Registration data is available at the individual voter level in the State of Arizona.
1. Subsample Effects

Do the gain and loss frames really have different effects on voting behavior on voters according to party registration? We report the estimated effect of each of the two frames on voters according to party registration in Table 7.\footnote{As in the previous section, we only report estimates for the full specification of Model (2). The substantive and statistical conclusions remain unchanged when the model is run without controls for demographics.} We find that the gain frame decreased turnout amongst Democrats and Liberals by approximately one percentage points. The coefficient is not statistically significant but attests to the ineffectiveness of the gain frame at increasing voting turnout amongst registered Democrats and Liberals. Amongst these same voters, the loss frame also decreased turnout by about 0.4 percentage points, though this coefficient is not statistically significant. Still, the difference in signs and in magnitudes present here suggest that the gain frame may have driven the decrease in turnout we found in the previous section.

The two frames were very ineffective at increasing turnout amongst registered Republicans. The gain frame, which had a considerable, if negative, impact on Democrats’ turnout, left Republican turnout almost unchanged, increasing it by only 0.2 percentage points. The loss frame did not do much better either. Receiving it increased turnout amongst Republican voters by a mere 0.1 percentage points. None of the coefficients is statistically significant. Furthermore, neither increase, even if it were statistically significant, would have any substantive implications on actual political behavior.

Our analysis of the effect of the frames on voters according to party registration does not identify a substantive positive effect of either frame on voting turnout. However, the analysis does suggest that the frames may have had different effects on voters who registered with different parties. Our findings seem to illustrate how Democrats reacted more negatively than Republicans did to the mailing, and how the gain and loss frames may have affected this reaction. Given the relatively small sample size, however, we

* Educational level is defined at the zip-code level: Using 2000 Census Data, mean estimates for proportion of population with college graduates are obtained and zip codes are then ranked accordingly.

b Income level is defined at the zip-code level: Using 2000 Census Data, median estimates for per capita income are obtained and zip codes are then ranked accordingly.

cannot fully establish whether this difference in effect is causal in nature or just a result of random variation.

Following the order we established above, we estimate the effects of the frames on voting by grouping voters by educational attainment levels. We use the same classification used before, and estimate the effect of the frames on voting turnout amongst voters in the three subsamples. The results are reported in Columns (1), (2), and (3) of Table 7.

Amongst voters in the low-education subsample, the gain frame had a negative effect on turnout. Specifically, the gain frame decreased voting turnout by about 1.1 percentage points. Similarly, the loss frame had a negative effect on voting turnout, decreasing voting rates by approximately 1.6 percentage points. These two estimates are not statistically
significant, but, once again, they preclude the possibility of the frames having had a positive effect on turnout. If anything, the coefficients would suggest the opposite. We note that both frames are driving the decline in turnout we found above.

Both the loss and the gain frames had a negative effect on turnout amongst voters in the mid-education subsample. The gain frame decreased turnout by about 0.5 percentage points, while the loss frame decreased turnout by about 0.7 percentage points. The two frames also had barely perceptible effects on turnout amongst voters in the high-educational attainment subsample. Interestingly, the estimates had opposite signs. Thus, the gain frame had an estimated negative effect on turnout of about -0.5 percentage points. Meanwhile, the loss frame had a positive effect on turnout of approximately 0.7 percentage points. Notice, however, that the standard errors for both estimates are quite large, and thus it is very unlikely that the difference in point estimates reflect anything other than random variation.

Finally, we perform the analysis on the three subsamples based on income levels, which we report in Table 7. In line with what we find before, the two frames had both different and negative effects on turnout amongst voters in the low-income subsample. Receiving the gain frame decreased the voter’s probability of showing up at the polls by about 0.007. In turn, the loss frame decreased turnout by 1.4 percentage points. Neither estimate is statistically significant, but we can infer the possibility of the loss frame having had a larger negative effect on voting turnout vis-à-vis the gain frame. Moreover, these findings seem to confirm the existence of a negative effect on turnout amongst voters in the low-income sample. It also appears as if the loss frame is the main cause behind such a decrease in voting turnout.

The frames two were essentially ineffective at improving voting rates amongst voters in the mid-income subsample. The gain frame decreased turnout by 0.2 percentage points, while the loss frame decreased turnout by less than 0.1 percentage points. Amongst
voters in the high-income sample frame, the gain frame decreased turnout by half of a percentage point, while the loss frame increased turnout by about one percentage point. Neither coefficient is statistically significant; moreover, the large standard errors for both estimates suggest that this difference is as likely to be the result of random noise as of a real, underlying difference.

Overall, our findings challenge the *universal* applicability of Prospect Theory’s predictions to voting turnout analysis. Neither the loss frame, nor the gain frame had a substantive and positive effect on voting turnout. On the other hand, our results do suggest that, amongst certain groups of voters, the gain and loss frames may have had different effects on voting rates. Specifically, we find that low-income and low-education voters, as well as registered Democrats, were more likely to decrease their turnout rates as a result of the frames. This finding stresses the importance of understanding the context when measuring and predicting framing effects on political behavior.

**VI. Discussion**

What can we make of these results? We approached two different empirical questions in this experimental study. First, we tried to elucidate whether advertising potential monetary rewards led to a substantive increase in voting turnout. The experimental results overwhelmingly reject such possibility. Secondly, we tried to determine whether loss and gain frames had different, but positive, effects on voting turnout as predicted by Prospect Theory. Our findings reject a positive effect but suggest that, amongst certain groups, the frames may have had different effects on turnout rates. The results certainly challenge some of the initial expectations and theoretical assumptions, hint at the possible existence of differential effect and, most importantly, constitute a call for future research that focuses on some of the constituencies analyzed here.
Regarding the first of the two empirical questions, our results challenge the predictions from rational choice and neoclassical consumer models. The mailing did not have a positive effect on voting turnout, and any actual positive effect that may have gone unnoticed would be too small to have any substantive significance. Indeed, at this point we establish a key distinction between the effect of the message itself and the effect of the mailing as a canvassing tool. We are aware of the very small effects found in previous studies that analyzed the effect of mailings on turnout. We, however, argue that such small effects are the result of combination of a combination of a not-so-great canvassing method — mailings — with a very ineffective appeal — civic duty. Recent research (Suarez, 2007) has shown that civic and community duties are very ineffective ways of mobilizing voters. The small effects found in these prior experiments are likely to be a combination of a not-every-effective canvassing tool with an ineffective message. An effective message significantly increases the magnitude and statistical significance of the mailing’s effect on voting turnout (Frey and Suarez, 2006). Therefore, even after "accounting" for the canvassing tool, the experimental findings at least challenge the neoclassical economic view of voting.

From a scholarly standpoint, this is not to say that the rational choice view of voting is completely wrong. But, to borrow from Bertrand et. al. (2006), context may be everything when it comes to the interplay of economic incentives and voting. The challenge for rational choice and economic theorists is to incorporate such context in the economic models of voting, so that the latter can become useful representations of what really goes on in the field. From a policy-making point of view, both campaign managers and community organizers, as well as Mr. Osterloh — the father of the AVR Initiative —, will find little use for a message that has no positive effect on voting turnout.

We also explored whether the gain and loss frames had different effects on voting turnout. This research question stemmed directly from the overwhelming evidence found
on these differential effects in psychological experiments. Yet, we find that neither the loss frame nor the gain frame had a substantive and positive effect on voting turnout. While it is certainly possible that either of the frames may have slightly increased voting rates, the results certainly fall short of the predictions we derived from Prospect Theory. Furthermore, we find little evidence for the existence of a hugely different effect on turnout between the two frames. Our findings do not challenge the previous studies’ findings on the relative effectiveness of gain and loss frames, but do question whether such relative effects apply to political behavior. Perhaps when it comes to voting behavior, we cannot universalize Prospect Theory’s predictions.

Overall, our two main findings do contradict our initial hypotheses and raise some interesting theoretical challenges that should prompt scholars to engage in related research. However, we note that, while we did not find a positive increase in turnout as a result of the interventions amongst all the voters in the sample frame, we do find some interesting results concerning a subset of such sample. First, we find that registered Democrats, as well as low-income and low-education voters experienced a decline in turnout as a result of the mailings. This finding is puzzling and unexpected. Previous studies have shown that low-income individuals tend to gamble more often than individuals in other income levels (Kearny 2005a, 2005b). Thus, we had expected low-income, and, by extension, low-education voters to be more likely to increase their voting turnout as a result of the mailing. Rather, the opposite happened. These voters were considerably less likely to vote as a result of the lottery offer!

We interpret these results using Bertrand et. al. (2006) as a guidepost. They find that customers were less likely to take-up a loan if offered the opportunity of entering into a lottery to win a cell phone. At some level, there is a fundamental distrust of such promotional offers, and voting does not seem to be the exception to such a rule. Alternatively, to paraphrase Mellstrom and Johannesson (2005), perhaps Titmus was
right. Perhaps low-income voters tend to value their vote more highly than other types of voters and thus refuse to put a "price tag" on their votes. Future research should certainly try to disentangle which of these three mechanisms may have been driving the decline in turnout we saw amongst these voters.

On a related note, we also find suggestive evidence regarding the relative effects of the frames on turnout amongst the voters we just described. The frames did not seem to have different effects on all voters, but they did seem to have a different effect on these low-income, low-education voters. Furthermore, we also notice that these suggestive differences were also present — to a lesser extent — amongst those voters in the high-income sample frame. We highlight this in the hope that scholars will take on this interesting issue and will try to determine whether the differences we found in this study actually reflect the different underlying causal mechanisms.

VII. Conclusion

We should take this experiment as a loud and clear call for further research in this area. The AVR is not likely to make it to the ballot again in the near future, but other instances exist where experimental research would be appropriate. Minimum wage initiatives, tax proposals, are all valid proxies to further the study of extrinsic economic rewards and their effect on voting turnout. Clearly, the study’s findings suggest that some of our current theoretical frameworks may not be able to fully explain the individual act of voting. Further, it also suggests that certain psychological frames may have little effect on affecting political behavior on the average voter. However, certain constituencies may be more susceptible than others to these interventions. Identifying and disentangling these nuances and causal relationships is, fundamentally, an empirical exercise. While every experimental study is certainly a call for further replication, the unusual nature of this
experiment’s findings certainly warrants further studies in this area.

From a policy-making standpoint, our findings should alert policy-makers and community enfranchisers alike. Our results suggest that the offering of economic incentives decreases turnout amongst those key communities that have historically experienced low turnout rates: low-education and low-income voters. While we are unable to identify the underlying mechanism behind such effects, this should not deter us from carefully weighing the important implications of these findings. They suggest that economically-based turnout drives may instead backfire and disenfranchise those groups that were supposed to be mobilized. Until further research takes place, economically-based initiatives should take a backseat to other forms of community mobilization.

We should also be careful to observe the key distinction between a challenge and a rebuttal of a theory. Certainly, it would be almost naive to deny that the experimental results do pose a challenge to some of the established theories of voting in the field of rational choice, as well as to the applicability of Prospect Theory on political behavioral issues. Yet, it would be equally naive, if not more so, to use this experiment’s results to proclaim the total and complete ineffectiveness of both. Rather, we should take these results as a serious warning bell that warrants more research.

While experimental research offers some distinct advantages over other research — namely, the ability to draw sound causal inferences —, it is limited by an inescapable time-place constraint: experiments are certainly context-dependent. Thus, replication becomes all the more relevant in cases where experimental results may differ from our theoretical expectations. In the end, whether the finding is a one-shot effect or a persistent causal relationship is an empirical question. The only solid answer to this empirical question will come in the form of other experiments, which may support or refute, complement or replace, this experiment’s conclusions.

Post-Apartheid South Africa and the White’s Negotiations to Find a Place

SUL, Ji Yun

In the late 1990s, South Africa underwent political and social changes. Regarded as an official announcement of the beginning of the post-apartheid era, Nelson Mandela’s 1994 presidential inauguration marked a significant point in the history of South Africa. The active engagement and efforts of the Truth and Reconciliation Commission (TRC) in dealing with the legacies of apartheid followed, and it has also been celebrated as a success. As Archbishop Tutu, the chairperson of TRC, claims, due to TRC’s progress, the South Africans “have become a beacon of hope to others locked in deadly conflict that peace, that a just resolution, is possible.” However, it is doubtful whether this “resolution,” the true reconciliation regardless of race, gender, generation and class, really has been achieved in such a short time, within less than a decade. In fact, as depicted in Disgrace, one of Coetzee’s novels, South Africa in the late 1990s went through a social transition. Its whole situation is regarded as an “anarchy,” in which “people just pick and choose which laws they want to obey” (Coetzee 9) and the formal security is not to be depended upon.

Most whites found the situation more threatening than other ethnicities in the new South Africa. While the blacks were gaining the economical power as well as the political one, the white, once privileged, started losing its political and economic influences; and the social situation became increasingly hostile for many whites. Corinna Schuler points out that, under the government of the
African National Congress, many whites are left economically vulnerable because of pay equity laws and affirmative action. According to Shuler, the unemployment rate of the white was doubled in 1999, compared with 1995. The white had become the main target of violence of the racial hatred. In *Disgrace*, three black men attacked Lurie and Lucy at their home and when Lurie tries to pull over the car on the road on the way home, Lucy warns him against stopping since they are on the “bad stretch, too risky to stop.” (157) Like them, many of the white were attacked in their homes and on the road, which was usually taken as something political. Mary Braid claims that more than 500 white farmers have been murdered in the 2,400 attacks on farms during three years after 1994 and statistically most of the attackers were black. Yet, with the transition of the society to the majority governance still going on, the efficiency of the police and other social security forces have been compromised, and the white feel socially insecure and vulnerable. (Attridge, 104)

In this situation, the white had to decide whether to compromise for the social changes of the post-apartheid South Africa or not. *Disgrace* describes the two different courses, which the white South Africans actually have taken in the late 1990s. One is to leave South Africa temporarily or permanently. In the novel, the secretary (significantly named) Dawn plans to leave South Africa and emigrate to New Zealand and, later in the story, it is shown that the children of Ettinger, Lucy’s neighbor, had gone back to Germany, the European country of their origin. Many whites continuously reported their anxiety for the uncertain future, and the insecurity led the white people to flee; they chose to emigrate. According to
Marcus Mabry, approximately 30,000 South Africans between 1994 and 1996 emigrated, the majority of whom were professionals. The country’s high rate of crime, corruption, affirmative action and decaying public services are the main factors that have driven them out.

Nevertheless, there is also another choice: to stay in the country and try to adapt themselves to the social changes. Yet, while Disgrace concentrates on those whites who choose to stay in the post-apartheid South Africa, it clearly depicts that, to the white remaining in the new South Africa, the whole situation is more complicated than it appears to be and indeed ambiguous. Contrary to the general expectation, not all the white are wealthy and socially privileged. Various social strata, divided by generation, gender, social class and one’s economic ability, exist among the white. In Disgrace, Lurie, the protagonist, is a representative of the elderly white, the group that has been marginalized in the new South Africa, becoming not only physically but also socially vulnerable. From the beginning of the novel, he is aware of the fact that by the younger generation, he is now regarded as “the hangover from the past,” unfit in the changing society. He feels about himself that “the sooner cleared away the better.” (40) Pamela Cooper claims that Lurie “becomes an exile in his own land,” when he is perpetually displaced from the university and his house in Cape Town. (27) His age is an important aspect since not everyone feels doubtful and worried about the present and the future.

Unlike Lurie, who finds it harder to cope with the new South Africa, Lucy is “[the] sturdy young settler” (61) of the younger generation: economically conscious, the white younger generation consider
the situation not to be so negative, if not hopeful, and thus continue to live in South Africa. Simon Robinson claims that younger Afrikaners and Afrikaner businessmen maintained a positive view of the country’s situation, while many of the elders did not. Lucy is more determined than her father in adapting herself to the new South Africa. Economically conscious, she runs a farm with a more commercial mind—in a quite different way from the traditional agriculture: she grows and sells flowers instead of “cattle and maize” (62) and sets a painted sign on the road in order to advertise her farm and its products. In the new South Africa, there are more “frontier farmer[s] of the new breed” (62), making profits in the country by non-traditional means. For instance, Mabry introduces a case of P. C. Ferreira who converted a vacant house into a guesthouse. Ferreira has a positive attitude towards his future, who claims, “People are coming to South Africa to make money. Why should I leave to make money somewhere else?” In addition to this, after the economic liberation of 1994, young people have more chances to work abroad or in the multinational corporations, and they are optimistic about the overall situation.

Moreover, those young people are more apt to understand the new South Africa and thus more willing to compromise. After the robbery and rape by three blacks, Lucy proposes the possibility of “another way of looking at [the raid]” and interprets it as “the price one has to pay for staying on.” (158) She is ready to pay for it, even if it means to give up her farm and marry Petrus, a neighboring black farmer who is a brother-in-law of one of the attackers. In this, Lucy represents the younger generation
which denounces the past years of apartheid and thus tries to understand the present situation from an optimistic perspective. Chris Serfontein, 27, a manager at Coca-cola’s bottling plant, asserts, “South Africa will sort itself out.” (qtd. in Mabry)

However, like Lurie in *Disgrace*, the elderly whites find it harder to position themselves in the new South Africa. After the disgraceful dismissal from the university for his affair with one of his female students Melanie, Lurie is “no longer marketable” (88) and there is little or no prospect left for him of regaining his power and influence. In the new South Africa, agedness leads to a certain social and economic inability beside physical vulnerability. There is an economic reference to the old Afrikaner couple who “do less well” (72) at the market while Lucy makes more profit by her trade. With the less chance of finding work and getting help from the family and community, they are exposed to the possibility of becoming “one of those sad old men who poke around in rubbish bins” (189), which increased in number after 1994. Schuler argues that in the 1980s, white beggars were rare, almost non-existing, and yet, it has now increased and often can be seen on the streets. Russell also provides a supporting report about the middle-aged and elderly whites’ unemployment and lack of community. In other words, the post-apartheid South Africa has become “no country, this, for old men” (190).

While there are certainly those who express resentment and show a conservative attitude towards the transitional society, Coetzee takes great pains to portray an elderly white man who comes to accept the terms of living in the post-apartheid South Africa. In the text, Lurie at first resists the new South
Africa, declaring that “He is too old to heed, too old to change. Lucy may be able to bend to the tempest; he cannot, not with honour.” (209) Finally he negotiates for his place in the country through his relationship with Lucy and her unborn child. This does not necessarily mean that he has a positive or hopeful prospective on the new South Africa. Yet, it is certain that staying in the new South Africa for the whites means and requires, as Keane argues, “adjust[ing] themselves to a new dynamic.” The white will have to compromise with the transitional ways of living, whatever the price would be, even though it means to be in disgrace.

Informal Economy in Dhaka City—Automobile Engineering and Hazardous Child Labor

Abstract

Child labor particularly hazardous child labor is one of the severest forms of child exploitation and child abuse in the world today. Though it is restricted in most countries, many children do work with long and short-term risk (physical, mental and economic). Child labor is a matter of great concern of Bangladesh. On the basis of The National Child Labor Survey 2002–2003, there are above 3 million children are working in various sectors and 0.4 million are engaged in hazardous work in Bangladesh. Automobile engineering is one of the informal sectors of economy in Dhaka City where a large number of children are working under hazardous circumstances. The present study was an attempt to identify the short and long-term hazards, why children work, what and how they work, why employer recruit children, and other aspects on child labor in automobile engineering from an anthropological perspective. The data was collected from both primary and secondary sources. The primary data was collected from three-month fieldwork during the period of July to September 2004. Qualitative and quantitative both types of data were collected during the fieldwork for getting a real, visible and invisible picture of the child labors in automobile engineering. Relevant
Reports of different organizations, articles, newspapers, etc. were reviewed as secondary source of data. A significant number of children were found to work in the automobile engineering in the study area. Almost all children came from the poorest families of the rural area. They worked with a very poor amount of salary and sometimes only for food. They had no weekend and leisure time. Actually all types of exploitation on children and hazards were present there. Though in Bangladesh child labor is illegal and Bangladesh government ratified the ILO Convention No. 182 and established the compulsory primary education system, increasing of child labors especially hazardous child labors has been alarming in the recent years. It is incredibly important to analyze the cause and effect of child labor and taking step for removing those. If suddenly stopped child labor, children can be engaged to violence activities such as prostitution, terrorism, robbery because they are suffering from their poorest situation. But removing hazards and improving working environment of child labor is not difficult and lengthy process. Only need more and more qualitative research on child labor and taking integrating attempt to eliminating the problem.

**Key words:** Informal economy, Dhaka city, Child labor, Hazardous child labor.
Abstract

Catastrophe and Law Change:  
The Impact on Smoking Rates on Two Louisiana College Campuses

During the past two years, Louisiana has been impacted by two hurricanes and a major change in state law to limit smoking in public places. While some effects of the hurricanes are obvious—loss of population, high insurance rates, disputes about how to rebuilding both the physical and economic structure of the state—other effects have been less obvious. Of interest to us is the affect that hurricane-related stress has had on the smoking rates, especially among college students. We found that stress levels rose significantly after Katrina and that smoking increased as a means of coping with stress and boredom. More than 70 percent of those on both campuses were aware of the new Louisiana Smoke-Free Air Act. The law is strongly supported on both campuses, particularly by non-smokers.
Catastrophe and Law Change: 
The Impact on Smoking Rates on Two Louisiana College Campuses

During the past two years, Louisiana has been negatively impacted by two hurricanes. While some effects of the hurricanes are obvious—loss of population, high insurance rates, disputes about how to rebuilding both the physical and economic structure of the state, other effects—such as increased smoking as a way to cope with stress—have been less obvious, and therefore, less observed. Of interest to us is the affect that hurricane-related stress has had on the smoking rates, especially among college students, in Louisiana.

Perhaps surprisingly, in the midst of political and social chaos in the wake of Katrina and Rita, the state legislature passed the Louisiana Smoke-Free Air Act, which protects Louisiana citizens from secondhand smoke and provides cleaner indoor air for both patrons and employees of restaurants and other businesses. This study examines whether stress associated with Katrina and Rita increased smoking rates on both the Louisiana State University and the Southern University campuses in Baton Rouge and whether support for the statewide law could reduce smoking rates below the level prior to Katrina.

Background

As Katrina took aim on the Louisiana coast, a mandatory evacuation was ordered for New Orleans on August 27, 2005. The majority of evacuees left with enough food and clothing for a couple of days. Many left pets behind, expecting to get back to them before their food and water supplies ran out. Among the evacuees were many college students, most of whom had just begun their classes. Among the college affected were Tulane, Loyola, New Orleans University, LSU-New Orleans, Southern University-New Orleans, Xavier, and Dillard. Southern, Xavier and Dillard primarily serve African-American students. Katrina hit on August 29, and as New Orleans, flooded during the next couple of days, most of these college campuses were damaged to the point that some of the buildings could not be used for a long time, if ever. All were closed for the fall semester.

The majority of the displaced students flooded into LSU, SU-Baton Rouge and other Louisiana colleges that were less affected. But, many of them relocated to campuses as far away as Colorado State University and Stanford. Students who were able to come to LSU found themselves in a much larger setting than those to which they were accustomed. Many had difficulty finding housing and students’ loans were tangled to the point where many students were unable to pay their tuition. There were also questions about how credits would transfer from one college to another and whether educational standards were vastly different. LSU and SU students also found their campuses quite crowded. Increased competition for parking spaces and larger classes (sometimes more than doubling in size) further increased stress. LSU was closed for a week, so students were either coping with boredom, were volunteering in one of the shelters or emergency medical facilities on campus or elsewhere in Baton Rouge, or were assisting family members and friends. Many packed four or more people and their pets into dorm rooms or apartments for much of the semester. Some, of course, lost their family homes and saw their relatives scattered across a number of states. Most tried to
remain in school, but some had to leave to assist family members. Stress was everywhere, and many students and adults in the state turned to cigarettes for comfort.

The stress was acerbated when a month later Hurricane Rita slammed into the coastal area near the Louisiana/Texas border, inflicting major damage on the coastline and the cities of Lake Charles, LA, and Beaumont, TX. Once again, LSU was closed for a couple of days and students (many of whose families had been evacuated to Lake Charles following Katrina) saw their families on the move once again. LSU students from the Houston/Galveston area left to help their families evacuate. It seemed that nearly every student not affected by Katrina was now experiencing the stress of Rita.

Hurricane Katrina had an immediate effect on the LSU SmokingWords campaign, an education program designed to influence both Louisiana State University and Southern University students to avoid tobacco products and smoking. In its fifth year as a program, but only in its first year of partnering with the newly formed Louisiana Campaign for Tobacco-Free Living, Hurricane Katrina destroyed TFL’s headquarters in New Orleans and scattered its staff. SmokingWords worked with TFL’s regional coordinator Pam Malveaux and a coalition of volunteer organizations to continue the campaign which was focused on secondhand smoke during the year. We were, however, unable to conduct formal research to determine what was happening to smoking rates on campus. Informal observation of selected smoking areas on campus did indicate that smoking increased at least during the fall 2005 semester when Katrina and Rita hit Louisiana.

The coalition and TFL staffers who remained continued the SmokingWords ad campaign and worked to pass a parish-wide ordinance that eliminated smoking in public places and called for smoking to be prohibited within 25 feet of building entrances. A survey of regular voters indicated widespread support for an ordinance that would prohibit smoking in restaurants and public buildings. Judges had the discretion of sending violators to jail or assessing up to a $300 fine. However, both the LSU and SU campuses considered themselves exempted from the law since they are state, rather than local, entities. Also, restaurants with bars were allowed to continue to have smoking sections.

A survey of LSU students conducted in the spring of 2005 indicated that 25 percent of students who have a job (about 75 percent of all LSU undergraduates) were exposed to secondhand smoke in their workplace with most of these working in the local food industry. Consequently, SmokingWords assisted in promoting a statewide law that would prohibit smoking in all public places, including restaurants.

The strategy during the spring and summer of 2006 was to pass ordinances in the largest population centers in the state, while lobbying the state government for a statewide law. The state legislature passed Act 815, Louisiana`s Smoke-Free Air Act ahead of the expected schedule. The Act became law on Jan. 1, 2007. This act prohibits smoking in most public places and work places, including all restaurants, school campuses, health facilities and retail businesses. The only exemptions are stand alone bars and casinos.

How this law will impact both the LSU and SU campuses remains to be seen. While both institutions prohibit smoking inside campus buildings, there are no designated smoking areas, so smokers tend to congregate near benches and receptacles. In many cases, these areas are right outside entrances, allowing smoke to be pulled into buildings.
and forcing nonsmokers to breathe secondhand smoke. On the LSU campus, the
buildings that are most affected by smokers are the Student Union, the main campus
library and large classroom buildings on the LSU campus and bench areas between
buildings on the SU campus. There are fewer problem areas on the Southern campus, but
residence halls appear to be the most constant problem spots. Although sports arenas on
both campuses are supposed to be smoke-free inside, the ramps and walkways leading
into the areas are not. Southern students also claim that the non-smoking rule inside the
stadium is not enforced at all, while smokers tend to congregate just inside the stadium at
the portal areas at LSU but do not smoke in the seat areas.

Current Research
Because of the stress resulting from the hurricanes and the political activity that
had occurred since the last SmokingWords research, the time seemed appropriate to take
a measure of support for the Smoke-Free Air Act and a smoke-free campus. This survey
marked the first attempt to interview representatives all campus groups: undergraduate
and graduate students, faculty and staff on both campuses. Previous studies focused only
on undergraduate students.

Our research questions are: 1) Has the overall percentage of students who smoke
increased because of hurricane-related stress? 2) Are students, faculty and staff at LSU
and SU aware of the law change? 3) Do students, faculty and staff at LSU and SU
support it? 4) Do students, faculty and staff at LSU and SU support policy changes that
would make both campuses smoke free?

Methodology
Both SmokingWords and TFL had devised surveys used in the past to determine
smoking rates and assess public opinion about smoking issues. TFL’s instruments were
designed to be administered as telephone surveys and were models on National Tobacco
Prevalence surveys. SmokingWords had conducted both telephone and mail surveys in
the past but both approaches no longer work well with college students. The increase in
the number of students who had only one telephone number—a mobile phone number—
and who routinely had caller id, made contacting students very difficult. Additionally, as
the number of mobile phone increased, students’ willingness to allow their phone
numbers to be listed in public directories went down.

We also had considerable difficulty in administering mail surveys. We could not,
for example, gain admittance to residence halls to deliver mail surveys, especially on the
SU campus. Also, because students are asked to complete a variety of paperwork,
increasingly online, returns on mail surveys were low.

When we tried online surveys, however, we were pleasantly surprised at the
return rates. Email addresses are generally available for all college students today and
are usually public. FaceBook and MySpace also have made students more willing to
share personal information about themselves and their attitudes. Because of our previous
successes and failures, we decided to combine the TFL instrument and portions of
previous SmokingWords surveys into an online survey instrument which was then
administered to a random sample of LSU students, faculty and staff and a census of SU
students, faculty and staff. Most were collected prior to the Jan. 1 implementation of the
law, but because SU students left campus a week before LSU students finished the
semester, a second wave was sent to SU students in January shortly after the new semester began.

A cover letter email was sent to the selected subjects, which invited them to click on a link that allowed the data to be collected on an LSU server. The survey was administered through the LSU Public Policy Research Lab and the IT manager at SU. The resulting data was analyzed using SPSS 12 and 15. A total of 1580 subjects responded to the survey (1365 from LSU and 215 from SU). The LSU sample includes 1061 students, 83 faculty and 182 staff. The SU sample includes 76 students, 51 faculty and 83 staff. In addition, 38 respondents from LSU and five from SU did not provide their classification. These are eliminated from much of the analysis.

**Results**

Although we were unable to conduct surveys during the terrible semester of 2005, we expected our subjects to be able to recall the degree to which they were affected and the level of stress that they suffered at that time. We asked our subjects to indicate which hurricane, Katrina or Rita, had the more negative influence on them. Not surprisingly, Katrina had the greater negative impact on the LSU and SU communities. About 55 percent of LSU subjects and 44 percent of SU respondents said they more negatively impacted by Katrina, while only about 6 percent from LSU and 4 percent from SU were more negatively impacted by Rita. However, 21 percent of SU subjects, compared to about 13 percent of LSU subjects, said they were negatively affected by both nearly equally.

On the LSU campus, 77 percent of faculty, 75 percent of students and 69 percent of staff said they were negatively affected. On the SU campus, 75 percent of students, 69 percent of faculty and 65 percent of staff were negatively affected by one or both hurricanes. When the totals from each campus are combined, 75 percent of students, 73 percent of faculty and 67 percent of staff were affected negatively.

Subjects were asked first to think back to the time just before Katrina and rate their stress levels on a scale from 0 to 10 with a 0 indicating little or no stress and a 10 representing extremely high stress. Interestingly, 16 percent of the campus community at SU rated their stress levels at 0, compared with only 5 percent of the LSU group. The overall average stress level was only about 4.36 and the median rating was 5 prior to Katrina. The mean increased to 6.62 with a median of 7 after Katrina. The overall ratings fell to an average of 5.47 with a median of 6 after Rita. The standard deviations ranged from 2.29 to 2.65 to 2.751 for each rating.
Post-Katrina, only 9 percent said their stress levels were at 0, but it increased to 21 percent following Rita. So, it is clear that stress levels overall rose and then fell for those on the LSU and SU campuses. This result, of course, excludes students who were at LSU temporarily and those who graduated or left campus since 2005.

The next step is to assess whether smoking levels were affected by the hurricanes and the resulting stress. Smoking prevalence was ascertained in two ways. First, subjects were asked whether they had smoked at least 100 cigarettes in their lives. As expected, the percentage who said they had smoked at least that many cigarettes was statistically significantly lower for SU when compared with LSU (p=.002). A quarter of the students, 28 percent of the faculty and 33 percent of the staff at LSU had smoked at least 100 cigarettes compared with only 7 percent of the students, 28 percent of the faculty and 23 percent of the staff at SU. However, when those who had smoked that many cigarettes were asked if they now smoke every day, some days or not at all, 37 percent overall smoke every day, 22 percent smoke some days, and 42 percent said they don’t smoke at all. Again there is a statistically significant difference (.005) between the campus responses. Thirty-seven percent of those on the LSU campus compared with 33 percent on the SU campus smoke every day, while 24 percent on the LSU campus compared with only 5 percent on the SU campus smoke some days. Nearly twice the number who had smoked at least 100 cigarettes on the SU campus now never smoke—63 percent compared with 39 percent on the LSU campus. Also, students on the LSU campus were the most likely to smoke every day or some days, while students on the SU campus were the least likely to smoke every day or some days when compared to faculty and staff.

The second assessment involved asking subjects to characterize themselves as regular or occasional/social smokers, former smokers who had not smoked in the past 12 months, and non-smokers who had never smoked. SmokingWords has consistently used these categories to track changes. However, previous surveys had assessed only undergraduate students. Based on the total sample, 12 percent said they are regular smokers, 11 percent said they are occasional or social smokers, 11 percent are former smokers and 66 percent are nonsmokers. But, as with previous results, there is a statistically significant different in the results between the two universities (p=.000).
Students made up the largest percentage of regular and occasional/social smokers in the LSU sample, while about 20 percent of the faculty and staff said they were former smokers. Staff at SU were the most likely to be regular or occasional/social smokers, but the staff also was the most likely (76 percent) to be non-smokers.

Next, respondents were asked whether they had begun to smoke or increased the amount smoked in response to the hurricane stress. Almost 20 percent of those from LSU compared with 16 percent from SU said that they had consumed cigarettes during this time. The rate was about 8 percent for LSU students and staff, compared with only 4 percent of the faculty. About 5 percent of all groups from SU confirmed an increase in smoking.

To break down these results even further, about 2 percent from both campuses said they began to smoke during this time. Nearly all of these respondents are students. Eleven percent of those from LSU, compared with 8 percent of those from SU, said they increased the amount they smoked.

The subjects were asked specifically whether relieving stress, coping with boredom or being with others who smoked led to their smoking behavior. Sixteen percent of those from LSU compared with 11 percent from SU said they used smoking to relieve stress. Ten percent from LSU and 7 percent from SU said they smoked to relieve boredom. Finally, 9 percent from LSU and 8 percent from SU said they were with others who were smoking. It should be noted that respondents could select more than one of these responses or write in their own reasons. Most of these other reasons had to do with simply enjoying smoking or being addicted.

Because of the obvious increase in stress on both campuses, SmokingWords began to run “stress” ads as part of its campaign in student newspapers on both the LSU
and SU campuses during the fall of 2005 and spring of 2006. The ad presented a series of statements for students to check and then assess their stress level. These lists included such things as “living in a FEMA trailer” and “credit card bill due.” The point was to encourage students to not reach for a cigarette in order to relieve stress. (See attached ad.)

The summer and fall of 2006, however, focused more on the passage of the city ordinance and the statewide law. The message changed in order to create awareness of the law and to encourage students to stop smoking (or not to start if they weren’t currently smokers) because the law would make it more difficult to smoke in public as well as encourage nonsmokers to speak up more about their right to a smoke-free environment.

Consequently, one of the things we measured in this survey is awareness of the law. (In addition to SmokingWords’ campaign, TFL was also running good quality ads on television and radio, in newspapers and on billboards, so we expect awareness to be the result of both campaigns.)

There were few differences between the campuses or student/faculty/staff designations when it comes to awareness of the Louisiana Smoke-Free Air Act or knowledge about the specific provisions. About 86 percent of all respondents were aware of the law. (Although some of the Southern data was collected after the law went into effect Jan. 1, 2007, there is no evidence that there were differences in knowledge between those who responded before Jan. 1 and those who responded after.)

When statistically significant results were found, they indicated that those on the SU campus were more aware of some provisions of the law. For example, 75 percent of those from SU, compared to 62 percent of those from LSU, were aware that the law prohibits smoking in public places. Eighty-four percent, compared with 77 percent from LSU, were aware that smoking is prohibited in restaurants. Sixty-one percent, compared with 45 percent from LSU, were aware the smoking is prohibited in workplaces with more than two employees.

There were no statistically significant differences between the campuses in support for the law. Almost 71 percent strongly favored and 11 percent somewhat favored the law at LSU (total of 82 percent). At SU, 77 percent strongly favored and 13 percent somewhat favored the law (total of 90 percent).

Not surprisingly, most of the opposition to the law came from regular and occasional smokers, while nonsmokers were the strongest supporters. Former smokers were more likely to support than oppose the law.

**Conclusions and Discussion**

We make the following conclusions in regard to our research questions:
1) Has the overall percentage of students who smoke increased because of hurricane-related stress? We did detect an increase of about four percent and do see an effect from the hurricane-related stress.
2) Are students, faculty and staff at LSU and SU aware of the law change? The vast majority on both campuses were aware of the law change.
3) Do students, faculty and staff at LSU and SU support it? Yes, they did show strong support for the law.
4) Do students, faculty and staff at LSU and SU support policy changes that would make both campuses smoke free? We cannot conclude that this is the case, but we also think the question lacks validity for this survey.

Clearly, there is a strong link between stress and smoking. Stress both triggers smoking and increases the frequency of smoking. While it is important to educate the campus community about the health issues involved with smoking and second-hand smoke, there also is a need to offer stress reduction classes or support to break the link. While these results were obtained only from those who either work on or attend classes on college campuses, these results likely indicate what will happen to large populations when stress is prevalent. For example, smoking has likely increased among the residents of New Orleans and other communities that were decimated by Katrina and Rita. When stress is combined with boredom, smoking is likely to increase even more as is the case with American soldiers in Iraq and Afghanistan. Journalists who have covered the battlefield have indicated that smoking is prevalent, even among those who smoked very little or not at all before being thrust into dangerous situations where entertainment options are limited.

Katrina and Rita contributed to an increase in smoking among undergraduate students. The overall rates had increased from about 23 percent prior to Katrina to about 28 percent today (with regular and occasion/social smokers combined). Another interesting pattern also emerged. Only about 57 percent of the seniors were non-smokers who had never smoked (compared with about 70 percent of the freshmen, sophomores and juniors). Seniors also were the most likely among the students to say that they had been negatively affected by the hurricanes. These are also the students who are under the most pressure to decide whether to remain in Louisiana or leave the state for employment. The rates for the rest of the undergraduates are closer to the pre-Katrina smoking rate. So, we can hope that the new law with the increased pressure on smokers to not smoke in public places will further reduce smoking rates among young people. However, life in Louisiana will continue to be stressful for many of its citizens, so stress reduction education should be a priority, especially on college campuses.

We did have difficulty with determining whether students, faculty and staff will support a smoke-free campus. The question that was supposed to assess this was: The new law does not prohibit smoking on university campuses. How much do you agree that the law should be extended to include university campuses? But, the response codes were set up to read: strongly opposed, somewhat opposed, neither opposed nor in favor, somewhat in favor and strongly in favor. The mismatch between the question and the codes resulted in 63 percent of those from the SU campus and 41 percent of those from the LSU campus indicating strong opposition to extending the law to campuses. Additionally, no one said they were strongly in favor of the extension. These results simply do not mesh with our other findings. Consequently, we are going to repeat this question on a spring survey after Kick Butts Day (March 28) and after everyone has adjusted to smoking restrictions in restaurants and other public places.
STRESS

How high is your stress level?
Find out. Check the statements that apply to you.

__ You aren’t ready for finals.  __ You’re living in a FEMA trailer.
__ You’ve gained five pounds.  __ You have to work all summer.
__ Your best friend is graduating, but you’re not.  __ You have to pay your credit card bills from Spring Break.

1-2 check marks, you probably would smoke a cigarette if someone offered it to you.
3-4 check marks, you are probably buying one carton of cigarettes and bumming all you can from friends.
5-6 check marks, you are buying two cartons of cigarettes and scouring the ground for any used butts you can find.

When stress makes you want to smoke ... take an exercise break, swallow a multi-vitamin, get more sleep, relax in a hot tub, call a friend who doesn’t smoke, save the money you’d spend on cigarettes, think about the poison you’d be breathing in and exhaling out for others to breathe.

For help to quit smoking, call 1-800-QUIT-NOW (the Tobacco Free Living quit line) and visit the smokingwords website at www.jh.edu/smokingwords or the TFL website at www.tobaccofreeliving.org.
PATTERN OF HEALTH EXPENDITURE AND UTILIZATION OF HEALTH CARE SERVICES IN ANDHRA PRADESH, INDIA; A CLOSER EXAMINATION

Economic growth and population health are positively related and the latter is a precondition for ensuring higher incomes and better wages. There are studies which proved that the ill-health and sickness have resulted in low or minimal wages in some cases no income at all. Further, it is observed that the income poverty has a direct bearing on the health condition of the families in developing countries. Therefore, improvement in people’s health is instrumental for the attainment of the twin development goals of poverty reduction and economic growth.

In fact, India spends less than one per cent of its Gross Domestic Product (GDP) on public health, which is grossly inadequate. Public investment in health and essentially in primary health care needs to be much higher to accomplish health targets, to reduce poverty levels and raise the rate of economic growth.

In developing countries poverty of a family reflected by low incomes and low wages which in turn, results in poor health. Again low income coupled with poor health leading to low productivity resulting in lack of employment. Lack of employment ultimately results in lack of having minimum food to sustain and shelter. In fact, it is a circular causation of poverty that needs to be broken to free millions of people who are groaning under poverty. Although we are a signatory of Millennium Summit of the United Nations in September 2000 with regard to the adoption of the Millennium Development Goals.

The Report of the Commission of Macroeconomics and Health in 2001 (CMH 2001) rightly argued that poor health was one of the most important determinants of poverty and urged the governments of developing countries to improve their health systems by investing in their people’s health through increased budgetary allocations.

Provision of Primary Health care by the governments is a basic precondition for ensuring better people health at least in developing countries. In the wake of globalization and privatization the poor communities in India are not able to pay their health expenses and approaching quacks and registered medical practitioners (RMPs) with limited borrowed funds at their disposal. On the other hand, the lower middle class and middle class people are the ones who are increasingly spending on health and utilizing the health care services of private sector in the absence of public provision of primary health care. As a result, health expenditure in a family’s budget has risen since a decade especially from 1995-96 at the expense of other items or needs. Therefore, it is important to see the reasons behind the rising health expenditure and also examine the utilization of public and private health care services.

The Case of Andhra Pradesh state

The state of Andhra Pradesh (AP) has a variety of health services available to its population. On the one extreme there are the high tech hospitals and diagnostic centres in Hyderabad city and on the other one has village health guides, folk healers, faith healers and quacks in remote villages. In between these two extreme situations there are district general hospitals (civil hospitals) private hospitals and general private practitioner dispensaries and clinics (allopathic, ayurvedic and homeopathic) rural hospitals, primary health centres and sub centres.
For instance, in 2002 in India there were 15393 government hospitals in total, 15 hospitals per ten lakhs population, 89 beds per one lakh population and 82 nurses per lakh population. On the other hand, in 1999 there were 54 doctors per one lakh population in the country. As per the standards set by the Bhore Committee in 1946 the ratios should have been 1: 1600 (doctor per population) and 1: 175 (bed per population) respectively, distributed evenly all over the country. On the contrary, the situation in AP is different. As on 31.03.2003 doctor per population is 8788; bed per population is 2151 and the hospital available for every 43,000 population in the state. Although an extensive primary health care infrastructure provided by the government exists in the country as well as in the state yet it is inadequate in terms of the coverage of the population, especially in rural areas and grossly underutilized because of the dismal quality of health care provided.

As a result, most people in the state even the poor choose expensive health care services provided by the largely unregulated private sector. Not only do the poor face the twofold burden of poverty and ill-health, the financial burden of ill health has pushed some of the non-poor families into poverty.

Secondly, the private sector has outgrown the size of public sector in the medical care in AP. According to the 52nd round of the National Sample Survey (NSS), the private sector accounted for about 75 per cent of inpatient and outpatient care in AP in 1995-96. In 1999-2000 the per capita household expenditure on medical care in AP was Rs. 363 p.a. which was two and a half times more than the state government expenditure (Rs.149). Again within private health expenditure it appears that the lion’s share is taken away by outpatient medical care services. Therefore, there is a need to look into the pattern of expenditure and utilization of health care services in rural and urban areas of AP.

The question is, are there an adequate number of health care providers in the state to meet the health care needs of the population. If one looks at the official/
published data then the aggregate ratios that emerge (doctor, bed, nurse and hospital as a ratio of population) reveal that there is a large shortfall when one considers any adequate minimum standard.

Andhra Pradesh (AP) is perhaps the first state to introduce health reforms and create awareness among people about public delivery of health care services in rural areas. The initiatives taken up include user charges, urban health centres managed by NGOs, 24 hour (round the clock) PHC with gynaec and pediatric specialists in some selected PHCs and other services.

**Objectives and methodology**

The objective of the study is to examine the pattern of health expenditure in public and private sectors and delivery of health care services offered by the state government.

The methodology of the study include a structured questionnaire meant for eliciting peoples’ perceptions and views on health care services in the state. As part of the study sample has been taken randomly from three districts (representing each one of the regions namely Telangana, Rayalaseema and Coastal Andhra) viz., Karimnagar, Cuddapah, and West Godavari and interviewed people from different income classes. The selection of different income classes, viz., poor, lower income, middle income and higher income classes is based on purposive random sampling, and it is to know the perceptions of people who are dependent on public health care over a period of time. The use of secondary data enabled us to have a broader picture of health sector in the state, draw conclusions and recommendations about rising health expenditure and health care services provided by the state government.
Results and Discussion

Health expenditure and health indicators in selected countries showed that India is lagging behind and it is reflected in low HDI rank (127). Even some of the neighboring countries like China, Srilanka, Indonesia and Vietnam are faring well compared to India. Besides, health expenditure as a percentage of GDP, in 2001, in the private sector registered 4.2 whereas the public sector has 0.9 to its credit (table-1). It is an indication of neglect of health sector in the budget allocations and encouraging the private sector to enter into the key areas of the state. Given the structure of the population in terms of income about 75 per cent people are depending on public sector health care services whereas 25 per cent are able to buy the private sector services. In such a situation increased state intervention is highly essential in catering the medical and health needs of majority population.

According to the Report of National Commission on Macroeconomics and Health 2005 health care spending by private households accounted for 73.4 per cent public sector 19.4 per cent and others 7.2 per cent.

It is an irony that 25 per cent of population accounted for 74 per cent of health care spending whereas 75 per cent of population accounted for 26 per cent of health expenditure in the state (table-2). Therefore, ‘health for all’ has become a mere slogan in the country for the last one decade in the absence of adequate public spending.

Health expenditure, in current prices, over a period of time has clearly shown that it has been declining steadily from mid seventies (10.8 per cent) to recent time 2006-07 and finally stood at 4.5 per cent of the state budget (table-3). The increase in per capita health expenditure in constant prices is also very minimal when compared to the demand for health care services. It is clear that the health expenditure in the public sector has come down over a period of fifty years in the state. Added to this the privatization of health sector has aggravated the problem
and resulted in ‘private sector’ as the Hobson’s choice. On the other hand, the initiatives like collection of ‘user charges’ in government hospitals from poor and lower middle classes while the richer sections have moved away from public health has really resulted in penalizing the poor. As a matter of fact, the better off utilizes health services more than the poor have shifted towards the private sector in view of the low quality public health systems and the user charges. Therefore, when a person falls sick he/she has to go to private hospital whether affordable or not leading to debt ridden families. This is clearly observed in the rural areas in the state.

A study conducted by NCAER has proved that the public sector subsidies benefit the better off more than the poor. While public sector subsidies for PHC and immunizations tend to benefit the poor this is more than offset by the concentration of public subsidies for inpatient care on middle and higher income groups. It was also shown that 86 per cent of subsidies at all India level accounted for hospital care while inter-state variations exist.

The benefits are distributed in a more equitable manner in Gujarat, Tamilnadu, Kerala and to some extent Punjab because the poor tend to have relatively more access at all levels of facilities in these states. On the other hand, the distribution of public subsidies in Bihar, Haryana, Himachal Pradesh, Madhya Pradesh, Northeastern states, Orissa, Rajasthan, and Uttar Pradesh is less equitable than for India as a whole. In a way the state of Andhra Pradesh also comes in this category as PHCs are neglected in public spending.

Further, from the perspective of equity, clearly the levy of user charges is likely to hurt the cause of equity, as a large section of hospital beneficiaries is the poor who are generally exempted from payment of user charges. Also at the same time the well to do people are shifting away from public health care system to the private one. This has resulted in the dismal performance of the user charges as is evident from rather small collections on this account. Thus user charges apart
from hurting equity have also put a question mark on the sustainability aspect as well. Therefore, if we have to ensure both equity and sustainability of projects in the health sector we have to seek other options of raising funds such as health insurance, and providing additional resources while focusing on improving the allocative efficiency.

As per NSS data the per capita medical expenditure (PCME) of Andhra Pradesh is Rs. 363 in 1999-2000. Further, PCME is not rising consistently in relation to the growing demand for the public provision of health care services in the state. Rural, urban disparities in PCME are less as opposed to the needs of the people in rural areas which are higher than urban people.

Health and family welfare expenditure has registered an increase up to 1998-99 and thereafter declined steadily reflecting the neglect of health of people. When we look at the health infrastructure in terms of hospitals, beds and doctors although it has shown an increase it is not sufficient when it is seen from (aggregate ratios) per lakh of population.

District wise analysis of health infrastructure showed that there are regional variations in provision of public health services. Number of beds per lakh of population during 1961 to 2004-05 shown that there is a declining trend in coastal Andhra, Rayalaseema and Hyderabad whereas north and south Telangana have registered an increase. Further, number of beds per lakh of population is the least in south Telangana (34.50) followed by north Telangana (39.19) as against the state average of 47.76 during 2004-05. On the other hand, north coastal Andhra has the highest 51.32 followed by Rayalaseema 45.88.

Contrary to the above situation, number of doctors per lakh of population region wise showed that there is an increase during the period under consideration. Going by same indicator the Rayalaseema, north and south coastal Andhra regions have more number of doctors compared to the north and south
Telangana. It shows that the successive governments led by Andhra rulers have neglected the Telangana region. A mention about some of the districts in Telangana (Khammam, RangaReddy, Nalgonda, and Karimnagar) is essential as they are very backward in provision of health care services. As a result, they have witnessed more number of deaths, epidemics and high rate of morbidity.

To cross check the situation discussed above and to know the pattern of health expenditure and the utilization of health care services provided by public and private sectors in the state we have interviewed 84 men and 48 women in rural and urban areas of three districts (consider table-7).

Majority respondents informed that they have visited private hospitals for emergency services followed by chronic diseases. They opined that they are not receiving better health care during emergency situation. Therefore, though it is very expensive, they approached private hospitals and incurred huge money in some cases. There is also worth noting point that people are visiting private hospitals even for safe deliveries in the absence of lady gynecologist in PHCs inspite of health reforms initiated in AP. The prevailing situation in the health sector corroborates the fact that the public health care in the state is in a bad shape while the government is making tall promises like 100 per cent institutional deliveries and ‘health for all’ (consider table-8).

When enquired about the reasons for rising health expenditure they told that it is chiefly due to absence of public spending in the health sector which got reflected in the lack of medicines, diagnostic facilities such as X-ray and finally absence of quality health care services. When seen these reasons independently men and women respondents expressed in the same tone that lack of diagnostic facilities and medicines are the main reasons which compelled them to go in for private hospitals and thereby leading to rising health expenditure. This is particularly observed very much in the case of lower middle classes whose annual income does not exceed Rs. 35,000. Most of the time, they say, that they borrowed
money from others at a rate of interest or taking loans from workplaces and other sources. This is how their debt burden is increasing and affecting adversely the expenditure pattern of a family. Ultimately they say education is the casualty in these families. Otherwise they would have sent their children to a private school which is a luxury for them (consider table-9).

The expenditure made on health check ups and treatment in private sector has been worked out and shown as average amount spent by each household. It is clear from the field data that it is rising since 3 years in all the three districts. It is very high in the case of Karimnagar district followed by West Godavari district. We can see that the people are ready to spend any amount when there is an exigency (health problem) as the awareness levels are very high. But ultimately the health expenditure is pushing them into poverty and making them vulnerable (consider table-10).

The data show that a family whose annual income is just below Rs. 35,000 is prepared, though not affordable, to spend in private hospitals in the absence of proper public health care facilities. In many cases it is observed that if a doctor is available medicines and diagnostic facilities are absent. If the latter facilities are available the former may not be attending the hospital. This is true in most of the PHCs as the doctors are having a strong lobby in not yielding to the government orders. In rural areas the doctors visit the hospital once or twice in a week whereas it is still worse in tribal areas. Therefore, the outbreak of a gunya fever in the last year in AP has taken the lives of hundreds in tribal areas.

**Conclusions and Emerging Issues**

It was also observed that the rate of morbidity, treatment and health expenditure is high among lower income classes whereas it is low among higher income classes. There is also a perception that the health reforms have adversely affected the poorer sections in the wake of user charges and absence of free public health care services. The results showed that the large chunk of health
expenditure is towards private sector in the absence of proper and adequate public sector health care services in the state. One of the plausible explanations for this situation is that the state health expenditure as a percentage of GDP is less than 2 and medical services expenditure as a percentage of GDP is below 1. It corroborates the fact that the social sector allocations particularly to the health sector by the government have come down while the demand for it has increased tremendously.

Given the situation in the health sector it is important to have a look at the options like raising funds such as health insurance, and providing additional resources while focusing on improving the allocative efficiency.

Hence, there is a demand for universal and relatively equitable health care and the need to curb rising cost of health care services. It was observed that in both cases only increased state intervention would help sort out the matters. Thus one needs to look at the private health sector and private health expenditure closely in this context.

A key finding resulting from recent natural disasters is the need to reexamine and enhance training and education programs that prepare public service professionals for work with diverse populations in multiethnic communities during disaster occurrences and long-term recovery. In general, there is a lack of education and training in cultural competence among emergency management and other disaster relief professionals, who are usually members of the majority and do not reside within those minority communities in which they may provide services. The problem is further complicated when one considers intercultural diversity within ethnic groups and its impact on the helping process during a disaster occurrence. According to Hogan (2007) and associates, many good intentions are often lost when disaster relief workers and professionals “think” they are culturally sensitive, but are not familiar with the realities of intercultural diversity and its impact on the helping process.

The purpose of the panel session is to demonstrate how social work education programs can collaborate in the development of culturally sensitive practitioners to prepare them for the realities of disaster recovery case management within multiethnic communities. A particular emphasis is placed on the development of partnerships between two academic social work education programs and a nationwide faith-based organization. Another goal is to understand how intercultural diversity affects disaster recovery case management with indigenous populations in the mainland U.S.A. and the Pacific Islands. Common themes and differences in responses to a disaster occurrence by
multiethnic groups will be discussed. The participants will introduce attendees to the broad array of issues needed to prepare public service professionals for culturally competent practice with multiethnic groups during disaster relief occurrences. The discussion will include information on methods for designing training and educational opportunities for social work practice with diverse intercultural populations in a disaster occurrence. We will also introduce a model for training social work students in multicultural case management for disaster recovery. Our approach involves the integration of crisis intervention and emergency management research into a self-paced, web based training program designed to develop culturally competent service providers and professionals. A central component of the program places emphasis on cross-cultural and intercultural awareness, program evaluation and evidence-based knowledge development, culturally sensitive mental health intervention, assessing and shaping organizational cultural competence, and strategic planning for assisting vulnerable populations in disaster relief and long-term recovery. Particular attention is placed on the development of a model that can be replicated in other domains that will not only educate and train mental health professionals for culturally competent practice, but also provides feedback for the development of best practices and evidence-based practice measures that are specific to the needs of a given community.

**BACKGROUND AND NEED**

In recent years, natural disasters have hit more frequently in the United State. An earthquake at 6.7 in magnitude hit the Hawaiian Island of Kailua in October 2006 and was followed by heavy rain fall in parts of the state. The quake caused widespread power outages, hindered telephone communication and was followed by numerous aftershocks.
The August 2005 Hurricane Katrina is on record as one of the worst floods in the history of the U.S. and has displaced over 100,000 individuals with over 2000 reported deaths. Florida has been hit hard during hurricane seasons.

In 2004 Charley and Ivan marked the first time that two major hurricanes, Category 3 or higher, hit Florida in one year since 1950. Over 100 people lost their lives and approximately 25,000 homes were destroyed. With another 40,000 homes suffering major damage, the cost has been estimated at $42 billion in total property losses. Charley devastated the state's central east coast and is considered the worst natural disaster to hit Florida since Hurricane Andrew in 1992. Florida’s tourist and agricultural industries suffered billions of dollars in damage and loss wages. The citrus industry alone, the mainstay of Florida agriculture, suffered almost $500 million in initial damages and an estimated over 2 billion dollar in overall loss.

One of the major challenges to disaster relief and crisis intervention professionals is the development of methods for initial access and long-term services to vulnerable populations such as rural minority residents, migratory families, persons with disabilities, low-income families, the homeless, and the elderly. Beyond the general risk that all geographic localities face during hurricane season, many of these communities and individuals face greater risk due to their sometimes less than adequate access to public resources (Zakour & Harrell, 2003).

Coupled with this problem is a general lack of education and training in cultural competence among emergency management and other disaster relief professionals, who are usually members of the majority and do not reside within those minority communities in which they may provide services. These professionals often struggle in the long-term
case management process with the most vulnerable populations due to language barriers and other cultural factors that, if not understood, can hinder the helping process. As such, the research literature in this area is replete with examples of stress, burnout, and posttraumatic disorders related to long-term case management with the most vulnerable populations (Puig & Glynn, 2003).

SOCIAL WORK EDUCATION AND DISASTER RELIEF

The social work profession with its emphasis on advocacy and empowerment of vulnerable populations has much to offer disaster relief education and training. The presentation outlined a three-part demonstration project developed by Florida State University College of Social Work in collaboration with Catholic Charities USA and the University of Hawaii School of Social Work. It outlines the development of a self-paced, on-line computer-based education and training program as well as face-to-face instruction. Program certification is within one of three modalities (1) a degree seeking certification program with a dedicated internship for MSW students; (2) a non-degree certification program which does not require field placement for MSW and can be attended by non-social work students, particularly those engaging in continuing education; (3) and an on-line special topics course entitled: Culturally Competent Emergency Management which is open to degree seeking and non-degree seeking individuals. The training website can be found at www.disasterrecoverytraining.org. Individuals interested in the on-line training program can contact the program chair, Martell Teasley: mteasley@mailer.fsu.edu.
I. Program Objectives

After successful completion of this training program, participants will be able to:

- Understand the meaning of cultural diversity and how it affects the helping process during and after a natural or human induced disaster.

- Understand the signs and symptoms of stress, burnout, and posttraumatic stress syndrome as they relate to disaster recovery.

- Understand how to become culturally competent and how to determine individual, group, and organizational levels of self-awareness towards cross-cultural sensitivity in the helping process.

- Demonstrate awareness, skills, and strategies for dealing with stress, burnout, and other mental health challenges that result from short-term and long-term recovery case management.

- Understand how vulnerable populations may be disproportionately affected by the impact of disasters and methods for advocacy and facilitating healthy outcomes for these populations.

- Assess and facilitate community risk and preparation for a disaster occurrence, crisis intervention, and long-term recovery.
• Understand and assess organizational culture including administration, management and staff in terms of cultural competence and preparation for crisis intervention and long-term recovery with vulnerable populations.

II. Structure of the Training Program

This is a self-paced training program that should be completed within 120 days from the start. Depending on the individual reader, this training will take approximately 60 hours to complete. The curriculum consists of five modules with each demonstrating micro, mezzo, and macro-level implications.

Module 1: Understanding Cultural Diversity and Cultural Competence

Module 2: Racial & Ethnic Diversity and Disaster Relief

Module 3: Vulnerable Populations & Disaster Relief

Module 4: Case Management & Long-Term Disaster Recovery

Module 5: Cultural Competence & Disaster Relief Organizations: Strategies, Skills & Community Practices

The bulk of the program consists of chapters of text for review, followed by a test in each chapter. Tests contain multiple-choice questions and true/false questions and are based on the materials from the corresponding chapter. This program uses video and audio streams and PDF files as part of the training. It is necessary for the user to review all video and audio components of the training in order to successfully complete the certification program. Listed throughout this program are links to websites that provide
additional in-depth information about specific topics. After completion of the entire program, users will have to take a posttest. The posttest is designed to see how much of the information provided in the curriculum has been retained. In order to receive certification, users must achieve a passing score on the posttest.

III. Research Components

The evaluation plan for this project consists of three phases: (1) It gathers data from all components of the project including on-line and face-to-face classroom education; (2) structured interviews with emergency management professionals and volunteers are conducted; (3) finally, recipients of services will be part of structured interviews to discuss their experiences. Both quantitative and qualitative methods will be used through survey research and structured person-to-person interviews.

The evaluation plan will also consist of data collected from both Florida State University College of Social Work and the University of Hawaii School of Social Work. Findings from both quantitative and qualitative methods used for the project will be discussed to include the results from data collected through survey research and structured person-to-person interviews by personnel from Florida State University.

The Role of Nuclear Policy in Bulgaria’s Accession to the European Union: A Case Study in Sociopolitical and Economic Compromise

Julia Terlinchamp
Fulbright Research Student

Email: jterlinchamp@gmail.com

Abstract:

In 1993, Bulgaria agreed but later failed to decommission the four older Kozloduy Nuclear Power Plant (KNPP) reactors, deemed unsafe by the IAEA. In 1999, the EU required Bulgaria to commit to the closures before it could begin Accession talks and in 2002 they signed a third agreement affirming their promise. The last reactor was closed on December 31st, 2006 only hours before Bulgaria became an EU member. The EU claims that KNPP is still not considered "safe," but the plant has come to represent a warning in Bulgaria’s ability to comply with its past agreements. In contrast, the Bulgarian government declares these closures as “absurd,” given the recent safety modifications, and has launched a campaign to reopen them. This struggle to save KNPP symbolizes Bulgaria’s fight for its pride and sovereignty. The "forced" closures of the Soviet-era NPP have thus become central to the continuing controversy over the EU, in which some see the solution to Bulgaria's economic woes and others see the threat of further imposition. Analyzing Bulgarians' reactions to the EU demands, this paper reveals the intensity of these feelings and the degree to which Bulgaria's integration into Europe will challenge their future together if they are unable to resolve their differences.
Bulgaria has endured a long history of foreign influence, from the Romans to the Ottomans to the Soviets. Since the 1989 Revolution, Bulgaria has paved its way toward a fresh new future, one proud of its own accomplishments and actions, and one where sovereignty prevails. However, as with many nations of relatively small stature, it often requires the security and strength of a greater power, achieved through alliance, in order to help accomplish its own agenda. Timm Beichelt argues that, concurrent with the fall of communism, nearly all the political elites in Bulgaria recognized the importance of establishing a strong partnership with the European Union, in order to have favorable access to the West European market.\(^1\) However, as part of EU Accession, Bulgaria was asked to pay what it viewed as a high price in order to gain membership.

As part of the EU’s requirements for accession, Bulgaria was told to decommission Units 1-4 of the six reactors at Kozloduy Nuclear Power Plant (KNPP). Bulgarians have since come to view KNPP as more than just an economic asset, but rather as a symbol of what sovereignty still remains in the face of EU imposed regulations. It is an example of Bulgaria asserting its autonomy despite potentially negative social and economic consequences. In contrast, the EU views the Kozloduy reactors as unsafe, and the campaign to reopen them, as threats to Bulgaria’s ability to follow through on its promises. Since Bulgaria has signed three treaties thus far agreeing to close the units, the EU sees the KNPP reactors as indicative of trustworthiness.

\(^1\) Beichelt, 2004.
This paper is more than just a discussion about energy security, economic development and international treaties; it is a commentary on the relationship between the European Union and its newest members. For the EU, it is about a partnership based on trust and commitment, while Bulgaria, as one of the EU’s more recent members, believes in its right to maintain a certain level of independence, respect and control over its own resources. This paper attempts to present both perspectives from a neutral point of view, not to provide advice or solutions, but rather to delineate the stalemate created by these opposing points of view. This complex issue first must be understood through the lens of Bulgaria’s history before any attempt can be made to understand the profundity of the tension within the current EU and Bulgarian relationship.

History: A brief review

Construction of the first KNPP reactor began in 1970, the first of four VVER-440/230 units planned.2 Soviet-era reactors first attracted international attention after the April 26, 1986 Chernobyl disaster in Ukraine. Both technical error and the lack of a safety culture played significant roles in the grave disaster. In turn, nuclear safety dominated the 1992 G-7 Summit where the International Atomic Energy Agency (IAEA) was commissioned to study all 66 Soviet-designed reactors in Eastern Europe. Consideration was given to replacing less-safe reactors with alternative energy options and increasing energy efficiency. A proposal was made to countries in Central and Eastern Europe to take part in a multilateral Action Program to promote safety and encourage early closure of their NPPs. Slovakia, Lithuania and Bulgaria were categorized as operating the most “dangerous” nuclear power plants in the region. According to the

---

2 Units 5 and 6 are VVER-1000/320 models, put into operation in 1988/1993 and feature additional safety measures.
G-7, the four oldest KNPP reactors, Units 1-4, were considered “non-upgradeable to international safety standards at a reasonable cost.”

Soviet-designed VVER reactors are virtually the same type of water-pressurized model as seen in the West. However, during the Socialist period, Bulgaria did a poor job of ensuring the safety and efficacy of KNPP. IAEA inspectors were horrified when they visited the plant in the early 1990s, remarking how appalling and poorly run they found it to be. Nicole Foss of the Oxford Institute for Energy Studies wrote about a 1991 IAEA visit to KNPP, where they reported that, “the probability of a serious accident, potentially arising from any one of a range of critical defects, was very significant.”

Furthermore, the G-7’s major complaint about Units 1-4 is that they have no containment structure in case of a leak or accident. Therefore, Bulgaria signed the Nuclear Safety Account Agreement (NSAA) as part of this Action Program in conjunction with the European Bank of Reconstruction and Development (EBRD) in June 1993. According to the NSAA, Bulgaria agreed to decommission Units 1 and 2 by 1997 and Units 3 and 4 by 1998, accepting 24 million ECU ($30.5 million) to help with preparation of the closures as soon as the energy situation would allow. Funding for this program was provided by a number of countries around the world in addition to the European Community.

Due to a number of factors, including the crash of Bulgaria’s economy from 1996 to 1997, the reactors were not closed as promised in the NSAA. In fact, throughout the 1990’s, Bulgaria spent millions of dollars to implement an extensive safety modification program in an attempt to meet Western standards. During a visit to Bulgaria in late 2002

4 Foss, June 1999.
5 EBRD, February 2006.
the President of the World Nuclear Association, John Ridge, touched on this issue, stating that, “Back in 1993 Bulgaria had the choice either to close the small units of Kozloduy or to modernize them. And Bulgaria took the decision in favor of modernizing the small units.” However, the modifications seemed to make little impact on the EU’s decision to hold by the provisions of the NSAA, still viewing Units 1-4 as “unsafe.” Therefore, as a candidate country for EU membership, Bulgaria was pressured to sign an agreement once again committing to decommission the four reactors as a condition to begin EU Membership talks. On November 29, 1999 a Memorandum of Understanding was signed by Bulgaria and the European Commission, stating that Bulgaria agreed to decommission Units 1 and 2 of KNPP by 2002. The closure dates for Units 3 and 4 were to be agreed upon at a later date. Negotiation talks commenced less than two weeks after the Memorandum was signed, when Bulgaria began discussions with the EU about closing all 31 chapters of the *acquis communautaire*. 7

Over the next few years, the Bulgarian government enthusiastically encouraged a campaign to keep all four reactors open, in addition to spending several hundred millions of dollars more on Units 3 and 4. In July 2002, IAEA experts were invited to assess the improved safety features of KNPP; they concluded that Units 3 and 4 met the same levels of safety of any other Western European reactor of similar age. The Bulgarian Parliament even passed a nearly unanimous, non-binding vote in 2002 to keep Units 3 and 4 operating until after Bulgaria joined the EU. However, the Bulgarian government, due to the pressure placed by the EU, felt obligated to close the reactors if they wanted to join

---

7 The *acquis communautaire* refers to the total body of common rights and obligations that connect the EU.
by 2007. Therefore, a third agreement was signed in November 2002 as part of the ministerial meeting in the Negotiations Conference, specifying that the closures of Units 3 and 4 would take place no later then 2006. However, Bulgarian officials declared that they had in fact agreed to close the reactors down sometime between 2006 and 2008. Furthermore, according to Matthew Tejada, the Energy chapter was only provisionally closed, creating the possibility that it could potentially be reopened in the future. Recognizing this reality, “The EU had in fact sent a weak yet unmistakable signal that it would severely look down upon the reopening of a closed chapter.”

On December 31, 2002 Bulgaria closed down Units 1 and 2 as agreed upon in the 1999 Memorandum. Over the next few years, Bulgaria cited the likelihood of a severely adverse economic impact due to the loss of exports and need for the construction of alternative means of generating the lost electricity as its reason for wanting to delay the closures. As of 2005, Kozloduy Units 3-6 were responsible for 42% of the nation’s electricity production. In addition, KNPP had helped Bulgaria ensure its place as the region’s top energy supplier, exporting 7.6TWh of power to the Balkans in 2006 alone. Although some argue that the estimated loss of 6TWh of power can be covered by national reserves and an increase in energy efficiency, prices are expected to rise by 20% due to the closures in an already economically fragile region. Currently, Eurostat

9 The text from the Negotiations Conference reads, “…the EU notes that Bulgaria agrees with the EU Common Position (CONF-BG 79/01) and commits to the closure of units 3 and 4 of Kozloduy NPP in 2006 (CONF-BG 53/02)” (Primatarova, 2005).
10 Belin, December 2002.
12 Raxhimi, October 2006.
measures Bulgaria’s level of energy efficiency to be 2.3 times worse than the EU average.13

The EU remained unmoved by Bulgaria’s arguments, declaring its belief that Bulgaria must honor its past agreements if it were to join in 2007. In turn, Bulgaria shut down Units 3 and 4 on December 31, 2006 hours before it became an official EU Member on January 1, 2007. Though the reactors are now closed, the Bulgarian government continues to argue over the unjust nature of the EU’s lack of willingness to renegotiate the closures. This is reinforced by the claim that Bulgaria never signed a “true” treaty in the recent past, especially in reference to the 2002 agreement. In contrast, the EU continues to insist Bulgaria should end its campaign to reopen the reactors, as the Accession process has ended, and the negotiations were final.

EU Perspective: Can Bulgaria be trusted?

Over the process of its Accession, the European Union has come to question Bulgaria’s hesitancy to cooperate and whether it can be trusted as a new member. The controversy over Bulgaria’s commitment to the closures, as originally outlined in the NSA Agreement and then later by two more agreements, led to a perception in the EU that Bulgaria has difficulties remaining true to its negotiated commitments. Subsequently, as Bulgaria was preparing for the last of the closures in 2006, the EU voiced concern about Bulgaria’s willingness to finalize the decommissioning of its reactors. Bulgaria may be perceived by some as gambling with its own reputation within the international community, by hesitating to follow the “rules” and permanently close the four reactors.

From the European Union’s perspective, Bulgaria has signed three international agreements, promising to decommission Units 1-4. From the 1993 NSAA, 1999

---

13 Petrova, November 2006.
Memorandum of Understanding and then to the 2002 Agreement over Units 3 and 4, Bulgaria seems continually to appear in search of loopholes to help avoid its previous arrangement. Despite recognizing the economic impact that the closures will have, the EU remains firm in its decision to close the reactors, arguing that they still do not consider the reactors to be safe enough. In a December 1999 report in *The Guardian*, the U.S. Department of Energy classified KNPP as "one of the seven most dangerous nuclear plants in the world," while the Nuclear Information Resource Service, a U.S. environmental group, labeled KNPP as, "the most dangerous nuclear plant in the world." More recently, Handelsblatt newspaper reported Kozloduy to be one of the most dangerous plants in Europe. In 2002, the EU head of the mission in Bulgaria, Dimitris Kourkoulas stated,

"The EU has a responsibility for the safety of our citizens and also for the citizens of future member states…We don't ask the Bulgarians to close Kozloduy altogether but only the first four units which we believe have some designs problems that could not be upgraded."

Several months before Bulgaria became a member, the EU criticized it for its inability to comply with its commitments as seen in the 2002 closures of Units 1 and 2. According to the European Commission’s May 2006 report, Bulgaria had yet to begin the irreversibly dismantling Units 1 and 2 despite having closed them down in December 2002. The report also noted that Bulgaria had yet to comply with necessary measures that would lead to the “definitive” closures of 3 and 4, in order to ensure their decommissioning.

It is challenging for the EU to fully trust Bulgaria, when only days after meeting a 14 year-old commitment, government officials began campaigning to overturn that very

---

17 Cooper, June 2006.
agreement, claiming that Bulgaria should retain the right to decide whether and when to close its reactors. However, membership in the EU, or any multinational organization, involves a certain loss of sovereignty for all member states. The European Commission notes that, “Bulgaria has decided of its own free will that its interests are best served through EU membership,” which requires agreeing to the EU’s wishes to close the reactors.\(^{18}\) Nevertheless, Bulgaria continues to protest the required closures post-accession. It promotes its own “action plan” which includes large monthly open forums to discuss saving Units 3 and 4, with the disclaimer that these events are not intended to give any false impressions that they will in fact be saved.\(^ {19}\) In turn, the European Commissioner for Energy, Andris Piebalgs, has stated that Bulgaria’s lobbying to reopen KNPP Units 3 & 4, sends “a bad signal for investors and citizens of the EU, as the country entered the Union on certain conditions and then the same conditions would be changed.”\(^ {20}\) Furthermore, as written in Capital, a Bulgarian newspaper, on October 18, 1999, "The EU is not willing to have a new agreement on Kozloduy every time a Bulgarian government changes. They want a fixed timetable, and this is not unreasonable, since a legitimate government did voluntarily agree to such in 1993."\(^ {21}\) However, Bulgaria believes it is holding firm not for whimsical reasons, rather, it is attempting to salvage what sovereignty remains.

**Bulgaria’s Perspective: Straddling sovereignty and its EU alliance**

From the very beginning, the details of the NSAA are somewhat vague, as the Bulgarian government never believed that the agreement was legally binding. Every time

\(^ {21}\) Karadjov, March 2000.
discussion about the early closures was raised, the EU still continues to defend its
decision based on a technical argument.\textsuperscript{22} As a result, given that there is no \textit{acquis} or
unified EU policy on nuclear safety, it is challenging to justify whether or not a nuclear
reactor is considered “safe.” The EU argues that Units 3 and 4 do not have a proper
containment structure to ensure a means of securing any possible nuclear leak or spill.
However, Units 3 and 4, the reactors in question, are VVER-230s, and though they may
not have a containment structure in the western sense, according to the World Nuclear
Association, they do have proper safety measures to prevent a radioactive leak.\textsuperscript{23} A large
scale upgrade program was implemented between 1997 and 2002 on Units 3 and 4. The
IAEA was then invited by Bulgaria to review the reactors in June 2002, and they
concluded “that the operational and design safety at Kozloduy now corresponds to the
level of improvements seen at similar vintage plants.”\textsuperscript{24} Furthermore, in 2003, the World
Association of Nuclear Operators conducted a separate inspection, and reported that the
units met all necessary international standards for safe operation.\textsuperscript{25} In addition, the
President of the World Council of Nuclear Workers, Andre Maisseu, recently wrote a
public letter of support for the continuation of the reactors, noting that Bulgaria has a
“moral obligation” to do so.\textsuperscript{26} Likewise, Bulgarian Academy of Sciences Chairman, Ivan
Yukhnovski, recently discussed how the level of safety since the modernization of Units

\textsuperscript{22} Primatarova, 2005.
\textsuperscript{23} WNA, 2007.
\textsuperscript{24} The IAEA review also confirmed that, “Many of the safety measures taken by the plants exceeded those that were
foreseen in the design, operation and seismic areas. Plant management and technical personnel were found to be
dedicated to giving the highest priority to safety issues on a continuing basis” (IAEA, July 2002).
\textsuperscript{25} WNA, January 2007.
\textsuperscript{26} BBC, February 2007.
3 and 4, “meets the highest standards achieved in Finland, Hungary and the Czech Republic which operate similar reactors.”

From the Bulgarian perspective, this issue is more about politics than about nuclear safety. The EU has pressured Bulgaria into following through on commitments made long ago, under ill-advised Bulgarian politicians during an extremely challenging politically transitional environment. During the time that the NSA Agreement was signed, legislation was typically drawn up by the executive bureaucracy and submitted to the parliament, offering very little time for Members of Parliament to review and make changes to the policies. Therefore, legislators would often just accept whatever information the government provided them, making it fairly easy to pass through something as controversial as the NSAA.

The third agreement signed in 2002 was more about poor negotiations. According to President Georgy Purvanov, “Our politicians made a huge mistake by bonding Bulgaria's EU entry to the decommissioning of Units 3 and 4 at Kozloduy power plant," even suggesting that this may have even been deliberately done as, "Bulgaria failed to provide strong arguments for modernizing, rather than closing units 3 and 4. It could be that someone just did not want to put all the arguments on the table." In another address recently made, Purvanov acknowledged that the Bulgarian government, and those negotiating the terms of the agreement, were unable to reach an understanding equal to the conditions for accession set by the other candidate countries. Purvanov’s position implies that his new administration, presumably because it is better prepared and more

---

actively involved than past politicians, should be allowed to renegotiate the original terms of the NSAA. Considering the documented proof of the safety of Units 3 and 4 by reputable sources, Energy and Economy Minister Rumen Ovcharov argues in defense of Bulgaria’s right to renegotiate, saying that the only reason for the reactors’ decommissioning is bureaucratic.31

Admitting mistakes and wanting to live up to its future commitment, Bulgaria hopes to be afforded more flexibility by the EU in return. The consequences of the closures may be immensely detrimental to the social and economic sector. The Bulgarian government does not believe that there is enough time or resources to make up for the loss of electricity.32 Furthermore, Bulgarians fear the personal impact of these closures, “Bulgarians, who have an income thirty times lower than the average income in the EU, have to pay for electricity which is less than two times cheaper compared to that in the EU. This means that, in practice, during winter months their heating and electricity bills exceed their monthly income. This can clearly account for the emotional reaction they have toward the threat that these costs may continue to rise.”33

According to some experts, the NSAA is extremely out of date and unnecessary, as even the IAEA signed off on the reactors’ bill of health, making it appear as though the EU has demanded more of Bulgaria than of any other candidate country.34 Such behavior has not only further destabilized its economy in addition to affecting regional energy demand, but the EU has also undermined Bulgaria’s strength, sovereignty and pride. The 1999 EU decision that the reactors be decommissioned was “seen both by the public and the political elite as unfair, while Brussels was portrayed as issuing dictates on Bulgaria.”35 Furthermore, it was challenging for Bulgarians to understand why Lithuania and Slovakia were not required to close their reactors until several years after

31 BBC, March 2007.
32 Cooper, 2006.
34 Semov, 2005.
membership, while Bulgaria was required to close their reactors before they entered the EU. Bulgarians feel personally affected by these closures.

As Bulgarian journalist Christopher Karadjov wrote, “The idea to close Kozloduy has always been considered European, not Bulgarian.” Georgi Ganev of the Center for Liberal Strategies, discussed how, “Closing down Kozloduy is identical to closing down Bulgaria in the public mind.” This impasse over the reactors closing has contributed to public fear of the EU’s power to dictate whatever it wants, regardless of whether or not Bulgarians agree. In light of these opposing interests, it is difficult to hope that a resolution of this disagreement will come easily or soon.

**Conclusion: Setting a precedent?**

What started as a debate over the technical safety of KNPP has evolved into an intense political conflict. As a result, the Kozloduy Nuclear Power Plant has become more than a mere source of electrical output, but also stands as a symbol of power and pride for Bulgarians. At the same time, from the EU’s standpoint, Kozloduy has become an exemplar of Bulgaria’s possible lack of trustworthiness.

The EU views the controversy surrounding the KNPP closures as a representation of a relationship that has been pushed to the limits as Bulgaria walks a fine line between what it can and cannot do as a new member. In some cases, influential politicians are

---

36 Belin, December 2002.
38 Brunwasser, April 2004.
making statements regarding past compromises which are interpreted by the EU as contradictory. Bulgaria’s Energy and Economy Minister Rumen Ovcharov agreed in June 2006 that it was useless to talk about reopening the Energy chapter of the *acquis*, noting that such action would paint a negative picture of Bulgaria to the EU.\(^{39}\) However, in February 2007, less then two months after its accession, Ovcharov announced that Bulgaria “demands” Units 3 and 4 to be reopened based on Article 36 of the Accession Treaty. This stipulates that in the case of serious economic difficulties inflicted upon the member state, introduction of security measures will be allowed.\(^{40}\) EU Energy Commissioner Andris Piebalgs stated that, theoretically, Bulgaria’s newest approach to save the reactors can only work if enough scientific evidence of the safety of the units is presented, and all 26 EU members agreeing to the changes. However, Piebalgs argues that since no new scientific data *has* been presented, the decision to decommission the reactors will not change. Piebalgs noted that the decision was made under basic EU law and nothing has since been presented or changed that would influence the European Commission to change their minds.\(^{41}\)

Bulgaria appears to recognize the possible long term effect of its actions as it continues to defend the socioeconomic rationale for reopening the reactors, while the EU feels challenged in trying to educate Bulgaria about the importance of keeping its agreements and establishing a relationship based on trust. The EU is dedicated to Bulgaria’s development and future success, having pledged €4.6 billion in funding through 2009, making it the highest per capita accession funding in the EU so far.\(^{42}\) The

\(^{40}\) Financial Times, February 2007.

\(^{42}\) Bulgaria will receive €9 billion by 2013 in EU accession funds (Brunwasser, December 2006).
EU sees Bulgaria’s willingness to close the KNPP reactors as an act of loyalty, respect and faith in its new alliance, hence the frustration and tension incurred by Bulgaria’s persistent campaign to reopen them.

Bulgaria holds the position that these closures represent an infringement of a nation’s right to control its own resources, especially because they believe in the reactors’ safety and intrinsic value to society. Fighting to save the KNPP reactors has become symbolic of preserving Bulgarian sovereignty within EU membership. Compensating for a long history of foreign influence, saving Units 3 and 4 metaphorically becomes a way for Bulgarians to demonstrate strength and the ability to advocate for Bulgarian interests within the EU. “Most see the closures simply as something Brussels is arbitrarily taking away, much as Moscow once did,” wrote Matthew Brunwasser in the International Herald Tribune. During an active campaign, some lobbyists went so far as to create bumper stickers that read, “Save Kozloduy, Save Bulgaria”. In response, many Bulgarians have come to support the government in its “fight” to reopen Units 3 and 4 as a matter of national pride. Concerns about the domestic rise in the price of electricity, as well as fears of regional instability due to diminished capacity to export electricity to neighboring countries are additional factors included in arguments presented by the Bulgarian government. According to President Purvanov these closures are seen as “the greatest compromise the government and the negotiating teams made,” At this moment, Bulgarians view the EU’s decision to decommission the reactors as unjustified given the numerous outside experts’ positive reviews of the reactors and a lack of EU common policy on nuclear safety. In light of the more lenient nuclear policies negotiated with the

43 Brunwasser, December 2006.
44 Interview: Georgy Ganev, October 2006.
other EU members, Bulgaria feels that it is within its rights to continue pressuring the EU for the sake of the salvation of KNPP. It is hard for Bulgarians and their sympathizers to understand why the EU will allow Czech Temelin NPP to continue operating despite its current leaks of radioactive water, and not KNPP Units 3 and 4, which appear to be completely safe.\textsuperscript{46}

Considering its unique treatment of Bulgaria as the only candidate country required to agree to such a significant and potentially economically detrimental request as the closures of Units 1-4, Bulgaria feels that the EU is being hypocritical and is asking for too much. The loss of electricity due to the closures will be compensated by the construction of more coal-fired plants, which goes against the EU’s pledge to fight climate change.\textsuperscript{47} Furthermore, as President Purvanov said in an interview three months before Bulgaria’s accession, "Bulgaria today has the same level of preparedness as the 10 countries which joined the European Union in May 2004 had at the time of their accession," emphasizing his hope that there would not be any double standards and that the EU should treat them with the same equality they applied to all previous accession countries. He continued by adding that,

``...This decision wasn't fair to Bulgaria and to the Bulgarian people...Therefore it is very important for Europe to understand and take into account the sacrifices and deprivation people are going through to meet their commitments. The European Union itself needs to make an effort towards Bulgaria's integration."\textsuperscript{48}

The discussion that has come about as a result of this issue marks an important moment in history. The EU is an emerging superpower, and within the next few decades, it has the possibility to become the most dominant socioeconomic force in the world. Yet something as seemingly marginal as the closure of four Soviet-era nuclear reactors, has

\textsuperscript{46} Eastbusiness, March 2007.
\textsuperscript{47} BBC, March 2007.
\textsuperscript{48} Financial Times, September 2006.
the potential to generate a devastating tear in the gentle fabric comprising the newly
formed 27 member European Union. Apart from Bulgaria’s sovereignty concerns, this
discussion also highlights trust and power within the EU. If the EU lets Bulgaria reopen
the reactors, it will set a precedent for new and future members concerning the EU’s
vulnerability to implement negotiated laws and agreements, thereby potentially
undermining its viability as a unified alliance. Such a resolution could have ramifications
for European and international relations for years to come. However, it is important to
question whether Bulgaria will face equally detrimental consequences if the EU ensures
that the reactors remain closed.

As an emerging democracy, Bulgaria may find that it must shed some of its fear
of foreign dominance as it enters a new set of realities by aligning with its neighbors
under the EU umbrella. The advantages of such association will be judged by future
generations, as Bulgaria will hopefully benefit from the collective experiences of these
EU nations. However, the EU must be mindful of the economic backlash of suspending
current resources such as KNPP Units 1-4 and the resultant political fallout for those who
negotiated the agreements with the EU. Any such negative impact can easily create a
ripple effect within the EU, hence the importance that members work together to ensure
the best possible solution available. In turn, the EU will be able to flex its muscle but
must do so with an awareness of the cultural realities of its newest member. It is hoped
that this consideration backed by pragmatic aid, steeped in cultural understanding, will
strengthen the bonds within this new coalition of countries.

Abstract

According to the National Educational Act of B.E. 2542 (1999), all Thai citizens are entitled to basic, quality education for at least 12 years. While this education is supposed to be free, in reality there are many costs associated with schooling. Whether young people go to school depends upon the basic optimization theory, whereby households maximize their utility subject to the budget limitation. The effects of free education on household decision are still in doubt as many researchers indicate that the family’s income and indirect cost of education play an important role especially in developing countries.

In this study I consider whether child labor and schooling decisions are made in a rational way and I explore which factors influence families’ decisions. I utilize the ‘Luxury Axiom’ (Bazu and Van, 1998), which states that when a family is below the poverty level, then they will need income from child labor. Using data from the Thailand Labor Force Survey (2003), I will test the luxury axiom along with other determinants that might have an influence on the supply of child labor. This study targets children between the ages of 15-17, which is the upper-secondary school age. I found no empirical evidence confirming that the luxury axiom exists, after controlling for the effects of parental schooling. It is possible that parents who are well educated tend to earn more income and the influence of poverty has been absorbed into that of parental education.
Application of transaction cost theory to features of mobile phones in Japan

Masao Toyama
Department of Informational Society Studies
Saitama Institute of Technology
1690 Fusaiji, Fukaya, Saitama 369-0293, Japan

toyama@sit.ac.jp
Abstract

The purpose of this research is to apply transaction cost theory to describe the current features of mobile phones in Japan, which are associated with the evolution of information and communication technology. According to the framework of transaction cost theory, transaction costs vary according to the degree of specificity. The higher the specificity, the higher are the transaction costs, and the lower the specificity, the lower are the transaction costs. Further, the degree of specificity tends to decline due to the evolution of information and communication technology. Therefore, there is a tendency for transaction costs to also decline together with the evolution of information and communication technology. The evolution of information and communication technology ushers in improvement in the multifunctionality of mobile phones, and this improvement in multifunctionality leads to a reduction in physical asset specificity. The portability of mobile phones also leads to a reduction in site specificity. In light of these facts, this research indicates that there is a tendency for transaction costs related to mobile phones to decrease.

Abstract:

The ‘CSI Effect’ refers to the belief among a growing number of legal professionals that programs such as CBS’s “CSI” and other TV shows about crime and forensic science have a growing influence on real-world expectations about forensic science. It’s suggested that an influence is particularly evident among jurors who view these programs. Proponents for the ‘CSI Effect’ hypothesize that these shows provide criminals with tips for covering up crime and alluding capture, create unrealistic expectations for crime scene investigation and skew juror expectations about forensic evidence, resulting in tainted verdicts. It is also believed that the ‘CSI Effect’ has sparked a newfound interest in forensic science, with a boom in courses being offered at a growing number of educational institutions. It has also been suggested that the ‘CSI Effect’ has no meaningful evidential foundation, and that perceptions of criminal investigations can be attributed to other social factors. As of now there is no conclusive evidence proving the ‘CSI Effect’ exists. The ongoing research, of which this paper is the initial formulation, will develop into an extensive review of the available, albeit limited, literature, and a series of interviews with prosecutors, defense attorneys and crime scene investigators. The object of the research is to try to bring some clarity of understanding to a development, which if it is established to be happening, would have enormously significant consequences for the practice of the law and the integrity of the jury system. The paper also examines a number of theoretical arguments as to why there may be real substance to the idea of a “CSI Effect.”

ABSTRACT

Two cultural models of relationship were proposed to understand social hierarchy. The *equality* model is rooted in European American (EA) ideas and practices of individualism and democracy. It constructs hierarchy as problematic and negative and as associated with oppression, injustice, and institutional practices that need to be justified. The *propriety* model is rooted in East Asian ideas and practices of Confucianism and relational interdependence. It constructs hierarchy as natural and positive, and as associated with family, respect, and roles that need to be maintained. Using social scenarios and a memory recall task, Studies 1a, 1b, and 2 confirmed the existence of the two models. In comparison to EA, Asian Americans (AA) preferred more hierarchy-oriented responses, liked a hierarchy-oriented peer more, rated themselves as more similar to the hierarchy-oriented peer, and were quicker to recall hierarchical relationships. Study 3 showed differences in the meaning space of hierarchy. Consistent with the equality model, EA generated more negative associations (e.g., dominance, discrimination) to hierarchy. Consistent with the propriety model, AA generated more positive associations (e.g., family, respect). Study 5 conducted with participants from Taiwan devised a reliable and valid measure that captured the practice and definition of social hierarchy according to the propriety model. Studies 4 and 6 examined hierarchy in the laboratory using a paradigm developed by Chen, Lee-Chai, and Bargh (2001). Student participants completed a word identification task while seated in a professor’s chair (violation of hierarchy condition), a student’s chair (hierarchy condition), or a lab chair (control condition). In the professor’s chair, AA were more nervous and responded in a respectful manner to a message from the professor. EA showed no difference in their responses regardless of condition. Study 6 used the Social Hierarchy Scale (Study 5) to define a group of Taiwanese students who endorsed hierarchical ideas and practices (high-hierarchy) and a group who did not (low-hierarchy). When seated in the professor chair (violation of hierarchy), high-hierarchy participants were more nervous and performed worse on the identification task than low-hierarchy participants. When seated in the student chair (hierarchy), low-hierarchy participants were more annoyed/disgusted and performed worse than high-hierarchy participants.

**Title:** Youth making sense of resilience: A critical exploration of the social processes of resilience amongst ethnically diverse young people in East London, UK.

**Authors:** Dr Anne-Marie Tupuola [1], Dr Vicky Cattell [1], Professor Stephen Stansfeld [1], Professor Sarah Curtis [2]

**Affiliation:** Centre for Psychiatry, Wolfson Institute of Preventive Medicine [1], Geography Department, University of Durham [2]

**Abstract:**

Numerous studies acknowledge social capital (in its broadest sense) to be key in bettering the educational and health outcomes of young people. We recognise the importance of social capital; however the degree to which family and friends or peers can enhance and/or inhibit the resilience of young people in adverse circumstances deserves further investigation.

This paper asks: Why are some young people reluctant to turn to their families (nuclear and extended) and their peers during times of adversity? What strategies are youth themselves creating to overcome daily obstacles in their ‘impoverished’, ‘troubled’ and/or ‘at risk’ environments?

The following discussion is of a recently completed qualitative and community based study with 84 participants of diverse backgrounds that explored the social processes of young people’s resilience in East London.

The narratives of young men and women are explored to illustrate the critical dialogue taking place amongst youth themselves to change and better their own situations. Attention is paid to some of the unique ways some participants have overcome peer and familial pressures in their desire to be independent and to create their own self-identities. Furthermore, self-initiated strategies and developments are also highlighted with the intention of challenging deficit and helplessness stereotypes that are often associated with young people from ‘at risk’ societies. For, in the words of one participant, “We want to break the stereotype people have of youth in East London.”

The concluding section explores the limitations of current interpretations of resilience for ‘at risk’ youth and communities. In turn, we, alongside the young participants, suggest resilience to be an intermittent and ongoing transitional process that is unique to each individual in different cultural, social and local spaces.

The European Union’s Consideration of Potential Member States:
Explaining Romania and Bulgaria’s Inclusion and Ukraine’s Exclusion

Lisa Turkewitsch

Abstract

On January 1, 2007, Romania and Bulgaria joined the European Union, while Ukraine’s current relations with the EU are framed within the context of the European Neighborhood Policy. It is obvious now that the gap between Romania and Bulgaria and Ukraine is wide, but in the early to mid-1990s this was not the case. In the context of the debate over normative and geopolitical explanations for EU enlargement, this paper seeks to explain why the EU did not consider Ukraine as a potential member state at the time when it considered Romania and Bulgaria as potential member states. The paper presents a challenge to the argument that “meritocracy” and the adoption of liberal norms and values were the most important factors in the EU’s consideration of potential member states. Instead, the paper argues that factors related to geographic proximity, namely linkages and ties to the EU and its member states, along with security issues, were the main reasons behind Romania and Bulgaria’s inclusion and Ukraine’s exclusion. A qualitative comparative analysis of the domestic situation in the three countries, corroborated by data from Freedom House’s “Freedom in the World” democratization rankings, serves to demonstrate that the domestic situation in Romania and Bulgaria was the same as, and in some respects worse than, that in Ukraine. Ukraine’s exclusion as a potential member state is seen in light of the uncertainty of its independence from Russia in the early 1990s, while Romania and Bulgaria’s inclusion stems from support from EU member states that advocated for their membership, coupled with the EU’s desire to secure the two countries as stable allies in the Balkans. This paper presents an alternative view to the consideration of Romania and Bulgaria as slow reformers compared to their Central and Eastern European counterparts. Instead, when compared to Ukraine, they were opportune and benefited from their geographic location. In light of the Orange Revolution, the question of EU membership for Ukraine is again in focus. Ukraine now shares a common border with the EU, and the Central and Eastern European countries are emerging as advocates for Ukraine’s EU membership.

Positive Reinforcement: The Effects of Instant Rewards Versus Prolonged Rewards

Student discipline has been a focus of educational research for over 30 years. Check (1979) writes:

The past two decades have held many tense and uncertain moments in the establishment of acceptable behavioral patterns in our society, so much so that even those who had commanded the highest respect for their intelligent and stable decisions were shaken by the disruptive activities of our youth (p. 134).

Classroom discipline is a concern for all. The focus of this paper deals with that concern and attempts to explain ways to manage student behavior so that the educational process is a worthwhile experience. Stated more precisely, this study will attempt to answer the following questions: (a) Do positive reinforcement behavioral management systems truly work? (b) Are students more likely to respond better to reward systems that offer instant gratification in the form of smaller and more numerous rewards or rewards that are larger and occur on a weekly basis?

Since the study is conducted within the realms of one classroom, certain limitations are obvious. The population is relatively small (21 students) and four of those students transferred in after the initial start date of the current school year thus limiting the population size even further. Another limiting factor is that the students attend “specials” (physical education, art, and music) several times a week and during those periods, other teachers monitor their behavior. In addition to that, approximately 50% of the class has what is known as an Early Intervention Plan. Students with Early Intervention Plans are pulled daily to work with another teacher in the areas of math and reading. This interruption also interferes with the direct behavioral monitoring of
the students by the researcher. During these time periods, the researcher will have to rely on the reports of others concerning student behavior.

The purpose of the research is to explore different management strategies and their effects on student behavior. Check (1979) denotes the importance of behavioral studies of children when he states, “Acceptable behavioral patterns must be clearly defined in order for students to develop the ability to self-monitor their own behavior” (p. 135). Check (1979) further states, “The ability to self-monitor one’s own behavior is not only important in a classroom setting, but to society as a whole” (p. 135). The rationale for choosing to research different classroom management strategies is based on Check’s statements. In addition, this research will investigate whether students’ understanding of classroom rules and expectations carry over into settings outside of their base classroom. The exploration of this dynamic will aid in understanding which classroom management techniques are most appropriate for third grade students in a public elementary school setting.

The literature review is organized to help explain some of the aspects that must be taken into account when dealing with student discipline. The first section describes some of the root causes of discipline problems. The major focus is quality of life/urban setting and cross-cultural competence. The next section discusses the location of negative behaviors within the school setting. Third, the research explores whether or not discipline problems vary according to grade level and/or the sex of the instructor. Fourth, there is the exploration of two school-wide discipline models. Those models are the Constructive Discipline Model and the Positive Behavioral Intervention Support Model. The last component of the literature review focuses on studies done in the area of delay of gratification behaviors of children and youth. More
specifically, the literature review will describe gratification delay as it relates to visualization, developmental trends, rewards, and delay termination.
Literature Review

Characteristics of Discipline Problems

Joan Gaustad identifies several characteristics that are associated with discipline problems in her research. Gaustad (1992) states the following contributing factors in behavioral problems in our schools:

- Rules were unclear or perceived as unfairly or inconsistently enforced; students did not believe in the rules; teachers and administrators did not know what the rules were or disagreed to the proper responses to student misconduct; teacher-administration cooperation was poor or the administration inactive; teachers tended to have punitive attitudes; misconduct was ignored; and schools were large and lacked adequate resources for teaching. (p. 1)

Gaustad (1992) further notes, “Orderly schools usually balance clearly established and communicated rules with a climate of concern for students as individuals. They also have fewer formal rules and a more flexible approach to infractions” (p. 1). Gaustad found that positive behavior must also be increased. She cites a study from Denise Gottfredson done in 1989. Gaustad concedes, “Schools must work to increase academic success for low achievers and strive to make school enjoyable and interesting” (p. 2).

Quality of Life/Urban Settings

Carol Ascher acknowledges how many students see school as a haven from their home lives. Ascher (1994) states, “The most resilient are students who can use teachers and other staff as mentors and role models and their time at school as profitable refuge” (p. 2). Ascher goes on to say the following:
New tasks—from “wading” students with metal detectors, to talking to social workers and teaching socialization skills are being added to the teachers’ already stretched rosters of daily responsibilities. At the same time, national uncertainty about how to handle potential conflicts between discipline, safety, and students’ rights has made teachers unsure about what parents and the larger society want them to do. (p. 3)

Hank Bohanon and his colleagues further support this notion in their case study of positive behavior support in an urban high school. They found that the quality of life of the students is a direct link to discipline problems in schools. Bohanon (2006) states, “Factors that can affect the quality of life experience for individuals and families are race and poverty issues, differences in language and culture, and living in areas with limited resources and dense populations” (p. 132). Bohanon (2006) continues, “Urban school districts have unique challenges due to factors such as size, high poverty rates, and limited resources” (p.132).

**Cross-cultural Competence**

Schwartz (2002) writes:

> U.S. society has long been characterized by ignorance about African American social styles, denigration of African American traditions, and persistent negative and fear inducing media images of African Americans. Thus, as products of this society, educators may project attitudes about African American students to avoid, rather than mentor them. (p. 1)

Schwartz (2002) continues this argument by saying:

> In class, many African American students speak out loudly and interrupt as a way of showing interest, or even argue as they press their point; their intention is to participate, not to misbehave, although some teachers might consider them disrespectful. (p. 4)
Schwartz surmises that using a model that takes cultural differences into account would also require an explanation of student wrongdoing. He also argues that the students have to learn why certain behavior may not be appropriate in all settings in order to ensure that these behaviors will not be repeated (at least not in the school environment). Schwartz gives an example of this in her writing. Schwartz (2002) states the following:

A graffiti-writing student should be helped to understand why he should clean the dirty wall, and should be able to do so when it would not interfere with a school activity or seen by other students; should a custodian clean the wall before a student can, the student should offer thanks. (p. 4)

**Location of Disruptive Behavior**

Colvin and Fernandez (2000) state, “Negative student behavior was excessive in common areas such as hallways, the cafeteria, recess, and bus lines” (p. 252). The researchers claim that they were able to validate this perception by taking a staff survey. In the survey, Colvin and Fernandez (2000) state, “Staff rated the school very low in all critical areas of school-wide behavior management” (p.252).

**Grade Level/Sex of Instructor Differences**

Check (1979) states, “Lower elementary and middle school teachers reported a greater number of problems than senior high school teachers. The ratio of slightly more that 2 to 1 (79%: 38%)” (p.135). Check then compared the number of incidences for female teachers versus male teachers. He suggests that the sex of the teacher has no impact on the number of discipline problems that the teacher encountered in the classroom. Check (1979) states:

Furthermore, whether the teacher was male or female was of no importance to the incidence of reported problems. As eluded to earlier, the grade level at which the teacher
worked was a significant contributing factor on the number of problems reported and their severity. (p. 135)

**School-Wide Discipline Models**

Muscott (2004) states the following:

Despite the fact that the overall rate of school violence has leveled off since the early seventies, milder forms of problem behavior such as disrespect, disruption, and noncompliance appear to be on the rise and the overall state of children’s mental health appears to be deteriorating. (p. 454)

According to Muscott, educators in New Hampshire have devised a plan called the Positive Behavioral Interventions and Supports that takes all these things into account. Positive Behavioral Interventions Support systems require three components. Muscott’s research indicates that those components are (a) positive approaches to interventions such as teaching the appropriate behavior rather than relying on punishment alone [sic], (b) matching the level of intervention resources to the level of behavioral challenge presented by students, and (c) designing multiple systems that deal with the full range of discipline challenges that schools face. Positive Behavioral Interventions Support also uses a 3-tiered system of behavioral support. Muscott (2004) writes:

- **Level 1**, universal prevention, is designated to address the entire school. The emphasis here is on reaching the 80-90% of the students who do not have serious behavioral problems or mental health needs. Level 2, secondary prevention, is aimed at roughly 5-10% of students or subgroups. These children are considered at risk for developing behavioral disorders or mental illness. Level 3, tertiary prevention, targets the remaining
1-5% students who are displaying symptoms or behaviors related to emotional behavioral disorders or mental illness. (p. 455)

Muscott concedes that the goal is to target the students who fall into these perspective groups and provide more suitable replacement behaviors that will compete with the inappropriate ones.

Mayer examines what is commonly known as Constructive Discipline and how it is best used in the classroom setting. According to Mayer (1999), “It has reduced violence and the other antisocial behaviors and offers a disciplined environment conductive to learning” (p. 1). Mayer (1999) states the following:

At the very least, discipline codes list the dos and don’ts, or the behavior standards required by students. The better ones also specify consequences for violating and following rules. They are designated to influence how students behave and how educators respond when students violate or follow rules. (p. 2)

Mayer (1999) then goes on to say, “Many codes are hastily conceived, arbitrary, overly punitive in nature, and have little evidence of the effectiveness” (p. 2).

Mayer’s description of an effective Constructive Discipline model is comprised of three key components. The first component is clarity of classroom rules. Mayer (1999) speaks of a California law that requires every principal of every school to “take steps to insure that all rules pertaining to discipline of students are communicated to students at the beginning of the school year and to transfer students at the time of their enrollment in schools” (p. 3).

Mayer deduces that the clarity of the rules does not just apply to students though. Mayer (1999) states the following:

All relevant parties-including administrators, counselors, psychologists, teachers, parents, and students—should be represented when school-wide discipline rules are developed.
Positive Reinforcement 12

Rules tend to be better accepted, understood, supported, and enforced when all concerned parties have been included in drawing up a conduct code. (p. 4)

The next component discussed by Mayer for a Constructive Discipline model is the establishment of staff support. Mayer implies that administration must consistently be supportive to staff when rules are broken, otherwise teachers will not cooperate in the implementation of this discipline model. Mayer (1999) states, “A lack of support also can be aversive for staff, perhaps fostering a greater reliance on punitive methods of control in managing student behavior” (p. 5). The final component of this discipline model that Mayer lists is recognizing individual differences in students.

**Delay and Visualization**

Klineberg believes there to be a relationship between a child’s ability to delay gratification and the power of visualization. Klineberg (1968) states, “There is empirical evidence supporting the relationship between delay of gratification and one’s ability to visualize the future event and endow the image of that event with a sense of present reality” (p. 253). Schack and Massari (1973) reiterate this point by stating, “In order to accomplish the delay, the child must frequently remind himself of the contingency imposed on him and in doing so, logically the child must recall the delayed reward for which he is waiting” (p.170). Nisan seemingly agrees with this assumption. Nisan (1974) states, “The strengthening of a child’s representation of the delayed outcome should increase the probability that he will delay gratification” (p. 376). Nisan (1974) continues:

One seemingly straightforward means of strengthening the representation is the exposure of the child to the delayed reward. Furthermore, the effects of this exposure ought to be even greater when both immediate and delayed rewards are seen, since value is the
salient attribute determining the choice of the delayed outcomes, and the difference in value between the two rewards is accentuated by their juxtaposition. (p. 376)

Fry and Preston drew a different conclusion. Fry and Preston (1980) state, “Waiting in the presence of reinforcements is seen as aversive” (p. 282).

**Developmental Trends**

Nisan (1974) also found what he termed to be “a clear developmental trend toward delay of gratification” (p. 378). Nisan (1974) states, “The results show no effect of exposure among the six-year-old children, who show a predominant choice of the immediate reward” (p. 378). Nisan (1974) continues, “The eight and nine-year-olds chose predominantly the delayed reward and were similarly unaffected by the exposure to the rewards” (p. 378).

Likewise, Ebbesen and Mischel described a correlation between development and the ability to delay gratification. Ebbesen and Mischel (1970) state, “Preliminary observations of the actual waiting behavior of nursery school children suggested that the capacity to wait for long-term goals and to inhibit both immediate gratification and motor activity seems to develop markedly at about ages 3-4” (p. 331). Ebbesen and Mischel (1970) continue, “The network of associations found here so far indicates significant relations between the preference of delayed rewards and indexes of achievement orientation, social responsibility, age, socio-cultural and rearing conditions, and intelligence” (p. 329). Shybut (1968) agrees and adds, “Relations have also been found with resistance to temptation and with severity of psychological disturbances” (p. 465).
Rewards

The rewards themselves are also viewed as noteworthy in delay of gratification studies. Dmitruk (1973) states, “There is no correspondence between what adults think children like and the children’s actual preferences” (p. 340). Burns and Borrego had similar findings. In their research, they used Mexican coins as rewards. Burns and Borrego (1985) state, “The coins are easily manipulated, generalized rewards and have been found to be ideal rewards as opposed to points or stars in studies involving children” (p. 391). Burns and Borrego (1985) continue, “The immediacy of token rewards and the opportunity for the subjects to exchange them for a wide variety of back-up items makes the token ideal for this research” (p. 391).

Delay Termination

Delay termination was also a concern in these studies. Kanfer (1977) explains, “Delay-produced frustration activates cognitive processes that then produce changes in the perceived values of the rewards” (p. 367). Kanfer (1977) continues, “One of these possibilities is that the preferred but delayed reward becomes less attractive as the children continue to wait” (p. 367). In contrast, Karniol and Miller (1983) state, “The dynamics of the situation is that the preferred but delayed reward increases in value over time and that this increase in reward value serves both to increase frustration and decrease the ability to tolerate the delay” (p. 936).
Method

Question/Issue

This study is a correlational design. Through the use of prolonged and immediate rewards it will attempt to answer the following questions: (a) Do positive reinforcement behavioral management systems work? (b) Are students more likely to respond better to reward systems that offer instant gratification in the form of smaller and more numerous rewards or rewards that are larger and occur on a weekly basis? It is hypothesized that positive reinforcement behavioral management systems are effective tools for classroom management. It is also believed that students will respond better to reward systems that offer instant gratification as opposed to systems that offer prolonged rewards.

Limitations

As stated earlier, a possible limitation (threat to internal validity) was data collector bias. Several times per week, the students were not under the direct supervision of the researcher due to certain scheduled activities. During those times, the researcher relied on the observations of other teachers to determine whether or not students earned points. To control for this, teachers were not made aware that the accumulation of points was being analyzed in any way. Modifications to the school discipline plan were not discussed. The teachers carried on with the stated objectives of the discipline program just as they had been instructed to do at the beginning of the school year.

Maturation was another possible limitation. The possibility of scores rising due to an increase in the students' comfort levels with the rules and classroom expectations was a major concern. To control for that, the study began at the beginning of the school year and was completed in eight weeks.
Variables

The variables used to complete this study were the different types of rewards and the behavior of the students. \((X=\text{prolonged rewards/immediate rewards}, Y=\text{behavior})\). The prolonged rewards (independent variable) were given on a weekly basis. They included extra recess, a movie and popcorn, an ice cream party, and arts and crafts. The immediate rewards (independent variable) were given at the exact moment a desirable behavior was observed by the researcher. Students had the opportunity to earn a limitless number of rewards throughout the day. The immediate rewards included (but were not limited to) candy, “no homework” passes, coupons for free ice cream, and activity sheets (coloring sheets, crossword puzzles, etc.). The behavior (dependent variable) was measured using a point system. The higher the point accumulation, the better the behavior.

Population

This eight-week study was conducted in a third grade classroom (due to students entering and leaving during the experiment interval, \(N=17\)) in a Title I school. The school is located in a school district of the suburban Atlanta area. The percentage of the population receiving free or reduced lunch was 82% free and 18% reduced.

The population consisted of eight boys (six African Americans and two Hispanics) and nine girls (six African Americans, two Hispanics, two Asians, and one Caucasian) most of whom have been labeled “at risk” of failing the state mandated Criterion Referenced Competency Test at the end of the 2006-2007 school year. In order for a student to be labeled “at risk”, one or more of the following conditions applied:
(a) The student failed to reach a minimum score of eight hundred on the reading portion of the Criterion Referenced Competency Test during the previous school year, (b) the student received small group reading assistance through the state Early Intervention Program (EIP), (c) the student had an oral reading fluency score of less than seventy-seven words per minute at the beginning of the school year, and (d) the student had an Individual Learning Plan (IEP-special education). Of the seventeen participants, fourteen (82%) fell into one or more of these categories.

**Sampling Process**

The students were not randomly assigned to the class. Instead, they were grouped in such a way that the majority functioned below grade level. The class assignments were based on data from numerous test scores. As mentioned before, the students’ Criterion Referenced Competency Test scores from the previous year were evaluated and used as one determining factor for placement in specific classrooms. Another test that was given to the students and later analyzed was the Star Reading Test. The Star Reading Test is a timed computerized test that seeks to measure reading comprehension skills. Students were challenged to read passages and subsequently answer questions concerning what was read. At the conclusion of the test, the program generates a reading score (level) based on how well the student answered the questions. According to the Star Reading Test, 92% of the participants read below grade level.

Likewise, oral reading fluency was also measured electronically. The program used is called the Dibels program. With the Dibels program, students are given a passage to read to the teacher and are challenged to read has many words as they can in one minute. The reading passage is changed on a weekly basis. The goal is for the student to be able to read seventy-
seven words per minute at the onset of the third grade. Only 36% of the participants achieved this goal.

**Time Frame and Process**

The unit lessons were taught during the first two weeks of the eight-week study in order to clearly define the classroom and school-wide expectations of the students. During that time, as well as the six weeks that followed, the school day was divided into three distinct periods. The divisions were made for the purpose of awarding points. The periods were from 8:00 AM to 10:00 AM, 10:01 AM to 12:00 PM, and 12:01 PM to 2:30 PM. A student could earn one behavioral point for each of these three time periods. The structure of the program allowed the students to have numerous opportunities to make appropriate behavioral choices.

At the end of the week, each student’s points were calculated. If a student acquired the desired amount of points for the week, that student was allowed to participate in “Fun Friday” activities. These activities included (but were not limited to) watching a movie, recess, arts and crafts, and ice cream parties. The students who did not earn enough points to participate were given assignments to complete during that time.

Due to holidays and breaks, at times the required points varied from week to week. For a regular five-day school week, a student had to earn fifteen points to be eligible to participate in “Fun Friday” activities. For a four-day week, the requirement was thirteen points and a three-day week the requirement was ten points.

For the first four weeks of the study, the students were told of the “Fun Friday” activity at the beginning of each week. Their behavior was then monitored according to the discipline plan and recorded on the discipline report sheets. At the end of each week, students were advised of their point totals and based on the totals received or did not receive the reward.
The second four weeks was handled the same except for the addition of immediate rewards. During the second half of the experiment, the students had the opportunity to earn multiple small rewards along with the points. The smaller rewards included “no homework” passes, candy, pencils, erasers, and coloring sheets. The points were calculated at the end of each week just as before. At the conclusion of the eight weeks, the class’ point averages for the first week were compared to the averages for the second four weeks.

**Data Collection**

To measure behavior, Pupils are Leaders in Self Control (P.A.L.S.) discipline sheets were used. The Pupils are Leaders in Self Control program is a school-wide discipline plan that is based on an “earned point” system. Each student has the opportunity to earn three points per day and an additional three bonus points each week. The basis of the program is to encourage students to make appropriate choices regarding their behavior.

**Data Analysis**

The data was analyzed quantitatively. Student behavior was measured using a numerical system (an accumulation of points). The more points a student earned, the more compliant with the rules the student was considered to be. Likewise, the fewer points a student earned by week’s end, the less compliant with the rules that student was considered to be.

The statistical analysis used was a combination of descriptive and inferential statistics. The mean class score and the standard deviation were calculated for the first four weeks and the second four weeks respectively. Pearson’s r was then calculated (X=scores without immediate rewards, Y= scores with immediate rewards). Finally, a t-test was used to determine the significance of the variables.
**Assessment/Evaluation**

The study can easily be replicated due to its simplicity. The findings were appropriate to generalize to populations with similar student body characteristics. The findings cannot be applied to classrooms comprised mostly of students who were functioning at or above grade level because those classes tended to have fewer behavioral issues. In those cases, there would not be enough change to observe.

The study progressed with few problems. The major concern turned out to be a previously anticipated issue. That was the issue of having to rely on other teachers’ observations when the students were not in the care of the researcher. It was discovered that when rule enforcement was not the same across the board, it was sometimes difficult to access student behavior.

Despite the difficulties, the study was still meaningful in the respects that it accurately measured student behavior within the realms of the classroom. A final report was prepared and discussed with administration. When compared to the number of discipline referrals from the previous year, it was determined that the behavior of approximately 25% of the students had improved.
Results

In this study, the researcher sought to determine whether the mean class behavioral point total would increase when an immediate reward system was used as opposed to a system that used prolonged rewards. Table 1 reports the means and standard deviations of each variable.

</tr>
</tbody>
</table>

Each student could earn a maximum of eighteen points per week. Since each measurement period lasted for a total of four weeks, the maximum weekly total was multiplied by four resulting in a total of seventy-two possible points in a four-week time frame. During the initial phase of the experiment, the students scored an average of 58.82 points with a standard deviation of 11.02 points. After the immediate reward system was introduced, the students scored an average of 64.35 points with a standard deviation of 8.62 points.
In order to examine the results more thoroughly, Pearson’s $r$ was calculated and a t-test was conducted. Table 2 reports the t-test information.

**TABLE 2**

<table>
<thead>
<tr>
<th>Calculated t-test Information</th>
<th></th>

</tbody>
</table>

The research hypothesis stated that the mean of $X$ was less than the mean of $Y$ ($H_0$: $X=Y$). A t-test was conducted to see whether or not the results supported that theory. When the calculated value of $t$ ($t=-3.12$) was compared to the critical value of $t$ ($CV_t=1.746$) the null hypothesis was rejected ($| -3.12 | > 1.746$). It was determined that there was a significant difference between point accumulations for pre and post immediate reward implementation, $t(16) = -3.12$, $p < .05$. The results of the research also determined that there was a strong positive correlation between increased point totals and immediate rewards ($r = .75$). As the immediate rewards increased, the point totals increased. Farther analysis showed that the coefficient of determination ($r^2$) = .5625. This indicated that 56% of the variance in point totals could be explained by the addition of immediate rewards.
**Literature Review Discussion**

**Summary**

The review of the literature established that disciplinary problems of children and efforts to deal with those problems were not new topics to researchers. Check wrote about his discipline studies back in 1979. Although some aspects of the problems have changed, many still remain the same. Check reported that teachers often felt that the discipline problems were a direct result of problems that the students had encountered within their living environments. Check (1979) wrote, “More than half of the respondents identified the home as the primary cause of their school problems” (p. 135). Twenty-seven years later, Bohanon had similar findings when he reported that quality of life experience was a contributing factor to disciplinary problems. Bohanon (2006) wrote, “For students who face dangers walking through their own neighborhood to get to school, being ‘ready to learn’ as they walk into the classroom is not likely to be a high priority” (p. 132).

Another issue discussed in the literature was the lack of cross-cultural competence. Schwartz found that misunderstandings and misrepresentations of African American culture have lead educators to have negative attitudes toward African American students. These negative attitudes often promoted an antagonizing relationship between the teacher and the students. Schwartz believed that what might be perceived as a lack of discipline on the part of some African American students could most likely be explained by a lack of cultural understanding of the African American community.

In order to have an effective behavioral management plan in place, the rules must be understood. This understanding is not just limited to the students. Teachers, parents, school
staff, and administrators must understand the rules as well. Gaustad (1992) wrote, “Orderly schools usually balance clearly established and communicated rules…” (p. 1). Mayer agreed with this statement. He saw the need for all interested parties (from students to administrators) to be included in the development of the rules. Mayer (1999) wrote, “Rules tend to be better accepted, understood, supported, and enforced when all concerned parties have been included in drawing up a conduct code” (p. 4).

Current school-wide discipline models tend to rely less on punishment and more on positive approaches to correct disciplinary problems. Muscott spoke of this when he described the Positive Behavioral Interventions and Supports school-wide discipline model. Muscott (2004) stated, “It is important to teach the students the appropriate behavior. Too many discipline plans focus on punishing negative acts without ever addressing the correct way to do things” (p. 455). Mayer also wrote of this in his description of the Constructive Discipline model. Mayer (1999) wrote, “At the very least, discipline codes list the do’s and don’ts, or the behavior standards required by students” (p. 2). Mayer (1999) continued, “Many codes are hastily conceived, arbitrary, overly punitive in nature, and have little evidence of the effectiveness” (p. 2).

In terms of delay of gratification in children, it was suggested that the developmental level of a child had a direct effect on the child’s ability to sustain the delay. Nisan wrote of this in his studies with six-year-old children. His results showed that children in that age range mostly chose the immediate reward when offered a choice. In contrast, Nisan (1974) wrote, “The eight and nine-year-olds chose predominantly the delayed reward and were similarly unaffected by the exposure to the rewards” (p. 378). Shybut also discovered this trend when he
worked with mentally challenged students. Shybut (1968) wrote, “Relations have been found with the resistance to temptation and with severity of psychological disturbances” (p. 465).

The rewards offered to children must also be considered. The rewards have to be meaningful to the children. Dmitruk (1973) wrote, “There is no correspondence between what adults think children like and the children’s actual preferences” (p. 340). Burns and Borrego agreed with Dmitruk. They used Mexican coins as rewards in their studies and allowed the children to trade the coins in for a reward of their choosing.

**Interpretation**

I agree with much of the information that was presented in the literature review. In order to fix the problem, it must first be understood. It is important to recognize what constitutes misbehavior. That means that as educators, we must consider all possibilities. Is a student really misbehaving or are we misinterpreting that act due to cultural differences? Do the students know the correct behavior? Are issues in the home affecting the child? These are all important questions that must be answered when dealing with disciplinary problems. It is only after these questions are answered that we can begin to plan a course of action.

If after completing these steps I wish to use a reward system with my students, I will still have other issues to consider. I need to first know the developmental stage(s) that the students are in. They may be unable to handle all the elements of the plan I am trying to devise. If I use rewards, those rewards must be meaningful to the students. Finally, I must be willing to modify the rules to suit the needs of the children.
Conclusion

I believe that disciplinary issues and management strategies are important topics in the field of education. Even the best teachers would find it difficult to educate a classroom filled with students who had no sense of what was expected of them. For this reason, it is important for teachers to have an idea of the different management styles so that they can choose one the works well for them and the students who they are teaching. It is also important to realize that teachers are in the business of not only educating youth, but also developing productive citizens. Once students learn what the rules are and the importance of abiding by them, they will be well on their way to achieving that goal.

Recommendations

The information presented in the literature review was pertinent to the study in the respects that it offered a guideline for the development of a classroom discipline plan. It began by explaining the characteristics of discipline problems and providing some underlying reasons for student misbehavior. It also served as a report of where misbehavior occurred most often and whether or not a child’s grade level or the sex of the instructor made any difference in the amount of student misconduct. Next, the literature review outlined two school-wide discipline models. Attaining this information was necessary in the development of the disciplinary strategy used in this study.

Once the decision was made to use a system of positive reinforcement for the study, delay of gratification was researched. It was important to determine why some children were able to function without their senses being constantly gratified and why some were not. The specific rewards that were used in these studies were also relevant. When the rewards were important to the children, the delay was sustained for a longer period of time.
If a researcher chose to replicate this study in the future, I would recommend that he or she take time when selecting the rewards to use with the children. I definitely see the need for establishing a list of rewards that are meaningful to the students. Given the opportunity to do this study again, I would have the children to complete an interest inventory so that I would have a better idea of their likes and dislikes. If giving an interest inventory was not an option, I would have given myself enough time to get to know the students on an individual basis instead of starting the study during the very first week of school.
Research Studies Discussion

Results Summary

The study attempted to answer the following questions: (a) Do positive reinforcement behavioral management systems work? (b) Are students more likely to respond better to reward systems that offer instant gratification in the form of smaller and more numerous rewards or rewards that are larger and occur on a weekly basis? From the results of the study, it can be concluded that not only do positive reinforcement systems work, but also that students will respond better to reward systems that offered instant gratification as opposed to rewards where gratification was delayed. Three studies in the reviewed literature were directly related to these results.

In the case of the first question, Muscott’s research was relevant. In his discussion of the Positive Behavioral Interventions and Support system, he described the components needed to make the model a success. Muscott (2004) wrote, “There must be positive approaches to interventions such as teaching appropriate behavior rather than relying on punishment alone” (p. 456). Likewise, Mayer insisted that steps had to be taken to insure that all rules of discipline were communicated to students at the beginning of the school year. In this study, the appropriate behavior was taught to the students during the unit implementation. Through the lessons, students were reminded on a daily basis what the appropriate rules of behavior consisted of.

In terms of the second question, it was suspected that although the students initially desired the larger rewards, delaying those rewards devalued them in some way. This view was supported by Kanfer’s delay termination study. Kanfer (1977) wrote, “Delay produced frustration activates cognitive processes that then produce changes in the perceived values of the
There was a definite increase in the mean class point total during the second four weeks of the study when the students’ positive behavior was immediately gratified.

**Interpretation**

Positive reinforcement behavior systems are effective strategies for classroom management. Children seem to behave better when more focus is placed on rewarding positive behavior as opposed to punishing negative behavior. Punitive approaches to inappropriate acts do little to curtail their occurrences. In fact, they may perpetuate the problem because they do not provide any motivation to make students want to handle a given situation differently the next time that it occurs.

**Conclusion**

I feel that behavior management plans that solely focus on punishing inappropriate behavior are obsolete. Some kind of reward system must be put in place when developing any discipline plan that deals with children. The reward system cannot be arbitrarily conceived if it is to have any effect. The rewards must be worthwhile to the children. Educators can no longer assume that they know what children like.

It is also important for the children to have an understanding of the expectations. Rules should be taught on the very first day of school and the children should be reminded of the correct behaviors on a regular basis (not just when they do something inappropriate). It is helpful when the students feel like they have been a part of the rule development. This not only promotes understanding, but also gives them a sense of responsibility in terms of making proper behavior choices.
Recommendations

In retrospect, if could do the study again I would make a few changes. First, I would take time to get to know my students better to make sure that the rewards were meaningful. Like most educators, I assumed that I knew what the kids would like. Although I had already reviewed the literature prior to the experiment, I did not fully comprehend the importance of knowing exactly what the children liked and disliked. I reconsidered the importance during the experiment. Secondly, I would have given the immediate rewards during the first half of the study and the prolonged ones during the second four weeks instead of vice versa. It may have been easier for the children to delay gratification if they were sure that they would actually receive the reward. There was no time to establish a relationship of trust between the kids and me due to the time frame of the study. They really had no reason to believe that I would reward their behavior at the end of the week. Maybe if they had seen a pattern of rewards from the inception, it would have been easier to sustain the delay. Finally, I would do the study with older children to see if the results would be different.

Appendix

Reflective Essay

I decided to do a study on discipline because I was looking to explore a topic that I felt was important in the field of education, but was not prevalent in current research. While I am not saying that I have never been exposed to discipline strategies during my teaching career, the majority of the educational conferences that I have attended and the classes that I have taken have mainly dealt with ways to educate children academically. In elementary education the upmost importance has been given to the areas of reading and math. Granted, these subjects need to be addressed, but I think that other areas are equally important. Since I have been teaching, I have seen (through my own eyes and the perceptions of others) an abundance of programs implemented in schools that focus only on reading or math. Classroom teachers have found it to be very difficult to work with the numerous programs that are required to teach reading and math and still find time to devote to the areas of social studies, science, and health education. It is unfortunate that because of the demands placed on teachers in areas of reading and math, the other subjects often get limited attention during the school day.

I have always been amazed to see so few people correlate behavior to academic achievement. To me, the relationship between these two entities is obvious. If a teacher has to spend over fifty percent of his/her time correcting negative behavior in the classroom, the instruction of the students suffers. That is why believe behavior management plans should be given a higher priority in the field of education.

Implementing the unit allowed me to do two very important things at the same time. First, I was able to teach appropriate behavior. This was achieved through the role playing activities, the story reading, and the subsequent class discussions. Secondly, I was able to focus
on social studies education. During the unit implementation, I had the opportunity to cover the Constitution, America’s symbols of freedom, the divisions of government, laws, and the concept of civic duty. The way that the information was taught made it easy for the students to relate to because it was applied to the classroom. I was pleased with the outcome and I do plan to teach the unit again.

I am still using the immediate reward system in my classroom; however, since the overall behavior of the students has continued to improve, I do not have to give as many as I did during the study. I feel that the students are in the beginning stages of taking responsibility for their own behavior. When they do not think that I am listening I often hear them correcting each other. They seem to have developed their own sense of checks and balances within the group and they are holding each other accountable. Incidentally, I have seen some academic improvement in several of the students.

The completion of the study was a worthwhile experience. I found it to be very rewarding and I have already discussed my findings with several colleagues. I hope to one day get the opportunity to present this information at an educational conference so the more people will be aware of the importance of discipline in the field of education. I look at it as my contribution to the field.
**Definition of Terms**

*Constructive Discipline*

Roy Mayer (1999) describes Constructive Discipline as “a form of discipline that stresses preventive measures for discipline as opposed to punitive ones” (p.2).

*Delay of Gratification*

The *Encyclopedia of Psychology* (2001) defines delay of gratification as “the ability to forgo an immediate pleasure or reward in order to gain a more substantial one later” (p. 41)

*Disciplinary Problem*

Disciplinary problem is defined as any behavior exhibited by a student who consistently disrupts classroom instruction and/or one in which physical aggression is displayed.

*Positive Behavioral Intervention Supports*

Muscott (2004) and his colleagues describe Positive Behavioral Intervention Supports as “a three tiered system that teaches appropriate behavior instead of just punishing it” (p. 455).

*Positive Reinforcement Behavioral Management System*

Positive Reinforcement Behavioral Management System is defined as any system that rewards positive behavior in an effort to promote its consistency. In this system negative behaviors receive little focus.

*Rewards*

Rewards are defined as any object or opportunity given to a student for desired behaviors. (Instant rewards are given at the exact moment that the desired behavior is displayed by the student).

Stage 1

QCC Objectives For 3rd Grade: Strands-Civics and Core Social Studies Skills

Big Ideas

Civics
- 3.3 Distinguishes the difference between rights and privileges.
- 3.4 Explains that rules and laws protect the rights of people.
- 3.5 Explains the differences among making laws, carrying out laws, and determining if laws have been violated.
- 3.6 Describe how violations of law produce consequences.

Core Social Studies Skills
- 3.38 Proposes alternatives possibilities for solutions.
- 3.42 Shows respect toward others.
- 3.43 Observes set rules of procedures.
- 3.45 Participates in planning for effective civic actions; demonstrates appropriate civic actions.

Enduring Understandings

Students will understand
- 1. Rules/laws are necessary.
- 2. Rules/laws are set up to protect the rights of all.
- 3. There are consequences for breaking rules/laws.

Unit Essential Questions

In order to understand, students will need to consider such questions as…
- 1. What are rules/laws?
- 2. Why are rule/laws necessary?
- 3. Who makes the rules/laws?
- 4. What is a consequence?
- 5. What are the consequences for breaking rules/laws?
Assessment Evidence – What evidence will show that students understand?

Performance Task
1. Classroom constitution.
2. Community guidance card.
3. Chart-Important jobs.

Other Evidence- Informal Assessment – observation
1. Role playing activities.
2. Classroom discussions.
3. Participation in "community involvement activity.
4. PALS point sheets.

Student Self-Assessment and Reflection
Students will respond orally after each assignment to questions:
1. What have I learned?
2. How can I use what I have learned?

Stage 3

Learning Plan – How will learning experiences be designed to achieve understanding of the concepts and mastery of the reasoning, knowledge and skills to achieve the desired performance?

Day 1
Materials:
Miss Nelson is Missing
Harcourt Brace Communities-Social Studies Textbook page 293 (or resource containing information about the U. S. Constitution)
Why Laws are Important-worksheet

Procedures:
1. Read Miss Nelson is Missing by Harry Allard to the students. At the conclusion of the story, discuss the behavior of the children in the story. Ask open-ended questions to determine whether the students think that the behavior in the story is appropriate or not.
2. Distribute the student text (or other resource). Explain that the U.S. Constitution is a set of laws that was written when the United States was still a new country and that it is still around today. Tell the students that this year, the class will construct its own version of the Constitution as well as develop our own community elements.
3. Have students work in groups to complete Why Laws are Important-worksheet. (Collect)

Day 2
Materials:
Why Laws are Important-worksheet
Poster board
Markers

Procedures:
1. Redistribute Why are Laws Important worksheets. The students will share their responses with the class. Remind the students that all units have some form of governing principles. Discuss the rules set forth by parents and police officers.
2. Challenge the students to brainstorm rules for our Classroom Constitution and write them on the board.
3. Go through the rules listed and determine (as a class) which ones are most important. After choosing about five rules, write them on the poster board under the heading Classroom Constitution and display them on the wall. (It may be appropriate to decide as a class what the consequences for breaking the rules will be at this time).
4. Discuss PALS discipline plan and consequences.

**Day 3**

Materials:
Five index cards (each one displaying one Constitution rule)

Procedures:
1. Divide the class into five groups.
2. Give each group one of the index cards making sure that no group knows what rule any other group has. Advise the students that each group has to come up with a strategy to “act out” the incorrect way to display that rule and the correct way to display that rule.
3. After ten minutes of group planning time, call individual groups to go to the front of the classroom and “perform” their rule. The rest of the class will be challenged to guess which rule is being portrayed.

**Day 4**

Materials:
Index cards
Precut pieces of construction paper
Crayons/markers
Glue

Procedures:
1. Advise the students that they will be creating individual “community guidance” cards to carry with them so that they can have something to refer back to in the event that there is some “confusion” about the Classroom Constitution.
2. Give each student one index card.
3. Have the students list the following information on their index card: full name, date of birth, and the rules of the Classroom Constitution (neatly).
4. Allow the students to glue their cards on the precut construction paper.
5. Collect the cards and laminate them.
6. Give the cards back to the students and advise them to store in their Social Studies notebooks for the remainder of the school year.

**Day 5**

Materials:
Poster board
Markers

Procedures:
1. Advise the students that in order for communities to be successful, everyone must be an active participant. Discuss the different jobs the people occupy in a community (police officers, teachers, doctors, lawyers).
2. Brainstorm a list of the possible jobs needed to make the class community run efficiently.
3. List the jobs and determine how they will be assigned (suggestion: assign students to specific jobs the first week and allow them to choose their own replacements the following week—provided that their replacements have demonstrated the behavior of “good citizens”).
Day 6

Materials:
Computer
Scan converter
White construction paper
Crayons/markers

Procedures:
2. Using a scan converter, allow students to watch as you navigate through the site paying special attention to the heading labeled Symbols.
3. Discuss the following symbols in detail: the American flag, the bald eagle, and Uncle Sam. Tell the students what each symbol represents and why the symbols are important to Americans.
4. Divide the class into three groups and challenge them to come up with symbols to represent our community. Display the final projects within the classroom.

Day 7

Materials:
Harcourt Brace Communities-Social Studies Textbook pages 303-309 OR
Computer
Scan Converter

Procedures:
1. Read and discuss textbook pages 303-309 - The National Government.
2. Using the computer and the scan converter, allow students to view your navigation through the Ben’s Guide to U.S. Government website. (The above-mentioned pathway will take you to and organizational chart of the three branches of government.
3. Explain the role of each branch and discuss the importance of the checks and balances system.
4. Tell the students why courts are important and how local citizens are picked for juries.

Day 8

Materials:
None

Procedures:
1. Create a scenario depicting a student who has just broken a Classroom Constitution rule.
2. Challenge the students to role-play what they think is meant by the judicial process.
3. Discuss the activity afterward.

Day 9

Materials:
Harcourt Brace Communities-Social Studies Textbook page 52- Act as a Responsible Citizen OR

Procedures:
1. Use page 52 or Good Character website is discuss the qualities of being a good citizen.
2. Brainstorm ways to show good citizenship in the Classroom community.
Day 10

Materials:
Trash bags

Procedures:
1. Remind the students that one sign of a good citizen is showing respect for the environment.
2. Explain that the class will demonstrate their respect for the environment by cleaning up outside.
3. Have the students pledge to always keep the environment (inside and outside) clean.
Why Laws are Important

Directions: Give reasons why you believe it is important to have laws in a community. (See if you can come up with the most!)

ABSTRACT

In recent years, there has been a considerable experimentation in the institutional arrangements governing natural resource management (NRM), including fishery resources, in different countries. The institutional changes amount to a redefinition of the role of the state and have stimulated further exploration regarding a variety of local government and non-state forms of management and co-management. Institutional restructuring efforts of this kind involve local communities and user groups, joint
environmental management schemes, nongovernmental organization-based initiatives, cooperative bodies and other actors at the micro and meso levels (Maynen and Doornbos, 2004). It is believed that prevailing institutional arrangements play a significant role in determining the efficacy of a given set of policy or technological interventions (Barrett et.al., 2005). Altered institutional arrangements have been done, it is often argued, to bring about more sustainable and equitable forms of NRM through the enhancement of local participation (Maynen and Doornbos, 2004). Thus, it is emphasized, the key task in NRM is building the right kind of institutions (Shah, 1993). Practitioners and scholars increasingly believe that "getting institutions right" is as important as – and inextricable from - getting incentives right, if sustainable progress is to be made in either the conservation or the development arenas, much less both (Barrett et.al., 2005).

The literature on NRM, including fishery resources is replete with conceptualization, experimentation, analysis and evolution of different forms of community-based management (defined as a situation in which "decisions about fisheries management in a particular area are made at the local level by the community using the fishery, with no or very little clear role for government" and co-management (defined as "an arrangement where responsibility for resource management is shared between the government and user groups"). The managerial rational for co-management lies, it is argued, in the fact the strengths and weaknesses of the state in resource management are complementary to those of local communities or user groups (Baland and Platteau, 1996).

Several countries have recognized the role and relevance of local communities in the management of natural resources (Balland and Platteau, 1996; Agrawal and Gibson, 1999; Berkes, 2003; Ostrom, 1990). However, most often the central agencies do not provide enough space for local communities to participate in resource management. At the same time, top down government fails to mobilize cooperation of local communities to deliver sustainable livelihoods that ensure fair and equitable distribution of resources (Thomson, 2006), as well as, effective conservation and management of the resource. Exceptions to this general failure are, however, increasingly being documented and analyzed globally.
This paper presents the experiences of a cooperative arrangement between the state (represented by the State Fisheries Department) and the community (represented by the Fishing Cooperative Societies – a village level primary institution of the rural people displaced due to construction of dams) in the management of fishery resources in two major reservoirs of a northern hill state (province) – Himachal Pradesh in India.

The two reservoirs studied – Gobind Sagar and Pong, constructed on two major rivers of the region originating from the great Himalaya, namely, Sutluj and Beas, respectively; with mean water spread of 25,000 ha constitute an important fishery resource of the state. The development of fisheries on scientific lines in these two major water bodies of the state have shown tremendous potential for, not only the food production and generating employment but also resource conservation. A system of cooperative management of these resources have been developed over last three decades in the state by designing and implementing a series of policy and administrative interventions, whereby, the state has been able to facilitate creation, promotion and strengthening of the fishing cooperative societies as an effective partner in the sustainable fisheries development and resource enhancement in the two reservoirs.

In this study, we trace the roots of this system and its progressive evolution into an effective mechanism of co-management. The study focuses on the roles of various stakeholders in ensuring resources sustainability and equitable distribution. The study also assesses how this system of co-management has impacted upon the orientation and actions of fisherfolks towards resource conservation. An attempt has been made to identify and discuss the factors contributing towards success of this arrangement and constraints perceived therein. Finally, the paper concludes by summarizing key lessons emerging from the study and their relevance and implications for designing and implementation of institutional and policy interventions for fishery resource conservation and management in other parts of the country.
Title: Boom and bust economics in northern British Columbia: The changing nature of northern rural women’s caregiving

Abstract:

Rapid economic change in northern single industry resource-based towns has influenced the nature and scope of local women’s caregiving roles. The volatile nature of resource-based industry has resulted in rural economic decline and spiraling housing market values. Policy responses promoting out-migration constitute the primary state intervention while privatisation and deep cuts to social services have further deteriorated remaining community infrastructure. Within this context, women, who are often the primary caregivers, increasingly compensate for reduced services and supports in their communities by accepting expanding caregiving responsibilities for family, friends and the broader community. Strong community identity, kinship ties and commitment to community caring places many women in the precarious situation of choosing between their personal well-being and that of their family, friends and community - their “home”.

A primary aim of this study is to explore how rural economic decline influences the decisions of women caregivers in the broader context of constructed conceptualisations of womanhood and the manifestation and reinforcement of women’s caregiving roles by state policy (i.e. housing policy), local community context and rural women themselves. The research also explores the impact of economic decline on housing policy and associated implications for women caregivers in rural and northern settings.

Focus groups were held in four northern British Columbia communities and data was used to gain an understanding of place-based issues. Collected data was also used to inform the development of individual interview questions. Semi-structured one-to-one interviews were conducted with approximately 70 women in three northern rural communities and one non-metropolitan northern town. Participants were asked to share their experiences and perceptions of the rural economic decline they experienced in relation to family relationships, housing choices and caregiving responsibilities at the individual, familial and community level. Institutional ethnography was adopted as a means to further contextualise women’s caregiving experiences within local circumstances and structures.

Preliminary research findings which revealed tensions between growing community demands, state off-loading of caregiving responsibilities and the capacity of women to provide increasing amounts of unpaid care will be discussed within the broader context of economic decline. Women caregivers’ perceptions and constructions of their roles as natural caregivers and the disconnect of these perspectives in terms of the decline of community infrastructure will also be discussed. The resulting changing nature and structure of rural women’s caregiving roles and responsibilities will also be highlighted.

This research investigates the existence of a gender stereotype confirming attribution bias, and related stereotype confirming processes. The data showed that stereotype consistent and inconsistent behavior did not result in different causal attributions by the observer, or in the subsequent endorsement of different traits for the actor\(^2\). However, observing behavior that was inconsistent with gender stereotypes did cause participants to reconfirm these stereotypes in their ratings of how typical and desirable specific behaviors are for men, and for women. These findings are relevant not only to the study of gender stereotypes, but to the area of stereotype biases generally.

Part of our attempt to understand the social world in which we exist and interact involves explaining other people’s behavior. Social psychology terms this process ‘attribution’, and theory suggests that causal attributions vary along the loci of causality (internal-external), stability (temporary-stable) and controllability (controllable-not controllable; Weiner, 1985b). The role of perceiver’s expectations in how we attribute different behaviors has been well documented, and much of this work implies a confirming attribution bias (Kulik, 1983). There is a tendency to attribute actions which are consistent with our expectations of an actor to internal or stable causes, even if some situational factor is present, and a tendency to attribute actions which are inconsistent with our expectations to any possible external, situational, or temporary cause. Related to

\(^2\) The attribution and trait endorsement findings have been previously reported (Camp & Sloan, 2006), however when reporting the findings concerning typical and desirable ratings it is necessary to present them in the wider framework of stereotype confirming biases, thus the attribution and endorsement findings are reiterated to create the context for issues and results here.
this pattern is the possibility that observing a target acting inconsistently with our expectations may result in a different trait endorsement since presumably endorsement of traits consistent with a targets’ behavior is reflective of internal attributions. These are two of the patterns of data which would suggest a bias toward confirming expectations, but there may be other, perhaps more creative means, to achieve this end. For example, there may be a rebound effect such that following exposure to inconsistency, social observers engage in other expectation confirming cognitions or processes, and that this tendency is not just limited to the pattern of their causal attributions.

The basis of our expectations for an actor may come from a number of sources, including the actor’s membership in a particular social category, in particular a stereotyped group (Deaux, 1976; Duncun, 1976; Jones & McGillis, 1976). Observing someone acting inconsistently with a stereotypical expectation we hold about their group may lead to a stereotype confirming attribution bias. Although this bias has been demonstrated (Johnston, Bristow & Love, 2000) it has not been adequately investigated. In particular there is a need to examine the process of stereotype confirming attribution bias in relation to gender stereotypes. We are all members of a gender group and so any impact gender stereotypes may have on how we relate to, and understand, one another has implications beyond theoretical interest.

The aim of this research was to attempt to contribute to the attribution field’s understanding of how perceivers attribute unexpected information by investigating the gender stereotype confirming attribution bias. Specifically, this research explores the pattern of causal attributions made for gender stereotype consistent vs. inconsistent behaviors, as well as subsequent trait endorsements for the actor. In addition, another
more novel means of stereotype confirmation is examined. Do participants’ ratings of how typical or desirable a behavior is for each gender differ following the observation of a behavior which is consistent or inconsistent with their stereotypical expectations? More specifically could these ratings act as an outlet for re-confirmation in the face of inconsistency that may threaten the disconfirmation of stereotypical expectations.

**Method**

238 African American participants read vignettes describing behaviors that were either: stereotypically male / female (gender typed behavior), positive / negative valence (valence of behavior), and performed by a male / female African American actor (actor gender). To ensure that the gender stereotypes used were considered relevant and applicable to our particular participants they were selected on the basis of data regarding gender stereotypes and favorability ratings of trait behaviors collected by a colleague from the same subject pool (Glover, 2005) and / or from a similar published study elsewhere (Smith & Midlarsky, 1985). Following the vignettes participants completed the revised Causal Dimension Scale (McAuley, Duncun, & Russell, 1992) which measures attributions about a target person’s behavior, and a trait endorsement measure to assess the extent to which positive-male, negative-male, positive-female, and negative-female traits were endorsed for the actor. Participants were then presented with each of the behavioral sentences again and asked to rate what percentage of African American men would behave as the actor had, how desirable / undesirable it is for African American men to act this way, what percentage of African American women would behave as the actor had and how desirable / undesirable it is for African American women to act this way.
Results

Contrary to expectations derived from stereotype confirming attribution bias, there was no interaction of gender typed behavior and actor gender on attributions about target behavior or on trait endorsements. Stereotype consistent and inconsistent behavior did not result in different causal attributions by the observer, or in endorsement of different traits for the actor. However, there was a significant main effect of gender typed behavior and of valence of behavior on the all trait endorsement measures; participants were more likely to endorse traits consistent with the expected gender of the actors’ behavior, regardless of the actors’ actual gender; and were more likely to endorse traits of the same valence of the behavior. For example if participants were presented with an actor behaving in a stereotypically male way, then they were more likely to expect male traits in a subsequent trait endorsement task, regardless of the identified gender of the actor.

These data seem to imply that gender expected consistency does not have an effect, while personal consistency may. However, the participant’s ratings of the stimulus behavior with which they had been presented on how typical it is for each gender, and how desirable it is for each gender, reveal there is some effect. The interaction between gender typed behavior and actors gender (which indicates consistency) was significant for the rating of what percentage of men who behave as the actor had (F(1,232)=10.54, p<.01), the rating of what percentage of women would behave as the actor had (F(1,232)=14.50, p<.01), how desirable it is for AA men to behave as the actor had (F(1,232)=4.77, p<.05), and how desirable it is for African American women to behave as the actor had (F(1,232)=10.251, p<.01). In examining the means it would appear that
observing inconsistency between gender typed behavior and the actors’ gender causes participants to reconfirm their expectations in their ratings. For example, if participants read a scenario in which a stereotypically male behavior is shown, they rate this behavior as more typical of men if the actor in the scenario had been female (mean = 6.50) than is they had been male (mean = 6.08). It may be that observing inconsistent behaviors makes stereotypes salient to the observer, when they may not be under stereotype consistent circumstances. The stereotype confirming attribution bias literature, and literature concerning information processing effects of stereotypes generally, implies that it is under stereotype inconsistent, that is unexpected, conditions, when the bias will be most apparent (Croxton, 1989; Deaux, 1976; Kulik, 1983; Ross, 1977; Weiner, 1985a). If we observe something which confirms our stereotypes then we take it at face value, however if we observe something which is inconsistent with our expectation then we engage in various biases and processes to protect our expectations from the potentially disconfirming evidence.

Conclusions

Although no direct evidence was found for a gender stereotype confirming attribution bias, results were significant for the study of gender stereotypes. It seems that gender stereotypical behaviors are powerful, more powerful even than the actor’s actual gender, in evoking perceivers’ stereotypes regarding other stereotype relevant traits possessed by the actor, as seen in the trait endorsement results. Behavior was expected to be reliable, and predicted behavior based traits were not based on the stated gender of the actor, but rather on consistency with their past behavior. Furthermore, even if we may be unwilling to change our causal attribution to protect our stereotypes this does not mean
that we don’t engage in some reconfirming process. Our participants’ tendency to estimate a higher percentage of trait endorsement for the gender consistent with the stereotype following a scenario involving the inconsistent gender, may well one possible means by which social observers confirm stereotypes following potentially disconfirming evidence. Alternatively, this may be a sort of analogous contrast effect. The actors’ gender inconsistent behavior may serve to cue or remind us of the behavioral stereotype for the expected gender.

Beyond the Myths: What are African Americans Attitudes Towards Gay Men and Where do They Come From?

Debbie Van Camp¹, Jamie Barden¹ and Lloyd Sloan¹

Social observers have noted the existence of a strong prejudice toward gay men within the African American community. This research extends current understandings regarding the content and basis of these negative attitudes. These data indicate that gay couples are evaluated much more negatively than straight couples. Participants’ attitudes towards gay men were predicted by their perception of their religions’ attitudes towards gays. Critically, this was fully mediated by their perceptions of parents’ attitudes, suggesting that parental views may provide an effective focus for prejudice reduction strategies.

Negative attitudes towards gay men and lesbians, and the associated prejudice and discrimination, are pervasive and persistent in American society as a whole (Stangor, Sullivan, & Ford, 1991). In particular, social observers suggest that prejudice towards gay men is particularly strong within the African American community. This prejudice has been traced back to cultural factors such as organized religion, and family values (King, 2004; Negy & Eisenman, 2005). However, there remains remarkably little empirical research concerning the content or the bases of African Americans’ attitudes towards homosexuals, and what does exist is equivocal (Lewis, 2003).

A more complete understanding of African Americans’ attitudes is important for a number of reasons; most notably, highly negative attitudes towards homosexuality have been implicated as a major factor in the spread of HIV in this community, and as a barrier to effective education and prevention (Brooks, Etzel, Hinojos, Henry & Perez, 2005).

¹ Department of Psychology, Howard University, 525 Bryant Street, NW, Washington DC, 20059.
(202) 806-6805, debbievancamp@hotmail.com
HIV/AIDS is of great concern to the African American community: 47% of all HIV cases in the US are Black, and the rate of diagnosis is over 8 times higher than the rate among Whites (CDC; November, 2006). A person’s race itself cannot be the risk factor for higher HIV rates; therefore we must examine specific social and cultural factors within the African American community for potential explanations. These include not only socioeconomic barriers to education and treatment, but also the prevailing stigma against gay men in the community (Brooks et al, 2005). This stigma has been implicated as the primary reason for the higher rates of men who have sex with men (CDC; November, 2006). It has been suggested that Black men are more likely than their White counterparts to engage in homosexual behavior while maintaining a ‘straight’ identity, and that this is a result of the stigma toward gay men within the African American community. The consequences of this are far reaching: for the men who struggle with their identity and feel forced to live a double life, for the women in their life who are at a higher risk for contracting HIV, and in turn for the community as a whole.

In light of these fundamental implications, it is imperative that we better understand the basis of this stigma. The current research examines the content and correlates of African Americans’ attitudes towards gay men. In particular, in light of the parental socialization hypothesis (Allport, 1954; O’Bryan, Fishbein, Ritchey, 2004), as well as the value placed on traditional family values in the community, we explore what role parental attitudes might have in forming prejudiced attitudes. Previous work has found that children’s implicit and explicit negative attitudes or prejudices correspond with parental views (Sinclair, Dunn, & Lowery, 2005). The impact of religious attitudes will also be investigated, because Black churches are often held as at least partially
responsible for negative attitudes (Ward, 2005), and prejudice toward gay men among African Americans is associated with religious attendance (Schulte & Battle, 2004).

Method

A 2 (sexual orientation: gay/straight) x 2 (race of couple: Black/White) within subjects design was used. Eighty-eight straight Black participants rated pictures of Black and White couples that were either straight or gay. Ratings were made on a number of items designed to assess their overall attitude toward the couple. Participants then completed other measures to assess the content and bases of their attitudes, including items asking about their parents’ attitudes and their religions attitudes toward homosexuality, and in particular gay men.

Results

Overall, participants’ attitudes towards gay couples were negative. Participants showed a strong preference for their sexual orientation ingroup (straight couples; $F(1,86) = 222.25, p < .01$), and racial ingroup (Black couples; $F(1, 86) = 20.73, p < .01$). However, there was a significant interaction between the sexual orientation and race of the couple ($F(1, 86) = 20.69, p < .01$). Black couples were preferred to White couples if the couple is straight, however if the couple was gay, there is no racial preference. Gay couples were disliked irrelevant of their race.

To examine the relationship between participants’ attitudes and the attitudes of their religion and their parents, analyses were performed using religious attitudes as the independent variable, the participants’ attitude index as the dependent variable, and parents’ attitudes as the mediator. First, the participants’ attitude index was regressed on religious attitudes; religious attitudes were found to be a significant predictor of
participants’ own attitudes ($b = .32, p < .05$). Second, parents’ attitudes were regressed on religious attitudes; religious attitudes were found to be a significant predictor of parents attitudes ($b = .46, p < .01$). Finally, the participants’ attitude index was regressed on both religious attitudes and parents’ attitudes; parents’ attitudes significantly predicted participants’ attitudes ($b = .67, p < .01$), however religious attitudes no longer significantly predicted participants’ attitudes ($b = .01, p = .915$). The Sobel (1982) test was conducted and results confirmed that the reduction in the path from religious attitudes to participants’ attitudes was significant when parents’ attitudes were included in the regression ($z = 4.01, p < .01$). Therefore it seems parents’ attitudes fully mediate the relationship between religious attitudes and participants’ attitudes (Baron & Kenny, 1986).

Conclusions

Results are consistent with that of social observers: African Americans’ attitudes towards homosexuals are generally negative. Results also conform to the usual ingroup bias pattern based on both race and sexual orientation. However, the interaction between sexual orientation and race indicates that Black gays are considered as an outgroup, and rejected from the Black racial ingroup along with White gays.

The attitudes of both the participants’ religion and their parents seemed to predict their own attitudes. However, parents’ attitudes mediated the effect of religious attitudes; the influence of religion only had an effect when supported by parental attitudes. These results imply that, in keeping with previous research concerning parental socialization of attitudes, parents provide proximal validation and transmission of views coming from outside the family.
The influence of parental attitudes supports the parental socialization hypothesis and points to a possible focus for successful intervention strategies. If parents and religious institutions can be implicated as potential sources of negative attitudes, so then they can be tools for change; perhaps more importantly, they may be crucial outlets for effective HIV prevention campaigns. Although some churches will unfortunately remain a source of negative attitudes, others are already starting to play a central role in the fight against ignorance, stigma, and disease (Brooks et al, 2005).

SUSTAINABLE URBAN NEIGHBORHOODS THROUGH DECENTRALIZATION AND PARTICIPATORY PROCESSES: CASE EVA LANXMEER, THE NETHERLANDS

dr.ir. A. van Timmeren ¹,², M. Kaptein ³,

Abstract

This paper focuses on the spatial, technical and social integration of a ‘combined waste (wastewater) / energy system’ for an urban neighborhood (the deep green district ‘Lanxmeer’ in Culemborg, The Netherlands) integrated in a semi-public building. The district consists of approximately 250 houses, several offices and a ‘City farm’. The design of the district and the building is based on permaculture, Reggio Emilia and organic design principles. An innovative mixture of ‘red and green’ development is presented (urban agriculture), together with a concept of integrated decentralized technologies for wastewater and organic waste treatment with energy, carbon and nutrients recovery.

The concept is called ‘Sustainable Implant’ (S.I.). Principally, the concept is based on a small scale biogas installation (with treatment of black water and organic waste / garden & park waste), Combined Heat Power (CHP) and accompanying closed glasshouse, designed as a four storey high double skin façade of the semi-public building, called the ‘EVA Centre’, with integrated wastewater treatment for parts of the wastewater flows based on the Living Machine concept. These compact ‘hanging gardens’, as they are called, are situated in a non-ventilated space with heat (and water) recovery, heat/cold storage in an underlying aquifer and with injection of the surplus CO₂ of the biogas plant. The S.I. will be realized as a part of the EVA Centre and has an interconnecting role between both district and EVA Centre, inhabitants and visitors. Especially the social context concerning the people living in this urban neighborhood, the role of the S.I. and the Cityfarm(er) will be explained. Besides, the system layout and the dimensioning backgrounds are explained. Additional emphasis is put on maintenance, conservation and administration of the integrated whole, and the possible consequences for the district and its inhabitants.

Keywords: Self-sufficiency, Interconnection Wastewater Treatment and Energy Generation, Architectural Integration, Urban Agriculture.

1 INTRODUCTION

The background of this research is urban planning that is based on ‘interconnection’, as well as waste management in general, and on closure of the essential cycles (energy and water) inside urban developments, or as close to them as possible. During the process of realisation of this kind of complex decentralized solutions special interest concerns the need for existence and support of an ‘intentional community’.

The research presented was commissioned by the Delft University of Technology (TUD) as part of the CD&E research (Climate Design & Environment). The aim is to
investigate, develop and implement decentralised sanitation, energy and reuse technologies. In addition to this CORE International, Haskoning Nederland, Innogas and Thecogas Biogas B.V. are responsible for the Culemborg case related quantitative and qualitative process analysis (battery limits) and the economic implementation study. Atelier 2T Architects together with Hospitality Concepts, V&L Consultants and several other partners are responsible for the development and design of the EVA Centre in the deep green district Lanxmeer in Culemborg (Timmeren, 2006).

1.1 Decentralization and self-sufficiency

A limited and so-called ‘ecological interpretation’ of autarkic systems has been taken as a starting point: ‘systems that are closed for matter and energy, except for the continuous flow of solar energy’. The decentralization and, in some cases, even complete disconnection of central (infra)structures are at the centre of the developing emancipation of systems of which they are a part.

Two development processes concerning decentralized technology for the purpose of autonomy have come forward as topical: viz. first, the efficiency and improvements in the integration of sub techniques and ‘real-time’ co-ordinated, connected concepts, and, second, a better harmony between supply (input) and demand of the (different) sub flows. Additionally, there are two more general underlying development processes. The first is the environment-technical, environmental and, to some degree, also social optimization of decentralized systems within semi-autonomous projects. The second underlying development process concerns the link to economic applications related to the surroundings, often determined by soil or users, including taking carbon and nutrients back to agriculture and other lateral applications or possibilities. The presented case study incorporates both development processes.

1.2 Ecological district EVA Lanxmeer, Culemborg (The Netherlands)

Main case study within the presented research in which interconnection of public utilities and local autonomy has been elaborated is the project EVA Lanxmeer (EVA: Education, Information and Advice; in Dutch). It concerns an ecological settlement in the small-scale city of Culemborg. The location of the EVA project is near the central railway station of Culemborg, on 24 hectares of agricultural land and some orchards.

This was the first time in the Netherlands that permission was given to build in the vicinity of, and partially even within the protection zone of a drinking water extraction area. The regional government allowed building at this site only under the guarantee that it would carefully be built according to modern ‘deep green’ principles.

![Figure 1 Lanxmeer district with orchard, drinking water extraction area, retention ponds & helophytes (left) and semi-open court yards (right) www.eva-lanxmeer.nl](www.eva-lanxmeer.nl)

The structure of the urban plan is mainly based on the record of the existing landscape. Especially the subterranean structure has been used for the overall plan, the water zoning- and ecological plan. Besides of that general principles of Permaculture affected the spatial structure of the plan, especially the green zoning).

There is a gradual transition from private-, semi-private-, and public space towards a more natural landscape in the protected zone of the Water Company. Together these green zones form an environment that displays the diversity and resilience of natural
ecosystems. It can be called the ‘Park of the 21st century’ (Timmeren and Röling, 2005). Moreover because of the added links to the (waste)water-, energy- and waste concept of Lanxmeer. The project has been carried out in different phases and will consist of approximately 250 houses and apartments, (collective) permaculture gardens and ecological office buildings. In addition to special functions such as a biological city farm, the EVA Centre (an education, information & conference centre) is also situated in this district, along with a hotel and ‘Sustainable Implant’ facilities.

1.3 The EVA Centre with Sustainable Implant

At first the district’s energy concept had completely autarkic living as its main principle. Because of the concept of autarky and, consequently, the requirement for energy being available ‘on demand’, it was decided to use chemically bound energy, in the form of biogas. The production of gas from (green) waste flows in the district has two positive effects at the same time: not only does gas become available, but also there will be no need for a connection to the public sewage system. For the production processes it is of importance that the percentage of solid substance in the fermenter is as high as possible: the energy content of black water is determined by the solid mass. Therefore, it is of importance to decrease the quantity of flushing water as much as possible. To achieve this, the option of using a booster for each 8 houses was chosen. The combination of black water and green waste offers advantages. Firstly, the amount of biomass available will be higher and therefore the gas proceeds will be larger; secondly, the ‘fresh black water’ implies a constant supply of fermenting biomass, which is good for the stability of the fermentation process.

The fermentation of waste is not the end of the process. Other integral parts of the process include using the gas for energy generation and purifying the liquid effluent of the fermenter to a level that it can be discharged into the surface water without major problems, and processing the sludge without odour nuisance into fertilizer. Because of the E for Education in EVA, also a Living Machine (Todd and Josephson, 1996) was integrated for the purification of small part of the effluent. With respect to the necessary exploitation of the system two extra decentralised concepts were added, viz. a facility for further separating various anorganic waste fractions (‘Retourette’ or ‘Recycle Shop’), and the possibility for joint e-commerce supply (‘E- Fulfilment’). The total system is called the “Sustainable Implant” or in short: S.I. (Timmeren et al., 2004).

2 THE SUSTAINABLE IMPLANT

2.1 Combined decentralized facilities: the Sustainable Implant (S.I.)

The SI has been planned on the transition of the district into the surrounding (urban) areas, in the same lot as where the Eva Centre and the hotel are to be built (Figure 2, Figure 4).

Figure 2 Longitudinal section over the EVA Centre with integrated Sustainable Implant (left).

The technical installations will be integrated in an architectural solution, in such a manner that they will take up as little space as possible. The process of producing biogas (energy generation) and wastewater treatment can be divided into various sub processes:
1. Gathering black water on the one hand and green household waste (and to some extent garden waste) on the other, and leading them into the system;
2. The fermentation process, with biogas, effluent and sludge as its output;
3. Purifying and improving the gas into natural fossil gas equivalent;
4. Purifying the effluent until it has surface water quality;
5. Composting sludge into usable garden compost.

In addition a collection facility for waste and e-delivery, and a re-use step concerning the methane (biogas), water and carbon are added:

6. Collection of separated waste flows (Retourette) & e-delivery goods of the district;
7. Using the biogas in a combined heat power plant (CHP), CO$_2$ in glasshouses and purified water in the spa & vitality facilities.

Advantages of the biogas installation include getting rid of the inconvenience and cost of the (individual) green rubbish bins. This, however, can only be accomplished if the green waste is collected with a much higher frequency than the current once every fortnight. In Lanxmeer this will be an important role for the ‘urban farmer’ of the city farm ‘Cae staffage’, who will also perform the management tasks for the installations. The fermentation process takes place with a temperature of approximately 30 degrees Celsius, fully automatically; its stability is guaranteed by sufficient organic waste being fed into the system and as long as bactericides are avoided. Therefore, there is a risk that residents want to disinfect their toilets in case of illnesses and use cleaning products for that (bleach, lysol etc.) that do not harmonise with the fermentation process. Unwanted objects (in the green waste) can also damage the installation.

The biogas is a mixture of 65% methane, 34% CO$_2$ and some remaining gases (with a maximum of 1%), e.g. sulphur hydrogen. In addition to the biogas, the digestion output of the fermentation process (approximately 5 m$^3$/day) consists of slurry, that is divided into a solid fraction (approximately 40% solids) and a fluid fraction by a screw press.

The fluid fraction is free from pathogens. However, it is still polluted, so that extra purification is necessary before it can be discharged to surface waters (Sidler et al., 2004). Therefore the effluent will be added to the input flow of the Living Machine (that will also process the black water from the EVA Centre and the hotel).

There are two solutions for the solid fraction from the screw press: compost it in heaps in a well-closed compost room, or entering the slurry from the fermenter into the Living Machine. Because of uncertainties with respect to the process quality of this sub flow in the Living Machine, the first option was chosen (Figure 3). An advantage of using a compost room is that also the final maturation can take place there. After the maturation, the compost can be removed and brought back to the city-farm. The air in the compost room is extracted and purified by a bio-filter.
2.2 Interconnection of solutions & direct reuse of different sub flows

The biogas from the fermentation tank is used in a small Combined Heat Power (CHP) installation (Figure 3). Afterwards, a net amount of approximately 70 natural fossil gas equivalents remains and electrical energy surplus of 81 kWh/d remains to be sold (Sidler et al., 2004). From an economic standpoint this amount of gas to be obtained is too small for the investment and exploitation of the installation, within this context. Therefore energy revenue is introduced and used within the EVA Centre. Besides the Sustainable Implant is integrated (implemented) in the EVA Centre (Figure 4).

There are more added values. For example, the local, small-scale sanitation can cause less expansion of the present conventional sewage purification installation to be necessary. In addition to this, there is a (small) reduction of CO₂ discharge and some...
energy saving. In the current configuration with CHP and composting of the sludge in the basement approximately 194 kg/home*year of CO2 reduction for this district of 250 homes will be prevented (Sidler et al., 2004). There is also some reduction of waste collection and energy saving as a result of transport and pumping energy saved. When this saving is also taken into account, there is a total energy saving of approximately 8 GJ per home produced by the biogas installation (Vries and Timmeren, 2006).

2.3 Spatial Integration of the Sustainable Implant

Local interventions, e.g. with regard to sustainability, can be made without leaving the existing scaling-up. The overall design of the district Lanxmeer and the architecture of the most of the buildings is based on permaculture and organic design principles.

Figure 4 Conceptual plan of the EVA Centre with Sustainable Implant and model of the building (preliminary design); see also: www.evacentrum.com.

The triad ‘City Farm Caetshage’, ‘Sustainable Implant’ (SI) and the ‘EVA Centre’ form both the important ends (or beginnings) of the main east/west greenbelt that forms the backbone of the Lanxmeer district. The City Farm is situated in the originally agricultural area in front of the water extraction area. In buying houses the residents of partly have contributed in the realisation costs. In return the residents can visit the farm freely, and if desired even can help with the maintenance of fields. Nevertheless, the City Farm is supposed to work independently.

An important role is set aside to the maintenance aspects and collection of green waste by the city farmer. Together with the green waste of other green areas of Lanxmeer, the kitchen- and green waste of the houses (‘garden waste’) and Lanxmeer’s sewage effluent, this is being transported to the Sustainable Implant by the city farmer.

Figure 5 Schematic overview on the Sustainable Implant within the EVA centre (left: section, and right: basement plan).

Essential for this type of local solution is the way that possible types of trouble are dealt with. The main environmental aspects here include noise nuisance, odor trouble and dust trouble. Noise nuisance can be the result of waste collection and nuisance caused by the installation. In the Netherlands there are also restrictions as for odor nuisance. Effective biofilters should guarantee that this type of nuisance will not occur. As to
dust trouble it can be observed that there will not be any dust emitting process steps in the installation. As to possible aesthetic pollution perception it can be remarked that especially the Living Machine is perceived as a positive factor, looking like a ‘green’ hothouse and oasis, while the larger part of the fermentation is carried out under surface level. As indicated in the previous paragraph the SI can be divided into two main components. The first main component consists of the anaerobic fermenter, CHP, Retourette and e-fulfilment miniload. This part of the installation is situated in a closed, garage-like volume in the southwest corner of the building complex. On top of this mainly closed volume the new ‘water tower’ is situated with storage of biogas (in inflatable bags) in the centre of the tower and retention of the water effluent round about this core in the transparent volume, cascading down in five (repeating) levels.

Figure 6 Impression of the Sustainable Implant (Subcomponent I and II) integrated in the EVA Centre, in the Lanxmeer district, Culemborg (The Netherlands).

The second main component of the SI consists of the water retention cisterns, a sealed double skin façade with wastewater treatment of the EVA Centre (Figure 6), the agricultural glasshouses and ‘hanging gardens’ and the heat recovery installations with seasonal storage in aquifer. Three of the installations within this second main component (the façade, the solar-cavity spaces with hanging gardens and the agricultural glasshouses on top of the building) are fully integrated in the design of the EVA Centre. Most visible is the double skin façade: in fact it can better be defined as a ‘Vertical glasshouse’. This vertical glasshouse is 1.4 meter deep and is entirely sealed to optimize the heat-recovery potentials. Inside this glasshouse wastewater of the EVA Centre (hotel, conference centre, restaurants and wellness centre) is being treated in a Living Machine like configuration. In making the water treatment stacked considerable space is won in comparison with concepts like the Living Machine. The façade is situated in a noise nuisance zone due to its location parallel to railways.

3 REALIZATION THROUGH PARTICIPATION AND INTERACTION

In the democratic triangle formed by the three main groups of parties involved, viz. government, market and citizens, the relation between the first and the third is changing at the moment, because of the withdrawing government and the accompanying liberalization processes. The former relationship between State and citizen, to be characterized as linear (a modern society, fragmented with respect to power), has been transformed into a alternating networks of collaborative structures. The result is a changed margin for the co-ordination and participation processes of (residential) areas.

This leads to a larger interest to involve users and other “relevant” parties into the planning processes as early as possible, or, in other words, to aim for more commitment. There is always a basis for collaboration with the various parties involved
in a process, irrespective of the individual, sometimes conflicting aims. The choice for specific interested parties or their involvement is decisive for the eventual development process. In order to have as many of all the relevant parties involved participating, groups (of partners) are selected normatively or according to their “power” and influence in the residential area.

There is an important task for designers, viz. mapping people’s demands and wishes, and supporting and visualizing the concrete common aims. In this area, design should focus on the physical context of quality of life and sustainability, with the emphasis on the creation of conditions for spatial, social and environmental quality to exist (within the scope of a certain process quality). The other, often dominant parties involved should realize that the involvement of inhabitants/users goes further than just the change (design, construction). It is a balanced concept that is interconnected with surrounding projects, in a structure that supports flexible and continuous change processes, is open, and is continuously capable of absorbing corrections through permanent reflection (and learning), which is called ‘place making’. Also because of the possible learning processes, optimal communication and a maximum of involvement are vital when making comparative assessments in the preferably pluricentric decision-making. Generally taken The Netherlands has two models of decision-making for the (technical) infrastructure and the accompanying systems: the “model of decision”, or “referee model”, that places the problem of difficult decision-making among opposing individuals, interest groups and lower authorities; and the “interaction model”, also know as “coaching model”. The latter starts from the position that it is the decision makers that cause the possible problems. In order to really contribute to quality improvement, all “partners” within the process should declare their willingness to integrate the systems to be used.

Within the scope of the research underlying this project, the “coaching model” or “interaction model” was chosen. The advantage is that people can be prevented from working up to a solution in the shape of a specific infrastructural project too quickly, without sufficiently thinking about the relationship between the suprastructure (what do we want) and the infrastructure (how can we best accomplish this goal). A sound method of decision-making following this interaction model is the so-called “co-production”: recognizing the existence of mutual dependence between the various parties and interests. This method has been applied in the illustration project: the final case study of Lanxmeer.

The model can be made more effective by putting in new (possibly interactive) information technologies. In a digital (Internet) environment, an unambiguous working environment and an unambiguous system can easily be introduced for unhampered use by the various partners. Therefore a platform where participants can communicate in person or digitally with each other about the (desired) developments, and can act and decide has been realized in an early stage of the development process (this is the protected environment within the website: www.evacentrum.com). In this source-oriented attempt, improvised acting is linked to the creative process. In such a complex interaction and integration process, it is crucial to appoint a so-called “leading actor”. In Lanxmeer the designer has been appointed for this purpose, in close collaboration with the concept manager and the process manager, in line with the model of co-production. The pluricentric method of interaction combined with the concept of “open design” offers the best perspectives, and is particularly suitable because of the current “specialists’ society” and the many parallel dynamic processes playing a part: it is an interactive learning process, in which participants may only develop and tune (adjust) their goals during the process. The emphasis is on directing the transformation process and developing alternatives while the process itself is going on.

4 CONCLUSION

The Sustainable Implant cannot be regarded as a fixed design that can be repeated. The instrument comprises a guiding principle for a sustainable solution to the mainly non-sustainable streams in new or existing neighborhoods. On a neighborhood level the S.I. entails the design of a more sustainable main structure for the transportation of water, nutrients, energy, materials and waste. Still a central grid connection will be needed: for starting up and back-up purposes. A connection to the centralized sewerage also still stand. This is mainly due to the fact that (parts of) the Lanxmeer district already have been realized. The sewer system of these parts however is anticipating the
disconnection (planned in 2007/2008). For emergency backup (hygiene related) the connection still will be held available. Specific local circumstances in most of the cases are a strong stimulus for the implementation of decentralized systems for closing cycles on a local basis. Decentralized sanitation systems often offer a solution in places where traditional sewers are not possible, because of soil conditions, water conditions or related rules and regulations. Decentralized systems turn out to be able to gain efficiency advantages as compared to fully centralized systems, particularly through the design of an integrated system of energy generation and supply, and through the connection of this system to a waste water treatment system coupled to nutrients recycling. In this case, in which an anaerobic fermenter is used, the necessity of a protected environment for development was evident. The choices made arise mainly from technical and social optimisation. There are several reasons for the decreasing level of ambition for closing the local (waste) water flows in case of larger scales of application. Occupants turn out to have more commitment when systems perform on the scale of a house or apartment, as compared to the scales larger than a district. As scale size increases, the supply and removal of waste(water) and similar flows get more and more anonymous and gives less possibilities for integration with its source/users (the buildings / houses), with decreasing commitment as a consequence.

It is important to change the general attitude towards the different components of design, development, use and management of urban areas. A way to do so is the ‘interconnection’ of different themes and cycles within cities. An example is the linking of sanitation to energy- and food production, preferably at lower scale levels. The introduction of solutions on an intermediate scale-level, like in Lanxmeer, Culemborg, offers opportunities for autonomous design of the whole or elaborations in which buildings can be semi-autonomous.

Introducing the analogy of the functioning of buildings with respect to energy and sanitation flows with that of a parasite. The appealing-, and already partly realised, example of the linking of agriculture, waste(water) treatment and energy production in the urban district Lanxmeer in Culemborg might be exemplary for the potentials of the supposed need for a change in attitude.

ABSTRACT: January, 2007

Submitted for consideration for presentation at the Hawaii International Conference on Social Sciences, International Development track
Reports of the failure of development programs around the world; more conspicuously in the developing countries provoke the following questions: What caused these programs to fail?, Why did the development theories and models that were successful in certain countries not work in others?, How do we bring about development in places where the dominant definition of development would be meaningless?. To address these questions, this paper draws from literature around these issues to first define conventional development, then illustrate the failure of conventional development and the reasons for the same and finally provide a discussion on what an alternative understanding of development could look like. The process of development is driven by the definition and understanding of development. Thus in order to create and restructure existing development models that are often transported carte blanche from one context to another, it is vital to first rethink our understanding of development and its goals. This paper concludes that development is essentially the increase in the options an individual has in living his life and the goals of this process is to be primarily defined by those it is meant for.
Moral Evaluation and Perceived Legal Responsibility of Various Offences

Topic Area: Psychology/Criminology

Presentation format: Paper Session

Abstract

Moral Evaluation and Perceived Legal Responsibility of Various Offences

Sandra Vermeulen, Reid Webster, Kristine Gardner, Catherine Power, and Karen Newman

As part of a larger research endeavour to understand social cognitive reasoning in offenders, this proposed research project will examine moral evaluations and the perception of legal responsibility of offences against others. There are situations in which an offence is perceived to be an illegal act, but the morally right action to take. In these situations, people often believe that the morality of the situation or mitigating factors should decrease legal responsibility (including punishment). This study will attempt to establish whether offenders and non-offenders differ in their moral evaluations of incidents/offences and the perceived legal responsibility for committing these incidents/offences. Based on the findings of past research, these incidents/offences will vary in the harm done to others and provocation. The proposed paper will discuss the past research, methodology, and preliminary findings.
Restorative Justice Practices in Elementary Schools

Restorative Justice Practices in Elementary Schools

Sandra Vermeulen, Diane Purvey, Catherine Power, and Lindsay Goodridge

Although the definition of restorative justice has evolved, it can be defined as a process and as a set of values (Roche, 2001). The process involves bringing together parties affected by the wrongdoing to discuss and resolve the after effects of the offence (see Braithwaite, 1999). In addition to this process, restorative justice also involves a set of values and theorists agree that the main value is repairing the harm (Braithwaite, 2000; Schweigert, 1999; Van Ness & Strong, 1997; Zehr,1990). Other important values include reintegration and forgiveness of the offender (Braithwaite, 1989; Roche, 2001). Initially, research and discussion concerning restorative justice programs was centred on its role as an alternative to the formal court procedures (Roche, 2006). Restorative practices more recently have expanded to other settings and types of offences, including behavioural problems in public schools (Karp & Breslin, 2001).

Considering the process and values of restorative justice, Karp and Breslin (2001) suggest that these practices are an effective alternative to punitive disciplinary policies in the school communities. According to these authors, however, restorative justice is mainly an abstract concept within schools. Most research and discussion regarding these programs has focused on secondary schools (grades 8 to 12). Yet, little research has been conducted on restorative justice practices in elementary schools.

According to Roche (2006), many teachers believe that restorative justice is simply a new name for the way they have always dealt with problems. In other words, according to many teachers, they routinely employ informally the principles of restorative justice. In stark contrast to these informal practices, many school districts enforce “zero tolerance” approaches (Karp & Breslin, 2001). These policies do not accord the flexibility for individual teachers to employ informal resolutions, including restorative justice practices. Furthermore, these policies, according to Karp and Breslin, exclude the “offenders from the school community” and build a school community on “fear rather than care”. Adoption of formal restorative justice practices, therefore, may provide an alternative to zero tolerance practices, when appropriate (p. 253).

School District 73, Kamloops, British Columbia (SD73) currently does not have a formal restorative justice program in the elementary (Kindergarten – Grade 7) schools. Recent SD73 (2006/07) initiatives include promotion of Effective Behaviour Support (EBS), a school-wide implementation of consistent, positive, and effective policies and procedures for reinforcing appropriate behaviour and dealing with inappropriate behaviour. Much of the focus of EBS is on positive reinforcements and following through with articulated consequences. SD73 also has an anti-bullying initiative (September 2005) in which it is stated: “The rights and interests of all parties (complainant and respondent) shall be considered when appropriate actions are decided.” Although some of SD73’s prose involves language around tolerance and care, a survey of the district’s social responsibility initiatives and policies reveals scant mention of the processes and sets of values which would be akin to restorative justice models.

As a first step to determining the feasibility of implementing these programs, we examined current responses to school-base problems and compared them with those of restorative justice practices. In addition to examining problem solving practices, we were interested in current
understandings of restorative justice programs, as well as perceived obstacles to their implementation.

Hopkins (2004), in her book that focuses on implementing restorative justice programs in schools, proposes a series of questions to initiate discussion with teachers and administrators regarding existing behavioural management and restorative programs. As a starting point, we adopted several of her questions and developed additional questions that we asked principals of elementary schools. In this paper, we will discuss their responses and propose recommendations regarding the implementation of a school-based restorative justice program.

Methodology

Eight principals of elementary schools in SD73 were individually interviewed. The schools were selected because they represent a range of the types of elementary schools found in SD73, according to size, rural/urban context, diversity of students, neighbourhood, and curricular focus (see Appendix I). As of October 2006, SD73 had 7,739 students registered in its elementary schools. Approximately 13% of all SD73 students identify as aboriginal.

The principals were asked the following questions in a semi-structured interview format:

1. Describe behaviours or incidents that are of concern at this school.
2. What are the current responses or responses of your school to these behaviours? Describe different procedures for different behaviours.
3. What are the ideal outcomes you are hoping for with these types of responses?
4. Please describe your understanding of restorative justice.
5. Have you explored the possibility of implementing a restorative justice program?
6. What sort of supports do you need to implement restorative justice practices in this school?

The first three interview questions were adapted from Hopkins (2004). Trained interviewers followed up responses with probes to clarify and expand the principals’ responses. The average interview time was 20 minutes and interviews were conducted in the principals’ offices. The responses were audio recorded and later transcribed. Principals were given the opportunity to review their transcriptions and edit their responses. All identifying information was removed from the transcriptions prior to an examination of the responses. A summary of these responses is presented below. In some instances, a question was answered in a prior response to another question. Following this summary, we will discuss the feasibility of developing a restorative justice in the elementary schools for this school district.

Results and Discussion

Question 1: Describe behaviours or incidents that are of concern at this school.

Our first question was to determine the types of incidents that are of concern and to ascertain whether or not restorative justice programs could be applicable to these incidents. The
principals' responses to this question were varied. Concerns include bullying, non-compliance, anger, physical fighting, vandalism, and drugs. These responses are consistent with a recent literature review that cited bullying, violence, vandalism, and other such similar behaviours as the most common student based problems (Luiselli et al., 2005). The most common response, mentioned by all principals, is bullying. When asked to provide examples of what constitutes bullying from their perspective, the principals' responses are divided into physical bullying and emotional bullying and often both, with verbal bullying escalating to physical conflict. Most incidents stem from friction in relationships. For example, in School B the principal recalled this incident:

we had some grade 7 girls this year getting involved in a fight... and basically it was... one of those 12-year old 13-year old, they're friends, they're not friends, best friends, now they're worst enemies...someone said something about somebody and the rumours spread around and before they knew it they were,...embroiled in a conflict so big they got involved in a fight.

Principals indicated that these types of incidents often escalate during less-supervised times during the school day such as lunch or recess. Additionally, sometimes bullying can begin in off-school sites, such as the internet. Principal A relates the influence of the internet (instant messaging) in bullying.

... because society’s ... more aware of bullying, things which used to just go under the radar, now we deal with a whole lot more, and we have things like MSN bullying which occurs off the school site, but it comes back to the school ‘cause threats are made over MSN or challenging comments are made or putdowns, rumours, so we had this year about four students who decided with the support of their parents that they didn’t feel comfortable at this school and ended up moving to another school meanwhile we’re also receiving five or six from other schools who are in the same boat.

Another principal, from School D, also mentions verbal bullying, including ostracization: “Pretty common types of things there will be exclusionary types of things ‘You can’t play,’ name-calling increasing to taunting, those types of things; and I get some intimidation, some physical intimidation.” This movement from verbal bullying to physical conflict is further supported by Principal C: “…out on the playground…there is on occasion you run across students who will I guess verbally abuse other students . . . on occasion at times they’ll lose their tempers and, you know, will engage in physical conflict with each other.” Physical violence almost exclusively occurs on the playground. Principal C makes this point: “Occasionally it’ll happen inside the school but I can only think of one instance in the last three years where it’s happened inside - mostly it’s on the playground over some playground issue.”

Another behavioural concern, which was cited as the most prevalent on-site act, was non-compliance. Similar to bullying, this often seems to happen outside of the teachers' purview. “An example of the defiance would be students wandering in the hallway and are asked to go outside and they either totally ignore the supervisor or they give the supervisor flack.” (Principal A) However, teachers are also subject to this sort of defiance. “Well when the teachers ask the kids to do something and they either blatantly refuse or they have some kind of a smart mouth comment back. Something that isn’t acceptable in my house is certainly not acceptable in the school.” (Principal G) Another principal reiterates this type of behaviour: “The non-compliance issues are around refusal to cooperate in the classroom, refusal to engage in
any meaningful activity; that sort of thing. So then that within itself creates discipline issues.” (Principal E)

Although the bulk of concerns are related to “squabbles, rumours, defiance, kids having disagreements over teams for, for how they're playing outside, that sort of thing.” (Principal A), a minority of the incidents in the schools have involved drugs and vandalism. “[W]e’ve had very small incidents of drugs at school, but [a] particular incident escalated when the student left the school and proceeded to w-want to commit suicide.” (Principal A) Another principal had two incidents at the school in the past year involving vandalism, specifically school windows being broken. (Principal D) And still another principal related an incident involving drugs at a school where the principal previously worked.

We had a grade seven girl found with marijuana at school and again, you know, that was kind of typical of some of the situations in xxxxx that we've seen kids using marijuana and, you know, fighting and vandalism…. (Principal F)

These last two incidents involved the RCMP, but most often schools respond to behavioural concerns at a school-based level.

Alcohol and drug abuse by students has also been cited as a common concern among educators. In 2004, a Youth Health Survey was administered by the McCreary Centre in Vancouver (Lawrence) the results suggest that there has been a steady increase in the use of drugs and alcohol on school premises during the 1990’s. Karp and Breslin (2001) also mention the prevalence of drug and alcohol use in a review of three programs which used restorative justice practices to help deal with the issues of substance abuse in schools. However, it is not surprising that these problems as considered relatively low occurrences considering the age of the children. The type of problems reported in this study can easily be contrasted with those found in secondary schools (e.g. alcohol/drug use and truancy).

**Question 2: What are the current responses or responses of your school to these behaviours? Describe different procedures for different behaviours.**

This question was posed to examine current responses to incidents of concern with an eye to contrasting these responses with restorative justice processes.

According to the principals, the schools employ a variety of methods in response to behavioural incidents; all of these involve some form of fact finding and progressive discipline. School staff or administration will generally investigate behavioural incidents by interviewing the children involved. Then, they implement agreed upon responses that are progressive in nature, which depend on the severity of the behaviour and the number of incidents a child has been involved in. Progressive discipline differs from school to school, but generally follows a similar pattern: encouraging students to be aware of the misbehaviour, timeouts or consequence rooms, in-school suspensions, and, finally, out-of- school suspensions. Although in most situations the behaviour is initially dealt with by the teacher or supervisor, with more severe behaviour the principal becomes involved. Principal G explains progressive discipline as follows:

For whatever incidents … it is first dealt with in the classroom. Then if the teacher doesn’t feel that they’ve gotten the response they want from the student, they contact parents. And if they still don’t get the response they want then it comes to me or the
vice-principal. If it comes to the administration, then we deal with the child. Again, normally that’s in a progression too, so we deal with the child first by talking generally, getting them to fill in a behaviour form that talks about what they did; what they did wrong and what they can do to make sure they don’t do it again. And if that doesn’t work we go on to another step that gets them to look at similar types of incidents through worksheet kinds of examples; read ...some ideas about incidents similar to what they had done and, respond to some questions. And then if we still don’t get the changes that we expect...then it becomes dealing with parents. It could lead to in-school suspensions. I prefer in-school suspensions to out-of-school suspensions. But in the end if it continues to escalate then it’s out-of-school.

Principals routinely involve parents in talking to their child about his/her behaviour, as in the case of Principal H’s handling of bullying. “I have a sheet I call a bullying sheet it has eight different descriptions of bullying. I send it home to the child’s parent and ask the child and parent to talk about it that night.” This particular principal acknowledges that in bullying situations, both the child who engages in bullying and the child who has been bullied need to be the focus of attention.

There are some differences between schools. For example, in one school classroom meetings are held. According to Principal D, a benefit to classroom meetings is that they can be implemented immediately following the incident:

... It is a student driven agenda. It is run just like a staff meeting, where there is a sign-up of things that they want to bring up, or they will have a box where they can put in agenda items. “I want to talk about this, this situation” or “I have this problem that I want to talk about.” That is what [teachers] do, they explore the situation and then help the student identify other ways of handling that.

Another principal reported that community service is a possible consequence that is more serious than a timeout. “Community service would be doing tasks around the school under the supervision of myself or the vice-principal, anything from the tidying up, organising the lost-and-found, setting up the gym for an assembly to whatever tasks need to be done.” (Principal A) Similarly, Principal A favours providing students with a work package in which, among other things, the students write apology notes to those individuals they have offended.

Principal A also attempted restitution, but found it “onerous and cumbersome”:

one example that I could give is a student who, someone stole his hat so he lost his temper and in losing his temper, he struck one student numerous times, he chased another girl, beat her up, and so he was suspended from school for a period of time and we decided that restitution was going to be the only successful way to get him back into school... It took a very protracted length of time to get to the actual restitution process as the concept of having an impartial third party do the restitution meeting portion of it. By the time it occurred, it was three months after the event and the students involved had basically already been playing with this guy again on the playground, when they were asked questions about the incident at that point, their memories were totally different from what they had remembered immediately after the incident or the witnesses at the time... [B]ecause of the time lapse restitution was not a very successful.
Principal A concedes that restitution practices which didn’t necessitate involve a neutral third party from outside of the school were much more effective because of the immediacy of the response. “There’s been other situations where we’ve you know we’ve used, we’ve tried to use the same process, but we haven’t gone to a disinterested, or I mean a neutral third party, we’ve just done it with our own staff and that has been more successful because it’s been more immediate to the situation.”

After consulting with the RCMP, Principal D’s school responded to an incident of vandalism “involving a number of kids” with a restorative justice approach. This process involved the students, their parents, the people who were impacted by the act (the principal, the PAC chair, two representatives from the community association – an employee and a youth, and the school custodian), as well as RCMP personnel. Unlike Principal A, Principal D did not refer to the length of time it took to initiate this process as a deterrent to embracing a restorative justice as a legitimate response to particular school-based incidents.

Principal A believes that much of the work around discipline that is done at the schools is really about “rebuilding relationships.” Just because a child behaves inappropriately, doesn’t mean that they are not still good kids. “Kids step over the line and they make a mistake and they’re still kids, they’re good kids before they made the mistake and they’ll be good kids again after. What I’m really amazed at in this community with these kids is that when they do something wrong, they’re remorseful immediately, there’s tears there’s a desire to fix things with their friend, because typically it’s their friend that they’ve hurt, and, you know, we move on…. They’re not habitual criminals you know, who need to be taught empathy.”

Principal B echoes this sentiment regarding children’s essentially good natures and believes that conflict resolution is helpful in diffusing conflict so that the incident doesn’t escalate to the level where discipline is mandated. “We’ll have the two people who are in conflict sit down at a table with an adult and the kids say both sides of the story and nine times out of ten it’s like ‘well, I didn’t know that you really didn’t think that’ and all this kind of stuff, and it’s worked out very well.”

Many of the principals talked about rewarding good behaviour by providing positive incentives, such as public recognition, draws for prizes, and pairing older children with younger children so that the older children are placed in a position of trust. Similarly, in one of the schools the older children are involved in a leadership program where they give back to the surrounding community by such events as visiting a seniors’ home and working on a Rotary garden. Principal C maintains that this encourages good behaviour in the larger community, not solely within the confines of the school. Encouragement, positive reinforcement, resolution – these are the words the principals kept repeating. As one principal stated: “We react to behaviours that come up in a lot of different ways, hopefully with some humanness and understanding.” (Principal C) This positive spin on both the students’ behaviours and the schools’ reactions to these behaviours underscored the principals’ reflections.

**Question 3: What are the ideal outcomes you are hoping for with these responses?**

This question was posed in an attempt to establish the principals’ goals or vision when determining their responses to inappropriate behaviour. For all of the principals the ideal outcome was for the behaviour to stop: “…we want these negative type behaviours to stop, and that’s the whole key to all the discipline and management things that we do.” (Principal G) Similarly, “change in behaviour;” (Principal E); “keep the kids’ behaviour on track” (Principal F); and “that it stops. That is the ultimate goal” (Principal D) were outcomes commonly expressed
by principals. A handful of principals went further, identifying that as well as stopping the behaviour, students need to change their attitudes, find other ways of dealing with conflict, and develop a sense of empathy. As Principal H expressed, “we don’t want the bully to continue bullying. Often, unfortunately, what happens is you take one target away from a bully and a bully will find another target. …the real goal is to help the student who is being the bully to find alternate ways to deal with anger, frustration, hurt.” Similarly, Principal A listed a host of behaviours they school hopes to address, in the long term, with intervention:

the ideal response is that the child feels remorse, that the child wants to make the situation better, that we help them with methods of making it better, [that] we help them rebuild relationships, we help them rebuild their own self-esteem because they’ve heard about people who’ve done something like they’ve just done and they know what kind of labels get attached and they don’t want to be that person, they want to fix it and move on.

As well, principals expressed a desire to establish new patterns of behaviour so that “they can get on the right track before they hit high school” (Principal E) or by the time they become adults: “what we’re trying to do is teach them how to deal with conflicts later in life; it’s no different with adults.” (Principal B)

In general, the responses were succinct, but also somewhat limited in that they focused on changes in individual behaviour, in both the short- and long-term, but rarely mentioned the larger context of the family and community outside of the schools’ purviews.

**Question 4: Describe your understanding of Restorative Justice.**

The purpose of this question was to ascertain the principals’ current level of knowledge and understanding of restorative justice. Additionally, this question was posed in order to recognize and acknowledge various understandings of restorative justice.

Bazemore and Umbreit (2001) distinguish between four different restorative justice models. They are victim-offender mediation, community reparative boards, family group conferencing, and circle sentencing. Bazemore and Umbreit describe all four models and discuss the procedural and administrative differences among them. According to the authors, family group conferencing is considered the model used most often in elementary school settings. The lack of agreement and the many different types of restorative justice models may account for some of the confusion when it comes to defining restorative justice.

The responses given to this question ranged from very broad to very narrow in terms of defining restorative justice. For example, Principal E gives a rather broad definition of restorative justice as “an alternative to the kinds of punishments that we’ve been using or consequences and it’s more about making amends between all parties involved in discipline issues.” Principal F also has a more specific and narrow definition. “Restorative justice is based on a model of, as I understand it, of a team coming together to address a problem and a victim getting some…some retribution from the person who committed the crime.” Principal F says:

...with restorative justice what has to happen is when someone has been victimized, let’s say, when someone has perpetrated a crime that you actually sit
down with both the person who did the action and the victim along with other supports so that the victim can really explain how it impacted their life. And then the person who did the crime can actually fully understand how their actions have affected another and hopefully make peace or...regain their own personal integrity by making up...making amends to the victim and so it is discussed and agreed upon what they are going to do.

The principals of school district 73 also allude to restorative justice as a process as well as a set of values. Some of the core values mentioned were: collaboration of the victim[s], offender[s], and community members, and restitution by the offender[s] to the victim[s]. Principal F comments on the impact of restorative justice for the offender in that he/she can:

...regain their own personal integrity by making up...making amends to the victim and so it is discussed and agreed upon what they are going to do. And in fact because the person who perpetrated the crime is, in the end, doing something to enhance the community or to right a bad situation, or even more, they end up feeling like they are actually contributing in a more positive way which hopefully will address some the needs, you know, their basic psychological needs in committing the crime in the first place.

Restorative justice is viewed, by Principal D, as “a process that takes place after an act, after a serious act, where everyone who has been involved with it agrees that they want to do something to improve what has happened.” This view of restorative justice as a process is further supported by Principal C and Principal A. Principal A describes restorative justice as a process and also comments on the limiting nature of restorative justice in elementary schools:

...restorative justice is basically a process which is designed to take a-an incident of inappropriate behaviour and to re-dress things for the victims to support the perpetrator or perpetrators and it’s a process which is quite prescriptive and step-by-step.

Bazemore and Umbreit (2001) also argue that restorative justice, as a process, helps to restore balance between the victims, offenders, and the community, and that involvement of each party is crucial to the healing. Braithwaite (1999) also views restorative justice as a collaborative effort where all parties gather to discuss the offence. This collaborative theme was evident in the responses; in particular the victim and the offender convening to discuss the wrong-doing. Principal G describes this collaborative explanation of restorative justice:

when there has been an incident between two of our people. The aggressor has to somehow show that they've changed their behaviour by going back to the person they were aggressive towards and making it better. Now I say making it better and to me that means, ‘let’s fix what’s gone wrong here and somehow you’ve got to find a way to tell that person that you know you messed up.’

In addition to collaboration as a key factor, restitution to the victim by the offender was also mentioned. Restorative justice includes restitution as a core value. Fields (2003) describes the goal of restitution as allowing the “person who has wronged to remedy that wrong and so become stronger” (p. 46). Fields also claims that restitution in the school context “has been used informally by teachers for some time” (p. 45) but that formal systems of restitution have only just found their way into school policies. Restitution to the victim is one of the most
common responses regarding the principals’ understanding of restorative justice Principal B describes restorative justice where there is “some sort of restitution, whether it’s, you know, a community service thing, or whether somebody replacing someone’s torn shirt that they wrecked. That kind of thing.” Restitution as a core value of restorative justice is further supported by Principal H. Restitution is not always in the form of monetary compensation; according to Principal F restitution was in the form of a “presentation, about some of the bad things about drugs- marijuana; and [the offender had to] present that to the school to hopefully teach the younger kids involved in it that it’s not a good idea.”

Question 5: Have you explored the possibility of implementing a restorative justice program?

This question was posed to determine the extent of interest in developing a restorative justice program as well as the extent of actual exploration into the possibility. Each principal had some exposure to restorative justice programs. Their exposure, however, varied as did their interest in pursuing these programs as an alternative to their existing programs.

All of the principals, who were asked, had attended workshops and engaged in discussions at meetings concerning the possibility of implementing a program. Some of the workshops were information and training sessions with the RCMP. Other workshops were conducted by educators, or educators and the RCMP. All eight principals attended principal meetings where the possibility of a restorative program was discussed. Although not directly asked or probed, one principal reported that the staff members at their school discussed the possibility of implementing a restorative justice program.

Two of the principals reported being directly involved in restorative justice meetings. According to Principal D, as previously described, there was an incident that was “fairly widespread involving a number of kids. So we involved the RCMP…and we decided to go with a restorative justice meeting and involved all the kids…and the people impacted and the parents.” Principal D further reported that he was a part of the ensuing restorative justice meeting. Another principal described an incident involving a student bringing drugs to school. A community member facilitated the restorative justice meeting. According to this principal “There was him (the community member), myself as principal of the school…an RCMP representative, the victim, I represented the victim…as principal of the school, the [student], and … [the student’s] parents I.

One of the principals, described being part of a restitution meeting, which incorporates some aspects of restorative justice. The process involved “having an impartial third party do the restitution meeting.”

Although several of the principals expressed interest in learning more about restorative justice, other principals suggested that there was little need for these programs. This perceived lack of need for these programs was, in part, discussed as a barrier to implementing them.

Question 6: What sort of supports do you need to implement restorative justice practices in this school?

Throughout the interview, the principals mentioned various barriers to implementing restorative justice programs in the schools. In this section, the barriers will be addressed first followed by a summary of the supports that the principals cited as necessary to implement these programs.
The barriers to implementing these programs, as reported by the principals, include (1) the inappropriateness or need of these programs for their student population, (2) the delay between the process and incident, (3) various logistical concerns, (4) other effective programs are in place, and (5) parental disengagement.

Three of the principals mentioned that restorative justice programs were not suitable for elementary school children. According to Principal G, “I certainly see restorative justice with older kids and with adults and I see that as being a real beneficial thing. I’m not sure how good it is with elementary kids”. In part, this perception is based on the fact that restorative justice may be more appropriate for criminal activity. According to Principal F “it doesn’t get to the point where kids are behaving in such a way that it would involve the RCMP”. This perception (i.e., restorative justice programs are more suitable for criminal activity) may be fuelled by the content of the workshops that some of the principals attended. For example, Principal B describes a workshop conducted by the RCMP, “we had a short training session...which was geared more toward...high school students and...criminal activity...” Principal B further implies that another workshop suitable for elementary school staff would be useful “I would probably go to another workshop if (it) ...was a little more geared towards younger children. Furthermore Principal G believes that these programs may actually be disadvantageous for younger children “If children do not feel as though they are equals in the process then there may be a problem in terms of achieving a forum where they can openly discuss the matter.”

Principal A articulated the problem of the lapsed time between the incident and having a restorative justice meeting as a significant problem. This principal was directly involved in a restorative justice meeting that occurred three months after the incident. “By the time it occurred...the students involved had ...already been playing with [the victim] on the playground”. Principal A also contrasts the restorative process with current practices “A kid misbehaves we provide consequence today or tomorrow, we don’t wait for two or three weeks or a month”.

In addition to the time lapse, other logistical concerns were raised by the principals. For example, the difficulty in organizing all interested in parties to attend a meeting was discussed by Principal A and F. “It was difficult to get everybody together, there were a lot of meetings cancelled because one of the people couldn’t attend”. Another logistical concern raised was the time consuming nature of the process and of implementing the process. According to Principal C “...it just seemed to take a huge amount of time, so it might be that restorative justice is something that’s ...used to deal with really serious incidents.” Furthermore, Principal A mentions the difficulty of ensuring that the entire school community engages in a coordinated effort to make these programs successful.

In addition to these barriers, there is also the problem of obtaining parental support for these programs. The lack of support from some parents was discussed by Principals E and F as an on-going difficulty for current school programs.

Another barrier to implementing these programs is the perceived lack of need for them. Principal B stated that there are existing behavioural support systems and that “to dump what we’re doing to jump onto [a] different thing would...not be useful.” Furthermore, Principal H mentions that “a lot of it [restorative practices] is being used on a smaller scale”.

A related matter to the barriers to these restorative justice programs, are the resources that are necessary to implement them. The types of supports/resources identified by the principals
included information and education regarding these programs, acceptance of these programs by the school community, RCMP involvement, and funding.

Five of the eight principals suggested that education and/or training were necessary if these programs were to be implemented. According to Principal D “it starts small, education with teachers and education with parents and building from there”. Principal G suggests that “we need to have…adults working in the school to know what it is about…everybody needs to know how the process works.” Other principals mentioned workshops or training sessions for staff members and parents.

Several of the principals responded that it was important to secure acceptance for restorative justice programs in the school community. Principal A put forth that “…everyone in the school has to have ownership of it to make it truly successful in the school”. Principal C resonates this idea “[it is] just important for people to be convinced that it's a worthwhile thing to do and that it’s practicable and doable”. Principal H also suggests that “the community, parent advisory council would need to be involved and supportive of it and individual parents”.

In addition to securing acceptance for these programs, Principal F the school division should have a restorative justice team (rather than each individual school having teams) and that the RCMP should be directly involved. “The more closely we can work with the RCMP, the more the kids see that we are all a community together and we’re all there to support their behaviour”.

Finally, the issue of funding was discussed. According to Principal H “funding would be a big hurdle, but it would be a factor depending on how far you wanted to take the training…”

Conclusions

Does restorative justice have a place in elementary schools? The principals’ responses to the interview questions provide insight to this question. Many of the principals focused on the process of restorative justice programs when discussing the limitations of these programs (e.g. time consuming process). However, throughout their responses most of the principals cited the values of these programs as desirable outcomes of problem behaviour (e.g. building empathy). Elementary school staff and administrators should consider implementing the values of restorative justice and be flexible regarding the process. The concerns raised by the principals such as inappropriateness of these programs for young children, delay between incident and the process (meeting), difficulty bringing together community members, and parental disengagement are barriers associated with the process. Focussing on the values and not the process of restorative justice should help overcome the perceived barriers of restorative justice programs.

Values such as repairing the harm, reintegrating and forgiving the offender, and building empathy are possible to achieve within the structure of some of the existing behavioural management approaches (e.g. restitution programs). Programs such as time outs and zero tolerance, however, may need to be modified to ensure that the values of restorative justice can be achieved following the expulsion of the offender. For example, teachers should focus on ways to ensure that the offender is reintegrated into the classroom or school community and forgiven following a time out or suspension. In sum, the findings of this study suggest that restorative justice does have a place within the parameters of the elementary school environment.
Appendix I

School A enrolled 409 students in September 2005. One percent of their students spoke a language other than English at home, however none were classified as English as a Second Language (ESL). School A is the largest elementary school in the school district. On average, School A has higher class sizes than the provincial average. According to statistics, School A has 4 classes with 1 student with special needs, 2 classes with 3 special needs students, and 1 class with more than 4 students with special needs. Sixty-nine percent of the classes at School A have Learning Assistance Teachers (LATs).

School B enrolled 308 students in September 2005. Six percent of students spoke a language other than English at home, however none were classified ESL. School B currently ranges from Kindergarten to Grade 8, however will be incrementally expanding to a full high-school beginning in September 2007. School B is a choice school with a strong emphasis on the arts. Class sizes at School B are on par with the provincial average or higher.

School C enrolled 200 students in September 2005. Two percent of the students were classified ESL and 2% spoke a language other than English at home. School C is located close to a primary business center. School C uses a variety of community projects to involve the students in the community and the community with the school. Of the schools studied, School C had the highest percentage of LATs working in the classroom, with 88% of classes having an LAT. The numbers for students with special needs range from 3 classes with 2 special education students to 4 classes with 4 or more special education students. Special needs, aboriginal and language immersion programs are available at this school.

School D enrolled 229 students in September 2005 of which there were no ESL students. School D is a community-based school, in a suburb approximately 15 kilometers from downtown Kamloops. According to statistics, two classes at this school have 2 students with special needs and 3 classes have assigned LATs.

School E enrolled 266 students in September 2005. School E reports no ESL students, however 4% of their student population speaks a language other than English at home. School E offers one of the District's Behaviour Intervention classes, targeting grades 4-7 students. School E also has a First Nations program and 14% of their enrolment is First Nations. Class sizes at School E are on par with provincial averages. School E has approximately 12 classes, 6 have LATs in the classroom. One classroom has 4+ students with special education students. One to two students with special education needs occupy 3 other classes at School E.

School F enrolled 95 students in September 2005, making it the smallest school in this study. School F has a strong community focus and is a rural school located approximately 39 kilometers outside Kamloops. The school describes itself as a close-knit school "family", which offers a full range of primary, intermediate and extra-curricular K-7 programs. The school services a variety of small communities. School F has no ESL students enrolled and class sizes are below the provincial average. In 2005, School F reported to have 1 class with a student with special needs and 1 class with 2 students with special needs; however, according to provincial statistics, LAT support is not present at the school.
School G enrolled 336 students in September 2005. Sixteen percent of those students spoke a non-English language at home, which is significantly higher than other schools studied, and 4% of the students were classified ESL. Of the schools studied, School G has the highest percentage of ESL enrolment. Enrolment in School G reflects a multicultural community as more than half of their enrolment represents a variety of ancestries such as Aboriginal (80 students), Indo-Canadian (100 students) as well as students from Italian, Spanish, Vietnamese, Chinese, Philippine and British/Canadian cultures. School G offers community and neighbourhood programs as well as specialized programs for Aboriginal students and students with special needs. When compared to district statistics, School G has the highest percentage of special needs children in their classes than the other schools in this study.

School H enrolled 392 students in September 2005. School H offers specialized programs such as Montessori, Fine Arts and Music. There is a strong community focus with active involvement and support coming from the Parent Advisory Council (PAC). The school also doubles as a Community Center. The community is one of the more affluent areas of the city. School H has a high attendance of students with special needs in the classroom. With 19 classrooms in the school and a focus on special needs education, 7 classes have 1 student with special needs, 3 classes have 2 students with special needs and 4 classes with 3 special education students. Support in the classroom appears to be fairly high with 14 out of 19 classrooms using an LAT.

Epinephrine, Norepinephrine and their Relationship to Forgiveness

Glen D. Vinson, Jr.¹, Steven M. Green¹, Deloris B. Monye¹, Alfonso Campbell, Jr.¹, Jules P. Harrell¹, and Clive Callender², ¹Department of Psychology, Graduate School, Howard University, and ²Department of Surgery, Howard University College of Medicine, Washington, DC 20059.

Studies show that social stressors can increase levels of epinephrine (EPI) and norepinephrine (NEPI) (Cacioppo, 1994). Prolonged increases in levels of EPI and NEPI may contribute to atherosclerosis, myocardial ischemia, arterial obstruction, and myocardial infarction (Lundberg, 2003) and other negative health outcomes (Cacioppo, 1994). An urban sample of 93 African Americans completed the Transgression-Related Interpersonal Motivations inventory, a measure of forgiveness utilizing the subscales of avoidance and revenge motivation. EPI and NEPI were measured through urine samples. Results show that avoidance motivation is correlated with increased EPI (r=0.309, p < .001) and NEPI levels (r=.219, p < .05). There was no significant relationship between revenge motivation for either EPI or NEPI levels. These findings suggest that avoidance behavior after an interpersonal conflict can lead to an increase secretion in stress hormones. Prolonged elevation of these hormones has been associated with negative health outcomes such as myocardial infarction (Lundberg, 2003). Consequently, forgiveness may lead to a reduction in the excessive physiological burden associated with the failure to resolve stressful experiences (Thoresen et al., 2000).

This research investigation is part of a larger study entitled, “Stress and Psychoneuroimmunological Factors in Renal Health and Disease,” that is funded by The National Center on Minority Health and Health Disparities, Grant# 1P20 MD 000512-03. Email address: gvinsonjr@gmail.com
DYNAMICS OF CONFLICT AND COOPERATION FOR GROUP STABILITY AMONG SELECTED COOPERATIVES IN REGION IV, PHILIPPINES

Abstract

The research was conducted to study the management dynamics of selected government-assisted cooperatives in Region IV, Philippines in terms of conflict and cooperation among their members. Specifically, it aimed to: 1. determine and analyze the nature of conflict and cooperation among members of the cooperatives under study; 2. determine the factors that influence conflict and cooperation; 3. identify the consequences of conflict and cooperation on the stability of the cooperatives under study; and 4. formulate recommendations to help sustain the stability of other government-assisted cooperatives in other parts of the country as well.

Meetings with the purposely selected cooperative members were conducted before the data gathering to inform them of the purpose of the study and ensure their cooperation. Respondents were sampled using the using the Slovin formula. Descriptive analysis, T-test and chi-square were used to determine the relationship of the variables.

It was assumed that the respondents’ internal factors (socio-demographic characteristics, socio-psychological characteristics and group factors) and external factors (perception towards extension professionals and researchers, towards their leaders and institutional support/incentives) affect their level of conflict and cooperation in their respective cooperative. In turn, their level of conflict and cooperation influence the stability of their cooperative.

---

1 Emilia S. Visco, PhD, Assistant Professor, Department of Social Development Services, College of Human Ecology, University of the Philippines Los Banos, College, Laguna 4031, Philippines, esvisco@yahoo.com
Results showed that there were significant relationships between the respondents’ group factors like group relation, group processes and coordination with other members of the cooperative and their level of cooperation in the cooperative’s activities. Similarly, socio-psychological characteristics like interpersonal orientation affect their level of conflict with their cooperative leaders. Almost all statements determining the respondents’ interpersonal characteristics got an “agree” stand for positive and “disagree” for negative statements. Most of the respondents did not have conflict with their leaders. This was finding was confirmed in their perception towards their leaders. There was a significant relationship between the respondents’ perception towards their leaders and their level of cooperation in their cooperative activities. The respondents’ “high” perception towards their leaders caused the respondents to believe that there was a “high” level of cooperation among the members. In turn, the level of cooperation among members affects the stability of the cooperatives under study.
Rationale

The government believed that economic productivity is the roadmap to the country’s sustainable economic development. The country’s Medium-Term Philippines Development Plan (MTPDP) 2004-2010 aims to reduce poverty through equitable growth, rural development and social investment. To attain this, the government encourages its citizens to become self-reliant through engaging in small and medium entrepreneurship. Some policies to support this move were already in place. These include Republic Act (RA) 6938, Cooperative Code of the Philippines, RA 6839, establishment of the Cooperative Development Authority and RA 8289, an Act Strengthening the Promotion, Development, and Assistance to Small and Medium Scale Enterprises. Many non-government organizations and people’s organizations also support this movement.

Filipinos, by nature are very sociable people. They join groups/associations both for economic and social reasons. That is why the call for people to join cooperatives and become entrepreneurs is easy. Since the passage of the RA 6838 and R 6839, 68,922 cooperatives were registered in the country (CDA, 2005). Of this number, 94% are multi-purpose cooperatives in production and marketing of their locally-produced products. In the countryside, almost every community has cooperative. However, the number is very dynamic since sustaining the stability continues to be a challenge. As of December 2005, only 28,555 cooperatives in operation (CDA, 2005).

While the Filipinos are very sociable, they are also very sensitive. Thus, occurrence of conflict is normal. It also occurs when members with varying needs, values and personalities come together. Conflict starts with resentment, resentment leads to
revenge. Conflicting parties tend to get back at each other. This happens when every party perceived their cause to be valid, thus, conflict continues. It then became a cycle.

Conflict, however, is not necessarily destructive; some conflict may be desirable for promoting change and growth. Depending on a leader’s response to conflict, the outcome may help or stifle group and individual growth. Conflict may create a climate of distrust and develops suspicion among members of a group; organizational integration; members may pursue their own interests; poor morale causing high absenteeism and low productivity; sabotage; or worse, some good people may leave the organization due to turmoil. On the other hand, conflict when properly resolved leaves people more integrated, adjusted and competent; develops our individuality so that we feel more fulfilled and capable; provides opportunity to express our needs and form opinions and positions; people are forced to search for new approaches thereby promotes creativity, productivity and innovativeness and; long standing problems surface and dealt with (Kinard, 1988).

Three of the Forest Products Research and Development Institute (FPRDI)-assisted were chosen to be the study site. The FPRDI is one of the country’s research and development institute under the Department of Science and Technology. Technical assistance includes conduct of training courses/seminar/technology fora, installation of dryers, and many more. They were selected to determine what makes these cooperatives sustainable? On the other hand, what makes other cooperatives disintegrate? Literature and studies on group conflict and cooperation among organizations is very limited. Generally, this research aims to determine the group processes/dynamics in the cooperatives/organizations assisted by the FPRDI. Specifically, it seeks to answer the
following questions: 1. What processes/dynamics are involved in the management of a cooperative/organization?; 2. How are conflicts and cooperation manifested?; How are conflicts managed?; and 4. What are the effects of conflicts and cooperation in the stability of the cooperative.

Result of the study would provide valuable information to government planners and policy makers, research and extension staff, educators in creating/planning policies, programs or activities that would help sustain stability of community organizations/cooperatives for rural development.

**Objectives of the Study**

This research aims to study the management dynamics of the government-assisted cooperative in terms of conflict and cooperation among its members. Specifically, it aims to:

1. determine and analyze the nature of conflict and cooperation among members of the cooperatives under study;
2. determine the factors that influence conflict and cooperation;
3. identify the consequences of conflict and cooperation on the stability of the cooperatives under study.
4. formulate recommendations to help sustain stability of cooperatives assisted by other government agencies and probably other cooperatives as well.
Methodology

Locale of the Study

The study was conducted in Region IV. The cooperatives under study were the Taytay Sash Contractors Cooperative (TASACOOP) in Taytay, Rizal, Cavite Woodworks Association Incorporated (CWAI) in Silang, Cavite and Tumalim Farmers Cooperative (TFC) in Nasugbu, Batangas.

Respondents and Sampling Technique

Since there were three cooperatives that were purposively selected, stratified random sampling were used. The total number of the members of every cooperative under study was sampled using the Slovin formula:

$$n_1 = \frac{N}{1 + Ne^2}$$

where:
- $n$ is the sample size
- $N$ is the population size
- $e$ is the desired margin or error

Data Gathering Method

Before the actual data gathering, the researchers met with the officers and some members of the cooperative to explain the purpose of the study. This was done to determine what to expect from the researchers and vice-versa. In the meeting, a focus group discussion on topics related to the study was also conducted. The information gathered was used to confirm or deny some results gathered through the interview schedule. It was also agreed that the research result will be validated to the cooperatives under study. After the leveling-off, structured interview schedule were prepared in English. In some areas of the study, the questions were translated into Tagalog.
Statistical Analysis

For the descriptive analysis of the data, frequency counts, percentages, means and ranking were used. T-test and chi-square were used to determine the relationship between variables.

RESULTS AND DISCUSSION

Socio-Demographic Characteristics of the Respondents

The socio-demographic characteristics of the respondents included age, sex, civil status, number of years as a cooperative member, membership and position held in an organization, highest educational attainment, occupation and estimated monthly income. Table 1 summarizes the socio-demographic characteristics of the respondents.

Majority (57.5%) of the respondents were on the 41-50 age bracket. The youngest and the oldest were 24 and 67 years old, respectively. Most (90%) of them were male and only 10% were female. Similarly, most (92.5%) of them are married and only few 7.5% were single. Many (75%) of the respondents finished college and almost the same number (72.5%) have been a member of their respective cooperatives for one to 10 years. Most (85%) of them were engaged in business and only 15% were farmers. Majority (72.5%) of the respondents were relatively new in the cooperative business (1-10 years) and more than half (51.51%) received a monthly income of P20,000 and below.

Group Processes

Interpersonal Characteristics of the Respondents

Interpersonal characteristics of the respondents include interdependency, interpersonal orientation and social sensitivity. There are seven statements to determine the respondents’ interdependency, six for interpersonal orientation and six for social
sensitivity (Table 2). Result showed that respondents recognized the importance of good interpersonal relationship with each other, share common goal and genuine concern for the welfare of members of the cooperative and the cooperative as well. Except for the

statements “there is no need to remind the members on regular meeting because they were informed earlier” and “heated discussion during meeting is not healthy”, the rest of the statements determining the respondents’ interpersonal characteristics got “agree” for the positive statements and “disagree” for the negative statements.

To determine the respondents’ group factors, their perception towards group relation, communication, decision-making and coordination were determined (Table 3). All the respondents “agree” to all statements measuring group relations. Similarly, except for the statement “I do not interact much to our leaders”, the rest of the statements measuring communication got an “agree” stand from the respondents. The same with the decision-making part, except for the statement “Our leaders do not encourage members to participate in decision-making”, all the rest of the statements got an “agree” rating. In coordination, since there were no sentences stated in negative form, all the statement got an “agree” stand.

Aside from their perception on group factors, the respondents were also asked on their perception towards cooperative and cooperative activities (Table 4). To determine the respondents’ attitude on these matters, 12 statements were presented. Except for the statement “Membership is voluntary” wherein the respondents were “Not Sure”, the rest of the statements got an “agree” stand from the respondents.

Table 4. Respondents’ perception towards cooperatives and its activities.
In every organization, how it is managed by its officers/leaders is very important. This may spell the success or failure of an organization. In this study, the respondents were also asked to assess their leaders’ leadership style (Table 5). Results showed that the leaders in all three cooperatives under study have no definite leadership style. There was no clear cut leadership style. It was not clear whether it was participatory, free rein or autocratic since the responses in agreement to statements presented were scattered. Thus, the leadership is flexible.

Aside from their perception towards cooperative and cooperative activities, their perception towards FPRDI staff, their leaders and institutional support/incentives were determined (Table 6). Ten statements each for FPRDI staff and their leaders were presented to measure their perception. As to institutional support, the respondents were asked on their perception towards credit availability, technical assistance, training/seminar and marketing. As to their perception towards FPRDI staff, all the statements got “high” perception. The same is true with their perception of their leaders. All the statements got “high” perception. Similarly, except for training and marketing wherein the respondents perceived it to be “moderate”, all others were found to be “adequate”.
Table 5. Respondents’ assessment of their leader’s leadership style.

Note: Leadership style is determined based on responses to these descriptions. If there are three to four respondents in agreements to statements 1, 2, 3 and 4, the leadership is participatory; three to four responses in agreement to statements 5, 6, 7 and 8, the leadership is free rein; and if there are three to four responses to statements 9, 10, 11 and 12, the leadership is autocratic. If responses in agreement scatter to each style of leadership, the leadership is flexible.

Factors that Influence Conflict and Cooperation of the Cooperative

Conflict occurs when persons or groups disagree over a means or ends, and try to establish their views in preference to others. It also emerges when people experience dissatisfaction or frustration, and its frequency produces anxiety and tension (McFarland, 1979). This happens in every organization. It is not however, always bad for an individual or an organization to experience conflict. If resolved properly, it may even: 1.) create problem awareness; 2.) promote organizational change; 3.) improve solutions, 4.) boost morale, 5.) improve personal development, 6.) improve relationships among members of the organization, 7.) develop psychological maturity, and 8.) stimulate fun in the organization (Tjosvold, 1992).

In this study, very few conflicts were encountered. Most (82.5%) of the members revealed that they did encounter conflict with the other members of cooperative. Similarly, almost the same number (85%) did not encounter conflict with their leaders and no conflict at all with the FPRDI staff (100%). For some (17.5%) who encountered conflict with the members, this was due to non-attendance to meetings, miscommunication non-payment of dues. As to the causes of conflict with the leaders (15%), it was due to priority programs of the cooperative, marketing of products and policies that need to be changed.

The presence of few conflicts did not however, hamper the respondents’ confidence on their cooperative and their leaders as reflected in Table 7. Table 7 shows the respondents’ level of cooperation. Among the statement measuring their level of cooperation, only marketing and payment of dues got “moderate” rating. The rest of the statements got “high” rating. The “moderate” rating on marketing confirms the earlier
result found in their perception towards institutional support/incentives. Similarly, the non-payment of dues was one of the mentioned reasons for causes of conflict.

Their “high” perception on the level of cooperation may have an effect to their perception on the stability of their cooperative. Stability of their cooperative was measured in terms of group activities, group productivity and human relationship. Except for “payment of dues”, “number of members” and “financial capability” wherein they were rated “moderate”, all the statements measuring stability were rated “stable”.

Relationship of Variables

Results showed that there were significant relationships between the respondents’ group factors like group relation, group processes and coordination with other members of the cooperative and their level of cooperation in the cooperative’s activities. Except for two statements where the respondents were “not sure”, all other statements measuring group factors were agreeable with the respondents. This explains their “high” perception.

on their level of cooperation. Similarly, socio-psychological characteristics like interpersonal orientation affected their level of conflict with their cooperative leaders. Most (85%) of the respondents did not have conflict with their leaders. This was confirmed in their interpersonal characteristics. Except for two statements in interpersonal characteristics, all others got “agree” for positive and “disagree” for negative statements. Furthermore, this was finding was confirmed in their perception towards their leaders. There was a significant relationship between the respondents’ perception towards their leaders and their level of cooperation in their cooperative activities. The “high” perception towards their leaders affected their “high” level of cooperation among the members. Similarly, there was a significant relationship between
their perceived institutional support/incentives to their level of cooperation. In turn, the
level of cooperation among members affects the stability of the cooperatives.

**Conclusion**

Perception and attitude are functions of people’s traits, values, practices and
norms. In this study, while the respondents’ socio-demographic characteristics and
leadership style were not found to affect the level of cooperation and/or level of conflict
of the cooperative, other variables like group factors, interpersonal characteristics,
perception towards their leaders and institutional support were found to affect the level of
conflict/and or level of cooperation of the cooperative. The respondents’ “high”
perception towards their leaders affects their “high” level of cooperation among the
members of the cooperative. Similarly, the “adequate” perception on institutional
support/incentives affects the level of cooperation among members of the cooperative.
These perceptions influenced the stability of the cooperatives under study.

**Recommendations**

In the light of the results of the study and the conclusions made, the following
recommendations are forwarded to research and extension planners/professionals,
community development planners and practitioners and policy-makers involved in this
area of study for their consideration:

- The study showed the importance of good interpersonal characteristics and group
  factors among members and their leaders of the cooperatives under study. To
  further strengthen the stability of cooperatives, all these variables should be
  considered.
• The performance, credibility and commitment of leaders in an organization is very important. This may spell a success or failure of a cooperative. In this study, the respondents’ “high” perception towards their leaders was significantly related to their level of cooperation. Thus, these factors should be given importance when choosing people to lead/manage a cooperative/organization.

• Institutional support/incentives are also very important. It is important that the members should feel and believe that their welfare and cooperatives’ welfare are the primary consideration. In this study, their “adequate” and “moderate” perception of institutional support like credit availability, technical assistance, training and marketing affects the respondents’ level of cooperation.

• A harmonious relationship among the members and leaders is very important. This may also contribute to the success or failure of a cooperative. Results of the study showed that the respondents’ interpersonal characteristics like interdependency, interpersonal orientation and social sensitivity affect their level of conflict with their cooperative leaders.

Policy Implications

The government recognized the contribution of cooperatives in the countryside development. For years, the government believed that an economically productive country is one of the roadmap to help address poverty alleviation in the country. That is why policies to support this effort have been in place - RA 6938, Cooperative Code of the Philippines, creation of Cooperative Development Authority, RA 8289 – an Act Strengthening the Promotion, Development, and Assistance to Small and Medium Scale Enterprises, to name a few. Some national and local government offices were also
mandated to support entrepreneurship in the countryside. Likewise, the private sector, in coordination with some government organizations, actively promotes entrepreneurship. Recently, programs like Go Negosyo and Techno-Negosyo were successfully launched to encourage Filipinos to become entrepreneur.

With the active promotion of entrepreneurship in the countryside, the factors that affect stability of cooperatives should be considered.

Abstract

The chief aim of this research is to assess the influence of rural amenities on population change amongst all non-metropolitan counties in the United States (excluding Alaska and Hawaii) from 1980 to 2000. Rural amenities, as defined by this research, are the attributes of a non-metropolitan locale that enhance the quality of life of the people living or visiting there. First, I discuss the general patterns of population change in non-metropolitan areas during these three decades as well as the possible influence of rural amenities during this time period. I then examine how rural amenities have been studied by past research in order for me to hypothesize their influence on non-metropolitan population change in the United States. Additionally, I draw on past research in order to guide my conceptualization and measurement of rural amenities. Using data from the United States Census of Population, the National Outdoor Recreational Supply Information System (NORSIS), and David McGranahan’s (1999) Natural Amenity Scale, a panel model data set was constructed for the aforementioned counties from 1980 to 2000. This research constructed a panel data set using data from the aforementioned sources for the years of 1980-2000. Accordingly, in this model the change scores on two measures of population change (absolute population change and percentage population change) were regressed on the amenity and control variables. Regression diagnostics were then used to examine the extent to which specific regression assumptions were validated by the data. Results suggest that climatic amenities, river and ocean based amenities, and warm weather recreational amenities were most significantly associated with increase in population amongst the counties examined by this study.
Teaching Diverse Spiritual and Religious Perspectives
in a Turbulent World

Erika Vora, Ph.D.

e-mail: ewvora@stcloudstate.edu
Why Study Diverse Spiritual Perspectives?

The history of all conflicts and confrontations in the world is the history of intolerance born out of ignorance and misunderstanding. This holds especially true in relation to religion. Religion is the very soul of culture, and therefore the most powerful ethnocentric force that complicates communication between individuals of different cultures. If we look at religion as “the individual’s ultimate concern” (Tillich, 1959), then this ultimate concern can also be the ultimate difficulty when we try to communicate with someone who does not share our concern.

Religion often motivates some of the most negative aspects and positive aspects of human communication and behavior. Many violent confrontations throughout history and today have an underlying religious dimension. These conflicts can be found from the Middle East to Afghanistan, from the Sudan to Somalia to Rwanda, from India to Pakistan to Malaysia, from Kosovo to Great Britain to France, to the United States. In the name of religion, human beings may not only physically be killed in battles and wars but also in subtle ways, such as oppression and repression.

On the other hand, religion also contributes to the most healing in the world today. It often provides the motivation for those who help, and it often plays an important role in reconciliation, even when gross human rights violations have been committed.

We are living in turbulent times. In an ever shrinking world that has become a global society, it is of paramount importance that we prepare our students to live, function and thrive in this new society. Six billion people identify with one religion or another. It behooves us to expose our students to the teachings of diverse religions and spiritual perspectives. We do not need to disrespect others when we hold on strongly to our own faith. In fact, firm grounding in our spirituality may help us appreciate other people’s approach to their spirituality.
Understanding and respecting diverse spiritual perspectives is not only a pass toward peace but also an aspect of liberal education. Liberal education helps to prepare us to live more responsible and ethical lives because it has challenged us to be aware of alternative ways of living and to critically examine our own society and culture. An exposure to diverse spiritual perspectives helps to “humanize” us along with the study of history, languages, philosophy, art, and music. Most pragmatically, understanding and respecting diverse spiritual perspectives helps us understand not only our neighbor but also ourselves. It helps to demystify the religions different from our own and clears up dangerous misconceptions. Respect and understanding for diverse ideologies reduces ethnocentrism and paves the way toward more effective communication, less violence, and a more peaceful world. It has the potential to smooth relations between individuals, societies, and nations.

What is Spirituality?

Studies of spirituality focus on two dimensions of human life: transcendence and community (Banner, 1995; Elkins, Hedstrom, Hughes, Leaf, & Saunders, 1988; Guare, 1995; Twigg, Wyld, & Brown, 2000). Transcendence has to do with the quest of humans for answers to two related questions: Does life have meaning? Is there a purpose to life above and beyond the physical world? Writings assert that search for answers to the questions takes an individual to a state of knowledge/consciousness that is best captured by terms such as ‘ultimate reality,’ ‘Supreme Being,’ or ‘universal spirit.’ In contrast to transcendence, writers on the community dimension see spirituality as leading to charity, integrity, brotherly love and an emphasis on relationships, and a search for meaning (Bruce & Novinson, 1999). The search for meaning generally encompasses both community and transcendence. Also, in both dimensions of spirituality, connectedness is an integral element of the final meaning that the search finds. The answer to life’s meaning will involve an integration of the self with the ‘other.’ This ‘other’ can be as specific as another human being and a Supreme Being or as broad as nature and the universe.

The teaching approach described below has been successful in facilitating student learning about diverse spirituality and religions, and gaining respect for diverse perspectives.
Action Learning Exercises

Interactivity is a very effective teaching approach when exposing students to diverse spiritual perspectives and confronting their misconceptions. Students learn better and are more open to the potentially difficult subject matter, like religion and communication, when they are able to be actively involved with the concepts presented. I have found the following exercise to be effective in facilitating understanding and respect for diverse spiritual perspectives:

To stimulate active learning, students are asked to form small groups of four and to complete a two-part exercise consisting of nonverbal and verbal communication. The exercise is carefully integrated with each religion under study.

Nonverbal: First, a picture depicting religious art is presented on the screen. The students are asked to analyze that picture and to reflect on the main principles of the particular religion under study.

Verbal: Second, each group is given one quote that centers on major principles of each religion. The group is asked to content analyze the quote, to explore the major ideas, and to present the group’s findings to the class as a whole.

Specifically, each part of the exercise asks students to:

1. Describe what is happening in the picture and what are the major ideas in the quote using concepts discussed earlier.

2. Compare the above concept with that found in their own religion or spirituality or another religion previously studied.

3. Answer the question, “How can the application of the main concepts or principles of this religion be of help to me in my own life?

This activity not only keeps the students actively involved in the subject matter, but it also helps greatly toward deepening their understanding of a difficult subject matter. I have found it to be an excellent aid in reducing ethnocentrism and misconceptions.
Jainism

Jainism is a spiritual perspective practiced in Mahatma Gandhi’s land, India. It is an ideology that believes in reincarnation or the transmigration of the self. Jainism emphasizes nonviolence, purity, and renunciation or detachment. Jainism has two main principles. These are the doctrine of multiplicity of viewpoints (anekaantvaad) and that of nonviolence (ahimsa) in thoughts, speech and actions.

The Sanskrit word anekaantvaad implies a multitude of perspectives. Thus, the theory of partial truths is corollaries of anekaantvaad. It teaches that truth is many-sided. The principle of multiplicity is also known as the doctrine of relativity. The basic theory is that truth is revealed to us only partially when we look at something from a single point of view. In order to understand the cause of our disagreements, we need to analyze it from other points of view, not ours only. By analyzing the cause of our disagreements from a variety of perspectives, we will be able to understand the cause of our disagreements and manage our conflicts more effectively. Our own viewpoint depends much upon our subjective judgment and our recollection of the past experiences, our prejudices and predispositions, our environment. Thus, it is extremely important to analyze every object and every idea from a variety of viewpoints. A human being, with his or her own limited capabilities, cannot comprehend all the characteristics of an object, idea or proposition. We need to cultivate an unbiased approach towards each situation or idea. Our view, based on limited data and capability, cannot be absolute. Thus, all knowledge is relative. Since we cannot see all aspects, it is important to avoid absolute assertions (Mehta, 1997, p. 142).

Jainism’s principle of multiple perspectives can help us a lot in reducing our ethnocentrism and becoming more effective intercultural communicators. It is extremely useful in everyday life. It provides a rational synthesis of the various views of a given situation and rejects the assertions of bare absolutes. Mahatma Gandhi held the principle of multiplicity of viewpoints in high esteem. In 1926, he observed:
“It has been my experience that I am always true (correct) from my point of view, and often wrong from the point of view of my honest critics. I know we are both right from our perspective points of view….I very much like this doctrine of the manyness of reality. It is this doctrine that has taught me to judge a Mussulman (Muslim) from his standpoint and a Christian from his…From the platform of the Jains, I prove the non-creative aspect of God and from that of Ramanuj, the creative aspect”.

- Mahatma Gandhi

Advocates of religion often suffer from dogmatism. They may agree that what they have known is not absolute truth, but they insist that what others believe is absolutely wrong. This clash between sects is a result of this dogmatism

- Acharya Shri Mahaprajna

Another important teaching of Jainism is the principle of nonviolence (ahimsa). In order to understand nonviolence, we need to examine the meaning of violence. Violence is of two kinds, physical and mental violence to the self or other living beings. Physical violence involves hurting or killing the self or any other living being through words or other actions. Mental violence means hurting the feelings of others with thoughts. When we are envious and hateful, we hurt ourselves and others. When we are angry and seek revenge, we are not peaceful and thus hurt ourselves. Premeditated violence is the most hurtful form of violence. Jainism teaches nonviolence of thought and action. It teaches compassion for self and others. All life should be respected.

It is this compassion and principle of nonviolence that makes most Jains vegetarians. Jains believe that as human beings wish to live, so do all living beings. All animals, including insects, try to run away from danger. Thus, we should practice compassion and not commit the violent act of killing another being. It is not necessary, nor good, to kill animals for food.
Hinduism

Hindus believe in reincarnation or the transmigration of the self. The essential self of a person is really one with the Ultimate Reality; it has no beginning and can have no end. The self of a newborn infant is old beyond the conception of time; its body is merely a new form for an eternal spirit. In Hinduism, each individual existence becomes their primary burden. It is a prison enslaving an essential self which should be free of a body.

The sequence of rebirth is determined by the law of *karma*. *Karma* literally means “action”. Every action of the past determines a person’s present condition of existence. No act is without result. Thus, *karma* operates like moral law of cause and effect. Morally good acts produce favorable results; morally bad acts produce bad results. Each person is his or her own destroyer or preserver, depending on their actions. Thus, in each action an individual is determining his or her future life. The Hindu Epic, *Mahabharata*, states: “As among a thousand cows a calf will find its mother, so the deed previously done will find and follow its doer. Karma is the unseen which shadows people everywhere.” All the inequalities and sufferings in our life are the results of our *karma*. Thus; a good person is closer to spiritual progression than a bad person. The culmination of spiritual progression is liberation from the endless torment of birth and rebirth. Nonviolence, justice and mercy are valued more highly than injustice and violence.

Yes, all the deeds those men have done
In light of day, before the sun,
Or veiled beneath the gloom of night,
The good, the bad, the wrong, the right –
These, though forgotten, reappear,
And travel silent in the rear.

- Mahabharata
Taoism

Taoism takes its name from the Chinese word *Tao* meaning “The Way.” It is the first word of the Taoist book *Tao Te Ching*, “The Classic of the Way and Its Power.” The Tao is the unseen power and force beneath the life and movement in nature. Taoism teaches that the best way to live is the natural way. It stresses naturalness and simplicity. People’s fears, sufferings, and problems are the result of an unnatural life. Only by liberating ourselves from artificial restraints can we really be free.

To harness nature is harmful because those actions interrupt the natural sustaining flow of the Tao. For instance, to place a bit into a horse’s mouth, to force horses to race, to lash them with a whip must harm them because all these things are contrary to the nature of the horse. The *Tao Te Ching* teaches that “what is of nature is internal. What is of man is external….That oxen and horses should have four feet is what is of nature. That a halter should be put on a horse’s head, or a string through an ox’s nose, is what is of man.” These man-made conditions are contrary to the nature of those animals and therefore cause pain.

Suffering and evil comes from disharmony of nature, striving and desire. Ethical and moral ideals are “actionless action,” effortless spontaneity, not striving.

The duck’s legs are short,
But if we try to lengthen them,
The duck will feel pain.
The crane’s legs are long,
But if we try to shorten them,
The crane will feel grief.
Therefore, we are not to cut off
What is by nature long,
Nor to lengthen
What is by nature short.

- Chuang Tzu
Confucianism

Confucius, also known as the “teacher of all teachers” in China, was born in 551 B.C. and died in 479 B.C. Confucianism teaches that the maintenance of peace and harmonious relationships is of utmost importance. Human beings are compelled by nature to live in the company of other human beings. Thus, the social way of life is the best way to live because it is only in society that people reach their fullest potentials. The universal human quality which leads people to live in society is called jen.

The Chinese character for jen combines the symbol for man and the symbol for two. Thus, it implies the relationship and communication between two individuals. It is difficult to find a proper translation in English for jen. It has been translated as “benevolence,” “human-heartedness”, “sympathy,” and person-to-personness.” The meaning of jen for Confucius, was the very foundation of society. It is a shared humanity which includes the desire to help others. We all have the ability to help one another. We merely need to look into ourselves for the answers to the problems of others. Self-understanding leads to an understanding of the fears and hopes of others. Confucius taught that “the man of jen is one who, desiring to develop himself, develops others, and in desiring to sustain himself, sustains others.

Jen is expressed in “right action” in relation to the duties and obligations implicit in five basic social relationships. These five relationships are: ruler and subject, father and son, elder brother and younger brother, husband and wife, friend and friend. All of them, except the last, involve the authority of one person over another. To maintain harmony, we need to properly communicate and behave in relation to our perspective roles in these relationships. The superior owes loving responsibility to the inferior, and the inferior owes loyalty and loving obedience to the superior. The terms ruler, father, son, older brother, younger brother, husband, wife and friend indicate a certain type of communication, conduct, and respect necessary in that relationship. The ethical and moral ideas are virtues of character, benevolence, wisdom, filial piety.

The “right action” is called li. It should be inspired by feelings of human concern and compassion (yen). The English translation of li is “etiquette,” “ceremony,” or “ritual.” Confucius believed that ritual, etiquette, and forms of conduct are important, just as language is important. They are an expression of feelings and guide our interactions.
A good example of this sympathetic feeling for others is the following poem written by one of China’s greatest poets, Tu Fu. He lived in the T’ang Dynasty, 618-907 A.D, and wrote this to a relative:

Please allow your western neighbor to pluck the dates from the trees before the hall;
She is a woman, without children and with no means to support.
Were it not for dire poverty, she would hardly have come for these fruits;

And to save her from embarrassment, we have to be especially kind.
She is of course needlessly afraid of a stranger from a distance;

I recall her complaints of the taxation that has made her poor to the bone;
The burdens of war on such persons! It makes me shed bitter tears.

- Tu Fu

In relation to proper conduct or “right action”, Confucius has this to say:

“In the way of the Superior Man there are four things, none of which I have as yet attained – to serve my father as I would require my son to serve me; to serve my prince as I would require my minister to serve me; to serve my elder brother, as I would require my younger brother to serve me; and to offer first to friends what one requires of them.”

- Confucius

The influence of English learning strategies on English academic achievement – A Taiwanese context

Abstract

This study explored the differences of the frequencies of strategies use in learning English and English learning achievements among the elementary school students and described the relationships among the frequencies of the strategies use in learning English and English learning achievements. The predictabilities of the frequencies of the strategies use in learning English and the degrees of motivation in learning English on English learning achievements were investigated. Several suggestions for further studies and for educational practices are suggested based on the findings.

The two hundred thirty-nine students were randomly selected from public elementary schools in central Taiwan. A revised version of Oxford’s SILL and a self-developed “English learning achievements Test” were the instruments used to collect the data. The background information of the students was collected through a self-developed questionnaire. Descriptive statistic, t-test, ANOVA, correlation analysis and stepwise multiple regression analysis were conducted to analyze the data collected.

The findings of this study are summarized as follows:
1. Significant differences of the frequencies of strategies use in learning English and English learning achievements were found among the students of different genders as well as the students with different backgrounds in terms of their parents’ education and vocations. There are also significant differences on the years of studying English among the students.
2. There were correlations among students’ frequencies of strategies use in learning English, students’ degrees of their English learning achievements.
3. A student’s frequency of strategies use in learning English and his/her degree of motivation in learning English can effectively predict his/her English learning achievement.
Estimates of seriousness and deserved punishment for legal rule transgressions by adult offenders, correctional officers, and non-offenders

Estimates of seriousness and deserved punishment for legal rule transgressions by offenders, correctional officers, and non-offenders

Reid Webster, Sandra Vermeulen, Catherine Power, and Rhiannon Vermeulen
Thompson Rivers University

Research indicates that individuals tend to believe that others share their attitudes and beliefs to a greater extent than is actually the case (Ross, Greene, & House, 1977; Wolfson, 2000); this effect has been termed the false consensus effect. Wolfson points out that false consensus arise “from exposure and information availability” (p. 295). That is, people are likely to associate with others who hold similar judgements and lifestyles, and will estimate the general prevalence of a behaviour based on their own personal databases (Wolfson).

Most research in this area examines this effect in relation to university students, a generally law abiding and rule compliant population. Based on the false consensus effect, it is realistic to expect that inmates, who largely associate with a criminal subculture, will see rule transgressions as the norm, and will believe that most other people will engage in similar behaviours to a greater extent than they actually do. Further, since they see their behaviour as falling within the expected norm (i.e., everybody does it), then they are less likely to see their rule violations as “wrong” or as a serious rule transgression.

Furthermore, correctional officers spend 12 hours a day supervising and interacting with offenders. If exposure and information availability are the essential elements in forming beliefs around one’s own behaviour and that of others, as proposed by the false consensus effect, then one might expect that Correctional Officers’ estimates regarding the seriousness of rule infractions and the degree to which transgressions deserve punishment might fall somewhere between the estimates of non-offenders and offenders.

Hypotheses being tested:

1. Offenders will estimate that significantly more people engage in legal rule transgressions in comparison to non-offenders.

2. Offenders will judge legal rule transgressions to be less wrong (more acceptable) and less deserving of punishment than non-offenders.

3. Correctional Officers’ estimates regarding the seriousness of rule infractions and the degree to which transgressions deserve punishment will fall somewhere between those of the offenders and non-offenders.
Talkin’ Country: Black Women’s Speech in Rural Mississippi

Abstract

Language, by definition, is a form of communication. It represents our thoughts, cultural beliefs, and norms; we use language to define ourselves, each other, and the world around us. For African Americans, the use of language has been a tortuous process in a country that desires everyone to be linguistically uniform. African Americans have been forced into linguistic integration despite the persistence of racial and class divisions that create social, political, and economic separations. African American English (AAE) has been one of the major tools used by African Americans to express their ethnicity, and at the same time is a focal point for debates on legitimacy and economic opportunity. Despite society’s failure to recognize its validity, AAE still persists. Thus, it is one of the primary keys to understanding African American identities and aspirations. Linguists have recognized the importance of AAE and have been studying it for at least three decades. However, little research has been done on African American women’s speech and what it reveals about self-perceptions, cultural identity, and their efforts to secure their future. Yet, women are at the heart and core of families and shoulder major responsibilities for raising the next generation. To ignore their voices is to demean the importance and value of their roles in society.

My research focuses on AAE of African American females in a rural Southern community of the Mississippi Delta. These women are single heads-of-household on welfare; they are the primary caretakers, both socially and financially of their families. The ways in which they use language reflect how they view themselves as well as the strategies they use to survive and situate themselves in their community. The main
research questions that my study addresses are: (1) what function does AAE serve for these women? How do they use AAE to define themselves, their status, and relate to others in their community environment? Do they use AAE as a coping strategy, and if so, how? (2) How does their language fit into the schema of other AAE-speaking communities? In what ways is their speech similar to or different from these other communities? And if there are differences, what are they and what are the contributing factors?

The methodology consists of over 30 hours of in-depth interviews of 20 African-American women living in Coahoma County (located in the Mississippi Delta) in the early 1990s. The data were collected by a sociological research team in 1991 that examined “the relationship between gender, race, family structure and poverty within the context of Southern rural political economies” (Dill 1990:1). The questions were designed to increase general knowledge about the social factors which underlie the formation as well as coping and survival strategies of low-income female-headed households in Southern rural communities. The current study consists of an observational and statistical analysis of these interviews. The observational aspect of the study is an analysis of the stories told on the tape-recordings about the lives of these women and how they view their place in society. The statistical aspect involves linguistic analyses of two grammatical features that help to determine how this AAE variety is similar or different from others. A general observation of the statistical data shows that structurally AAE in Coahoma County is similar to other AAE varieties found in other studies. What is different about this variety is how often the AAE grammatical features are used based upon where in the county the subject resided. For example, those
who lived in Clarksdale, the county seat and a racially mixed town, used AAE features less frequently in their speech than those in Jonestown, a predominantly Black town. This study draws on primary and secondary research and resources on the speech of African American women, linguistic studies on AAE, and sociological studies on women in poor, rural areas.

Diverse fields such as African Diaspora, Ethnic, and Women’s Studies can benefit from this research because many women find themselves heads-of-household for a variety of reasons whether due to socioeconomic condition, AIDS, or legacy of racism and oppression. Their experiences, struggles, and language uniquely position them to be primary touchstones for identity and cultural issues throughout the world. By studying the language used by poor women of the African Diaspora who, like many other women, reside in a rural community, scholars can develop a stronger foundation for comparative studies across the Black Atlantic.
Addressing the High Use of Hospitals – Using a Systematic Literature Review to Plan an Analysis of Hospital Data for High-User Identification and Description

Addressing the High Use of Hospitals – Using a Systematic Literature Review to Plan an Analysis of Hospital Data for High User Identification and Description

Abstract
An increasing number of seniors and the health decline that often accompanies increased longevity are creating increased concern about sustainable health systems, particularly with regard to hospital access and utilization. Existing health services utilization research is indicating that only a small proportion of seniors and younger persons are high users of hospitals, but that their collective use of hospitals is substantial. A systematic literature review was recently conducted to review definitions that have been used to date to investigate “high” use of hospital services. Three types of definitions were identified: (1) High use was defined most often on the basis of a person having reached or exceeding a certain number of hospital days during one hospital stay or over multiple admissions, or on the basis of reaching or exceeding a certain number of hospital admissions or separations in a defined time period. These counts were most often tabulated over a course of one year, although 6-month through 7-year timeframes were also employed. (2) High use was less often defined on the basis of use by a select proportion of the general public who could potentially be hospitalized or by a select proportion of the citizens who had been hospitalized in a given time period, with this proportion normally accounting for a large (often half) share of total hospital days, hospital admissions or separations, and/or costs. (3) High use was less frequently defined on the basis of costs or cost-weights that include consideration of both the quantity and intensity of care, such as those based on the number of hospital procedures and days of care, as well as the acuity or cost of these procedures and other services provided, such as intensive care services. As such, operational definitions of high use varied considerably.

After much deliberation, a decision was made to analyze 11 years of data from two representative full-service Canadian hospitals on the basis of high use being defined as 2 or more standard deviations above the mean utilization per each distinct hospital service. High users were thus identified as 6.1% of all persons who were admitted for inpatient hospital care, 2.6% of all patients admitted to an emergency department, 5.9% of all patients admitted for sub-acute care, 1.3% of all patients admitted for daysurgery, and 1.6% of all patients admitted to an outpatient unit for ambulatory tests or treatments. Minimal variation on a year-by-year basis was found. High users were most often younger (under the age of 65), female, living in the immediate community surrounding the hospital, and experiencing either a mental disorder (if under age 65) or a vague and undefined health problem (if aged 65+). Furthermore, few high users of one hospital service were high users in subsequent years and few high users of one hospital service were high users of other hospital services. When multi-use occurred, high users were more likely to use emergency department services and inpatient care services, followed by outpatient clinic and daysurgery services. These findings are highly relevant for health services planning, including the designing of services that provide an alternative to hospital-based care and programs that will improve the health of persons who have become high users of hospitals.

Key Words: Seniors, aging, hospital, utilization, use, high use, high cost, use reduction, cost reduction, systematic review, integrative review, environmental scan, research
In January 2004, Astrid traveled to Israel, Jordan, Egypt, and Palestine and wrote a series of short essays on her experiences. These essays focused on issues of immigrant absorption, urbanization and community planning. Her well-written essays were perceptive, reflecting her background in urban studies as well as her solid grasp of the history of Zionism and Palestinian nationalism. Astrid is a keen observer of people and places. Her writing skillfully depicts the people she encountered as well as the places she visited. Her enlighting and witty essays on Israeli, Jordanian, and Egyptian attitudes about space make for very interesting reading.
"Endangered Museums: The Viability of Living History Museums in the Modern Era"

"Endangered Museums: The Viability of Living History Museums in the Modern Era"

Abstract

In her research, Astrid examines the origins and development of Living History Museums (LHMs) with the intent of explaining both their former popularity and their current state of decline. While her focus is on two LHMs in Massachusetts, Old Sturbridge Village and Historic Deerfield, many other similar museums are referenced for comparative purposes. Astrid describes their current situations and responses to challenges posed by competing forms of tourism and other forms of economic and social change. This includes an in depth discussion of museum financing, marketing and strategic planning. The final product is a richly detailed exploration of a once unique and innovative alternative approach to the concept of a museum and educational recreation. Astrid is deeply committed to improving and updating LHMs in ways that remain true to their core mission: to present history as it was lived and experienced by the people of the time.

Astrid's thesis is five chapters long, with numerous appendices. In Chapter One, she describes the origins of LHMs in the U.S. as a response to the formalism of traditional museums that neither allowed nor encouraged interactive exhibits. Astrid does a fine job describing how Old Sturbridge Village, sought to portray life in rural New England in the 1830s, gathering historic buildings of the era from neighboring towns with the purpose of foregrounding local craftsmanship. In contrast, we learn that Historic Deerfield began from the antique collections of two individuals and is comprised of historic buildings still standing in their original location. Astrid explains how both sites tended to place emphasis on the positive features of the time as opposed to a more rounded and undoubtedly down beat representation of the hardships.

In Chapter Two, "Museums and the Public," she sets out the problematic around which the rest of thesis revolves: the ever-changing relationship between LHMs and the visiting public. Astrid begins by situating LHMs within the larger category of 'heritage tourism," noting how their popularity and programming was related to broader societal change. She convincingly explains why Sturbridge and Deerfield were once such popular tourist destinations but how other more commercial forms of tourism that often use history as a lure to what is essentially a shopping expedition, eventually won out. This is a complex discussion that includes many factors that are claimed to have an effect, such as reduced vacation time, more home gadgets, and greater cultural disconnection from the past. Astrid read widely and put considerable effort into making sense of these disparate, and sometimes ill supported claims, in order to draw some conclusions about why LHM popularity has declined.
Chapter Three examines one mechanism that LHMs use to address their declining popularity -- marketing. While describing in some detail the various marketing strategies that Sturbridge and Deerfield have employed (including useful illustrations of logos and advertisements), Astrid quite astutely points out the challenge this poses as LHMs run the risk of alienating their loyal supporters if they present a new image that is far different from their original intent. Especially interesting here is the discussion of "audience development," where we learn about the different groups that LHMs are trying to target for the future (e.g. children and families). In the end, without an improved visitor experience, Astrid suggests that marketing cannot provide a panacea.

This theme is picked up in the next chapter where she explores the fiscal crisis currently facing LHMs. Here we learn how the financial origins of a LHM can determine its sustainability, and how solid endowments, while they may delay the need to raise attendance and cut costs, do not postpone this need indefinitely. Astrid has compiled an enormous amount of detailed information and provides innumerable examples to illustrate how particular changes in programming and/ or staffing, new construction, reductions in exhibit space, and fund raising of various sorts, have failed to produce solvency or significantly increase attendance and crucial income for operations.

The last chapter, "History Plans Its Future," explores in some detail the most recent strategies that Sturbridge and Deerfield are using to increase attendance and engage their audiences without doing too much damage to their reputation for authenticity. The strategies examined include: developing a new image (re-branding); constructing indoor exhibits geared towards children; strengthening community involvement; improving visitor orientation, and achieving and maintaining financial stability. Astrid develops the arguments for each of these approaches and provides a balanced view of the likelihood for success or failure. It is here that we come to appreciate how dependent each of these strategies is on the other, and how important it is for individual LHMs to identify their own uniqueness and build upon that as opposed to trying to be all things to all people. Recognizing your own limitations, such as audience capacity at Deerfield, is another point that is underscored.

In the Conclusion, Astrid returns to her original motivation for the project and argues strongly for the need to save LHMs as wonderful and "enchanting" historic educational resources with the potential to contribute to local economies. With more attention to targeted fundraising and changes in exhibits that present history as "alive," she remains somewhat hopeful that a revival of interest can occur.

The Journey of Offering a Course for the First Time: Social Work 498 Indian Boarding School
Introduction

Social Work (SOWK) 498 Indian Boarding School will be offered for the first time on an experimental basis this summer session 2007 at Eastern Washington University through the School of Social Work. The purpose of this report is to share the journey of creating a new course as well as receiving the feedback of colleagues in the field.

In regards to terminology, I will refer to the Indigenous population of the United States as Indian or Indians. When referring to Indian Boarding Schools I will also use boarding school.

Historical Overview

Indian boarding schools were created as an instrument in exercising assimilation for the Indian populations in the United States. In many instances Indian children were forcibly taken from their homes to attend these boarding schools. As described by Plummer (2005):

Most Indian boarding schools dished out harsh punishment when children spoke their native language. Indian students had their long hair abruptly chopped off, their traditional attire discarded. They had to answer to new names, wear uniforms, march military style, wear hard, tight shoes instead of moccasins, speak only English (even to each other), convert to Christianity, eat only non-traditional food, learn a vocation, and work. (p. 5)

Many Indian people suffered physical and sexual abuse at the hands of school personnel. This forced assimilation was a product of European colonialism in which Indians were seen as subjugated people.

One of the first well known off reservation Indian boarding schools to open was Carlisle Indian Boarding school located in Pennsylvania. Carlisle was erected in 1879
The Journey 3

(Plummer 2005). Soon after Carlisle’s opening other well known boarding schools opened, Chemewa in Oregon, Chilocco in Oklahoma and Haskell in Kansas (Adams 1995). Some of the boarding schools that first opened are now closed while others have transitioned over time. Haskell is one such institution that started as a boarding school and is now a University. In present time, “The federal system of Bureau of Indian Affairs (BIA) schools currently encompasses over 185 day and boarding schools on and off reservations” (Plummer 2005).

It is not uncommon when speaking with Indian families to identify at least one member in their extended family that attended an Indian boarding school. Thus, the experience of Indian boarding schools is a common experience of Indian families in the United States. The same can be true of other indigenous people of other nations. In Canada the equivalent boarding schools for the Indigenous populations (referred to as “First Nations” people) were called “residential schools”. In Australia, similar child removal policies were developed in the late 1800’s, whereas light skinned aboriginals were removed from their families and placed in other homes, missions and institutions (Jacobs, 2006). Thus, these hardships to Indigenous children can be seen on a global scale.

Even though there were some harsh realities of the first Indian boarding schools not all that attended suffered. When informally surveying boarding school attendees one can find a wide variety of experiences. The variety of experiences appears to be related to (but not limited to) the age of the person, when they went to boarding school, the reason why they attended the boarding school, the decade they attended, and whether or not the attendee attended only during the day or resided at the school. In Jacobs article,
“Indian Boarding Schools in Comparative Perspective”, some boarding school attendees found their experience to be, “…fostering of a strong peer culture and the accompanying emergence of pan-Indian identity”. She continues by saying, “…not all children’s experiences within the schools were tales of unrelenting oppression…” and “Many Indian authors also recount their Indian school days with a degree of nostalgia and fondness for certain aspects of their experience” (Jacobs, 2006). Many Indians made life long friendships and also found their future husbands and wives (Dixon & Trafzer, 2006). In addition, some Indian boarding schools of the past now host school reunions. Lastly, contemporary Indian boarding schools now encourage, “Indian cultural traditions” and “the importance of ‘being Indian’” (Dixon & Trafzer, 2006).

New Course Offering

As mentioned previously, even though the Indian boarding school has been a well known chapter for most Indian people there has not been a course offered dedicated to this one topic. Outlined below are some of the challenges in delivering this new course and a discussion of ways to meet these challenges.

**Challenges**

Offering a course for the first time presents many challenges: What book or books to adopt for the course? Provide a reader (compilation of journal articles and other publications) in addition to texts? What aspects of the Indian boarding school should be focused on? How to recruit for prospective students (build interest)? How to give a balanced perspective? What are the reasons why this course has not been offered in the past?

**Addressing the Challenges**
In order to decide on a text or a reader to adopt it has been helpful to gather input from fellow colleagues in the field and research in various search engines. I have been given several reference lists to gain information from as well as conducted various web searches and periodical searches. I have found through research that the majority of books dedicated to the subject of Indian boarding schools tend to focus on the first half of the 20th century. Such books include, “Education for Extinction: American Indians and the Boarding School Experience 1875 to 1928” by David Wallace Adams. This type of focus looks at the harsh realities of the boarding school system before the enactment of the 1934 Johnson O’Malley Act, “… which essentially allowed American Indians on reservations to go to public schools” (May 2005). The majority of journal articles as well focus on the boarding school experience prior to 1930’s. There are some books and journal articles that do discuss contemporary Indian boarding schools such as, “Boarding School Blues” by Trafzer et al. and “Indian Boarding Schools and the Therapeutic Residential Model Project” by Judith A. DeJong and Stanley R. Holder. From this survey of publications one option to consider is to adopt a text that focuses on the early days of the boarding school experience and through other class presentations cover current trends in these boarding schools. This will also be accomplished with a field trip to an existing boarding school. Giving an overview of the boarding school experience from the late 1800’s to the present will allow the class to compare and contrast the atrocities of the past with the inclusion of culture in the current curriculum.

In offering a new course a recruitment strategy has to be planned in the hopes of making this a viable class with future offerings. For this course there has been some preliminary work such as cross listing this class with the American Indian Studies
Program on campus. Also there are plans on doing announcements in other courses in other disciplines in addition to the School of Social Work (where the class has been listed for the summer schedule). I have completed a few guest lecturing spots in social work courses where the Indian boarding school class has been mentioned. I have also fielded several inquiries from students that called to ask additional questions about what the course is about.

One of the difficulties of giving a balanced perspective is to balance my own family’s experience with Indian boarding schools with what is published. I am an enrolled member of the Confederated Tribes of the Colville Reservation. My maternal grandfather attended the Indian boarding school on my reservation, Saint Mary’s Mission and my mother attended the Indian boarding school in Lawrence, Kansas, Haskell. Because I am very close to the subject material I also need to be cautious of my own biases. One strength that I can call upon is that my family has a mixture of Indian boarding school experiences. My maternal grandfather had an unfavorable response and my mother had a positive experience. In addition, I have to provide self care to be able to relay the stories of my grandfather attending boarding school. At times I feel his trauma even though I never was able to meet him and he is now deceased. This trauma is often referred to as “inter-generational post traumatic stress” (Graman 2006). Even though I did not attend Indian boarding school I feel the grief through stories that have been passed down in my family from one generation to another.

I understand that timing is everything. Even though Indian people may understand the history of Indian boarding schools there are many in the dominant culture who have not received any exposure to this topic. It has only been in the last decade that
I have heard Indian people talk about boarding schools. To give an illustration of the current sentiment, I had conducted a Department of Social and Health Services (DSHS) training on the Indian boarding school experience. I coordinated and facilitated a panel of speakers to come together – all panel presenters were boarding school attendees. After the presentation one of the panel presenters said to me as the facilitator, “Thank you for providing a venue so I could finally tell my story”. It has been my observation that there has been years of Eurocentric education in the United States and only recently has the education community started to become more receptive in hearing the experiences of the Indigenous populations of the United States.

Conclusion

The journey of proposing a new course entitled Indian Boarding School has been challenging and rewarding. Decisions have been made to give a balanced perspective of the abuse issues of the past (the process of assimilation that involved in some cases physical and sexual abuse) compared with the celebratory accomplishments of the present (emphasizing Indian culture) through selected readings. A recruitment strategy has been started and there will need to be continued analysis of this strategy to evaluate it’s effectiveness in making this an ongoing class offering. In addition, my own biases in delivering this course will need to be monitored. Lastly, the timing seems right to offer a class that students from other cultures may appreciate.

Collaborative Public Policy Development: Making it Work
An Empirical Model of Government-Community Collaboration

Citizen participation in policy-making is receiving renewed attention today as policy issues become more and more complex, community demands for improved public accountability and responsiveness grow, and new approaches to public management continue to evolve. While traditional consultative strategies, such as public hearings and town-hall meetings continue to be used, collaborative planning processes are becoming increasingly popular. These initiatives generally entail bringing together representatives of key stakeholder groups, who work alongside state officials in order identify meaningful, feasible, and often highly creative policies to complex issues; policies that otherwise would likely not be developed. Collaboration theorists advocate that group deliberation uncovers participants’ mutual interests and goals and fosters resourceful problem-solving, which in turn lead to innovative policies that build on the perspectives and strengths of each constituency. Such an outcome is appealing to all concerned, especially in the context of limited public resources and increasing community needs.

Despite its growing popularity, little is known about how to promote effective collaboration, particularly in terms of ensuring that these processes are authentic and meaningful in bringing the voices of non-state actors into the complexity of government and its policy processes.

Using the Canadian Province of Newfoundland and Labrador’s Working Group on Welfare Services to Victims of Violence as an intrinsic case study, this inquiry advances our conceptual and pragmatic understanding of collaborative policy-making. To do so, two central research questions are addressed: From the stance of those involved, what is collaboration?; and, What conditions and qualities lead to its effective and authentic implementation? Using documentary analysis of critical government reports and key informant interviews with government officials and representatives of community agencies, this investigation documented the collaborative process and its outcomes, and explored the experiences of differentially located state and non-state actors.

Inductive analysis of the data identified four core factors that contributed to effective and authentic collaboration, namely: (1) the presence of certain enabling conditions in the host department and the Government of Newfoundland and Labrador; (2) the evolution of relationships characterized by trust, respect, and open communication; (3) participants having realistic expectations and a commitment to work together to develop “solutions” owned by the group; and, (4) the presence of a broker who linked the workgroup with senior officials within the host department. These factors and their related dimensions, particularly the broker role, bring clarity to our understanding of collaboration and offer significant insight into the conditions necessary to make collaborative processes successful. This paper concludes by highlighting the most significant implications for administration theory and practice and professional education for policy practice.

POLITICAL TRANSITION IN NEPAL: RE-FORMATION OR REFORMATION OF STATE IN NEPAL

Shambhu Singh Yadav
Abstract

The changes unleashed by the Maobaadis and people’s movements of April 2006 and the signing of the comprehensive peace agreements between the government and the Communist Party of Nepal (Maoist) on November 21st same year are generating tectonic shift in the political structure of the emerging democratic state. The emerging political communities weaving a utopia of future Nepal: a big ‘No’ to monarchy, multiparty democracy, free and fair election, secular statehood, abolition of every kind of discrimination based on gender, caste, ethnicity and class; independence of judiciary, reduction in the coerciveness of state’s machinery like army, police and bureaucracy, social justice, rule of law, recognition of cultural diversity, abrogation of discriminatory treaties with other countries and economic upliftment of all. The ground situation clearly will not allow such utopia to be translated into reality. Though, it may be the first model country where a “people’s war” under the tutelage of a revolutionary communist party on the verge of a complete victory, has agreed to participate in a multiparty democracy allowing consensus and reason to have an upper hand over “power” and the “Gun”, expectations of a country with more than forty percent population living below the poverty line in a landlocked country still untouched by “productivity revolution” will continue to be a rising crescendo against changelessness at personal situations. Whether politically active population in almost “de-institutionalized society will allow the culture of negotiation and tolerance, the prerequisite for a democratic statehood, remains a million dollar question? The stronghold of western district population over the military structure of the CPN (Maoist), the pendulous shift of opportunistic monarchist and democrats between various sections of the governing elite and marginalization of terai people at power centre in Katmandu will have non linear effect over distribution of power among various administrative regions, pillars of the state and saplings of democracy. Prolonged ideological and armed structure in Nepal has led to increasing militarization of the younger cohort group, and heightened awareness among dalits, janjatis and other minorities that will further increase strains in the emergent structure. This paper aims to address these emerging issues which will be relevant to the study of dialectics of stateness-democracy continuum and possible transplantation of democracy in failing states of Asia and Africa.

Introduction

The recent events in Nepal attracted the world community. They have been moving at a bewildering pace and this small land locked country of South Asia is now poised to have a major shift in its political order. On February 1, 2005, King Gyanendra took absolute power. This undemocratic state intensified domestic turbulence.1 This political move was a reversion of competitive politics. With the King’s actions giving no room for reconciliation, the agitating parties made a historical decision of forming a Seven Party Alliance (SPA) on May 5, 2005 which in course of time proved to be the major challenge to the monarchy. The Maobaadis understood the importance of the united front put up by the seven

---

parties and promptly offered their party's support in the protest movement of the political groups. Under the heavy pressure of mass movement the king issued a proclamation reinstating the parliament dissolved on 22nd May 2002. He directed the parliament to be convened on 28th April.

A complex political scenario has come out on the forefront of Nepal. The king has acknowledged the sovereignty of the people. The Maobaadis have proclaimed their commitment to a peaceful solution through the political process. The army has declared its loyalty to democratic forces. All major political parties agreed on the ultimate goals of society and state like sovereignty of the people; multiparty democracy inclusive of all people communities and regions; gender-equity; recognition of cultural diversity; rights for all, including minorities; social justice and rule of law. People's governments of the Maobaadis would be dissolved. Decisions on important national issues would be made through dialogue and consensus. The interim constitution would also specify the procedure for the convening and operation of the constituent assembly, including public participation through free and fair elections. But implementation would not be smooth due to differing attitudes, interests and priorities of the different political parties.

Nepal got an interim constitution that will remain effective by June 2007. By this deadline new Constituent Assembly has to approve the new constitution. The composition of this Constituent Assembly is heavily dictated by the Maobaadis, who not only shared 83 seats out of 330 seats, but also influenced the selection of other members. In spite of initial controversies, the apex body approved the interim constitution on January 15th at which point the Communist Party of Nepal (Maoist) or CPN (M) joined the interim parliament. So far seven parties that opposed King Gyanendra in 2005 and the Maobaadis have managed to work together, despite their major ideological differences and individual priorities. The Nepali Congress (NC) has yet to confirm its position on the future of the monarchy, while the leftist parties advocate a republican set-up.

The Maobaadis are in the process of transforming their organization into a mainstream political party operating in peacetime which is not so easy. They are probably the most organized political force, and it is their next move that will determine how political force and it is their next move that will determine how political alliances unfold in the coming months. In contrast, the seven parties that opposed King Gyanendra in 2005 are not exhibiting the same level of preparedness for the huge transition that the country is going through. The Comprehensive Peace Agreement that was signed on November 21st 2006 formally ended the Maobaadi insurgency. All parties to the deal declared their intention of making Nepal inclusive, democratic and progressive, but the next step in the political transition is to include the Maobaadis in government. The army remains an important factor in the emerging political landscape, and its role will probably be shaped by developments in the broader political environment, particularly its evolving relationship with the Maobaadi. So far the army and the Maobaadis have maintained their truce, but should the Maobaadis resort to violence, on whatever pretext, the military could move back to the centre of the political stage.
Nepalese political situation and equation could develop in a number of different ways. The government and the Maobaadis could successfully implement their agreements and hold a constituent assembly election as planned. However, delays in the election timetable would provide monarchists with the time to regroup and the opportunity to disrupt the transition. The Maobaadis, for their part, are aware that their strength lies in the distance between the king and the political parties. They also recognize that they need to remain committed to peace and to keep the political parties on their side if they are to gain international acceptance. Nevertheless, there is an outside chance that the Maobaadis could take advantage of any serious delays in the country's political transition to try to push through a second revolution. The seven-party alliance has so far managed to remain united, but could splinter when the election process magnifies the parties' ideological differences, a weakness that both the Maobaadis and the monarchists would be quick to exploit. The political situation is further complicated by the ailing condition of Mr. Koirala, who was recently in India for his treatment. His further incapacitation as head of state and government will lead to succession battle that could become disastrous for the efforts to move the country peacefully towards democracy.

**Monarchy**

Monarchy had traditional base as an institution in Nepal. But the Nepalese monarchy stands no chance of survival and the overwhelming popular sentiment seems to be in favor of a parliamentary republic. The effects of the recent political developments in Nepal are indicative of an extremely important shift in the structure of Nepal's political order, the implications of which are still being experienced. One of the most important shifts concerns what were considered the two most powerful institutions in the polity- the monarchy and the army. In May 2006, the House of Representatives passed legislation that transformed relations between the monarchy and parliament. The legislation ended important executive prerogatives of the monarchy and included measures such as – taking the assets of the royal family; discontinuing the royal advisory council or Raj Parishad; transferring control of the military to the legislature and renaming the RNA (Royal Nepal Army); removing the title "Royal" from all government institutions and; declaring Nepal as secular state. However, it is rather puzzling that both the monarchy and the army accepted a curtailment of their powers and this makes further research regarding the nature of the internal negotiations important. The Constitution Drafting Committee has received suggestions form all the major political parties CPN (M) suggested that Nepal be declared a Federal Republic in the very preamble while CPN-UML asked the drafting committee that the fate of the monarchy be decided by a referendum. The NC wants the constituent assembly to decide the fate of the monarchy.2

**Judiciary**

The independence of judiciary essentially demands independent, competent, efficient and intelligent person of high character and integrity to be selected and appointed as judge. Unlike other branches of the government, the judiciary in Nepal is also sharply alleged for not serving and delivering the justice with high ideals as expected and directed by the constitution and the laws. Democracy has

---

rewarded the judges with unparalleled honor and authority with a belief that they will maintain and use their integrity, wisdom and independence for the benefit of the people and the nation at all times. But the ends of decade-long experience of Nepal’s democratic system, crises in the judiciary both internally and externally are broadly felt. Judging the judges has become inevitable because of the loud voice raised against the misconduct of the judges. There are complaints from many corners that the corruption is ascending in the judiciary.

Because the judiciary enjoys as security of tenure rightly denied to politicians and unique among public servants, it is especially important that the judges should be subject to free and open criticism of the performance of their duties. In fact independent judiciary should not be equated with despotic judiciary. Though, the Judicial Council Regulation has clearly mandated every judge to submit property details, the Judicial Council could not have effectively performed the task of monitoring the assets and interests of the judges. The Judicial Council must initiate investigation when a complaint is made against a judge for having abundant wealth, lacking valid source of income.

Nepal has 75 districts of them; seven are completely in the hands of the Maobaadis. In these districts they have established their own government, their own judicial system and set up other branches of administration. In another 17 districts the Maobaadis and the former Royal Government existed side by side while in the rest of the country the Maobaadis used to carry out subversive activities at will.

**Elections**
For the success of any democratic system, it is essential that there must be adequate provisions for free and fair elections. As far as the constituent assembly process is concerned, the dangers are manifold, and not least the need to explain the intricacies of the mixed electoral system to the populace. Additionally, one of the grievances with the recent agreements is that the demands of various ethnic, regional and other marginalized communities have not been adequately addressed. Elections mean polarization, as the various political parties compete for votes. The process has already begun in Nepal, and it can be expected that the two parties most at loggerheads would be the CPN (Moist) and the CPN (UML), who would presumably be battling for the same ideological space. Given that the elections are not even for a Parliament but a constitution-making body, there is an urgent need for a code of conduct that binds the political parties to minimum standards of good behavior. This is absolutely crucial. A highly charged and potentially violent campaigning period over the spring of 2007 would be one more cause for the reactionaries of Nepal to try to flex their muscle.

Security during the election presents a further challenge. The intensification of violence associated with competing sectarian demands has

---

5 Ibid. p. 9.
caused deterioration in law and other, which could unsettle the transition. More interest groups, political, ethnic and religious, are making their agendas known. Supporters of the monarchy are still a presence in the country. Although King Gyanendra has remained reticent politically, it is not yet clear whether he will accept a quiet exit. His future will be decided by a simple majority of the constituent assembly. Demands to establish ethnic republics in Nepal are intensifying, although the mechanics of autonomy would be challenging. Nepal is a country of minorities, with some groups dominant in specific areas and others dispersed throughout the country. The protests and strikes witnessed in recent weeks in the plains of Nepal indicate the danger that ethnic politics could take a violent turn. More armed groups attempting to exercise local control could emerge, particularly given weak law enforcement. Despite the re-establishment of many police posts, the government remains unable to police the country effectively. The situation is likely to become increasingly fraught as the election draws closer and partisan interests intensify. The challenges of maintaining law and order will stretch all those concerned if Nepal is to be in a position to hold a free and fair election by June.

Bureaucracy
Bureaucracy is expected to fulfill professional duties maintaining neutrality. The bureaucrats should be able to provide their services. Political neutrality is essential to ensure impartiality in service delivery to the people. Sometimes in other countries, bureaucracy even directs the government due to their permanent nature, experiences, continued access to information and professional expertise. However, the situation is different in Nepal. On the one hand, bureaucracy as such is not functioning according to the principles of rule of law and on the other hand, political leaders are carelessly using bureaucracy to fulfill their vested interests. Therefore, one cannot imagine good governance in the absence of neutral and impartial bureaucracy. The bureaucracy in Nepal was never allowed to function on any sound administrative principle. The future career of the administrative personnel during the royal regime depended on patronage of the palace. The bureaucracy was neither independent nor impartial and efficient in its functioning. Neither the political leadership nor the permanent civil service is looked up to for noble initiatives in development and administration or for mitigation of poverty. At present, the greatest challenge to the country's bureaucracy is in the filed of its professionalism and accountability. Achieving these qualities require some fundamental shifts in personnel policies of the government which, for one thing, should place an unmistakably high premium on performance accompanied by opportunities for the professional advancement of the officials.6

Arms Management
Like any other nation-building exercise, the political transition in Nepal will be cumbersome and confusing. How will a military machine be converted into a political party? The difficulty lies in the fact that the Moist rank-and-file have been drilled with revolutionary fervor and talk of takeover of the state by force of arms. There will be a large group, gathered during the rapid Maoist expansion in

the last 1990s and early 2000s, whose political commitment is suspect, and who are obviously enjoying armed power and the livelihood gained from it. The political transformation of the Maobaadis will require something more than 'arms management'. This euphemism is used by all parties in Nepal, and means disarmament of the Maobaadis, while ensuring that the Nepal Army is kept within barracks. The military structures and thinking that have defined rebel behavior will now be the most crucial to transform if the transformation seems to be happening at a pace that could be faster, and indicates a danger for the 'politicalization' of the CPN (Maoist).

Arms management and the involvement of the UN in weapons decommissioning and election monitoring were included in the peace accord, but were dealt with more specifically in a separate agreement. However, an integral part of the peace accord was the commitment by both parties to cease any form of aggression, recruitment of personnel or movement of weapons. People held in detention by both sides were to be released within 15 days.

**Sectarian Violence**

Political discrimination, coupled with social and economic inequity, led people to organize them against the state, demanding a space for inclusive politics. Pressure groups of women, *janjatis* and *dalits* have been demanding their inclusion in the political and socio-economic spheres. Discontent grows when they find it difficult to gain a foothold in the main political parties or rise up the economic ladder. These groups are asking for systemic changes for better political, economic and social equitability. For example, the *janjatis* have organized themselves under the *janjati* Mahasangh, which has 48 *janjatis* as its members, and are demanding changes within the Constitution. *Janjatis* are the indigenous tribes of Nepal and do not consider themselves to be Hindus. They are against the Hindu character of the country as enshrined in the Constitution of 1990 and want Nepal to be declared a secular state. They challenge the unitary structure of the country and demand federalism based on ethnic distinctions. Like the *janjatis*, other protest movements spearheaded by women, *terains* and *dalits* are also demanding inclusive politics.

The Maoist attempt to increase their support base by including the concerns of the *janjatis* has paid rich dividends. Most of their cadres belong to Rai, Limbu, Gurung, Magar and Tamang communities. This has led many scholars to describe the Maoist movement as an ethnic movement. However, it is best characterized as a political movement with economic and ethnic elements. The Maoist image of being representative of *janjatis* is a political ploy to gain more cadres.7

The government's inability to police the country effectively has made the ground fertile for politically motivated violence and has resulted in poor law and order more generally. Violence relating to sectarian demands, as well as strikes, has been on the rise throughout the country. In particular, the tensions between migrants from the hills (Pahadis) and the original inhabitants of the plains (Madhesis) have intensified. The Madhesis are demanding regional autonomy to

---

end domination by hill groups. One immediate demand is the redelineation of election constituencies, but bowing to these demands could open the floodgates to demands from other ethnic groups, and might delay the election until after June. The movement promoting the Madhesis' cause has three fronts: groups engaged in armed struggle; groups promoting radical aims but without violence; and Madhesi politicians in the Nepal Sadhabhavana Party (Anandi Devi), or NSP (A), and the mainstream parties that advocate regional autonomy.

The Janatanirk Terai Mukti Morcha (JTMM), a Maoist splinter group that has been fomenting sectarian unrest in the plains of Nepal's south, has now split into two factions, and violence has intensified.\(^8\) There were sectarian clashes in Nepalgunj in mid-western Nepal in late December between Pahadis and Madhesis. These came in the wake of a strike called by the NSP (A) on December 25th to protests about the constituencies agreed in the interim constitution. The JTMM is opposed to the holding of direct elections in the existing 205 constituencies, and both JTMM factions are demanding the creation of a Terai (plains) federation with rights to self-determination.

Violence associated with identity-based demands spread to other districts after the death of Madhesi activists in a Maoist shooting at Lahan in eastern Nepal in mid-January 2007. The death toll related to these protests and clashes had reached 19 by February 5th. Most of the eastern Terai towns, including Birgunj and Biratnagar, remained under curfew throughout the protest period. Many small town in between these two (Biratnagar is the easternmost town in which protests took place) were also placed under curfew. Transport came to a halt, and the government began rationing petroleum products in Katmandu in early February, as stocks had run low and it was unable to bring in more supplies from the plains.

The Madhes Jana Adhikar Forum (MJF) advocates more radial Madhesi rights, but has not yet taken up arms. The MJF did, however, become embroiled in violent clashes with the Maoists in late January, and the resulting protests spread to a number of districts. The JTMM faction led by Mr. Singh has claimed that it was behind the protests, and has demanded that the government include it as well as the MJF in talks. The Maoabaadis, meanwhile, regard the JTMM as traitors and oppose any negotiation with them. They do want the government to meet the "reasonable" demands of the Madhesis, which includes fair representation, access to opportunities, recognition of identity, ownership and control over natural resources, and regional autonomy.

**Economic Issues**

The basic economic foundation of Nepalese society is agriculture; more than 81% of the labor force is engaged in agriculture and close to 90% of Nepalese people live in rural areas. The dominance of agriculture also appears in the accumulation process, though the productive forces in Nepalese agriculture are backward and primitive. It is still the case that nearly 99% of the total investment in Nepalese agriculture is made in land, human and animal labor and primitive equipment and only 1% in modern means of production.\(^9\) Eighty percent of the population in Nepal is still dependent on agriculture. Distribution of land, the most important

---

\(^8\) The JTMM was formed when a group split from the Maoists in July 2004. There was a split in this group in July 2006, when a faction broke away under the leadership of Jwala Singh.

productive resources, is substantially skewed. Forty percent of the households at the bottom hold any nine percent of land. Bottom 20% of the household shares only 3.7% of the national income whereas the top 10% share 50%.\textsuperscript{10} Land Reform should be directed towards improving lot of the poor people. The following suggestions could be forwarded for making land reform as a means of poverty reduction:

a) Land to the tillers should be its guiding principle  
b) Homestead land should be made available to the homeless in a planned manner.  
c) Co-operative farming should be encouraged.\textsuperscript{11}

The importance of the future economic development of Nepal was highlighted in the accord, with a commitment to the implementation of a socio-economic transformation by ending feudal and ownership and introducing other land reforms. The Ministry of Finance has estimated the cost of establishing lasting peace at NRs 6bn (US $80m). As part of the peace process, the government has set up a Peace Trust Fund with initial funds of NRs 100m (US $ 1.4m), which will be used to rebuild infrastructure, resettle some 50,000 internally displaced people, generate employment, enforce security and maintain the Maobaadis in their cantonments. Nepal has asked donors for NRs 5bn to help with these activities.\textsuperscript{12}

\textbf{Foreign Affairs}

Foreign powers have praised the progress made so far in the peace process, and by and large have welcomed the inclusion of the Maobaadis in parliament. However, concerns persist. Both the US and India would like to see the Maobaadis joining government only once arms management is complete, and the US has been strongly critical of continued Maoist violence since the peace accord. Nepal needs to retain the support of India and the US. International backing is essential on a number of levels if the political transition is to be effected peacefully. Support from the UN could help in the transition process, but its power to assist partly depends on the ability of the political parties to manage the process effectively. India may not welcome greater UN involvement beyond its two current roles of arms monitoring and election support.

Nepal will continue to draw in foreign funds to help to cover the budget deficit resulting from low economic growth. Some donors have stepped up aid to Nepal, but the implementation of projects in the country remains a challenge, owing to the poor security environment. Although the Maoists have dissolved the local government apparatus that was notorious for making demands on development agencies, local leaders may be slow to end their high-handedness. A peace divided in the form of aid will probably not materialize until the constituent assembly has finalized a new constitution and clarified the nature of the Nepalese state. Important donors, such as the US and the UK, want an unequivocal assurance that the Maobaadis have once and for all renounced violence and surrendered their weapons. The multilateral aid agencies, meanwhile, will be

watching for signals from the US and the UK before making major commitments for their own.

On a visit to India on November 17th-19th, Comrade Prachanda said that the November 2005 pact with the mainstream parties that had led to the king's downfall had been possible only with India's support. India has not yet ceased to class the Maobaadis as terrorists, although it has welcomed the interim constitution in Nepal. However, it has called for credible arms control measures to be implemented before the Maobaadis be allowed to join the government. India's foreign secretary, Shiv Shanker Menon, declared during the a visit to Nepal in late November that India was prepared to discuss all issues, including the controversial 1950 Treaty of Peace and Friendship that Nepal claims favors India. The US, meanwhile, has remained strongly critical of the Maobaadis, while supporting Nepal in its progress towards democracy. The US ambassador to Nepal, James F Moriarty, declared in January that the Maobaadis would remain on the US list of terrorist organizations until they convinced the US of their commitment to peaceful political activity. Nepal and Bhutan were scheduled to discuss the repatriation of Bhutanese refugees from Nepal on November 21st-22nd, but the talks have been indefinitely postponed. Nevertheless, on November 15th Nepal began a census or refugees living in seven camps in the country.

Conclusion
The paradox lies in the fact that despite agreement on the ultimate goals and this seemingly straightforward roadmap, hurdles have appeared as to its implementation. Difficulties arise in part from the ambitious scope of the interim constitution draft, which nevertheless leaves several critical and controversial issues to be resolved by the SPA and the Maobaadis. These include the nature of the state, the mode of election of the constituent assembly, and the composition of the interim legislature. It does not sufficiently address the problems of governance in the transitional period. In part, these difficulties arise from differences over the 'management of weapons' - particularly the Maoist arms – and from questions as to the conditions under which the Maobaadis can enter government and under which elections to the constituent assembly can legitimately to held.13

The implementation of constitutional suggestions will not be effective without the satisfactory resolution of the weapons question, and the exercise of good leadership. The management of weapons and of armed forces, together with other issue of transition, will require a leadership with vision and determination.14 Nepali citizens retain their trust in democracy as the best from of government despite disappointment with the working of democracy and the behavior of politicians. The people clearly reject non-democratic alternatives. They do not want the king to be the executive head. People strongly disapprove of the popular government and the takeover of executive powers by the king.15 The socially exclusionary nature of Nepali state and society, and the centrality of the Katmandu valley, is the fact of social geography. Constructing a just, equitable, modern democratic state and society in a small, land-locked country with a large

proportion of its land mass covered by mountains, extreme poverty, low literacy,
and a tantalizingly brief experience with democracy, is unlikely to be easy.

Abstract:
Our paper investigates how changes on the Applied Japanese Language education system have influenced on the language teacher’s careers development. Studies about Japanese language teachers (JLTs) have demonstrated that female part-time teachers are four times higher than male teachers, and full-time JLTs at universities are predominantly male. At the first phase of our project we investigated the case of JLT part-timers. Data was collected by in-depth interview with female JLTs working at Japanese universities and at private Japanese-language schools. Firstly, we analyzed how female JLT part-timers start their careers as teachers. As result we found some similarities among interviewees and we classified them according to the kind of teaching training program (if at university or private training school). Primary results showed that JLT part-timers who have received training at universities start their teaching careers at the private language schools but move to universities where the work conditions are better, as soon as they have an opportunity. JLT part-timers who received training at the private training schools also start their career at private language school, but rarely move to universities. In the next phase of the research we will collect data concern the language training courses’ educational proposals, analyze advertisement on the main web sites where JLTs have free access to job information and also analyze how professionals who changed their previous jobs to JLT jobs develop their careers.

Developing Effective and Efficient Leadership

Introduction

As a leader, one should gain an understanding of oneself and simultaneously perceive others carefully and intentionally. I hold that what we need is effective and efficient leadership. Consequently, how to determine the strategies and tactics necessary to be an effective and efficient leader is the core of the researches and analysis.

First, I emphasize it is necessary to be an efficient and effective leader. An effective leader should be one who can “generate creative responses to the broad range of problems that he/she encounters” (Bolman & Deal, 1991, p. 4). Halpin (1966) states that one of the major findings resulting from the LBDQ (Leader Behavior Description Questionnaire) data was that “effective leadership behavior tends most often to be associated with high performance on both dimensions” (p. 97). The two dimensions referred to are initiating structures (concern for organizational tasks) and consideration (concern for individuals and interpersonal relations). In addition, in the Rutter et al (1979) study, firm and purposeful leadership has been frequently cited as the first requirement of effective leadership. Murphy’s (1990) review on the effective leadership is:
Developing a limited number of well-defined goals and communicating them to all school constituencies; managing the educational production function supervising teaching, allocating and protecting instructional time, co-ordinating the curriculum and monitoring student progress; promoting an academic learning climate involving positive expectations for students, maintaining high personal visibility, providing incentives for teachers and students, and professional development of teachers. (p. 160-200)

In summary, the role of the leader is to balance different needs and wants in an organization and reach to the goals of the organization. If there is no leader in an organization, members would be confused and disorder will occur. Second, I will analyze and expound the strategies and tactics needed to be an effective and efficient leader from these aspects as follow: (a) how to emanate personal character; (b) how to master competencies; (c) how to set directions; (d) how to build organizational capability; and the last one is (e) how to mobilize individual commitment.

**The necessity for developing effective and efficient leadership**

The essential trait of effective and efficient leadership, in my opinion, is how to tackle the relationships among “Human Being.” No matter what different times and stages, different countries and regions, and different cultures and backgrounds, it is essential to good leadership that this important element—relationships with people not be neglected.

When severe and drastic changes happen, members of an organization will expect effective and sensible planning, confident and efficient decision-making, and
regular, complete communication that is timely. In addition, in changing times, members of an organization will perceive effective and efficient leadership as supportive, concerned, and committed to their welfare. The essential factor is that there is a culture and climate of trust and respect between leader and the rest of the team. The existence of trust and respect brings hope for the future and also makes complex things easier. In a school each member should have an agreed upon goal—help students receive quality education. Effective leadership can help us reach this goal. First, effective leadership provides a framework which gives schools, teachers, and students opportunities to learn what they want to learn. Second, effective leadership involves sustainable development and achieves positive outcomes. In addition, effective leadership offers opportunities to cooperate with other groups such as government, community groups, and business groups. Consequently, it is necessary to develop effective leadership in schools.

In contrast, poor leadership, such as forcing aggressive and punitive behaviors on employees, endorsing a heavy workload or unmanageable work pace will result in members of the organization expecting nothing positive. For example, in a climate of distrust and disrespect, members know that the leader will act in unreasonable ways that do not seem to be in anyone’s best interests. Thus, poor leadership implies an absence of hope and in the long-term, the organization will become completely nonfunctioning. Members of the organization will totally give up their own interests and goals, at the same time; they will yield to difficulties and admit defeat. There will be no faith in the organization and also in the ability of the leader to turn the
organization around.

**Emanating personal character**

From my perspective, how to emanate personal character that anyone else can accept and support is the basic element to be an effective and efficient leader. David Whitney (2005, p. 3) describes the character of George Washington (1789-97), the first president of the United States below:

Perhaps the strongest feature in his character was prudence, never acting until every circumstance, every consideration, was maturely weighed; refraining when he saw a doubt, but, when once decided, going through with his purpose whatever obstacles opposed. His integrity was most pure…. He was indeed, in every sense of the words, a wise, a good and a great man.

Although George Washington had little formal education, he had the charm to attract people to follow him and he was elected by the unanimous vote of his countrymen. One of the most important reasons is his preeminent character, personality, values and beliefs. But it does not mean that he did not have weaknesses in his characters. This will elicit another aspect of his character, namely, using his strengths to offset his weaknesses. Consequently, I think there are two more essential characteristics to be an effective leader, that is, emotional intelligence and integrity. Firstly, emotional intelligence can help you recognize other people’s positive or negative feelings and motivations. Goleman (1998) posits that the foundation of emotional competency is self-awareness, the knowledge of ones own abilities and limitations as well as solid understanding of factors and situations that evoke emotion in one self and others.
Specifically, as a leader in an organization, you have to observe each member’s activities and feelings, encourage their potential, and reach the goals of the organization. Novak (2002) says “good helpers possess people-oriented perceptions of themselves, others, purposes and frames of reference” (p. 78). I propose that means we should focus on people’s thoughts and feelings on what they experience. We could use another word “care,” just like Novak says an inviting stance is centered in care.

As a leader, one should listen to the interests and meanings expressed by the others. If not, one cannot be acknowledged and welcomed by others and gain the trust and respect from others. The process of accomplishment is a teamwork process and cannot be done by only one person. If a leader only pretends and is in fact, not connected with followers, followers will not trust the leader. So, the whole organization’s relationship will be broken up. That is why I emphasize integrity in order to be an effective leader. Integrity is the core quality of a successful and happy leadership. In my opinion, that means being totally honest and truthful in every part of your life, including being honest to yourself and also the people around you. If you cannot keep the promise that you have made, your followers will not believe and trust you, what is worse, they may betray you because you are not worth them relying on. In sum, for leadership success, emotional intelligence and integrity are both crucial.

**Mastering competencies**

I suggest the vital factor of mastering competencies is how to be a creative leader. Nowadays, creativity is used frequently in many fields. For instance, transformational orientation emphasizes that teachers should facilitate students to be creative and
free-thinking. Ray and Sayer (1999) have pointed out how increasingly, economic success is seen as lying with “culture, knowledge and creativity” (p. 17). However, different people have different understandings of the meaning of the word “creativity.” Elliott (1989) suggests that creativity is “a fourfold concept at least: it involves a doer, a doing, something done, and the context in which it is done” (p. 4). He focuses creativity on music education. Fasnacht (2003) holds that creativity is “a process that may be developed and influenced by the environment and is recognized by the product produced” (p. 195-202). He emphasizes creativity in nursing.

In developing effective leadership, I suggest creativity is not only to invent or create something that is “brand new,” it is about new “synergistic” connections with what already exists. Synergistic means interactive, cooperative with each other. For instance, there are two high schools in the same district. They have the same organizational structure and get their finance from the local government. Also, they have almost the same number of students and faculty. In other words, there are few differences in the basic situation of the two schools. Nevertheless, there are quite different outcomes of the same year’s accomplishment. To some extent, it is due to the different levels and skills of leadership. Probably, one of the principals has created synergistic connections but another cannot. As to how to create synergistic connections as a leader, I would like to analyze from the facets as follow: trust, integrity, self-surrender, proactiveness and reflectiveness. Trust within the faculty members is indisputably an important element of effective leadership.

Developing and sustaining an inviting stance is about establishing a
trustworthy pattern of interaction over time. When trust is lacking, everything is called into question. People are at cross-purposes and time, energy and potential are lost and not easily restored. (Novak, 2002, p. 72)

If the faculty members cannot trust and respect one another, surly, they cannot have a good working relationship with their colleagues. Integrity, I would replace it with the word “straightforwardness”. I hold that integrity means being proud of your self achievements and having the courage to admit your errors and being accountable to your faulty. Self-surrender means being sure not to blame others and shirk responsibilities. If you cannot do something, try to not be too demanding to others to do the same thing. From my perspectives, being proactive has two meanings. The first level is being active and energetic yourself, while another is making your followers active and spirited. Last, make sure reflect on your actions. Confucius, one of the Chinese philosophers, says reflect on your own actions three times a day in his book named the Analects of Confucius.

**Setting directions**

Direction can be compared to a line which guides and leads members of an organization to the destination. Leaders must work with members to begin creating a new vision of an altered workplace and help members to understand the direction of the future.

However, if a leader only pays attention to feelings, such as happiness, sadness, grief, despair, everything in the organization will only be a dream because members only focus on their own aims and forget the direction of the organization. Harvey
Mackay once said, “A dream is just a dream. A goal is a dream with a plan and a deadline.” And that goal will remain a dream unless you create and execute a plan of action to accomplish it. So every goal that gets accomplished has a good plan behind it.

The leader should combine acknowledgement of members’ feelings with members’ understanding of future vision of the organization. When the leader sets directions, he/she should concentrate on two questions (Army Handbook, 1973): (1) What are all the ingredients necessary for its successful execution? (2) What are all the possible forces or events that could hinder or destroy it? The first question should include who, when, where, how and why. The directions contain the detailed plans: determining all the missions and tasks; organizing a structure to accomplish those tasks; allocating the resources of the organization. In each section of the process, it is a “doing-with” (Novak, 2002) process. For example, when a leader determines the tasks, he/she has to learn the members’ needs but not force others to carry out the missions. A leader should support a variety of members and supply them with sufficient equipment. Also, a leader has to check that all the missions don’t get off track. If leaders can “develop goodwill,” “reach a variety of people,” “read situations,” “ensure delivery” and “negotiate alternatives,” all mentioned in John Novak’s Inviting Educational Leadership, the process of determining tasks, organizing structure, and allocating resources are much easier to carry on.

As for the second question, it means anticipating difficulties and tough situations that will occur. Before solving the problems, a leader should identify what the real
problems are. For example, in a school there is a rule regulating that teachers should stay 30 minutes after school to help students with their work. As the principal, you find that although all the teachers obey this rule, some of the teachers only follow the letter but not the spirit of the rule. The principal at first should figure out why the teachers do not like staying to help the students. Probably, teachers think it is unnecessary to help students with extra time because students have already learned in the class; or, perhaps they would like to stay if they can get additional recognition; or, they consider 30 minutes is too long and if it is a shorter time they can accept it more readily. After the principal makes sure what the problem is, he/she can put solutions into action. However, different solutions give rise to different responses from the teachers. Try to compare and analyze which is the relatively best solution. Next, the principal can implement the plan. But, new problems will take place and the process of identifying and solving problems itself is a cycle.

**Building organizational capacity**

Organizational capacity covers many aspects, such as leadership, organizational infrastructure, skills and capacities, relationships, experiences and confidence. I propose it comprises specific questions such as: (a) Is the organization run by a single, charismatic leader and does the organization take on greater levels of responsibility? (b) Does the organization have sufficient resources such as staff and financial support? (c) What are the strengths and weaknesses of the organization and what other areas could be developed? (d) Are there productive relationships within the organization and with other organizations? (e) Is the organization eager to try new things and learn
from its mistakes or not?

Additionally, I find the McKingsey Capacity Assessment Grid (2001) is a tool designed to help organizations assess their organizational capacity. The contents are as follows:

- **Aspirations**—mission, vision-clarity, vision-boldness, overarching goals.

- **Strategy**—overall strategy, goals/performance targets, program growth and replication, new program development, funding model.

- **Organizational skills**—performance management, planning, funding-raising and revenue generation, external relationship building and management, other organizational skills.

- **Human resources**—staffing levels, board-composition and commitment, board-involvement and support, CEO/executive director and/or senior management team, management team and staff-dependence on CEO/executive director, senior management team (if not previously covered), volunteers.

- **Systems and infrastructure**—systems, infrastructure.

- **Organizational structure**—board governance, organizational design, inter-functional coordination, individual job design.

- **Culture**—performance as shared value, other shared beliefs and values, shared references and practices.

According to McKinsey, the grid can help an organization: identify those particular areas of capacity that are strongest and those that need improvement;
measure changes in an organization’s capacity over time; draw out different views within the organization regarding its capacity. In total, there are seven aspects in the assessment. It has a comprehensive structure and covers key areas that affect an organization’s capacity, such as strength of management, soundness of finances, and commitment to ongoing improvement. However, it does not mean this method fits each organization. It depends on every organization’s micro and macro situation.

Mobilizing individual commitment

Individual commitment is dominated by obligations. For example, these obligations may be mutual, or self-imposed, or explicitly stated, or may not. As a leader, I think the foundations to mobilize individual commitment are to engage others and share power with others. Consequently, if these obligations are simply imposed on individuals without individuals’ support, it is impossible to mobilize individual commitment over an extended period of time.

How to engage others and share power, in my opinion, is probably to praise and give recognition. Nowadays, sometimes money is a good motivator to engage people. However, I do not believe money is omnipotent and all-powerful. To a great extent individuals want to feel that what they do makes a difference. Thus, I consider personal recognition does make a difference.

To mobilize individual commitment in an organization no one wants to do the same boring work day after day. Individuals need some tasks and work that can appeal to their interests. First, leaders should balance the usual work and interesting work to keep individuals excited in their work.
Second, leaders should empower individuals. That means empower individuals with information they need to know to do their work better and more effectively. For example, individuals need to know the functioning condition of the organization. So, a leader should open the channels of communication in the organization to allow each individual to be informed, ask questions, and present suggestions. This method partly represents the sharing of power in the organization.

In addition, give individuals much more independence. Make sure not monitor individuals too closely because no one wants to be completely controlled by others without any freedom. Individuals would like to develop by bringing some innovative ideas and energy to their own job. Individuals will challenge themselves without being closely monitored.

Last, involve individuals in the usual businesses to help them feel respected. Everyone appreciates getting credit and then sharing the successes and failures of the organization with others. Accordingly, give individuals opportunity to explain, learn, and grow with the organization. As the leader involves others, he/she increases their commitment in implementing new ideas or change.

Conclusion

Developing effective and efficient leadership is a complex process. Moreover, there is no definition about how to do this. Emanating personal character, mastering competencies, setting directions, building organizational capacity, and mobilizing individual commitment are only some suggestions of the developing process. Also, effective leadership is not just words and they are identifiable actions that are
integrated into a plan which ultimately elevates the performance of individuals and organizations. In other words, leaders need some specific strategies and tactics to develop effective leadership.

Effective leadership has significant effects on students’ learning, the quality of curriculum, and also teachers’ instruction. Good leaders influence students’ learning by helping to promote visions and goals, also by ensuring that resources and processes are in place to enable teachers to teach well. Thus, effective leadership can provide instructional guidance and create a competitive school to offer students quality education.

Developing Just, Democratic, Empathic, and Optimistic Leadership

In a Cross-Cultural School

Introduction

Kincheloe and Steinberg (1995) propose that any system of meaning we develop for our schools must be “just, optimistic, empathetic and democratic” (p. 2). I agree with this statement. Because it is a pluralistic and ever-changing society, we should pay attention to each individual and every one should have equal access to education. I think just, optimistic, empathetic, and democratic leadership is the basic foundation to develop each individual’s education. The enrollment of the school is diversified and internationalized, many students come from different cultures and backgrounds, thus, as a leader, it is crucial to handle the different wants and needs using a combination of methods.

Culture is “a patterned way of thinking, feeling, and reacting, acquired and transmitted mainly by symbols, constituting the distinctive achievements of human groups, including their embodiments in artifacts” (Kluckhohn, 1951, p. 921-976). In the American Heritage Dictionary (2004), cross-cultural means comparing or dealing with two or more different cultures. In a cross-cultural school, if a leader wants to deal with diverse opinions and ideas successfully, first, he/she has to make sure what his/her career goals are—to help each member of the school achieve self-actualization or to earn profit. Self-concept is the belief
that people have about who they are and how they fit into the world. It is the most intimate of realities and the slipperiest of abstractions (Bracken, 1995). The most personal perception is maintained, protected and enhanced by every feeling, thought and action a person manifests (Novak, 2002). Consequently, a leader should know oneself well to understand others’ perceptions. Next, a leader has to be willing to get much more information about others’ beliefs, values, ethnicity, language and so forth. Avoiding the kinds of dilemmas which happen in a cross-cultural school cannot help the leader to ease the situation. It only makes conditions worsen. Confronting the difficulties realistically and proactively is most important.

First, I express my opinion on the relationship between culture and leadership. Also, in a cross-cultural school, how to tackle language problems and how to balance different values are the essential missions of a leader in my opinion. In the second part, I emphasize developing justice in a cross-cultural school. Next, I focus on developing empathy in a cross-cultural school. Then, developing democracy in a cross-cultural school is elaborated on. I briefly introduce my own experience about democracy. The last part I offer my understandings about developing optimism in a cross-cultural school.

**Culture and leadership**

When I visited Ridley College, a private school, I learned that the student body in the school is a diverse, multi-talented group with students from over 30 other nations. I am interested in how to manage a school with students from different cultures. So, from my perspectives, how to balance an indigenous group and one or more minority cultures deserves the educators’ serious consideration. Increasing mobility and migration characterizing the world today inevitably results in people from different cultures studying in the same societal
Hallinger (1995) notes that in studies of educational leadership, culture has been a missing variable. Stolp (1994) argues that school culture offers principals and other leaders a broader framework for understanding difficult problems and complex relationships within the school. He also says that by deepening their understanding of school culture, leaders will be better equipped to shape the values, beliefs, and attitudes necessary to promote a stable and nurturing learning environment. Also, there is another example to explain. Clive Dimmock and Allan Walker (2005) wrote that leadership is a culturally and contextually bounded process. This means it is inextricably intertwined with its larger environment and the cultural influence on leadership is multidimensional, often difficult to discern, subtle and easy to overlook.

I believe culture and leadership interact with each other. Leadership in a school to some extent reflects the societal culture, while at the same time, leadership influences societal culture. Also, there is another culture, that is, organizational culture. Hoy and Miskel (2005) state that “organizational culture is a system of shared orientations that hold the unit together and give it a distinctive identity” and some people suggest that what is shared should include “norms, values, philosophies, perspectives, beliefs, expectations, attitudes, myths, or ceremonies” (p. 165). For example, teachers and students in society have to face societal culture, which shapes their beliefs and values. Also, in the organization of a school, teachers and students have to overcome the differences between societal culture and school culture. There are five symbol systems communicating the contents of a school’s culture, namely, stories, myths, legends, icons, and rituals (Hoy & Miskel, 2005). The five symbol systems
give us different examples from different perspectives which demonstrate a school’s culture. In fact, societal culture is much more complex and difficult to understand than organizational culture, which is often short term and set by the leader of the organization. The organizational vultures including norms and practices are products of the societal values and belief systems that are dominant in any society (Rensburg, 1993). As a leader, he/she tries to shape a new culture in the organization. Consequently, the leader should help teachers and students to tackle the problems and difficulties in society and in the organization. However, I suggest the final mission of the leader is to help teachers and students distinguish the organizational culture from societal culture and achieve the goals of the organization. Thus, my attitude is developing just, democratic, empathetic, and optimistic leadership to form the organizational culture so that a leader can meet different needs and simultaneously balance distinct benefits.

As a matter of fact, the basic tool for communicating in a school is the language. There are a great many languages in the world. The leaders cannot learn and understand each kind of language and I think it is not that essential for leaders to know different languages. But, leaders should embrace, value, and care about different language speakers, especially minority language speakers. I propose in a cross-cultural school, because most people speak the majority language, individuals who speak the non-native language to a great extent feel no sense of belonging. If they are separated from the majority speakers, they will feel ignored by the majority and what is worse this may lead to some psychological problems. Consequently, what the leader should do is to try his/her best to get different languages speakers together, and let the majority languages speakers learn more about the minority languages speakers. Also, inviting the minority languages speakers to join the majority to
help them establish social interactions and friendships can assist the minority to adjust to the native living and studying style. And I think this process should be proactive and interactive. For example, in the same program, a local student and an international student can form a small group to prepare assignments and presentations. Therefore, the international student not only can develop language skills but also learn more about native cultures and customs. On the other hand, the local student can gain a broad view about different countries’ values and beliefs.

In addition, I believe it is a psychological process. If the minority students feel they are being treated appropriately, they will totally adjust themselves into native life. However, if the minority students are unable to communicate because of language barriers, they probably will have negative psychological problems and behaviors which are not helpful for the leadership of cross-cultural schools. So, in a cross-cultural school it is necessary to open special courses to help non-native speakers get familiar with the local language, including reading, writing, speaking, and listening. However, I propose that to some extent special courses are not satisfying because such kinds of courses are always set in an isolated form so that non-native speakers cannot get in touch with local students. For example, there is no connection with English speakers and no chance to learn local slang. It gives birth to the neglect of communication and comprehension of the local culture and custom. For example, ESL program should not only focus on academic purposes but also on cultural purposes. The program can have a 12-week or 16-week course on local culture to help non-native students get used to the living style. In addition, some internship courses can offer non-native students workplace experience. This allows them to develop their English language skills in a
Another crucial ingredient is the individual’s values. I think values are beliefs of a person or social group in which they have an emotional investment (either for or against something). Because of the different cultural backgrounds, each individual has quite different values. Some of them are similar, while others are not. In my opinion, a leader ought to organize a set of systematic values of the school that everyone in the school believes and supports. To win support from individuals, leaders have to understand individuals’ expectations well. For example, the expectancy theory believes that each individual can “accomplish the task” and make sure that “good performance will be noticed and rewarded” (Hoy & Miskel, 2005, p. 149). Above all, leaders should empower teachers and students to express their ideas about how the school is run and what is learned in the classroom and how. It is reasonable and helpful to use the “decision-making action cycle” (Hoy & Miskel, 2005, p. 303). If there are many conflicts in the organization, a leader should “recognize and define the problem or issue”. Next, “analyze the difficulties in the existing situation” and “establish criteria for a satisfactory solution”. In addition, “develop a plan or strategy of action” and “initiate the plan of action”. During the process, it is necessary to anticipate the negative as well as positive consequences of each action. For example, values could be embodied in the regulations and rules of the school. These values are more formal and to some extent it can limit some negative behaviors such as misconduct and negligence. If individuals disobey the rules and regulations, they will definitely be punished. Formal policies can give leaders privileges because leaders will punish individuals based on the rules and regulations. In other words, leaders only give reasons to individuals—“We are complying with rules and
regulations”. But, it has negative effects too. For instance, if something happens unexpectedly and out of the range of formal policies, the leader will have nothing to depend on. I think now it is a proper time to test the leader’s ability to handle emergencies. Also, values could be informal ones. For example, without speaking out, individuals revere the leader’s personal charisma and support his/her decisions. Hoy and Miskel (2005) state that the Weber’s ideal type includes five aspects: “division of labor”, “impersonality”, “hierarchy of authority”, “rules and regulations”, and “career orientation” (p. 85). It is too ideal and neglects some informal aspects in a school. To some degree, the relationships among leaders, teachers, students and the community should be informal and interpersonal. Hierarchy of authority “does enhance coordination but frequently at the expense of communication”; Rules and regulations “do provide for continuity…they often produce organizational rigidity and goal displacement” (Hoy & Miskel, 2005, p. 86). When I was in university, I was elected as the director of the Students’ Union. I was proud that many students from different departments supported me. When I reflected on my behaviors, I could understand why I was sponsored by others. One of the conclusions I reached is that I valued what the students valued and vice versa. Above all, I was a proactive person who stimulated, encouraged and supported them. As a result, I obtained sponsorship and assistance from the students. That was an equal process and everyone benefited from the process. In the next sections I will explain my view about developing justice, democracy, empathy and optimism in leadership.

**Developing justice**

Justice should be applied to the entire society. Education as an important factor of the society’s development also should be justified. Each one including students, teachers, and the
community should have just rights to express their voice. “Justice stipulates that every voice – not just the majority or the most powerful – should be heard” (Shields, 2002, p. 239). In a cross-cultural school, individuals have different conceptions of what justice actually is because they hold different values, beliefs and varied opinions about ethnicity, gender discrimination, racism and so on. It is indeed tough work to give each individual fair treatment and a just share of the benefits in the school. However, leaders have to exert their every effort to treat every one justly. In my opinion, a leader’s mission is to meet each individual’s needs and accordingly make the organization’s goals come true. The two aspects complement and interact with each other. In fact, individuals from the different levels represent different voices. In a cross-cultural school, for example, the principal, vice principal, administrators, teachers, students and the members of the community form the structure. They have different motivations and conceptions about the school so that contradictions and conflicts naturally exist. For example, individuals in the school have different intrinsic and extrinsic motivations. Hoy & Miskel (2005) consider that intrinsic motivation is “the natural tendency to seek and accept challenges as we pursue personal interests and exercise capabilities” and extrinsic motivations, in contrast, “is based on rewards and punishment” (p. 157). Consequently, as leadership, it is complicated to use rewards to develop individuals’ potential and punishment to limit their behaviors. I believe that the principal, as the leader, should listen to and embrace diverse perspectives and empower representatives from different levels. Centralization of the power to a great extent implies inequity and unfairness.

However, sometimes, the opinions of the lowest level are obstructed from reaching the leader because the opinions will influence the positions and privileges of the middle level so
that the voices are held up. This situation always happens among different administrators of
the school. Authoritarian structure in a school illustrates the blockages from the bottom to the
top. Hoy and Miskel (2005) assert that “disciplined compliance to the rules, regulations, and
directives is the basic principle of the authoritarian structure” (p. 99). Thus, authority is based
on position and hierarchy and concentrated power is obvious. In this situation, it is difficult to
be just to individuals. Therefore, if the leader cannot make contact with each individual face
to face due to limited time and energy, he/she should adopt distinct measures to solve the
problem. The principal’s mail-box, for example, can help individuals get in contact with the
leader indirectly through letters to reflect their opinions. Another suggestion is a fixed time
colloquia to talk with individuals face to face which could be a realistic and effective method
through informal conversation. Hoy & Miskel (2005) refer that “one generalization that
researchers and participants in organizations have observed repeatedly is that people who are
in groups, cliques, or gangs tend to reach an understanding on things or issues very quickly”
(p. 364). Consequently, the informal communication in schools is necessary.

Developing empathy

There are many empathetic cases in our real life. For example, in the case study course,
we analyze the cases assuming that if we were the real roles in the case, what solutions we
would carry out. Additionally, although many people recognize that the importance of
developing empathy in education is critical, it is still a tough work to apply into the reality.
Above all, we have to understand what empathy is. Empathy means:

To perceive the internal frame of reference of another with accuracy and with
the emotional components and meanings which pertain thereto as if one were
the person, but without ever losing the ‘as if’ condition. Thus, it means to
sense the hurt or the pleasure of another as he senses it and to perceive the
causes thereof as he perceives them, but without ever losing the recognition
that it is as if I were hurt or pleased and so forth. (Rogers, 1959, pp. 210-211)

Empathy is the capacity to “think and feel oneself into the inner life of another person”
(Kohut, 1984, p. 82). Hence, based on the definition, in my opinion, empathy means to
perceive and understand the other’s innermost conceptions as if you were him/her. Thus, I
think in a school developing empathy implies that every one is understood and cared for in
order that each one has a sense of belonging.

I admit developing empathy is truly difficult. First, if one does not have the experience
to study abroad, one probably could not identify feelings and ideas that another one has.
Second, even if one has the same experience with another, perhaps they would not have the
same emotion and reaction. That is because the two persons possibly hold different values
and beliefs. Additionally, the beliefs and values are influenced by socioeconomic status. On
the assumption that I am the principal of a cross-cultural school, additionally, I have studied
two years abroad and also my family has a high socioeconomic status. An international
student in the school, for instance, phones me about his/her language block during the study
process. There are two situations. First, I talk with the student face-to-face to learn whether it
is due to the psychological problem that he/she is timid and afraid of making mistakes when
speaking the local language. Probably, because of my busy work I cannot talk with him/her
every day, but I would find a helpful teacher to assist me to complete the mission. The reason
I pay so much attention to the student is partly as a result of the same situation I have
encountered before. My actions imply that I infuse empathy into my usual work. Second, my family has a high socioeconomic status and centralization of the power impresses me deeply and as the principal do not have to waste my time on the trivial things about a student. Although I had the same experience of studying abroad, I did not have the language block. Therefore, I feel the student’s problem is not so important. Perhaps, I will not respond to the student; perhaps, I only write back superficially without doing some specific work. That means no empathy exists in the process.

Finally, Cotton (1993) cites McCollough’s statements (1992) that “moral imagination is the capacity to empathize with others, i.e., not just to feel for oneself, but to feel with and for others”. This is something that education ought to cultivate and that citizens ought to bring to politics (Brooks, 2004). From this perspective, developing empathy is also a moral problem so that a leader is not a real leader if he/she is without morality. Shapiro (2006) suggests that “the ethic of care was particular complex…”, the director “constantly thought of the children …also had to consider the requests of her staff, some of whom had families of their own, who needed care” and “additionally, she had to consider the needs of the parents, who were acting in very emotional and unstable ways” (p. 6). During the caring process, the leader not only has to keep his/her professionalism but also care for the teachers, students and parents in a comfortable way.

**Developing democracy**

I had an experience that I thought I was treated unfairly when I was in elementary school. But, now when I critically and objectively think about the experience, some other interpretations occur to me. When I was in Grade 6, I was elected as the monitor of my class.
However, because I was not good at Chinese literature, the teacher who taught the course publicly opposed me as the monitor. She suggested we take a second vote, yet I still got the highest number of votes. Then, to my surprise, she just gave us some excuses to recommend another student who had a good mark in her course to be the monitor. Without asking other students’ opinions, she made the decision decisively and unfairly without democracy.

Now I consider the teacher’s behavior to definitely be undemocratic. As I know, one kind of democracy is direct democracy, which is classically termed pure democracy\(^1\), comprises a form of democracy and theory of civics wherein sovereignty is lodged in the assembly of all citizens who choose to participate. Another category is liberal democracy, \(^2\) which is a form of government. It is a representative democracy in which the ability of the elected representatives to exercise decision making power is subject to the rule of law.

In my opinion, I think direct democracy is the most democratic but in reality it is hard to practice and apply. Thus, liberal democracy is relatively easier to implement. If he/she is in a small school, a leader probably has enough energy to connect with each individual to completely learn the real condition in the school. But, in a large school, it would be challenging to apply direct democracy. My suggestion is to utilize a liberal democracy. The representatives in the school should be good listeners, like to communicate with individuals, and respect individuals’ opinions.

For example, in a cross-cultural school, representatives from different departments directly report to the principal. The representatives should not only include administrators, teachers, and usual staff but also students and members of the community. Developing democracy means caring for each member of the school and in addition it is valuable and...
helpful to form a vigorous and beneficial culture in the school.

**Developing optimism**

In my point of view, optimism does not mean considering every experience good and there are no bad things in the world. Heathfield (2006) holds that “optimism allows you to see the positive aspects of any situation and enables you to capitalize on each possibility”. In spite of this, optimism is a life of perspective that conceives and understands the world from a positive aspect, even if it is a negative experience, we also can figure out the meaningful facets. In a cross-cultural school, I suggest that part of the leader’s function is to bring hope for the present and also chances and prospects for the future, to make sure subordinates involve themselves in the process and share ideas with colleagues.

One of my teacher’s attitudes influenced me deeply and greatly. In my high school, to some extent I was interested in chemistry but I was poor in it, so sometimes I got really disappointing marks. For a short time, I was in fact upset and frustrated. However, the teacher told me if I did not get a good score, probably it was a helpful thing for me. He explained that failure gives the opportunity to discover what weaknesses and difficulties you had and when you overcome the weak points, you would acquire great progress. After that, I tried again and again and though I never got fantastic results, I actually made improvement and progress in chemistry. Optimism helped me, especially it had a constructive effect on my later living and studying.

Therefore, developing optimism is in truth critical and necessary in a cross-cultural school. The leader should cherish and respect the students and teachers from diverse cultures. I consider it a win-win process and both the leader and subordinates benefit from developing
optimism. Subordinates could have a bright and hopeful view about their personal advancement and also the school’s enhancement and growth. Similarly, if the leaders win support from the subordinates, they would embrace and persist with an optimistic view on the present and future development of themselves and the school.

Lightman (2005) proposes POWER optimism. “P” is the word proactive giving birth to responsible actions; “O” is the word open-minded resulting in innovative responses; “W” represents being well-informed which is helpful for productive conclusions; “E” is evolving good for beneficial reactions and “R” represents resilience giving birth to motivating interpretations. I think the five aspects of developing optimism are very comprehensive and far-reaching. Lightman recommends POWER optimism to help us live a more creative, productive and enjoyable life. but I believe they also can be carried out in the leadership of a cross-cultural school. Proactive, open-minded, well-informed, evolving, and resilient can be seen as leaders’ essential characters to develop optimism and also the methods to realize optimism.

Conclusion

Developing justice, empathy, democracy and optimism in a cross-cultural school definitely can help the school form a healthy and vigorous culture. If a leader wants to succeed, he/she must set himself/herself as an example for others. As a leader, if I cannot carry out my promise, I will not force others to do the same thing. In sum, in a cross-cultural school developing the four aspects is a shared process: shared ways of thinking, feeling; shared meanings and identities; shared socially constructed environments and so forth. Leaders should guide and motivate subordinates to reach the goals of the school together.
There are two stages in developing the four features. One is an intentional phase where a leader deliberately builds up the four features. Next, is an unintentional phase which I believe is a demonstration of a leader’s fantastic ability and capacity.

6. Abstract:

   This paper describes the effects of Parent Training for parents who have a child with Asperger’s Disorder. In this training, we aimed the parents to catch their child’s inner experiences - emotion, cognition that the child would have at the time of their maladjusted behaviors.

   The participants were 10 parents (7 families). During 5 months we provided 5 sessions consist of psycho education about Asperger’s Disorder and discussion about their child’s maladjusted behaviors. They completed questionnaires at the time of the first and final session. The measures were as follows; frequency of their child’s maladjusted behaviors, parent’s self-efficacy in managing their child’s behavior, anxiety in the future of the child, and intelligibility about their child’s behavior and anxiety of the other family members or child’s school.

   The results showed that
   - Parents became to suggest each other the way to manage their child’s maladjusted behavior based on their child’s inner experiences.
   - Parents’ intelligibility about their child’s maladjusted behavior and self-efficacy in managing that behavior were significantly greater. Then parent’s anxiety decreased significantly.
   - These results suggested that
     - Parents perspective about their child’s maladjusted behaviors changed from descriptive to dynamical.
     - Parents became to find the way by themselves to manage their child’s maladjusted behavior.
     - These decreased the parents’ anxiety.

   We concluded that the training aimed the parents to catch their child’s inner experiences was useful for the parents who had a child with Asperger’s Disorder.
Title of the submission: **Failure Effects of ‘Autonomous Adaptation’ in Relation to Extreme Flood Events in Bangladesh: Should It Be Addressed Without Delay?**

Name(s) of the author(s): **M A F Younus**

Affiliation(s) of the author(s): PhD Scholar, Department of Geography and Environmental Studies, The University of Adelaide, South Australia, 5005 and Research Fellow, BUP

Address(es) of the author(s): Department of Geography and Environmental Studies, The University of Adelaide, South Australia, 5005

E-mail: md.younus@adelaide.edu.au  younusmaf@yahoo.com

Abstract and/or full paper:

United States Country Study Program (USCSP), IPCC and UNEP have formulated vulnerability and adaptation to climate change guidelines. There is a step entitled ‘autonomous adaptation’ which needs to be assessed systematically as IPCC forthcoming chapter 17: adaptation is going to emphasize on this issue. The failure effects of autonomous adaptation in response to extreme flood events in Bangladesh are huge which need to be addressed by the climate change scientists.

From 1988 to 1998 Bangladesh experienced three extreme floods which might have strong link with the current climate change issue. Climate change associated with flood management literature over the GBM river basin as well as South Asia support this argument (Ahmad et al., 2005, Prashad, 2005, Lal, 2000, Lal and Aggarwal, 2000, Warrick and Ahmad, 1996). The study has followed multi-method technique which is involved with two Participatory Rapid Appraisal (PRA), questionnaire survey over 140 households in case study area and professional judgment. It is found that farmers in Bangladesh are highly resilient with different kinds of extreme flood events in 1988, 1995 and 1998. Total agriculture cost for planting the *aman* variety rice (cost of seedling, agriculture input, land preparation) of surveyed vulnerable farmers at the *Kharif* 2 cropping season in relation with the various types of extreme floods (multi peak with longer duration flood, single peak with shorter duration flood and single peak at the period of harvesting) in each flood event is huge and it varies household to household. Farmers experienced extreme flood event more than one at the period of *Kharif* 2 cropping season; as a consequence the total agriculture cost that means the failure effect of autonomous adjustments is different in relation to other type of extreme flood events. As the case study shows that the failure effects of autonomous adjustments on marginal farmers are huge in relation with the extreme flood events in Bangladesh, therefore it should be dealt with immediately, not to be left for future.

Area: Geography
Exploring Emerging Spatio-temporal Patterns of Human Activities
with A GIS-based Extended Time-geographic Framework

Abstract

Recent developments of advanced information and communication technologies (ICTs), such as the Internet and cell phones, are changing the ways how we conduct our daily activities and how we interact with others. With access to ICTs, we are gaining more freedom in space and time to arrange and conduct activities. For example, we are no longer forced to visit a brick-and-mortar store in person to buy a music CD; we can purchase songs from an online music store at any location with access to the Internet. We now can search literatures using an online library catalog service anytime without being limited to the open hours of a library. Researchers are expecting the capability of performing activities with more freedom in space and time to re-shape various aspects of our society. However, the question of how exactly ICTs can influence the spatial and temporal distribution of human activities remains unsolved to the research community. Therefore, effective research tools are demanded by the research community to explore the emerging spatio-temporal patterns of activities in today’s society. This study presents an ongoing effort of developing a GIS environment, which incorporates an extended time-geographic framework, to support representation, visualization, and analysis of various spatio-temporal relationships of activities. The classic time geography provides an elegant framework to study the relationships between human activities and their constraints in space and time. However, the classic framework only focuses on activities taking place in physical space. It falls short on handling current human activities, which have been extended to a virtual space supported by ICTs. This study first extends the concepts in the classic time-geographic framework (e.g., space-time path and space-time prism) so that the framework can be used to examine spatio-temporal characteristics of activities taking place in both physical space and virtual space. A temporal GIS design is then proposed and developed to accommodate the concepts in the extended time-geographic framework. The proposed GIS design includes functions to support interactive visualization of activities in their space-time contexts and analysis of spatio-temporal relationships of activities. The framework is expected to provide useful tools that can help researchers explore and gain better understanding of the emerging spatio-temporal activity patterns of people who adopt ICTs in their daily lives.
AN ANALYSIS OF HOW PEOPLE SEEK LONG-TERM CARE INFORMATION

Sarah C.W. Yuan, Ph.D.

Center on the Family, University of Hawaii
2515 Campus Road, Miller Hall 103
Honolulu, HI 96822

cwlau@hawaii.edu
http://www.uhfamily.hawaii.edu

ABSTRACT

BACKGROUND/OBJECTIVE: This study was motivated by the rapidly aging population and the lack of information preparation for future care needs among older Americans. Some researchers contend that the existing studies of information- and help-seeking behaviors underestimate the importance of social support and social network. To explore an alternative understanding of how people seeking health-related help, this study employed the Social Organization Strategy (SOS) framework as proposed by Pescosolido (1992). The main objective was to gain a deeper insight into how older people seek long-term care information, the social determinants of information-seeking behaviors, and how the information-seeking pattern affects older people’s knowledge of long-term care services.

METHODS: This study analyzed data from a telephone survey conducted in 13 communities across the United States, containing a representative sample of 4,699 individuals aged 50 or above. The survey respondents were asked about the sources that they would turn to for information of in-home personal-care services, their knowledge of various home- and community-based long-term care services, and a set of basic social-demographic information. Cluster analysis was performed to explore patterns of sources that people rely on for long-term care information. The effects of social characteristics on information-seeking strategies were examined in a multinomial logistic regression model. Associations between information-seeking patterns and knowledge of long-term care service were examined using ANOVA.
RESULTS: (1) By applying clustering procedures, seven information-seeking patterns emerged in the data and provided insights on the different strategies people used to acquire long-term care information. (2) Each of the six social characteristics was found to be influential on the use or non-use of an information-seeking strategy at \( p=0.000 \) level. However, there were substantial differences in the specific influences each social characteristic had on each strategy. (3) The information-seeking strategy was able to explain 10% of the variance of the service-awareness index.

CONCLUSION: People’s information-seeking strategies are bounded by the socially organized constraints and opportunities presented in everyday interactions. The SOS approach views people’s help-seeking behavior from a network perspective where clustered sources rather than a singular source of help are the focus of study. Without assuming homogeneity among people who seek a particular source of help (e.g., physicians) or among those who do not, the SOS approach offers additional insights into the dynamics of coping by showing that there are different pathways to the use or non-use of a particular form of help. The shift of focus to social networks of interaction from individual mental events also helps to reveal the intertwined nature of individual and structure where the bounds of choices in planning and decision-making emerge.
INTRODUCTION

America is not ready for the escalating demand for long-term care that will come with its rapidly aging population. It is projected that one in five Americans will be 65 years or over by 2040—that represents twice as many elderly as there are today, or an additional 43 million elderly (U.S. Census Bureau, 2004, 2006). Although rates of chronic disease and disability among the elderly may continue to decline in the near future, the need for long-term care is expected to exceed our current ability to meet the demand by at least one-third by 2040, simply due to the sheer number of elderly individuals (Allen, 2005).

Long-term care encompasses a wide range of personal and nursing support needed by frail and disabled individuals in their everyday lives. People generally do not anticipate needing long-term care, and when such needs arise, many rely on unpaid caregivers such as family members and friends. When unpaid caregivers are not available and such services have to be purchased, many people found it difficult to find the right and affordable services due to a general lack of knowledge of the existing services in their communities and the complexity of long-term care delivery and financing system.

It is imperative to encourage individuals’ proactive coping behavior in the area of long-term care information gathering. Research found that when long-term care decisions are made in response to a health crisis that has resulted in a hospitalization, they are often made under great time constraints and psychological stress, based on incomplete information about home- and community-based long-term care and financing options; and they may in fact be made with little input from the elderly person needing the care
(Maloney, Finn, Bloom, & Andresen, 1996). As a result, such decisions usually favor institutional care over community-based care, which may not be the preferred care setting of the frail elderly, and which could cause ineffective use of long-term care resources.

**LITERATURE REVIEW**

Some researchers contend that the existing studies of information- and help-seeking underestimate the importance of social support and social network. Social supports are frequently measured by quantity; for examples, the number of adult children, the frequency of contact with family members and friends, and the number of confidants the respondent could talk with about personal problems (Chapleski, 1989; Sörensen & Pinquart, 2000). To the extent that social support provides information and helps an individual appraise stressful events, the mere number of social support resources inadequately represents the role of the social support in question (Aspinwall & Taylor, 1997). This is illustrated in a study using formal-informal typology of social support in explaining knowledge of services, which found that those who rely on formal sources of information are more knowledgeable about all services (Calsyn & Winter, 1999).

Pescosolido (1995) advanced the argument by pointing to the ways in which social behavior is embedded in the social network of interaction. In her empirical work, Pescosolido (1992) proposed the Social Organization Strategy (SOS) framework as an alternative understanding of how people seek health-related help:

> [In the SOS approach], a particular action, choice, or decision is embedded in a social process where the network interactions of individuals not only influence preference formation and define the situation but also drive the process of deciding whether something is wrong, whether anything can be done about it,
what should be done, and how to evaluate the results. By doing so, network interactions produce systematic structures and contents (or cultures) and sometimes become crystallized into organizations and institutions that, in turn, affect social interactions. (p. 1104)

The SOS approach views people’s help-seeking behavior from a network perspective where clustered sources rather than a singular source of help are the focus of study. Without assuming homogeneity among people who seek a particular source of help (e.g., physicians) or among those who do not, the SOS approach offers additional insights into the dynamics of coping by showing that there are different pathways to the use or nonuse of a particular form of help.

This study employed SOS framework to explore an alternative understanding of how older people seek health-related help. The main objective was to gain a deeper insight into how older people seek long-term care information, the social determinants of information-seeking behaviors, and how the information-seeking pattern affects older people’s knowledge of long-term care services.

**METHODS**

Data from the Survey of Older Adults (SOA) of the Robert Wood Johnson Foundation (RWJF) are used in this study, with permission from the national office and grantees of the Community Partnerships for Older Adults program. The survey was conducted in 2002, contained a representative sample of 5,298 persons aged 50 and over living in 13 communities across the United States. Overall, 27% of the samples were screened and determined to be eligible for the survey. The post-screening response rate was 63% for all communities combined. This study analyzed data collected from 4,699
self-respondents living in a household setting who provided age information. Weighted data are reported in the analysis.

These telephone interviews asked about the sources that the older adults would turn to for information of in-home personal-care services, their knowledge of various home- and community-based long-term care services, and a set of basic social-demographic information. Refer to Tables A to C in appendix for descriptive statistics of the variables used in this study.

Cluster analysis was performed to explore patterns of sources that people rely on for long-term care information. The effects of social characteristics on information-seeking strategies were examined in a multinomial logistic regression model. Associations between information-seeking patterns and knowledge of long-term care service were examined using ANOVA.

RESULTS

This study aimed to gain a deeper insight into how people seek long-term care information and how the information-seeking pattern affects people’s knowledge of long-term care services. The survey respondents were asked about the sources that they would turn to for information of in-home personal-care services.

The sources were grouped into nine major categories, including an “other” category for all rarely mentioned sources. Among those who answered (83% of 4,795 respondents), 59% provided one source, 29% provided two, 12% provided three or four,
and a few respondents provided more than four sources. By just including up to four answers would generate 255 possible combinations.

Following the analytical strategies proposed by Pescosolido (1992), cluster analysis was performed to explore the patterns of the sources that people rely on for long-term care information. Clustering is a type of partitioning method that is used to assign cases into groups so that the cases are most similar within a group and most different among groups. The results of the cluster analysis are discussed next.

**Exploring Information-Seeking Strategies**

The $K$-means clustering procedure was chosen because of the non-hierarchical nature and large size of the data set, and because of the assumption that both states of a variable, “mentioned a source (1)” and “did not mention (0)” were equally important in describing the patterns of the data (Kaufman & Rousseeuw, 1990). An “iterate and classify” method was used to update cluster centers in the iterative process and classify cases according to the updated centers. Nine binary variables on information sources were entered into the procedure, and the “don’t know” answers were excluded. The procedure required the user to specify the number of clusters ($k$). Since cluster analysis was used as an exploratory tool, a range of partitions between 2 and 12 was run and the results were compared to determine an optimal $k$. After considering the interpretability and the minimum size (at least 5% of respondents in a cluster for statistical purposes) of the clusters, the 6-cluster solution was selected. The “don’t know” group was later added as the 7th cluster.
The density and image matrices derived under the clustering algorithm are presented in Table 1. Each cell of the density matrix represents the percentage of respondents in each pattern that chose a particular source for long-term care information. A high percentage indicates high resort to that source in that strategy. An arbitrary cut-off point for high density was set at the 40% level. The substantive nature of the strategy was revealed by the patterning of high densities in each cluster, indicated as 1 in the image matrix.

</tbody>
</table>

Note: Total N=4,752. Pattern 1: family/friend (n=1,438); 2: hospital-based referral (n=562); 3: AAA + Senior Center (n=431); 4: other health care provider + other (n=1,076); 5: family/friend + other health care provider + phone book (n=269); 6: family/friend + doctor + other (n=219); 7: don’t know (n=757).

The results indicated that “family/friend” was called upon in three different strategies (1, 5, and 6) but only one of them depended on “family/friend” as the sole source (1), which was also the strategy of greatest resort (30%). The “other health care
"other health care provider" was included in two strategies (4 and 5), but neither of them relied solely on it. Over one-fifth of the respondents would use “other health care provider” and “other” (4), but only 6% of respondents would use “other health care provider” together with “family/friend” and “phone book” (5). Other multi-strategies included “AAA” and “Senior Center” (3) and “family/friend,” “doctor,” and “other” (6), adopted by 9% and 5% of respondents, respectively. Another “single” strategy beyond “family/friend” (1) was “hospital-based referral” (2), used by 12% of respondents, and “no strategy” (7), which was observed in 16% of respondents.

By applying clustering procedures, patterns emerged in the data and provided insights on the different strategies people used to acquire long-term care information. Clustering was especially useful in making multi-strategies (multiple responses) analyzable. Pescosolido (1992) further argued that, since social interaction is the basis of social life, these patterns are best understood as socially organized strategies rather than as individuals’ rational choices. While the data in this study do not allow the examination of the dynamics between social actors and social structure, the effects of social structure on people’s information-seeking strategies are discussed next.

**Social Organization of Information-Seeking Strategies**

The effects of social characteristics on information-seeking strategies were examined in a multinomial logistic regression model. Seven social characteristics were first examined at the bivariate level, and only those with statistically significant relationships at $p=0.05$ level were entered into the multivariate model. Co-residence status was dropped, while the six characteristics included were age, gender, race,
education, financial resources, and emergency support. To further reduce the complexity of the model, all independent variables were dichotomized.

Since the dependent variables had seven different outcomes, the pair-wise comparison of the outcomes produced 21 unique coefficients for each of the six independent variables, a total of 126 for the whole model. The results presented in Figure 1 follow the graphic presentation method proposed by Long (1987). The graphic presentation is an effort to summarize the size, direction, and statistical significance of all effect coefficients produced by the multinominal logistic model.

Figure 1 consists of six effect plots, one for each independent variable. The reference category (0) of an independent variable was enclosed in parentheses. The effect coefficients were plotted on a linear scale, with the 7th outcome category—no strategy—lined up at zero in each plot. This corresponds with the odds ratio of 1 on a natural-log scale. The magnitude of an effect is indicated by the distance between any two outcomes. The farther is the horizontal distance, the stronger the effect. The vertical distance is not interpretable, but was created so as to avoid overlapping of the graphic elements. An outcome to the left of a reference indicates a negative coefficient, whereas an outcome to the right indicates a positive coefficient. A line connecting two outcomes indicates a statistically insignificant coefficient at \( p=0.05 \) level.

For instance, the first effect plot on the left indicates the net effect of age on information-seeking strategies. The strongest effect of age is found among those who use strategy 6 versus strategy 7, which has the farthest horizontal distance (0.63 on the linear scale) between two strategies among all pairs in the plot. People between the ages of 50
Figure 1. Social Organization of Information Seeking: Graphic Representation of All Contrasts in Multinomial Logistic Regression Analyses

Note: Only horizontal distances are interpretable. Effect coefficients are plotted on the linear scale. The log scale provides reading of the odds ratios. Reference category is in parentheses. N=4,373. Model $\chi^2=426.69$, d.f.=36, $p=0.000$. Pseudo-$R^2=0.10$ (Cox and Snell Index).

Figure 1. Social Organization of Information Seeking: Graphic Representation of All Contrasts in Multinomial Logistic Regression Analyses
and 65, compared to their older counterparts, are more likely to use strategy 6 (family/friend + doctor + other) than strategy 7 (no strategy). A slightly weaker effect is also found among those who use strategy 6 versus strategies 1 and 3. The effect of age is statistically insignificant among those who use strategies 2, 4, 5, and 6, and among those who use strategies 1, 3, and 7, as indicated by the lines connecting strategies within each of these two clusters. However, the effect of age is significant when comparing any two strategies from different clusters.

In sum, the effect of an independent variable is more unique to an outcome when it is farther away on the graph (indicating a stronger effect) and is less connected to other outcomes (indicating a significant effect). In contrast, the effect of an independent variable does not differ across outcomes if the coefficients are plotted in close proximity and are connected in all possible ways.

The overall model was statistically significant ($p=0.000$), with a pseudo-$R^2$ of 0.10 (Cox and Snell Index). The chi-square test of the effect of each independent variable is reported in Figure 1. Each social characteristic was found to be influential on the use or non-use of an information-seeking strategy at $p=0.000$ level. However, there were substantial differences in the specific influences each social characteristic had on each strategy.

The effect of younger age on two groups of strategies was distinctive: positive in the case of those involving health professionals (2, 4, 5, and 6) and negative in the case of those not using health professionals (1, 3, and 7). Respondents who were female, had higher education, had financial resources, and had emergency support were less likely to use “no strategy” (7) compared to all other strategies (1 to 6). Those who were female,
had higher education, and had emergency support tended to use a strategy including a
doctor (6) versus other strategies, although some of these distinctions were not
statistically significant. Whites were more likely to use hospital-based referral (2) than no
strategy (7), while the effect of white race on other strategies was not significant.

While these results can be further discussed in greater detail, the point has been
made that people’s information-seeking strategies are bounded by the socially organized
constraints and opportunities presented in everyday interactions. The next section
discusses the extent to which the information-seeking strategies, as explored in cluster
analysis, helped to explain knowledge of long-term care services.

**Information-Seeking Strategies: Relationship With Knowledge of Long-Term Care
Services**

The relationship between socially organized information-seeking strategies and
knowledge of long-term care services was examined using one-way ANOVA. As shown
in Table 2, the relationship was found to be statistically significant at $p=0.001$ level. The
information-seeking strategy was able to explain 10% of the variance of the service-
awareness index.

The statistical test for the pair-wise group means differences were performed. The
lowest level of the service-awareness index was first associated with the “no information-
seeking strategy” and second with a strategy that included “family/friend” only. Those
who relied on an “other health care provider + other” strategy had a lower service-
awareness index than those who adopted strategies 2, 3, or 5.

</table>

Notes: PEV denotes the proportion of variance explained by information-seeking strategy. The F-test for significance of difference among two or more group means was performed. The results are indicated as follows: \( p < 0.05 \) (*), \( p < 0.01 \) (**), \( p < 0.001 \) (***) , and \( p \geq 0.05 \) (n.s.).

**CONCLUSIONS**

A common approach to analyzing information sources is to classify each source as formal (such as doctors and government offices) or informal (such as family and friends). Studies have found that reliance on formal sources of information predicts higher service awareness. This study explored the information-seeking strategy of older adults using a clustering technique, following the suggestions by Pescosolido (1992). A total of seven strategies were identified, including “no strategy,” two single strategies, and four multi-strategies. This approach does not assume any classification of information sources (e.g., formal versus informal; community-based versus institution-based); instead, it treats each one as a unique source and allows the patterns of use or non-use of sources to emerge.
The analysis of these patterns by individual characteristics supported that information-seeking strategies are socially organized. Individuals’ age, gender, race, education, financial resources, and emergency support all play a part in the formation of information-seeking patterns. This was supported by the multinomial logistic regression results, where the model as well as the six individual predictors were found to be statistically significant at \( p = 0.000 \) level. Information-seeking strategies were also found to be associated with information preparation at the bivariate level \((p<0.001)\).

Clustering analysis provided an analytical advantage by allowing the data to speak for itself instead of imposing a classification schema onto the data. The analysis of the information-seeking patterns helped reveal the embeddedness of the information network in the social structure. The shift of focus to social networks of interaction from individual mental events also helps to reveal the intertwined nature of individual and structure where the bounds of choices in planning and decision-making emerge.

ACKNOWLEDGEMENTS

This study would have been impossible without the valuable data collected in the Survey of Older Adults (SOA) by the Robert Wood Johnson Foundation’s Community Partnerships for Older Adults (CPFOA) program. I am grateful to the CPFOA national office and the partnership grantees for granting me permission to use the survey data in this study. I hold full responsibility for the opinions expressed in this study.

LITERATURE CITED

Family Therapy for Chinese Canadian
--Transcultural issues and Family Therapy Introduction

Dan Zhang, Ph.D., M. D.
Vancouver Community College, Canada

Abstract

In the process of cultural transition, people often experience changes both individually and in their families. The process of immigration likely necessitates a large number of life changes associated with normative conflicts and confusion. As new family structures and practices have been emerging, traditional values and assumptions have often been called into question. At the same time, relevant norms are lacking to guide families in transition as they experiment with alternative patterns of relating and adapting to a changing social world. Transactional issues in many immigrant families, for example, are the major problems needing help.

Considering Chinese cultural and family traditions, working with Chinese Canadian family or any other culturally diversified situations, the following strategies such as: The use of symbols; Re-labeling; Borrowing or applying the Chinese traditional medicine theory; the importance of involvement of family members; Respect and avoid stereotyping. have found to be useful. How to apply those therapies will be further discussed.
ORDER PSYCHOLOGY, QUANTUM PSYCHOLOGY
CONFIGURATION METHOD – AN INDEPENDENT METHOD REGARDLESS LANGUAGE AND CULTURE

a. Topic area of the submission: Psychology

The method belongs to Order Psychology. Quantum Psychology, authors Corneliu Sofronie and Roxana Zubcov, registered mark in Romania. The content and the answers of the test are not depending of words. The test is based on the Chomsky’s universal grammar. The genetic cores are the letters of the genetic code A,T,G,C. They contain information about male rationality (A), female rationality (T) – structured on the human sense chain, male irrationality (G) and female irrationality (C) – on the human anti-sense chain. We discovered, by experiment, the behavior forms of the four letters, the four universal senses. The final product is an image similar to the image obtained with the magnetic resonance scanner. The image indicates the form of the thought (male, female and androgyny), the thought position (rational/irrational), and the structure degree (organized/disorganized, thus efficient/inefficient). The thought is the answer intention of the subject to a stimulus. The standard forms, experimentally obtained, enable the correlation with other known methods: Jung and Myers Briggs, Transactional Analysis, NLP, Heymans Le Senne, Szondi and Luscher. Theory basis of the test consists in morphogenetic theories and Quantum generalized theory. The test enables the application of the quantum probability starting from the uncertainty principle. The bench mark is the couple coherence – de-coherence and not frequency-correlation.

AN ANALYSIS OF ENTREPRENEURSHIP AND WOMEN EMPOWERMENT

Dr. Venkateshwarlu Munaganti and Sumanth Garakarajula

Introduction

Entrepreneurship is considered to be a strategic input in the process of economic development. Entrepreneurship could be conceived as an individual’s free choice of activity or a profession. Commercialization and modernization of Indian economy have resulted in a decline in the avenues of employment especially to women in both agriculture and industries and thus compelled them to supplement their incomes with the spirit of entrepreneurship. Hence entrepreneurship became a logical necessity to women in particular. This state of women is being complemented by an increase in women literacy rate and enhanced opportunities. This combination of enhanced literacy rate and enhanced opportunities pushed upwards the spirit and activities of entrepreneurship among the women class (refer Table A). However, women in India suffer from many handicaps including the traditional, conservative, orthodox approaches of understanding women at the time of entry into business. But the compelling urge for self-expression by women enabled them to overcome the barriers created by the society. For Indian women, today, danger means not only crisis but also opportunity.

Women entrepreneurship is the order of the day. More and more women are participating in the entrepreneurial economic activities in various fields. Women entrepreneurs have got vast entrepreneurial talents which could be harnessed so as to convert them from the position of job seekers to job givers. The range of activities of women entrepreneurs vary from small business to manufacturing enterprises. The line
of differentiation between men and women entrepreneurs is being erased by the performance of women entrepreneurs.

The present research effort is a modest attempt to analyze the nexus between women entrepreneurship and women empowerment. As the women entrepreneurship is playing an equally important role in the development of the economy, this area of entrepreneurship and its impact on women empowerment needs to be understood, studied and researched. Hence the present study is about the women entrepreneurship and its implications for women empowerment.

Many research attempts have been made on women entrepreneurship and its implications. The extent of fulfillment of expectations of women entrepreneurship towards supporting agencies\(^1\), the study socio-economic profile and factors motivating women entrepreneurship\(^2\), the relationship between perceptions about and the performance of women managers\(^3\), lower representation of work force and its link with education\(^4\), paucity of women managers in corporate sector\(^5\), distorted perceptions about women executives\(^6\), the need and importance of skill up-gradation especially marketing strategies\(^7\), various categories of women entrepreneurs including chance, forced and created\(^8\) are major areas addressed and analyzed by the said researchers. The major area uncovered in the above mentioned studies is women entrepreneurship and its implications for women empowerment. The present study entitled “AN ANALYSIS OF ENTREPRENEURSHIP AND WOMEN EMPOWERMENT” assumes significance and relevance as the natural outcome of women entrepreneurship should be women empowerment.

The term ‘empowerment’ gives the people of a community, the ability and opportunity to take part in decision processes with regard to socio-economic and political issues affecting their existence.\(^9\) In the present study an attempt is made to make use of the women empowerment as given by Shashi S. Narayana\(^10\). Women empowerment is measured in the present study as followed:

1. Self image
2. Knowledge and awareness
3. Cohesive women’s group
4. Networks of women
5. Access to resources
6. Set-up and manage of their own services
7. Ability to question various forms of exploitation
8. Ability to communicate and act on oppressive practices and violence against women.

OBJECTIVES OF THE STUDY:
1. To estimate the status of women empowerment of the sample respondents.
2. To study the relationship between the socio-psychographics of women entrepreneurship and empowerment.
3. To suggest measures to strengthen the processes of women empowerment through the means of women entrepreneurship

HYPOTHESES:

1. The relationship between education status of first generation entrepreneurship and their status of women empowerment is assumed to be statistically independent.
2. The relationship between socio-psychographics of the sample women entrepreneurs including technology induced, innovative proneness and risk behavior on the one hand and the status of women empowerment on the other, is assumed to be related in a statistically dependent manner.

METHODOLOGY:

For the purpose of the objectives and hypotheses mentioned, 60 first generation women entrepreneurs were selected on the basis of judgement sampling from a backward district, namely, Nalgonda, Andhra Pradesh, India. The relevant data were collected for the financial year 2005-06 by administering a pre-designed and tested questionnaire /schedule among the women entrepreneurs. First generation women entrepreneurs are defined as those women entrepreneurs who did not inherit any enterprise background either from parents or from in-laws. First time on their own they have started the enterprising activities. Women empowerment status is defined as

1. Low (Less than the mean 2.04)
2. High (More than the mean 2.04)

To analyze the perceptions of women entrepreneurs, Spearman’s rank correlation coefficient was used.

\[
R = 1 - \frac{6 \sum d^2}{n(n^2-1)}
\]

To study the relationship between age, education, psycho-graphics and women empowerment the Chi-square statistic was used.

\[
\Lambda^2 = \sum \frac{(0-E)^2}{E}
\]
MAJOR FINDINGS

1. Three-fifths of the sample women entrepreneurs have experienced low level of women empowerment status and two-fifths of the sample respondents have enjoyed higher empowerment status. (Refer Table 1)

2. The relationship between the age of the sample respondents and their empowerment status is found to be statistically dependent as is evident from the rejection of the null hypothesis when tested at 5% level of significance (LOS) and degree of freedom (df =2). (Refer Table 2)

3. The level of education and the status of women empowerment are found to be influencing each other and the same is evident from the Table 3. (Ho is tested at LOS=.05 and df=2) Refer Table 3.

4. There existed no significant relationship and economic status of the sample women entrepreneurs and their women empowerment status is found to be statistically independent and do not influence each other. (Refer Table 4)

5. Social status of women entrepreneurs and the their empowerment status are mutually influencing each other thus, they are related in a statistically dependent manner. (Refer Table 5)

6. The psycho-graphics which include the personality traits of women entrepreneurs like technology induced, innovative proneness and risk taking behavior are found to have no influence and judged to be statistically independent. (Refer Table 6,7 and 8)

7. The relationship between women empowerment status and their personality traits like management orientation are found to influence each other and they are judged to be related in a statistically dependent manner. (Refer Table 9)

8. Women empowerment status and their nature of activity that they are conducting are found to be related in a statistically independent manner and they do not influence each other. (Refer Table 10)

Thus, it is concluded that age, education status and social status with management-oriented mind have a considerable amount of influence on the status of women empowerment. It is also concluded that the first hypothesis “The relationship between education status of first generation entrepreneurship and their status of women empowerment is assumed to be statistically independent” has not been accepted.

The second hypothesis “the relationship between psycho-graphics of the sample women entrepreneurs including technology induced, innovative proneness and risk behavior on the one hand and the status empowerment on the other, is assumed to be related in a statistically dependent manner” has not been accepted.

Hence, it is suggested that in the wake of the role played by the entrepreneurial class in the process of industrialization, the state should design and implement some measures on improving the empowerment status of women by dealing with the issues within the matrices of age, educational and social status and management oriented mind.

Abstract

The purpose of this panel discussion is to highlight some of the challenges, pitfalls, and insights gained in becoming cross-culturally competent in terms of both research and clinical practice. A unique aspect of this panel is that the perspectives of both seasoned faculty and advanced doctoral students will be offered. Rather than being a run of the mill academic exercise and relying on a textbook approach, the panel presenters will discuss insights gained from experiences in teaching and counseling practice centered on developing cross-cultural competence. The first part of the panel will focus on teaching cross-cultural research methods as a vehicle to heighten awareness about the tremendous influence of race and culture in psychology. The second half of the proposed panel session will center on the concrete and practical lessons learned in the process of becoming culturally competent counselors. Hence, those factors that worked or did not work in the struggle to become culturally competent clinicians will be presented. The insights of the panel presenters will make salient the differences and similarities between training in an East versus West coast doctoral program, as well as counseling sites.

Title: Making their voices heard: Social Workers’ Recommendations for Reducing the Number of African American Children in the California foster care system.

Name: Sylvester Bowie, Ed. D, MSW

Affiliation: Division of Social Work- California State University, Sacramento

Mailing address: 6000 J Street, Sacramento CA. 95819

Email: bowies@csus.edu
Abstract

“Making their voices heard: Social workers’ recommendation for reducing the number of African American children in the California foster care system.”

African-Americans make-up 6.8% of California’s 36.1 million population, they also account for 7.1% of the 9.7 million children in the state. On the other hand African Americans account for 28% of the children in foster care in the state (U S. Census Bureau, 2006; Needell, et. al. 2006). The evidence also shows that African-Americans account for 44% of the cases that have been in the foster care system for over 36 months. It is evident by such statistics that African American children are overrepresented in the foster care system.

This follow up study consisted of a self-designed 27 items survey instrument entitled “Social Worker Recommendation Survey II.” This survey instrument was made available online for self-administration by child welfare social workers, supervisors, and managers in the State of California. The instrument consisted of nine (9) items to elicit demographic data and 18 items in thee (3) sections with a 1-6 ranking scale addressing the questions of how to reduce the number of African American in the foster care system as it is related to social worker performance, parents behavior/reaction and systemic challenges/barriers. After each section there was provision for respondents to write additional comments if it was believed that the rank ordering was incomplete. A total of 350 respondents were used to complete the survey analysis. Like the original study, the majority of the respondents have Masters Degrees 56%, including 44 % with Masters
Degree in Social Work (MSW). 35% of the respondents are in the age range 25-34, there were 74% female and 26% male responding to the survey.

Respondents to the survey recommended that the number of African American children in the foster care system could be reduced if:

- Social workers employed more family focused practice (such as family conferencing) with African American parents (26%).
- Social workers were better trained to work with African American families (20%).
- Social workers were able to do more effective interventions as part of prevention efforts (19%).
- Social workers were more culturally sensitive to African American families (17%).
- Reunification workers caseloads were reduced so they could have more time to work more effectively with these families (15%).
- Social workers were better advocates for African American families (13%).

Additionally, the written comments provided by the respondents have been coded into nine sub categories. These categories of recommendations include: poverty issues, racial & bias issues, prevention, training, social workers, case loads, drug treatment/mental health, community based interventions, court system, African American cultural issues and parent training.
